1. This Regulation establishes rules for the protection of and provision of assistance to disabled persons and persons with reduced mobility travelling by air, both to protect them against discrimination and to ensure that they receive assistance.

2. The provisions of this Regulation shall apply to disabled persons and persons with reduced mobility, using or intending to use commercial passenger air services on departure from, on transit through, or on arrival at an airport, when the airport is situated in the territory of a Member State to which the Treaty applies.

3. Articles 3, 4 and 10 shall also apply to passengers departing from an airport situated in a third country to an airport situated in the territory of a Member State to which the Treaty applies, if the operating carrier is a Community air carrier.

4. This Regulation shall not affect the rights of passengers established by Directive 90/314/EEC and under Regulation (EC) No 261/2004.

5. In so far as the provisions of this Regulation conflict with those of Directive 96/67/EC, this Regulation shall prevail.

6. Application of this Regulation to Gibraltar airport is understood to be without prejudice to the respective legal positions of the Kingdom of Spain and the United Kingdom of Great Britain and Northern Ireland with regard to the dispute over sovereignty over the territory in which the airport is situated.

7. Application of this Regulation to Gibraltar airport shall be suspended until the arrangements included in the Joint Declaration made by the Foreign Ministers of the Kingdom of Spain and the United Kingdom of Great Britain and Northern Ireland on 2 December 1987 enter into operation. The Governments of Spain and of the United Kingdom shall inform the Council of the date of entry into operation.

Article 2

Definitions

For the purposes of this Regulation the following definitions shall apply:

(a) 'disabled person' or 'person with reduced mobility' means any person whose mobility when using transport is reduced due to any physical disability (sensory or locomotor, permanent or temporary), intellectual disability or impairment, or any other cause of disability, or age, and whose situation needs appropriate attention and the adaptation to his or her particular needs of the service made available to all passengers;

(b) 'air carrier' means an air transport undertaking with a valid operating licence;

(c) 'operating air carrier' means an air carrier that performs or intends to perform a flight under a contract with a passenger or on behalf of another person, legal or natural, having a contract with that passenger;

(d) 'Community air carrier' means an air carrier with a valid operating licence granted by a Member State in accordance with Council Regulation (EEC) No 2407/92 of 23 July 1992 on licensing of air carriers [1];

(e) 'tour operator' means, with the exception of an air carrier, an organiser or retailer within the meaning of Article 2(2) and (3) of Directive 90/314/EEC;

(f) 'managing body of the airport' or 'managing body' means a body which notably has as its objective under national legislation the administration and management of airport infrastructures, and the coordination and control of the activities of the various operators present in an airport or airport system;

[1] OJ L 240, 24.8.1992, p. 1.

(g) 'airport user' means any natural or legal person responsible for the carriage of passengers by air from or to the airport in question;

(h) 'Airport Users Committee' means a committee of representatives of airport users or organisations representing them;

(i) 'reservation' means the fact that the passenger has a ticket, or other proof, which indicates that the reservation has been accepted and registered by the air carrier or tour operator;

(j) 'airport' means any area of land specially adapted for the landing, taking-off and manoeuvres of aircraft, including ancillary installations which these operations may involve for the requirements of aircraft traffic and services including installations needed to assist commercial air services;

(k) 'airport car park' means a car park, within the airport boundaries or under the direct control of the managing body of an airport, which directly serves the passengers using that airport;

(l) 'commercial passenger air service' means a passenger air transport service operated by an air carrier through a scheduled or non-scheduled flight offered to the general public for valuable consideration, whether on its own or as part of a package.

Article 3

Prevention of refusal of carriage

An air carrier or its agent or a tour operator shall not refuse, on the grounds of disability or of reduced mobility:

(a) to accept a reservation for a flight departing from or arriving at an airport to which this Regulation applies;

(b) to embark a disabled person or a person with reduced mobility at such an airport, provided that the person concerned has a valid ticket and reservation.

Article 4

Derogations, special conditions and information

1. Notwithstanding the provisions of Article 3, an air carrier or its agent or a tour operator may refuse, on the grounds of disability or of reduced mobility, to accept a reservation from or to embark a disabled person or a person with reduced mobility:

(a) in order to meet applicable safety requirements established by international, Community or national law or in order to meet safety requirements established by the authority that issued the air operator's certificate to the air carrier concerned;

(b) if the size of the aircraft or its doors makes the embarkation or carriage of that disabled person or person with reduced mobility physically impossible.

In the event of refusal to accept a reservation on the grounds referred to under points (a) or (b) of the first subparagraph, the air carrier, its agent or the tour operator shall make reasonable efforts to propose an acceptable alternative to the person in question.

A disabled person or a person with reduced mobility who has been denied embarkation on the grounds of his or her disability or reduced mobility and any person accompanying this person pursuant to paragraph 2 of this Article shall be offered the right to reimbursement or re-routing as provided for in Article 8 of Regulation (EC) No 261/2004. The right to the option of a return flight or re-routing shall be conditional upon all safety requirements being met.

2. Under the same conditions referred to in paragraph 1, first subparagraph, point (a), an air carrier or its agent or a tour operator may require that a disabled person or person with reduced mobility be accompanied by another person who is capable of providing the assistance required by that person.

3. An air carrier or its agent shall make publicly available, in accessible formats and in at least the same languages as the information made available to other passengers, the safety rules that it applies to the carriage of disabled persons and persons with reduced mobility, as well as any restrictions on their carriage or on that of mobility equipment due to the size of aircraft. A tour operator shall make such safety rules and restrictions available for flights included in package travel, package holidays and package tours which it organises, sells or offers for sale.

4. When an air carrier or its agent or a tour operator exercises a derogation under paragraphs 1 or 2, it shall immediately inform the disabled person or person with reduced mobility of the reasons therefor. On request, an air carrier, its agent or a tour operator shall communicate these reasons in writing to the disabled person or person with reduced mobility, within five working days of the request.

Article 5

Designation of points of arrival and departure

1. In cooperation with airport users, through the Airport Users Committee where one exists, and relevant organisations representing disabled persons and persons with reduced mobility, the managing body of an airport shall, taking account of local conditions, designate points of arrival and departure within the airport boundary or at a point under the direct control of the managing body, both inside and outside terminal

buildings, at which disabled persons or persons with reduced mobility can, with ease, announce their arrival at the airport and request assistance.

2. The points of arrival and departure referred to in paragraph 1, shall be clearly signed and shall offer basic information about the airport, in accessible formats.

Article 6

Transmission of information

1. Air carriers, their agents and tour operators shall take all measures necessary for the receipt, at all their points of sale in the territory of the Member States to which the Treaty applies, including sale by telephone and via the Internet, of notifications of the need for assistance made by disabled persons or persons with reduced mobility.

2. When an air carrier or its agent or a tour operator receives a notification of the need for assistance at least 48 hours before the published departure time for the flight, it shall transmit the information concerned at least 36 hours before the published departure time for the flight:

(a) to the managing bodies of the airports of departure, arrival and transit, and

(b) to the operating air carrier, if a reservation was not made with that carrier, unless the identity of the operating air carrier is not known at the time of notification, in which case the information shall be transmitted as soon as practicable.

3. In all cases other than those mentioned in paragraph 2, the air carrier or its agent or tour operator shall transmit the information as soon as possible.

4. As soon as possible after the departure of the flight, an operating air carrier shall inform the managing body of the airport of destination, if situated in the territory of a Member State to which the Treaty applies, of the number of disabled persons and persons with reduced mobility on that flight requiring assistance specified in Annex I and of the nature of that assistance.

Article 7

Right to assistance at airports

1. When a disabled person or person with reduced mobility arrives at an airport for travel by air, the managing body of the airport shall be responsible for ensuring the provision of the assistance specified in Annex I in such a way that the person is able to take the flight for which he or she holds a reservation, provided that the notification of the person's particular needs for such assistance has been made to the air carrier or its agent or the tour operator concerned at least 48 hours before the published time of departure of the flight. This notification shall also cover a return flight, if the outward flight and the return flight have been contracted with the same air carrier.

2. Where use of a recognised assistance dog is required, this shall be accommodated provided that notification of the same is made to the air carrier or its agent or the tour operator in accordance with applicable national rules covering the carriage of assistance dogs on board aircraft, where such rules exist.

3. If no notification is made in accordance with paragraph 1, the managing body shall make all reasonable efforts to provide the assistance specified in Annex I in such a way that the person concerned is able to take the flight for which he or she holds a reservation.

4. The provisions of paragraph 1 shall apply on condition that:

(a) the person presents himself or herself for check-in:

  (i) at the time stipulated in advance and in writing (including by electronic means) by the air carrier or its agent or the tour operator, or

  (ii) if no time is stipulated, not later than one hour before the published departure time, or

(b) the person arrives at a point within the airport boundary designated in accordance with Article 5:

  (i) at the time stipulated in advance and in writing (including by electronic means) by the air carrier or its agent or the tour operator, or

  (ii) if no time is stipulated, not later than two hours before the published departure time.

5. When a disabled person or person with reduced mobility transits through an airport to which this Regulation applies, or is transferred by an air carrier or a tour operator from the flight for which he or she holds a reservation to another flight, the managing body shall be responsible for ensuring the provision of the assistance specified in Annex I in such a way that the person is able to take the flight for which he or she holds a reservation.

6. On the arrival by air of a disabled person or person with reduced mobility at an airport to which this Regulation applies, the managing body of the airport shall be responsible for ensuring the provision of the assistance specified in Annex I in such a way that the person is able to reach his or her point of departure from the airport as referred to in Article 5.

7. The assistance provided shall, as far as possible, be appropriate to the particular needs of the individual passenger.

Article 8

Responsibility for assistance at airports

1. The managing body of an airport shall be responsible for ensuring the provision of the assistance specified in Annex I without additional charge to disabled persons and persons with reduced mobility.

2. The managing body may provide such assistance itself. Alternatively, in keeping with its responsibility, and subject always to compliance with the quality standards referred to in Article 9(1), the managing body may contract with one or more other parties for the supply of the assistance. In cooperation with airport users, through the Airport Users Committee where one exists, the managing body may enter into such a contract or contracts on its own initiative or on request, including from an air carrier, and taking into account the existing services at the airport concerned. In the event that it refuses such a request, the managing body shall provide written justification.

3. The managing body of an airport may, on a non-discriminatory basis, levy a specific charge on airport users for the purpose of funding this assistance.

4. This specific charge shall be reasonable, cost-related, transparent and established by the managing body of the airport in cooperation with airport users, through the Airport Users Committee where one exists or any other appropriate entity. It shall be shared among airport users in proportion to the total number of all passengers that each carries to and from that airport.

5. The managing body of an airport shall separate the accounts of its activities relating to the assistance provided to disabled persons and persons with reduced mobility from the accounts of its other activities, in accordance with current commercial practice.

6. The managing body of an airport shall make available to airport users, through the Airport Users Committee where one exists or any other appropriate entity, as well as to the enforcement body or bodies referred to in Article 14, an audited annual overview of charges received and expenses made in respect of the assistance provided to disabled persons and persons with reduced mobility.

Article 9

Quality standards for assistance

1. With the exception of airports whose annual traffic is less than 150 000 commercial passenger movements, the managing body shall set quality standards for the assistance specified in Annex I and determine resource requirements for meeting them, in cooperation with airport users, through the Airport Users Committee where one exists, and organisations representing disabled passengers and passengers with reduced mobility.

2. In the setting of such standards, full account shall be taken of internationally recognised policies and codes of conduct concerning facilitation of the transport of disabled persons or persons with reduced mobility, notably the ECAC Code of Good Conduct in Ground Handling for Persons with Reduced Mobility.

3. The managing body of an airport shall publish its quality standards.

4. An air carrier and the managing body of an airport may agree that, for the passengers whom that air carrier transports to and from the airport, the managing body shall provide assistance of a higher standard than the standards referred to in paragraph 1 or provide services additional to those specified in Annex I.

5. For the purpose of funding either of these, the managing body may levy a charge on the air carrier additional to that referred to in Article 8(3), which shall be transparent, cost-related and established after consultation of the air carrier concerned.

Article 10

Assistance by air carriers

An air carrier shall provide the assistance specified in Annex II without additional charge to a disabled person or person with reduced mobility departing from, arriving at or transiting through an airport to which this Regulation applies provided that the person in question fulfils the conditions set out in Article 7(1), (2) and (4).

Article 11

Training

Air carriers and airport managing bodies shall:

(a) ensure that all their personnel, including those employed by any sub-contractor, providing direct assistance to disabled persons and persons with reduced mobility have knowledge of how to meet the needs of persons having various disabilities or mobility impairments;

(b) provide disability-equality and disability-awareness training to all their personnel working at the airport who deal directly with the travelling public;

(c) ensure that, upon recruitment, all new employees attend disability-related training and that personnel receive refresher training courses when appropriate.

Article 12

Compensation for lost or damaged wheelchairs, other mobility equipment and assistive devices

Where wheelchairs or other mobility equipment or assistive devices are lost or damaged whilst being handled at the airport or

transported on board aircraft, the passenger to whom the equipment belongs shall be compensated, in accordance with rules of international, Community and national law.

Article 13

Exclusion of waiver

Obligations towards disabled persons and persons with reduced mobility pursuant to this Regulation shall not be limited or waived.

Article 14

Enforcement body and its tasks

1. Each Member State shall designate a body or bodies responsible for the enforcement of this Regulation as regards flights departing from or arriving at airports situated in its territory. Where appropriate, this body or bodies shall take the measures necessary to ensure that the rights of disabled persons and persons with reduced mobility are respected, including compliance with the quality standards referred to in Article 9(1). The Member States shall inform the Commission of the body or bodies designated.

2. Member States shall, where appropriate, provide that the enforcement body or bodies designated under paragraph 1 shall also ensure the satisfactory implementation of Article 8, including as regards the provisions on charges with a view to avoiding unfair competition. They may also designate a specific body to that effect.

Article 15

Complaint procedure

1. A disabled person or person with reduced mobility who considers that this Regulation has been infringed may bring the matter to the attention of the managing body of the airport or to the attention of the air carrier concerned, as the case may be.

2. If the disabled person or person with reduced mobility cannot obtain satisfaction in such way, complaints may be made to any body or bodies designated under Article 14(1), or to any other competent body designated by a Member State, about an alleged infringement of this Regulation.

3. A body in one Member State which receives a complaint concerning a matter that comes under the responsibility of a designated body of another Member State shall forward the complaint to the body of that other Member State.

4. The Member States shall take measures to inform disabled persons and persons with reduced mobility of their rights under this Regulation and of the possibility of complaint to this designated body or bodies.

Article 16

Penalties

The Member States shall lay down rules on penalties applicable to infringements of this Regulation and shall take all the measures necessary to ensure that those rules are implemented. The penalties provided for must be effective, proportionate and dissuasive. The Member States shall notify those provisions to the Commission and shall notify it without delay of any subsequent amendment affecting them.

Article 17

Report

The Commission shall report to the European Parliament and the Council by 1 January 2010 at the latest on the operation and the effects of this Regulation. The report shall be accompanied where necessary by legislative proposals implementing in further detail the provisions of this Regulation, or revising it.

Article 18

Entry into force

This Regulation shall enter into force on the 20th day following that of its publication in the *Official Journal of the European Union*.

It shall apply with effect from 26 July 2008, except Articles 3 and 4, which shall apply with effect from 26 July 2007.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Strasbourg, 5 July 2006.

The President
J. BORRELL FONTELLES

The President
For the Council
P. LEHTOMÄKI

ANNEX I

Assistance under the responsibility of the managing bodies of airports

Assistance and arrangements necessary to enable disabled persons and persons with reduced mobility to:

— communicate their arrival at an airport and their request for assistance at the designated points inside and outside terminal buildings mentioned in Article 5,

— move from a designated point to the check-in counter,

— check-in and register baggage,

— proceed from the check-in counter to the aircraft, with completion of emigration, customs and security procedures,

— board the aircraft, with the provision of lifts, wheelchairs or other assistance needed, as appropriate,

— proceed from the aircraft door to their seats,

— store and retrieve baggage on the aircraft,

— proceed from their seats to the aircraft door,

— disembark from the aircraft, with the provision of lifts, wheelchairs or other assistance needed, as appropriate,

— proceed from the aircraft to the baggage hall and retrieve baggage, with completion of immigration and customs procedures,

— proceed from the baggage hall to a designated point,

— reach connecting flights when in transit, with assistance on the air and land sides and within and between terminals as needed,

— move to the toilet facilities if required.

Where a disabled person or person with reduced mobility is assisted by an accompanying person, this person must, if requested, be allowed to provide the necessary assistance in the airport and with embarking and disembarking.

Ground handling of all necessary mobility equipment, including equipment such as electric wheelchairs subject to advance warning of 48 hours and to possible limitations of space on board the aircraft, and subject to the application of relevant legislation concerning dangerous goods.

Temporary replacement of damaged or lost mobility equipment, albeit not necessarily on a like-for-like basis.

Ground handling of recognised assistance dogs, when relevant.

Communication of information needed to take flights in accessible formats.

ANNEX II

Assistance by air carriers

Carriage of recognised assistance dogs in the cabin, subject to national regulations.

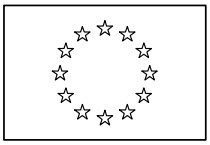
In addition to medical equipment, transport of up to two pieces of mobility equipment per disabled person or person with reduced mobility, including electric wheelchairs (subject to advance warning of 48 hours and to possible limitations of space on board the aircraft, and subject to the application of relevant legislation concerning dangerous goods.

Communication of essential information concerning a flight in accessible formats.

The making of all reasonable efforts to arrange seating to meet the needs of individuals with disability or reduced mobility on request and subject to safety requirements and availability.

Assistance in moving to toilet facilities if required.

Where a disabled person or person with reduced mobility is assisted by an accompanying person, the air carrier will make all reasonable efforts to give such person a seat next to the disabled person or person with reduced mobility.



COMMISSION OF THE EUROPEAN COMMUNITIES

Brussels, 7.8.2008
COM(2008) 510 final

COMMUNICATION FROM THE COMMISSION

Communication on the scope of the liability of air carriers and airports in the event of destroyed, damaged or lost mobility equipment of passengers with reduced mobility when travelling by air.

Text with EEA-relevance

COMMUNICATION FROM THE COMMISSION

Communication on the scope of the liability of air carriers and airports in the event of destroyed, damaged or lost mobility equipment of passengers with reduced mobility when travelling by air.

Text with EEA-relevance

1. BACKGROUND

On 5 July 2006, the Council and the European Parliament adopted the Regulation 1107/2006 concerning the rights of disabled persons and persons with reduced mobility when travelling by air[1] (hereinafter referred to as "the Regulation"). The overall objective of the Regulation is to ensure that disabled passengers and persons with reduced mobility (hereinafter referred to as PRM) are not discriminated against when travelling by air. On 30 November 2005, in the course of the political negotiation process on the Commission proposal, and in relation to the future Article 12 concerning 'Compensation for lost or damaged wheelchairs, other mobility equipment and assistive devices', the Commission presented an statement for the minutes[2], in which the Commission committed to launch an study and to report on it, regarding the possibility of enhancing the existing rights under Community, national or international law of air passengers whose wheelchairs or other mobility equipment are destroyed, damaged or lost during handling at an airport or during transport on-board aircraft.

The Commission published a contract notice[3] for a *"Study on the compensation thresholds for damaged or lost equipment and devices belonging to air passengers with reduced mobility"* (hereinafter referred as to "the Study"), which is available on the Commission website. The purpose of this Communication is to report on the outcome of the study and the possibility to enhance existing rights.

2. THE SCOPE OF THE PROBLEM.

"Damaged or lost luggage is annoying. Damaged or lost mobility equipment can destroy the whole journey and complicate life considerably for a long time. It is a loss of independence and dignity[4]."

A significant proportion of the current EU population has mobility problems which include needing a wheelchair other mobility equipment or assistive devices (hereinafter referred to as "mobility equipment"). The proportion of PRM within the population is likely to increase as the EU population ages.

The Commission does not wish to reproduce in this Communication the data already provided in the study, which should be read as a complement to this Communication. Nevertheless, on

3 Contract notice 2006/S 111-118193 of 14.06.2006

4 From a PRM association's answer to the consultants.

the basis of those data, the Commission notes that there are clear indications that passengers with reduced mobility who require mobility equipment, are travelling by air less than the general population. It is quite likely that fear of loss, damage or destruction of their mobility equipment is a contributory factor in deterring them from travelling and, therefore, preventing their integration in society. This fear is based on several objective reasons:

(1) The loss or damage of wheelchairs or other mobility equipment takes away the independence of the PRM and affects every aspect of their daily lives until the matter is properly resolved.

(2) PRM face risks to their health and safety if their mobility equipment is lost, damaged or destroyed, as replacements are not always provided and, even when provided, replacements are not always suitable for the person's needs.

(3) The time taken by airlines or airports to resolve practical problems presented by the damage or loss of mobility equipment is inappropriate given the urgency of the need.

(4) The existing procedures and the average training level of the staff of most airlines and airports regarding how to act when confronted with a loss or damage of mobility equipment are deficient.

(5) The financial implications of the loss, damage or destruction of mobility equipment present an additional risk for PRM when travelling by air in comparison with other passengers.

(6) The provision of compensation for damaged, destroyed or lost mobility equipment varies from air carrier to air carrier, and for airports

3. OUTCOME OF THE STUDY: THE CHALLENGES

The actual number of accidents per year and per company involving incidents with mobility equipment is very low. The total number of relevant complaints is somewhere in the range between 600 and 1000 cases per year, compared to 706 million air passengers carried per year in the European Union[5]. That means a ratio between less than one and one and a half complaints as a maximum in a million of passengers.

The study analyses both the experience in the USA and the situation in Europe. The two analysis provide a reasonable basis for believing that this estimate is close to the actual number. The study has also concluded that there are a number of outstanding issues regarding both the quantitative aspects and the qualitative aspects of the problem worth to be highlighted:

3.1. Quantitative objective: to reduce the number of incidents

The number of events of destroyed, damages or lost mobility equipment of PRM is linked to the correct handling and stowage of mobility equipment onboard aircraft and storage at airports is a fundamental part of the conditions of transport of PRM in order to meet their needs, and a skill for which staff must be properly trained. The objective should remain to allow the PRM to use her/his personal device as long as possible. Ideally, the mobility

[5] 705.8 million air passengers carried in the EU in 2005.

equipment should be handed over by the PRM and back to him at the door of the aircraft in all those cases where the PRM cannot use their own mobility equipment onboard. Other procedures may be set up when required for safety, security or practical reasons.

The attachment to the 2001 Airline Passenger Service Commitment[6], signed by the majority of European national carriers (hereinafter referred as to the Airline Commitment) states that signatory airlines must take all reasonable steps to avoid loss or damage to mobility equipment or other disability assistive devices; they will develop their own individual service plans incorporating the Airline Commitment*;* They will establish staff training programmes and introduce changes to their computer systems to implement the Airline Commitment; and that *"PRM must be enabled to remain independent to the greatest possible extent"*.

The Airport Voluntary Commitment on Air Passenger Service (hereinafter referred to as "the Airport Commitment"), developed by European airports under the auspices of Airports Council International Europe[7] states that *"Staff will be given appropriate training in understanding and meeting the needs of PRMs"*. The aim for the signatories was to develop their own individual service plans on the basis of the Commitment and to incorporate the appropriate provisions of the European Civil Aviation Conference (ECAC) Document 30 (Section 5)[8], and the International Civil Aviation Organisation[9] (ICAO Annex 9).

Point 5.2.3.2 of ECAC document 30[10] states that *"Member States should promote the distribution of a booklet to airline and airport operator personnel on procedures and facilities to be provided to assist PRM, which would contain all the necessary information concerning the conditions of transport of such persons and the assistance to be provided to them, as well as the steps to be taken by them. They should ensure that airlines include in their manuals all procedures concerning PRM"*. Point 5.5 of the same document says "*Member States should ensure the provision at airports of a ground handling service for PRMs comprising: staff trained and qualified to meet their needs (…) the appropriate equipment to assist them."*

However, those voluntary agreements are not always properly honoured. Firstly, few companies and airports in the EU have actually developed their own plans or customer policies to implement those voluntary agreements. Secondly, those that have done so have adopted such different plans or policies that they result in widely differing levels of protection for PRM. Thirdly, those plans and customer policies are not always published, which makes it very difficult for PRM to know what to expect in advance.

In the context of the Airport Commitment, the majority of airports spontaneously provide assistance to passengers with reduced mobility. However, the procedures whereby the PRM is allowed to get to the door of the aircraft in their own wheelchair, or receive their own wheelchair on arrival, vary from airport to airport

---

8 ECAC Policy Statement in the Field of Civil Aviation Facilitation (ECAC.CEAC DOC No. 30 (PART I) 10th Edition/December 2006

9 Standards and Recommended Practices of the International Civil Aviation Organization (Annex 9 of the Chicago Convention).

10 See footnote 8.

3.2. Qualitative objective: to minimise the consequences of an incident.

3.2.1. The current lack of a common procedure leading to immediate solutions on the spot.

The extent of damage sustained to mobility equipment can have serious implications not just because of its cost. The issue is also about both the time during which the PRM will be unable to use their equipment, and the long period until compensation is finally paid to them. The difficulties of establishing where to send complaints about damage and appeals for assistance on arrival, in what is often an unfamiliar airport, adds to the time and stress involved in finding even a temporary solution to the practical problems of everyday life when without mobility equipment.

There are currently no international, Community or national legislation on offering immediate assistance to PRM whose mobility equipment has been lost, damaged or destroyed, or on how this immediate assistance should be provided, or what are the essential aspects of such assistance.

The Airline Commitment, does not give details of how related claims for compensation are to be dealt with or what action should be taken on the spot when a wheelchair or other mobility equipment is damaged or lost.

The majority of airports do not have a policy regarding claims for damaged or destroyed wheelchairs or mobility equipment. The provision of compensation and the procedures by which airports provide a replacement vary from airport to airport despite the existence of the Airport Commitment[11]. This may result in gaps and inconsistencies regarding replacement and compensation for PRM whose equipment was destroyed or damaged during the time when the airport is in charge. This certainly results in uncertainty and confusion for PRM, who never know how to act or to whom they should turn in the event of an accident involving their mobility equipment.

3.2.2. The difference between the nature and the limits of the liability of airlines and the liability of airports.

Traditionally there has been a difference between the nature and the limits of the liability of the airlines and the airports. This difference may cause confusion among stakeholders.

3.2.2.1. Transport of equipment on board an aircraft (airline liability)

Currently, assistance to PRM is provided by air carriers in the framework of the ground-handling. Air carriers can provide the assistance either directly, through a third company or through the airport when it acts as a service provider for the air carrier. Airline liability is currently limited by a miscellany of international conventions[12], Community Regulations

---

11 See footnote 6.

12 Those conventions are: 1 -The Convention for the Unification of Certain Rules Relating to International Carriage by Air, signed at Warsaw on 10/1929, abbreviated: the Warsaw Convention (1929). 2 -The Protocol to Amend the Convention for the Unification of Certain Rules Relating to International Carriage by Air signed at Warsaw on 12 October 1929; signed in the Hague on 28/09/1955, abbreviated: The Hague Protocol (1955). 3 -The Convention for the Unification of Certain Rules for International Carriage by Air, signed in Montreal on 28/05/1999, abbreviated: the Montreal Convention (1999).

implementing those international conventions within the EU[13], and legal or administrative procedures that other countries impose on EU companies that wish to enter their national markets. Companies may waive their limited liability and agree to compensate the full value of the lost mobility equipment or of its repair.

All these legal texts operate according to the same mechanism: presumption of liability of the carrier in case of checked baggage[14]. This means that the victim will not have to prove that the carrier was at fault in order for the carrier's liability to be incurred. The only thing the PRM needs to prove is the fact that the damage or loss occurred while the equipment was in the care of the carrier (also commonly referred to as the "period of transportation").

With regard to equipment that was checked in at the check-in counter (always by or on behalf of the carrier) and consequently labelled as luggage, it is quite clear that the period of transportation starts at the moment the check–in procedure starts. The same holds true for luggage that is "a delivery at cabin". Although the equipment can be labelled prior to being actually handed over to the carrier (at the gate or at the door of the aircraft), the liability of the carrier should only be triggered at the moment the equipment is physically handed over to the carrier (be it at the boarding gate or at the door of the aircraft).

3.2.2.2. Handling of the equipment at an airport (airport liability).

Airports have assumed the responsibility for providing assistance to PRM since the Regulation fully came into effect on 26 July 2008. Airport liability is, in principle, not limited[15] and it is established according to national liability/tort law. This fact that the applicable legal framework is different as between airports and airlines results in two big differences in the nature of their respective liability: First of all, as a rule, airport liability is based on a proven fault by the airport managing body. Secondly, whereas airport liability is not limited, airline liability definitely is. This means that, in the case of airports, the PRM will have to prove the fault of the wrongdoer before a court if the airport does not accept the claim (not so if the air carrier is responsible), but can recover the full damages (not so if the air carrier is liable, since its liability is normally limited).

3.2.3. Compensation: amount and procedure.

For a long time, PRM organisations have been pressing for unlimited liability in cases of incidents regarding mobility equipment both during handling at an airport or during transfer on-board aircraft. This approach is driven by the high cost of modern mobility equipment[16] and the relatively low limit of current liability for baggage under international conventions, and in particular the Montreal Convention[17], which indeed suggest that the amount of compensation under international conventions may not be adequate in all cases.

---

13 Regulation (EC) Nº 889/2002 of the European Parliament and of the Council of 13 May 2002 (JO L 140/02 of 30.05.2002, amending Council Regulation (EC) Nº 2027/97 on air carrier liability in the event of accidents.

14 See Article 1.10 of the REGULATION (EC) Nº 889/2002.

15 Airport liability is not dealt with by any international convention or Community .

16 for example, electric wheelchairs can cost up to € 10000

17 Up to 1000 SDRs (approximate amount in euros based on the SDR value on 10/03/2008 according to the IMF SDR valuation: € 1060).

Most air carriers provide compensation in line with the Montreal Convention. Damages to the mobility equipment above 1000 SDR are at the passenger's own risk, unless the passenger has made, at the time when the checked baggage was handed over to the carrier, a special declaration of interest in delivery at destination and has paid a supplementary sum if the case so requires[18]. Special insurance for PRM mobility equipment is proposed by only a minority of companies and for a marginal number of airports. The majority of air carriers and of airports do not offer special insurance coverage for damaged or destroyed wheelchairs or mobility equipment.

According to the study, only a minority of EU companies allow PRM to declare that their mobility equipment has a higher value and that this can then be claimed accordingly. Among those companies, some limit the excess value declaration to a given amount above the level of compensation set by international and EU rules, but below the actual cost of the mobility equipment. Several carriers pointed out that declaring a special value involves “a supplement [that] has to be paid by the passenger”.

All stakeholders agree that the cost of providing for the needs of PRM must not be passed directly to PRM. However, only a few have drawn the logical conclusion and compensate the full cost of the damage or loss of the mobility equipment. The Regulation consolidates the principle that assistance shall be provided without additional charge to PRMs[19] , but its scope does not include the specific amount of compensation, which is left to be dealt with under the "rules of international, Community and national law[20]".

It is worth noticing that for railway transport, Community legislation imposes on railway companies the obligation of full compensation, if the railway undertaking is liable for the total or partial loss or damage of the mobility equipment[21].

3.2.4. The inclusion or exclusion of mobility equipment in the definition of "baggage".

The point of view of PRM organisations and the majority of the Civil Aviation Authorities responding to the survey linked to the study is that mobility equipment should not be regarded as baggage. The purpose of this exclusion is that mobility equipment should not be subject to the airline limited liability rules laid down by the international conventions. As a consequence, airlines and airports should compensate the full cost of the lost mobility equipment or the price of repairing it.

The US Air Carrier Access Act (ACAA) does not give a definition of mobility equipment and does not expressly exclude it from the definition of baggage; however, it does impose full, objective liability without financial limits in the event of an accident involving mobility equipment on all carriers wishing to cover domestic routes in the United States[22]. The U.S. Department of Transportation intends to amend soon its regulation implementing the US Air Carrier Access Act to make foreign air carriers operating to and from the United States

---

18 in line with what it is stipulated by article 22.2 of the Montreal Convention and article 1.5 of Regulation 889/2002.

19 See Article 8 of Regulation nº 1107/2006.

20 See article 12 of Regulation nº 1107/2006.

21 REGULATION (EC) No 1371/2007 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 23 October 2007 on rail passengers’ rights and obligations, JO 315/14 of 31.12.2007, article 25.

22 The Air Carrier Access Act (ACAA) prohibits discrimination in air travel against individuals with disabilities. The U.S. Department of Transportation issued a regulation (14 CFR Part 382) implementing the ACAA which explicitly refers to the treatment of mobility aids and devices.

subject to most of the disability-related requirements currently available to U.S. carriers under Part 382, including treatment of mobility aids and assistive devices.

The current Canadian legislation in place concerning PRMs is *Part VII of the Air transport Regulations: Terms and Conditions of Carriage Regulations*[23]. The Canadian Transportation Agency seems to define mobility aids as priority checked items of a personal nature, even though the mobility equipment is not excluded from the baggage definition strictu sensu. By doing so the Canadian Transportation Agency does not allow companies working on their territory to apply the limited liability provisions in respect of destroyed, damaged or lost baggage in international conventions to mobility equipment. There is an understanding that to land in Canada, the carrier must respect the Canadian regulations. This understanding seems not to have been challenged by any foreign carrier.

4. AN ANSWER TO THE CHALLENGES: REGULATION Nº 1107/2006.

4.1. Quantitative objective: to reduce the number of accidents.

As has been demonstrated in point 3.1 of this Communication, the absence of specific procedures for handling wheelchairs or other mobility equipment and the fact that, training on handling wheelchairs and other mobility equipment is not being provided in all airports or by all airlines, indicate that improvements could easily be made. Regulation 1107/2006 has tackled this shortcoming in the current state of affairs by establishing legal obligations concerning both the necessary procedures and the necessary training for the staff to ensure adequate assistance to PRM[24].

Such legal obligations include, inter alia, the handling of mobility equipment at the airport or its transportation on board aircraft. Therefore, the quality and the adequacy of the assistance provided by airlines and air carriers should improve significantly. Specific procedures on check-in and training for staff in the handling of mobility equipment will raise awareness among employers and employees alike and help to reduce even further the number and the gravity of accidents, as well as the personal and economic costs.

4.2. Qualitative objective: to minimise the consequences of an incident.

Point 3.2.1 of this Communication highlights the shortcomings of the current lack of a common procedure which would provide immediate solutions on the spot, in the case of damaged or lost mobility equipment. Regulation 1107/2006 partly covers that legal vacuum. First of all, Annex I of Regulation 1107/2006 specifically includes in the definition of airport assistance the *"temporary replacement of damaged or lost mobility equipment, albeit not necessarily on a like for like basis"*[25]. Secondly, Article 9 establishes a legal obligation for airports to set up *"quality standards for the assistance specified in Annex I and determine resource requirements for meeting them".*

---

23 The Terms and Conditions of Carriage Regulations issued under the authority of the Canada Transportation Act. Part V of the Act deals with the transportation of persons with disabilities. Section 155 of this Part V explains the provisions for a damaged or lost aid.

24 See articles 9 and 11 of the Regulation

25 See Annex I to Regulation nº 1107/2006.

As regards the difference between the nature and the limits of the liability of airlines and airports mentioned in point 3.2.2 of this Communication, article 12 of Regulation 1107/2006 establishes the obligation of compensation *"in accordance with rules of international, Community and national law"*.

The Commission will closely monitor how airports and airlines implement this responsibility in the new context laid down by the Regulation, in order to assess in the future whether the inclusion of a more precise definition of the airport's liability, along the lines of what it is laid down for air carriers in Regulation 889/2002, would be advisable.

With regard to the amount of compensation and the relevant procedure, dealt with in point 3.2.3 of this Communication, the number of incidents regarding mobility equipment is already small and the new protection offered by Regulation 1107/2006 should help to further reduce the number of incidents and their consequences. It therefore seems clear that, if the current rules applying to compensation were to be changed, any economic consequences which those accidents could involve for companies or airports would not have a major economic impact on carriers or airports.

Finally, point 3.2.4 of this Communication deals with the issue of whether mobility equipment should be deemed included in the notion of "baggage". This question is relevant because it is linked to the amount of the compensation, since the limits on liability imposed by international conventions only apply to baggage. Some of the Community's biggest air transport partners have already developed detailed administrative procedures regarding the rights of PRM on this issue. Broadly speaking, those administrative procedures impose objective liability and full compensation on air carriers and sometimes on airports. European air carriers covering transoceanic routes to Canada or domestic flights in the US or Canada do already comply with those rules outside the Community's borders. Some companies have already waived their limited liability through their own customer policy or their internal quality standards.

As these examples show, different options can be envisaged when dealing with the amount of the compensation paid in case of destroyed, damaged or lost mobility equipment in order to approximate it to the real value of such equipment. That goal can be achieved by seeking to interpret or define the notion of baggage so as to exclude mobility equipment, while still ensuring legal coverage of such equipment under the applicable international conventions, or alternatively by removing or reviewing the limits on financial compensation under those international conventions. Finally, airlines and airports might voluntarily waive their current limited liability regarding mobility equipment.

The Commission considers that it is worth addressing this issue at ICAO level with the aim of abolishing or reviewing any financial limit on lost, damaged or destroyed mobility equipment, laid down in the Montreal Convention. The Commission recognises the difficulties linked to re-negotiating an international Convention. However, the fact that some ICAO members have decided to unilaterally amend their rules and impose full compensation for their domestic routes regarding the mobility equipment indicates that such an EU initiative may receive political support.

In the mid-term, the Commission considers that the full application of Regulation 1107/2006 will improve both the monitoring and the enforcement of existing rights of PRM related to compensation and/or replacement of destroyed, damaged or lost mobility equipment, as well as the kind of assistance to be provided on the spot when an incident occurs. Before deciding

whether to put forward a legislative proposal on these issues, the Commission considers it prudent to allow Regulation 1107/2006 to become applicable, before assessing its impact on the likely decreasing of incidents. Whilst taking into account current practices in other countries and having regard to Community legislation governing railway transport, the Commission in the short term encourages airlines to voluntarily waive their limited liability.

5. CONCLUSIONS

(1) The Commission reminds airports and airlines of their obligation to put in place the quality standards and the necessary training and procedures regarding the handling of mobility equipment and the rights of PRM passengers in the case of an accident related to their mobility equipment, following in particular ECAC document nº 30 and its relevant annexes.

(2) As regards the amount of compensation and in order to bring it closer to the actual value of the equipment, the Commission will propose to the Council that, with the cooperation of the Member States, the Community launch an initiative within ICAO with the aim of clarifying or defining the term 'baggage' so as to exclude mobility equipment or, alternatively, of abolishing or reviewing any liability limits on lost, damaged or destroyed mobility equipment, in the framework of the Montreal Convention.

(3) The Commission encourages airlines in the UE to voluntarily waive their current liability limits in order to bring the amount of compensation closer to the actual value of the mobility equipment.

(4) The Commission will monitor in 2008-2009 the compliance of Member States, air carriers and airports with Community law, including Regulation 1107/2006.

(5) The Commission encourages the stakeholders to carry out a better and more systematic collection of data concerning claims related to mobility equipment.

(6) The Commission will include in the Report foreseen in Article 17 of Regulation 1107/2006 a chapter on the rights of PRM whose mobility equipment has been lost, damaged or destroyed. The Commission will then assess the actual developments following the entry into force of Regulation 1107/2006 and the progress of the initiative within ICAO mentioned in point (2) of these conclusions. If the assessment shows that necessary improvement has not been achieved, the Commissions will put forward an appropriate legislative proposal to enhance the existing rights under Community law of air passengers whose wheelchairs or other mobility equipment are destroyed, damaged or lost during handling at an airport or during transport on-board aircraft, including the revision of the current threshold for compensation and the need to better define airport liability.

EVALUATION OF REGULATION 1107/2006

EXECUTIVE SUMMARY

Background

1. Regulation 1107/2006, which took full effect in July 2008, introduced new protections for people with reduced mobility when travelling by air. Key provisions included:

   - The right, subject to certain derogations, not to be refused embarkation or reservation.
   - The right to be provided with assistance at airports, at no additional cost, in order to allow access to the flight.
   - Responsibility for provision of assistance to PRMs at airports is placed with the airport management company; previously, these services were usually contracted by airlines.
   - The costs of providing assistance at airports can be recovered from airlines through transparent and cost-reflective charges levied for all passengers.

2. The Regulation also required Member States to introduce sanctions into national law for non-compliance with the Regulation, and create National Enforcement Bodies (NEBs) responsible for enforcement of the Regulation. The Regulation applies to all flights from and within the European Union (EU), as well as to flights to the EU operated by EU-registered carriers.

3. The Regulation requires the Commission to report to the Council and the Parliament on its operation and results, and if appropriate to bring forward new legislative proposals. In order to inform this report, the Commission has asked Steer Davies Gleave to undertake an independent review of the Regulation.

Factual conclusions

4. Our review has gathered evidence on the implementation of the Regulation through in-depth discussions and consultation with stakeholders, supplemented by desk research. Stakeholders included airports, airlines, NEBs and PRM organisations. The evidence gathered shows that most of the airports and airlines examined for the study have implemented the requirements of the Regulation. However, there is significant variation in the quality of service provided by airports, and in the policies of airlines on carriage of PRMs. We also identified relatively little activity by NEBs to monitor the Regulation's implementation, or to promote awareness of the rights it grants.

5. Conclusions regarding each of the groups of stakeholders are set out below.

Airlines

6. The key issue we identified in the study is the lack of consistency in policies on carriage, and the significant variation between carriers. For example, Ryanair permits a maximum of 4 PRMs who require assistance on any flight, and Brussels Airlines permits at most 2 on most aircraft; in contrast, British Airways does not impose any restrictions. There is similar variation in policies on whether PRMs have to be accompanied. Approval of policies is the responsibility of national safety regulators, however typically airlines propose policies which are then approved with little or no challenge by the licensing authority (often the same organisation as the NEB).

Although the rationale for these restrictions is safety, there is limited evidence to justify them. Limitations on carriage of PRMs are specifically prohibited by the equivalent US regulation on carriage of PRMs[1].

7. All airlines in the study sample had published some information on carriage of PRMs, however 13 of the 21 did not publish on their websites all of the restrictions on carriage of PRMs that they imposed. Most stated in their Conditions of Carriage that PRMs would not be refused, but this was usually conditional on pre-notification; this may be an infringement of the Regulation.

8. The Regulation encourages PRMs to pre-notify their requirements for assistance to airlines, which are then required to pass on this information to the relevant airports. In theory this should both ensure that PRMs promptly receive the services they need, and allow airports to minimise resourcing costs through efficient rostering. However, our research found that levels of pre-notification too low to allow this: at 11 of 16 airports for which we were provided with information, pre-notification rates were lower than 60%.

9. PRM representative organisations informed us that loss or damage to mobility equipment could still be a significant issue. The Regulation requires airports to handle mobility equipment but does not introduce any new provisions which reduce the risk of loss or damage, or increase the amount of compensation payable, which is restricted by the limits defined in the Montreal Convention.

Airports

10. All airports in the study sample had implemented the Regulation, although we were informed that the Regulation had not been implemented at all at regional airports in Greece. Most had subcontracted the service through a competitive tender; several informed us that they were considering or were in the process of retendering the service, generally because service quality in the initial period had not been sufficient.

11. The frequency with which the PRM services are used varies considerably between airports: among the airports for which we have been able to obtain data use of services varies by a factor of 15, although in most cases between 0.2% and 0.7% of passengers requested assistance.

12. Most airports in the case study States had published quality standards, typically following the format of the minimum recommended standards in ECAC Document 30. Most undertook some form of internal monitoring of performance, however few used external checks of service such as ‘mystery shoppers’. Most stakeholders informed us that airports were providing an adequate level of service quality.

13. Variability in airport service quality (including safety) was reported by PRM organisations and some airlines, but this is subjective and hard to quantify. Airports reported variation in equipment and facilities provided, and we observed significant

[1] US Department of Transport 14 CFR part 382.

variation in the level of training given to personnel providing services to PRMs. In the sample examined, training varied between 3 and 14 days, ostensibly to provide the same services.

14. Charges levied by airports varied considerably (between €0.16 and €0.90 per departing passenger), and we were unable to identify any apparent link to frequency of service use, price differentials between States or service quality. Airports in Spain and mainland Portugal levied uniform charges across all airports managed by the national airport company; this may be an infringement of the Regulation. Many airlines believed consultation by airports regarding charges was poor; Cyprus, Spain and Portugal were identified as particular issues.

NEBs

15. All States except Slovenia have designated NEBs; in most cases the NEB is the CAA, and is the same organisation as the NEB for Regulation 261/2004. All States except Poland and Sweden have introduced penalties into national law for infringements of the Regulation, although several have not introduced sanctions for all possible infringements. The maximum sanction which can be imposed varies significantly, and in some States may not be at a high enough level to be dissuasive; for example, in Estonia, Lithuania and Romania the maximum sanction is lower than €1,000.

16. Most States have received very few complaints to date; in total 1,110 received to date, compared to a total of 3.2m passengers assisted in 2009 across 21 case study airports. 80% of all complaints regarding infringements of the Regulation had been submitted to the UK NEBs; this may be the result of national law in the UK which permits financial compensation to be claimed under the Regulation. No sanctions have yet been imposed, although the NEBs for France, Portugal and Spain have opened proceedings to impose fines. In a number of States we identified significant practical difficulties in imposing and collecting sanctions, typically in relation to imposing fines on carriers registered in other States. These issues are in most cases equivalent to those that apply in relation to Regulation 261/2004[2].

17. Although most case study NEBs had taken some action to monitor the services provided under the Regulation beyond the monitoring of complaints (14 out of 16 had undertaken at least one inspection of airports), in most cases this was limited. Most inspections focussed on checks of systems and procedures, and did not assess the experience of passengers using the services. Monitoring of PRM charges was also poor: NEBs in 9 of the 16 States had undertaken no direct monitoring of airport charges.

18. Few NEBs had made significant efforts to promote awareness of the Regulation by passengers, as required by the Regulation; only two informed us of national public awareness campaigns they had undertaken. This lack of promotion undermines the claims of some NEBs that reviewing complaints is sufficient to monitor the

[2] See Evaluation of Regulation 261/2004, February 2010: http://ec.europa.eu/transport/passengers/studies/doc/2010_02_evaluation_of_regulation_2612004.pdf.

implementation of the Regulation. Awareness of the NEBs' performance appeared in general to be poor: most stakeholders contacted for the study held no opinion on the effectiveness of enforcement by NEBs, and many informed us that this was because they had had no interaction with them.

Other issues

19. A particular issue raised by stakeholders was the conflict between the Regulation and the equivalent US legislation (14 CFR Part 382), which applies to European carriers operating flights to/from the US, and other flights where these are operated as codeshares with US carriers. The most significant conflict is the allocation of responsibilities for assistance: the Regulation requires airports to arrange the provision of services to PRMs, while under the US legislation it is the airlines that have this responsibility. The US legislation also prohibits airlines from imposing numerical limits on PRMs, and from requiring pre-notification from PRMs. This has caused issues for carriers who are required to comply with pieces of legislation that conflict, although the US legislation does allow carriers to apply for a waiver where there is a conflict of laws.

20. A number of other issues regarding specific Articles are discussed in the section below on recommended changes to the Regulation.

Recommendations

21. We have made a number of recommendations, addressing:

- improvements to the implementation of the Regulation which would not require any legislative changes; and
- further recommendations which could only be implemented through amendment to the text of the Regulation.

Measures to improve the operation of the Regulation

22. Several airlines argued in their submissions to the study that they should be permitted to provide or contract their own PRM assistance services, as they could provide this more cost-efficiently than airports. We believe that this could create an incentive to minimise the service provided and hence would risk a reduction in service quality. Whilst there were initially significant issues with the quality of PRM service provision at certain airports, most stakeholders believed that these issues had now been addressed, and our most important recommendation is therefore that allocation of responsibility for PRM services to airports should not be amended.

23. Many of the concerns raised regarding airports relate to inconsistency of application of the Regulation. To address this, we suggest that the Commission should:

- improve provision of information regarding accessibility of airports, through a centralised website listing factors such as maximum likely walking distance within an airport, means used for access to aircraft, and any facilities available for PRMs;
- develop and share best practice on contracting of PRM service providers, both to improve the content and structure of the contracts used and therefore reduce

the likelihood of unnecessary retendering, and to recommend methods of cooperation; and

- develop and share best practice advice on training of staff providing PRM services, so that a more consistent standard of service is provided.

24. Similarly, many of the concerns raised regarding airlines also relate to inconsistency of application of the Regulation, in particular to inconsistent policies on carriage of PRMs. We therefore suggest that the Commission should:

- work with EASA to determine safe policies on carriage of PRMs, in particular to address the wide and unjustifiable variation in airline policies on carriage of PRMs (in particular on numerical limits and circumstances under which PRMs are required to be accompanied); and
- ensure that the airlines we have identified as not publishing clear policies on carriage of PRMs do so, through actions by the relevant NEBs (which could also review airlines outside the study sample for the same reason).

25. Given the current low rates of rates pre-notification, we suggest that the Commission monitor this issue, through encouraging NEBs to collect rates of pre-notification. In future, the Commission should assess the situation and consider either eliminating the requirement for pre-notification or alternatively retaining it and providing passengers and carriers with more incentive to pre-notify.

26. An additional problem reported with pre-notification is where PRMs had pre-notified their requirements for assistance, but then found that this information had not been passed on to airport or airline staff. To address this, and to provide PRMs with evidence that they can use when making a complaint, we recommend that the Commission encourage airlines to provide PRMs with a receipt for pre-notification.

27. The greatest problem identified by the study regarding NEBs was the lack of pro-active measures taken to monitor or enforce the Regulation. In most cases this has not had significant detrimental effect, as most airports and airlines have implemented the provisions of the Regulation, but could become an issue if the situation changes in the future. We suggest that the Commission should encourage all Member States to:

- designate NEBs and introduce penalties for all infringements of the Regulation;
- take measures to inform PRMs of their rights under the Regulation and of the possibility of complaint to the relevant NEB, for example through national promotional campaigns; and
- pro-actively monitor the application of the Regulation (rather than relying on complaints), for example through increased interaction with PRM organisations, and through direct monitoring of quality of service provided.

28. We also recommend that the Commission should, in consultation with stakeholders, develop a detailed good practice guide regarding implementation of the Regulation. This could include sections regarding recommendations on safety limits, the format and content of policies on carriage, and consultation. It could also specify recommended minimum quality standards covering qualitative aspects of the services provided. Publishing voluntary policies such as these would allow potential future amendments to the Regulation to be tested in practice before adoption.

Changes to the Regulation

29. There are some areas where improvements can only be effected through changes to the text of the Regulation. These include minor amendments which we recommend should be implemented as soon as possible, and more significant amendments to be considered in the longer term.

30. The minor amendments we would suggest are:

- Extend Article 11 to require airlines to ensure that the personnel of their ground handling companies are trained to handle mobility equipment.
- Amend Article 8 to make specific PRM charges obligatory for airports wishing to recover costs from users, and therefore ensure costs are transparent, reasonable and cost-related.
- Amend Article 8 to make clear that that PRM charges are airport-specific and cannot be set at a network level.
- Amend Article 14 to require that NEBs must be independent of any bodies responsible for providing services under the Regulation (at present this is not the case in Greece).
- Amend Article 14 to clarify that NEBs are responsible for flights departing from (rather than both departing from and arriving at) airports in their territory, in addition to flights by Community carriers arriving at airports within the State's territory but departing from a third country.
- Amend Recital 17 to be consistent with Article 14, so that both state that complaints regarding the Regulation should be addressed to the NEB of the State where the flight departed, rather that of the State which issued the operating license to the carrier.

31. These changes would improve the functioning of the Regulation in its current form, without making significant changes to its overall approach.

32. A key issue with the Regulation is its lack of detail when compared to equivalent legislation (in particular, the equivalent US regulations on carriage of PRMs); in our view, as a result of this, it leaves too much scope for interpretation and variation in service provision. We suggest that, to ensure greater consistency, and that PRMs' rights are adequately respected, the Commission should consider making the text more detailed and specific about the requirements for airlines and airports. Some key areas in which we suggest that changes could be made are as follows:

- Specify the circumstances under which carriage of PRMs may be restricted (including any numerical limits) or where PRMs may be required to be accompanied[3].
- Clarify the definitions of 'PRM', 'mobility equipment' and 'cooperation'.

[3] This could be implemented either through amendment to this Regulation or through amendment to Commission Regulation (EC) 859/2008

- Clarify whether airlines may levy additional charges for supply of medical oxygen and for multiple seats where one seat is insufficient for the passenger (for example, in the case of obese or injured passengers).
- Extend the Regulation to include a provision requiring airports to publish information on the rights of PRMs (including the right to complain) at accessible points within the airport.

33. It would be necessary to consult with stakeholders about these changes and to undertake an impact assessment, and therefore these changes could not be introduced immediately.

34. We also suggest that the Commission and the Member States should work with other contracting States to amend the Montreal Convention so as to exclude mobility equipment from the definition of baggage. This would address the problem faced by users of technologically advanced wheelchairs, the values of which often substantially exceed the maximum compensation allowable under the Montreal Convention (1,131 SDRs, or €1,370). Although most airlines we contacted for the study informed us that they waived the Montreal limits in this type of situation, several PRM organisations informed us of cases where they did not, and even in the case that an airline voluntarily waives the limit the PRM is in a position of uncertainty.

1. INTRODUCTION

Background

1.1 Approximately 10% of the EU population has some type of disability[4]. Equal access to air transport services is necessary to enable full and equal participation in modern society. In order to ensure equal treatment as far as possible, Regulation 1107/2006 introduced new protections for people with reduced mobility when travelling by air, including the right, subject to certain derogations, not to be refused embarkation or reservation, and the right to be provided with assistance at airports, at no additional cost, in order to allow access to the flight. Before the introduction of the Regulation, there had been some well-publicised examples of carriers charging passengers for the provision of assistance that was essential in order to travel[5].

1.2 The Regulation creates obligations towards disabled persons and persons of reduced mobility (PRMs) for air carriers and their agents, tour operators, airport management companies, and Member States:

- Airlines are prohibited from refusing carriage (except where necessary to comply with safety regulations or where it is physically impossible) and have to provide certain types of assistance on board the aircraft.
- Airlines, their agents and tour operators have to ensure that they can accept notification of the need for assistance at all points of sale, and transmit this information to the airport and the operating air carrier.
- Airport management companies have to provide assistance at the airport, and develop and publish quality standards for this assistance. The costs of providing this assistance can be recovered through transparent and cost-reflective charges levied for all passengers.
- Member States are required to introduce sanctions into national law for non-compliance with the Regulation, create bodies responsible for enforcement of the Regulation, and promote awareness of the rights created by the Regulation and how to complain about infringements.

The need for this study

1.3 Article 17 of the Regulation requires the Commission, by 2010, to report to the Parliament and the Council on the operation and results of the Regulation. In order to inform this report, the Commission requires an independent evaluation of the operation of the Regulation.

This report

1.4 This report is the Final Report for the study. It sets out the work undertaken over the five month duration of the study, and draws conclusions on the current functioning of the Regulation. The recommendations set out in this report were discussed at the final

[4] ECAC document 30, section 5, annex N

[5] For example, on January 2004 a UK court ruled that Ryanair had acted unlawfully by charging a passenger Bob Ross £18 in each direction for wheelchair hire at London Stansted airport

meeting with the Commission.

Structure of this document

1.5 The rest of this report is structured as follows:

- Section 2 summarises the methodology used for this study;
- Section 3 sets out how the Regulation is being applied by airports;
- Section 4 sets out how the Regulation is being applied by airlines;
- Section 5 describes enforcement and complaint handling by NEBs;
- Section 6 summarises stakeholder views on other policy issues relating to the Regulation;
- Section 7 summarises the factual conclusions; and
- Section 8 summarises the recommendations.

1.6 Further detailed information on the policies of airlines regarding carriage of PRMs is provided in Appendices A and B.

1.7 Case studies have been undertaken of complaint handling and enforcement in 16 Member States. These are provided in Appendix C, which, due to its size, is provided as a separate document.

2. RESEARCH METHODOLOGY

Introduction

2.1 This section provides a summary of the research methodology used. It describes:

- the overall approach used;
- the selection of case studies;
- the scope of the desk research that has been undertaken; and
- the stakeholders that have participated in the study, and how they have provided inputs.

Overview of our approach

2.2 The Commission requested us to collect evidence to address a number of questions, most of which can be categorised as either relating to:

- enforcement and complaint handling undertaken by National Enforcement Bodies (NEBs); and
- application of the Regulation by air carriers, their agents, tour operators and airports.

2.3 In order to address these questions, we developed a research methodology divided into two parts:

- case study research; and
- cross-EU interviews and analysis.

2.4 The rationale for this division is that enforcement and complaint procedures are specific to Member States and are therefore best evaluated through a case study approach. It was agreed to undertake case studies of complaint handling and enforcement in 16 Member States as part of this study. The case studies also describe state-specific aspects of airline and airport implementation of the Regulation.

2.5 Key airlines cover the whole of the EU rather than restricting operations primarily to one State (for example, the Irish-registered carrier Ryanair operates domestic flights in the UK, France, Spain and Italy). In addition, the issues faced by airports in implementing the Regulation are, in most cases, not State-specific. Questions relating to the application of the Regulation by airlines and airports have therefore been addressed through a cross-EU approach. Information from both elements of the research has been used for the conclusions, and will be used in the development of recommendations.

2.6 Both the case study and the cross-EU research use a mixture of stakeholder interviews and desk research. The desk research has been useful to supplement the information provided by stakeholders, particularly regarding the charges levied by airports for services to PRMs.

Selection of case study States

2.7 The 16 case study states were selected in agreement with the Commission, with reference to the following criteria:

- The Member States with the largest aviation markets (measured by passenger numbers these are UK, Spain, Germany, Italy, France, Greece, Netherlands and Ireland);
- At least some of the Member States that, at the time the study commenced, had not introduced sanctions into national law;
- Member States in which the structure of the NEB is unusual (for example, in the UK, the Equality and Human Rights Commission is responsible for complaint handling);
- Member States in which airlines are based with which we identified significant issues of non-compliance with Regulation 1107/2006 in our 2008 review of Conditions of Carriage (carriers with some particularly non-compliant terms were based in Denmark and Italy); and
- States covering a wide geographical scope and variation in sizes.

2.8 The case study states are:

- Belgium;
- Denmark;
- France;
- Germany;
- Greece;
- Hungary;
- Ireland;
- Italy;
- Latvia;
- Netherlands;
- Poland;
- Portugal;
- Romania;
- Spain;
- Sweden; and
- United Kingdom.

2.9 In order to present a thorough analysis of the operation of the Regulation across the EU we conducted a more limited programme of data collection and stakeholder interviews in the remaining 11 Member States.

Stakeholder selection and inputs

2.10 The stakeholders important for the study were:

- NEBs;
- Airlines;
- Airport managing bodies; and
- Organisations representing disabled people, and people with reduced mobility (PRM organisations).

2.11 In addition to these, we spoke to cross-EU bodies which represented these organisations at a European level.

National Enforcement Bodies

2.12 We interviewed (face-to-face or by telephone) the NEB(s) notified to the Commission in every case study State, and obtained written responses from the NEBs of all other States.

2.13 We obtained the following information from each NEB:

- The legal basis for complaint handling and enforcement in the Member State;
- The degree of compliance by airlines;
- The degree of compliance by airports;
- Statistics on the number of complaints and the process for handling them;
- Issues relating to enforcement; and
- Any other issues.

2.14 Non-case study states were provided with a shorter question list which, while addressing the areas listed above, does so at a less detailed level.

2.15 Engagement of the NEBs was obtained through a combination of written responses, meetings and telephone interviews, depending on whether the State concerned is one of the 16 case study states. The approach adopted for case study NEB is listed in Table 2.1, together with the final status of contact as we drafted this Report.

TABLE 2.1 STAKEHOLDER INTERVIEWS: CASE STUDY NEBS

Member State	Organisation	Form of input
Belgium	SPF Mobilité et Transport	Written response and face-to-face interview
Denmark	CAA-Denmark (Staetens Luftfarsvaesen)	Face-to-face interview
France	DGAC Sous-direction du tourisme	Face-to-face interview
Germany	Luftfahrt-Bundesamt (LBA) BM für Verkehr, Bau und Stadtentw	Face-to-face interview
Greece	CAA, Air Transport Economics Section CAA, Airports Division	Written response and telephone interview

Member State	Organisation	Form of input
Hungary	Nemzeti Közlekedési Hatóság (Directorate for Aviation) Egyenlő Bánásmód Hatóság (Equal Treatment Authority)	Face-to-face interview
Ireland	Commission for Aviation Regulation	Face-to-face interview
Italy	ENAC - Direzione Centrale Operazioni	Face-to-face interview
Latvia	Civil Aviation Agency	Written response and telephone interview
Netherlands	Inspectie Verkeer en Waterstaat	Written response and face-to-face interview
Poland	Civil Aviation Office	Face-to-face interview
Portugal	Instituto Nacional de Aviação Civil	Face-to-face interview
Romania	Autoritatea Nationala Pentru Persoanele cu Handicap Romanian Civil Aeronautical Authority	Face-to-face interview
Spain	Servicio de inspección y relaciones con usuarios	Written response and face-to-face interview
Sweden	Swedish Civil Aviation Authority	Written response and telephone interview
United Kingdom	Equality and Human Rights Commission (England) Civil Aviation Authority	Face-to-face interview

2.16 We obtained responses from all NEBs in the non-case study States, as shown in Table 2.2. We requested written responses from all non-case study NEBs and these were followed up with telephone interviews where necessary for clarification.

TABLE 2.2 STAKEHOLDER INTERVIEWS: NON-CASE STUDY NEBS

Member State	Organisation
Austria	Civil Aviation Authority
Bulgaria	Civil Aviation Administration Ministry of Transport, Information Technologies and Communications
Cyprus	Department of Civil Aviation
Czech Republic	Civil Aviation Authority
Estonia	Consumer Protection Body
Finland	Civil Aviation Authority
Lithuania	Civil Aviation Administration
Luxembourg	Direction de l'Aviation Civile
Malta	Department of Civil Aviation
Slovakia	Slovak Trade Inspection Ministry of Transport, Posts and Telecommunications, Directorate General of Civil Aviation and Water Transport, Air Transport Department
Slovenia	Ministry of Transport, Directorate of Civil Aviation

Airlines

2.17 20 airlines have been selected to include a sample with variation across several criteria. These are:

- One key airline with major operations in each case study State;
- At a minimum to include the top 10 European airlines measured in terms of passenger numbers;
- Also to include a mix of different airline types (legacy, low cost and charter), States of registration, and sizes; and
- At least 2 non-EU airlines.

2.18 The airlines selected, and their relevance to each of the criteria, is shown in Table 2.3. We were originally planning to consider Air France-KLM as one airline, but various differences (for example, in its Conditions of Carriage) have meant that it is more logical to consider it as two airlines, meaning there are 11 airlines under the 'Top 10 passenger numbers' criterion. We have consequently excluded the 11th (Austrian) from the interview sample, although the airline still forms part of the desk research.

TABLE 2.3 AIRLINE SELECTION CRITERIA

Airline	Case study State coverage		Airline type				
	Selected for case study state coverage	Case study states	Non-EU	Legacy	Low cost	Charter	Top 10 passenger numbers
Aegean Airlines	✓	Greece			✓		
Air Berlin					✓		✓
Air France	✓	France / Netherlands		✓			✓
AirBaltic	✓	Latvia			✓		
Alitalia	✓	Italy		✓			✓
British Airways	✓	UK		✓			✓
Brussels Airlines	✓	Belgium		✓			
Delta			✓	✓			
EasyJet					✓		✓
Emirates			✓	✓			
Iberia	✓	Spain		✓			✓
KLM	✓	Netherlands		✓			✓
Lufthansa	✓	Germany		✓			✓
Ryanair	✓	Ireland			✓		✓
SAS	✓	Denmark / Sweden		✓			✓
TAP Portugal	✓	Portugal		✓			
TAROM	✓	Romania		✓			
Thomas Cook						✓	
TUI (Thomsonfly)						✓	

Wizzair	✓	Hungary / Poland	✓	

2.19 We approached all 21 case study airlines requesting either a face-to-face or telephone interview. The methods they chose to respond are shown in Table 2.4 below.

TABLE 2.4 STAKEHOLDER INTERVIEWS: AIRLINES

Airline	Form of input
Aegean Airlines	Written response and telephone interview
Air Berlin	Input through IACA only
Air France	Telephone interview
AirBaltic	Did not respond
Alitalia	Written response
British Airways	Declined to participate
Brussels Airlines	Did not respond
Delta	Written response
easyJet	Face-to-face interview
Emirates	Did not respond
Iberia	Telephone interview
KLM	Face-to-face interview
Lufthansa	Declined to participate
Ryanair	Face-to-face interview
SAS	Written response
TAP Portugal	Face-to-face interview
TAROM	Face-to-face interview
Thomas Cook	Face-to-face interview
TUI (Thomsonfly)	Input through IACA only
Wizzair	Did not respond

2.20 We also consulted the five main associations representing airlines operating airlines within the EU, listed in Table 2.5 below.

TABLE 2.5 STAKEHOLDER INTERVIEWS: AIRLINE ASSOCIATIONS

Organisation	Full Name	Type of airline represented	Form of input
IATA	International Air Transport Association	Legacy	Written response and telephone interview
ELFAA	European Low Fares Airline Association	European low cost	Face-to-face interview
AEA	Association of European Airlines	European legacy	Face-to-face interview
ERA	European Regions Airlines Association	European regional	Face-to-face interview
IACA	International Air Carrier Association	Leisure / charter	Face-to-face interview

Airports

2.21 The 21 case study airports were selected according to the following criteria:

- All of the top 10 European airports in terms of passenger numbers;
- The main airport in each of the 16 case study Member States; and
- A sample of smaller airports.

2.22 The airports selected under each criterion, and the methods they chose to respond, are shown in Table 2.6. Note that three of the top 10 airports were excluded from the case study consultation as they were operated by the same organisations as others in the top 10. These comprise Paris Orly, London Gatwick, Zaragoza and Barcelona airports which, at the time the study was planned, were managed by the same companies as Paris CDG, Heathrow and Madrid Barajas respectively[6]. These airports do still form part of the desk research, however.

TABLE 2.6 AIRPORT SELECTION CRITERIA

Airport	State	Main airport in case study State	Top 10 passenger numbers	Smaller airport	Form of input
Amsterdam	Netherlands	✓	✓		Face-to-face interview
Athens	Greece	✓			Written response and telephone interview
Bologna	Italy			✓	Face-to-face interview
Brussels	Belgium	✓			Face-to-face interview
Bucharest Otopeni	Romania	✓			Face-to-face interview
Budapest	Hungary	✓			Face-to-face interview
Brussels Charleroi	Belgium			✓	Face-to-face interview
Copenhagen	Denmark	✓			Written response and telephone interview
Dublin	Ireland	✓			Face-to-face interview
Frankfurt Main	Germany	✓	✓		Face-to-face interview
Lisbon	Portugal	✓			Face-to-face interview
London Heathrow	United Kingdom	✓	✓		Face-to-face interview
London Luton	United Kingdom			✓	Face-to-face interview
Madrid Barajas	Spain	✓	✓		Face-to-face interview*
Munich	Germany		✓		Not able to obtain a response
Paris Charles De Gaulle	France	✓	✓		Face-to-face interview
Riga	Latvia	✓			Written response and telephone interview
Roma Fiumicino	Italy	✓	✓		Written response and telephone interview

[6] Gatwick ceased to be managed by BAA, the operator of Heathrow, on 2 December 2009

Stockholm	Sweden	✓			Written response and telephone interview
Warsaw	Poland	✓			Face-to-face interview
Zaragoza	Spain			✓	Face-to-face interview*

* Interview with AENA covered all State airports in Spain

Selection of PRM organisations and other passenger groups

2.23 In each case study State we selected a PRM organisation representing all disabilities and impairments at a national level. We initially approached the national council organisations that are members of the European Disability Forum (EDF); however in a small number of cases we were unable to obtain a response from this organisation and had to contact an alternative organisation in their place. The table also includes four cross-EU PRM organisations.

TABLE 2.7 PRM AND PASSENGER ORGANISATIONS BY CASE STUDY STATE

State	Organisation	Form of input
Belgium	Belgium Disability Forum	Telephone interview
Denmark	Danske Handicaporganisationer (DH; Disabled Peoples Organisations Denmark)	Face-to-face interview
France	Conseil Français des personnes Handicapées pour les questions Européennes (CFHE ; French Council of Disabled People for European Affairs)	Telephone interview
Germany	Deutscher Behinderten Rat (DBR; German Disability Council)	Unable to obtain a response
Greece	National Confederation of Disabled People (ESAEA)	Written response and telephone interview
Hungary	National Council of Federations of People with Disabilities (FESZT)	Written response and telephone interview
Ireland	People with Disabilities in Ireland (PWDI)	Face-to-face interview
Italy	Forum Italiano sulla Disabilità (FID; Italian Disability Forum)	Face-to-face interview
Latvia	Latvian Umbrella Body for Disability Organisations (SUSTENTO)	Written response and telephone interview
Netherlands	CG-Raad*	Face-to-face interview
Poland	Polskie Forum Osob Niepelnosprawnych (PFON; Polish Disability Forum)	Face-to-face interview
Portugal	Confederação Nacional dos Organismos de Deficientes (CNOD; National Confederation of Organisations of Disabled People)	Unable to obtain a response
Romania	National Disability Council (CNDR)	Face-to-face interview
Spain	Fundación ONCE*, on request of Comité Español de Representantes de Personas con Discapacidad (CERMI)	Face-to-face interview
Sweden	Swedish Disability Federation (HSO)	Written response and telephone interview
United Kingdom	UK Coalition for Disability Rights in Europe (UKCDRE)	Telephone interview

EU	European Disability Forum	Face-to-face interview
EU	European Blind Union	Face-to-face interview
EU	European Union of the Deaf	Written response and telephone interview
EU	Inclusion Europe	Declined to respond

* Not a national council organisation member of EDF

Selection of other organisations

2.24 In addition to the stakeholders listed above, we contacted a number of cross-EU organisations. These comprised:

- **Passenger organisations:** the European Passenger Federation;
- **Travel agent associations:** ECTAA;
- **Airport association:** ACI Europe; and
- **Advisory bodies:** EASA, ECAC.

2.25 At the level of Member States, there were stakeholders which did not correspond to the categories described so far, but which we believed would provide useful information. These organisations were as follows:

- **Wings on Wheels (UK):** This organisation provides package holidays tailored to the needs of disabled people.
- **Thomas Cook, TUI:** Elements of the Regulation apply to travel agents as well as to airlines.
- **Air Transport Users Council (UK):** Prior to the introduction of the Regulation, this organisation had handled complaints from disabled passengers regarding travel by air, and as a result continued to receive some complaints after the Regulation came into force. In addition, the AUC is the only government-funded body in the EU specifically to represent the interests of air passengers

2.26 The form of input adopted by each stakeholder is shown in Table 2.8.

TABLE 2.8 STAKEHOLDER INTERVIEWS: OTHER ORGANISATIONS

State	Association name	Form of input
EU	ECTAA	Written response
EU	EPF	Did not respond
EU	ACI Europe	Face-to-face interview
EU	EASA	Written information provided
EU	ECAC	Face-to-face interview
United Kingdom	Wings on Wheels	Unable to obtain a response
Germany	Thomas Cook	Face-to-face interview
United Kingdom	TUI	Through IACA only
United Kingdom	Air Transport Users Council	Face-to-face interview

Desk research

2.27 The main objectives of the desk research were:

- To evaluate the extent to which air carriers demonstrate compliance with the Regulation through published information, such as Conditions of Carriage and policies on carriage of PRMs; and
- The extent to which airports have complied with the requirement to develop and publish PRM quality standards, as specified in Article 9 of the Regulation, and the content of these standards.

2.28 Conclusions emerging from the desk research were supplemented by the information collected through stakeholder interviews.

Airlines

2.29 The research methodology employed for this part of the study was based on a review of the websites of the 21 case study airlines listed above. Although the focus was on the English language version of the websites, versions in other languages were checked to check whether additional information was provided.

2.30 Three key sources of information were surveyed from each website:

- Conditions of Carriage, with particular regard to the conditions set out for the carriage of PRMs;
- Other policies on the carriage of PRMs: a more detailed search across the airline's website for any policies and relevant information on PRM travel; and
- Options to notify carriers of assistance requirements.

Airports

2.31 Again, the research conducted for this part of the study was internet-based. The websites of each of the case study airports was surveyed against the following criteria:

- whether the airport publishes quality standards;
- how easy these are to find;
- the content of the standards; and
- whether the airport publishes details of its performance against the standards.

Review of relevant legislation and other documentation

2.32 We also reviewed airline and airport policies with reference to other applicable legislation and guidance. The only other EU-wide legislation which relates to the carriage of PRMs by air is EU-OPS 1 (Commission Regulation 859/2008). In addition, many EU carriers which operate flights to the US are also covered by the corresponding US regulation (14 CFR Part 382, Nondiscrimination on the Basis of Disability in Air Travel); this is significantly different from Regulation 1107/2006 and this has an impact on the operating procedures of some carriers.

2.33 Other current guidance includes:

- ECAC Document 30;
- JAR-OPS 1 Section 1;
- JAA Temporary Guidance Leaflet (TGL) No. 44; and
- UK Department for Transport (DfT), *Access to Air Travel for Disabled Persons and Persons with Reduced Mobility – Code of Practice.*

3. APPLICATION OF THE REGULATION BY AIRPORTS

Introduction

3.1 One of the most fundamental changes introduced by the Regulation was the change in responsibility for provision of assistance to PRMs: where previously these services were provided by airlines, the Regulation requires airports to provide them, and permits them to pass on the associated costs to users, provided this is done in a fair and transparent manner. The Regulation also requires airports handling over 150,000 passenger movements per year to develop and publish quality standards for assistance. The detailed requirements are set out in the following section.

3.2 In order to assess how airports are implementing these requirements, we met or sought responses from a sample of airports selected under the criteria set out above (see 2.21). The information gathered was supplemented by tours of the services provided at certain airports, by interviews with other stakeholders who gave their views on service provision, and by desk research. The desk research included analysis of the charges and quality standards set out by the airports in the sample.

Requirements of the Regulation

3.3 As noted above, the Regulation places responsibility for provision of assistance with the airport, whereas previously assistance had been provided by ground handling companies on the basis of contracts with individual airlines. The Regulation requires each airport to provide a uniform service quality for all airlines that it handles (except where an airline requests a higher level of service). The key requirements for the PRM assistance service are summarised below:

- **Designated points:** Airports are required to designate points inside and outside the terminal building at which PRMs can announce their arrival at the airport and request assistance. These must be developed in cooperation with airport users and relevant PRM organisations, must be clearly signed and must offer basic information about the airport in accessible formats.
- **Assistance:** Airports must provide assistance to PRMs so that they are able to take the flight for which they hold a reservation, providing that they have pre-notified their requirements and arrive with sufficient time before the departure of their flight. If they have not pre-notified, the airport must make all reasonable efforts to enable to them to take their flight. For PRMs on arriving flights, the airport must provide assistance to enable them to leave the airport or reach a connecting flight. The assistance provided should be appropriate to the individual passenger. An airport may contract for these services to be provided by another company, in compliance with quality standards (discussed below).
- **Charges:** An airport cannot charge a PRM for this service, but may levy a specific charge on airport users for it. The charge must be reasonable, cost-related and transparent, and the accounts for these services must be separated from its other accounts. The charge must be shared between airport users in proportion to the total number of passengers carried to and from the airport by each. If an airport wishes to contract for services or levy a charge, both must be done in cooperation with airport users through the Airport Users Committee (AUC).

- **Quality standards:** Airports with over 150,000 annual passenger movements must set and publish quality standards for these services, and decide resource requirements to meet them, in cooperation with airport users and PRM organisations. The standards must take account of relevant policies and codes, such as the ECAC Code of Good Conduct in Ground Handling for Persons with Reduced Mobility (ECAC Document 30). An airline can agree with an airport to receive a higher standard of service, for an additional charge.
- **Training:** All employees (including those employed by sub-contractors) providing direct assistance to PRMs should be trained in how to meet their needs. Disability-equality and disability-awareness training should be provided to all airport personnel dealing directly with the travelling public, and all new employees should attend disability−related training.

Categories of PRM defined by carriers and airports

3.4 The Regulation covers passengers with a wide range of impairments for which the needs for assistance are different. Although each individual is different, airlines and airports find it helpful to apply some categorisation when referring to the needs of different passengers. The most commonly used categorisation is the list of Special Service Request (SSR) codes defined by IATA. These categories are:

- **WCHR:** Wheelchair (R for Ramp). Passengers who are able to ascend and descend steps and move about inside the aircraft cabin, but who require a wheelchair or other assistance for longer distances (e.g. between the terminal and the aircraft).
- **WCHS:** Wheelchair (S for Steps): Passengers who cannot ascend or descend steps, but can move about inside the aircraft cabin. They require a wheelchair for the distances to and from aircraft and must be assisted up and down any steps.
- **WCHP:** Wheelchair (P for Paraplegic). Passengers with a disability of the lower limbs who have sufficient personal autonomy to take care of themselves, but who require assistance to embark and disembark and can move about inside the aircraft cabin only with the assistance of an onboard wheelchair.[7]
- **WCHC:** Wheelchair (C for Cabin Seat). Passengers who are completely immobile, and who can move about only with the assistance of a wheelchair or other means, and require this assistance at all points from arrival at the airport to seating (which may be fitted to their specific needs) on board the aircraft, and the reverse process on arrival.
- **BLND:** Blind or visually impaired passengers.
- **DEAF:** Deaf or hearing impaired passengers, and passengers who are deaf without speech.
- **BLND/DEAF:** Passengers who are both visually and hearing impaired, and who can only move about with the assistance of an accompanying person.
- **DPNA:** Disabled passengers with intellectual or developmental disabilities who need assistance.
- **MEDA:** Passengers whose mobility is impaired due to illness or other clinical reasons, and who are authorised to travel by medical authorities.

[7] This code is not widely used or universally recognised at present

- **STCR:** Passengers who can only be transported on a stretcher.
- **MAAS:** Meet and Assist. All other passengers requiring special assistance.

3.5 Some airlines use different categorisations. For example, Ryanair uses a more detailed classification system with 16 categories that also identify, for example, whether the passenger is travelling with their own wheelchair.

3.6 In addition to the codes above which describe the needs of the passenger, when referring to wheelchair users airlines may also add a description of the type of wheelchair which will be carried. The codes used are WCMP for manual power, WCBD for dry cell battery and WCBW for wet cell battery. These codes are useful for planning the type of assistance which will be necessary to transport them, for example if they require preparation or disassembly.

Services actually provided by airports

3.7 All of the case study airports had implemented the Regulation, and were providing the required services in some form. We were given tours of the services provided at several of the airports we visited. From these, and descriptions of services given in interviews, we have drawn together a description of a typical process by which the services required by the Regulation are provided.

Departures

Pre-notification	Almost all airports and airlines have contracted SITA (a company providing aviation information technology) to provide a telex or email service for the purpose of passing notification of the needs of PRMs (see 4.64). For each series of flights for a given aircraft, any assistance required is communicated via a telex which includes a four letter code describing the category of disability of each PRM on each flight (see 3.4). This message is known as the passenger assistance list (PAL); if requirements change prior to the flight this is updated by a change assistance list, or CAL. Where a request for assistance is made by a PRM at least 48 hours before the published departure time for the flight, the airline is obliged to transmit this information to the relevant airports at least 36 hours before the published departure time.
Recording of notification	This information arrives at a telex server in the dispatch office of the airport PRM service provider. The telex describes: the time of the flight, the flight number, the names of passengers on board requiring assistance, and the category of disability of these passengers. The information from this telex is used to update the service provider's task management system, either via an automatic link, or via manual input. The task management system can be purposely developed task management software, or in some airports a piece of paper containing notes on expected assistance. Information regarding requests for assistance may also arrive via email. Airlines and airports may use email for several reasons: some airlines (such as non-EU charter carriers) may not have a SITA terminal; larger groups (such as operators of cruises) may send an off-line message in addition to PAL/CAL messages.
PRM arrives and is assigned an assistant	Each new request for assistance creates a new task; if a passenger arrives without notification, the task is created on their arrival. The task management software lists PRMs requiring assistance as tasks, and sets out expected arrival times and real-time information about their flights. When the passenger announces their arrival (either via a designated point or a check-in desk), the type of assistance they require is confirmed, and the task is assigned to one or more available assistants. At some airports, assistants carry personal digital assistants (PDAs) which record progress on a particular task; if this is the case, information regarding the passenger to be met will be forwarded to the PDA of the selected assistant. At other airports (for example in Spain) the management of tasks is a manual process. More than one assistant may be assigned if the passenger requires more involved assistance, such as carrying into their seat or is in a stretcher.

PRM is met and needs are confirmed	The assistant meets the passenger at the point at which they announced their presence; when they meet the PRM, they update the dispatch office with their action. This update may be via PDA linking through to the software in the dispatch office, or via calling in. Assistants should be trained in how to approach passengers with different requirement. If the PRM has difficulty with long distances, the airport may use electric carts, or may push the passenger in a wheelchair provided by the airport. The electric carts may be capable of carrying a passenger in an airport wheelchair. The extent of the use of electric carts may be dependent on airport design. PRMs who are blind or visually impaired may require someone whose arm they can hold guide them through the airport. A PRM with an intellectual disability may require information about the airport to be presented to them in a simplified manner, or may require check-in and other procedures to be conducted in a particular manner. The assistant will help PRMs with a reasonable amount of baggage, but only as much as any other passenger would take.
PRM is assisted through check-in and security	The passenger is taken through check-in and security. At check-in, there may be lowered desks for passengers in wheelchairs. At security, there may be a track where the security staff are trained in searching PRMs, including searching wheelchairs, and a screen to provide privacy for the search. Usually it is not possible for wheelchairs to be taken through metal detector arches, and therefore wheelchair users are searched manually. The security track is not typically exclusively for PRMs, but they may receive priority. There may be a dedicated PRM lounge; if there is time before their flight leaves, they will have the option of resting there or if there is time may wish to use the facilities in the departure lounge until called for their flight. Some airports are willing to take PRMs to these facilities (such as restaurants and shops), while others require PRMs to remain in the waiting area allocated. Where the airport is willing to provide this, the assistant arranges a time at which to collect the passenger. Some airports allow PRMs to use the business lounge regardless of class of travel.
PRM is assisted through customs and to gate	Once the flight is ready for boarding, the assistant takes the passenger to the gate. Different methods of assisting a PRM into the aircraft will be used depending on the passenger's needs and on the manner in which the aircraft is embarked (e.g. via airbridge or from the apron). Some PRMs will be able to use either stairs or an airbridge and will not require specific assistance at this point.
PRM is assisted on board aircraft with airbridge	Where passengers board via an airbridge, category WCHC and WCHS PRMs are transferred to the onboard wheelchair at the door of the aircraft. If they have remained in their own chair up to this point, their wheelchair is transferred to the hold; otherwise the airport's wheelchair is returned with the assistant. The onboard wheelchair is narrower to allow it to pass down the aisle, and has straps to hold the passenger safely in the chair. Other categories of PRM board the aircraft on foot, without particular assistance. Depending on the policy of the carrier concerned, PRMs may have to board either first or last.
PRM is assisted on board aircraft without airbridge	Where passengers board via steps, category WCHC and WCHS PRMs are transferred to the onboard wheelchair on the apron before entering the aircraft. They are then lifted up to the aircraft either by an Ambulift8, by a motorised stair-climbing chair or at some airports by manual lifting. Other categories of PRM board the aircraft on foot, and may require assistance to ascend the stairs. If the aircraft is boarded away from the terminal building and passengers are brought to the aircraft by bus, a dedicated PRM vehicle may be used to bring the PRM to the aircraft.
PRM is assisted to seat on board aircraft	On board, the assistant provides the assistance necessary for the passenger to get to their seat. This may include lifting the passenger from the on-board wheelchair into the seat and if, as required by certain carriers, the PRM has to be seated in a window seat, transferring across other seats. The assistant may also help the passenger with storing any baggage in the overhead lockers. Once the passenger is installed in their seat, the airport ceases to have responsibility for providing assistance, and it transfers to the airline.

[8] An Ambulift is a vehicle with a hydraulic platform which can be raised to the level of the flight deck to allow wheelchairs to be pushed on board.

Arrivals

Notification arrives	In addition to arriving via PAL or CAL, notification for arriving passengers may arrive by passenger service message (PSM). This is a list of passengers on board the aircraft requiring particular treatment on arrival, dispatched when an aircraft departs. The message states the points of embarkation and disembarkation, the flight number and date, and lists the names of the passengers requiring particular assistance with a description of the assistance. In addition to PRMs, the PSM lists children travelling alone (unaccompanied minors, or UMs), deportees and returned inadmissible passengers. In some circumstances, no PAL or CAL is received for arriving passengers, and the only notification is via PSM; this reduces the period of notification from 36 hours to the duration of the flight. In some cases no notification is received at all.
PRM is met and assisted to disembark	The information from the PSM is input into the task management system in the same manner as the PAL or CAL. When a flight lands, available assistants are assigned to each of the PRMs on board the flight, and dispatched to meet them at the gate. On landing, if a PRM requires assistance to disembark they will typically disembark once all other passengers have disembarked. The PRM is met at the door of the aircraft or within the aircraft by their assigned assistant. Depending on the code included in the PSM the assistant may have equipment such as wheelchairs, or may be accompanied by another member of staff. If the passenger has their own wheelchair, this is removed from the hold, and the passenger may then be assisted to transfer from the aircraft wheelchair into their own. At some airports the passenger's wheelchair is not returned to them until baggage reclaim, for security reasons.
PRM is assisted from aircraft to point of arrival	The passenger is then assisted through passport control (where there may be a dedicated PRM-accessible track) to the baggage hall, where they are assisted to retrieve their bags. They are then assisted through customs, and the assistant accompanies them as far as is required, up to the designated point of arrival outside the terminal. If it is situated close to the arrival point, they may also assist the PRM to their car if requested.

Connections

Connecting flights	Where a PRM requires assistance to make a connecting flight, the assistance offered varies depending on the length of time between arrival and departure. If there is limited time, assistance is offered as described above to disembark, transfer, and embark the passenger onto their next flight. If there is a significant wait between arrival and departure, the passenger may be taken to a PRM lounge or waiting area, until their departing flight is ready for boarding.

Policies on service provision

Provision for non pre-notified passengers

3.8 The Regulation sets out the assistance which must be provided to PRMs where they have notified the air carrier or tour operator at least 48 hours before the published time of departure of their flight. It also requires that where no such notification is made, the airport should make all reasonable efforts to provide this assistance.

3.9 Of the airports we contacted, most stated that there was little or no difference in the service received by passengers who had not pre-notified, and differences in service quality only occurred when the services were busy. Even in the cases where a choice did have to be made between assisting a pre-notified and non-pre-notified passenger, some airports informed us that they would make decisions on the basis of ensuring all passengers could make their flights, rather than on the basis of notification. Some airports informed us that the level of notification was so low that it was not useful to make any distinction on this basis. Only a small minority of the case study airports stated that a slower service was provided to passengers who did not pre-notify (Table 3.1 below).

TABLE 3.1 AIRPORT SERVICE PROVIDED TO NON-PRE-NOTIFIED PRMS

Airport	Service provided to non-pre-notified PRMs
Amsterdam Schiphol	Equivalent service, priority based on ensuring passengers can make their flights
Athens	Slower service than pre-notified for departures, equal service for arrivals
Bologna	Equivalent service is provided
Brussels	Equivalent service as pre-notified, lower priority when busy
Bucharest Otopeni	Equivalent service is provided (some equipment may not be available)
Budapest	Equivalent service is provided (possible delay of a few minutes)
Brussels Charleroi	Equivalent service, priority based on ensuring passengers can make their flights
Copenhagen	Equivalent service as pre-notified, lower priority when busy
Dublin	Slower service
Frankfurt Main	Equivalent service as pre-notified, lower priority when busy
Lisbon	Standards not defined
London Heathrow	N/A
London Luton	Equivalent service is provided
Madrid Barajas	Equivalent service is provided (possible delay on arrival)
Munich	Equivalent service as pre-notified, lower priority when busy
Paris Charles De Gaulle	Equivalent service as pre-notified, lower priority when busy
Riga	Equivalent service is provided
Roma Fiumicino	Slower service
Stockholm	Slower service
Warsaw	Equivalent service as pre-notified, lower priority when busy
Zaragoza	Equivalent service is provided (possible delay on arrival)

3.10 Airports' estimates of the impact of pre-notification rates on staffing and equipment levels varied considerably. Several airports informed us that while an increase in the rate of pre-notification would improve the quality of the service provided, they would not expect it to significantly affect the number of staff they employed. In contrast, Aèroports de Paris believed that improving rates of pre-notification could allow them to reduce the costs of PRM service provision by 30%-40%. In January 2010, London Heathrow introduced a banded charge which varies the amount paid depending on the level of pre-notification of the airline (see 3.34).

Restrictions on service

3.11 Unlike for airlines, the Regulation does not explicitly state any grounds for airports to restrict the services provided. However, there may be national laws which have bearing on the functions which airport staff are permitted to undertake; for example, we were informed that in Denmark national laws on health and safety did not permit people of above a certain weight limit to be carried up stairs and into an aircraft.

Other issues noted

3.12 All of the case study airports provide the services required under the Regulation. The manner and quality of provision varies among the sample, and there have been a number of incidents of significant service failure, but we identified no fundamental problems with service provision at major airports. However, we were informed that the Regulation had not been implemented at Greek airports other than Athens: at these airports, services are provided to PRMs, but the change of responsibility from airline to airport has not yet been effected; provision of and payment for services is agreed between airlines and ground handling companies, as it was prior to the introduction of the Regulation.

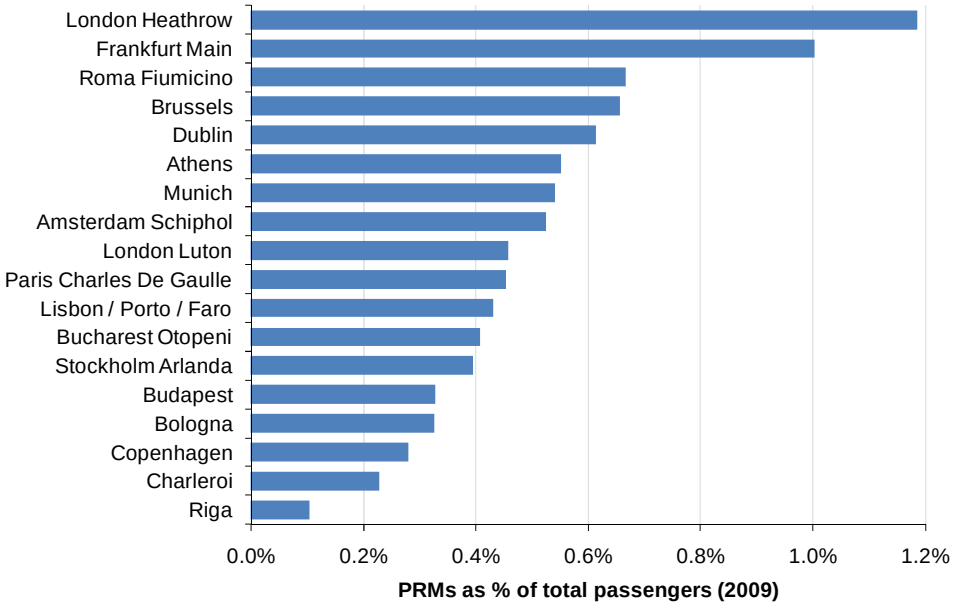
3.13 The views of stakeholders on the provision of services are discussed at the end of this chapter (see 3.76).

Statistical evidence for carriage of PRMs

The proportion of passengers requiring assistance

3.14 The frequency with which PRM assistance services are used varies considerably between airports. Figure 3.1 shows the rate of use at the airports in our sample for which we were provided with data. At London Heathrow 1.2% of passengers are PRMs requiring assistance, while at Riga only 0.1% of passengers require assistance. However, for most airports in the sample, the proportion requiring assistance is between 0.2% and 0.7%. ACI informed us that the higher rates at some airports were the result of the demographics of the passengers flying to these destinations.

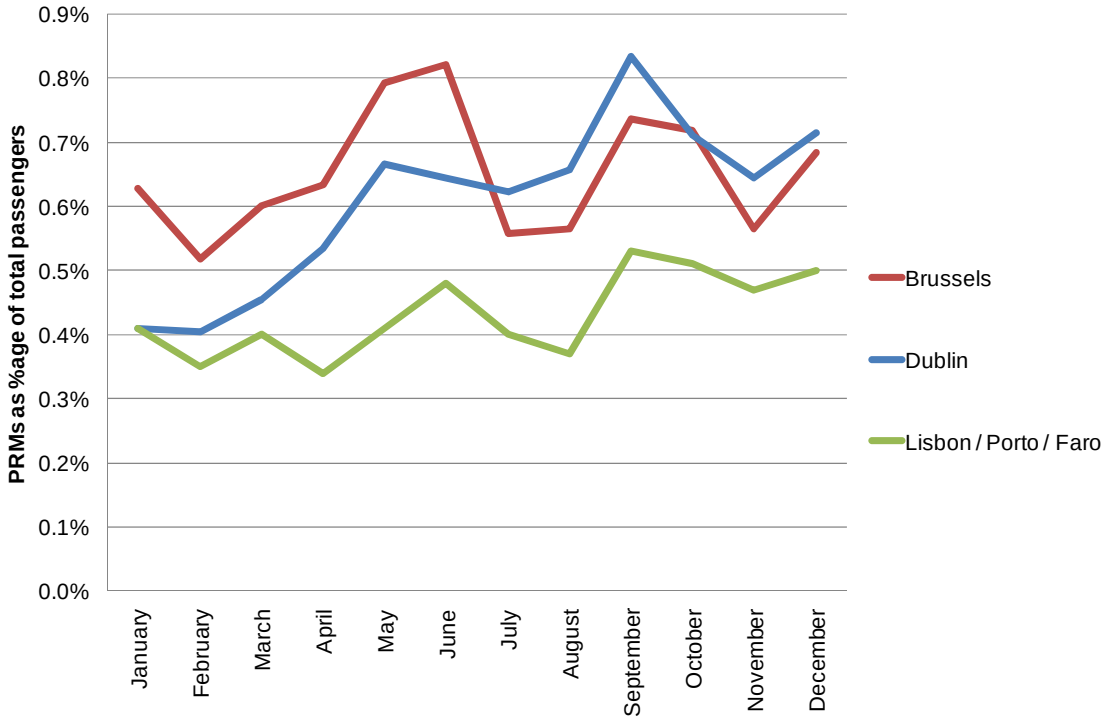
FIGURE 3.1 FREQUENCY OF PRMS REQUESTING ASSISTANCE AT AIRPORTS (2009)



3.15 Some other airports have higher proportions of PRMs requiring assistance, resulting from the demographic profile of passengers using the airports. These include holiday destinations popular with elderly people, such as Alicante, Malaga and Tenerife Sur; and pilgrimage destinations such as Lourdes.

3.16 Based on the information we have received from airports, the profile of PRM travel differs markedly from that of other passengers (see Figure 3.2). Most data indicates that the number of PRMs travelling tends to be lower in relative terms, and at some airports also in absolute terms, during July and August when total air travel is at a peak. At some airports, there appears to be a peak in December and January, however this is not consistent across all the airports for which we have data. Airports informed us that provision of services between April and September can be particularly affected by passengers travelling to cruise ships: these often carry high numbers of PRMs, and since a cruise ship usually disembarks passengers at the same time as it embarks the next load, there is a twofold increase in the number of PRMs travelling through the airport. The winter peak in PRMs is partly due to high rates of injury amongst passengers returning from winter sports holidays.

FIGURE 3.2 FREQUENCY OF PRMS OVER THE YEAR (2009)

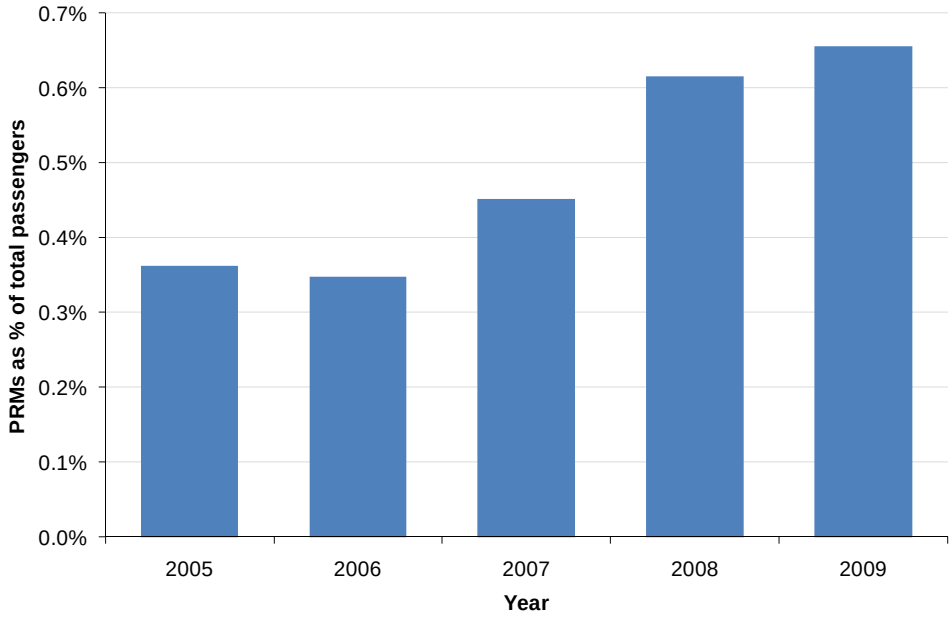


Trend in PRM travel

3.17 Several airports and airlines informed us that the number of PRMs requiring assistance has increased significantly since the introduction of the Regulation. It is difficult to verify this, as airports generally did not provide PRM services before July 2008, and therefore did not have a time series of data available. However, Brussels Zaventum airport introduced a PRM service similar to that required by the Regulation earlier, and as a result was able to provide figures for PRM's travelling between 2005 and 2010. This shows an increasing trend (Figure 3.3): the proportion of passengers

requiring assistance appears stable at approximately 0.35% over 2005 and 2006, and then climbs to 0.66% in 2009. It believed that this was a result of significant abuse of the services.

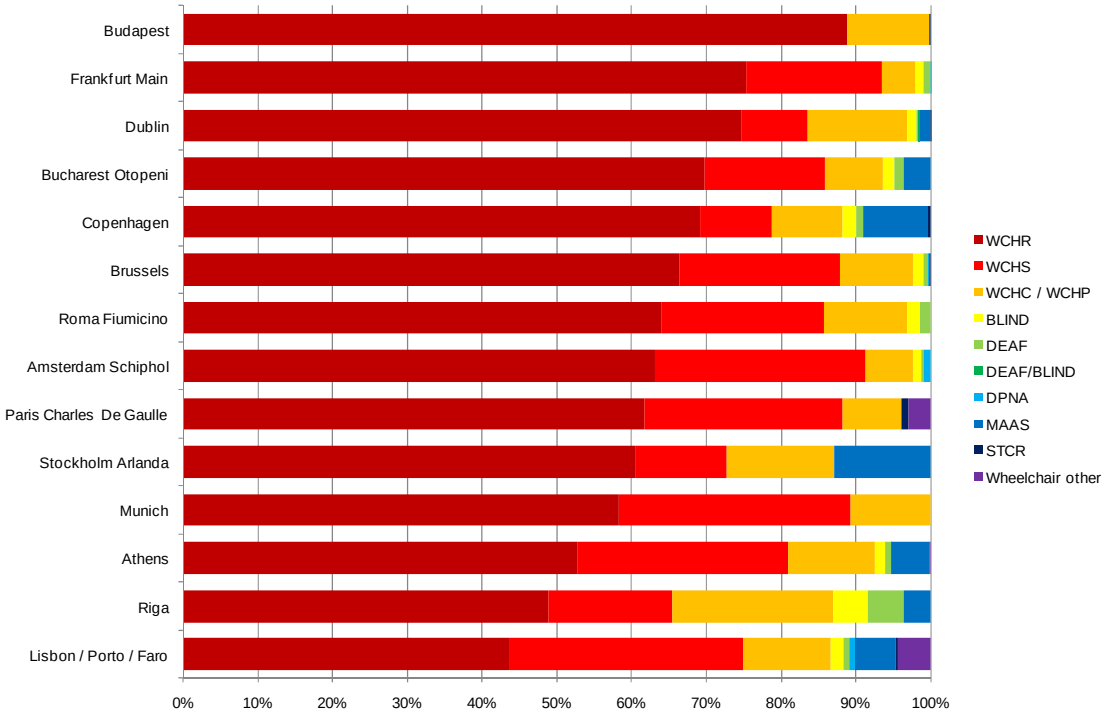
FIGURE 3.3 RATE OF PRMS OBSERVED AT BRUSSELS ZAVENTUM AIRPORT



Types of assistance provided

3.18 Assistance is often divided by airports into WCHC/WCHS (see 3.4), which requires significant time and resources, and others. We requested data on the types of passengers assisted from each of the case study airports and a summary of the data is shown in Figure 3.4. At all airports which provided data, the most frequent category of assistance was WCHR, although the proportion ranged from 44% to 89% (median 64%). The category "Wheelchair other" comprises wheelchair codes which do not fit into the other wheelchair categories: WCMP, manually powered wheelchair; WCBD, dry cell operated wheelchair; and WCBW, wet cell operated wheelchair. We have excluded the codes for medical cases and unaccompanied minors (MEDA and UM respectively) from this analysis, as they are not within the scope of the Regulation.

FIGURE 3.4 VARIATION IN TYPES OF PRMS ASSISTED (2009)



Abuse of services

3.19 Many airports – particularly larger and busier airports – reported that the services they provided for PRMs were sometimes used by passengers who did not appear to have the right to do so under the Regulation. A typical observation was of a passenger who was assisted in a wheelchair from a designated point of arrival through security and customs, and who then walked to the gate unassisted. Several types of passenger who might be motivated to do this were suggested:

- Passengers who feel confused by a large and complex airport, and do not feel that they would able to navigate it successfully;
- Passengers who do not speak the language used for the airport signs and announcements;
- Passengers who have no mobility impairment which prevented them from walking long distances within the airport, but who did not wish to; and
- Passengers (particularly those arrive at the airport with limited time before the departure of their flight) who wish to avoid lengthy queues at emigration, customs and security.

3.20 In addition, some airports reported cases where airlines had requested PRM assistance for passengers such as unaccompanied minors, passengers with excessive cabin baggage, and VIPs. These passengers might previously have been classified ‘meet and assist’ (MAAS) and any assistance required would have been paid for by the airline.

3.21 By its nature, it is hard to establish the true level of this abuse. PRM organisations noted that a passenger's disability may not always be visible. They also noted the perceived stigma attached to travelling in a wheelchair, and believed that many passengers would prefer to avoid this in preference to receiving the services offered under the Regulation.

3.22 The level of abuse reported varied between airports. Copenhagen Airport reported a rate of approximately one passenger per day whom they suspected was not entitled to services under the Regulation, while Brussels reported 20-30 passengers per day. Brussels Airport perceived abuse as a bigger problem than other airports within the sample.

3.23 However, Charleroi Airport informed us that abuse of services had decreased since the introduction of the Regulation, as a result of changes made to procedures. The two changes it identified as having had an impact were:

- requiring passengers who had not pre-notified requirements for assistance to wait; and
- boarding passengers requiring assistance after, rather than before, other passengers, and hence users of the PRM service no longer get first choice of seats on low cost carriers that do not allocate seats in advance.

3.24 These changes had the effect of reducing the number passengers without mobility needs who wished to use the services to avoid queues, and to obtain first choice of seating. However, these policies create some disadvantages for passengers who are entitled to the services.

Organisation of service delivery

3.25 Airport managing bodies may provide the services required under the Regulation themselves, or may contract with other parties to provide the assistance. Any arrangements for assistance to be provided through other parties must be compliant with published quality standards, and must be determined with the cooperation of airport users.

Overview

3.26 15 of the sample of 21 airports provided PRM services through a subcontractor (Table 3.2 below) and, of these, 12 were procured through open tenders. The advantage of procuring this service through an open tender include:

- a specialised provider might more easily be able to provide services of the cost or quality required;
- providing services through subcontractors facilitates the separation of costs of PRM services in an airport's accounts; and
- open tenders allow the airport to demonstrate that the costs are reasonable, as required by the Regulation.

3.27 Some of the largest airports split the tendering of provision into more than one contract, usually through grouping terminals together on a geographical basis.

3.28 In contrast, some of the airports provide the services required under the Regulation through specially trained airport staff. This may be through the creation of new department with this remit, or through extending the remit of a pre-existing department (for example the firefighting department). Airports may also subcontract some services (such as assisting passengers from the gate to the aircraft) to ground handling staff whilst providing other elements of the service themselves.

3.29 We also identified variation in the type of organisation providing services, where this was sub-contracted:

- **Subsidiary company of airport:** This approach is very similar to providing the services in-house, although an advantage is that it is easier for the airport to separate the accounts relating to the provision of PRM services.
- **Ground handling companies:** Airports may be able to realise economies of scope through provision of PRM services by ground handling companies.
- **Specialist PRM contractor:** Among the airports examined for this study, the most frequent type of organisation providing PRM services was a company that specialised in this kind of assistance service. Some such companies provided PRM services only, while a number provide it as part of a range of services. These other services might include cleaning services, facilities management, emergency assistance, and ambulance services.

TABLE 3.2 METHODS OF PROCURING PRM SERVICES AT AIRPORTS

Airport	Approach to procurement	Type of organisation providing PRM services
Amsterdam Schiphol	Open tender	Specialist PRM contractor
Athens	Open tender	3 ground handling companies
Bologna	In-house / non-competitive tender	Airport staff, 2 ground handling companies
Brussels	Open tender	Specialist PRM contractor
Bucharest Otopeni	In-house	Airport staff
Budapest	Open tender	Ground handling company
Brussels Charleroi	In-house	Airport staff
Copenhagen	Open tender	Specialist PRM contractor
Dublin	Open tender	Specialist PRM contractor
Frankfurt Main	Non-competitive tender	Subsidiary of airport
Lisbon	In-house	Airport staff, subcontracted ground handling staff
London Heathrow	Open tender	2 specialist PRM contractors
London Luton	Open tender	Specialist PRM contractor
Madrid Barajas	Open tender	Information not provided at interview
Munich	Open tender	Specialist PRM contractor
Paris Charles De Gaulle	Open tender	2 specialist PRM contractors
Riga	In-house	Airport staff
Roma Fiumicino	Non-competitive tender	Subsidiary of airport

Stockholm Arlanda	In-house	Airport staff
Warsaw	Non-competitive tender	Ground handling company
Zaragoza	Open tender	Information not provided at interview

3.30 Although the PRM service had only been provided by airports for around 18 months at the time of our research, we were informed by a number of airports that they were considering or were in the process of retendering the service. The primary reason given for retendering was that service quality had not been sufficiently high, although some airports cited a higher than expected increase in use of services after the introduction of the Regulation.

3.31 The Regulation also allows[9] for airlines to request a higher level of service than those set out in the quality standards for the airport, and to levy a supplementary charge for this service. However, none of the sample airports or airlines were requesting or providing such a service.

Consultation

3.32 The Regulation requires contracts for the supply of services under the Regulation to be entered into in cooperation with airport users and with organisations representing PRMs. Cooperation with airport users is usually through the airport users committee (AUC). Although this is intended to improve consultation, airlines informed us that in some circumstances it did not do so, citing examples where:

- the proceedings of the AUC were conducted only in the native language of the airport;
- only ground handlers were represented on the committee; and
- one stakeholder has a voting majority on the committee, allowing it to disregard the views of other carriers.

3.33 We were also informed of circumstances where the consultation provided by airports was extensive. London Luton retendered for PRM services in March 2010, and involved airport users (airlines and ground handling companies) at all stages of the tendering process, including the development of the specification, and the evaluation and scoring of bids.

Airport charges

3.34 The Regulation permits airports to fund the provision of assistance through a specific charge on airport users. This charge must be reasonable, cost-related, transparent and established in co-operation with airport users. It must be shared among airport users in proportion to the total number of passengers that each carries to and from the airport (this is typically calculated on the basis of departing passengers). The accounts of the airport relating to provision of PRM services must be separate from its accounts relating to other services, and it must make available to airport users and NEBs an audited annual overview of charges received and costs incurred relating to the provision.

[9] Articles 9 (4) and (5).

3.35 The majority of the case study airports recover costs for PRM assistance through a PRM charge levied on all departing passengers which is specific to the airport and set to fully recover the costs of the PRM service. However, we identified the following key variations in this approach:

- **Uniform charge:** The PRM charges in Spain and Portugal are uniform across the airports operated by AENA and ANA respectively. This approach appears to infringe the Regulation, which requires a specific charge "established by the managing body of the airport", although there is some uncertainty about this due to differences between the English and Spanish language versions of the Regulation. Both AENA and ANA believed that, since the service was provided across a network of airports, it was appropriate that there should be a uniform network charge.
- **Economic regulation:** Many airports are subject to economic regulation of the charges they may levy on airlines. At most of the airports in our sample, the PRM charge is excluded from the regulated price cap, but at Dublin and Brussels Zaventum the PRM charge is included within this. As a result, their flexibility to amend charges (for example to reflect a higher than expected use of PRM services) is constrained: for example, they may require regulatory approval for any changes, or have the level of any increases limited by a charging cap. Charges may also be fixed over the course of a given regulatory period.
- **Pre-existing provision:** Stockholm Arlanda and all other State-owned airports in Sweden provided some elements of the services required under the Regulation prior to its introduction. In Sweden, charges for services for WCHC and WCHS passengers were introduced in 2001 at a rate of 1 SEK (€0.10[10]) per departing passenger; charges have not yet been increased since the Regulation came into force to reflect the wider range of passengers requiring assistance, but we were informed that this is likely to happen in the next year.
- **Non-implementation of the Regulation:** With the exception of Athens, none of the airports in Greece provide assistance for PRMs. Assistance is provided by ground handling companies, and charges are negotiated directly between airlines and ground handling companies, and consequently not made public.

3.36 We were informed by ACI that the proportion of airports which identify this fee separately was 52% across the airports it surveyed, as opposed to 48% which include it in the passenger fee.

3.37 The types of costs which may be recovered using the PRM charge are:

- **Direct assistance costs:** The direct costs of the day-to-day running of the service.
- **Other incidental operating costs:** These may include maintenance, purchase of operating materials, other services, etc.
- **Capital expenditure:** Expenditure to invest in facilities required to provide services, such as mobility equipment and the fitting out of a dispatch office.
- **Administrative expenses:** These may include time spent by airport personnel in running the contract, and project costs such as airport management time in developing the tender.

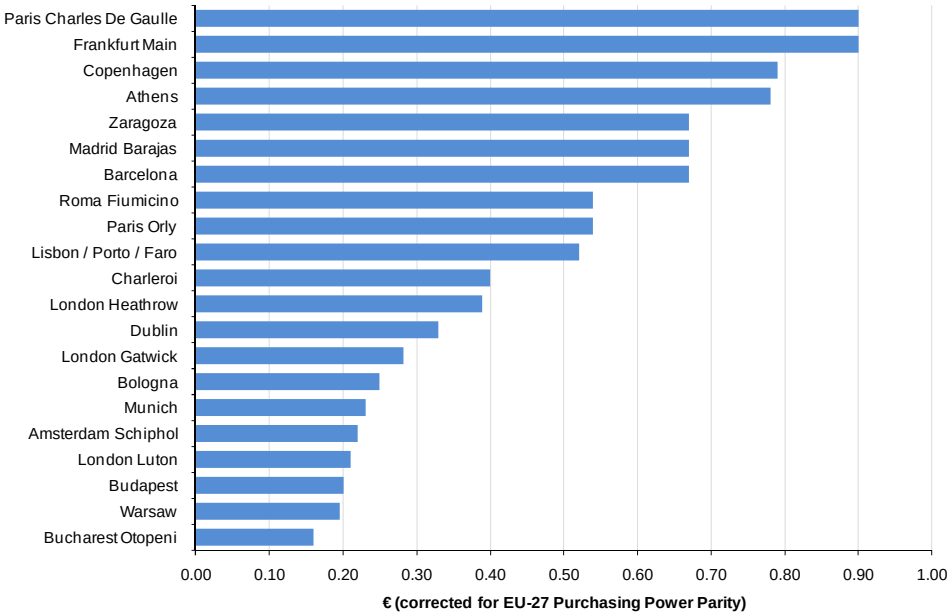
[10] Calculated on the basis of €1 = 9.7 SEK.

- **Other airport fees:** The PRM contractor may have to, for example, rent space from the airport and to pay a fee for doing so. This would also be recovered through the PRM charge.

Level of charges

3.38 Figure 3.5 shows the charges at the case study airports in euros, converted using current (January 2010) exchange rates where required. There is significant variation in the level of the PRM charge between airports, from a minimum of €0.16 in Bucharest to €0.90 at Frankfurt Main and Paris CDG.

FIGURE 3.5 AIRPORT CHARGES PER DEPARTING PASSENGER (€ AT CURRENT EXCHANGE RATES)



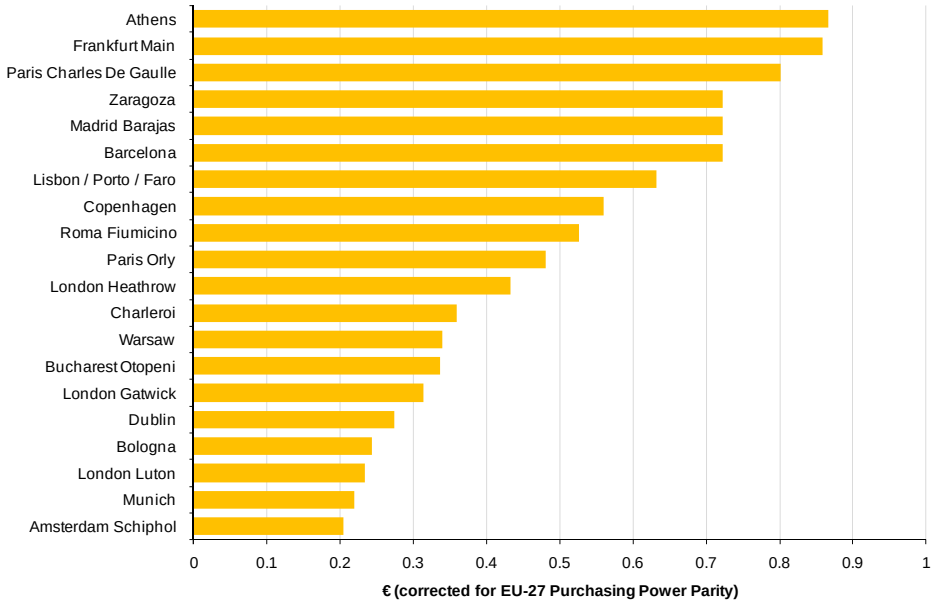
3.39 The variation in charges between airports may result from several factors, including:

- staff cost variation;
- quality standards in place;
- the frequency with which the PRM services are used;
- the proportion of connecting flights; and
- the design of the terminal or airport.

3.40 We discuss each of these possible reasons for variation in turn.

3.41 **Purchasing power parities (PPPs)** can be used to compensate for differences in price levels between States. Figure 3.6 uses Eurostat PPPs for 2008 to convert PRM charges in national currency to euros at average price levels for the EU-27. The harmonisation only very slightly reduces the variation in the charges (measured in terms of standard deviation).

FIGURE 3.6 AIRPORT CHARGES PER DEPARTING PASSENGER, 2009 (€ AT 2008 EU-27 PPP)



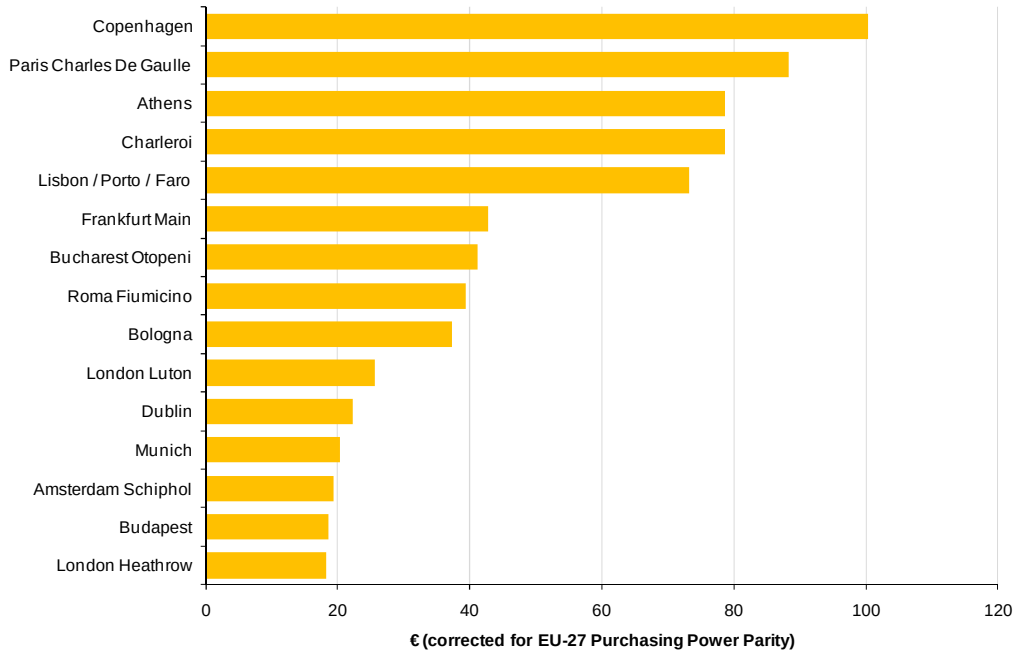
3.42 Although it was not possible to find published data showing the actual **level of service** offered to PRMs at any of the case study airports, the level of service set out in the PRM quality standards might help explain the variation in charges. To test this, we have calculated a weighted average PRM wait time and compared this with the PRM charge at each airport. This analysis suggests little or no correlation: for example, although the London airports state the highest service standards in terms of waiting times, the charges levied are lower than those at many other airports. Similarly, low charges at Bucharest are not reflected in longer proposed waiting times for PRMs requesting assistance.

3.43 It might also be expected that airports with **higher proportions of PRMs** would have higher charges. To examine this we calculated a proxy for the cost of assisting each PRM, for the airports for which we had data. This was obtained by dividing the PRM charge by the proportion of PRMs at each airport, to obtain the revenue gained by the airport for each PRM assisted.

3.44 It should be noted that there are some limitations to this analysis. It calculates revenue per PRM, and for this to be a valid proxy for costs, it must be assumed that charges are accurately cost-reflective, which is not the case in some airports: in Spain and Portugal the charge is uniform across all mainland State-owned airports, and does not therefore reflect local variation in costs; at State-owned airports in Sweden, the charge reflects only the costs of providing services for WCHC and WCHS passengers. For the costs to be cost-reflective it is also necessary that the frequency of use of the service is as forecast when the charges were calculated.

3.45 Figure 3.7 shows the results of the analysis. There is still significant variation between airports; the maximum cost per PRM assisted (€100 at Copenhagen, PPP adjusted) is 5 times the minimum cost (€18 at Bucharest, PPP adjusted). This shows that the variation in the number of PRMs does not fully explain the variation in the charge.

FIGURE 3.7 AIRPORT COSTS PER PRM ASSISTED, 2009 (€ AT 2008 EU-27 PPP)



3.46 The level of variation also does not appear to be accounted for by the **size of the airport**: the charge at London Heathrow is relatively low, while Paris CDG is relatively high.

3.47 Several airports cited **high proportions of connecting passengers** as a factor which increased costs. However, we do not believe that high proportions of connecting passengers would increase the costs of provision: transfer passengers are counted as two passengers in airport statistics and any PRM charge is levied twice, so if the service is less than twice the cost of that for an arriving or departing passenger, such passengers would in fact result in a cost saving relative to other PRMs. This view is supported by the data, where the charge at London Heathrow is relatively low.

3.48 **Terminal design** may impact on the amount of time required to provide assistance, or the efficiency with which it can be provided. For example, Amsterdam Schiphol airport, which has one integrated terminal building and the concourse is generally at the same level, can make extensive use of electric carts to transport multiple passengers together; this is not practical at airports such as CDG.

Changes to charges in 2010

3.49 The charges and costs in this section are based on those current in 2009, as this is the only complete year for which data was available. Where updated charges have been published for 2010[11], we have compared these with those for 2009. Most airports had not made any changes, but Munich and Rome Fiumicino increased charges by 48% and 28% respectively.

[11] IATA Airport, ATC and Fuel Charges Monitor, February revision, published March 2010.

3.50 London Heathrow changed the structure of its PRM charges in 2010. Whereas previously it levied a charge of £0.35 (€0.38) per passenger for all airlines, from 1 January 2010 the charges vary depending on the level of pre-notification. Airlines which pre-notify 85% or more of PRMs are charged £0.42 (€0.46) per departing passenger, while those which pre-notify 45% or less of their passengers are charged £0.83 (€0.91).

Consultation

3.51 Airports are required to determine charges in cooperation with users through airport user committees. The Regulation does not define cooperation further, however, and as a result the form this consultation has taken varies considerably. London Luton informed us that their tender process involved airlines, ground handlers and PRM organisations at all points of the tender process, from developing the specification to evaluating the bids and awarding the contract. In contrast, several airlines informed us that the consultation in Portugal and Spain was limited to the publication of a letter stating the amount the charge per person. We were also informed that consultations on PRM charges were often included in wider general charge negotiations.

3.52 A number of issues were raised regarding this cooperation.

- We were informed by several airports that certain carriers have contested the procedural steps taken by airport managing bodies to establish the charge. This has in at least one case been supported by an NEB taking a strict interpretation of the meaning of 'in cooperation with airport users', as requiring agreement between the airport and the airline both on the tender and the level of the charge. This has led to delays, particularly due to challenges by low-cost airlines, including requests to see cost information, which the airports regarded as unnecessary, after the tender processes were completed.
- Some airlines have blocked the process of approving charges by refusing to participate in the consultation.
- Some airports believed that direct involvement of users in the tender process can be problematic: without signing personal non-disclosure agreements, it may not be possible to share the commercially sensitive information included in tenders; there may also be conflicts of interests between some of the handlers and the tendering parties. However, the example of London Luton discussed above demonstrates that these barriers are not impossible to overcome.

Quality standards

Standards published

3.53 The Regulation requires all airports serving over 150,000 passenger movements per year to set and publish quality standards. Figure 3.8 indicates the proportions of airports publishing quality standards. The following airports had not yet done so:

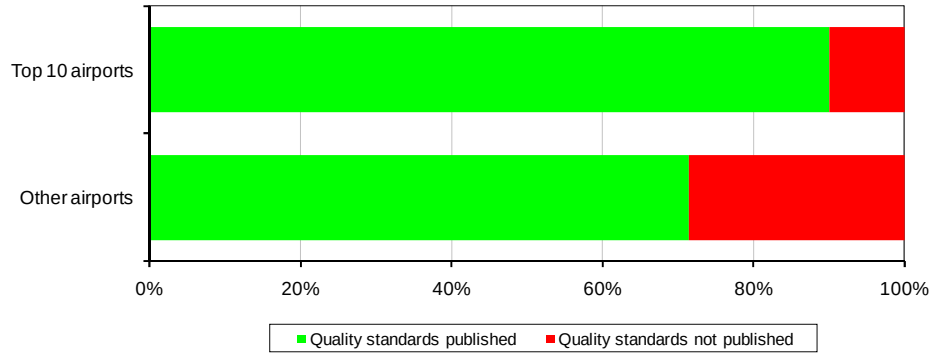
- Amsterdam Schiphol: quality standards are in the process of being re-developed with airlines, and have not been published yet;
- Bologna: standards not yet published;
- Budapest: standards published to airlines and handling companies by letter; and
- Stockholm Arlanda: standards published to airlines but not yet published on its

website; it informed us that the standards would be published soon.

3.54 Three of these airports provided the quality standards to us at interview, but Amsterdam Schiphol and Bologna did not provide any details of their quality standards.

3.55 We found that the largest ten European airports in terms of passenger numbers were more likely to publish quality standards that those outside the top 10.

FIGURE 3.8 PROPORTION OF AIRPORTS PUBLISHING QUALITY STANDARDS



Ease of finding quality standards

3.56 The ease with which the quality standards could be located on airport websites varied considerably. For the airports which published quality standards, some of the main issues encountered were:

- Having to click through an excessive number of links before finding the standards, e.g. the website of Charleroi Airport requires the user to click on five links before the standards can be viewed;
- Locating the standards on the site of the management company rather than within the section or website dedicated to the airport – this was the case for the Spanish airports for which the information is on the main AENA website;
- Using terminology which may not be obvious, avoiding the actual term 'quality standards', e.g. BAA use the term 'Service Level Agreement'; and
- Restrictions on language – Bucharest Otopeni, Brussels Charleroi and the Paris airports only publish quality standards on the local language versions of their websites.

Standards for waiting time

3.57 The standards defined by the case study airports are shown in Table 3.3 and Table 3.4 below. At all of the case study airports for which we were able to obtain standards, these are defined in terms of the percentage of PRMs who should wait for up to a given number of minutes. For example, at Barcelona, 80% of departing passengers who have pre-notified requirements for assistance should wait for 10 minutes or less from the point at which notice is given that they have arrived at the airport. This

approach is consistent with the example standards in Annex 5-C of ECAC Document 30[12], and eight of the airports in the sample (including Copenhagen, Munich and the AENA Spanish airports) follow these exactly.

3.58 There are however variations in both how the standards are structured and the level of the standards. Paris Charles de Gaulle is unusual in that, with the exception of the top 99% bracket, an additional ten minutes is added to the wait time for departing passengers located 'further away'. The published standards do not define how far away this is. Aéroports de Paris also define an additional category, of pre-notification of between 8 and 36 hours, for whom the standards are part-way between those applying to PRMs for which notification was received 36 hours or more before travel ('pre-booked'), and those for which notification was received less than 8 hours beforehand ('non-pre booked'). This is not shown in the table as it is not comparable with the standards offered by the other airports.

3.59 There are also some differences in how the wait time for arriving passengers is measured. At most airports, it is measured from when the aircraft reaches the parking position, but there are the following exceptions:

- From descent of last passenger: Rome Fiumicino;
- From boarding bridge lock: Brussels; and
- Not defined: Athens, Budapest, Lisbon, Stockholm Arlanda.

3.60 The standards proposed for pre-booked departing passengers are generally consistent, at least in terms of the waiting times which percentages are applied to: 10, 20 and 30 minutes are the most commonly used intervals, at 80%, 90% and 100% respectively. For non pre-booked passengers 80%, 90% and 100% apply to 25, 35 and 45 minutes. Better standards are offered by the UK and French airports that we reviewed. This is also reflected in the standards for arriving passengers, with the London and Paris airports targeting zero waiting time for 90-100% of passengers. There is also a clear pattern for arriving passengers, with 80% of pre-notified PRMs waiting no more than 5 minutes, 90% no more than 10 and 100% no more than 20 minutes. Standards are not as high as this for non pre-booked passengers, however.

3.61 Several airports informed us that the standards suggested by ECAC Document 30 for arriving passengers were not short enough to meet airline requirements on turnaround times: if the airports adhered only to these standards, there would be significant operational issues. Some of these airports published standards in line with Document 30, but stated that they actually provided services in much shorter times.

[12] ECAC Policy Statement in the field of Civil Aviation Facilitation, 11th Edition/December 2009.

Other elements of published quality standards

3.62 Some airports define additional standards other than the waiting time targets, generally reflective of the assistance set out in Annex 1 of the Regulation. For example, Charleroi provides detailed information regarding the level of assistance which will be provided for PRMs, for example support for embarking and disembarking the aircraft, or for dealing with customs formalities. Brussels Airport also defines how many assistants will accompany a PRM, depending on their type of disability.

3.63 Some airports also include more general, qualitative targets, less directly related to the assistance offered to an individual PRM. For example, Luton Airport's published standards include responding to 'disabled customer enquiries to offer guidance and advice', and auditing to ensure compliance with all disability legislation. Athens Airport also provides extensive details of the measures it has taken to accommodate PRMs, including disabled-access internet points and a special walkway for partially sighted PRMs.

TABLE 3.3 SCOPE OF QUALITY STANDARDS: DEPARTING PASSENGERS

	Pre-booked / airport informed *% of PRMs who should wait no longer than (minutes)*										Non-pre-booked / airport not informed *% of PRMs who should wait no longer than (minutes)*									
	5	10	15	20	25	30	35	40	45	60	5	10	15	20	25	30	35	40	45	60
Athens		80%		90%		100%							80%		90%		100%

Monitoring

3.64 While the Regulation requires larger airports to develop and publish quality standards, it does not require them publish whether they are actually met, and none of the case study airports do so. Nonetheless most airports do undertake some form of monitoring and several provided us with performance statistics. There were a number of approaches to monitoring:

- **Time spent waiting to receive assistance:** This is the most common measure used by airports, as set out above. These times are often measured by time stamps inputted into the personal digital assistants (PDAs) or equivalent devices carried by staff providing assistance to PRMs (discussed earlier). The data recorded can often give wider outputs than solely the time taken to receive assistance, such as time from gate to boarding, or time waiting once disembarked from an aircraft. This approach should give accurate information on the time spent waiting by passengers, but does not address other aspects of quality of service.
- **Spot checks:** Many airports reported that the PRM service manager will undertake frequent unannounced tours of the services and infrastructure provided within the airport. They may check, for example, that the designated points of arrival and departure are functioning correctly. This approach is useful to identify wide-ranging problems but may not be sufficiently systematic to identify all problems.
- **Surveys:** A number of airports reported using surveys to obtain feedback from passengers. Typically, a postcard with survey questions to be completed was given to PRMs at some point during their use of the airport's services, which could be submitted at information desks or at various comment boxes place throughout the airport. These covered questions on the services received, and in some cases assessed the passenger's knowledge of the Regulation. A potential problem with this approach is the lack of accessibility for all passengers.
- **Mystery shoppers:** 'Mystery shoppers' are people (typically PRMs) paid to anonymously receive the service provided by the airport and afterwards give detailed reports or feedback about their experiences. This approach gives a thorough appraisal of the service provided at a particular time.

3.65 Table 3.5 sets out the actions airports have taken to monitor their quality standards. Most airports do not include any external auditing in their monitoring processes; Athens, Bucharest Otopeni, Luton, Madrid Barajas, Zaragoza include some external checks.

TABLE 3.5 AIRPORT ACTIONS TO MONITOR QUALITY STANDARDS

Airport	Measures monitored
Amsterdam Schiphol	Manual checks of numbers of PRMs and service quality
Athens	Audits, including 'mystery PRM' audit; PRM surveys
Bologna	PRM survey; time taken for assistance
Brussels	Time taken for assistance (in real time); passenger complaints
Bucharest Otopeni	Passenger surveys; complaints; external audits by NEB, PRM organisations, Commission, and airlines
Budapest	Monthly reports of time taken for assistance and passenger complaints; daily contact with service provider; 'walk-throughs' of service provided; airline audits

Brussels Charleroi	Passenger complaints received
Copenhagen	Time taken for assistance (in real time)
Dublin	Weekly audits of time taken; annual training audit
Frankfurt Main	Monthly reports of time taken for assistance
Lisbon	Time taken for assistance
London Heathrow	Time taken for assistance; missed flights; flight delays; internal audits; regular meetings with service providers; complaints from passengers and airlines; some of these measures monitored through a 'dashboard'; monthly 'scorecard' review
London Luton	Passenger feedback forms; 'walk-throughs' of service provided; internal and external audit teams of provider; airline and PRM organisation audits
Madrid Barajas	Monthly meetings with service providers and PRM organisation; surveys by service providers; independent surveys; PRM feedback forms
Munich	Monthly reports of time taken for assistance; spot checks; quality service manager as 'mystery shopper'; yearly passenger survey
Paris Charles De Gaulle	Flight delays for which PRM services are responsible; passenger complaints
Riga	Questionnaires to airlines, passengers and others; daily service monitoring by duty managers; internal audits
Rome Fiumicino	Time taken for assistance (in real time); other unspecified monitoring
Stockholm Arlanda	Time taken for assistance; passenger complaints; AOC meetings
Warsaw	Infrequent spot checks of time taken
Zaragoza	Monthly meetings with service providers and PRM organisation; surveys by service providers; independent surveys; PRM feedback forms

3.66 In addition, we found that most NEBs had not undertaken any direct, systematic monitoring of whether airports were meeting quality standards. Table 3.6 sets out the actions NEBs have taken to monitor airport quality standards.

TABLE 3.6 NEB ACTIONS TO MONITOR QUALITY STANDARDS

Member State	Monitoring
Belgium	Inspections of infrastructure and procedures
Denmark	No monitoring, biannual meetings
France	No monitoring
Germany	No monitoring
Greece	Inspections of infrastructure and procedures at Athens, not of regional airports
Hungary	Inspections of infrastructure and procedures, questionnaire on training
Ireland	No monitoring
Italy	Inspections of quality standards including infrastructure, procedures, information, training
Latvia	Inspection of infrastructure, procedures, waiting times, documentation
Netherlands	Inspection of infrastructure and procedures
Poland	No monitoring
Portugal	No monitoring

Member State	Monitoring
Romania	Request annual reports
Spain	Checks of staff training and procedures
Sweden	No monitoring
United Kingdom	Inspections of infrastructure and procedures, attend monthly PRM groups at major airports, less frequently at smaller airports

Complaints to airports

Airport processes for handling complaints

3.67 Most case study airports accepted complaints relating to PRM services in the same way as other complaints. Often airports will accept complaints via email, via information desks at the airport, or via forms which can be filled in and deposited in comment boxes located at various points within the terminals.

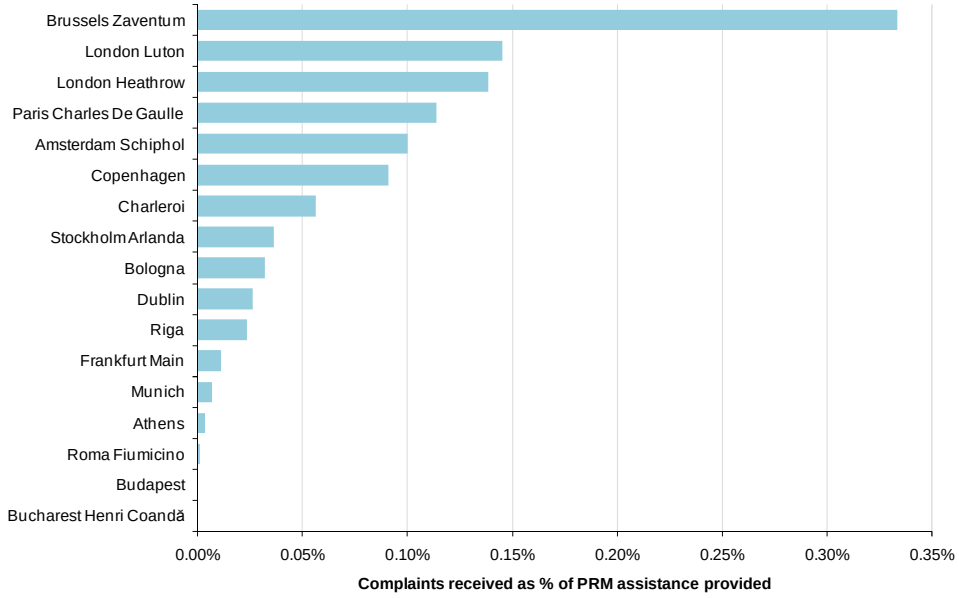
3.68 Typically, complaints are registered in a database which is reviewed by a member of staff on the service quality team. The staff member allocated to the complaint reviews documents relating to the service referred to in the complaint, and talks to the member of staff who provided the service (this member of staff may be employed by either the airport or a contractor). After investigating the complaint, the staff member writes a report including the findings and any response which is sent to the passenger. The service quality manager may review monthly reports on complaints, which will include complaints regarding the PRM service.

3.69 The level of detail to which the complaint handling process is specified varies depending on the volume of complaints received: an airport which handles many complaints may follow clearly defined procedures for handling complaints, while an airport which receives only few complaints may address them on a more ad hoc basis.

Number of complaints received

3.70 For each airport in the case study sample we requested the number of complaints received relating to provision of services to PRMs. We compared the data received with the assistance provided to give a rate of complaints, shown in Figure 3.9. This shows a high level of variation in the number of complaints received. Most of the larger airports have a similar rate of complaints. The highest rate of complaints is at Brussels Zaventum (0.33%, over double the next highest).

FIGURE 3.9 RATE OF COMPLAINTS RECEIVED BY AIRPORTS, 2009



3.71 Some airports note that they have received no complaints regarding the Regulation since its introduction, while during the same period they have received several thousand complaints regarding aspects of their service not covered by the Regulation. This is evidence that their system for receiving complaints is functioning well, but it is not necessarily evidence that there are no problems regarding the implementation of the Regulation. We were informed by several PRM organisations that a mobility-impaired passenger who receives poor service may be reluctant to complain, as they may wish to forget the incident, and since these passengers may face many obstacles during a journey, they may take the view that reporting the more frequent minor incidents is not worthwhile. In addition, the lack of compensation in most Member States means there is little direct incentive to complain.

Training

3.72 The Regulation requires that airports provide training relating to PRMs for their personnel:

- All personnel who provide direct assistance to PRMs, including those employed by subcontractors, must have knowledge of how to meet the needs of various different types of PRMs.
- All airport personnel who have direct contact with the travelling public must have disability-equality and disability-awareness training.
- All new employees must attend disability-related training and personnel must have appropriate refresher training.

3.73 We requested information on the training provided at each of the airports in the sample for the study. As many considered this material confidential, we were not able to obtain many copies of training documents. From the information we have received, the content of the three types of training may typically include the following:

- **Staff assisting PRMs directly:** Most courses described included: theoretical training on rights and obligations under the Regulation, training in awareness of disabilities, and physical training in lifting and other handling of PRMs. Some elements of training may be given to all staff; these could include Ambulift licenses and sign language. It may also include training not directly related to PRMs, such as training in first aid. Not all of the training courses we were given information for included provision for 'soft' elements of interacting with PRMs, such as ensuring that the person providing assistance is at the same height as a wheelchair user when talking to them, or being aware of the type of circumstances which could cause a person with autism to become distressed.
- **Passenger-facing staff:** This training is typically the disability-equality and disability-awareness sections of the training for staff providing direct assistance to PRMs. Several airports ensured that this training was undertaken by all staff working in the airport (including external staff) by making this training a requirement for obtaining the security clearance pass needed to work in the airport. It may include specific training for security staff who perform searches on PRMs, relating for example to how to search a passenger in their own wheelchair, and awareness of the importance to blind passengers of having belongs replaced in exactly the same place within their baggage.
- **Other employees:** The form of this training was often a short video on disability awareness. Some airports did not provide this training, or did not make it compulsory, which appears to be an infringement of the Regulation.

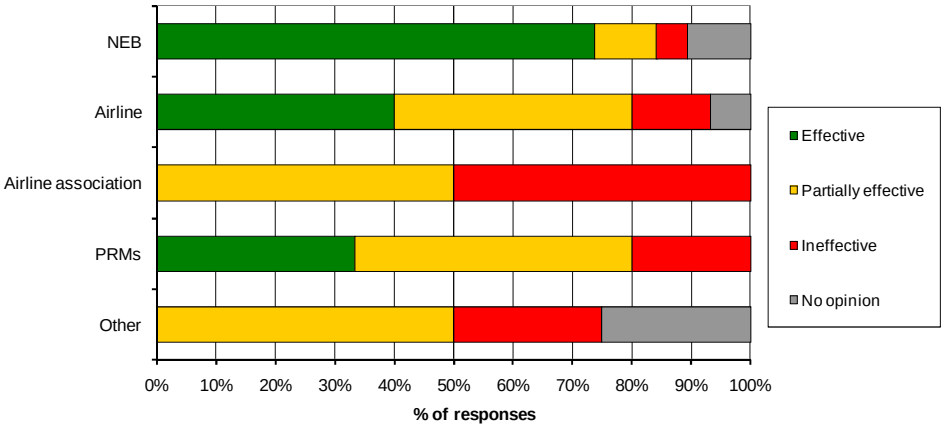
3.74 Training was delivered either internally, by external contractors specialising in training, or by PRM organisations. Several airports informed us that they used a "train the trainer" approach, where employees who have received the training then go on to train other employees. Several airports informed us that their training programmes were compliant with the guidance given in Annex 5-G of ECAC Document 30. A number of airports had involved PRM organisations in their training in some way, including in the development of the training, in its delivery, or through audit and approval. Several airports informed us that they had sought assistance from local PRM organisations but had found this problematic.

3.75 The lengths of the training programmes about which we were given information varied widely. We were given information relating to 6 training programmes for those providing direct assistance to PRMs: of these, 4 lasted 3-6 days, while two lasted 12 days or more. The length of training for passenger-facing staff also varied, with some airports requiring a full day of training whilst others only required the staff member to watch a 20 minute video. Refresher courses also varied considerably in length (between 1 and 4.5 days) and frequency: one airport informed us that it had monthly refresher training, while another required refresher training every 2 years.

Stakeholder views on effectiveness of implementation

3.76 We asked each of the stakeholders we contacted about how effectively they believed airports had implemented the Regulation; views vary considerably between different groups of stakeholders (Figure 3.10 below). Airlines and PRM organisations both believe that there are significant improvements to be made, but over 70% of NEBs believe that the actions of airports are largely sufficient. The rest of this section summarises the views expressed by stakeholders.

FIGURE 3.10 VIEWS OF STAKEHOLDERS ON AIRPORT EFFECTIVENESS



Airports

3.77 Most airports viewed their own actions as effective implementations of the Regulation. The most common problem reported by airports was misuse of the PRM service, however the level of impact of this reported misuse varied considerably between airports. The following other issues were identified by airports:

- Connecting flights: Minimum connection times, while sufficient for other passengers, can be insufficient for a PRM.
- Initial implementation of the Regulation: Several airports informed us that they had had problems with subcontracted service providers; a number had since retendered the service because of unsatisfactory service quality.
- Several airports informed us that they had had difficulty obtaining the cooperation of PRM organisations when developing quality standards.

Airlines and airline associations

3.78 Many airlines reported that quality of service and level of charges varied considerably between airports. This did not necessarily relate to size of airport: some airlines informed us that larger airports tended to provide better assistance, while other airlines informed us that their provision tended to be worse. Few airlines reported significant delays due to PRM services.

3.79 The most common problems with airport implementation of the Regulation reported by airlines related to airport charges. These issues were raised, in particular, by low cost and charter carriers:

- many airlines believed that the method of determining charges was not transparent and that the charges determined by airports were not reasonable or cost reflective;
- many airlines reported that the costs of the PRM service had increased (in some cases significantly) since the introduction of the Regulation, relative to the previous situation when the PRM service was contracted directly by the carrier, generally from its ground handler;

- this increase was believed by several airlines to be a result of overstaffing, or by some as a result of the inclusion of a margin, which they believed to be a contravention of the Regulation;
- at the same time as this perceived increase in cost, many airlines believed the quality of service had decreased, or at best not improved, since the introduction of the Regulation, and that the charges therefore represented poor value for money; and
- some States (in particular Spain and Portugal) have introduced uniform charges for services at State-operated airports, which airlines do not believe are cost-reflective or give value for money.

3.80 Some airlines informed us that they had serious concerns regarding the safety of uses of the PRM assistance services provided by airports, and noted that the airlines have no right to audit or directly influence the service provider.

3.81 Airline associations raised many of the same issues. ELFAA had particularly negative views regarding the assistance provided by airports: it believed that assistance was provided by unskilled staff and that the quality had decreased as a result, and that the cost of provision had tripled at some airports. It also believed that services were poorly synchronised with airline schedules. All of the airline associations from whom we obtained a response raised at least some concerns on all points regarding charges, including whether the costs were reasonable, cost-related and transparent, and whether the cooperation with airlines was sufficient.

NEBs

3.82 Most NEBs believed that airports had implemented the Regulation effectively. Several informed us that they believed there had initially been problems with implementation, but that these were now resolved. Those that believed there were areas which should be improved identified problems with designated points, infrastructure, delays on arrival and provision of information. It is not clear whether the level of supervision by most NEBs would be sufficient to allow an in-depth analysis of airport effectiveness (see 5.42).

PRM organisations

3.83 Most organisations representing disabled people believed there were some issues with the implementation of the Regulation by airports, and identified issues at all points of the process. Most organisations also noted that there was wide variation in the quality of service provided at different airports; several believed that this was a result of variation in the training given. Frequently identified problems included:

- **Mobility equipment is frequently damaged:** Many PRM organisations informed us that understanding of mobility equipment was poor and that training regarding it was insufficient. They believed that this poor understanding amongst airport and ground handling staff contributed to frequent damage. There was an expectation amongst most of the PRMs using wheelchairs that we spoke to that, if they travel by air, there is a high likelihood their chair will be damaged. For disabled people with extremely limited mobility who rely heavily on their wheelchair and may have adaptations particular to their needs, damage to their chair can be extremely distressing.

- **Lengthy waits for disembarkation:** Although the initial disembarking from the plane may be completed within the time set out in the quality standards, the passenger may then have to wait a long period of time in a holding area before the rest of the arrivals procedure is finished.
- **Information provision is poor:** This includes information on the layout of the airport, accessible real-time information on flights, and information on the rights of PRMs.
- **Websites are inaccessible:** We were informed by many organisations that airport websites are frequently inaccessible to visually impaired people.
- **Poor training of staff:** Several organisations reported that the interaction of airport assistance staff with PRMs could be poor. Examples of this included the assumption that all PRMs require a wheelchair, and where the assistance staff talk to a companion of a PRM rather than directly to the PRM.
- **Inability to use own wheelchair:** As discussed above, some wheelchair users with particularly limited mobility may wish to use their own wheelchair for as long as possible. We were informed that many airports do not permit the use of a passengers own chair up to the gate, and that some have a policy of transferring the passenger to an airport chair at check-in.
- **Inadequate provision where connection times are long:** Where there is a wait of several hours between the arrival of one flight and the scheduled departure of the connecting flight, at some airports this may result in a PRM being left unattended for a long period in an area without facilities or assistance.
- **Insufficient time allowed for connections:** The minimum connection time given by airports may not be sufficient to unload, transfer and board a PRM. This is a particular problem at larger, more complex airports with multiple terminals.
- **Parking provision:** A number of issues were raised with the parking spaces made available to PRMs. These included comments on inconvenient location, insufficient capacity, or inappropriate requirements for payment.
- **"Holding areas":** Some airports do not enable PRMs to access departure lounge facilities such as shops or restaurants, and require them to remain in a "holding area" for PRMs. Although such access to facilities is not required by the Regulation, it can significantly improve the experience of air travel of PRMs, and is provided by many airports.
- **Communication of arrival:** Communication of arrival at the airport can be difficult, for example through poor signage for points of communication, or points of communication failing to respond to calls for assistance.
- **Poor provision for the visually impaired:** Many airports do not provide adaptations to allow visually impaired passengers to access the airport independently. These can include tactile surfaces or Braille maps. We were also informed that training on how security staff should search the bags of these passengers was often lacking; it is important that all items are returned to their original location, as otherwise the passenger may have difficulty finding them.

Other organisations

3.84 The other organisations we interviewed raised issues which have been raised by the stakeholder groups already discussed. These included:

- "Teething problems" when the Regulation was first introduced;
- Poor provision of information;

- Variability of training; and
- Falling service levels, in particular falling standards of safety.

Conclusions

3.85 All airports in the sample for this study had implemented the provisions of the Regulation. We were informed that the regional airports in Greece had yet to effect the change from provision by ground handlers to provision by airports, but we were not told of any other airports at which the Regulation has not been implemented. Most of the sample airports had contracted the provision of PRM assistance services to an external company, and several had changed their service provider within 18 months of the Regulation coming into force; this was interpreted by some as a sign that initial procurement and specification had not met actual needs.

3.86 The service provided at the sample airports varies in terms of a number of factors including the resources available to provide the services; the level of training of the assistance staff; the type of equipment used to provide services; the facilities provided to accommodate PRMs (such as PRM lounges). According to the information provided by PRM organisations, there is resulting variability in service quality, although this is difficult to quantify.

3.87 There is also significant variation between airports in the frequency with which PRM services are requested: the level of use of the service varies by a factor of 15 between the airports for which we have been able to obtain data. The type of PRM service requested also varies considerably between airports. Both the frequency of use and the type of service required are likely to be affected by the varying demographics of the passengers using different airports.

3.88 The Regulation requires airports to publish quality standards. Most sample airports had done so, although some had published them only to airlines and other service users. Almost all quality standards followed the example format set out in ECAC Document 30, which defines the percentage of PRMs who should wait for up to given numbers of minutes. Some airports published qualitative measures in addition to these time standards, such as descriptions of the treatment the passenger should expect at all points of the service. However, none of the sample airports had published the results of any monitoring of these quality standards, and whilst most did undertake monitoring in some form, only four had commissioned external checks of the service.

3.89 The Regulation allows airports to levy a specific charge to cover the costs of assistance. All but one of the sample airports had done so. The level of charges varied considerably. We analysed this charge to examine whether variation could be explained by higher frequency of use of the service, differences in price levels between States, or differences in service quality, but there was no evidence that this was the case. The design of the airport may be a further factor influencing the cost of service provision and hence the level of charges.

3.90 Some stakeholders believe that the requirements to select contractors and establish charges in cooperation with users and PRM organisations were not followed thoroughly. Many airlines did not believe that consultation on either element had been sufficient, and this view was shared by some PRM organisations. There were a

number of barriers to effective consultation, including linguistic restrictions and airport user committees which failed to include all interested stakeholders. Consultation with airlines was reported as particularly poor in Spain, Portugal and Cyprus. In contrast to this, we note that several airports stated that they had sought the participation of PRM organisations but had found this difficult to obtain.

3.91 The Regulation requires airports to provide specialised disability training for staff directly assisting PRMs, and whilst all sample airports had done so, there were significant variations in the length and format of this training. The shortest training course among those for which we have data was 3 days long, while the longest lasted 14 days. There was similar variation in the length of training provided for passenger-facing staff who did not provide direct assistance. A number of airports informed us that they did not provide disability-awareness training for staff not in public-facing roles, or only provided it on a voluntary basis.

4. APPLICATION OF THE REGULATION BY AIRLINES

Introduction

4.1 Regulation 1107/2006 also sets out requirements for air carriers relating to their treatment of passengers with reduced mobility (PRMs). This section assesses how airlines are implementing these requirements. Information is drawn from two key sources:

- a detailed review of information published by the case study airline on their websites, against a range of criteria; and
- interviews with representatives of the carriers and other stakeholders.

4.2 This section begins by outlining the obligations imposed on airlines by the Regulation, and evaluates how airlines are implementing these requirements.

Requirements of the Regulation for air carriers

4.3 The Regulation imposes a range of requirements on airlines, which can be summarised as follows:

- **Prevention of refusal of carriage:** The Regulation prohibits airlines from refusing carriage or accepting reservations from PRMs, unless this is necessary to comply with safety requirements, or necessitated by the physical constraints of the aircraft. Where boarding is refused, the provisions of Regulation 261/2004 should apply with regard to refunds or rerouting. Airlines are permitted to require that a PRM be accompanied by a person who is able to provide any assistance that is required (again subject to this being necessary to meet safety requirements), and are required to publish any safety rules which they attach to the carriage of PRMs.
- **Transmission of information:** Airlines are required to take all necessary measures to enable the receipt of PRM assistance requests at all points of sale. Where such requests are received up to 48 hours prior to departure, the airline should transmit the information to the relevant airport(s) at least 36 hours before departure, or as soon as possible if notification is received from the passenger less than 48 hours before departure. Following departure of a flight the airline is also required to provide the destination airport with details of the PRMs requiring assistance on the arriving flight.
- **Assistance:** Annex II specifies the level of assistance which air carriers should provide to PRMs. This comprises carriage of assistance dogs, transport of up to two items of mobility equipment, communication of flight information in accessible formats, making efforts to accommodate seating requests (and seating accompanying persons next to the PRM where possible) and assistance in moving to toilet facilities.
- **Training:** All employees (including those employed by sub-contractors) handling PRMs should have knowledge of how to meet their needs. Disability-equality and disability-awareness training should be provided to all airport personnel dealing directly with the travelling public, and all new employees should attend disability‑related training.

- **Compensation for lost or damaged mobility equipment:** Airlines are required to compensate passengers for lost or damaged mobility equipment or assistive devices, in accordance with national and international law.

Published safety rules

4.4 Article 4(3) requires airlines to publish the safety rules relating to carriage of PRMs. The Regulation does not state in any more detail what these safety rules should cover, but we would expect from the context that this is intended to mean rules relating to where carriers would exercise a derogation under Article 4(1) to allow refusal or limitation of carriage, or for where passengers would have to be accompanied. This would include any rules necessitating limitations on the number of PRMs which can be carried, restrictions on the types of PRM posing specific safety risks, or limitations on their carriage or on that of mobility equipment due to the size of aircraft.

4.5 In some cases the information published by airlines is in the form of a document defined as 'safety rules' or 'information pursuant to Regulation 1107/2006', but more commonly information is provided on a web page (or pages) without these descriptions. The limited use of the 'safety rules' term by airlines may indicate that carriers do not understand what is meant by the term, or that the requirement is open to interpretation. It is also possible that airlines do not have specific PRM safety rules – both KLM and SAS informed us that the same safety rules apply to PRMs as to all other passengers.

4.6 The airlines' Conditions of Carriage may also provide a useful source of information on policy on the carriage of PRMs, and in some cases may provide more detail than dedicated PRM web pages.

4.7 Seven carriers' Conditions of Carriage also refer to other requirements (often described as 'Our regulations' or 'Other regulations') which apply to carriage of PRMs. In the sample we have reviewed, the reference to such regulations does not always specify exactly what the scope of these is or where they are to be found. This may infringe the requirement in Article 4(3) to publish any safety rules affecting PRMs, and may also raise issues of consistency with the Unfair Contract Terms Directive, as the conditions on which bookings are made should be transparent at the time. Whilst some airlines' Conditions state that these regulations are published on their websites, the following case study carriers' Conditions include such references without saying where the information can be found:

- Air Baltic;
- Emirates;
- SAS; and
- TAP Portugal.

4.8 The carriers which provided the most detailed information set out the information listed below, and we would therefore expect a comprehensive PRM web page to provide at least some information on these topics:

- Any limitations on the carriage of PRMs, for example a limit on the number that can be conveyed on a given flight;

- Advance booking requirements for any PRM requiring assistance;
- Conditions under which an accompanying passenger will be required;
- Guidance on the carriage of assistance animals;
- Policies on the carriage of equipment, e.g. wheelchairs, stretchers and oxygen; and
- Any assistance which will be offered on board.

Information actually published by carriers

4.9 Three of the sample airlines (Air Berlin, easyJet and Ryanair) provide either 'safety rules', or a notice specifically stated to be pursuant to Regulation 1107/2006. In a further six cases Regulation 1107/2006 is mentioned in a first sentence of the web page / PRM document, or elsewhere in the text.

4.10 We found that eight of the sample airlines include on their website all the information likely to be required. This was normally in the form of a web page, sometimes with sub-sections, however AirBaltic and KLM provide downloadable documents containing all PRM guidance. Delta also provides a PRM brochure, but this does not contain all the information provided on the PRM web page. In the remainder of cases airlines provide fairly comprehensive web pages, but omit certain items which may appear on other sections of the website (for example in the Conditions of Carriage).

4.11 In some cases we found inconsistencies between the PRM web page and that the information provided in the Conditions of Carriage. For example, Delta's Conditions of Carriage state that 48 hours' advance notice is required for any PRMs who wish to receive special assistance, but the PRM information section states that 48 hours' advance notice is only required if the passenger needs to use oxygen during the flight, requires the packaging of a wheelchair battery for shipment as checked luggage, or is travelling with a group of 10 or more people with disabilities. Austrian Airlines' PRM information emphasises the importance of booking in advance, but does not reflect the stronger wording in the Conditions of Carriage, which state that carriage of PRMs 'is subject to express prior arrangement'. Similarly, the Conditions of Carriage of Alitalia, Brussels Airlines, Delta, Ryanair and Wizzair state that carriage may be refused to PRMs if not arranged in advance; however although the PRM webpage states that assistance should be requested at the time of booking, it is not indicated that failure to do this may result in denial of boarding.

4.12 Some of the rules set out in airlines' Conditions of Carriage do not appear in the PRM information section of the website. For example, Thomsonfly imposes a limit on the number of PRMs or wheelchairs which will be accepted per flight in their Conditions of Carriage, which does not appear on the airline's PRM web page.

Table 4.1 outlines the coverage of the PRM web pages against the criteria set out in paragraph 4.9 above.

TABLE 4.1 INFORMATION AVAILABLE ON CARRIER WEBSITES

Airline	Information provided	Key issues and omissions
Aegean Airlines	'Travel Guide' section of website provides some information on carriage of assistance animals, wheelchairs and oxygen.	No information on advance booking, accompanying passengers or animals Information on wheelchairs is incomplete – conditions of carriage state that spillable batteries cannot be carried. No information on stretchers.
Air Berlin	Information is provided within a section entitled 'Flying barrier-free', and in a safety rules section entitled 'airberlin's safety regulations for the carriage of passengers with restricted mobility (PRMs) in accordance with EC regulation no. 1107/2206' downloadable from the same page. The safety rules discuss the following: • PRM limit • Accompanying persons • Seat allocation • Guide dogs • Information in the event of refusal of carriage	The safety rules do not include advance booking or policies on carriage of equipment. However, with the exception of stretchers this information is provided on the PRM webpage which contains the safety rules.
Air France	Information is provided within a section entitled 'Passengers with reduced mobility'	None
AirBaltic	Detailed information is provided within a document entitled 'Air travel for physically challenged passengers'	None
Alitalia	Limited information across all categories is provided in a section entitled 'No barriers travelling'.	More detailed information on some topics can be accessed only by searching the site for specific terms, e.g. 'stretcher'.
Austrian	Information on most categories is provided in a section entitled 'Barrier-free travel'.	No reference is made to the carriage of stretchers.
British Airways	Information on all categories is provided within a section entitled 'Disability assistance'	None
Brussels Airlines	Reasonably detailed information across all categories is provided in a section entitled 'Special Assistance'.	Information on accompanying passengers, wheelchairs and stretchers is incomplete.
Delta	Detailed information on all categories is provided within a section entitled 'Services for Travelers with Disabilities'. A brochure providing a summary of this information can also be downloaded from the site.	None
easyJet	Detailed information on almost all categories is provided within a notice entitled 'For passengers who are disabled or have reduced mobility (PRM) due to a physical, cognitive (learning) disability or any physical impairment, as defined by current European law, Regulation EC1107/2006 Article 2(a).' In addition detailed information is provided in the 'Carrier's Regulations'.	The information notice on the website is detailed and generally appears complete. There is no reference to provision of oxygen or carriage of stretchers although both are addressed in the Carrier's Regulations.
Emirates	Some information across all categories is provided within the sections 'Health & Travel', 'Special Needs' and 'FAQs'.	The information provided appears to be complete but it is fragmented between these

Airline	Information provided	Key issues and omissions
		three sections, which could be confusing.
Iberia	The website has a general information section entitled 'Passengers with reduced mobility or special needs'. This provides a link to a more detailed information leaflet, downloadable by clicking on a 'No barriers to travel' icon.	The location of the information leaflet is not obvious as it is not listed under 'Information of interest'. Information in the leaflet on accompanying passengers and carriage of mobility equipment appears to be incomplete. There is a document entitled 'Attending to the needs of people with reduced mobility' but this appears to be a general summary of ECAC/ICAO guidance and it is not clear what applies to Iberia.
KLM	Information is provided within a section entitled 'Physically challenged passengers' and in a 'Carefree travel' brochure.	None
Lufthansa	Information on most categories is provided in a section entitled 'Travellers with special needs'.	No information on accompanying passengers or stretchers, although some info is provided in a section on flights to and from the USA.
Ryanair	Detailed information on almost all categories is provided within a notice entitled 'NOTICE PURSUANT TO EC REGULATION 1107/2006 CARRIAGE OF DISABLED PERSONS AND PERSONS WITH REDUCED MOBILITY'.	None
SAS	Information on almost all categories is provided within a section entitled 'Special needs'.	No information on accompanying passengers or stretchers
TAP Portugal	Detailed information on all categories is provided within a section entitled 'Special Assistance'.	None
TAROM	Limited information across all categories is provided in a section entitled 'Persons with disabilities'.	Because the information is not detailed it is not clear whether it is complete, e.g. whether all circumstances where passengers need to be accompanied are listed.
Thomas Cook	Information on all categories is provided within a section entitled 'Medical - passengers with Reduced Mobility'.	None
TUI (Thomsonfly)	Some information on most categories is provided within a section entitled 'Passengers with special needs'.	No information on stretchers or oxygen
Wizzair	Limited information is provided within a section entitled 'Passengers with Special Needs'.	No information on assistance animals or stretchers, although both are referred to in the Conditions of Carriage.

Carrier requirements on carriage of PRMs

Safety requirements defined in law or by licensing authorities

4.13 Article 4(1) allows derogations from Article 3 in order to meet safety requirements defined by national or international law, or to meet safety requirements established by the authority that issued the air operator's certificate to the air carrier concerned. The only EU-wide legislation which applies is EU-OPS1 (Commission Regulation 859/2008), which is aligned with JAR-OPS 1 Section 1 guidance previously produced by the Joint Aviation Authorities.

4.14 National health and safety legislation may also provide safety-related grounds for imposing restrictions on the carriage of PRMs – for example cabin crew may not be permitted to lift passengers between their seat and an on-board wheelchair, which would then necessitate an accompanying passenger if it is expected that they will need to leave their seat at any point during the flight.

4.15 All other restrictions are governed by safety requirements established by licensing authorities, which are often (although not always) the same organisation that has been designated as the NEB for the Regulation. The main guidance material relating to carriage of PRMs that licensing authorities should take into account is that originally defined in Section 2 of JAR-OPS 1. Section 2 was not included in EU-OPS1, but ECAC Document 30 states that, pending the adoption of implementing rules related to operations based on the EASA Regulation (216/2008), Member States are allowed to use the Section 2 guidance material, provided that there is not conflict with EU-OPS. To accompany EU-OPS 1, the JAA published an updated version of Section 2 in the form of Temporary Guidance Leaflet (TGL) 44. The section relating to the carriage of PRMS, ACJ OPS 1.260, remains unchanged from the original JAR-OPS 1 Section 2. It states that:

> *1 A person with reduced mobility (PRM) is understood to mean a person whose mobility is reduced due to physical incapacity (sensory or locomotory), an intellectual deficiency, age, illness or any other cause of disability when using transport and when the situation needs special attention and the adaptation to a person's need of the service made available to all passengers.*
>
> *2 In normal circumstances PRMs should not be seated adjacent to an emergency exit.*
>
> *3 In circumstances in which the number of PRMs forms a significant proportion of the total number of passengers carried on board:*
>
> *a. The number of PRMs should not exceed the number of able-bodied persons capable of assisting with an emergency evacuation; and*
>
> *b. The guidance given in paragraph 2 above should be followed to the maximum extent possible.*

4.16 Licensing authorities may require their carriers to impose more stringent restrictions on carriage of PRMs than the 50% limit defined by TGL 44. However, this is rare: the only example identified amongst the case study States is the Belgian Civil Aviation Authority (BCAA), which has set restrictions on the numbers of certain types of PRM, and minimum numbers of accompanying passengers. The numerical limits, which are outlined in more detail in the case study for Belgium in appendix C, are reflected in the conditions imposed by Brussels Airlines. In contrast, some licensing authorities

(for example the UK CAA) have stated that they will not generally approve limits on carriage of PRMs below the 50% defined in TGL 44.

4.17 In the remainder of cases, licensing authorities do not have any defined policy and will consider any restrictions on carriage of PRMs on a case by case basis. Therefore, more stringent restrictions on carriage of PRMs may be proposed by the airlines themselves, included in their Operations Manuals and submitted for approval by the licensing authority. As a result, there are significant variations between airlines, even where operational models and types of aircraft are similar. For example, whilst Wizzair, easyJet and Ryanair have similar operational models and aircraft types, Ryanair has a limit of 4 PRMs who require assistance per aircraft whilst Wizzair has a limit of 28 PRMs and easyJet 50%. Although the limits imposed by the three airlines are all based on safety, it is difficult to imagine that all three could be 'safe' limits. There does not seem to be an evidence base for these limits and a stakeholder suggested to us that, in the event of an emergency, it is impossible to predict whether even 'able bodied' passengers will be in a physical or psychological state consistent with evacuating the aircraft in the expected time; therefore, it was discriminatory to have a PRM limit.

4.18 The policy adopted by many of the legacy carriers is influenced by the United States Department of Transport Regulation, 14 CFR Part 382 (hereafter described as rule 382). The United States Air Carrier Access Act of 1999 made rule 382 apply to non-US carriers on flights to/from the US, and to all flights which are codeshares with US carriers (even flights not to/from the US), except where there is a specific conflict with non-US law. Despite sharing the same aspiration of ensuring equal access to air travel for all, there are significant differences between the US and EU regulations. Rule 382 specifically prohibits airlines from imposing numerical limits on PRMs, on the basis that this practice is discriminatory. Lufthansa and TAP Portugal are the only case study airlines operating to and from the US to publish PRM limits.

4.19 PRM limits have also been challenged on the basis of national law. In 2009, the Madrid Provincial Court ruled that Iberia must change its Flight Operation Manual because it was indirectly discriminatory against disabled people. The case was brought by three deaf people who were refused boarding because they were unaccompanied.

4.20 The Regulation allows airlines to **request that a passenger be accompanied**, but only on the basis of safety. Three carriers cited the UK Department for Transport's *Access to Air Travel for Disabled Persons and Persons with Reduced Mobility – Code of Practice* as the basis for the criteria they use to determine whether a PRM should be accompanied. The document also supports the Regulation in providing guidance to airlines and airports on best practice approaches to the handling and transit of PRMs. The guidance states that an accompanying passenger should only be required "when it is evident that the person is not self-reliant and this could pose a risk to safety". The document defines this as being as passenger who cannot:

- Unfasten their seat belt;
- Leave their seat and reach an emergency exit unaided;
- Retrieve and fit a lifejacket;
- Don an oxygen mask without assistance; or
- Is unable to understand the safety briefing and any advice and instructions given

by the crew in an emergency situation (including information communicated in accessible formats).

4.21 The document also states that passengers who require a level of personal care which cabin crew cannot provide should be told that they should be accompanied. This includes assistance with the following:

- Breathing (reliance on supplementary oxygen);
- Feeding;
- Toileting; and
- Medicating.

4.22 The guidance implies that a passenger should only be required to be accompanied if they are likely to require such assistance during the course of the flight. This is consistent with rule 382, which states that ”concern that a passenger with a disability may need personal care services…is not a basis for requiring the passenger to travel with a safety assistant”.

4.23 The most significant difference between US and EU law relates to the **48 hour advance notification** requirement in the Regulation for passengers requiring assistance. Rule 382 states that requiring pre-notification from PRMs is discriminatory, given that the same requirement is not imposed on other passengers. It does however allow airlines to require 48 hours pre-notification in circumstances where a passenger:

- Requires oxygen on a domestic flight (72 hours notice can be requested on international flights);
- Is travelling in an incubator;
- Requires a respirator or oxygen concentrator to be connected to the aircraft power supply;
- Is travelling in a stretcher;
- Is travelling in an electric wheelchair on an aircraft with 60 seats or less;
- Requires hazardous material packaging, e.g. for an electric wheelchair;
- Is travelling in a group of 10 or more PRMs;
- Requires an on-board wheelchair on an aircraft with more than 60 seats that does not have an accessible toilet;
- Intends to travel in the cabin with an emotional support animal;
- Intends to travel in the cabin with a service animal on a flight of 8 hours or more; or
- Has both severe vision and hearing impairments.

4.24 The Regulation does not define the circumstances under which **medical clearance** can be reflected from a passenger, but rule 382 prohibits airlines from requesting medical certification unless the passenger’s condition poses a ‘direct threat’, which ‘means a significant risk to the health or safety of others that cannot be eliminated by a modification of policies, practices, or procedures, or by the provision of auxiliary aids or services’.

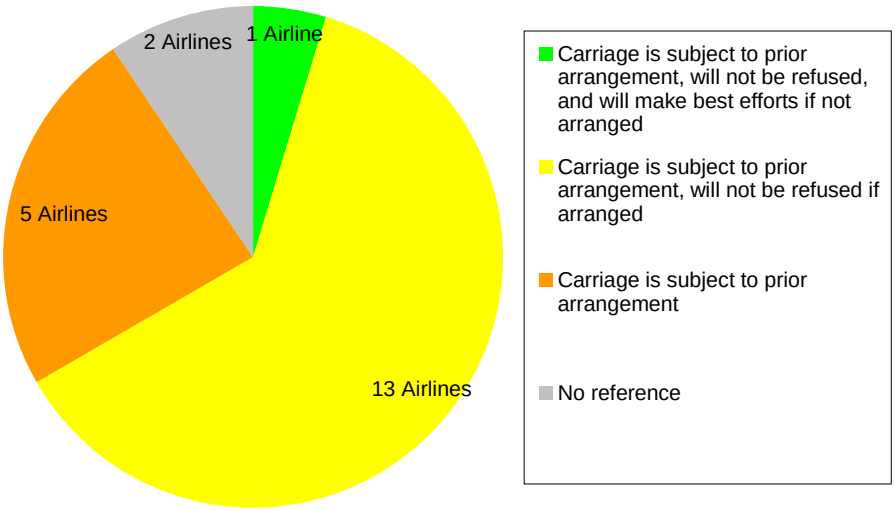
Policy on carriage of PRMs defined in Conditions of Carriage

4.25 The element of carriers' Conditions of Carriage relating to PRMs can be classified into the following six categories:

- **Will not refuse carriage on disability grounds** – all PRMs carried without restriction or requirement for pre-booking;
- **Carriage subject to prior arrangement, but will not be refused if not arranged** – the airline would prefer that advance arrangements are made, but PRMs may nevertheless be carried without this;
- **Carriage subject to prior arrangement and will not be refused if arranged –** PRMs are required to make advance arrangements, and will not be refused carriage on the basis of their disability if advance arrangements have been made;
- **Carriage is subject to prior arrangement** – as above, but without the additional clause on non-refusal of carriage to PRMs who have made arrangements;
- **Non-compliant term** – e.g. airline refuses to carry certain PRMs;
- **No reference** – PRMs not discussed in Conditions of Carriage.

4.26 Figure 4.1 shows the general approach adopted in the Conditions of Carriage of the case study airlines. None of the case study Conditions of Carriage were at the extreme ends of the scale, i.e. explicitly non-compliant terms or carriage of all PRMs without any restriction.

FIGURE 4.1 CONDITIONS ON CARRIAGE OF PRMS



4.27 Most (13) of the Conditions of Carriage of the sample airlines surveyed state a policy of not refusing carriage to PRMs on the grounds of their special requirements subject to arrangements being made in advance, although boarding may still be denied for other reasons. Alitalia adds an additional disclaimer, which states that the PRMs who have made advance arrangements will be carried, unless this is "…impossible due to objective causes of force majeure".

4.28 The advance booking requirement does not necessarily apply to all PRMs. Air Berlin states that the carriage of medical devices and mobility aids can only be guaranteed with up to 48 hours' notice, and visually impaired passengers with guide dogs are also required to make advance arrangements. No reference is made to PRMs not falling within these categories, however.

4.29 Table 4.2 shows the approaches adopted by each of the case study airlines in their Conditions of Carriage. Air Berlin is unusual in that the advance booking requirement appears only to apply to PRMs reliant on mobility aids, medical devices or assistance animals, and it appears that no such requirement exists for other PRMs.

TABLE 4.2 CONDITIONS OF CARRIAGE OF PRMS

Airline	State	General approach
Aegean Airlines	Greece	No reference
Air Berlin	Germany	Carriage of mobility aids, medical devices and assistance animals is subject to prior arrangement
Air France	France	Carriage is subject to prior arrangement, will not be refused if arranged
AirBaltic	Latvia	Carriage is subject to prior arrangement, will not be refused if arranged
Alitalia	Italy	Carriage is subject to prior arrangement, will not be refused if arranged
Austrian	Austria	Carriage is subject to prior arrangement
British Airways	UK	Carriage is subject to prior arrangement, will not be refused, and will make best efforts if not arranged
Brussels Airlines	Belgium	Carriage is subject to prior arrangement, will not be refused if arranged Also state that they will make reasonable efforts even if not arranged.
Delta	Non-EU	Carriage is subject to prior arrangement
EasyJet	UK	Carriage is subject to prior arrangement
Emirates	Non-EU	Carriage is subject to prior arrangement
Iberia	Spain	No reference
KLM	Netherlands	Carriage is subject to prior arrangement, will not be refused if arranged
Lufthansa	Germany	Carriage is subject to prior arrangement, will not be refused if arranged
Ryanair	Ireland	Carriage is subject to prior arrangement, will not be refused if arranged
SAS	Sweden	Carriage is subject to prior arrangement, will not be refused if arranged
TAP Portugal	Portugal	Carriage is subject to prior arrangement, will not be refused if arranged
TAROM	Romania	Carriage is subject to prior arrangement, will not be refused if arranged
Thomas Cook	Germany / UK	Carriage is subject to prior arrangement, will not be

Airline	State	General approach
		refused if arranged
TUI (Thomsonfly)	Germany / UK / Netherlands	Carriage is subject to prior arrangement, will not be refused if arranged
Wizzair	Hungary	Carriage is subject to prior arrangement

Circumstances under which carriage may be refused

4.30 Although all of the case study airlines impose a range of conditions on PRM bookings, only a proportion state explicitly that carriage may be refused if certain conditions are not met. In some cases, an individual PRM travelling cannot control whether the conditions are met, but some conditions can be satisfied if the PRM follows a defined course of action:

- Conditions which individual PRMs cannot control whether they meet include limits on the number of PRMs which can be carried on a given flight, and restrictions posed by the physical size and configuration of specific aircraft
- Conditions which PRMs can take actions to comply with include advance booking (discussed in the preceding section), travelling with an accompanying passenger or obtaining medical clearance.

4.31 The remaining categories are discussed in turn below.

4.32 Under Article 4 of the Regulation carriage can only be refused on safety grounds, or if boarding is physically impossible due to space constraints, a requirement with which most of the case study airlines are compliant. The only condition we have identified which is potentially non-compliant is the requirement for advance booking cited by Alitalia, Brussels Airlines, Delta, Ryanair and Wizz Air.

PRM limits and physical constraints

4.33 Ryanair is the only case study airline to set out numerical limits on carriage of PRMs in its Conditions of Carriage. In addition, Delta's Conditions of Carriage include the vague statement that carriage may be refused to any PRM on the basis of safety.

4.34 Airline PRM web pages provide more information on PRM limits, with several airlines setting out limits:

- Air Berlin;
- AirBaltic;
- Brussels Airlines;
- Lufthansa;
- TAROM (only for PRMs in wheelchairs); and
- Wizz Air.

4.35 Aegean Airlines and TAP Portugal also informed us that they have PRM limits in place, although these are not published. Full details of the PRM limits adopted by each airline are given in Table 4.3. Several of the other case study airlines informed us that they are required to adhere to the limit set out in TGL 44 that the number of PRMs

should not exceed the number of able bodied passengers; this restriction is not included in the table below, although it is possible that some of the unspecified restrictions actually relate to this. Note that other carriers may have unpublished limits which we have not been informed about.

TABLE 4.3 AIRLINE PRM LIMITS

Airline	Published limits	Unpublished limits	Applies to
Aegean Airlines	-	Unspecified restriction	All unaccompanied PRMs
AirBaltic	If number of PRMs exceeds number of cabin crew per flight (typically 3-4 on short haul aircraft)	-	All PRMs, only where PRMs form a large proportion of passengers on flight
Air Berlin	Unspecified limit for safety reasons	-	All PRMs
Brussels Airlines	2 when travelling individually, except on A330-300, where limit of 4. When travelling in group limit ranges from 9 (on BAe 146) to 27 (on A330-300), including escorts.	-	WCHS + WCHC + STCR + BLND + DEAF/BLND, in any combination
Lufthansa	Limit on unaccompanied passengers in wheelchairs: 3 on regional flights (>70 seats); 5 on other flights Limit on no. of wheelchairs per flight: 3 on most intercontinental flights, 2 on continental flights and 1 on regional flights. Also unspecified general limit on limited mobility passengers for care and safety reasons.	-	All unaccompanied PRMs
Ryanair	Limit of 4 per aircraft for safety reasons	-	Passengers with reduced mobility, blind/visually impaired or requiring special assistance.
TAP Portugal	-	Stretcher: 2, except Fokker 100 and Embraer 145; WCHC: 4-10 depending on aircraft; WCHS, blind and deaf: 9, except Fokker 100 and Embraer 145; Incubator: 1, except Fokker 100 and Embraer 145.	See left
TAROM	Limit on passengers requiring wheelchair in		

	cabin: 0 on AT42, 2 on B737 and 6 on A318. No limits on other PRMs		
Wizz Air	Limit of 28 disabled or incapacitated or passengers with reduced mobility, including a maximum of 10 who require a wheelchair from check-in to the cabin seat	-	See left

4.36 Fewer airlines refer to other physical constraints in their Conditions of Carriage, with only AirBaltic and Brussels Airlines indicating that carriage may be refused if the PRM is unable to physically board via the aircraft's doors.

Accompanying passengers

4.37 Article 4(2) of the Regulation allows airlines to require PRMs to be accompanied in order to meet the applicable safety requirements referred to in Article 4(1). As with any numerical PRM limits, requirements for PRMs to be accompanied should be set out in the carriers' Operations Manuals, which again would require the approval of the licensing authority in the relevant Member State.

4.38 Most airlines publish criteria under which a PRM would have to be accompanied. These are again generally safety related, or relate to the level of assistance cabin crew are able to give. Three common themes emerge:

- The PRM has certain specified conditions, e.g. difficulty walking;
- The PRM requires care which the cabin crew are unable to provide (typically this means that the passenger is not self-reliant); or
- The PRM is unable to evacuate the aircraft without assistance.

4.39 Although many airlines make reference to self-reliance criteria there is a difference between those requiring **all** passengers who are not self-reliant to be accompanied; and those which state that passengers who, for example, require help with eating, should be accompanied. In the latter case a passenger could argue that they will not be eating on the flight, and that this criterion is therefore irrelevant. Six of the sample airlines state that all passengers who are not self-reliant must be accompanied, and this is not limited to cases where there is a safety implication. In our view, these airlines may be infringing the Regulation as well as (if they fly to the US) rule 382.

Medical clearance

4.40 The majority of the case study airlines required medical clearance for certain types of PRM, either confirming fitness to travel, or stating a need to carry medical equipment such as syringes or oxygen, although again it is generally not explicitly stated that boarding will be refused if clearance is not obtained. In most cases, the PRM is required to ask their doctor to fill in a medical clearance form, which is then forwarded to the airline's medical department for approval.

4.41 Given the importance of not confusing disability with illness, it might be expected that

the proportion of passengers required to seek clearance before travelling would be minimised. This is the case for most of the case study airlines. Although the types of PRM required to obtain clearance varies, this normally includes those requiring oxygen or stretchers and is not overly restrictive. However, six airlines adopt slightly different policies:

- Lufthansa states that 'In the case of a physical or psychological limitation, you must obtain an assessment of your fitness for air travel from a Lufthansa doctor in advance', although it is stated elsewhere that this does not apply to blind people. Nevertheless, this requirement could potentially encompass many types of PRM, and the requirement to see a Lufthansa doctor is likely to be particularly onerous.
- The policy adopted by Wizz Air, although vague, also has the potential to be quite onerous. The airline reserves the right to require medical clearance in all cases, and will refuse the reservation if this is not obtained.
- Austrian, Iberia (both on the PRM web pages) and Wizzair (in the airline's Conditions of Carriage) all state explicitly that boarding may be refused to passengers on medical grounds if clearance has not been arranged in advance.
- Thomas Cook takes an unusually vague approach in stating that 'Some medical conditions require a fitness to fly certificate'. Passengers who consider themselves to have a condition that will require the authorisation of their doctor are advised to obtain their approval before flying. A telephone number is however provided, where presumably clarification of the conditions requiring medical authorisation can be obtained.

4.42 Policies on denial of boarding, accompanying passengers and medical clearance are summarised in Appendix A. This information is mostly derived from the PRM web pages provided by the airlines, unless explicit reference is made to the conditions of carriage. Any unpublished information provided to us directly by the airline is shown in italics.

Actions to be taken when carriage refused

4.43 Article 4(1) requires that, where a PRM is refused boarding, the airline is required to offer reimbursement or rerouting in line with Regulation 261/2004. Although none of the case study airlines make any references to this in either their PRM web pages or Conditions of Carriage, almost all of the airlines we interviewed confirmed that passengers who have been refused boarding would be offered a refund, rerouting or cost-free cancellation, depending on the circumstances. However, some carriers indicated that this situation would be rare, as refusal would most commonly occur at the booking stage.

4.44 Where boarding is refused, airlines are required under Article 4(4) of the Regulation to immediately inform the PRM of the reasons for the refusal and, on request, should communicate the reasons to the PRM in writing within five working days. Alitalia and Ryanair are the only airlines to refer to this in their Conditions or policies, Alitalia stating in its Conditions of Carriage that in the event of refusal of carriage the passenger may request additional information, and Ryanair stating on its PRM webpage that 'If we are unable to carry a disabled/reduced mobility passenger, we will inform the person concerned of the reasons for refusal of carriage'.

4.45 However, although only two of the case study airlines provide details of the actions

they will take when carriage is refused, again most indicated in their interviews with us that they will provide either written or verbal explanations to passengers who have been refused boarding.

Services provided to PRMs

Requirements defined in law or other guidance

4.46 Annex II of the Regulation requires that airlines provide the following assistance to pre-notified PRMs without additional charge:

- Carriage of recognised assistance dogs in the cabin, subject to national regulations.
- In addition to medical equipment, transport of up to two pieces of mobility equipment per disabled person or person with reduced mobility, including electric wheelchairs (subject to advance warning of 48 hours and to possible limitations of space on board the aircraft, and subject to the application of relevant legislation concerning dangerous goods.
- Communication of essential information concerning a flight in accessible formats.
- The making of all reasonable efforts to arrange seating to meet the needs of individuals with disability or reduced mobility on request and subject to safety requirements and availability.
- Assistance in moving to toilet facilities if required.
- Where a disabled person or person with reduced mobility is assisted by an accompanying person, the air carrier will make all reasonable efforts to give such person a seat next to the disabled person or person with reduced mobility.

4.47 This guidance is reflected in ECAC Document 30 and the UK DfT Code of Practice. The Code of Practice also suggests the following:

- Cabin crew should provide reasonable assistance with the stowage and retrieval of any hand baggage and/or mobility aid whilst in flight.
- Cabin crew should familiarise disabled passengers with any facilities on board designed particularly for disabled passengers. In the case of visually impaired people they should additionally offer more general familiarisation information and such other explanations as may be requested, such as about on-board shopping.
- Other printed material, such as dinner menus, should, where reasonably practicable, be accessible to blind and partially sighted people. Alternatively, cabin crew should explain the material.
- Where video, or similar systems, are used to communicate safety or emergency information, sub-titles should be included to supplement any audio commentary.
- Where possible, films and other programmes should be subtitled for deaf and hard of hearing passengers.
- In selecting catering supplies, air carriers should consider how “user-friendly” the packaging is for disabled people.
- Cabin crew should describe the food, including its location on the tray, to blind and partially sighted passengers.
- During the flight, cabin crew should check periodically to see if PRMs need any

assistance. In the case of those requiring the use of the on-board wheelchair (where one is installed), the staff must be trained in how to assist the passenger to and from the toilet by pushing the on-board wheelchair.

- Passengers' own portable oxygen concentrators should normally be allowed if battery powered, though air carriers will need to check the type of device to ensure it does not pose any technical problems.

4.48 The assistance provided by the case study airlines generally reflects this guidance, although not all provide comprehensive information on the service they provide to PRMs, particularly in terms of general assistance on-board the aircraft.

4.49 Again, there are some conflicts between Regulation 1107/2006 and the US guidance defined in rule 382, which would apply to some flights operated by EU carriers including all flights to/from the US. In particular, the US regulations do not define an upper limit on the number of items of mobility equipment that should be carried. Some additional requirements established by rule 382 include:

- Assistance in moving to and from seats;
- Assistance in preparation for eating;
- All new videos, DVDs, and other audiovisual displays played on aircraft for safety purposes should be high-contrast captioned;
- Passengers should be able to use moveable armrests seats where their condition requires it;
- Seats with additional legroom should be provided for passengers with fused or immobilised legs;

- PRMs should be permitted to use ventilator, respirator, continuous positive airway pressure machine, or portable oxygen concentrator (POC) of a kind equivalent to an FAA-approved POC on all aircraft originally designed to have a maximum passenger capacity of more than 19 seats, unless the equipment does not meet safety requirements or cannot be used or stowed safely in the cabin.

Assistance animals

4.50 Of all the case study airlines which refer to guide dogs, almost all accept them in the cabin free of charge, as required by Annex II of the Regulation, although carriage is also limited by national regulations regarding the transport of animals. However, we identified the following issues with the carriers' published policies:

- Alitalia – assistance dogs are only allowed in the cabin if space is available;
- Emirates – assistance animals can only be carried in the hold;
- TAP Portugal / Thomas Cook / Wizz Air – insufficient information regarding charging and carriage in cabin;
- TUI – assistance dogs carried for a nominal charge. It is not stated whether animals can be carried in the cabin; and
- Air France / EasyJet – not stated whether carriage is free of charge.

4.51 There is some variation in terms of the conditions applied to the carriage of guide dogs; some airlines require a carrying case, muzzle or harness, for example; Austrian,

EasyJet and TAP Portugal require certification of service animal status; and carriage in exit rows is often prohibited. Several airlines state limits on the number of guide dogs that can be carried on a given flight – AirBaltic, British Airways and Ryanair. Other airlines may enforce similar unpublished limits. Full details of airline policies are provided in Appendix B.

4.52 In most cases, the information provided by carriers on which routes service dogs can be carried on is quite vague. Two exceptions are British Airways and Iberia, which include detailed information and links to external websites; in the case of British Airways this is the UK DEFRA (Department for Environment, Food and Rural Affairs) guidance on the Pet Travel Scheme which governs the carriage of assistance animals on flights within and to/from the UK. This includes detailed guidance on travel preparation and a full list of approved routes. The guidance provided by Brussels Airlines is also reasonably detailed, and both Austrian and Thomas Cook provide links to EU and UK regulations respectively, but without detailed supporting explanations.

Mobility equipment

4.53 All the airlines reviewed accept wheelchairs, and in most cases airlines state that there is no charge for this. Three airlines allow at least certain types of personal wheelchair in the cabin, with carriage restricted to the hold or not stated in the remainder of cases. Spillable wet-cell batteries are not accepted by some airlines and where they are accepted this is usually subject to preparation. Where specified, most airlines policies on the carriage of wheelchairs are consistent with the upper limit of two items of mobility equipment per passenger specified in Annex II of the Regulation. Air Berlin is the only one of the case study airlines to define a limit below this.

4.54 Dangerous goods legislation is cited by many airlines as posing a limitation on the range of battery operated wheelchairs which may be carried. However, few airlines provide specific details of the laws and regulations which apply. Austrian does provide references to both Regulation (EC) No 820/2008 and the IATA Dangerous Goods Regulations, the latter accessible via an external link; and Delta provides a link to the US Department of Transportation's Safe Travel information, which provides information to passengers on the carriage of batteries. The Thomas Cook and TUI websites include a reference to the IATA Dangerous Goods Regulations, but without external links. It is worth noting that, although only a fraction of the case study airlines provide this level of detail on their PRM web pages, many may provide such information in their luggage regulations or elsewhere in the Conditions of Carriage.

4.55 Under Article 12 airlines are required to compensate for losses or damage to mobility equipment, up to the limits specified by national and international law, which effectively means the limits defined in the Montreal Convention. This limits any compensation to 1131 SDR (approximately €1260), which would be inadequate for technologically advanced wheelchairs which can cost up to €20,000. However, several airlines have indicated that these limits would be waived in practice, partly to avoid bad publicity associated with provision of insufficient compensation, and also because it is generally agreed that such events are rare. Air France, Iberia, KLM, TAROM, Thomas Cook and TUI informed us that they compensate passengers for the full value of the equipment; with TUI also indicating that all UK airlines have agreed to waive

the Montreal limits. In contrast, one PRM organisation informed us that it was aware of cases where airlines had not waived the limits.

4.56 Almost all stakeholders stated that the Regulation had made no impact on loss or damage to mobility equipment, both in terms of the number of incidents and levels of compensation for loss or damage; although some felt that the training requirements imposed by the Regulation has resulted in improved handling procedures.

Medical equipment

4.57 Oxygen is available on most of the case study airlines, and can either be provided by the airline or the passenger. Where stated, charges range from €100 (Ryanair / Thomas Cook) to €335 (SAS intercontinental flights). Wizzair is the only exception: the airline accepts passengers who need oxygen with medical certification, but does not provide additional oxygen or allow passengers to bring their own onboard. Such restrictions appear to equate to a complete ban on PRMs requiring oxygen.

4.58 Policies on the carriage of stretchers (where stated) tend to be based on aeroplane size, with several operators not accepting stretchers on the smaller planes in their fleet. Most low cost carriers including easyJet, Ryanair, Thomas Cook and Wizzair prohibit carriage of stretchers entirely.

Accessible information

4.59 Only 6 airlines specify the types of accessible information provided for PRMs. This tends to be safety-related, although may also include Braille seat numbers and verbally describing food-related information.

Seating

4.60 Austrian, British Airways, Delta and KLM are the only case study airlines to state on their web pages that PRMs can be allocated any seat most appropriate to their needs, subject to safety regulations restricting access to exit row seats. Where most other airlines discuss their PRM seating policy this is usually in terms of restrictions, again the most frequent being not allowing PRMs to be seated in exit rows. Many airlines provide seats with retractable armrests, although normally only a proportion of the seats on an aircraft are provided with this feature (KLM is the only airline to state that all seats have moveable armrests). British Airways state that passengers will be allocated a bulkhead seat when requested, provided that this is not already allocated to another PRM. Similarly, Delta and Lufthansa also state that customers with service animals (or immobilised legs in the case of Delta) are entitled to bulkhead seats. Again, only a proportion of the airlines (14 out of 21) provide any of this kind of information, so it is unclear what the other case study airlines offer. The results of our analysis are shown in Appendix Table A.2.

4.61 Ryanair requires PRMs to sit in window seats, so that they do not impede the evacuation of other passengers, although this could result in a difficult or uncomfortable transfer to and from the seat for some passengers. Other airlines may adopt similar policies which we were not informed about. Iberia informed us that, although they recommend that PRMs are accommodated in window seats, through

their online booking systems PRMs are able to choose any seat, with the exception of emergency exit rows.

4.62 Several airlines prohibit PRMs from being seated in exit rows 'for safety reasons', but generally do not make a specific reference to the legal basis for this, which in most cases would be EU-OPS1. Air Berlin, Delta and Ryanair are the only airlines to provide details of the regulations on which this prohibition is based – in the case of Delta this is the Exit Seat Regulation, 14 CFR 121.585; and for Air Berlin and Ryanair EU/JAR-OPS 1.260. Thomas Cook and TUI make more vague references to UK CAA regulations as a justification for their seating restrictions.

Restrictions on service

4.63 12 of the case study airlines provide an indication of the level of assistance in-flight provided to PRMs, although mostly in terms of the assistance staff are unable to provide. This generally includes feeding, lifting passengers, administering medication and assisting in personal hygiene or toilet functions. The level of assistance which is provided is generally limited to preparation for eating, assistance in moving around the aircraft and stowing and retrieving luggage.

Pre-notification of requirements

Requirements defined in law or other guidance

4.64 Article 6(1) of the Regulation requires that airlines take all measures necessary to ensure that they are able to receive PRM assistance requests via all normal points of sale. Articles 6(2) and 6(3) state that, where this information is received more than 48 hours before departure it should be transmitted to the relevant airports no later than 36 hours before the flight departs. Requests received after 48 hours should be communicated at the earliest opportunity. Article 6(4) requires that, after departure of a flight, airlines inform the destination airport (if within the EU) of the number of disabled persons and persons with reduced mobility on that flight requiring assistance, and the nature of the assistance required.

Methods by which passengers can pre-notify

4.65 In addition to the requirements of Article 6(1), the Recitals of the Regulation state that all essential information provided to air passengers should be provided "in at least the same languages as the information made available to other passengers". Several airlines do not meet this standard, although the Recitals are in themselves not binding.

4.66 Many of the major airlines provide offices and contact telephone numbers in a number of countries where the official language may not be one of the languages in which the airline website is offered. In most cases it is not possible to assess the languages offered by staff in these offices, and if the website is not offered in this language passengers may in any case have difficulty finding the contact for their country. For these reasons the language category is based on the website languages offered rather than the geographical spread of airline offices.

4.67 Some NEBs highlighted the use of premium rate special assistance telephone numbers as being an issue. Our research indicates that many carriers use phone numbers that do

charge, although rates are usually moderate, with the following exceptions:

- Some carriers, for example AirBaltic, provide international numbers only.
- Ryanair provides national phone numbers in most Member States but the rates in some States are high – for example, €0.50 per minute in Belgium
- Brussels Airlines provides (for calls from the UK) either a Belgian telephone number, or the UK reservations centre which charges £0.40 (€0.44) per minute, although this number centre deals with all reservations, and not just PRM assistance requests.
- SAS provides (for calls from the UK) a UK reservations number, which charges £0.25 (€0.28) per minute, although again this is not PRM-specific.

4.68 Each of these airlines accept notifications online, so passengers could theoretically avoid payment of these charges. However, we are not able to comment on the accessibility of these systems or whether they enable collection of all of the information that would be required in each case – some passengers may still need to use the telephone numbers for these reasons.

4.69 The notification options available to PRMs for the 21 case study airlines are shown in Table 4.4. It should be noted that options presented during the booking process could only be examined up to the point of payment for tickets. Some airlines may provide a notification option after payment has been made, which we would not have identified.

TABLE 4.4 OPTIONS TO NOTIFY CARRIERS OF REQUIREMENTS

Airline	Options provided	Differences between languages of PRM info and main website	Languages for phone calls
Aegean Airlines	Telephone	None	Not stated
Air Berlin	Telephone	None	Not stated
Air France	During online booking process Email / website Telephone	Main site in 15 languages PRM info in 10 languages	Not stated
AirBaltic	Telephone	None	Not stated
Alitalia	Telephone	Main site in 8 languages PRM info in 6 languages	Not stated
Austrian	Email / website Fax	Main site in 22 languages PRM info in 2 languages	Not applicable
British Airways	During online booking process Email / website Telephone	None	Not stated
Brussels Airlines	Email / website Telephone	None	Not stated
Delta	Telephone	None	Not stated
EasyJet	During online booking process Email / website Telephone	None	Telephone numbers only accessible after logging into personal account
Emirates	Email / website Telephone	None	Not stated
Iberia	During online booking process	None	Not applicable
KLM	Email / website Telephone	Main site in 15 languages PRM info in 9 languages	Not stated
Lufthansa	Email / website Telephone	None	Not stated
Ryanair	During online booking process Telephone	None	English French Italian Spanish
SAS	During online booking process Email / website Telephone	Main site in 15 languages PRM info in 12 languages	Not stated
TAP Portugal	Telephone	Main site in 9 languages PRM info in 7 languages	Not stated

Airline	Options provided	Differences between languages of PRM info and main website	Languages for phone calls
TAROM	During online booking process	None	Not applicable
Thomas Cook	During online booking process Telephone	None	Not stated
TUI (Thomsonfly)	Telephone	None	Not stated
Wizzair	During online booking process Telephone	None	Bulgarian Czech English French German Hungarian Italian Polish Romanian Ukrainian

Process for collection and transmission of requests

4.70 Although many case study airlines enable PRMs to make special assistance requests online, this often has to be supplemented by a telephone call to the airline to establish the PRM's exact requirements. Air France informed us that, when notifying online, a 'pop up' window will appear which informs the passenger that they will be contacted by the airline to clarify the assistance required. Similarly, KLM stated that, although they do provide an online notification option, the passenger would still need to call the airline to establish their exact requirements.

4.71 The standard procedure for transmitting assistance requests to the relevant airports is the PAL (Passenger Assistance List), which under Article 6(2) should be sent 36 hours before departure. Additional requests received after this time can be included in the CAL (Change Assistance List) in line with the requirements of Article 6(3). Most requests are transmitted using the standard special assistance codes IATA codes, although some airlines their own codes.

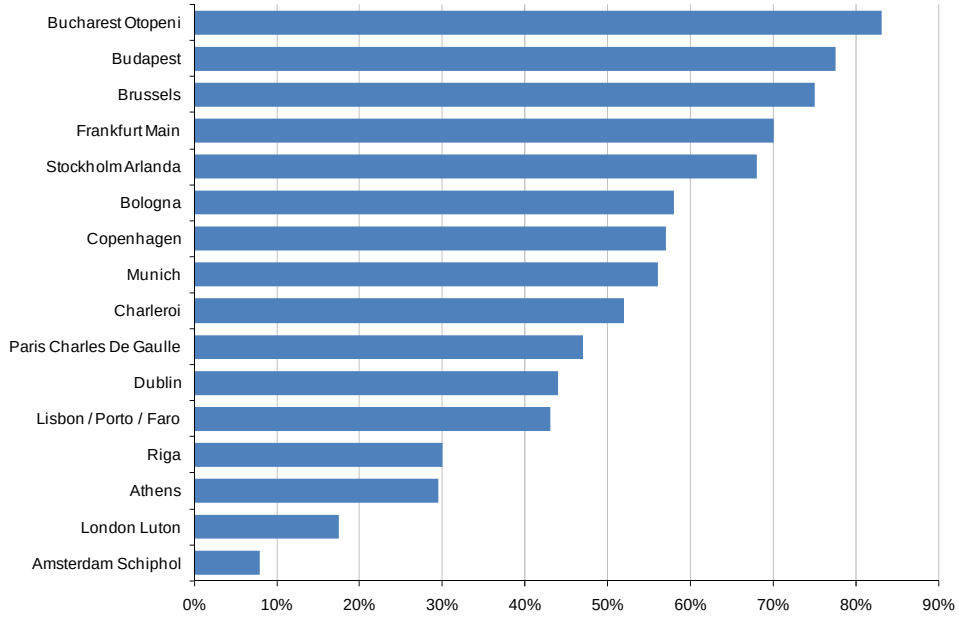
4.72 This information is supported by Passenger Service Messages (PSM) which are automatically generated by all special assistance requests recorded on the Passenger Name List of a given flight (thus complying with Article 6(4) of the Regulation). PSM messages are generated automatically on departure from the origin airport, so can be particularly useful for airports in relation to long haul flights, where there is sufficient time to mobilise staff and equipment before the aircraft arrives. Conversely, PRM messages are of less use in relation to short haul flights, as staffing arrangements cannot be so easily amended at short notice.

Effectiveness of process

4.73 All of the case study airlines interviewed use the standard PAL / CAL / PSM system, although Ryanair informed us that they also have their own system of codes and notifications (discussed in section 3 above).

4.74 Rates of pre-notification vary substantially, as shown in Figure 4.2. It should be noted that the definition of pre-booked assistance may vary between airports – for example Brussels Charleroi airport informed us that its figures for pre-notification includes notification by PSM message, which would not be received prior to the 36 hours specified by the Regulation. A number of other airports did not clarify their definition of pre-notification, including Bucharest and Budapest, which may explain why the percentages here are particularly high.

FIGURE 4.2 PRE-NOTIFICATION RATES BY AIRPORT



4.75 There a number of possible explanations for both the wide divergence of pre-notification rates, and the particularly low values observed at some airports. These include:

- **Passenger factors**, e.g. not being aware of the pre-notification requirement, abuse of the system or not realising that they would need assistance until arriving at the airport;
- **Airline factors**, e.g. not providing sufficient or appropriate means for passengers to pre-notify of their requirements, or failing to transmit assistance requests to airports within the time limits specified in the Regulation;
- **Other factors** – primarily communication and other technological failures.

4.76 Stakeholder views on the possible explanations for pre-notification issues are explored in the relevant section below.

Complaints to airlines

Airline processes for handling complaints

4.77 Most of the case study airlines have dedicated complaint forms and departments for the handling of complaints. Complaints regarding the Regulation do not necessarily require specialised procedures – both easyJet and Ryanair stated that their process for handling complaints was the same as for Regulation 261/2004, and KLM reported that PRM complaints were handled in the same way as all others. The only differences cited by the airlines were that, in the case of easyJet, complaints regarding refusal of boarding were escalated to head office; and KLM informed us that the airline's medical department may need to be involved in more complex cases. Ryanair also informed us that they will amend standard procedures for receipt of complaints where required, for example if a customer needs to complain by phone rather than in writing. KLM stated that to date they have only received complaints by phone, email or letter; and none in Braille / audio tape or other accessible formats.

4.78 Delta reported a more complex procedure, shaped primarily by the requirements of rule 382. The airline is required to designate Complaints Resolution Officials, responsible for providing a 'dispositive response' to customer complaints of an alleged violation, summarising the facts and explaining the airline's determination of the issue. If the complaint relates to the airline's policy and not a specific infringement the airline is still responsible for providing a full and final response and the reasons for its determination.

4.79 The stated time taken by airlines to respond to complaints is variable, and is not related to the airline type or business model.

4.80 Air France, SAS, TAP Portugal reported that they would (at least in theory) be able to accept complaints in any of the languages of the countries which they serve and/or have offices. Aegean Airlines, Ryanair and TAROM reported a more restricted range – despite its destinations including Albania, Egypt, Israel, Serbia, Spain and Turkey, Aegean Airlines stated that it can only accept complaints in Greek, English, German, French and Italian. Likewise, despite both Ryanair and TAROM operating services to 25 countries, the range of languages in which they will accept complaints is limited. Ryanair is only able to accept complaints in English, German, French, Spanish and Italian; and TAROM will only process complaints in Romanian, English, French, German, Spanish and Italian. Thomas Cook stated that, to date, they have only received complaints in English, although they do have a retainer with a language translation service which can be used if required.

Number of complaints received

4.81 Only TAROM and Thomas Cook were able to provide us with PRM complaint statistics. TAROM reported so far receiving no complaints from PRMs; Thomas Cook received 51 complaints in each of 2008 and 2009.

Cost of complying with the Regulation

4.82 The main compliance cost identified by airlines was the airport PRM charge. As discussed in section 3 above, several airlines (mostly low cost and charter carriers)

expressed dissatisfaction with the level of these charges; in contrast, Air France stated that it did not consider the PRM charge to be a real cost, as it was passed directly to passengers. Another legacy carrier stated that the Regulation did not generate any additional costs for it, as it was already complaint with the (generally more onerous) requirements of rule 382.

4.83 An issue raised by Air Berlin and TUI related to the additional costs likely to be associated with providing a cost-neutral special assistance telephone number. The German NEB considers that the special assistance helpline should be free, and the UK DfT Code of Practice also suggests that cost-neutral telephone numbers should be provided for PRMs, which TUI accommodates by requesting that the special assistance helpline calls the passenger back. However, the costs associated with telephone assistance calls are likely to be relatively small, particularly in relation to the staffing costs associated with providing a call centre.

4.84 TUI also highlighted the initial training costs incurred by the Regulation, which have now diminished as the focus shifts to more limited refresher training where required.

Training

4.85 Under Article 11 airlines are required to:

- Ensure that all staff (including those employed by sub-contractors) providing direct assistance to PRMs, have knowledge of how to meet the needs of these persons;
- Provide disability-equality and disability-awareness training to all staff working at airports dealing directly with the travelling public;
- Ensure that, upon recruitment, all new employees attend disability‑related training and that personnel receive refresher training courses when appropriate.

4.86 Most of the case study airlines were able to demonstrate compliance with the training criteria set out in Article 11, although the carriers informed us that training was restricted to passenger-facing staff only. Some examples of the training provided to airline staff are given below.

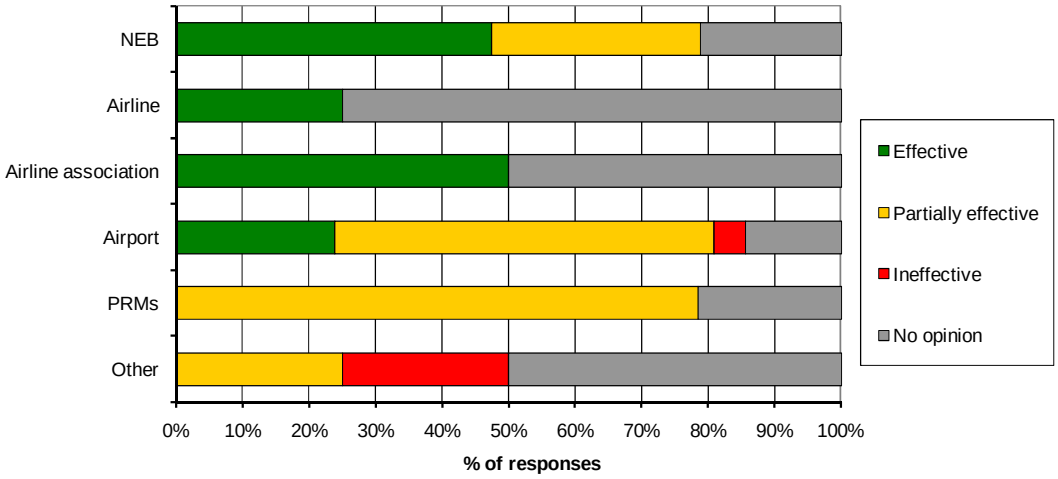
- Major European network carrier: 2.5 hours theory (e.g. responsibilities under the Regulation, how to approach PRMs) and practical (e.g. guiding blind PRMs, lifting to and from wheelchairs) training for crew; 1.5 hours theory for all other passenger-facing personnel.
- US network carrier: annual recurrent training is provided to all Complaint Resolution Officers (CROs); required under 14 CFR Part 382 to ensure effective implementation and to resolve passengers' problems as quickly as possible).
- European low cost carrier: initial and refresher cabin crew training includes PRM training, and the airline has requested that this training should be a requirement in contracts with ground handling staff.
- European low cost carrier: basic training in sign language is included.

4.87 Airlines operating to the US and therefore already compliant with rule 382 stated that few if any changes to their existing training programmes were required to comply with the Regulation.

Stakeholder views on effectiveness of implementation by airlines

4.88 Figure 4.3 summarises stakeholder views on the effectiveness of the implementation of the Regulation by airlines. Although many stakeholders did not express an opinion on this, relatively few stakeholders were dissatisfied. A summary of views of each stakeholder group is given below.

FIGURE 4.3 STAKEHOLDER VIEWS: AIRLINES



Airlines and airline associations

4.89 Unsurprisingly, the majority of airlines did not express an opinion on their own effectiveness in implementing the Regulation, and none felt that implementation was ineffective. Similarly, airline associations either expressed no opinion, or stated that implementation by their members was effective. ELFAA felt that all its members were complying and not refusing carriage. AEA was also generally satisfied that its members were not discriminating against PRMs in any way, but did suggest that there may be issues around the interpretation of the safety rules governing embarkation by PRMs, leading to inconsistencies between its members.

Airports

4.90 Pre-notification was the most frequently cited issue raised by the airports, an issue discussed separately below. The second most common theme emerging across several airports was the alleged non-payment of PRM charges by airlines.

4.91 Alongside the non-payment issue ACI highlighted several other issues relating to agreement of the PRM charges at airports. These included trying to avoid or reduce the charge, for example by requiring excessive levels of detail on the costs of PRM assistance at airports after the tender process had been completed, and refusing to cooperate with consultation meetings. Two airports with high proportions of low cost carrier traffic informed us that some carriers sought to specify the lowest possible levels of service in order to minimise PRM charges.

NEBs

4.92 The majority of NEBs informed us that compliance by airlines was satisfactory.

Although some issues were raised no common themes emerged, suggesting that any issues may be somewhat isolated. The NEBs which stated that implementation by airlines was partially effective were:

- France (DGAC): lack of information, and limited consistency in policies between airlines.
- Germany (BMBVS): use of premium rate telephone numbers by airlines.
- Portugal (INAC): some issues with the explanations provided for refusal of carriage.
- Spain (AESA): notification can incur additional costs for the passenger, airline safety rules are sometimes insufficient, and some airlines claim that passengers with mobility equipment are taking two seats, and charge for this.
- Sweden (CAA): issues around pre-notification (see section below).
- UK (CAA / EHRC / CCNI): lack of consistency in criteria for refusal of carriage. Some airlines charge for reserving specific seats.

PRM organisations

4.93 Satisfaction with implementation by airlines was generally lower among the PRM organisations, although none of the stakeholders informed us that airlines were significantly non-compliant with the Regulation. Inconsistencies in airline policies, accessibility of websites and the level of information provided by airlines emerged as the most frequently cited issues – *Danske Handicaporganisationer* (DH) suggested that less than 5% of airlines' websites were accessible. Two organisations also indicated that they had not seen any PRM safety rules published online.

4.94 Two organisations highlighted issues with medical clearance – this was felt to be requested too frequently, and that an unnecessary level of information was being requested by some airlines. Other issues raised included insufficient training, issues with handling of mobility equipment, seating, and inaccessibility of airport check-in systems. Guide Dogs reported instances where flight crew had not reported allergies which then prevented a passengers with guide dogs from flying, or had not checked that the dog was secure prior to take-off or landing. It was felt that policies of refusing boarding to unaccompanied blind passengers on the basis that they could not evacuate was misguided, given that they were accustomed to not being able to see and could therefore cope more easily in smoky conditions.

4.95 These views were echoed by the European Blind Union (EBU) and the European Disability Forum (EDF). In addition, EBU emphasised continuing difference in the handling of PRM travel between carriers, and felt that booking processes were discriminatory against those without access to a computer (we were informed that requesting assistance by phone can take several hours). The UK PRM organisation informed us that only 30% of the disabled population are online, which would increase this discrimination. EDF also noted that some airlines still only paid up to the Montreal Convention limits in cases of damage or loss of mobility equipment; that insurance for mobility equipment was extremely difficult to obtain; and that establishing liability for damage can be very complex. EDF also believe that the enforcement of numerical limits on PRMs is inappropriate and discriminatory, and that it is unacceptable for carriers to require passengers to be accompanied on self-reliance criteria.

4.96 EDF provided us with some examples of discrimination which had been reported to them. Some examples relating to treatment on-board the aircraft include:

- A blind passenger was not given any safety information in an accessible way, and the cabin crew were unaware of how to assist the passenger when serving a meal, or to communicate with the passenger more generally.
- A passenger was not allowed to check-in online, due to him using a wheelchair. Once on the aircraft he was forced to sit in a window seat at the back of the plane, which he found both discriminatory and difficult, as being tetraplegic meant that it was not easy to access the seat, or to receive assistance in an emergency.
- A passenger was informed that he had to pay extra to bring his prosthetic legs when going on holiday.
- A wheelchair user tried to book a ticket with an airline but noticed on their website that it was clearly indicated that they do not accept passengers using wheelchairs.
- A blind couple travelling with their baby were told that in order to be allowed to travel, they needed to bring an accompanying person, as it was not considered safe that the couple were responsible for their baby on board.
- A blind passenger was asked by a member of cabin crew in a rude manner whether she really was entirely blind.

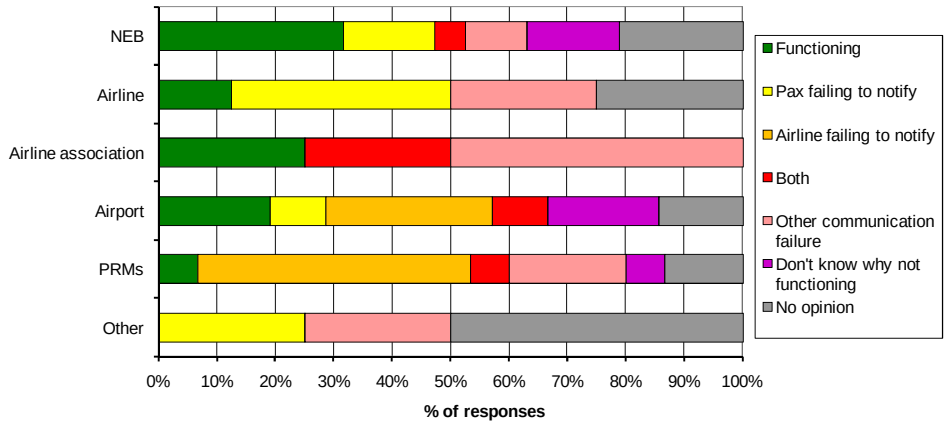
Other organisations

4.97 Key issues raised by other organisations were the application by some carriers of limits on the numbers of PRMs that could be carried, and that these limits could be further reduced based solely on arbitrary decisions by pilots. In addition, ECAC felt that information should be simplified for passengers with learning disabilities. However, ECTAA highlighted the improvements which airlines, tour operators and travel agents had made to their websites and booking procedures to enhance PRM travel.

Stakeholder views on effectiveness of pre-notification systems

4.98 Figure 4.4 shows stakeholder views on the effectiveness of the pre-notification system and reasons cited for low rates of notification. Most stakeholders believed that this system was not functioning well, although the explanations cited by each stakeholder group vary.

FIGURE 4.4 STAKEHOLDER VIEWS: PRE-NOTIFICATION



4.99 The NEBs were generally the most optimistic about how the pre-notification system was working, with fewer than half identifying problems. Where they did express a view on the cause of pre-notification issues it was most commonly that the passenger was the cause. The Irish NEB suggested that awareness of the Regulation and the need to pre-notify to receive assistance was low amongst PRMs who were not members of representative groups. Most of the PRM groups felt that the airlines were the primary cause of problems with the pre-notification system, for a variety of reasons:

- Poor design and accessibility of airline websites makes it difficult for passengers to pre-notify;
- Airlines have been unwilling to make the significant investments required to ensure an effective system; and
- Airlines have been ineffective at transmitting special requests (e.g. dietary needs) between staff and departments.

4.100 The majority of airlines believed that the main issue in terms of pre-notification was that passengers were themselves failing to notify of their assistance needs. Several airlines and airports suggested a possible explanation as being that, although they may not normally consider themselves as being in need of special assistance, some travellers (especially infrequent flyers and the elderly) may find they need this once in the airport and having to walk long distances to reach their flight. Low rates of pre-notification were also attributed partly to abuse of the system, as it was believed that 'genuine' PRMs would usually pre-notify.

4.101 However, the majority of airports stated that the most significant problem was failure by airlines to pass on notifications, or erroneous notifications. Several highlighted the large differences in pre-notification rates between airlines: some airlines are able to achieve high rates of pre-notification (60-80%) whereas others have very low rates

(10% or less). Non-EU airlines were often stated to be worse, with flights from North Africa and India often cited as being particularly problematic, both in terms of the low levels of pre-notification and the high numbers of PRMs on these flights. Aéroports de Paris stated that passengers travelling from some north African airports would be charged for assistance if pre-notifying, even though the European airport provided assistance free of charge. US flights also pose difficulties for airports as US carriers are generally not allowed, under rule 382, to request details of assistance requirements in advance; however, the relative length of these flights means that PSM messages are usually received 7-10 hours in advance of arrival.

4.102 Several airports also indicated that charter carriers had particularly low rates of pre-notification. This was attributed by some carriers to low rates of notification by travel agents – in many cases agents may have an incomplete knowledge of the full range of wheelchair codes, often simply observing that the passenger is using a wheelchair and then allocating the WCHR special assistance code.

4.103 Communication failures were also cited by a number of stakeholders, sometimes a result of the confusion generated by the IATA special assistance codes themselves, particularly unnecessary requests for wheelchairs. Although technological failures may have been a problem when the Regulation was first implemented, these did not emerge as a significant current issue.

Conclusions

4.104 The main obligation that the Regulation places on carriers is that it prohibits refusal of carriage of PRMs, unless this is necessary to meet national or international safety rules or requirements imposed by the carrier's licensing authority, or is physically impossible due to the size of the aircraft or its doors. We found that most carriers comply with this, although some make carriage of PRMs conditional on advance notification, which does not appear to be consistent with the Regulation. In addition, a small number of carriers impose requirements for medical clearance which appear to be excessively onerous.

4.105 There are significant differences in policies relating to carriage of PRMs between carriers – even between carriers with similar aircraft types and operational models. The most significant difference is that some carriers impose a numerical limit on the number of PRMs that can be carried on a given aircraft. These can be quite low: some carriers have limits of 2-4 PRMs on a standard single-aisle aircraft such as an Airbus 319. In most cases, these requirements are defined in carriers' Flight Operations Manuals, which have to be approved by the relevant licensing authority; often, although not always, this is the same organisation that has been designated as the NEB. In some cases the PRM limits are required by the licensing authority, but in most cases, they are proposed by the carrier and approved by the authority. Whilst the rationale for these limits is safety, there does not seem to be an evidence base for them, and they are specifically prohibited by the equivalent US regulation on carriage of PRMs (14 CFR part 382).

4.106 The Regulation also allows carriers to require that PRMs be accompanied, subject to the same safety-based criteria. We found that a number of carriers require PRMs to be accompanied where they are not 'self-reliant', which can mean that the PRM cannot (for example) eat unaided. In our view this may be an infringement of the Regulation because there is no direct link to safety; for those carriers that fly to the US, it is also an explicit breach of the US PRM rules. Other carriers require PRMs to be accompanied where they are not self-reliant **and** this has a safety impact (for example, if the PRM could not exit the aircraft unaided in an emergency); this is consistent with the Regulation.

4.107 The Regulation also requires carriers to publish safety rules relating to the carriage of PRMs, although it does not specifically state what issues these safety rules should cover. We found that carriers all published some PRM-related information but in some cases there appeared to be significant omissions from this information.

4.108 Annex II of the Regulation sets out various requirements for services which have to be provided to PRMs by carriers. Evidence for the extent to which this is provided is limited, and restricts a fair assessment of compliance with these requirements. There is however sufficient evidence to conclude that the vast majority of case study airlines are complying with the requirement to carry up to two items of mobility equipment free of charge. Some PRM representative groups were critical of the effectiveness of airlines in implementing the Regulation, and we were informed of some particularly bad passenger experiences, but it is difficult to assess how common such occurrences are.

5. ENFORCEMENT AND COMPLAINT HANDLING BY NEBS

Introduction

5.1 This section summarises the complaint handling and enforcement process undertaken by National Enforcement Bodies (NEBs). We set out the following information:

- an overview of the NEBs, describing the types of organisations they are and the resources they have available;
- the legal basis for complaint handling and enforcement in each State;
- statistics for the number of complaints received, the nature of the complaints, and the outcomes, and for sanctions that have been issued;
- the typical process for complaint handling and enforcement in each State, and outline a number of common issues and difficulties;
- a summary of the activities of NEBs to monitor the implementation of the Regulation; and
- an overview of other activities undertaken by NEBs in relation to the Regulation, such as interactions with other stakeholders and promotional activity.

5.2 Most of the information within this section is provided for the NEBs in all Member States. The detailed information relating to the complaint handling and enforcement process, and to monitoring and other activities undertaken by the NEB, has been collected for the case study States only. Further detail on complaint handling and enforcement in the 16 case study States is provided in the case studies, in Appendix C.

Requirements of the Regulation relating to States and NEBs

5.3 The Regulation requires each Member State to designate a National Enforcement Body (NEB) responsible for the enforcement of the Regulation regarding flights departing from or arriving at airports within its territory, and to inform the Commission of this designation. This body is required to ensure that the rights of PRMs are respected, and in particular that the quality standards defined by Article 9(1) (see 3.53) are respected. It must also ensure that the provisions of Article 8 are respected. More than one body may be designated. To allow NEBs to enforce the Regulation, Member States must set out penalties for infringements of the Regulation, which must be effective, proportionate and dissuasive.

5.4 These bodies must also accept complaints from PRMs where they are dissatisfied with the service they have received under the Regulation and have been unable to obtain satisfaction by complaining directly to the service provider. If a body receives a complaint for which a body in another State is competent, it must forward the complaint to the other NEB. Other bodies may be designated specifically for the purpose of receiving complaints.

5.5 Member States should also inform PRMs about their rights under the Regulation, and the possibility of complaint to the bodies above.

Overview of the NEBs

5.6 Most of the NEBs (68%) are Civil Aviation Authorities. The other NEBs are government departments, independent statutory bodies or consumer protection authorities. Some Member States have designated more than one NEB. In these States, the responsibilities of the NEBs are divided in two ways:

- according to which type of organisation the enforcement relates to: in France, there are separate bodies for complaints handling and enforcement relating to airlines and airports, and to tour operators; and
- according to task: in the UK, there are separate NEBs for complaints handling and for enforcement.

5.7 In Belgium, there are three NEBs and an additional body responsible for handling complaints; the case of Belgium is unique, as the Flemish- and French-speaking regions are administered separately. For some of the States, there is a body which acts as the NEB but which has not yet been explicitly designated (see 5.13).

5.8 No States have designated a separate body for the enforcement of Article 8.

5.9 Table 5.1 lists the NEBs, the nature of the organisation, and where there is more than one NEB in a State, the role of each organisation. The table is divided into case study and non-case study States.

TABLE 5.1 ENFORCEMENT BODIES

State	Enforcement Body	Nature of organisation	Role
Belgium	Belgian CAA	CAA	Enforcement and sanctions
	Departement Mobiliteit en Openbare Werken	Regional government department	Enforcement and sanctions
	Service public de Wallonie, direction générale opérationnelle de la mobilité et des voies hydrauliques	Regional government department	Enforcement and sanctions
	Passenger Rights Department of Federal Public Service of Mobility and Transport	Federal government department	Complaints handling
Denmark	Statens Luftfartsvæsen (SLV)	CAA	-
France	Direction Générale de l'Aviation Civile (DGAC)	CAA	Airlines and airports
	Ministry of Economy, Industry and Labour, Division on Competition, Industry and Services	Government department	Tour operators
Germany	Luftfahrts-Bundesamt (LBA)	CAA	-
Greece	Hellenic Civil Aviation Authority (HCAA): Airports Division	CAA	Airports
	Hellenic Civil Aviation Authority (HCAA): Air Transport Economics	CAA	Airlines and tour operators

Hungary	Equal Treatment Authority (ETA)	Independent statutory body	Complaint handling, enforcement relating to PRM complaints
	National Transport Authority Directorate for Aviation (NTA)	CAA	Other enforcement
Ireland	Commission for Aviation Regulation	Independent economic regulator	-
Italy	Ente Nazionale Aviazione Civile (ENAC)	CAA	-
Latvia	CAA, Aircraft Operations Division	CAA	-
Netherlands	Transport and Water Management Inspectorate (IVW)	CAA	-
Poland	Civil Aviation Office (CAO) Commission on Passengers' Rights	CAA	-
Portugal	National Institute for Civil Aviation (INAC)	CAA	-
Romania	Autoritatea Naţională pentru Persoanele cu Handicap (ANPH)	Independent statutory body	All Articles except 8
	Autoritatea Areonautică Civilă Română (AACR)	CAA	Article 8
Spain	Agencia Estatal de Seguridad Aérea (AESA)	CAA	-
Sweden	Swedish Transport Agency, Civil Aviation Department	CAA	-
UK	CAA	CAA	Enforcement
	EHRC	Independent statutory body	Complaints handling in UK except Northern Ireland
	CCNI	Consumer protection authority	Complaints handling in Northern Ireland
Austria	Federal Ministry of Transport, Innovation and Technology	CAA	-
Bulgaria	CAA	CAA	-
Cyprus	Department of Civil Aviation	CAA	-
Czech Republic	Civil Aviation Authority	CAA	-
Estonia	Consumer Protection Board	Consumer protection authority	-
Finland	Finnish Transport Safety Agency	CAA	-
Lithuania	Civil Aviation Administration	CAA	-
Luxembourg	Direction de l'Aviation Civile	CAA	-
Malta	Civil Aviation Directorate	CAA	-
Slovak Republic	Slovak Trade Inspectorate	Consumer protection authority	Consumer protection
	Civil Aviation Authority	CAA	Safety aspects
	Ministry of Transport, Post and	Government	Implementation, including airline

	Telecommunications	department	conditions of carriage and aspects of airport operations
Slovenia	Civil Aviation Directorate	CAA	-

5.10 Most of the bodies designated as NEBs under Regulation 1107/2006 are also designated as NEBs under Regulation 261/2004. The States which have different NEBs are shown in Table 5.2.

TABLE 5.2 STATES WHERE NEBS ARE DIFFERENT UNDER REGULATIONS 1107/2006 AND 261/2004

State	NEB(s) under Regulation 1107/2006	NEB(s) under Regulation 261/2004
Finland	Finnish Transport Safety Agency	Consumer Ombudsman & Agency
		Consumer Disputes Board
		Finnish Civil Aviation Authority
Hungary	Equal Treatment Authority (ETA)	Hungarian Authority for Consumer Protection
	National Transport Authority Directorate for Aviation (NTA)	National Transport Authority Directorate for Aviation
Latvia	CAA, Aircraft Operations Division	Consumer Rights Protection Centre
Romania	Autoritatea Naţională pentru Persoanele cu Handicap (ANPH)	National Authority for Consumer Protection
	Autoritatea Areonautică Civilă Română (AACR)	
Slovak Republic	Slovak Trade Inspectorate	Slovak Trade Inspectorate
	Civil Aviation Authority	
	Ministry of Transport, Post and Telecommunications	
Sweden	Swedish Transport Agency, Civil Aviation Department	Konsumentverket
		Allmänna reklamationsnämndens
UK	CAA	CAA
	EHRC	Air Transport Users Council
	CCNI	

5.11 Only BCAA is shown as a notified NEB for Belgium in the list published by the Commission. As a result, we were not made aware of the existence of the other Belgian NEBs until our interview with BCAA, and therefore did not seek responses from them; in addition, at the time of our research for this project, BCAA had not held meetings with the other regional departments. For these reasons, we therefore have only limited information on their operations, and the data relating to Belgian NEBs in this report refers only to BCAA.

Separation of regulation from service provision

5.12 There is no requirement in the Regulation that the NEB be independent from service providers. However, in our view, it is inappropriate for the NEB also to be a service provider, as it would be difficult for it to act independently in undertaking

enforcement in relation to an infringement that it was itself committing. The only case we have identified where an NEB is also a service provider is the Greek NEB, HCAA, which is also the operator of the regional airports in Greece. This is a significant issue because, as identified in section 4 above, the most significant failure to implement the Regulation that we have identified is that it has not been implemented at the HCAA airports.

Legal basis for complaint handling and enforcement

5.13 Most Member States have complied with the obligations set out in Articles 14 and 16 to designate an NEB and introduce sanctions into national law, with the exception of:

- **Poland:** No sanctions have yet been introduced; a proposed amendment which includes fines is before the Polish parliament, but has not yet been passed.
- **Slovenia:** As yet no body has been designated, and no sanctions have been introduced.
- **Spain:** Enforcement relies on a law which predates the Regulation and hence does not refer explicitly to it. As a result, sanctions for infringements of Regulation 261/2004 (which have an equivalent legal basis) have been challenged by airlines. In most cases, the courts have upheld the right of the NEB to impose sanctions, but cases have not as yet reached the Supreme Court, and in one case a court has ruled that the NEB was not competent to impose sanctions. This is discussed in detail in the case study for Spain (appendix C).
- **Sweden:** No sanctions have yet been introduced; a proposed amendment which includes fines is before the Swedish parliament, but has not yet been passed. The proposed amendment does not define the levels of fines.

5.14 There are a number of States where sanctions have not been introduced for all potential infringements of the Regulation:

- Bulgaria, which does not define penalties for Article 8;
- Estonia, where sanctions have only been introduced for carriers;
- Luxembourg, which only defines explicit fines for Article 4; and
- Romania, where the law defining responsibilities makes the CAA responsible for enforcing compliance with Article 8, but does not endow it with the powers to do so.

5.15 In several Member States, enforcement is dependent on more than one law; for example, the law defining how the NEB must operate and the procedure for imposing sanctions may differ from the law introducing sanctions. There may also be other laws – typically defining rights to equal treatment – which may apply at the same time as the Regulation. Table 5.3 below summarises the relevant legislation in the case study States. More detailed information is provided in the case studies in Appendix C.

TABLE 5.3 RELEVANT NATIONAL LEGISLATION

State	Summary of relevant legislation
Belgium	• Articles 32 and 45-52 of Law of 27 June 1937
Denmark	• Air Navigation Act, Articles 149(11) and 149a define sanctions

France	• Article 330-20 of the Civil Aviation Code, as amended by Decree 2008-1445 of 22 December 2008: gives the Minister of Civil Aviation the power to impose sanctions
Germany	• Air Traffic Licensing Regulation (Luftverkehrszulassungsordnung): defines LBA as the NEB and that breaches of the Regulation are considered an offence. • Air Traffic Law (Luftverkehrsgesetz): defines that breach of EU Regulations relating to air traffic is an offence, and defines the fines applying. • Law on Administrative Offences (Gesetz über Ordnungswidrigkeiten): defines the administrative process that must be followed in order to impose sanctions.
Greece	• Letter of 1 December 2006 (reference 6310/A/10909) from Permanent Representation of Greece to Commission designates NEB; National Aviation Law 1815/1988 sets out fines
Hungary	• Act CXXV of 2003 defines role and sanctions of ETA • Act CXXX of 2003, and Article 4 (2) of Government Decree No 362/2004 define complaints handling procedure • Act XCVII of 1995 on Air Traffic, implemented by Government Decree No. 141/1995 defines role and sanctions of NTA • Ministerial Order 97/2005 makes NTA responsible for approving airport charges • Act CXL of 2004 defines procedure for imposing fines and sets out administrative penalties
Ireland	• Section 45(a) of the Aviation Regulation Act 2001 as inserted by the Aviation Act 2006: defines basis for enforcement and sanctions • Statutory Instrument SI 299/2008: transposes the Regulation into law
Italy	• Legislative Decree 24/2009 of 24 February 2009: defines process to be followed by ENAC and fines that can be imposed
Latvia	• Air Navigation Order (2007): designates NEB • Administrative Violations Code: defines fines
Netherlands	• Resolution to set up the Transport and Water Management Inspectorate (Instellingsbesluit Inspectie Verkeer en Waterstaat), Article 2, paragraph 1, item d: sets up the NEB • Civil Aviation Act (Wet luchtvaart), revised December 2009, Article 11.15, section b, item 1 and Article 11.16, paragraph 1.e.3: defines circumstance under which sanctions may be imposed • General Administrative Law Act (Algemene wet bestuursrecht), chapter 4 (process to impose sanctions) and chapter 5 (level of fines).
Poland	• Aviation Act (Article 21.2(3)): designates NEB • Administrative Procedure Code: defines procedures to be followed • No sanctions yet defined - draft amendment to Aviation Act (Articles 205a, 205b, 209a, 209b) will set out fines
Portugal	• Decree Law 241/2008: designates NEB and defines level of fines which can be imposed for each infringement • Decree Law 10/2004: defines standard scale of fines
Romania	• Decree 27/2002: requires all government bodies to be able to receive complaints • Decision 787/2007: defines penalties (except for Article 8) • Decree 2/2001 (approved and modified by Law 180/2002): defines framework for imposing penalties
Spain	• Royal Decree 184/2008: designates NEB • Aviation Security Law (Law 21/2003): basis for enforcement and sanctions • Royal Decree 28/2009: defines inspection regime • Law on Public Administrations and Administrative Procedures (Law 30/1992): defines operational procedures for the NEB

	• Regulation on Procedures for the Imposition of Sanctions (Royal Decree 1398/1993): defines process for imposing sanctions
Sweden	• Förordning (1994:1808) om behöriga myndigheter på den civilia luftfartens område (ordinance on competent authorities in civil aviation): designates the NEB • No sanctions yet defined, but some are set out in a proposed amendment Regeringens proposition 2009/10:95- Luftfartens lagar • Prohibition of Discrimination Act may also apply in some circumstances (e.g. infringements of Articles 3 and 4)
UK	• Statutory Instrument 2007/1895: designates NEBs, defines penalties and introduces a right to compensation for injury to feelings resulting from an infringement • Enterprise Act 2002: defines civil powers for NEB, including power to apply for an injunction ('stop now order') and power to seek binding undertakings
Austria	• Austrian Civil Aviation Law
Bulgaria	• Civil Aviation Act, Art. 81a
Cyprus	• Civil Aviation Act N 213(I)/2002
Czech Republic	• Civil Aviation Act (No 49/1997), § 93 Articles 7 (a) - (l) and 8 • Administrative Code (No 500/2004)
Estonia	• Consumer Protection Act • Aviation Act §58 and §60
Finland	• Finnish Aviation Act (1194/2009) - Section 157 (Conditional fines and conditional orders of execution) • Conditional Fine Act (1113/1990)
Lithuania	• Paragraph 2 of Article 70 of the Act of Aviation No. VIII-2066 (O.J. 2000, No. 94-2918; 2007, No. 59-2279): designates CAA as NEB • Code of Administrative Violations, Article 115: defines penalties
Luxembourg	• Law of 31st January 1948, art 43, modified by the law of June 5, 2009, Article 1 (19)
Malta	• Civil Aviation (rights of Disabled Persons and Persons with Reduced Mobility) Regulations (LN234/07) as amended by (LN 411/07)
Slovak Republic	• Act No 128/2002 (State Inspections Act): defines powers of NEB to conduct inspections, impose preventative measures, and impose sanctions • Act No 250/2007 on Consumer Protection: provides legal framework for NEB's consumer protection activities
Slovenia	• Not yet implemented

Sanctions allowed in national law

5.16 There are significant differences between the States in the maximum sanctions for infringements of the Regulation that can be imposed under national law (Table 5.4). The highest defined maximum sanctions are in Spain (€4.5 million) but in Denmark, Finland, Netherlands and the UK unlimited fines can be imposed, and in Cyprus the maximum fine is 10% of the turnover of the carrier. In Austria, Belgium and Denmark sanctions may also include a prison sentence.

5.17 However, in many States, sanctions are low, and in some States maximum sanctions are close to or below the costs that a service provider may in some circumstances avoid through non-compliance with the Regulation. In these States, it is possible that the sanctions regime may not comply with the requirement in Article 16 for dissuasive

sanctions to be introduced by Member States; however, without data on the costs of compliance we are unable to assess this. Maximum sanctions are particularly low (less than €1,000) in Estonia, Lithuania and Romania.

5.18 In most States, fines are determined by the NEB, taking into account various factors relating to the case, including the circumstances and conditions of the case, any reasons given for non-compliance, its impact on the passenger and the size of the company. In some States, fines may be imposed which relate directly to the financial impact of the alleged infringement:

- in Germany, additional fines may be imposed to recover any financial gains to the service provider which resulted from its non-compliance; and
- in the Netherlands, reparatory fines can be imposed, which require the service provider to make good any financial loss incurred by the passenger.

TABLE 5.4 MAXIMUM FINES

State	Maximum sanction (€)	Explanation/notes
Belgium	€4,000,000 (criminal and administrative)	In addition up to 1 year's imprisonment if a criminal prosecution
Denmark	Unlimited fine	In addition up to 4 months' imprisonment
France	€7,500	Maximum sanction 'per failing', which is not defined. Can be imposed on a per-passenger basis to give a higher total sanction. Can be doubled if repeated within a year.
Germany	€25,000	Additional fines can be imposed to recover the economic advantage that the carrier has obtained from infringement
Greece	€250,000	Minimum sanction is €500. Fines are generic, and do not refer specifically to the Regulation
Hungary	€22,600 (ETA) €11,300 (NTA)	Minimum sanction €189 for ETA. In addition penalty of up to €3,774 for failure to cooperate with an investigation.
Ireland	€150,000	Maximum €5,000 if the case is heard in a District Court. Fines only applicable on failure to comply with a Direction.
Italy	€120,000	Maximum depends on Article infringed and reduced by two thirds if paid within 60 days. Minimum fines of €2,500-€30,000.
Latvia	€2,800	Fine can be applied per passenger that complains. Law makes no direct reference to the Regulation, and it is possible that penalties could be open to legal challenge.
Netherlands	Reparatory fines: unlimited Punitive fines: €74,000	Reparatory fines should be in proportion to the amount of loss and to the severity of the violation. Punitive fines are per infringement and are not multiplied by number of passengers affected. IVW are conducting a study which will define policy on punitive fines.
Poland	Not yet defined, but proposed to be €1,875	Fines vary depending on Article infringed. Fines are variable for infringements of some Articles, but otherwise are fixed. Fines are cumulative per Article and per passenger that complains, so maximum could be a multiple of this. Minimum fines €47-€1,875.
Portugal	€250,000	The maximum and minimum fines depend on the infringement ('light', 'serious' or 'very serious'), the size of the

		company, and whether the infringement was intentional or negligent. Minimum fine €350-4,500.
Romania	€608	Maximum depends on Article infringed. Per Article breached and per passenger. No penalties available for Article 8. Minimum fines €195-€243.
Spain	€4,500,000	For most infringements maximum would be €4,500
Sweden	Not yet defined	Proposed amendment does not define levels of fines
UK	Unlimited fine	Maximum fines depend on Article breached; for many Articles the maximum fine is €5,600. Unlimited fines must be imposed by Crown Court, for serious cases.
Austria	€22,000	In addition up to 6 weeks' imprisonment
Bulgaria	€5,100	No penalties available for Article 8. Minimum fines €1,020.
Cyprus	€8,000 or 10% of operators turnover	-
Czech Republic	€192,000	-
Estonia	€640	Only applies to carriers
Finland	Unlimited fine	Fines are conditional on the period of time during which a condition is unfulfilled, and should be in proportion to company's size, amongst other factors
Lithuania	€870	Minimum sanction €290. Per case, not per passenger.
Luxembourg	€10,000	Fine of €10,000 for violation of Article 4, of €5,000 for failure to provide information, but no other sanctions given.
Malta	€2,300	Criminal procedure
Slovak Republic	€66,000	Depending on number of passengers affected and whether it is repeated
Slovenia	Not yet defined	-

Statistics for complaint handling and enforcement

5.19 Most NEBs had received very few complaints in relation to the Regulation. Of the 27 NEBs, 8 had received no complaints, and 26 had received less than 50. 80% of all complaints to NEBs had been received by the UK NEBs. Although, the UK has the largest aviation market in Europe, and therefore would be expected to receive a higher number of complaints, in 2009 it received over ten times as many complaints as Germany or Spain, the next largest markets. This may be a result of the right in the UK to claim compensation for infringements of the Regulation, discussed below.

5.20 Of those NEBs that had received complaints, most were not able to give a breakdown. Table 5.5 therefore gives a brief description of the types of complaints received.

TABLE 5.5 COMPLAINTS RECEIVED

State	2009	Total	Description/notes
Belgium	1	1	Poor quality of assistance
Denmark	0	0	-
France	5	24	Transport of insulin and other liquids; denied boarding and requirements to be accompanied; damage to mobility equipment
Germany	22	34	Assistance by the carrier (55%), at the airport (18%), refusal of reservation (14%), denial of boarding (14%)
Greece	3	4	Denial of boarding; carriage of oxygen; handling of passengers
Hungary	0	1	Denial of boarding
Ireland	14	18	Conditions imposed on travel e.g. seating or carriage of oxygen.
Italy	36	40	48% refusal to embark PRMs; most of remainder lack of assistance at airports
Latvia	0	0	-
Netherlands	5	6	IVW was only competent for 1 complaint
Poland	2	2	Both related to airports outside Poland
Portugal	16	34	Not provided
Romania	0	0	-
Spain	35	46	Not provided
Sweden	3	5	Denied boarding, assistance dog policy
UK	356	883	Allocation of appropriate seating; timely provision of assistance on landing; and communicating requests for assistance on arrival at the airport.
Austria	1	2	Treatment of injured passengers
Bulgaria	0	0	Denied boarding
Cyprus	1	3	Not provided
Czech Republic	0	0	-
Estonia	0	0	-
Finland	3	4	Seating, oxygen, movement within cabin
Lithuania	0	0	-
Luxembourg	0	1	Boarding denied to deaf passengers
Malta	1	1	Carriage of guide dogs
Slovak Republic	0	0	-
Slovenia	0	1	Denied boarding
Total	499	1110	

5.21 In addition, NEBs in several States had received questions which were not complaints, regarding, for example, airline seating policy.

Sanctions applied

5.22 At the time the interviews for this study were conducted, no sanctions had yet been applied for infringements of the Regulation. At the time of drafting this report, three States were in the process of applying sanctions:

- France had opened proceedings to impose fines in one case;
- Portugal had opened proceedings to impose fines in two cases; and
- Spain had opened proceedings to impose fines in five cases.

5.23 Two other States had taken other actions to encourage compliance:

- Hungary wrote to an airline requiring it to correct its policy, and published this letter; and
- the UK has threatened several organisations with sanctions, and has taken other actions to encourage compliance, including writing to airlines, and setting out its requirements for compliance.

The complaint handling and enforcement process

Overview of the process

5.24 The complaint handling process is broadly similar in each NEB, however, since most NEBs receive very few complaints, the process for handling them is often not defined in detail. A typical process is as follows:

- complaints are recorded (since the number of complaints is frequently very low, this may be in a spreadsheet or a filing system rather than in a database);
- most undertake an initial filter of the complaints, to remove those that are not related to the Regulation, where the passenger has not first sought redress from the service provider, or where there is no *prima facie* case of an infringement;
- complaints relating to flights departing from other States are forwarded to the NEB of the State which is competent to handle the complaint;
- the complaint is investigated through contacting service providers to request information and/or justification for their actions; and
- a decision is made on the complaint.

5.25 The complaint handling process is different for complaints submitted to one of the UK NEBs (see box below). Otherwise, the main differences between the processes in different Member States are in the following areas, which are discussed in more detail below:

- the nature of the ruling or decision issued to the passenger, in particular whether the ruling is binding;
- under what circumstances the investigation of the complaint may lead to sanctions; and
- the process by which sanctions may be imposed and collected.

Complaint handling in the UK (excluding Northern Ireland) by EHRC

The legislation implementing penalties for infringements of the Regulation in the UK also grants a right to compensation for injury to feelings resulting from an infringement. This is in line with UK disability rights legislation in other sectors. As a result of this, the process for complaint handling is structured around conciliation, with a possible civil claim for compensation if conciliation fails. In other States there is no right to compensation and therefore no reason to offer conciliation proceedings.

The EHRC handles complaints relating to incidents which occurred in the UK excluding Northern Ireland. When a complaint is submitted to the EHRC and an initial evaluation shows it to be potentially valid, a letter is sent to the service provider which summarises the complaint and requests comments. This letter also explains the conciliation process, and asks if the service provider would be willing to participate. The responses are evaluated to see whether they appear to justify the actions of the service provider, but there is no technical or operational investigation, for example, to establish whether any claims made by a service provider are true.

If the complaint remains unresolved, the EHRC will consider referring the case for conciliation. If both parties agree, conciliation is provided independently, and may result in a voluntarily binding agreement on both parties. This agreement may include financial compensation, or may include non-financial reparations such as an apology.

If a service provider does not wish to participate in conciliation, the EHRC may suggest to the passenger that they initiate legal proceedings, which may result in payment of compensation. The EHRC may also consider offering litigation support for cases where it believes that the outcome could help clarify the application of the Regulation.

Complaints related to incidents occurring in Northern Ireland are handled by CCNI. This follows a procedure similar to most other NEBs, including an investigation of the facts of the case, but if this procedure fails to resolve the complaint to the passenger's satisfaction, the passenger can seek financial compensation under UK national law.

Languages in which complaints can be handled

5.26 Most NEBs are able to handle and reply to complaints written in the national language and English, but in many cases NEBs were not able to handle complaints in other Community languages. The languages in which NEBs can receive complaints, and respond to passengers, are shown below.

TABLE 5.6 LANGUAGES IN WHICH COMPLAINTS ARE HANDLED

State	Languages in which complaints may be written	Languages in which the NEB will reply to the passenger
Belgium	Flemish, French, English	Flemish, French, English
Denmark	Danish, English, German	Danish, English
France	French, English, Spanish	French only
Germany	German, English	German, English
Greece	Greek, English, French, German, Spanish, Italian	Greek, English
Hungary	Hungarian, English, German, Italian, other languages where possible	Hungarian, English, German, Italian
Ireland	English, French, German, Spanish, Italian	English, Spanish
Italy	Italian, English, French, Spanish, German	Italian, English, French, Spanish

Latvia	Information not provided at interview	Information not provided at interview
Netherlands	Dutch, English; sometimes also French and German	Dutch, English; sometimes also French and German
Poland	Polish, English, German, French	Polish, informal translation to English provided
Portugal	Portuguese, Spanish, English and French	Portuguese, Spanish, English and French
Romania	Romanian, English	Romanian, English
Spain	Spanish, English	Spanish, English
Sweden	Swedish, English	Swedish, English
UK	English, but would make arrangements to handle any other languages	English, but would make arrangements to handle any other languages

Time taken

5.27 Many NEBs informed us that they had received too few complaints to be able to draw conclusions on the average time taken to handle them (see Table 5.7 below). Several other States had received very few complaints, but had a legal limit on time to respond set by national law. Of those that were able to estimate the actual time taken to resolve complaints, most reported wide variation: for example, Italy reported variation between 1 and 6 months. The longest time taken to resolve complaints was reported in the UK, where complaints may take up to 6 months, and there are instances where complaints have taken longer than this to resolve; as a result the passenger has no longer been able to claim for compensation under UK national law (see 5.25).

TABLE 5.7 TIME TAKEN TO RESOLVE COMPLAINTS

State	Average time taken	Explanation/Notes
Belgium	Too few complaints to estimate time	
Denmark	Too few complaints to estimate time	No complaints yet received, but in principle 2-3 months
France	Varies significantly	If the case goes to CAAC, it will take longer. Overall, durations are similar to under Regulation 261/2004
Germany	Too few complaints to estimate time	Complaints are handled faster than for Regulation 261/2004, which take 3-4 months
Greece	30 days	Response time is set by law and is generic across all complaints to HCAA
Hungary	75 days	Response time is set by law and is generic across all complaints to ETA
Ireland	3-4 months	Awaiting responses (from service providers or Commission) lengthens the average time taken, so many cases handled quicker than this
Italy	30 days to 6 months	Depends on investigation required and response of service provider
Latvia	Too few complaints to estimate time	
Netherlands	Too few complaints to estimate time	Same procedure as for Regulation 261/2004: in principle 3-6 months
Poland	Too few complaints to estimate time	Likely to be quicker than for Regulation 261/2004
Portugal	Too few complaints to estimate time	May be faster than for Regulation 261/2004

Romania	30 days	Time limit set by law
Spain	Too few complaints to estimate time	Always less than six months, and delay is due to service providers. Shorter than equivalent complaints under Regulation 261/2004.
Sweden	At most 6 weeks	This is a non-binding target for the CAA; little information at present on how well this has been met.
UK	EHRC: Up to 6 months, can take longer CCNI: Up to 6 weeks	EHRC: Wide variation in time taken. Process is driven by 6 month time limit for court cases for compensation under SI. CCNI: Wide variation in time taken.

Responses issued to passengers

5.28 All of the NEBs in the case study States provide PRMs who complain with an individual response. As there is no right to compensation, the extent to which an NEB can offer assistance to obtain redress is limited; most responses state a decision on whether the NEB considers the Regulation to have been infringed, but do not state whether any payment should be made to the PRM, for example for loss due to denied boarding. The UK is an exception, for the reasons given in above. Most responses from NEBs do not have specific legal status, however in Hungary the response is legally binding, and in the Netherlands non-compliance with a decision may lead to a fine.

5.29 Almost all States would undertake some form of investigation of a complaint. The exception to this is the UK (excluding Northern Ireland), where the body responsible for handling complaints does not take an investigative role, although the CAA does investigate the facts of a proportion of cases. As discussed above, the UK process is structured around claims for compensation and the NEB sees its role as to facilitate conciliation, where the service provider is incentivised to voluntarily provide some form of compensation, or risk having a court award compensation against it.

5.30 Table 5.8 summarises the responses issued to the passenger.

TABLE 5.8 RESPONSES ISSUED TO PASSENGERS

State	Nature of response issued
Belgium	Individual non-binding evaluation sent to both service provider and passenger
Denmark	Non-binding individual evaluation provided to PRM and service provider
France	Individual response provided by DGAC summarising the conclusions of the investigation and its opinion on the case
Germany	Individual response giving the result of the investigation and their conclusions
Greece	Individual response giving the result of the investigation and their conclusions
Hungary	ETA issues legally binding decision to both passenger and service provider
Ireland	CAR writes to each passenger to summarise conclusions and whether incident was an infringement of the Regulation
Italy	ENAC writes to each complainant to inform them of its conclusions
Latvia	No specific procedures established, but passengers would be issued with an official letter communicating the final decision

Netherlands	Formal decision issued to both passenger and carrier. Not legally binding, but non-compliance may lead to a fine.
Poland	Formal decision issued to both passenger and carrier
Portugal	Individual response summarising correspondence with service provider and reasons for decision.
Romania	Individual response is sent to the passenger, setting out any infringements of the Regulation and any corrective measures taken by ANPH
Spain	Individual response, including response from carrier and AESA's view on it, and information on how passenger can obtain redress
Sweden	Individual non-binding response summarising correspondence with service provider and reasons for decision.
UK	EHRC: Does not investigate complaints, and therefore does not have standard format for output. Conciliation process may result in form agreeing actions to be taken. CCNI: Individual opinion letter sent to passengers.

Circumstances in which sanctions may be imposed

5.31 There are also significant differences between the States as to whether and when sanctions are imposed.

5.32 Some NEBs, including one of the Hungarian NEBs, Italy, Portugal, and Romania, always impose sanctions in the case that an infringement is found, even if it is a minor or technical infringement which does not significantly inconvenience passengers. If the amendments to the Aviation Act are passed in their current form, the Polish NEB will in future apply fines for every infringement. The German NEB must also take some action whenever an infringement is identified, although it has discretion to choose between a warning letter and a fine. If it chooses a fine, this has to be proven to the same standard of evidence required for criminal cases, and the NEB is therefore unlikely to impose sanctions if the infringement is 'not significant'.

5.33 In other States, the policy is to impose sanctions far less frequently:

- In two States (Belgium and Greece), a sanction would only be imposed where a service provider fails to take corrective action when required to do so by the NEB. In Ireland, this is the case for infringements of some Articles. In Spain, this is the general policy of the NEB but it could in theory impose sanctions without first warning the service provider.
- Several States have a policy of imposing sanctions where there is evidence of serious or systematic infringements, including Denmark, and the Netherlands.
- The UK will consider prosecution of a service provider where it fails to comply with CAA requests for corrective action, or for wilful non-compliance. Any case to be taken to prosecution must proven to a criminal standard of evidence, despite the due diligence defence available in UK law. The UK NEB believed that this would less difficult than under Regulation 261/2004, as Regulation 1107/2006 is more prescriptive.

5.34 The policies of the case study States on imposition of sanctions are shown in Table 5.9 below.

TABLE 5.9 POLICY ON IMPOSITION OF SANCTIONS

State	Policy on imposition of sanctions	Explanation/Notes
Belgium	Applied for serious or systematic violations (allows opportunity for corrective action first). Public prosecutor decides whether to bring criminal case; if not, BCAA may then decide whether to impose administrative sanctions.	If prosecutor brings criminal case, BCAA may not impose administrative sanctions
Denmark	Applied for serious or systematic offenses; minor offences would receive a caution, which would not be made public	
France	In consultation with CAAC. Ultimate decision made by the Minister responsible for Civil Aviation on the advice of CAAC.	Cases would only be considered by CAAC if referred by DGAC
Germany	If a complaint is upheld, imposes warning letter or sanction; LBA has flexibility to decide which	Procedure is a mix between administrative and criminal procedures: level of proof required is equivalent to a criminal case but case is decided by LBA
Greece	First send a letter of caution; if service provider infringes again, then impose penalty.	
Hungary	Choice of actions (including fines and non-pecuniary measures) which may be applied by ETA, depending on nature of case. NTA has same choice of actions but must take some form of action. Fines also imposed for non-cooperation with cases.	Fines for non co-operation can be imposed even where there was no infringement found
Ireland	CAR would consider prosecuting if a service provider did not comply with a Direction, or if it identified a breach of Articles 3 or 6 (2)	CAR can consider issuing a Direction if issue identified during an inspection, or if a service provider does not rectify a case when required to do so
Italy	Applied in every case of an infringement, identified either by investigation of complaint or inspection	Amount of fine considers facts of the case. Appeals and collection process can be lengthy, up to 7 years
Latvia	At discretion of NEB	More specific policies to be developed when Administrative Violations Code amended.
Netherlands	In principle sanctions could be applied for every violation, but IVW policy is to apply them only for severe or repeated infringements	Appeals process includes several stages, and may take in principle up to 2 years
Poland	When in force, will be applied in every case of an infringement	No sanctions yet in place
Portugal	Applied for every confirmed infringement, identified either through complaint or inspection	
Romania	Applied for every confirmed infringement	Amount of fine considers facts of the case. Any sanctions must be imposed through the Social Inspectorate; specific methodology is in development. AACR cannot impose fines for violations of Article 8.
Spain	Whenever an infringement is identified, the service provider receives warning, with a period in which to rectify the issue; if it fails to	

	do so, AESA can impose a sanction.	
Sweden	Sanctions not yet defined	
UK	Applied when service provider fails to comply with CAA requests for corrective action, or for wilful non-compliance	In addition, standard of evidence required for criminal prosecution, and 'due diligence defence' means that it must be proved that senior management of carrier had intended not to comply

Process to impose sanctions

5.35 In most Member States, the process to impose sanctions is an administrative procedure undertaken by the NEB, and the decision to impose sanctions is made by the NEB alone. Service providers, and in some cases also passengers, can appeal to the courts.

5.36 The exceptions to this are the following States:

- In Germany, the procedure is similar to the administrative procedures applying in other States, but the standard of evidence required is equivalent to that in criminal cases.
- In Slovakia, the procedure is also similar to the administrative procedures in other States, but with the key difference that (as for Regulation 261/2004) an on-site inspection is required before a sanction can be issued. A consequence of this is that sanctions cannot be imposed on carriers that are not based in Slovakia.
- In Denmark, Ireland, Malta and the UK[13], sanctions are imposed under criminal law and therefore a criminal prosecution is required.
- In France, cases are referred by the NEB (DGAC) to an administrative commission (the CAAC) that meets twice per year. This makes a recommendation to the Minister of Civil Aviation, who takes the ultimate decision about whether a sanction should be imposed, and the level of any sanction.
- In Belgium, sanctions can be imposed under criminal law but administrative fines to an equivalent level are also available.
- In Austria, administrative fines can be imposed, but in aggravated cases a prison sentence of up to 6 weeks may also be imposed, under criminal law.

5.37 Some States have administrative fines to encourage compliance, which can be applied when a service provider fails to respond within a certain time; these include Hungary and Latvia.

Application of sanctions to carriers based in other Member States

5.38 A number of NEBs face difficulties in applying sanctions to carriers that are not based in their State. This arises because national law either:

- does not permit application of sanctions to carriers not based in the State; or
- requires administrative steps to be taken in order to impose a sanction, which are

[13] Issues regarding the imposition and collection of fines in the UK are discussed in further detail in the Evaluation of Regulation 261/2004, SDG for European Commission, February 2010.

either difficult or impossible to take if the carrier is not based in, or does not have an office in, the State concerned.

5.39 The problem is particularly significant in relation to carriers based in other EU Member States, as opposed to non-EU carriers. In many Member States where sanctions are imposed through an administrative process, national law requires a notification of a sanction, or the process to start imposition of a sanction, to be served at a registered office of the carrier, or on a specific office-holder within the carrier. Non-EU (long haul) carriers will usually have an office in the each of the States to which they operate, and this can be a condition of the bilateral Air Services Agreements which permit their operation; however there are no such requirements on EU carriers, which are free to operate any services within the Union.

5.40 We discussed this issue in detail in our recent report on Regulation 261/2004, and in most cases the issues are equivalent, because the process to impose the sanction is the same. However, since the research for that report was conducted, there have been changes affecting the imposition of fines on non-national carriers in two States:

- **Greece:** Until 2008, the legal process for serving a fine required that a writ was accepted by a representative in Greece of the company being fined. As a result, HCAA faced difficulties in imposing fines on non-national carriers that had not established an office in Greece. To resolve this problem, in May 2008 HCAA adopted a regulation on airline representation, requiring all non-national airlines to have representation agreements with their local representatives. This was withdrawn shortly after it came into force, as the restrictions it imposed violated Regulation 1008/2008 on common rules for the operation of air services in the Community. The difficulties in imposing sanctions on non-national carriers therefore remain.
- **Germany:** German national law requires LBA to prove that the notification of any sanction had been issued to a named person within the carrier; as these carriers often do not have offices or legal representation in Germany, at the time of the research for the study on Regulation 261/2004 it was often not possible to meet this requirement. LBA now believes that this problem has been resolved and expects to test this application within six months.

5.41 The problems with application of sanctions to carriers not based in the Member State are summarised in Table 5.10. Since no fines have yet been imposed for infringements of the Regulation, many of the procedures and issues described below have not been tested in practice. However, often the procedures for imposing fines are equivalent to those for Regulation 261/2004 and therefore where possible we have drawn conclusions on this basis.

TABLE 5.10 ISSUES WITH APPLICATION OF SANCTIONS TO CARRIERS NOT BASED IN THE STATE

State	Whether it is possible to impose sanctions	Explanation/Notes
Belgium	Yes in principle	In principle there are no problems although this has not been tested as yet as no sanctions have been imposed. BCAA believed the best approach would be through cooperation with other NEBs, but the scope of the Regulation could limit this.
Denmark	Yes, although only if the incident occurred on Danish territory	No sanctions have been imposed and therefore this has not been tested. Restriction to Danish territory means that a small proportion of incidents would not be covered, i.e. incidents occurring mid-flight on board a non-Danish carrier which had departed from or was landing at a Danish airport.
France	Yes	Sanctions have been imposed on foreign carriers without any difficulties for other Regulations, so in principle should not be a problem. Notification can be sent by registered mail, and by fax if it is not possible to obtain a receipt from the registered mail.
Germany	Yes in principle	Sanctions must be served on a named person within the airline, which caused problems when issuing fines for Regulation 261/2004. LBA believe this is now resolved, and that it should be sufficient to obtain a signed receipt either by registered mail or by a courier, or issue the sanction through the German embassy in the State concerned
Greece	Uncertain	In summer 2009 national legislation came into force on airline representation, requiring a representation agreement for all non-national airlines. This allowed HCAA to impose financial penalties on all carriers but has now been repealed. The same difficulties in imposing fines on non-national carriers are now present: the legal process of serving a fine requires that a representative of the airline in Greece accept the writ, and there are therefore difficulties in imposing fines on non-national carriers that have not established an office in Greece.
Hungary	No	ETA is only able to handle discrimination cases regarding companies based in the territory of the Republic of Hungary.
Ireland	Yes in principle	Notification of a Direction can be served at the carrier's registered office, which does not have to be within the State. Any proceedings would require proof of incorporation of an airline which could be accepted by the Irish courts.
Italy	Yes but slower / more complex	ENAC would use the process set out in Regulation 1393/2007 to serve notifications on carriers which do not have offices in Italy, but this is likely to be slow/complex. For fines imposed under Regulation 261/2004, this has been short-cut in some cases by the Italian embassy/consulate in the State serving the notification directly.
Latvia	No	The Latvian Administrative Violations Code only allows for sanctions to be imposed on 'legal persons'. This is defined as including foreign individuals but not foreign companies.
Netherlands	Yes	IVW must prove that the company being fined has been notified, for example by proving receipt of the letter setting out the fine. The law states that if IVW can prove it has sent the fine, it is up to the other party to prove it has not received it.
Poland	Yes	Notifications are sent by registered mail or courier to the head office of the carrier – there is no limitation provided a receipt is obtained. A receipt from a courier company is considered sufficient.

Portugal	Yes	No specific constraints on imposing sanctions. Procedure equivalent to that for national carriers.
Romania	No	Notification of any penalty must be made by mail with a receipt, or by physically presenting it in the presence of a witness. If an airline does not have a legal representation in Romania, this cannot be done.
Spain	Yes	Notifications are sent by registered mail – there is no limitation provided a receipt is obtained. In theory collection of sanctions is problematic if carrier does not have an office in Spain, but this has not yet proved a problem.
Sweden	Sanctions not yet defined	Proposed amendment to Civil Aviation Act is unlikely to allow this, as no other Swedish legislation does so.
UK	Yes in principle	In principle there are no problems although this has not been tested as yet as no sanctions have been imposed. As sanctions could only be imposed through a criminal process, this would be undertaken by the criminal courts system not the NEB.

Monitoring undertaken by NEBs

5.42 While the Regulation does not explicitly require NEBs to undertake monitoring of compliance with the Regulation, it does require them to take measures to ensure that the rights of PRMs are respected, including compliance with the quality standards required by Article 9 (1).

Monitoring of airport quality of service

5.43 Two NEBs, Denmark and Germany, had undertaken no actions to directly monitor airport service quality. Denmark holds biannual meetings with stakeholders including PRM organisations, airport managing bodies and airlines, but does not undertake any first-hand monitoring of service quality at airports.

5.44 NEBs in all but two of the case study States had undertaken some inspections of airports. Many undertook yearly inspections of the major airports, although some inspected airports more frequently: the Hungarian NEB inspects Budapest airport three times per year, and Spain had conducted 152 inspections since the introduction of the Regulation. Some had only undertaken one inspection, when the Regulation came into force; these included France, the Netherlands, Romania and Sweden.

5.45 Most inspections focus on checks of the systems and procedures in place to provide service. These checks included confirming the signage and functioning of the designated points of arrival, training records, and the written procedures followed by staff providing the service. Most did not assess the passenger experience; those that did were Latvia, Sweden and the UK. These checks included site visits accompanied by representatives of PRM organisations to check actual waiting times and infrastructure such as designated points.

5.46 In addition to inspections, there were a number of other approaches to monitoring quality of service, including:

- attending the PRM steering committees of larger airports on a monthly basis (UK);
- holding biannual meetings with stakeholders including PRM organisations (Denmark); and

- sending annual surveys on implementation of the Regulation to airports (Romania).

5.47 Table 5.11 summarises the actions NEBs have taken to monitor airport service quality.

TABLE 5.11 NEB ACTIONS TO MONITOR AIRPORT QUALITY OF SERVICE (EXCLUDING INDIRECT MONITORING)

State	Direct monitoring of airport quality of service
Belgium	Inspection and audit of subcontractors at Brussels Airport, covering part of Regulation
Denmark	Biannual meetings with stakeholders including PRM organisations, airport managing bodies and airlines
France	One inspection of Paris Charles De Gaulle
Germany	None
Greece	Inspections of all airports (including 3 at Athens) for compliance with quality standards (although no quality standards set at any airport other than Athens)
Hungary	Regular inspections (Budapest 3 per year, smaller airports once) covering systems and equipment; questionnaire requesting number of complaints received and training given; approves safety license of PRM service provider, including check of quality standards
Ireland	2 inspections at each airport under jurisdiction
Italy	Regular inspections by staff based at airports, reviewing equipment and procedures, application of quality standards, and provision of training
Latvia	Inspections for compliance with quality standards: checking 'time stamps', site visits to measure actual waiting times. Meetings two times a year to discuss standards.
Netherlands	Audit of systems at major Dutch airports in 2007/2008. Further investigations will be driven by complaints.
Poland	Surveys of all airports, covering: quality standards, training records and programmes, documentation of cooperation with PRM organisations and airport users. Documentation checked by inspections.
Portugal	Yearly inspections of major Portuguese airports, covering designated points and information, but excluding staff training and assistance provided.
Romania	Inspection of Bucharest Otopeni, in cooperation with Social Inspectorate. Annual surveys of airports on several topics, including training, accessible information and procurement.
Spain	152 inspections relating to the Regulation
Sweden	Inspection of Stockholm Arlanda with PRM organisation, including checks of designated points and signage. No such checks of smaller airports.
UK	CCNI: Annual PRM site visits at airports; quarterly meetings with airports. CAA: Physical inspections of airports combined with discussions with service providers. Attends airport-PRM consultative committees monthly for London Heathrow, Gatwick, Luton and Stansted, and for Manchester less frequently.

5.48 For most of the NEBs we spoke to, resource constraints were not an issue: most NEBs received few complaints, and did not undertake significant additional activity which would require additional resources. Where inspections of airports for compliance with the Regulation were undertaken, they were frequently combined with other inspections and did not therefore require significant additional resourcing. The case study States which informed us that they would undertake more inspections if they

had more resources were France and Ireland.

Monitoring of airline quality of service and policy regarding carriage of PRMs

5.49 Most NEBs did not inform us of any monitoring of airline service quality they had undertaken, and stated that they had not investigated or challenged any airline policies on carriage of PRMs.

5.50 The most pro-active approach to airline service quality was that of the Spanish NEB, which in 2009 undertook 409 inspections on passenger rights. The other NEBs which informed us of reviews of airline quality of service took a number of approaches:

- approval of ground handler training (Greece);
- reviewing operating manuals (Latvia, Poland);
- reviewing websites for accessibility (Latvia, Netherlands); and
- annual surveys on airline implementation of the Regulation (Romania).

5.51 Table 5.11 summarises the actions NEBs have taken to monitor airline service quality and policies on carriage of PRMs.

TABLE 5.12 NEB ACTIONS TO MONITOR AIRLINE QUALITY OF SERVICE AND POLICY

State	Monitoring of airline quality of service and policy on carriage of PRMs
Belgium	Developed advisory document which sets limits on PRM carriage by Belgian carriers
Denmark	No review of service quality. Discussion of hypothetical reasons for refusal of embarkation discussed at stakeholder meetings
France	None
Germany	No review of service quality.
Greece	Training of ground handlers is approved by HCAA
Hungary	Reviews requirements and Conditions of Carriage for compliance with Regulation
Ireland	Reviewed airline policies on carriage of PRMs
Italy	None
Latvia	Inspections of both main Latvian airlines: reviewed operating manuals, websites and records. Would use unannounced inspections if infringements identified.
Netherlands	Consultations with EDF to check accessibility of airline websites
Poland	NEB reviewed airline's operating manual as a result of one case
Portugal	None
Romania	Annual surveys of airlines on several topics, including refusal of carriage, training and accessible information
Spain	409 inspections in 2009 on passenger rights, including checks on information provided to passengers and compliance with conditions of carriage
Sweden	Reviewed policies on carriage in cooperation with Swedish Work Environment Authority; awaiting EASA report before defining policy on PRM limits
UK	Requested and reviewed information from airlines on the rationales for their policies

5.52 In addition, many NEBs are also the licensing authority for carriers registered in the State, and therefore have to approve carriers Operating Manuals. Where this is the case, these NEBs have to approve, and therefore could determine, carriers' policies on carriage of PRMs and requirements to be accompanied.

5.53 We have identified that in some cases the licensing authority does have specific policies on carriage of PRMs which must be reflected in carriers Operating Manuals. The stated rationale for these policies is safety, but these policies vary significantly between States, and have not been demonstrated to be evidence-based. In most cases, the licensing authorities do not have specific policies and will approve those proposed by the carriers, subject to these being reasonably based on safety. Most NEBs and licensing authorities have not done anything to challenge policies on carriage of PRMs proposed by carriers, and this has resulted in significant differences in policies between carriers. This issue is discussed in more detail in section 4 above.

Monitoring of airport charges

5.54 As noted previously (see 5.6), no Member State has designated a separate body for enforcement of Article 8 of the Regulation, and several have not yet passed legislation to allow penalties to be imposed for infringements of this Article.

5.55 7 out of 16 case study NEBs had undertaken no direct monitoring of the charges levied by airports for providing services under the Regulation, or of the consultation which airports are also obliged to undertake when setting such charges.

5.56 The NEBs for Hungary and Italy had undertaken audits of the charges levied, while a number of NEBs had undertaken high level reviews of expenses and charges (including Greece, Latvia, Poland and Romania). The Netherlands and Portugal had undertaken benchmarking exercises against other airports.

5.57 Table 5.11 summarises the actions NEBs have taken to monitor airport charges under the Regulation.

TABLE 5.13 NEB ACTIONS TO MONITOR AIRPORT CHARGES (EXCLUDING INDIRECT MONITORING)

State	Direct monitoring of airport service charges
Belgium	None
Denmark	None
France	None
Germany	None
Greece	Annual review of expenses and charges
Hungary	Approves airport charges; in-depth audit of costs and charge for Budapest
Ireland	Charges included within regulated price cap. CAR has investigated level of consultation on charges.
Italy	Charges set by ENAC in cooperation with airports and airlines
Latvia	High-level check of charge
Netherlands	Reviews against other airports with advice of Netherlands Competition Authority.

Poland	Review of charges (by other CAO department)
Portugal	Benchmarking exercise across European countries, but no auditing or analysis of whether charges are cost-reflective
Romania	Checks for: existence of charges; separation of accounts; annual report on expenses and revenues. No checks on whether reasonable or cost-reflective (but in the process of recruiting staff with economic skills).
Spain	None
Sweden	None, but review is planned.
UK	None

Other activities undertaken by NEBs

Interaction between NEBs and with other organisations

5.58 Given the low number of complaints received by NEBs, interaction with other stakeholders is important to maintain an awareness of any issues arising. Table 5.14 summarises the interactions between NEBs and other organisations.

TABLE 5.14 NEB INTERACTION WITH OTHER ORGANISATIONS

State	Form of any interaction between NEB and other organisations
Belgium	None
Denmark	Biannual meetings with stakeholders, including airports, airlines and PRM organisations
France	No information provided at interview
Germany	No information provided at interview
Greece	Meetings with PRM organisations to help define quality standards, joint accessibility reviews of regional airports
Hungary	Biannual meetings with PRM organisations
Ireland	No information provided at interview
Italy	Round table discussions to develop advisory guidance, good relationship with PRM organisation
Latvia	CAA attends quarterly PRM steering committee at Riga Airport with PRM organisations
Netherlands	Consultations with EDF to check accessibility of airline websites
Poland	Worked with PRM organisation to improve CAO understanding of problems faced by PRMs
Portugal	One day seminar for aviation industry stakeholders on Regulations 261/2004 and 1107/2006. Did not include representatives of PRM organisations.
Romania	NEB and PRM organisation cooperated with Bucharest Otopeni to develop quality standards
Spain	No information provided at interview
Sweden	Approximately monthly contact with PRM organisations, including biannual aviation focus group
UK	CCNI: Worked with Equality Commission of Northern Ireland to support introduction. CAA: Attends monthly PRM steering committees at major UK airports with PRM organisations, receives guidance from government advisory committee on disabled travel.

Promotional activity undertaken by NEBs

5.59 The Regulation requires Member States to inform PRMs of their rights and the possibility of complaints to NEBs. Relatively few NEBs have made significant efforts towards this: of the case study NEBs, only Romania and UK had undertaken nationwide campaigns to promote awareness of passengers' rights under the Regulation, and even in the UK, the PRM organisation we spoke to was not aware of the campaign the UK NEB had conducted.

5.60 Other NEBs had undertaken less direct promotional activity, including the following:

- publishing of leaflets to be distributed at airports (Belgium, Germany);
- holding a conference (Germany); and
- actions to promote awareness of the Regulation to PRM organisations and other stakeholders, but which did not directly inform passengers (Denmark, Italy, Netherlands, Poland).

5.61 A number of NEBs had published information on their websites. While such information can be useful, if a passenger is unaware that they have rights, or is aware they have rights but unaware of the role the NEB plays in enforcing them, they are unlikely to find and read NEB websites. Table 5.15 lists the activities undertaken by NEBs.

TABLE 5.15 NEB ACTIVITY TO PROMOTE AWARENESS OF THE REGULATION

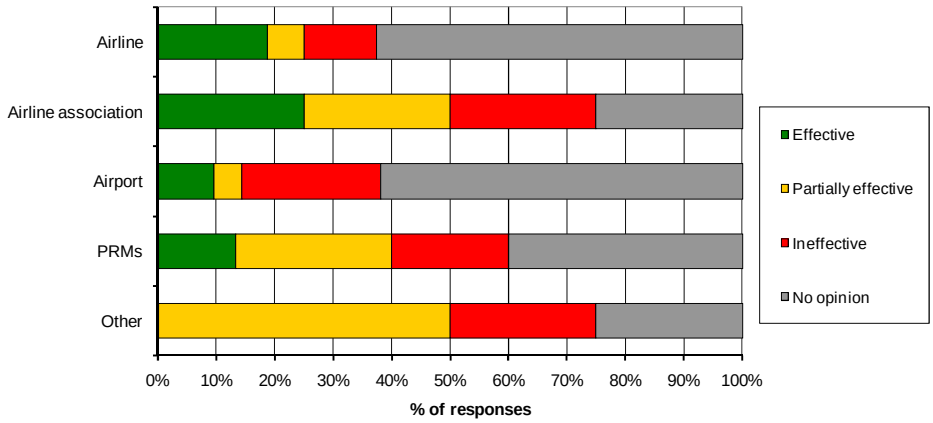
State	Actions taken by NEBs to promote awareness of the Regulation
Belgium	Leaflets sent to Brussels Airport; also available on the BCAA website.
Denmark	Letters to stakeholders on obligations under Regulation sent out when it was passed.
France	No information provided at interview. Section on website with information on Regulation.
Germany	BMBVS published a leaflet on Regulation in 2008 and held a conference with PRM organisations and the association of German air carriers; published information on website.
Greece	Information on the Regulation (including videos) placed on website.
Hungary	Information on the Regulation (including videos) placed on website.
Ireland	No information provided at interview. Section on website with in-depth information on Regulation.
Italy	Guidance on implementing the Regulation developed with and circulated to airports, airlines and PRM organisations. No direct promotional activity to passengers.
Latvia	Published PRM complaint form on website.
Netherlands	Contact with Dutch Association of Travel Agents to improve awareness and ensure correct allocation of IATA codes.
Poland	Provided information regarding the Regulation to PRM organisations.
Portugal	No information provided at interview. Section on website with information on Regulation.
Romania	Public awareness campaign with main PRM organisations, including dedicated website, posters and leaflets distributed throughout the country, through airports, carriers, travel agents and municipal bodies.
Spain	No information provided at interview. Section on website with information on Regulation.

Sweden	No information provided at interview. Section on website with information on Regulation. PRM org states well-publicised initially but not since.
UK	EHRC: distribution of guides on rights under Regulation; advertised in national media CCNI: distribution of guides on rights under Regulation, covered in regional media; advertorial piece in newspapers; exhibitions at relevant events.

Stakeholders views on complaint handling and enforcement

5.62 We asked each of the stakeholders we contacted about how effectively they believed NEBs had enforced the Regulation; there is some variation between different groups of stakeholders (Figure 3.10 below). A high proportion of stakeholders (over 60% of airports and airlines) have no opinion on how well NEBs have been enforcing the Regulation; often, the reason given for this response was that the stakeholder had had no interaction with the NEB in question. The proportion which believes that NEBs have not been enforcing the Regulation effectively is broadly consistent across stakeholder groups, at 20%-25%.

FIGURE 5.1 VIEWS OF STAKEHOLDERS ON NEB EFFECTIVENESS



5.63 In this section, we discuss the particular issues raised by each group of stakeholders.

Airlines and airline associations

5.64 Most airlines did not express strong views on whether NEBs had enforced the Regulation effectively, and did not give specific examples of areas where NEBs were performing well or poorly. One airline expressed frustration with the lack of action taken against airports, in particular relating to excessive charges and to lack of focus on safety.

5.65 Of the airline associations we spoke to, AEA believed that effectiveness of enforcement varied by State. IACA believed that in general NEBs were unfairly targeting airlines and not airports. Regarding specific NEBs, it believed that the UK complaint-handling NEB was bringing cases which were factually inaccurate, and that there was insufficient distinction between NEBs and service providers in Spain and Portugal.

Airports

5.66 A higher proportion of airports than airlines believed that NEBs were ineffective. Two airports believed actions needed to be taken by NEBs to raise the proportion of pre-notifications for assistance. One airport believed that the NEB should take more action to inform passengers of their rights and obligations. Three airports informed us that they had had no interaction with their NEBs, and two stated that their interactions with NEBs had been unsatisfactory: one informed us that the NEB was slow and unresponsive, and the other stated that it was not clear which organisation was their NEB. Only one airport informed us that it had good and close cooperation with its NEB.

NEBs

5.67 As there have been very few complaints received under the Regulation, there have also been very few complaints which have required forwarding to other NEBs. Therefore, the NEBs have no information on the effectiveness of other NEBs via their responses to forwarded complaints.

PRM organisations

5.68 13% of PRM organisations believed that NEBs were enforcing the Regulation effectively. Those that believed that NEBs were functioning ineffectively or only partially effectively believed that too little action was being taken, either through active monitoring of the services provided or through taking actions to remedy poor service. Four of the PRM organisations we spoke to had had little or no interaction with their NEB.

Other organisations

5.69 The other organisations we spoke to noted the following issues with regard to enforcement:

- lack of consistency of approach between NEBs, particularly in terms of whether they believe it is their role to handle complaints;
- unwieldy complaints systems; and
- unreasonable requests made by NEBs.

5.70 One organisation also believed that some NEBs were taking a sensible line between the demands of PRMs and of service providers.

Conclusions

5.71 Member States are required to designate a body responsible for enforcing the Regulation regarding flights from or arriving at its territory. They may also designate separate bodies responsible for handling complaints, and for enforcing Article 8. All Member States except Slovenia have designated an NEB, which in most cases is the Civil Aviation Authority and is the same organisation that is responsible for enforcement of Regulation 261/2004. In a number of States, the Regulation is not explicitly referred to in the law designating the NEB, and in Spain, the imposition of sanctions has been challenged, in one case successfully, on the basis that the NEB was not competent to impose the sanction.

5.72 There is no requirement in the Regulation that the NEB be independent from service providers and we have identified one case where it is not: the Greek NEB, HCAA, is also the operator of the airports other than Athens.

5.73 Member States are also required to introduce penalties in national law for infringements of the Regulation, which must be effective, proportionate and dissuasive. All States except Poland and Sweden have introduced sanctions into national law, although there are a number of States where sanctions have not been introduced for infringements of all Articles. In the UK, national law grants rights additional to those given in the Regulation: passengers who suffer injury to feelings as a result of an infringement of the Regulation may seek financial compensation from the service provider.

5.74 There is significant variation in the level of the maximum sanctions which can be imposed for infringements, and in some States the fines may not be at a high enough level to be dissuasive. While some States allow unlimited fines to be imposed and may also impose a prison sentence, maximum sanctions in Estonia, Lithuania and Romania are lower than €1,000.

5.75 The Regulation allows any passenger who believes that the Regulation has been infringed, and is dissatisfied with the response they have received from the service provider, to make a complaint to the appropriate body (usually an NEB). However, very few complaints have been received under the Regulation: to date, since the introduction of the Regulation, 1,110 complaints have been received, compared to a total of 3.2 million passenger assisted in 2009 across a sample of 21 EU airports. 80% of all complaints were received by the UK NEBs; none of the NEBs in the other 26 Member States has received more than 50 complaints.

5.76 Where an NEB identifies an infringement (through a complaint or other means) it may choose to enforce the Regulation by imposing sanctions. No sanctions have yet been imposed, but France, Portugal and Spain have opened proceedings to impose fines. However, in a number of States, there are likely to be significant practical difficulties in imposing and collecting sanctions, in particular in relation to airlines registered in different States.

5.77 Many NEBs had taken at least some action, other than the monitoring of complaints, to assess whether service providers were complying with the Regulation. NEBs in 14 of the 16 case study States had undertaken at least one inspection of airports for compliance with the Regulation, however most inspections have focused on checks of systems and procedures, and did not assess the actual experience of PRMs using the service provided by the airport. NEBs for 9 of the 16 States had undertaken no direct monitoring of the charges levied by airports for providing PRM services, although Hungary and Italy informed us that they had undertaken in-depth audits of the charges levied at airports.

5.78 Member States are required to take measures to inform PRMs of their rights under the Regulation, and the possibility of complaining to appropriate bodies. Of those that provided information, relatively few NEBs had made significant efforts to promote awareness of the Regulation by passengers; only two informed us of national public awareness campaigns they had undertaken.

5.79 Awareness of the NEBs performance appeared in general to be poor: most stakeholders contacted for the study held no opinion on the effectiveness of enforcement by NEBs, and many informed us that this was because they had had no interaction with them.

6. STAKEHOLDER VIEWS ON POLICY ISSUES

Introduction

6.1 This section summarises views expressed by stakeholders in the course of our consultation exercise on key policy issues, including whether any changes should be made to the scope or content of the Regulation, and what any changes should be.

6.2 Stakeholders also expressed views on the application of the Regulation by airports, carriers, and the complaint handling and enforcement process; these views are summarised in the relevant chapters above.

Whether changes should be made to the Regulation

6.3 We asked all of the stakeholders that we interviewed whether they considered that any changes should be made to the Regulation.

6.4 Half of the airports we interviewed believed that the Regulation should be changed. Several suggested that the definition of PRM was too broad, and that this was contributing to abuse of services. It was also suggested that the Regulation be amended to require proof of disability, and that the Regulation should also be amended to improve the functioning of pre-notification (for example by making it mandatory). ACI supported these positions. The airports which did not believe the Regulation should be amended, or had a neutral opinion, thought that any lack of clarity in the Regulation could be addressed through information from the Commission.

6.5 In addition, around half of the airlines we interviewed also believed that the Regulation should be changed, however this was for different reasons to those given by airports. A number of airlines believed that it should be possible for them to choose to provide the service themselves or that responsibility should lie with airlines, arguing that as customer-focussed organisations they are better able to do this. Of the airline associations, only ELFAA argued for this amendment. One airport strongly agreed with this position, however most believed that the allocation of responsibility should not be revised, as if airlines were to provide their own service, the incentive to reduce costs would result in unacceptable reductions in service quality. Airlines also supported amendments to clarify the definitions of PRM and mobility equipment, and to improve pre-notification.

6.6 Most of the NEBs we interviewed did not have a clear opinion on whether the Regulation should be amended. Seven NEBs believed that the definitions of terms such as PRM and mobility equipment should be clarified, and two of the NEBs in the case study sample supported changes which would allow airlines to opt out of the Regulation and provide the services themselves.

6.7 Slightly over half of the PRM representative organisations we interviewed believed that the Regulation should be amended. Amendments were suggested to address the following issues:

- limits on number of PRMs which can safely be carried;

- allocation of seating;
- requirements on compensation payable for damaged mobility equipment, and improvements to its handling; and
- provision of information.

6.8 EDF suggested that compensation should be introduced, as this would incentivise more complaints and therefore improve service. Those that did not believe the Regulation should be amended either believed that the Regulation had not been in force for long enough to assess its efficacy, or that poor implementation was the cause of any problems identified.

The content and drafting of the Regulation

6.9 We outline below some of the main detailed issues that have been raised by stakeholders. Few stakeholders believed that there were significant issues with the drafting of the Regulation that made it difficult to implement, however many stakeholders outlined issues relating to insufficient definition.

Definition of terms

6.10 The issue most commonly raised, particularly by airports and NEBs, is the definition of PRM set down in the Regulation. Many stakeholders believe this is too broad and opens the service to abuse, both by passengers and by airlines. A number of airports believed that airlines were using the wide definition to allow them to avoid costs: passengers who were previously classified as MAAS (including unaccompanied minors, VIPs and passengers with language issues), and therefore paid for by the airline, are now classified as WCHR and the cost is borne by all airlines. Some airports believed this could be resolved by setting out a clear definition of MAAS.

6.11 The definition in the Regulation could include a wide range of passengers who some stakeholders do not believe were the intended beneficiaries of the Regulation, including:

- obese passengers;
- stretchers;
- medical cases; and
- passengers who had sustained injuries (whose travel is often paid for by their travel insurance).

6.12 Some stakeholders believed that the definition of PRM was so broad that it could be considered to include passengers which the Regulation was clearly not intended to cover, such as passengers whose intellectual and sensory capacities were temporarily impaired by excessive consumption of alcohol.

6.13 Several stakeholders believed this issue could be resolved by requiring some proof of need for assistance in order to receive assistance, for example in the form of a disability ID card. This was opposed by some PRM organisations.

6.14 Stakeholders also considered that a number of other terms were not sufficiently defined. These included:

- **Mobility equipment:** The reference in Annex II to mobility equipment states that it should include electric wheelchairs but does not define the term any further. Stakeholders had differing views on what should be included in this: several airlines believe that it should refer only to equipment that is required to make it possible to travel by air, but a number of PRM organisations believed it should include items which make the *purpose* of the trip possible. This could include, for example, joists for lifting passengers in and out of seats.
- **Medical equipment:** Several stakeholders believed there was insufficient clarity on which items were classified as medical equipment and which as mobility equipment. It was also uncertain whether airlines could any limits (for example on weight) on its carriage.
- **Accessible formats:** It was reported that the requirement for designated points of arrival and departure to offer basic information about the airport in accessible formats did not define what was required, for example, whether all such points should include a map in Braille of the airport.
- **Safety rules:** Article 4(3) requires airlines to make publicly available the safety rules that it applies to the carriage of PRMs, and any restrictions on the carriage of PRMs or mobility equipment. Several stakeholders informed us that such documents were not defined, and it was not clear what this term referred to.

Lack of clarity in the Regulation

6.15 In one case, the requirements of the Regulation appear contradictory. Several NEBs noted that the responsibility for enforcement defined in Article 14 contradicts that specified in Recital 17. Article 14 states that NEBs are responsible for enforcement regarding flights departing from or arriving at airports within their State, while Recital 17 places responsibility on the NEB of the State which issued the carrier's operating license.

6.16 Stakeholders identified a number of other provisions where they considered the description of obligations was insufficiently clear, including:

- **Article 7:** Under this Article, airports are required to provide assistance to PRMs holding reservations so that they able to take their flight, however, it does not define what an airport is required to provide to a PRM who does not hold a valid reservation. In addition, it does not define the airport's liability when a PRM misses their flight, in particular where the passenger has not pre-notified their requirement for assistance.
- **Article 11:** One airport had been the subject of a legal challenge by an airline regarding the inclusion within its PRM service charge of the costs of providing training under Article 11(b) to subcontractors at the airport. The airline contended that since the paragraph did not refer to subcontractors (unlike Article 11(a)) the airport was not obliged to provide such training. Several airports believed that the requirement under this Article to provide disability-related training to all new staff (not just those whose role required them to interact with PRMs) was unnecessary. In contrast, some PRM organisations believed that training should be explicitly extended to Commanders of aircraft, to enable them to make better-informed decisions on whether to embark PRMs. PRM organisations also noted

that it was not clear whether airports were required to provide training on specific procedures for handling mobility equipment; as damage to mobility equipment is perceived to be a significant issue, they believed this requirement should be explicitly included.

- **Article 12:** Several PRM stakeholders raised concerns that the compensation referred to in this Article would be consistent with the Montreal Convention, and that the limits under the Convention were insufficient for some mobility equipment, such as technologically advanced wheelchairs (see 4.55). Although this had not been an issue to date – in almost all cases that we were informed of, airlines waived the limits – it creates uncertainty for wheelchair users travelling by air. This is heightened by the reported difficulties in obtaining insurance for such equipment.
- **Annex I:** A number of airlines raised concerns regarding the allocation of liability when boarding a passenger. For example, they did not believe that liability was clear in the case that an accident occurs on board an aircraft when airport staff are present. Some airports raised concerns regarding liability for damage to wheelchairs while in their care. In addition, the services which should be provided to transfer passengers and the measures which should be taken to accommodate assistance dogs are not defined.

6.17 Regarding training, some stakeholders raised the issue of the legal weight of ECAC Document 30, particularly Annex 5-G which sets out recommended guidance for training regarding PRM services. While this is referred to in the Regulation as a policy which should be considered when developing quality standards, the same reference is not made in Article 11 where training requirements are defined.

Conflicts with 14 CFR Part 382

6.18 As discussed in section 4 above, the US regulations on carriage of PRMs (14 CFR Part 382) apply to European carriers operating flights to/from the US, and other flights where these are operated as codeshares with US carriers. There are a number of differences between these rules and the Regulation, the most significant of which is the allocation of responsibilities for assistance: the Regulation requires airports to arrange the provision of services to PRMs, while under the US legislation it is the airlines that have this responsibility. This has caused difficulties for carriers who are required to comply with legislation that conflicts, although the US legislation does allow carriers to apply for a waiver where there is a conflict of laws.

Pre-notification

6.19 The requirement to pre-notify requests for assistance and problems in doing so were raised by many stakeholders (see 4.98). Stakeholders held differing views on how this should be improved. Several airlines (in particular those with operations to the US, where requiring pre-notification is usually prohibited) believed that the requirement to pre-notify should be removed; they believed that the resulting increases in costs of provision would be marginal, as most resourcing requirements could be planned on the basis of observed variation in demand (over the course of a year, a week or a day as appropriate). This approach was supported by some PRM organisations. In contrast, a number of airports believed that pre-notification should be made compulsory, and

this proposal was opposed by some PRM organisations.

Level of detail

6.20 Almost all stakeholders informed us that there was significant variation in the services provided under the Regulation. This is partly a result of the approach taken by the Regulation, which does not seek to define in detail the services to be provided. In contrast, the equivalent US rules set out in detail all aspects of the services to be provided, in effect setting out procedures to be followed by all service providers.

6.21 Several stakeholders have raised the lack of detail in the Regulation as an issue, and believe that a more prescriptive approach would lead to greater harmonisation of the services provided. In particular, they believed that the services set out in Annexes I and II and the training required under Article 11 should be defined with greater precision.

Conclusions

6.22 We asked each stakeholder we contacted for the study whether they believed that changes should be made to the Regulation. Slightly more thought that there should be changes than did not, but there was not a clear majority in favour of changes. The reasons given for making changes and what those changes should be varied depending on the stakeholder.

6.23 No significant problems were identified with the drafting of the Regulation, although there is a conflict between Recital 17 and Article 14. In general, stakeholders had not found it difficult to follow the provisions of the Regulation. The most common issue raised with regard to the text of the Regulation is that the definitions used are not sufficiently precise; in particular, the definition of PRM is believed by airports and some airlines to be too broad, and this is believed to make it difficult for them to take action to counter abuse. The Regulation is much less precise about the policies and procedures that have to be followed, particularly by air carriers, than the equivalent US regulation on carriage of PRMs, 14 CFR Part 382.

6.24 In addition, many stakeholders pointed out the significant differences between the Regulation and 14 CFR Part 382, which applies to European carriers on flights to/from the US and other flights operated as codeshares with US carriers. One of the most significant is the requirement to pre-notify requirements for assistance was raised as an issue, particularly by airlines operating to the US, and by airports where the rates of pre-notification were low. Two different approaches were proposed to address the perceived problem. Some airlines (primarily those flying to US) proposed removing the requirement to pre-notify, which would resolve the conflict with US legislation; this was opposed by airports on the grounds that it would reduce service quality and increase cost. Some airports proposed making pre-notification compulsory; this was opposed by some PRM organisations on the grounds that it would reduce the freedom of PRMs to travel.

7. FACTUAL CONCLUSIONS

Introduction

7.1 This section summarises our conclusions in relation to how effectively airports and airlines are providing the assistance required by the Regulation, and how effectively Member States and National Enforcement Bodies (NEBs) are undertaking their roles specified in the Regulation.

Implementation of the Regulation by airports

7.2 We selected a sample of 21 airports for detailed analysis for the study, and reviewed how they had implemented the Regulation, through desk research and through interviews with representatives of airport management and other stakeholders.

7.3 Prior to the introduction of the Regulation, assistance at airports was provided by airlines and usually contracted from ground handlers. The Regulation places responsibility for provision of this assistance with the airport management company. We found that all airports in the sample for this study had implemented the provisions of the Regulation, although we were informed by airlines and other stakeholders that the regional airports in Greece had yet to effect the change from provision by ground handlers to provision by airports. We were not informed by stakeholders of any other EU airports at which the Regulation has not been implemented.

7.4 Most of the sample airports had contracted the provision of PRM assistance services to an external company, generally selected through a competitive tender process. However, several airports had changed their service provider within 18 months of the Regulation coming into force; this was interpreted by some as a sign that the service initially specified and procured had been inadequate. One major hub airport acknowledged that it had had significant problems with a PRM service provider.

7.5 The service provided at the sample airports varies in terms of: the resources available to provide the services; the level of training of the staff providing assistance; the type of equipment used to provide services; and the facilities provided to accommodate PRMs (such as PRM lounges). According to the information provided by PRM organisations, this results in variability in service quality. PRM representative organisations, airlines and some airports cited a number of examples of poor quality or even unsafe provision of services at airports, although it is not possible to infer how regular these occurrences are. Overall, most stakeholders believed that the Regulation had been implemented effectively by airports.

7.6 There is also significant variation between airports in the frequency with which PRM services are requested: the level of use of the service varies by a factor of 15 between the airports for which we have been able to obtain data, although in most cases between 0.2% and 0.7% of passengers requested assistance. The type of PRM service requested also varies considerably between airports although in all cases the largest category is WCHR (passengers who cannot walk long distances but can board the aircraft, including using stairs, unaided). Both the frequency of use and the type of service required are likely to be affected by the varying demographics of the passengers using different airports; PRMs account for the highest proportions of

passengers at holiday airports, such as Alicante, and airports serving pilgrimage destinations, such as Lourdes.

7.7 The Regulation requires airports to publish quality standards. Most of the sample airports had done so, although some had published them only to airlines. Almost all quality standards followed the example format set out in ECAC Document 30, which defines the percentage of PRMs who should wait for up to given numbers of minutes. Some airports published qualitative measures in addition to these time standards, such as descriptions of the treatment the passenger should expect at all points of the service. However, none of the sample airports had published the results of any monitoring of these quality standards, and whilst most did undertake monitoring in some form, only four had commissioned external checks of the service.

7.8 The Regulation allows airports to levy a specific charge to cover the costs of assistance. All but one of the sample airports had done so. The level of charges varied considerably: the highest charges of the sample airports were at Paris CDG and Frankfurt. We analysed the charges to examine whether variation could be explained by higher frequency of use of the service, differences in levels of wages and other costs between States, or differences in service quality, but there was no evidence that this was the case. The design of the airport is a further factor influencing the cost of service provision and hence the level of charges: the assistance service can be provided at lower cost at an airport such as Amsterdam Schiphol, which is on a single level and has one integrated terminal building, than at an airport with a more complex configuration such as Paris CDG.

7.9 Some stakeholders believe that the requirements to select contractors and establish charges in cooperation with users and PRM organisations were not followed thoroughly. Many airlines did not believe that consultation on either element had been sufficient, and this view was shared by some PRM organisations. There were a number of barriers to effective consultation, including linguistic restrictions and airport user committees which did not adequately represent all air carriers. Consultation with air carriers was reported as particularly poor in Spain, Portugal and Cyprus. In contrast to this, we note that several airports stated that they had sought the participation of PRM organisations but had found this difficult to obtain.

7.10 The Regulation requires airports to provide specialised disability training for staff directly assisting PRMs, and whilst all sample airports had done so, there were significant variations in the length and format of this training. The shortest training course among those for which we have data was 3 days long, while the longest lasted 14 days. There was similar variation in the length of training provided for passenger-facing staff who did not provide direct assistance. A number of airports informed us that they did not provide disability-awareness training for staff not in public-facing roles, or only provided it on a voluntary basis.

Implementation of the Regulation by air carriers

7.11 We selected a sample of 20 air carriers for the study. We reviewed how they had implemented the Regulation, both through review of their published policies, procedures and Conditions of Carriage, and through interviews with the carriers themselves and with other stakeholders.

7.12 The main obligation that the Regulation places on air carriers is that it prohibits refusal of carriage of PRMs, unless this is necessary to meet national or international safety rules or requirements imposed by the carrier's licensing authority, or is physically impossible due to the size of the aircraft or its doors. We found that air carriers largely comply with this, although some state in their Conditions of Carriage that carriage of PRMs is conditional on advance notification. In our view, this is not consistent with the Regulation, which does not allow for a derogation on the prohibition of refusal of carriage on the basis that the passenger has not provided advance notification. In addition, we found that a small number of carriers impose requirements for medical clearance which appear to be excessively onerous and to be worded to include PRMs as well as passengers with medical conditions.

7.13 We found significant differences in policies relating to carriage of PRMs between carriers – even between carriers with similar aircraft types and operational models. The most significant difference is that some carriers impose a numerical limit on the number of PRMs that can be carried on a given aircraft. These can be quite low: some carriers have limits of 2-4 PRMs on a standard single-aisle aircraft such as an Airbus 319. These limits are not required by any international or European safety rules, although in some cases they are required by the licensing authority for the carrier concerned; often, although not always, this is the same organisation that has been designated as the NEB. However, in most cases, these requirements are defined by carriers in their Flight Operations Manuals; although the licensing authority has to approve this, it appears that in most States, little has been done to challenge the limits proposed by carriers. Whilst the stated rationale for these limits is safety, there does not seem to be a clear evidence base for them, and they are specifically prohibited by the equivalent US regulation on carriage of PRMs (14 CFR part 382).

7.14 The Regulation also allows carriers to require that PRMs be accompanied, subject to the same safety-based criteria. We found that a number of carriers require PRMs to be accompanied where they are not 'self-reliant', which can mean that the PRM cannot (for example) eat unaided. In our view this may be an infringement of the Regulation because there is no direct link to safety; for those carriers that fly to the US, it is also an explicit breach of the US PRM rules. This type of condition is also, in our view, unreasonable for short haul flights for which passengers could decide to (for example) not eat or drink during the flight. Other carriers require PRMs to be accompanied only where they are not self-reliant **and** this has a safety impact (for example, if the PRM could not exit the aircraft unaided in an emergency or put on an oxygen mask without assistance); this is consistent with the Regulation.

7.15 The Regulation also requires carriers to publish safety rules relating to the carriage of PRMs, although it does not specifically state what issues these safety rules should cover. We found that carriers all published some PRM-related information, but few published a notice specifically described as being the safety rules related to carriage of

PRMs. In some cases there appeared to be significant omissions from the information published by carriers: for example, some of the carriers which imposed a numerical limit on the number of PRMs which could be carried did not publish this.

7.16 Annex II of the Regulation sets out various requirements for services which have to be provided to PRMs by carriers. Evidence for the extent to which this is provided is limited, and restricts a fair assessment of compliance with these requirements. There is however sufficient evidence to conclude that the vast majority of case study air carriers are complying with the requirement to carry up to two items of mobility equipment free of charge. Some PRM representative groups were critical of the effectiveness of airlines in implementing the Regulation, and we were informed of some particularly bad passenger experiences, but it is difficult to assess how common such occurrences are.

Enforcement and complaint handling by NEBs

7.17 Member States are required to designate a body responsible for enforcing the Regulation regarding flights from or arriving at its territory. They may also designate separate bodies responsible for handling complaints, and for enforcing Article 8. All Member States except Slovenia have designated an NEB. In the majority of States, the NEB for this Regulation is the same organisation as the NEB for Regulation 261/2004, in most cases the Civil Aviation Authority. In a number of States, the Regulation is not explicitly referred to in the law designating the NEB, and in Spain, the imposition of sanctions has been challenged, in one case successfully, on the basis that the NEB was not competent to impose the sanction.

7.18 Member States are also required to introduce penalties in national law for infringements of the Regulation, which must be effective, proportionate and dissuasive. All States except Poland and Sweden have introduced sanctions into national law, although there are a number of States where sanctions have not been introduced for infringements of all Articles. There is significant variation in the level of the maximum sanctions which can be imposed for infringements, and in some States the fines may not be at a high enough level to be dissuasive. While some States allow unlimited fines to be imposed and may also impose a prison sentence, maximum sanctions in Estonia, Lithuania and Romania are lower than €1,000.

7.19 The Regulation allows any passenger who believes that the Regulation has been infringed, and is dissatisfied with the response they have received from the service provider, to make a complaint to the appropriate body (usually an NEB). However, very few complaints have been received relating to the Regulation: to date, since the introduction of the Regulation, 1,110 complaints have been received, compared to a total of 3.2 million passengers assisted in 2009 across the case study sample of 21 EU airports. There is also a significant disparity in which States had received complaints: 80% of all complaints about infringements of the Regulation were received by the UK NEBs; none of the NEBs in the other 26 Member States had received more than 50 complaints.

7.20 In the UK, national law grants rights additional to those in the Regulation: passengers who suffer injury to feelings as a result of an infringement of the Regulation may seek financial compensation from the air carrier or airport concerned. This is in line with

disability rights legislation applying to other sectors in the UK. A consequence of this is that the process for handling complaints is significantly different in the UK from other Member States, because passengers may have a right to claim compensation from the carrier or airport concerned. At least in part, this also explains the significantly higher number of complaints in the UK compared to the other Member States.

7.21 Where an NEB identifies an infringement (through a complaint or other means) it may choose to enforce the Regulation by imposing sanctions. No sanctions have yet been imposed, but the NEBs for France, Portugal and Spain have opened proceedings to impose fines. In most States, the process to impose sanctions is equivalent to that for Regulation 261/2004. In a number of States, there are likely to be significant practical difficulties in imposing and collecting sanctions, in particular in relation to airlines registered in different Member States. This is due to the same reasons identified in our recent study for the Commission of Regulation 261/2004[14]: either specific limitations in national law on imposition of sanctions on foreign companies, or administrative requirements which cannot be met if the carrier is based outside the State. This means that, in these States, the system of sanctions cannot be considered to be dissuasive as required by the Regulation.

7.22 There is no requirement in the Regulation that the NEB must be separate from the service providers that it has to regulate. The only case we have identified where the NEB is also a service provider is Greece, where HCAA is the operator of the airports other than Athens, as well as the NEB. Although not an infringement of the Regulation, this is a breach of the principle of separation of regulation and service provision. As noted above, the most significant failure to implement the Regulation that we have identified is at the HCAA airports, and HCAA has not imposed a sanction on itself for this failure to implement the Regulation.

7.23 Many NEBs have taken at least some action, other than the monitoring of complaints, to assess whether service providers were complying with the Regulation. NEBs in 14 of the 16 case study States have undertaken at least one inspection of airports for compliance with the Regulation. However, most inspections have focused on checks of systems and procedures, and did not assess the actual experience of PRMs using the service provided by the airport. NEBs for 9 of the 14 States have undertaken no direct monitoring of the charges levied by airports for providing PRM services, although Hungary and Italy informed us that they had undertaken in-depth audits of the charges levied at airports.

7.24 Member States are required to take measures to inform PRMs of their rights under the Regulation, and the possibility of complaining to appropriate bodies. Of those that provided information, relatively few NEBs had made significant efforts to promote awareness of the Regulation by passengers; only two informed us of national public awareness campaigns they had undertaken, and even in one of these States, a key national PRM organisation was not aware that the public campaign had taken place. Awareness of the NEBs performance appeared in general to be poor: most

[14] Evaluation of Regulation 261/2004; Steer Davies Gleave on behalf of European Commission, February 2010

stakeholders contacted for the study held no opinion on the effectiveness of enforcement by NEBs, and many informed us that this was because they had had no interaction with them.

Other issues that have arisen with the Regulation

7.25 Stakeholders also pointed out a number of other issues with the Regulation. Whilst few significant problems have been identified with the drafting of the Regulation, the following issues were identified:

- there is a conflict between Recital 17 and Article 14, regarding which NEB is responsible for enforcing the Regulation in relation to air carriers;
- the definition of PRM used in the Regulation is very broad, and could be interpreted to include some categories of passenger who it might not have been intended to cover (such as obese passengers, or even passengers temporarily incapacitated due to excess alcohol consumption); and
- the Regulation does not specify in detail the policies or procedures that have to be followed by air carriers, particularly if compared to the equivalent US regulations, and this has resulted in significant differences in policies between carriers.

7.26 In addition, stakeholders emphasised the significant differences between the Regulation and the equivalent US regulations on carriage of PRMs (14 CFR part 382). These can cause difficulties for air carriers, as part 382 applies to non-US carriers on flights to/from the US and all other flights that are operated as codeshares with US carriers (even if not to/from the US). The most significant differences are:

- in most circumstances, part 382 does not permit carriers to request pre-notification;
- part 382 does not allow limits on the number of PRMs on an aircraft and limits the circumstances in which an accompanying passenger may be required; and
- part 382 places the responsibility for provision of PRM assistance services on the air carrier, whereas the Regulation places this responsibility on the airport.

Conclusions

7.27 Overall, despite difficulties with service provision at some airports, the services required by the Regulation have been implemented at most European airports and compliance with the Regulation appears to be relatively good. Most stakeholders considered that the quality of service provision had improved since the introduction of the Regulation, although some airlines strongly disagreed with this.

7.28 The key issue we have identified with the implementation of the Regulation is that there are significant differences between carriers in their policies on carriage of PRMs. This arises in part from the fact that the Regulation does not specify in detail the services to be provided and the procedures to be followed, in particular if compared to the equivalent US regulations on carriage of PRMs. The Regulation allows carriers to refuse carriage or require a passenger to be accompanied on the basis of safety requirements, but these requirements are not specified in law, and therefore there are significant differences in interpretation of these requirements.

8. RECOMMENDATIONS

Overview

8.1 This section sets out our recommendations relating to how to improve the operation and enforcement of the Regulation. We present first a number of recommendations which would improve the operation of the Regulation without requiring any changes to be made to the text. However, we believe some changes are necessary which could only be implemented through amendments to the Regulation.

Measures to improve the operation of the Regulation

8.2 This section sets out measures to improve the operation of the Regulation. It covers the following:

- improvement in the operation of PRM services at airports;
- issues relating to the carriage of PRMs by airlines;
- actions to be taken by or in relation to NEBs; and
- guidance on PRM services and carriage which should be produced by the Commission, in consultation with other parties.

Airports

8.3 All airports in the sample for the study had implemented the provisions of the Regulation in some form, although as the Regulation does not precisely specify the quality of service to be provided, PRM organisations have reported this as being variable. We do not recommend any significant changes, and recommend a number of measures which will help airports to move towards consistency of service.

Maintain allocation of responsibility

8.4 Several airlines (primarily those operating low-cost business models) argued in their submissions to the study that they should be permitted to provide or contract their own PRM assistance services, as they could provide it more cost-efficiently than airports. We believe that this could create an incentive to minimise the service provided and hence would risk a reduction in service quality. Whilst there were initially significant issues with the quality of PRM service provision at certain airports, most stakeholders believed that these issues had now been addressed, and therefore we recommend that allocation of responsibility for PRM services to airports should **not** be amended.

Monitor misuse of services

8.5 A number of airports (in particular larger and busier airports) reported that the services they provided for PRMs were sometimes used by passengers who did not appear to have the right to do so under the Regulation. There was no consensus amongst airports about how significant this issue was. This variation in perception of the problem, combined with the nature of the problem itself, makes it difficult to accurately assess its extent. We recommend that the Commission monitor reports of misuse of services, so that it is alerted if the problem becomes more consistently serious.

Improve provision of information

8.6 Several PRM organisations informed us that provision of information on accessibility by airports could be improved. In particular, we were informed that many PRMs would find it helpful to have access to information, in a consistent format, regarding the accessibility of airports to which they were travelling. This could be provided through a webpage on an airport's website included, for example:

- the maximum likely walking distance within the airport;
- locations of any flights of stairs;
- the means used for access to aircraft (airbridge or stairs);
- any facilities available for PRMs;
- appropriate contact details for PRM services both for airlines and the airport[15].

8.7 Whilst some of this information is often available on airport websites, it can be difficult to find and is not always complete. To address this, we suggest that ACI could develop a single website which would either include all of this information or alternatively provide links to the specific pages on airport websites which include this information.

Share best practice on contracting of PRM service providers

8.8 We identified two issues with the process for selection of PRM service providers:

- several airports which had subcontracted PRM services had re-tendered within 18 months of the Regulation entering into force, as there were significant issues with the operation of the service; and
- many airlines informed us that they did not believe the extent of consultation from airports was sufficient.

8.9 To address these issues, we recommend that the Commission, in co-operation with ACI, develop and distribute best practice advice on contracting for services, including:

- **Content and structure of the contract:** This could include the level of detail at which contract terms relating to services should be specified, and any penalties for failure to meet required standards. It could be provided in the form of a sample contract. This would help to reduce the likelihood of issues with the contract leading to retendering.
- **Recommended methods of cooperation:** This could give details of the level and manner of consultation an airport should undertake. It could detail how to involve airport users in consultation at all points of a tendering process, including from drafting of invitation to tender documents, to evaluating and scoring bids, and might include input on the eventual decision. It could also include how to involve PRM organisations in this process. Where implemented, this would improve the perception by airport users and other parties of airport consultation.

[15] London Luton airport provides a good example of this; see http://www.london-luton.co.uk/en/content/3/1427/how-to-book-special-asistance.html.

Share best practice on training

8.10 Our research found that approaches to training of staff to provide PRM services varied significantly. In particular, there was significant variation in length of training (between 3 and 14 days) and method of delivery (videos, classroom-based or practical), to provide what should in principle be the same services. In addition, some airports reported that they had sought assistance on developing training from local PRM organisations, but the PRM organisations were too resource-constrained to be able to provide the required assistance. We therefore recommend that the Commission work with ACI and EDF to develop and distribute best practice advice on training, which would include recommended minimum levels.

Airlines

8.11 A key problem identified in our research is the lack of consistency between airline policies on the carriage of PRMs. These policies are subject to approval by the carriers' licensing authorities (which are often the same organisation as the NEB), but in many cases they approve policies with little or no challenge.

Work with EASA to determine safe policies on carriage of PRMs

8.12 Article 4 of the Regulation permits air carriers to refuse to accept reservations from a PRM, or to require that a PRM be accompanied, in order to meet safety requirements set out in international, Community or national law, or established by the authority that issued the carrier's operating certificate. However, other than minimal requirements in EU-OPS, Community law does not impose specific requirements regarding the safe carriage of PRMs. There is little published research into safety issues regarding carriage of PRMs, so even where licensing authorities do seek to challenge proposed airline policies or impose their own, there is a limited evidence base on which to do this. This results in wide and unjustifiable variation in airline policies.

8.13 Therefore, we recommend that the Commission work with EASA to determine policies on carriage of PRMs which are consistent with safe operation. Such policies should include any limits on the number of PRMs permitted on board an aircraft, where PRMs may be seated, and whether and under what circumstances PRMs must be accompanied. The policies should take into account the type of aircraft and the different safety implications of carriage of different types of PRMs.

Airlines to publish clear policies on carriage of PRMs

8.14 We have identified a number of airlines which are failing to publish clear policies on carriage of PRMs. We recommend that the Commission encourage the relevant NEBs to ensure that the airlines identified in Table 4.1 as not publishing sufficient information do so. The Commission could also encourage NEBs to review the policies of airlines outside the study sample to ensure that these provide sufficient information.

Monitor pre-notification

8.15 Pre-notification of requirements for assistance should have two benefits:

- it should ensure that PRMs are able, on arrival at an airport, to promptly receive the assistance they require to take their chosen flight; and
- it should allow airports to plan their staffing requirements efficiently, minimising the cost of service provision .

8.16 However, at present, as discussed in section 4.74 above, pre-notification is not functioning well. Of the 16 airports which provided us with information on levels of pre-notification, 11 have rates of pre-notification under 60%. The result of this is that at most airports, the rate of pre-notification is too low for the airport to gain efficiency benefits, and the incentive for PRMs to pre-notify is reduced (since at many airports a similar quality of service is provided regardless of pre-notification). Therefore the system as it presently operates requires airlines and airports to incur the costs of enabling pre-notification, but not to realise the benefits of reduced costs or smoother provision of services. We recommend that the Commission monitor the operation of pre-notification (for example by encouraging NEBs to collect appropriate data), and in future assess the situation and consider either eliminating the requirement for pre-notification or alternatively retaining it and providing passengers and carriers with more incentive to pre-notify.

Encourage airlines to provide receipts for pre-notification

8.17 Several PRM organisations reported problems where PRMs had pre-notified their requirements for assistance, but then found that this information had not been passed on to airport or airline staff. To address this, and to provide PRMs with evidence that they can use when making a complaint, we recommend that the Commission encourage airlines to provide PRMs with a receipt for pre-notification. Once this voluntary scheme has been in place for an appropriate length of time, the Commission could consider amending the Regulation to make it compulsory.

Monitor implementation of ECAC Document 30 recommendations on carriage

8.18 Section 5 of ECAC Document 30 contains a number of recommendations regarding on-board provisions for PRMs which it recommends airlines commission in new or significantly refurbished aircraft. These include (depending on the type of aircraft) the provision of on-board wheelchairs, provision of at least one toilet catering for the special needs of PRMs, and ensuring that at least 50% of all aisle seats should have moveable armrests[16]. We recommend that the Commission monitor uptake of these recommendations.

NEBs

8.19 The greatest problem identified by the study regarding NEBs was the lack of pro-active measures taken to monitor or enforce the Regulation. In most cases this has not had significant detrimental effect, as most airports and airlines have implemented the provisions of the Regulation, but could become an issue if the situation changes in the future. In most States few complaints had been received by the NEB, and as a result

[16] See ECAC.CEAC DOC No. 30 (PART I), 11th Edition/December 2009, Section 5.10.5.

the handling of complaints has not been raised as a significant issue.

Encourage all States to implement the Regulation

8.20 We identified in section 5.13 above that some States have not as yet either introduced penalties into national law for all infringements of the Regulation, or designated an NEB. We recommend that the Commission encourage all States to comply with their obligations under the Regulation.

Encourage better promotion of rights under Regulation

8.21 Article 15(4) of the Regulation requires Member States to take measures to inform PRMs of their rights under the Regulation and of the possibility of complaint to the relevant NEB. Of the NEBs which provided information on this point, few had taken direct actions to promote the Regulation. Many had published sections with information on their websites, but unless PRMs are made aware that this website exists and is relevant to them, we do not believe that this is sufficient. Only two case study NEBs informed us that they had commissioned national promotional campaigns relating to the Regulation. We recommend that the Commission takes actions to encourage NEBs to inform PRMs of their rights under the Regulation.

Encourage NEBs to pro-actively monitor application of Regulation

8.22 Article 14 of the Regulation requires Member States to take the measures necessary to ensure that the rights of PRMs are respected. Our research found that most NEBs were taking only limited actions to monitor the application of the Regulation (see 5.42), and few NEBs were directly monitoring whether airports were meeting published quality standards. Many NEBs rely on complaints as a method of monitoring, but without promotion of awareness of rights and of the NEB as the body able to receive complaints (see above), a low number of complaints cannot be interpreted as evidence that there are no issues with the application of the Regulation.

8.23 We therefore recommend that the Commission encourage NEBs to pro-actively monitor the application of the Regulation. This could take a number of forms:

- increased interaction with PRM organisations;
- direct monitoring of quality of service provided, for example through ‘mystery shopping’ and other types of inspections of airports (which could be conducted in cooperation with PRM organisations);
- collection of airline pre-notification data; and
- reviews of airline websites for accessibility.

Guidance to be produced

8.24 We recommend that the Commission should, in collaboration with airlines, airports, PRM representatives and NEBs, develop a detailed good practice guide regarding implementation of the Regulation. This could take the code of practice issued by the

UK Department for Transport[17] as a model, and could form the basis for later detailed revisions of the Regulation. Publishing voluntary policies would allow potential future amendments to the Regulation to be tested in practice before adoption.

8.25 The good practice guide could address the following areas (some of which are discussed in previous sections on recommendations regarding airports and airlines):

- recommendations on safety limits;
- the format and content of policies on carriage (including safety rules);
- detailed training modules implementing the recommendations in Annex 5G of ECAC Document 30, in addition to recommended minimum duration;
- consultation; and
- airport accessibility information.

8.26 A key issue to be addressed in this guidance would be the quality standards to be published by airports. At present, most airports follow the format of the minimum standards recommended in ECAC Document 30[18] (see 3.57). However, these standards are a limited measure of the quality of service received by PRMs. We recommend that the Commission work with ECAC to develop recommended minimum standards which are wider in scope, and cover qualitative aspects of the service received. Airports such as London Luton, which publishes a wide range of quality standards which address all aspects of the service, could provide a model for this approach.

8.27 The guidance should also specify the information which should be included in carriers' published policies on carriage of PRMs, which should cover at least the areas identified in 4.8.

Recommendations for changes to the Regulation

8.28 The measures described above could significantly improve the operation of the Regulation. However, we believe that some issues could only be addressed through amendments to the text, and therefore we also set out:

- Recommendations for some minor amendments to address issues with the text (such as areas where the Regulation is unclear) which we believe should be implemented as soon as possible.
- Suggestions for more significant revisions to be considered in the longer term. These would require consultation with stakeholders and an impact assessment to be undertaken.

Changes to be implemented as soon as possible

Training

[17] *Access to Air Travel for Disabled Persons and Persons with Reduced Mobility – Code of Practice*, UK Department for Transport, July 2008.

[18] See ECAC.CEAC DOC No. 30 (PART I), 11th Edition/December 2009, Annex 5C section 1.6.

8.29 We recommend that Article 11 be extended to require airlines to ensure that the personnel of their ground handling companies are trained to handle mobility equipment. Several PRM organisations informed us that damage to mobility equipment was one of the most serious problems for PRMs travelling by air, and that such damage could cause considerable distress to PRMs.

8.30 We recommend that Article 11 be amended to include the provisions in Recital 10, namely to specify that the provisions regarding training in ECAC Document 30 be taken into account when commissioning and developing training. This could be phrased in the manner of Article 9(2) on quality standards.

8.31 We recommend that Article 11b be amended to clarify that disability-equality and –awareness training is required for passenger-facing subcontractors as well as personnel directly employed by an airport. This would be consistent with Article 11a regarding personnel providing direct assistance. We were informed by one airport that an airline had disputed the level of PRM charges on the basis that the charges recovered the costs of training subcontractors, which the airline believed was not required by the Regulation.

8.32 We recommend that the Commission consider removing the requirement in Article 11c for disability-awareness training for non-passenger facing personnel, as it is not clear why this should be any more necessary in this sector than in others.

Obligatory charges where costs recovered

8.33 Article 8 permits airports to levy specific charges on airport users to fund the assistance provided under the Regulation, which must be reasonable, cost-related, transparent and established in cooperation with airport users. However, it does not *require* airports to levy such charges; several of the airports we researched for the study recovered costs through their general passenger charges, and did not identify the PRM component separately. Where specific charges are not applied, airports are not required to follow the requirements on reasonability, cost-relatedness, transparency and cooperation. We therefore recommend that, for airports above a minimum size, Article 8 be amended to make specific charges obligatory if costs are to be recovered from users.

Airport charges

8.34 We recommend that Article 8 be amended where necessary to make clear that PRM charges are airport-specific and cannot be set at a network level. At present, the translation into some languages (for example Spanish) could be interpreted to permit network charges, which we believe is contrary to the intention of the Regulation.

Independence of NEBs

8.35 We recommend that Article 14 be amended to require that NEBs must be independent of any bodies responsible for providing services under the Regulation.

Scope of Regulation

8.36 We recommend that Article 14 be amended to clarify that NEBs are responsible for

flights departing from (rather than, as is currently stated, both departing from and arriving at) airports in their territory, in addition to flights by Community carriers arriving at airports within State's territory but departing from a third country.

8.37 We also recommend that Recital 17 (which states that complaints regarding assistance given by an airline should be addressed to the NEB of the State which issued the operating license to the carrier) be amended to be consistent with Article 14.

PRMs without a reservation

8.38 Article 7 requires airports to provide assistance to PRMs arriving at an airport so that they are able to take the flight for which they hold a reservation. However, there may be rare occasions where a PRM (like any other passenger) arrives at an airport *without* a reservation, expecting to purchase a ticket at the airport. We therefore recommend that Article 7 be amended to set out the airport's responsibilities to such PRMs.

Longer term changes to the Regulation

8.39 The key issue that we have identified with the Regulation is that the text is much less detailed or specific than other comparable legislation (in particular, the equivalent US regulations on carriage of PRMs) and therefore leaves much more scope for interpretation and variation in service provision. We suggest that, to ensure greater consistency and that PRMs rights are adequately respected, the Commission should consider making the text more detailed and specific about the requirements for airlines and airports. The rest of this section describes key areas in which we suggest that changes could be made.

8.40 It would be necessary to consult with stakeholders about these changes and to undertake an impact assessment, and therefore these changes could not be introduced immediately.

Provisions on safe carriage PRMs

8.41 Once the Commission has established with EASA policies on the safe carriage of PRMs, particularly regarding any permissible limits on carriage and requirements for passengers to be accompanied (see 8.13), we recommend that either the Regulation or EU-OPS be extended to include these policies.

Definitions

8.42 We recommend that the following definitions should be clarified:

- **PRM:** The definition of PRM used in the Regulation is very broad and this has led to disputes as to whether obese passengers or those impacted by temporary injuries (e.g. winter sports) are included; and even that those temporarily incapacitated e.g. due to alcohol consumption might be included. We suggest that, at a minimum, the definition should be amended to clarify this, and ideally (but subject to consultation) a much more precise definition of passengers entitled to assistance should be used, along the lines of that used in the equivalent US Regulations (see below).
- **Mobility equipment:** The Regulation should make clear whether this includes

equipment required by PRMs for the trip but not required for them to be able to take the flight (e.g. joists for assisted lifting of PRMs).

- **Cooperation:** The Regulation should to specify what measures airports must take when required by the Regulation to set out policies and charges in cooperation with airport users and PRM organisations - in particular in Article 8(4).

Definition of disability used in US CFR part 14 rule 382

Individual with a disability means any individual who has a physical or mental impairment that, on a permanent or temporary basis, substantially limits one or more major life activities, has a record of such an impairment, or is regarded as having such an impairment. As used in this definition, the phrase:

(a) *Physical or mental impairment* means:

(1) Any physiological disorder or condition, cosmetic disfigurement, or anatomical loss affecting one or more of the following body systems: neurological, musculoskeletal, special sense organs, respiratory including speech organs, cardio-vascular, reproductive, digestive, genito-urinary, hemic and lymphatic, skin, and endocrine; or

(2) Any mental or psychological disorder, such as mental retardation, organic brain syndrome, emotional or mental illness, and specific learning disabilities. The term physical or mental impairment includes, but is not limited to, such diseases and conditions as orthopedic, visual, speech, and hearing impairments; cerebral palsy, epilepsy, muscular dystrophy, multiple sclerosis, cancer, heart disease, diabetes, mental retardation, emotional illness, drug addiction, and alcoholism.

(b) *Major life activities* means functions such as caring for one's self, performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working.

(c) Has a record of such impairment means has a history of, or has been classified, or misclassified, as having a mental or physical impairment that substantially limits one or more major life activities.

(d) *Is regarded as having an impairment* means:

(1) Has a physical or mental impairment that does not substantially limit major life activities but that is treated by an air carrier as constituting such a limitation;

(2) Has a physical or mental impairment that substantially limits a major life activity only as a result of the attitudes of others toward such an impairment; or

(3) Has none of the impairments set forth in this definition but is treated by an air carrier as having such an impairment.

Supplementary charges

8.43 Although we have not been made aware of any incidences of airlines or airports charging for assistance provided under the Regulation, several airlines charge for the supply of medical oxygen, and for multiple seats where one seat is insufficient for the passenger (for example, in the case of obese or injured passengers). Several PRM organisations informed us that they believed these charges were unjust. We recommend that in any amendment of the Regulation it should be clarified whether airlines may levy such additional charges.

Information on rights of PRMs

8.44 Regulation 261/2004 requires airlines to display at check-in a notice informing passengers that they may request information on their rights under the Regulation. To assist the promotion of awareness of rights under Regulation 1107/2006, we recommend that the Regulation be extended to include a provision requiring airports

to publish information on the rights of PRMs (including the right to complain) at accessible points within the airport, for example at check-in desks and help points.

Liability for mobility equipment

8.45 The Montreal Convention allows for compensation for damage to baggage up to 1,131 SDRs (€1,370), however this is insufficient for many technologically advanced electric wheelchairs, which can cost several thousand euros. Although most airlines we contacted for the study informed us that they waived the Montreal limits in this type of situation, several PRM organisations informed us of cases where they did not. Even in the case that an airline voluntarily waives the limit, the PRM is in a position of uncertainty. This is exacerbated by the difficulty of obtaining insurance for such wheelchairs; the high cost combined with the high probability of damage means that the PRM organisations we spoke to had been unable to find any insurers willing to provide coverage.

8.46 We therefore recommend that the Commission work with non-EU States to amend the Montreal Convention to exclude mobility equipment from the definition of baggage.

APPENDIX A

AIR CARRIERS POLICIES ON CARRIAGE OF PRMS

APPENDIX TABLE A.1 POLICY ON DENIAL OF BOARDING, ACCOMPANYING PASSENGERS AND MEDICAL CLEARANCE

Airline	Circumstances for refusal of carriage	Circumstances requiring accompanying passenger	Circumstances requiring medical clearance
Aegean Airlines	Not stated *Unpublished limit on unaccompanied PRMs*	Not stated	• PRM requires oxygen
Air Berlin	May limit number of PRMs on each flight for safety reasons	'Advised' if the following apply (although the use of 'must' in terms of the criteria for the companion suggest that this may not be optional): • PRM has severe walking disability • PRM has severe visual impairment *Also required if:* • *PRM is on stretcher* • *PRM is mentally ill / blind / deaf if unable to follow crew instructions* • *ID states that continuous accompaniment required*	• *PRM has infectious disease* • *PRM is on stretcher* • *PRM requires oxygen*
Air France	Not stated	• PRM cannot safely exit aircraft alone • PRM cannot follow safety instructions • PRM has visual or hearing impairment	• PRM is on stretcher or in incubator • PRM will need extraordinary medical equipment during flight • PRM requires oxygen
AirBaltic	To meet safety requirements If aircraft doors make boarding physically impossible If number of PRMs exceeds number of cabin crew per flight, where PRMs form a large proportion of passengers on flight	PRM requires assistance beyond that provided by cabin crew. Cabin crew will provide additional information to PRMs, but will not: • Assist with eating or personal hygiene; • Administer medication; or • Lift or carry passengers. *Also required if unable to follow safety instructions, e.g. if in stretcher, incubator, of if both blind and deaf*	• PRM has infectious disease • PRM has 'unusual condition' which could affect welfare of crew or other passengers, or could be considered a potential hazard to flight or its punctuality • PRM will require medical attention or special equipment during flight • PRM has medical condition which may worsen during, or because of, flight • PRM cannot use normal seat in upright position

Airline	Circumstances for refusal of carriage	Circumstances requiring accompanying passenger	Circumstances requiring medical clearance
			• Pregnant passengers, except when uncomplicated and with more than 4 weeks until due date.
Alitalia	Conditions of Carriage state that boarding may be denied if advance arrangements have not been made	• PRM uses wheelchair • PRM is blind or deaf • PRM is on stretcher • PRM is not self sufficient	• *PRM will require medical assistance on board*
Austrian	Not stated	• PRM cannot evacuate aircraft alone • PRM cannot follow safety instructions • PRM needs assistance in feeding or using toilet • PRM is deaf and blind • PRM requires assistance beyond that provided by cabin crew	• PRM has chronic illness or disability
British Airways	Not stated	• PRM cannot lift themselves • PRM cannot evacuate aircraft alone • PRM cannot communicate with crew on safety matters • PRM cannot unfasten seat belt • PRM cannot retrieve and fit life jacket • PRM cannot fit oxygen mask.	Not stated
Brussels Airlines	To meet safety requirements If size of doors makes boarding or alighting physically impossible Limit of PRMs of up to 31 per flight depending on aeroplane type Conditions of Carriage state that boarding may be denied if advance arrangements have not been made	• PRM is mentally disabled and does not have prior medical clearance of airline	• PRM is on stretcher or bed • PRM requires oxygen • PRM is under care of a doctor • PRM has unstable medical condition • PRM suffers from illness • PRM has recently been to hospital, or has operation

Airline	Circumstances for refusal of carriage	Circumstances requiring accompanying passenger	Circumstances requiring medical clearance
			• PRM has medical disability and cannot be accompanied • PRM is more than 34 weeks pregnant
Delta	On basis of safety, or if in violation of Federal Aviation Regulations If advance arrangements have not been made (this requirement is more stringent in the Conditions of Carriage)	• PRM requires constant monitoring at departure gate • PRM requires assistance beyond that provided by cabin crew	• PRM has infectious disease • PRM requires oxygen • PRM will require extraordinary medical assistance during flight
EasyJet	If the safety and welfare of the PRM or other passengers may be compromised *In only extreme circumstances, e.g. where special seats or torso restraints are required, or if a passenger's condition makes them potentially violent or disruptive.*	• PRM cannot evacuate aircraft alone • PRM cannot communicate with staff • PRM cannot unfasten seat belt • PRM cannot retrieve and fit life jacket • PRM cannot fit oxygen mask • PRM cannot take care of own personal needs and welfare	• PRM has infectious or chronic illness • PRM has broken limb in plaster • PRM is 28-35 weeks pregnant • PRM is a child with a chronic lung disease • PRM has severe asthma or has recently been prescribed oral steroids.
Emirates	Not stated	• PRM needs to travel in stretcher or incubator • PRM requires medical attention during flight • PRM cannot follow safety instructions • PRM cannot evacuate aircraft alone • PRM has severe hearing and visual impairments and cannot communicate with staff	• PRM is on stretcher • PRM requires oxygen • PRM requires medical escort or in-flight treatment • PRM is carrying medical equipment or instruments • PRM is 29 or more weeks pregnant
Iberia	If PRM poses a risk to themselves and other passengers for medical reasons Limit on number of PRMs per flight *May also refuse carriage for security reasons, e.g. aggression.*	• In order to meet safety requirements • *PRM is considered as a 'medical case'*	Not stated
KLM	Not stated	• PRM requires assistance beyond that provided by	• PRM has infectious disease

Airline	Circumstances for refusal of carriage	Circumstances requiring accompanying passenger	Circumstances requiring medical clearance
	Passenger cannot sit up straight *Wheelchair will not fit through aircraft door.*	cabin crew • PRM cannot move unassisted between wheelchair and seat / toilet • *PRM not compliant with normal safety rules*	• PRM requires medical care or specific equipment in-flight • PRM has medical condition that could result in a life-threatening situation or could require the provision of exceptional medical care for their safety during the flight. • PRM requires in-flight personal care • PRM cannot use normal seat in upright position • PRMs up to 36 weeks pregnant who are expecting complications
Lufthansa	Limit on number of unaccompanied limited mobility PRMs per flight	• Not stated for non-US flights	Stringent medical clearance requirements – see text
Ryanair	Limit on number of disabled or sensory or mobility impaired PRMs per flight. Conditions of Carriage state that failure to advise on special needs will result in denial of boarding. *PRM limit can be overridden at the discretion of the crew on a case-by-case basis*	• PRM cannot use toilet unaided • PRM cannot feed themselves unaided • PRM cannot administer own medication.	• PRM requires oxygen, portable dialysis machine or continuous portable airway pressure machine
SAS	Not stated *When PRMs cannot be safely carried or physically accommodated*	• Not stated • *PRM is blind, deaf; or both* • *PRM is Disabled Passenger with Intellectual or Developmental Disability Needing Assistance* • *PRM is on stretcher*	• PRM requires stretcher or other flat transportation
TAP Portugal	Not stated *Unpublished limit on unaccompanied PRMs*	• PRM is in an incubator • PRM is on trolley / stretcher • PRM requires oxygen • PRM uses wheelchair or has 'great difficulty in mobility'	• PRM uses emotional support dog • PRM is more than 36 weeks pregnant

Airline	Circumstances for refusal of carriage	Circumstances requiring accompanying passenger	Circumstances requiring medical clearance
		• PRM is reliant on others	
TAROM	Not stated	• PRM suffers from a disease • *PRM cannot self-evacuate*	• PRM has disease • PRM requires stretcher • PRM requires oxygen
Thomas Cook	Not stated	• PRM cannot lift themselves • PRM cannot use toilet unaided • PRM cannot feed themselves unaided • PRM cannot administer own medication • PRM cannot communicate or follow instructions • PRM reliant on oxygen.	Unspecified – see text
TUI (Thomsonfly)	Not stated	• PRM cannot lift themselves • PRM cannot use toilet unaided • PRM cannot feed themselves unaided • PRM cannot administer own medication • PRM cannot communicate or follow instructions • PRM reliant on oxygen • PRM requires wheelchair.	• *PRM is unaccompanied and does not meet self-sufficiency requirements* • *PRM has declared medical condition* • *PRM has requested a service for which there is a risk of abuse, e.g. extra legroom seats would normally be chargeable.*
Wizzair	If medical certification is not provided on request If airline is unable to provide for specific medical requirements Limit of 28 PRMs per flight Conditions of Carriage state that boarding may be denied if advance arrangements have not been made	• PRM unable to care for themselves • PRM cannot use toilet unaided.	Unspecified, but could be required in all cases – see text.

APPENDIX B

SERVICES PROVIDED BY AIR CARRIERS

APPENDIX TABLE A.2 SERVICE AND RESTRICTIONS

Airline	Assistance dogs	Wheelchairs and other equipment	Assistance offered	Accessible information	Seating and onboard assistance
Aegean Airlines	Prenotification required Carried free in cabin Case / carrier required Subject to weight restriction Not carried on UK flights	Wheelchairs carried free Not subject to baggage allowance Passenger's oxygen allowed with medical certification Conditions of Carriage state that wet cell batteries are not allowed in cabin	Not stated	Not stated	Not stated
Air Berlin	Carried free in cabin Case / carrier not required Harness required	Wheelchairs carried in hold only Wet cell batteries subject to safety regulations Other medical aids carried free with medical certificate Limit of one wheelchair per passenger defined in Conditions of Carriage	Not stated	Not stated	Free seat reservation for passengers with severe disability pass (or equivalent) for 50% disability or more, and for companion PRMs cannot reserve XL / extra large seats (i.e. in exit rows) Conditions of carriage state that seating may be restricted for safety reasons
Air France	Carried free in cabin Leash required, attached to seat in front Muzzle not required	Up to two wheelchairs carried free of charge Onboard wheelchairs on most flights Stretchers accepted with medical clearance Oxygen allowed on board on payment of fee	Cannot lift passengers Cannot administer medication	Braille seat numbers in new aircraft Safety briefing in French or English Braille Some crew members able to communicate in French sign language	Additional seat may be reserved at discounted rate if needed Seats with retractable armrests Easy access toilets
AirBaltic	Carried free in cabin Excluded from weight	Carried free of charge Only collapsible wheelchairs	Will provide extra information Cannot assist with eating or	Not stated	Depending on aircraft, provide movable aisle armrest seats

Airline	Assistance dogs	Wheelchairs and other equipment	Assistance offered	Accessible information	Seating and onboard assistance
	restrictions Prohibited from exit rows	allowed in cabin Spillable batteries accepted if removed and packed and labelled Stretchers not carried Oxygen provided free with prenotification, doctor's verification and accompanying passenger	personal hygiene Cannot lift or carry passengers Cannot administer medication		PRMs cannot obstruct crew or emergency exits Companion must travel in seat next to PRM
Alitalia	Carried free in hold, or in cabin if space available Leash required Muzzle required	Wheelchairs carried free Stretcher service offered for a fee and with authorisation and accompanying passenger, only one per aircraft. Oxygen must be booked in advance, and not available on all flights	Not stated	Not stated	Not stated
Austrian	Carried free in cabin Leash required Subject to size and weight restriction Proof of status required	Up to two wheelchairs carried free, subject to space and prenotification for electric wheelchairs Onboard wheelchairs available	Preparation for eating Use of on-board wheelchair Accessing lavatory Stowing / retrieving carry-on items	Will communicate effectively as required.	Choice of seat may be limited Some seats with moveable armrests Accessible lavatories on long haul flights
British Airways	Prenotification required Limit on no. of guide dogs per flight Carried free in cabin Carried on all UK and certain international routes	Up to two wheelchairs carried free Preparation required for certain types of electric wheelchair Onboard wheelchairs on some flights Portable Oxygen Concentrators accepted with medical clearance, included in cabin	Cannot assist with breathing apparatus Cannot assist with eating Cannot administer medication Cannot assist with going to toilet Can assist in access to and from toilet when on-board wheelchair is available	Individual safety briefings and subtitles on English safety video Braille cards on some flights	Lifting armrests on some seats Cannot be seated on emergency exit aisle due to safety regulations. Will be allocated bulkhead seat when requested, unless already allocated to PRM. Adapted toilets on 747-operated flights

Airline	Assistance dogs	Wheelchairs and other equipment	Assistance offered	Accessible information	Seating and onboard assistance
		baggage allowance Conditions of carriage state that the airline reserves the right to refuse stretchers on any flight			
Brussels Airlines	Prenotification required Carried free in cabin Leash required Muzzle required Subject to national regulations	Electric wheelchairs carried in hold Spillable batteries accepted under certain conditions In-flight wheelchair on some flights Up to two stretchers on certain planes Can supply oxygen with prenotification and payment of fee in advance	Moving to toilet facilities Cannot lift passengers Cannot assist during visit to lavatory	Not stated	Not stated
Delta	Carried free in cabin Prohibited from exit rows Must occupy space where passenger sits No documentation required Subject to national entry requirements	One wheelchair can be carried in cabin per flight Wet cell batteries accepted with preparation One onboard wheelchair per flight Personal oxygen tanks can be transported but not used in flight Can provide oxygen on many flights, subject to medical certification Conditions of Carriage state that carriage of passengers requiring stretcher kit may be refused	Cannot assist with feeding or personal hygiene and lavatory functions. Cannot lift or carry passengers Cannot provide medical services such as giving injections.	Pre-booked passengers with hearing disabilities can be accompanied by agents who will provide updates on flight information	FAA regulations limit exit seats to certain customers Customers with service animals or immobilised leg are entitled to bulkhead seats On board aircraft with 100 seats or more, Delta provides a stowage location specifically for the first collapsible wheelchair

Airline	Assistance dogs	Wheelchairs and other equipment	Assistance offered	Accessible information	Seating and onboard assistance
EasyJet	Carried free in cabin if space available Must occupy space where passenger sits Harness required Proof of training and status required Only allowed on routes within UK or mainland Europe	Up two to portable mobility items carried free, subject to weight restriction Wet cell batteries not accepted No onboard wheelchairs Allow up to two oxygen cylinders per passenger, with medical certification Conditions of Carriage state that stretchers are not carried	Stowing and retrieving of hand baggage Opening food packages and describing the contents Cannot lift passengers Cannot provide personal care Cannot administer medication Cannot assist with feeding or children	Can provide a verbal explanation of the safety card information and location of emergency exits	Body supports required for passengers who cannot sit upright
Emirates	All animals carried in hold, subject to IATA Live Animals and national regulations	Wheelchairs carried free of charge Do not count towards baggage allowance Battery-powered wheelchairs subject to safeguards Stretcher kit provided Oxygen provided Portable Oxygen Concentrators allowed	Cannot assist with transfer Cannot assist with feeding Cannot assist with toilet functions	Not stated	Not stated
Iberia	Carried free in cabin Must not use seat Muzzle required Does not count towards luggage allowance Deaf passengers will require medical certificate	All wheelchairs carried free in hold Wet cell batteries accepted with preparation Carriage of stretchers may be restricted on smaller aircraft Oxygen allowed in cabin subject to certain conditions	Cannot provide sanitary, hygienic or safety onboard assistance.	Not stated	'The entire fleet has been adapted to carry Passengers with Reduced Mobility, despite the space limitations that air transport normally poses.'
KLM	Carried free in cabin Must be with PRM, but not using seat or blocking aisle of	Up to two pieces of mobility equipment carried free Collapsible wheelchairs allowed	Transporting passengers using on-board wheelchair	Braille safety cards Toilets with Braille attendant call	Seats with moveable armrests Leg rests available

Airline	Assistance dogs	Wheelchairs and other equipment	Assistance offered	Accessible information	Seating and onboard assistance
	exit Leash required Subject to national regulations	in cabin, electric wheelchairs carried in hold Wet cell batteries accepted with preparation Onboard wheelchairs on all flights Stretcher service offered, subject to medically trained companion Oxygen allowed on board on payment of fee Own oxygen not allowed Approved Portable Oxygen Concentrators allowed	Cannot assist with eating Cannot lift or carry passengers Cannot administer medication Cannot assist with personal hygiene	buttons	
Lufthansa	Carried free in cabin Limited number allowed per flight Subject to national regulations	Wheelchairs carried free in hold (small collapsible devices allowed in cabin to/from US) Non leak-proof wet cell batteries not accepted except to/from US Limit on number of wheelchairs per flight Limited oxygen available with advance payment of an unspecified fee	Assistance in boarding / disembarking Stowing hand luggage Opening of food items Getting to / from toilet Cannot provide assistance in toilet Cannot lift or carry passengers Cannot feed passengers Cannot administer medication	Will explain arrangement of meal tray to partially sighted Flights to/from US section of website also includes: Separate safety briefings Separate briefings about delays and other issues Captioning of in-flight video in English and German	Disabled toilets in long-haul aircraft Flights to/from US section of website also includes: Bulkhead seats provided if travelling with service animal Some seats with lifting armrests May not be able to sit near exit
Ryanair	Carried free in cabin Must travel on floor at passenger's feet Max of 4 per flight Not carried on some international routes	Wheelchairs carried free of charge in hold Not subject to weight limit Wet cell batteries not accepted One oxygen request per flight allowed at cost of £100.	Will provide water for taking medication Cannot administer medication Cannot lift passengers Cannot assist with personal hygiene	Not stated	Passengers with reduced mobility, or whose physical size prevents them from moving quickly cannot be seated near exit. Passengers with pre-booked special assistance will be

Airline	Assistance dogs	Wheelchairs and other equipment	Assistance offered	Accessible information	Seating and onboard assistance
		Personal oxygen not allowed on board Conditions of carriage state that stretchers are not carried			boarded after general boarding is completed as seats will be held on board. Conditions of carriage state that seating may be restricted for safety reasons
SAS	Carried free in cabin Case / carrier not required Excluded from weight restriction	One collapsible and one power-driven wheelchair carried free of charge Wet cell batteries accepted as cargo In-flight wheelchair on some flights Personal oxygen allowed if required for transport to/from aircraft Will provide oxygen with payment of fee	Cannot lift passengers Cannot assist during visit to lavatory	Not stated	Not stated
TAP Portugal	Dogs and cats allowed in cabin Leash required Must not occupy a seat Must comply with sanitary regulations Proof of status required	Prenotification of type of wheelchair battery required On-board wheelchair on larger planes Stretchers accepted in economy class subject to medically trained companion Oxygen provided with medical certification Personal oxygen not allowed	Not obliged to provide any on-board assistance contradicting passenger statement of self-reliance, e.g. assistance in toilet, lifting, carrying or feeding.	Not stated	May request an additional seat for greater comfort in coach class only. This seat must be requested when booking and is charged as an occupied place

COM(2008) 804 final

COMMUNICATION FROM THE COMMISSION TO THE EUROPEAN PARLIAMENT, THE COUNCIL, THE EUROPEAN ECONOMIC AND SOCIAL COMMITTEE AND THE COMMITTEE OF THE REGIONS

"Towards an accessible information society"

COMMUNICATION FROM THE COMMISSION TO THE EUROPEAN PARLIAMENT, THE COUNCIL, THE EUROPEAN ECONOMIC AND SOCIAL COMMITTEE AND THE COMMITTEE OF THE REGIONS

"Towards an accessible information society"

[SEC(2008) 2915]

[SEC(2008) 2916]

1. EXECUTIVE SUMMARY

As our society is evolving to an 'information society', we are becoming intrinsically more dependent on technology-based products and services in our daily lives. Yet poor e-accessibility means many Europeans with a disability are still unable to access the benefits of the information society.

This issue of e-accessibility has received high policy visibility and attention in recent years. In 2006, European Ministers agreed targets in their 'Riga Declaration' to deliver significant progress by 2010. In 2007, benchmarking showed that the pace of progress was still insufficient and that further efforts were needed in order to achieve the Riga targets. Web accessibility, especially the accessibility of public administration websites, has emerged as a high priority due to the growing importance of the Internet in everyday life.

The Commission considers it is now urgent to achieve a more **coherent, common and effective approach to e-accessibility, in particular web accessibility,** to hasten the advent of an accessible information society, as announced in the Renewed Social Agenda[1]. Through this Communication, the Commission describes the current state of play, establishes the rationale for European action and sets out key steps to be taken.

To achieve a common and coherent **e-accessibility approach**:

- European Standardisation Organisations (ESOs) should **pursue wider e-accessibility standardisation** activities to reduce market fragmentation and facilitate increased adoption of ICT-enabled goods and services.

- Member States, stakeholders and the Commission should **stimulate greater levels of innovation and deployment** in e-accessibility, in particular through the use of the EU research and innovation programmes and the Structural Funds.

- All stakeholders should **make full use of** the opportunities to address e-accessibility within **existing EU legislation**. The Commission will include appropriate e-accessibility requirements in revisions or new legislative developments.

- The Commission will **boost stakeholder cooperation activities** to enhance the coherence, coordination and impact of the actions. In particular, a new high-level ad hoc group will be mandated to provide guidance on the overall coherent approach to e-accessibility (including web accessibility) and propose priority actions to overcome e-accessibility barriers.

[1] COM(2008)412.

To speed up progress in the special case of **web accessibility**:

- ESOs should **rapidly adopt European standards** for web accessibility, following the establishment of updated web guidelines (WCAG 2.0) by the World Wide Web Consortium.

- Member States should **step up work** on making public web sites **accessible** and **jointly prepare for swift adoption** of European web accessibility standards.

- The Commission will **monitor and publish progress** and may follow up at a later stage with legislative action.

2. E-ACCESSIBILITY

E-accessibility means overcoming the technical barriers and difficulties that people with disabilities, including many elderly people, experience when trying to participate on equal terms in the information society.

If everyone is to have equal opportunities for participation in today's society, the full range of ICT goods, products and services need to be accessible. This includes computers, telephones, TVs, online government, online shopping, call centres, self-service terminals such as automatic teller machines (ATMs) and ticket machines.

2.1. State of play

The scale of the accessibility challenge is huge and growing: around 15% of Europe's population has a disability and up to one in five working-age Europeans have impairments requiring accessible solutions. Overall, three out of every five people stand to benefit from e-accessibility, as it improves general usability[2].

E-accessibility has socio-economic implications for both individuals and Europe as a whole. For example, accessible ICT-enabled solutions can help older workers to stay in employment and enhance the take-up of online public services such as e-Government and e-Health. Lack of e-accessibility excludes significant sectors of the population and prevents them from fully carrying out their professional, education, leisure, democratic participation and social activities. Strengthening e-accessibility will contribute to both economic and social inclusion goals.

Many countries have adopted at least some legislative or support measures to promote e-accessibility and parts of the ICT industry are making significant efforts to improve the accessibility of their products and services[3].

E-accessibility is also a key element in the European e-Inclusion policy[4]. In a broader context, ICT falls within the scope of the proposed Directive on equal treatment that refers to access to and supply of goods and services available to the public[5]. The European Community and the

4 i2010 Communication COM(2005) 229, Communication on e-accessibility COM(2005) 425, and Communication on e-Inclusion COM(2007) 694.

5 COM(2008) 426.

Member States also have to fulfil obligations under the United Nations Convention on the Rights of Persons with Disabilities in relation to accessibility of ICT goods and services. Some pieces of EU legislation already directly or indirectly address e-accessibility issues.

2.2. Rationale for further action

Despite the benefits and political attention, progress in e-accessibility is still unsatisfactory. There are many striking examples of accessibility deficits. E.g. text relay services, essential for deaf and speech-impaired people, are only available in half of the Member States; emergency services are directly accessible by text telephone in only seven Member States; broadcasting with audio description, subtitled TV programming and TV sign-language programming remains very poor; only 8% of ATMs installed by the two main European retail banks provide 'talking' output[6].

The existing EU *acquis* relating to e-accessibility is limited. At Member State level, there is considerable fragmentation in the treatment of e-accessibility, both in the issues addressed (usually fixed telephony services, TV broadcast services and public website accessibility) and the completeness of policy instruments used. Faced with divergent requirements and uncertainties, the ICT industry suffers from this market fragmentation, making it difficult to achieve the economies of scale necessary to sustain widespread innovation and market growth. Parts of the industry are actively engaged and cooperating with users (e.g. on accessible digital television) but too many are watching from the sidelines.

The key issue in e-accessibility is that current efforts have insufficient impact due to a lack of coherence, unclear priority setting, and poor legislative and financial support.

A common and coherent European approach to e-accessibility is therefore key to achieving significant improvements.

2.3. Proposed actions

(1) Delivering the change — strengthening policy priorities, coordination and stakeholder cooperation

At European level several activities have been put in place in recent years. Now is the time to increase synergies between these and reinforce individual areas of action for greater and more consistent impact.

Member States, users and industry need to step up their efforts and seek more impact through greater cooperation at European level and better exploitation of existing EU policy instruments. To support and strengthen coherence and effectiveness of a common approach and to help define priorities, the Commission will establish an **ad hoc high-level group on e-accessibility**, reporting to the i2010 high level group, involving consumer organisations and representatives of disabled and elderly users, ICT and assistive technology and service industries, academia and relevant authorities.

Early in 2009, the Commission will establish an **ad hoc high-level group** to provide guidance on priorities and a more coherent approach to e-accessibility. Stakeholders are called upon to commit to this cooperation.

[6] For details, see the MeAC study (Measuring progress of e-accessibility in Europe).

The Commission will **boost its existing support for cooperation** with and between stakeholders. In particular the groups following the implementation of i2010, standardisation matters, telecommunication issues and the disability action plan should use the guidance of the high-level group to inform their priorities. It is also important that users, relevant authorities, and industry reinforce their commitment and cooperation on e-accessibility matters.

Priorities for e-accessibility need to be selected. The first is web accessibility, where the proposed coherent and common approach can be applied. Next are the accessibility of digital television and electronic communications, including accessibility of the single European emergency number. For these, cooperation of users and industry should be increased and, with the help of the high-level group, better linked to the EU-level legislative and innovation support.

Self-service terminals and electronic banking is another high priority[7]. The closer cooperation of stakeholders will help to obtain guidance on further priorities and define a common programme of future work.

The Commission has already addressed e-accessibility in its proposal for a new version of the e-government European Interoperability Framework[8], and will do so in its follow-up to the i2010 initiative and the disability action plan.

The Commission will ensure e-accessibility remains a **policy priority** in the follow-up to i2010 and disability action plan.

This closer coordination and cooperation will be further strengthened through enhanced exploitation of the activities mentioned below.

(2) Monitoring progress and reinforcing good practice

The Commission will launch a study in 2009 to continue monitoring general e-accessibility and web accessibility progress and implementation, following up two studies conducted in 2006-2008[9].

Under the 2009 Competitiveness and Innovation Programme (CIP), the Commission will propose a new thematic network on e-accessibility and web accessibility to further enhance stakeholder cooperation and the building up of experience and collection of good practices. It will also seek to reinforce the *ePractice* good practice exchange network on e-government, e-health and e-Inclusion, which has already amassed a vast amount of expertise on e-accessibility.

The Commission will monitor web-accessibility and e-accessibility progress and implementation, support cooperation and exchange of good practices via **studies** and a **CIP thematic network**, to be launched in 2009.

(3) Supporting innovation and deployment

---

7 See report on the public consultation.

8 http://ec.europa.eu/idabc/en/document/7728

9 MeAC and study on accessibility of ICT products and services for disabled and elderly people.

There is already extensive support for e-accessibility research and innovation. In 2008, 13 new projects were funded with some €43m from the EU research programme. The Commission will continue to actively support e-accessibility and ICT for independent living of elderly people through the EU research programmes with a further call for proposals in 2009.

The Commission will **ensure e-accessibility is a strong research and innovation priority** in 2009 and beyond.

Member States and the Commission will use the Ambient Assisted Living joint research programme, launched in 2008, to stimulate innovative ICT-based solutions for independent living and the prevention and management of chronic conditions of elderly people.

Under the 2008 CIP, the Commission funded a pilot project on accessible TV and pilots on ICT for elderly people to accelerate technology deployment. In 2009, the Commission will fund a pilot on 'total conversation' (the combination of audio, text and video communications to support people with disabilities), which will help hearing- and speech-impaired persons to access the European '112' emergency number.

Member States and stakeholders are urged to **stimulate e-accessibility innovation and deployment** via the Structural Funds, FP7, the AAL programme and national programmes.

The Structural Funds Regulation[10] requires that the Member States consider accessibility for disabled persons as one of the criteria to receive funding. In this context, the Commission will provide a 'disability toolkit' in 2009, applicable to ICTs, and encourage Member States and Regions to ensure that ICT accessibility is incorporated in their procurement and funding criteria.

The Commission will provide a **disability toolkit** applicable to ICTs in 2009 for use in Structural Funds and other programmes.

(4) Facilitating standardisation activities

The Commission continues its strong support for e-accessibility in its standardisation work programme. In particular, Mandate 376 issued to the European Standardisation Organisations is an important standardisation activity to foster e-accessibility.[11] The Commission will promote the use of the results from this standardisation work and will seek a rapid continuation of Mandate 376 to deliver the actual standards and related conformity assessment schemes. This process will be complemented and supported by stakeholders' dialogue, exchange of good practices and deployment pilots, as referred to in the proposed actions of this Communication.

Under Mandate 376, ESOs should **rapidly develop EU standards** for e-accessibility, in cooperation with relevant stakeholders during 2009 and beyond.

---

10 Council Regulation (EC) 1083/2006

11 The aim of Mandate 376 is to enable the use of public procurement and practice for ICT´s to remove barriers to participation in the Information Society by disabled and older people. The Mandate was given by the European Commission to the ESOs to come up with a solution for common requirements (for example for text sizes, screen contrast, keypad sizes etc) and conformance assessment.

(5) Exploiting current and considering new legislation

There is a clear correlation at national level between the existence of legislation and the actual level of progress on e-accessibility[12]. Research points to the risks of legal fragmentation in the EU due to divergent legislative measures. Based on this, and building on the 2005 and 2007 Communications, the Commission has started exploring a more general legislative approach to e-accessibility.

However, given the vast, complex and evolving nature of the e-accessibility field, there is not yet a clear consensus on possible EU legislation dedicated to e-accessibility[13], e.g. on elements such as scope, standards, compliance mechanisms and links to existing legislation. Furthermore, although there is a clear consensus on the need to act jointly to improve e-accessibility, there are different views on the next priorities to address. The Commission has therefore concluded that the time is not yet right for a specific e-accessibility legislative proposal, but will continue to assess its feasibility and relevance, taking into account actual progress in the field.

Nevertheless, there are provisions under current EU legislation that remain under-exploited, in particular for radio telecommunications equipment, electronic communications, public procurement, copyright in the information society, equality in employment, value added tax and state aid exemptions[14]. Making full use of these provisions would already significantly improve e-accessibility in Member States. The Commission therefore encourages Member States to make the most of these before new legislation is considered.

Several of the above pieces of EU legislation are under review or will be reviewed soon[15]. The Commission will work to ensure that, where appropriate, e-accessibility requirements are considered and reinforced in these revisions. Moreover, legislative proposals for electronic communications significantly strengthen provisions on disabled users under the current framework. The Commission will also carefully monitor the transposition and implementation of the audiovisual media services Directive[16] in particular its Article 3c that provides that Member States shall encourage media service providers under their jurisdiction to ensure that their services are gradually made accessible to people with a visual or hearing disability.

The Commission will **ensure that appropriate e-accessibility provisions are integrated in revisions** of EU legislation. Member States, stakeholders and the Commission should **make full use of opportunities in current legislation** to strengthen e-accessibility.

---

12 See MeAC and study on accessibility of ICT products and services for disabled and elderly people.

13 In the public consultation 90% of user organisations considered binding legislation a high priority, versus 33% of industry and public authorities.

14 Directives 2000/78/EC, 2002/21/EC, 1999/5/EC, 2004/18/EC, 2001/29/CE, 2007/65/EC.

15 For example, Directive 1999/5/EC on terminal equipment is under review: in this context, the Commission will make sure to maintain the possibility to activate the relevant Article 3(3)(f).

16 Directive 2007/65/EC.

3. WEB ACCESSIBILITY

Web accessibility is an important aspect of e-accessibility which offers disabled people the possibility to perceive, understand, navigate, interact with and contribute to the Web. It also benefits other people confronted with visual, dexterity or cognitive limitations, such as elderly people. Web accessibility has become particularly important because of the explosive growth in online information and interactive services: online banking, shopping, government and public services, and communicating with distant relatives or friends.

3.1. State of play

Despite its importance, the overall level of web accessibility remains poor across the EU. Several national and European surveys conducted over the last few years have found that the majority of websites, public and private, do not comply even with the most basic internationally accepted guidelines for accessibility. A recent survey found that only 5.3% of government websites and hardly any of the commercial websites surveyed were fully compliant with the basic accessibility guidelines[17]. This confirms why many people find important websites difficult to use and are therefore at risk of being partially or totally excluded from the information society.

The accessibility of public websites has received increasing policy attention in recent years in Member States[18]. At European level, a 2001 Communication on web accessibility encouraged Member States to endorse the Web Content Accessibility Guidelines (WCAG)[19]. In two Resolutions[20], the Council stressed the need to speed up accessibility to the web and its content. The European Parliament suggested in 2002 that all public websites be fully accessible to disabled persons by 2003[21]. In 2006, the Riga Ministerial Declaration on an inclusive Information Society included a commitment that 100% of public websites be accessible by 2010.

Internationally, WCAG version 1 was adopted in 1999 by the World Wide Web Consortium (W3C). However, ambiguities led to fragmented implementations by Member States, and in view of new internet developments, WCAG 1.0 is becoming outdated. W3C has been working on a new version of the specifications (WCAG 2.0) for several years; these are now in the final stages of adoption. The challenge this time is to avoid a fragmented implementation.

3.2. Rationale for further action

Making websites more accessible may be challenging in some cases, involving certain costs and expertise. However, there is increasing evidence and documented examples that making a website accessible delivers real benefits not only for disabled users, but also for website owners and users in general. Services are easier to use, simpler to maintain and accessed by more users[22]. As a result, improving website accessibility improves the situation for people

22 Staff Working Paper.

with disabilities and also for others and can thus strengthen the competitiveness of European companies.

Case study: benefits of an accessible website

After making their website accessible, a financial services business in the UK identified as benefits:

- Customers found information more quickly and stayed on the site longer.

- New customers used the service, increasing online sales.

- Website maintenance was simpler, quicker and cheaper.

- The website achieved significantly higher search engine rankings.

- Compatibility problems were eliminated and mobile device access improved.

- 100% return on investment in less than 12 months.

Even so, persistent legislative fragmentation across Member States combined with the lack of clear legislative action at European level continues to hamper the internal market, constitutes barriers to consumers and citizens in this cross-border environment, and hinders industry development. The United Nations Convention on the Rights of Persons With Disabilities foresees obligations related to the internet which State Parties have to comply with. Further action at European level is therefore appropriate.

3.3. Proposed actions

The primary responsibility for improving web accessibility rests with Member States and individual service providers. Nevertheless, there are actions that the Commission can undertake or facilitate that will help accelerate the improvement in web accessibility in Europe, even without specific EU legislative provisions on web accessibility. Overall success will be achieved through a common and consistent approach. The key action areas are:

(1) Facilitate the rapid adoption and implementation of international guidelines in Europe

There is broad consensus that WCAG 2.0 guidelines are the technical specifications to be closely adhered to for web accessibility. Once W3C reaches agreement on the guidelines, expected in the near future, Mandate 376 will be able to complete its harmonisation work at European level. In the meantime, Member States should undertake actions to ensure the Riga target for accessible public websites is achieved and prepare for the rapid incorporation of new web-accessibility specifications into national rules in a common and coherent way by:

– Publishing during 2009-2010 updated technical guidance and, where appropriate, translating relevant W3C specifications;

– Identifying during 2009 the public websites and intranets[23] concerned and achieving their accessibility by 2010.

[23] In accordance with the Employment Equality Directive 2000/78/EC.

The Commission will continue its work to improve the accessibility of its own websites, updating its internal guidance to reflect the new specifications.

Non-public service providers, in particular owners of websites providing services of general interest[24], and providers of commercial websites that are essential for participation in the economy and society are also encouraged to improve web accessibility (2008 onwards).

Member States should **achieve 100%** accessibility of public websites by 2010 and prepare for rapid transition to updated web accessibility specifications **in a common and coherent way.**

Websites owners providing services of general interest and other relevant website owners should improve the accessibility of their websites.

The European Standardisation Organisations, in cooperation with stakeholders, should rapidly develop **EU standards for web accessibility** building on WCAG 2.0.

The Commission is improving the accessibility of Commission websites, updating internal guidance to reflect the new specifications.

The Commission will monitor and support these developments, encouraging Member States to take rapid action on the key aspects of implementation and facilitating the collection and exchange of practical experience, primarily through the ePractice platform[25]. Depending on progress and when the standards are in place, the Commission will consider the need for common EU guidance, including legislative action[26].

The Commission will monitor and publish progress and consider the need for common EU guidance, including legislative action (2009 onwards).

(2) Improve the understanding of and promote web accessibility

There is a strong need for increased visibility, understanding and awareness of the needs and solutions for web accessibility. Member States should take a leading role in achieving this by:

– Widely promoting accessibility of websites by providing clear information and guidance on website accessibility, including assistive technologies[27], and encouraging the use of accessibility statements[28];

– Supporting training schemes, knowledge sharing and good practice exchange;

– Purchasing accessible tools and websites in their public procurement;

– Assigning a national contact point for web accessibility, e.g. via a website, in 2009;

---

24 As referred to in COM(2007) 725.

25 www.epractice.eu.

26 See Impact Assessment of COM 2007 (694)

27 Pieces of ICT equipment that support functional capabilities of people with disabilities.

28 Providing supporting information such as accessibility policy of the website, compliance with relevant specifications, support for persons with disabilities, complaint mechanisms.

– monitoring and reporting progress on compliance, user satisfaction and implementation costs for web accessibility on both public and other websites to the proposed high-level group and general public.

Member States should **lead in improving the awareness and understanding** of web accessibility in a coherent, efficient and effective manner and **report progress** to the high-level group.

4. CONCLUSION

Common and coherent action is required on many fronts to achieve e-accessibility. In particular, immediate and rapid progress on web accessibility is essential. All stakeholders have decisive roles to play to achieve the common goal of a truly inclusive information society.

The Commission invites the Council, the European Parliament, the Committee of the Regions, and the Economic and Social Committee to express their views on the actions to be taken to make the information society accessible to all.

Annex – Summary of actions

E-accessibility

Actions	*Date*	*Responsible*
Establish an ad hoc **high-level group** to provide guidance on priorities and a more coherent approach to e-accessibility. Stakeholders are called upon to commit to this cooperation.	Early 2009	EC, stakeholders
Ensure e-accessibility remains a **policy priority** in the follow-up to i2010 and disability action plan.	2009-	EC
Monitor web-accessibility and e-accessibility progress and implementation, support cooperation and exchange of good practices via **studies** and a **CIP thematic network**.	2009-	EC, industry and stakeholders
Ensure e-accessibility is a strong **research and innovation priority.**	2009 -	EC
Stimulate **e-accessibility innovation and deployment** via the Structural Funds, FP7, the AAL programme and national programmes.	2009 -	MS, other stakeholders
Provide a **disability toolkit** applicable to ICTs for use in Structural Funds and other programmes.	2009	EC
Under Mandate 376, **rapidly develop EU standards** for e-accessibility, in cooperation with relevant stakeholders.	2009-	ESOs
Ensure appropriate **e-accessibility provisions are integrated in revisions** of EU legislation.	2008-	EC
Make full use of opportunities in current legislation to strengthen e-accessibility.	2008-	MS, EC industry and stakeholders

Web-accessibility

Achieve 100% **accessibility of public websites** and prepare for rapid transition to updated web accessibility specifications in a **common and coherent way**.	2009-2010	MS
Rapidly develop **EU standards for web accessibility** building on WCAG 2.0.	2009-	ESOs (and stakeholders)
Improve the accessibility of **Commission websites**, updating internal guidance to reflect the new specifications.	2009-	EC
Websites owners providing services of general interest and other relevant website owners to improve the accessibility of their websites.	2009-	Other stakeholders
Monitor and publish progress and consider the need for common EU guidance, including legislative action.	2009-	EC
Lead in improving the **awareness and understanding** of web accessibility in a coherent, efficient and effective manner and report progress to the high-level group**.**	2008-	MS

COMMUNICATION FROM THE COMMISSION TO THE COUNCIL, THE EUROPEAN PARLIAMENT AND THE EUROPEAN ECONOMIC AND SOCIAL COMMITTEE AND THE COMITTEE OF THE REGIONS

eAccessibility

[SEC(2005)1095]

COMMUNICATION FROM THE COMMISSION TO THE COUNCIL, THE EUROPEAN PARLIAMENT AND THE EUROPEAN ECONOMIC AND SOCIAL COMMITTEE AND THE COMITTEE OF THE REGIONS

eAccessibility

Accessible Information and Communication Technologies (ICT) will improve the quality of life of people with disabilities significantly. At the same time, the lack of equal opportunities to access ICT can lead to exclusion. In this Communication, the Commission proposes a set of policy actions that foster eAccessibility. It calls on Member States and stakeholders to support voluntary positive actions to make accessible ICT products and services far more widely available in Europe.

This Communication on eAccessibility contributes to the implementation of the recently launched "**i2010 – A European Information Society for growth and employment**"[1] initiative, that presents a new strategic framework and broad policy orientations to promote an open and competitive digital economy, emphasising ICT as a driver of inclusion and quality of life. The Commission has the ambitious objective of achieving an "Information Society for All", promoting an inclusive digital society that provides opportunities for all and minimises the risk of exclusion.

1. INTRODUCTION

People with disabilities constitute about 15% of the European population and many of them encounter barriers when using ICT products and services. In certain cases, older people can be faced with similar problems. Accessible ICT products and services have now become a priority in Europe, due to the demographic shift: 18% of the European population was aged over 60 in 1990, while this is expected to rise to 30% by 2030.[2]

A recent study in the USA[3] found that 60% of working-age adults can benefit from the use of accessible technologies because they experience mild impairments or difficulties when using current technologies.

A 2002[4] study found that over 48% of 50 years+ persons in Europe considered that they are not being adequately addressed by manufacturers in the design of their products. Between 10 and 12 million were nevertheless potential customers of new mobile phones, computer and internet services.

The implications are clear: **making the benefits of ICT available to the widest possible number of people is a social, ethical and political imperative**. Furthermore, this creates markets of increasing economic significance.

3 The Wide Range of Abilities and Its Impact on Computer Technology – Forrester Research Inc., 2003.
4 Seniorwatch IST-1999-29086 www.seniorwatch.de

Overcoming the technical barriers and difficulties that people with disabilities and others experience when trying to participate on equal terms in the Information Society (IS) is known as "***eAccessibility***". This is part of the broader eInclusion concept, which also addresses other types of barriers, such as financial, geographical or educational.

This Communication builds on previous work on eAccessibility under the two eEurope Action Plans and on the conclusions and results of RTD projects. It also integrates the main findings of an **online consultation**[5] that was held early 2005, which showed a very strong support (over 88% of responses) for the European Institutions to take initiatives to address a situation that is perceived by a significant majority (over 74%) as a lack of coherence among accessible ICT products and services in Europe. A wider availability of accessible products and services is also felt to be needed (84% of respondents).

The main objective of this Communication is to promote a consistent approach to eAccessibility initiatives in the Member States on a voluntary basis, as well as to foster industry self-regulation.

2. THE PRACTICAL CHALLENGES

New technologies have already provided clear support to persons with disabilities and have enabled the realisation of functions in an independent manner that was only possible before with human assistance. However, despite efforts by industry, persons with disabilities still report a large number of problems when trying to use information technology products and services for example:

- lack of harmonised solutions, e.g. lack of access to the 112 emergency number from text phones in many Member States;
- lack of interoperable solutions for accessible ICT ;
- software not compatible with assistive devices, screen readers for blind users are often impossible to use after releases of new operating systems;
- interference between mainstream products and assistive devices, e.g. GSM telephones and hearing aids;
- lack of European-wide standards, e.g. the seven different, incompatible text phone systems for deaf and hard-of-hearing persons;
- lack of adequate services, e.g. many websites too complicated for cognitively impaired or inexperienced users or impossible to read and navigate through for visually impaired persons;
- lack of products and services for certain groups, e.g. telephone communication for sign language users;
- physical design difficult to use, e.g. keypads and displays on many devices;
- lack of accessible content;
- restricted choice of electronic communication services, quality and price.

[5] Results available at: http://europa.eu.int/information_society/policy/accessibility/com_ea_2005/a_documents/com_consult_res.html#_Toc97028181

Most of these problems could, conceptually, be easily solved from a technical point of view, but require cooperation, coordination and determination at European level as market forces alone seem not to have been sufficient to date.

In the near future, examples of new technologies where accessibility aspects must be considered early include:

- digital television, e.g. regarding standards and compatibility as well as design of services and hardware;
- third generation mobile telephones, e.g. regarding design of hardware and software as well as services;
- broadband communication, e.g. using the possibilities of multimodal presentations in a way that enhances accessibility rather than the opposite.

Addressing these issues, previously thought to be of interest to a specific target segment of the population, will actually have positive consequences for the majority of technology users.

3. MARKET AND ECONOMY ISSUES

ICT research and the market have come up with innovative solutions for some of these challenges. The main obstacles to their widespread availability are:

- until now they have been targeting a small market (seen essentially as people with disabilities and in some cases older people), mostly through SMEs at a national or regional level;
- the scarcity of applicable technical standards and technical specifications;
- relevant European legislation only recently explicitly contemplated the possibility of using accessibility requirements in the technical specifications in public procurement procedures;
- there are significant differences in the way some Member States have developed their own solutions.

As a consequence, the accessible ICT products and services market in Europe is still in an initial development phase, largely fragmented at national borders and lacking harmonised legislation and applicable technical standards. This does not facilitate the functioning of a single market and poses an increased burden on industry to comply with differing requirements in different Member States.

Increasingly, the target consumers are not seen anymore as only persons with disabilities and in some cases, older people, but as the whole population. This realization entails a market change we are just beginning to witness, as the bigger European industrial players are now turning their attention to this market sector, although they are still some time away before putting their full weight behind it.

This is also the case of the Telecommunications area – the pervasiveness of telecommunications products and services is now such that even this (relatively small for now) market niche is significant as a differentiator and growth generator, attracting interest from the bigger market players.

In conclusion, eAccessibility and related assistive technology products and services are now on the "midterm radar" of even the bigger mainstream technology providers, not only from Europe but also from other regions of the world.

4. LEGAL AND POLICY ISSUES

On several occasions, Council has encouraged action at EU level for instance when it called on Member States and invited the Commission to "*Tap the Information Society's potential for people with disabilities and, in particular, tackle the removal of technical and other barriers to their effective participation in the Knowledge Based Economy and Society*" [6]. The European Parliament has also supported this perspective[7].

In particular, European policies and legislation have recognised employment and occupation as key elements in guaranteeing equal opportunities for all, contributing strongly to the full participation of citizens in economic, cultural and social life and to realising their potential. The potential impact on this from a wider availability of quality accessible ICT products and services is clear. It will foster greater employability, better social inclusion and give people the ability to live independently for longer.

The need to include all Europeans in the Information Society has been expressed by the European Institutions in many contexts. The Commission has taken initiatives in the two eEurope Action Plans to build a more accessible IS. The 2002 Action Plan included a separate action line addressing these issues. It recommended the adoption of the Web Accessibility Inititiative (WAI)[8] guidelines, the development of a European Design for All (DFA) curriculum and strengthening assistive technology and DFA standardisation. In the eEurope 2005 Action Plan, the aim was to mainstream eInclusion in all action lines. It also proposed the introduction of accessibility requirements for ICT in public procurement.

Supporting this work, the Telecommunications Council has expressed the need to improve eAccessibility in Europe[9]. Furthermore the Ministerial Declaration[10]on eInclusion proposes taking all necessary actions towards an open, inclusive knowledge-based society accessible to all citizens.

Furthermore, in its 2003 Resolution on eAccessibility[11], the Social Affairs Council called on Member States to tackle the removal of technical, legal and other barriers to the effective participation of people with disabilities in the knowledge-based economy and society.

In line with this, the European Parliament, in its 2002 Resolution on web accessibility[12], "*reiterates the need to avoid any form of exclusion from the IS, and calls for the integration of*

12 EP Resolution on eEurope 2002: Accessibility of Public Web Sites and their Content (2002 (0325))

disabled and elderly people in particular". Furthermore in another Resolution, the use of sign language in Telecommunications in Europe[13] is mentioned.

In a general sense, Article 13 of the Treaty establishing the EC provides for action to combat discrimination, *inter alia* because of disability.

Based on this article, Council Directive 2000/78/EC of 27 November 2000[14], has the explicit purpose (Article 1) "*...to lay down a general framework for combating discrimination on the grounds of religion or belief, disability, age or sexual orientation as regards employment and occupation*". In particular the Directive states that *"Appropriate measures should be provided, i.e. effective and practical measures to adapt the workplace to the disability, for example adapting premises* ***and equipment****..."*

Furthermore, a number of European Directives related to the Information Society have clauses referring to the inclusion of persons with disabilities and older people. These include the Electronic Communications Directives, in particular the Framework[15] and the Universal Service Directives[16], the Directive on Radio and Telecommunication Terminals (RTTE)[17] the Public Procurement Directive[18] and the Employment Equality Directive[19].

The Commission Action Plan[20] published in December 2003 on the follow-up of the European Year of People with Disabilities included as one of its four areas the access to, and use of, new technologies and describes actions undertaken to improved accessibility to the information society using instrument available at EU level.

Activities at EU level have an added value as several Member States are developing legislation, regulations, standards or guidelines to tackle these issues at national level. These actions are leading to similar but yet different eAccessibility requirements for products and services, thus creating a high risk for the European industry, i.e. being forced to operate in a fragmented market with the consequent loss of competitiveness and effectiveness.

The risk for consumers is even greater, particularly for people with disabilities and older persons: a fragmented market means costlier, more unfamiliar and incompatible products, more difficulty in accessing/moving information across borders, etc.

EU actions also take into account international experiences, like those in the USA and Canada, with which a dialogue has been initiated by the European Commission, particularly regarding the use of legislative provisions in the context of public procurement as a powerful leverage factor.

Consequently, basic conditions are set for initiatives to be taken at EU level – this was the view expressed by an overwhelming majority of the stakeholders during the public consultation process (84%).

5. ONGOING ACTIVITIES AT EU LEVEL

Several measures are already under way at EU level and will be strengthened and continued.

Accessibility requirements and standards

Standards are a strategic tool for industry and for the public sector as well as a key enabler for new market opportunities. Although the production and implementation of standards are voluntary, they are an important tool to support the implementation of policy actions. European Standards on eAccessibility would contribute to the proper functioning of the single European market and consequently promote the development of new markets, competitiveness and employment Thus, the Commission will continue to provide financial support to specific activities proposed by the European Standardisation Organisations (ESO) in the framework of the European Standardisation Action Plan or issuing mandates to the ESO[21].

Accessibility requirements specified by standards must meet the needs of industry, designers and providers of products and services to avoid the hampering of creativity or innovation. At the same time they must meet user needs, and the involvement of users in the development of standards is therefore essential: a balance should be found between industrial and public interest. Standards should allow easy enforcement and reference in legislation, regulation and other instruments that promote accessibility. Free availability of standards or availability at a reduced cost would make their uptake easier, especially by SMEs with limited resources to purchase them and for users to access them.

Whilst promoting interoperability, care should be taken that patented technologies without reasonable and non-discriminatory (RAND) licensing are not promoted as standard solutions.

Design for All (DFA)

The DFA methodology denotes the design of products and services to be accessible to as broad a range of users as possible[22]. DFA is now well established, although not yet widely practiced. It is therefore essential to continue raising awareness and promotion of DFA in Europe. To this end, the Commission has set up a network of centres of excellence known as EDEAN[23], which has over one hundred members.

DFA not only allows a **more thorough consideration of accessibility requirements when designing a product or service**, but also fosters important **economies by avoiding costly redesign or technical fixes** after their deployment.

The basic structure for a European DFA curriculum for engineers and designers has been developed and several pilot courses have been provided in Member States. Strengthening its use in post secondary and professional education is a way of ensuring a future accessible IS.[24]

---

21 This process is governed by Directive 98/34: http://europa.eu.int/eur-lex/pri/en/oj/dat/1998/l_204/l_20419980721en00370048.pdf

22 There are three main strategies for DFA: 1) design for most users without modifications, 2) design for easy adaptation to different users (e.g. using adjustable interfaces), 3) design with a view to connect seamlessly to assistive devices.

23 Website EDEAN (European Design for All e-Accessibility Network), http://www.e-accessibility.org/

24 DFA curriculum report of IDCnet project.

The presence of an accessibility officer competent in DFA in relevant organisations, could be a way to professionalize eAccessibility.

Web accessibility

A 2001 Commission Communication [25] on accessibility to public websites was followed by Council and Parliament resolutions in 2002. As a result, Member States have committed themselves to make their public websites accessible according to international guidelines[26].

Through the eAccessibility Expert Group, the Commission with the Member States is monitoring developments, including new evaluation methods[27] and procedures, benchmarking, data collection and identification of best practices. **Web accessibility is an enabler** of accessible online services of public interest. To facilitate this process, it is important to encourage the development of authoring tools that encompass accessibility[28].

A need for certification schemes of accessibility has arisen from the fact that several Member States have binding legislation that mandates accessibility and the need to assess compliance. A European Committee for Normalization (CEN) Workshop[29] is currently exploring adequate solutions.

Benchmarking and monitoring

Several Member States are introducing benchmarking for accessibility and monitoring in their national legislation. At EU level, monitoring of web accessibility has been requested by Council and the European Parliament. The Parliament also requested monitoring subtitles and audio description for Digital TV.

To be able to further develop adequate European eAccessibility policies **it is essential to have European data comparable across Member States**. The Commission will build upon the ongoing European monitoring activities, taking account of the revised Lisbon approach.

The Commission maintains a dialogue with statistical bodies in order to develop and improve relevant indicators, in particular to mainstream accessibility questions in existing indicators.

Research

Research and technological development (RTD) is a fundamental element in the push towards an accessible IS. Almost 200 European RTD projects since 1991, representing approximately € 200 Million in EC co-financing[30] have already contributed to improving accessibility with increased knowledge of accessibility problems and required solutions.

Specific results demonstrated possible solutions such as accessible remote home services for older people (including alarms and emergency services). Solutions have been developed to

30 For examples of projects, see http://www.cordis.lu/ist/so/einclusion/home.html and http://www.cordis.lu/ist/directorate_f/einclusion/previous-research.htm

improve access to digital information by blind and partially sighted persons (text, graphics, 3D images, coded music, television programmes). Systems for motor impaired persons to facilitate mobility, manipulation and control have been demonstrated, as have services to improve communication possibilities of hearing impaired persons including sign language and lip movement generation. Other examples included computer environments to facilitate the integrated education of children with disabilities or employment of adults with disabilities and contributions to policy-making (eEurope i.e. Web Accessibility, Design for all).

Many of the results of Community projects have been further successfully elaborated in products in the market, or the knowledge developed has contributed to the improvement of the accessibility of ICT products and services.

As technologies continue to rapidly evolve, offering new technical solutions, it is essential to invest in research to reap the significant potential that they have for people with disabilities and older persons. The current proposal for the 7th Framework Programme integrates the **need to continue and, indeed, to expand RTD in eAccessibility** so as to further develop European assistive technology industry[31] and to make accessibility an everyday issue for mainstream industry.

6. INCREASING THE E-ACCESSIBILITY OF ICT PRODUCTS AND SERVICES IN EUROPE – THREE NEW APPROACHES

In addition to promoting the ongoing measures just listed, the Commission will foster the use of three approaches not yet widely used in Europe: (i) accessibility requirements in public procurement, (ii) accessibility certification, and (iii) better use of existing legislation.

Two years after the publication of this Communication, the Commission will evaluate the outcome of these actions. Following the principle of Better Regulation[32] the Commission will hold an exchange of views with the Member States and, subject to full impact assessment, may consider the possibility of taking additional measures, including legislation if deemed necessary.

1. Public procurement

The total public procurement in Europe is about 16% of the gross domestic product. Public authorities at all levels can require accessibility features in the goods and services they purchase. In fact, the European Public Procurement Directives specifically mention the possibility to include DFA and accessibility requirements in conditions for tender (technical specifications).

This implies a clear commitment to **an inclusion policy that makes the products and services available to more users, citizens and employees**. It encourages industrial companies to include accessibility as a built-in feature of their products and creates a larger market for accessible ICT. Such effects have been seen in the USA[33] where legislation mandates accessibility requirements to be included in federal procurement.

---

31 Access to Assistive Technology in the EU, a DG EMPL report, CE-V/5-03-003-EN-C

32 European Commission 'White Paper on Governance' COM(2001) 428 final.

33 Section 508 of the Rehabilitation Act as amended by the Workforce Investment Act of 1998.

In the online consultation over 90% of respondents favoured the principle of public agencies requiring all ICT products and services they buy to be accessible. Some Member States already include accessibility requirements in their public procurement. Shared accessibility requirements at EU level have the potential to reduce market fragmentation and to foster interoperability.

There is a strong need for consistency of accessibility requirements in public procurement in Europe. To this effect, the Commission is preparing a mandate to the European standardisation organisations to develop European accessibility requirements for public procurement of products and services in the ICT domain. The mandate is currently submitted to the Member States for consultation. It is foreseen to be issued to the European standardisation organisations by the end of 2005.

The Commission will encourage the debate on this subject with the Member States in the framework of the eAccessibility Expert Group[34]. It will continue to collect experiences from Europe and to encourage an international dialogue in particular with the US through the Transatlantic Economic Partnership (TEP) on harmonisation of eAccessibility requirements for public procurement.

2. Certification

It is not always obvious when buying ICT products what requirements they fulfil. This is particularly important when buying accessible ICT. Some standards exist or are under development defining how products and services can be made accessible. However, at present there is no reliable means to assess the conformity of products with those accessibility standards. Adequate certification schemes for accessibility of products, organisational processes and professionals (based on the European Key Mark[35] and on European standards) would provide guidance to customers and clients who want accessible products and services and might give manufacturers and service providers due recognition for their efforts. They would also facilitate the monitoring of compliance with regulations demanding accessibility.

In its January 2003 Resolution on eAccessibility , the Council called for an "eAccessibility mark" for goods and services. The 2002 Ministerial Declaration on eInclusion reflected that *"a European web accessibility label that certifies compliance with W3C WAI[36] guidelines could be considered in order to avoid market fragmentation".*

The Commission will study together with the key stakeholders **possibilities for the development, introduction and implementation of certification schemes for accessible products and services**, including the definition of criteria testing, and evaluation methods. The possibility of self-declaration or third-party certification will also be investigated and the different options will be compared for their effectiveness[37]. The Commission will launch a study on this matter in the last quarter of 2005.[38]

---

34 The eAccessibility Experts Group coordinates experts from the Member States who support the implementation of the eEurope Action Plan.

35 http://www.cenorm.be/conf_assess/keymark/keymarktext.htm

36 World Wide Web Consortium (W3C) Web Accessibility Initiative (WAI).

37 The online consultation showed a strong support (over 72%) for the certification and labelling of eAccessible ICT products and services, with significant differences among target groups only 61.4% agreement among *Manufacturers, providers or sellers of eAccessibility products & services).* Additionally, among those supporting product certification and labelling, the groups "*Private*

3. Better use of existing Legislation

Several Directives have provisions that can be used to enforce eAccessibility (such as the Equal Treatment in Employment Directive[39], the Directive on Radio and Telecommunication Terminals and the Public Procurement Directives). It is important to cooperate with the Member States, to develop a practical way of using these Directives to address eAccessibility.

In particular, implementing the Inclusive Communications Group (INCOM)[40] suggestions would resolve some existing European challenges, e.g. to ensure access by users with disabilities to emergency services using the single European number 112, to have harmonised frequencies in Europe for assistive wireless solutions, to ensure real time text and sign communication across Member States, and to facilitate the purchasing of accessible goods by public authorities. Possible difficulties in putting existing legislation into practice should be addressed.

The Commission, in its audiovisual policy dialogue, will encourage common or interoperable solutions in the field, for example, of improved access to digital TV programmes. Such common solutions will allow the exploitation of economies of scale.

The "eAccessibility potential" of existing European legislation needs to be fully exploited. The Commission will launch a study[41] in 2005 to identify best practices and establish a dialogue with Member States and key stakeholders through the relevant groups in charge of the implementation of the Directives.

7. CONCLUSIONS AND FOLLOW-UP

This Communication and the results of the online consultation process show and endorse the European Commission's determination to address eAccessibility issues and find solutions that (i) convey to Member States the urgent need to work together towards a consistent approach to e-accessibility; (ii) encourage industry to develop accessible solutions for ICT products and services; (iii) demonstrate to users with disabilities the active commitment to improve accessibility in the Information Society.

During the next two years (2005-2007), the Commission will continue to raise awareness, promote the use of the proposed instruments, gather evidence and continue stakeholder consultation in order to take informed decisions in the eAccessibility domain.

To this effect, the Commission plans a study to begin in the last quarter of 2005 on *"Measuring progress of eAccessibility in Europe"* in order to identify and evaluate policy options aiming at improving eAccessibility in Europe. The initial results of the study will be available in early 2007.

---

individuals with a disability" and "*Public Agencies*" clearly favouring mandatory schemes, while "*Manufacturers, providers or sellers of eAccessibility products & services*" favour voluntary procedures, with the remaining groups standing somewhere in between.

38 See chapter Follow-up and conclusions.

39 Council Directive 2000/78/EC of 27 November 2000 prohibits discrimination of persons with disabilities *inter alia* at work and encompasses reasonable accommodation including ICT.

40 Formed in 2003 and made up of representatives of Member States, Telecoms operators, user organisations and standardisation bodies.

41 See Follow–up and conclusions.

A follow-up that focuses on the eAccessibility situation will be made two years after the publication of this Communication. It will include an evaluation of the outcome of the approaches proposed here, following the principle of Better Regulation[42] and, subject to full impact assessment, the Commission may consider additional measures, including new legislation if deemed necessary. This eAccessibility work will in turn contribute to the already announced 2008 European Initiative on eInclusion[43].

(Notices)

NOTICES FROM EUROPEAN UNION INSTITUTIONS, BODIES, OFFICES AND AGENCIES

COURT OF JUSTICE OF THE EUROPEAN UNION

The following replaces the information note published in OJ 2009 C 297, p. 1, as a consequence of the addition of a new paragraph 25 and the amendment of paragraph 40.

INFORMATION NOTE

on references from national courts for a preliminary ruling

(2011/C 160/01)

I – **General**

1. The preliminary ruling system is a fundamental mechanism of European Union law aimed at enabling national courts to ensure uniform interpretation and application of that law in all the Member States.

2. The Court of Justice of the European Union has jurisdiction to give preliminary rulings on the interpretation of European Union law and on the validity of acts of the institutions, bodies, offices or agencies of the Union. That general jurisdiction is conferred on it by Article 19(3)(b) of the Treaty on European Union (OJEU 2008 C 115, p. 13) ('the TEU') and Article 267 of the Treaty on the Functioning of the European Union (OJEU 2008 C 115, p. 47) ('the TFEU').

3. Article 256(3) TFEU provides that the General Court is to have jurisdiction to hear and determine questions referred for a preliminary ruling under Article 267, in specific areas laid down by the Statute. Since no provisions have been introduced into the Statute in that regard, the Court of Justice alone has jurisdiction to give preliminary rulings.

4. While Article 267 TFEU confers on the Court of Justice a general jurisdiction, a number of provisions exist which lay down exceptions to or restrictions on that jurisdiction. This is true in particular of Articles 275 and 276 TFEU and Article 10 of Protocol (No 36) on Transitional Provisions of the Treaty of Lisbon (OJEU 2008 C 115, p. 322).

5. The preliminary ruling procedure being based on cooperation between the Court of Justice and national courts, it may be helpful, in order to ensure that that cooperation is effective, to provide the national courts with the following information.

6. This practical information, which is in no way binding, is intended to provide guidance to national courts as to whether it is appropriate to make a reference for a preliminary ruling and, should they proceed, to help them formulate and submit questions to the Court.

The role of the Court of Justice in the preliminary ruling procedure

7. Under the preliminary ruling procedure, the Court's role is to give an interpretation of European Union law or to rule on its validity, not to apply that law to the factual situation underlying the main proceedings, which is the task of the national court. It is not for the Court either to decide issues of fact raised in the main proceedings or to resolve differences of opinion on the interpretation or application of rules of national law.

8. In ruling on the interpretation or validity of European Union law, the Court makes every effort to give a reply which will be of assistance in resolving the dispute, but it is for the referring court to draw the appropriate conclusions from that reply, if necessary by disapplying the rule of national law in question.

The decision to submit a question to the Court

The originator of the question

9. Under Article 267 TFEU, any court or tribunal of a Member State, in so far as it is called upon to give a ruling in proceedings intended to arrive at a decision of a judicial nature, may as a rule refer a question to the Court of Justice for a preliminary ruling. [1] Status as a court or tribunal is interpreted by the Court of Justice as a self-standing concept of European Union law.

10. It is for the national court alone to decide whether to refer a question to the Court of Justice for a preliminary ruling, whether or not the parties to the main proceedings have requested it to do so.

References on interpretation

11. Any court or tribunal **may** refer a question to the Court of Justice on the interpretation of a rule of European Union law if it considers it necessary to do so in order to resolve a dispute brought before it.

12. However, courts or tribunals against whose decisions there is no judicial remedy under national law **must, as a rule**, refer such a question to the Court, unless the Court has already ruled on the point (and there is no new context that raises any serious doubt as to whether that case-law may be applied), or unless the correct interpretation of the rule of law in question is obvious.

13. Thus, a court or tribunal against whose decisions there is a judicial remedy may, in particular when it considers that sufficient guidance is given by the case-law of the Court of Justice, itself decide on the correct interpretation of European Union law and its application to the factual situation before it. However, a reference for a preliminary ruling may prove particularly useful, at an appropriate stage of the proceedings, when there is a new question of interpretation of general interest for the uniform application of European Union law in all the Member States, or where the existing case-law does not appear to be applicable to a new set of facts.

14. It is for the national court to explain why the interpretation sought is necessary to enable it to give judgment.

References on determination of validity

15. Although national courts may reject pleas raised before them challenging the validity of acts of an institution, body, office or agency of the Union, the Court of Justice has exclusive jurisdiction to declare such an act invalid.

16. All national courts **must** therefore refer a question to the Court when they have doubts about the validity of such an act, stating the reasons for which they consider that that act may be invalid.

---

[1] Article 10(1) to (3) of Protocol No 36 provides that the powers of the Court of Justice in relation to acts adopted before the entry into force of the Treaty of Lisbon (OJ 2007 C 306, p. 1) under Title VI of the TEU, in the field of police cooperation and judicial cooperation in criminal matters, and which have not since been amended, are, however, to remain the same for a maximum period of five years from the date of entry into force of the Treaty of Lisbon (1 December 2009). During that period, such acts may, therefore, form the subject-matter of a reference for a preliminary ruling only where the order for reference is made by a court of a Member State which has accepted the jurisdiction of the Court of Justice, it being a matter for each State to determine whether the right to refer a question to the Court is to be available to all of its national courts or is to be reserved to the courts of last instance.

17. However, if a national court has serious doubts about the validity of an act of an institution, body, office or agency of the Union on which a national measure is based, it may exceptionally suspend application of that measure temporarily or grant other interim relief with respect to it. It must then refer the question of validity to the Court of Justice, stating the reasons for which it considers the act to be invalid.

The stage at which to submit a question for a preliminary ruling

18. A national court or tribunal may refer a question to the Court for a preliminary ruling as soon as it finds that a ruling on the point or points of interpretation or validity is necessary to enable it to give judgment; it is the national court which is in the best position to decide at what stage of the proceedings such a question should be referred.

19. It is, however, desirable that a decision to seek a preliminary ruling should be taken when the national proceedings have reached a stage at which the national court is able to define the factual and legal context of the question, so that the Court of Justice has available to it all the information necessary to check, where appropriate, that European Union law applies to the main proceedings. It may also be in the interests of justice to refer a question for a preliminary ruling only after both sides have been heard.

The form of the reference for a preliminary ruling

20. The decision by which a national court or tribunal refers a question to the Court of Justice for a preliminary ruling may be in any form allowed by national law as regards procedural steps. It must however be borne in mind that it is that document which serves as the basis of the proceedings before the Court and that it must therefore contain such information as will enable the latter to give a reply which is of assistance to the national court. Moreover, it is only the actual reference for a preliminary ruling which is notified to the interested persons entitled to submit observations to the Court, in particular the Member States and the institutions, and which is translated.

21. Owing to the need to translate the reference, it should be drafted simply, clearly and precisely, avoiding superfluous detail.

22. A maximum of about 10 pages is often sufficient to set out in a proper manner the context of a reference for a preliminary ruling. The order for reference must be succinct but sufficiently complete and must contain all the relevant information to give the Court and the interested persons entitled to submit observations a clear understanding of the factual and legal context of the main proceedings. In particular, the order for reference must:

— include a brief account of the subject-matter of the dispute and the relevant findings of fact, or, at least, set out the factual situation on which the question referred is based;

— set out the tenor of any applicable national provisions and identify, where necessary, the relevant national case-law, giving in each case precise references (for example, a page of an official journal or specific law report, with any internet reference);

— identify the European Union law provisions relevant to the case as accurately as possible;

— explain the reasons which prompted the national court to raise the question of the interpretation or validity of the European Union law provisions, and the relationship between those provisions and the national provisions applicable to the main proceedings;

— include, if need be, a summary of the main relevant arguments of the parties to the main proceedings.

In order to make it easier to read and refer to the document, it is helpful if the different points or paragraphs of the order for reference are numbered.

23. Finally, the referring court may, if it considers itself able, briefly state its view on the answer to be given to the questions referred for a preliminary ruling.

24. The question or questions themselves should appear in a separate and clearly identified section of the order for reference, generally at the beginning or the end. It must be possible to understand them without referring to the statement of the grounds for the reference, which will however provide the necessary background for a proper assessment.

25. Under the preliminary ruling procedure, the Court will, as a rule, use the information contained in the order for reference, including nominative or personal data. It is therefore for the referring court itself, if it considers it necessary, to render anonymous, in the order for reference, one or more persons concerned by the dispute in the main proceedings.

The effects of the reference for a preliminary ruling on the national proceedings

26. A reference for a preliminary ruling calls for the national proceedings to be stayed until the Court of Justice has given its ruling.

27. However, the national court may still order protective measures, particularly in connection with a reference on determination of validity (see point 17 above).

Costs and legal aid

28. Preliminary ruling proceedings before the Court of Justice are free of charge and the Court does not rule on the costs of the parties to the main proceedings; it is for the national court to rule on those costs.

29. If a party has insufficient means and where it is possible under national rules, the national court may grant that party legal aid to cover the costs, including those of lawyers' fees, which it incurs before the Court. The Court itself may also grant legal aid where the party in question is not already in receipt of legal aid under national rules or to the extent to which that aid does not cover, or covers only partly, costs incurred before the Court.

Communication between the national court and the Court of Justice

30. The order for reference and the relevant documents (including, where applicable, the case file or a copy of the case file) are to be sent by the national court directly to the Court of Justice, by registered post (addressed to the Registry of the Court of Justice, L-2925 Luxembourg, telephone + 352-4303-1).

31. The Court Registry will stay in contact with the national court until a ruling is given, and will send it copies of the procedural documents.

32. The Court of Justice will send its ruling to the national court. It would welcome information from the national court on the action taken upon its ruling in the national proceedings and, where appropriate, a copy of the national court's final decision.

II – **The Urgent preliminary ruling procedure (PPU)**

33. This part of the note provides practical information on the urgent preliminary ruling procedure applicable to references relating to the area of freedom, security and justice. The procedure is governed by Article 23a of Protocol (No 3) on the Statute of the Court of Justice of the European Union (OJEU 2008 C 115, p. 210) and Article 104b of the Rules of Procedure of the Court of Justice. National courts may request that this procedure be applied or request the application of the accelerated procedure under the conditions laid down in Article 23a of the Protocol and Article 104a of the Rules of Procedure.

Conditions for the application of the urgent preliminary ruling procedure

34. The urgent preliminary ruling procedure is applicable only in the areas covered by Title V of Part Three of the TFEU, which relates to the area of freedom, security and justice.

35. The Court of Justice decides whether this procedure is to be applied. Such a decision is generally taken only on a reasoned request from the referring court. Exceptionally, the Court may decide of its own motion to deal with a reference under the urgent preliminary ruling procedure, where that appears to be required.

36. The urgent preliminary ruling procedure simplifies the various stages of the proceedings before the Court, but its application entails significant constraints for the Court and for the parties and other interested persons participating in the procedure, particularly the Member States.

37. It should therefore be requested only where it is absolutely necessary for the Court to give its ruling on the reference as quickly as possible. Although it is not possible to provide an exhaustive list of such situations, particularly because of the varied and evolving nature of the rules of European Union law governing the area of freedom, security and justice, a national court or tribunal might, for example, consider submitting a request for the urgent preliminary ruling procedure to be applied in the following situations: in the case, referred to in the fourth paragraph of Article 267 TFEU, of a person in custody or deprived of his liberty, where the answer to the question raised is decisive as to the assessment of that person's legal situation or, in proceedings concerning parental authority or custody of children, where the identity of the court having jurisdiction under European Union law depends on the answer to the question referred for a preliminary ruling.

The request for application of the urgent preliminary ruling procedure

38. To enable the Court to decide quickly whether the urgent preliminary ruling procedure should be applied, the request must set out the matters of fact and law which establish the urgency and, in particular, the risks involved in following the normal preliminary ruling procedure.

39. In so far as it is able to do so, the referring court should briefly state its view on the answer to be given to the question(s) referred. Such a statement makes it easier for the parties and other interested persons participating in the procedure to define their positions and facilitates the Court's decision, thereby contributing to the rapidity of the procedure.

40. The request for the urgent preliminary ruling procedure must be submitted in an unambiguous form that enables the Court Registry to establish immediately that the file must be dealt with in a particular way. Accordingly, the referring court is asked to couple its request with a mention of Article 104b of the Rules of Procedure and to include that mention in a clearly identifiable place in its reference (for example at the head of the page or in a separate judicial document). Where appropriate, a covering letter from the referring court can usefully refer to that request.

41. As regards the order for reference itself, it is particularly important that it should be succinct where the matter is urgent, as this will help to ensure the rapidity of the procedure.

Communication between the Court of Justice, the national court and the parties

42. As regards communication with the national court or tribunal and the parties before it, national courts or tribunals which submit a request for an urgent preliminary ruling procedure are requested to state the e-mail address or any fax number which may be used by the Court of Justice, together with the e-mail addresses or any fax numbers of the representatives of the parties to the proceedings.

43. A copy of the signed order for reference together with a request for the urgent preliminary ruling procedure can initially be sent to the Court by e-mail (ECJ-Registry@curia.europa.eu) or by fax (+352 43 37 66). Processing of the reference and of the request can then begin upon receipt of the e-mailed or faxed copy. The originals of those documents must, however, be sent to the Court Registry as soon as possible.

Neutral Citation 2012 [IEHC] 491

THE HIGH COURT
[2011 No. 9548P]

BETWEEN

M.X. [APUM]
PLAINTIFF
AND
HEALTH SERVICE EXECUTIVE

DEFENDANT
AND
BY ORDER

THE ATTORNEY GENERAL

NOTICE PARTY
AND
IRISH HUMAN RIGHTS COMMISSION

AMICUS CURIAE

JUDGMENT of Mr. Justice John MacMenamin delivered on Friday, the 23rd day of November, 2012

1. The unfortunate factual background to the proceedings to date has already been set out in a previous judgment in this matter, namely, HSE v X. [APUM] [2011] IEHC 326. Since that time, new proceedings have been initiated on behalf of the plaintiff, M.X. (hereinafter referred to as "X"). On her behalf, her counsel seeks to challenge a number of aspects of the procedure which have been adopted in her care regime. It is now claimed that the medical decisions, made in the context of her incapacity by reason of treatment-resistant paranoid schizophrenia, fail to have regard to her equal rights before the law as a citizen; and that she should be entitled to have the decision that she lacks capacity to decide whether or not to receive treatment subject to an independent review, ideally by an independent tribunal or court. While not fully alluded to in the pleadings, it is claimed that she is entitled to have the medical options concerning her treatment made on an "assisted decision-making" basis, which would give proper weight to her own wishes as to that treatment. It is contended that the plaintiff is being treated under s. 57 of the Mental Health Act 2001 ("the Act"), and that this provision is repugnant to the Constitution, incompatible with the European Convention on Human Rights ("ECHR"), and also fails to have due regard for the provisions of the United Nations

Convention on the Rights of Persons with Disabilities ("UNCRPD"). The Attorney General and the Irish Human Rights Commission have been joined as notice parties to the proceedings. As this judgment outlines, the law in this area is evolving, and this case must be decided on its very unusual, if not unique, facts. It is essential to bear in mind the nature of the treatment being administered against the plaintiff's will. It involves the regular administration of the drug Clozapine, together with the necessary involuntary abstraction by a syringe of blood samples from the plaintiff's veins. This is itself an invasion of the plaintiff's bodily integrity – a constitutionally protected right.

Issues to be considered

2. This judgment, first, considers how the plaintiff's assessment was carried out in the context of the Act of 2001, and in particular the precise provisions of that Statute which are applicable.

3. Second, in cases like the present, where challenges are brought to the constitutionality of legislation, and declarations as to the incompatibility of legislation with the European Convention on Human Rights are also sought, the sequencing approach which a court should follow has been set out in a number of decisions of the Supreme Court. The guiding principle regarding determinations of constitutionality was set out by Henchy J. in The State (Woods) v. Attorney General [1969] I.R. 385 at p. 400 where he stated "… that a court should not enter upon a question of constitutionality unless it is necessary for the determination of the case before it". Similarly, in Murphy v. Roche [1987] I.R. 106, Finlay C.J. stated at p. 110:-

"… where the issues between the parties can be determined and finally disposed of by the resolution of an issue of law other than constitutional law, the Court should proceed to determine that issue first and, if it determines the case, should refrain from expressing any view on the constitutional issue that may have been raised."

Therefore, a court must initially seek to resolve an issue by a means other than through constitutional reference. Here, counsel for the plaintiff contends, in a novel argument, that the UNCRPD is directly applicable within this jurisdiction, by virtue of the fact that the European Union is a signatory to that Convention. As will be explained later, the Court is not of the view that this Convention has direct effect in this jurisdiction at this time. That is not to say however that the provisions of that Convention are entirely immaterial, however.

4. Therefore, it will then be necessary to consider the other aspects of the plaintiff's claim, namely that the impugned provisions are unconstitutional, and/or incompatible with the ECHR. In accordance with the judgment in Carmody v. Minister for Justice [2010] 1 I.R. 635, this judgment will first assess questions of constitutionality before turning to consider the compatibility of the legislation with the ECHR. At p. 650 of Carmody, Murray C.J. pointed out:-

"… when a party makes a claim that an Act or any of its provisions is invalid for being repugnant to the Constitution and at the same time makes an application for a declaration of incompatibility of such Act or some of its provisions with the State's obligations under the Convention, the issue of constitutionality must first be decided.

If a court concludes that the statutory provisions in issue are incompatible with the Constitution and such a finding will resolve the issues between the parties as regards all the statutory provisions impugned, then that is the remedy which the Constitution envisages the party should have. Any such declaration means that the provisions in question are invalid and do not have the force of law. The question of a declaration pursuant to s. 5 concerning such provisions cannot then arise. If, in such a case, a court decides that the statutory provisions impugned are not inconsistent with the Constitution then it is open to the court to consider the application for a declaration pursuant to s. 5 if the provisions of the section including the absence of any other legal remedy, are otherwise met."

5. As will be explained, the Court does not conclude that any of the statutory provisions impugned are inconsistent with the Constitution. The conclusion is, rather, that procedures which have been adopted in purported compliance with s. 60 of the Act of 2001 are to be applied in a constitutional manner, which process, in this specific category of cases, involves a right to independent review and assisted (rather than substituted) decision making. The incursion into the plaintiff's constitutional rights is very significant. It involves medical treatment against her will. The conclusion is that it is only in this manner can the rights of the plaintiff under the Constitution be vindicated "as far as practicable" (Article 40.3 of the Constitution). I do not think such vindication can take place unless the steps outlined here are an integral part of the process and, allow for remedies commensurate with the protection of rights. To decide whether the plaintiff is entitled on a mandatory basis to an independent tribunal or court to determine the issues as to her treatment, and in light of the connections between rights identified in the Charter of Fundamental Rights in European Union jurisprudence and the ECHR, it will then be necessary to outline some current jurisprudence of the Strasbourg Court. The judgment follows the following sequence therefore. Having outlined the statute law and the evidence, it asks first can the issues be decided and finally disposed of by an issue of law other than constitutional law (section 1) (see The State (Woods) v. Attorney General and Murphy v. Roche). This question is answered in the negative. Section 2 addresses the constitutional issues (see Carmody). Section 3 addresses whether the plaintiff is entitled to a declaration regarding an independent tribunal or court under s. 5 of the European Convention of Human Rights Act 2003, in the absence of any other legal remedy.

6. Finally, the judgment addresses the issue of the plaintiff's locus standi (section 4). While parts of this judgment may overlap with the earlier judgment relating to the same plaintiff, for completeness it is necessary to outline certain of the statutory provisions in detail.

The provisions of the Mental Health Act 2001

7. Section 2 of the Act provides:-

"2(1) In this Act, save where the context otherwise requires— …
'treatment', in relation to a patient, includes the administration of physical, psychological and other remedies relating to the care and rehabilitation of a

patient under medical supervision, intended for the purposes of ameliorating a mental disorder;"

…

Section 4 provides:-

"4(1) In making a decision under this Act concerning the care or treatment of a person (including a decision to make an admission order in relation to a person), the best interests of the person shall be the principal consideration with due regard being given to the interests of other persons who may be at risk of serious harm if the decision is not made.

(2) Where it is proposed to make a recommendation or an admission order in respect of a person, or to administer treatment to a person, under this Act, the person shall, so far as is reasonably practicable, be notified of the proposal and be entitled to make representations in relation to it and before deciding the matter due consideration shall be given to any representations duly made under this subsection.

(3) In making a decision under this Act concerning the care or treatment of a person (including a decision to make an admission order in relation to a person) due regard shall be given to the need to respect the right of the person to dignity, bodily integrity, privacy and autonomy."

Part 4 of the Act deals with the question of consent to treatment. For present purposes ss. 56-60 must be read together. They provide as follows:-

"56. In this Part 'consent', in relation to a patient, means consent obtained freely without threats or inducements, where—
(a) the consultant psychiatrist responsible for the care and treatment of the patient is satisfied that the patient is capable of understanding the nature, purpose and likely effects of the proposed treatment; and

(b) the consultant psychiatrist has given the patient adequate information, in a form and language that the patient can understand, on the nature, purpose and likely effects of the proposed treatment."

Section 57 of the Act provides:

"57(1) The consent of a patient shall be required for treatment except where, in the opinion of the consultant psychiatrist responsible for the care and treatment of the patient, the treatment is necessary to safeguard the life of the patient, to restore his or her health, to alleviate his or her condition, or to relieve his or her suffering, and by reason of his or her mental disorder the patient concerned is incapable of giving such consent.

(2) This section shall not apply to the treatment specified in sections 58, 59 or 60."

8. It is important to point out, therefore, that s. 57 does not apply in relation to forms of treatment specified in s. 60. The latter section deals with a position where it is necessary to administer medicine for a continuous period of three months. The evidence now clearly establishes that the treatment regime adopted in the case of the plaintiff is that identified in s. 60, and, contrary to what is asserted on behalf of the plaintiff, not under s. 57 of the Act. Sections 58 and 59 of the Act are not relevant. However, s. 60 provides:-
"60. Where medicine has been administered to a patient for the purposes of ameliorating his or her mental disorder for a continuous period of 3 months, the administration of that medicine shall not be continued unless either—
(a) the patient gives his or her consent in writing to the continued administration of that medicine, or

(b) where the patient is unable or unwilling to give such consent—

(i) the continued administration of that medicine is approved by the consultant psychiatrist responsible for the care and treatment of the patient, and
(ii) the continued administration of that medicine is authorised (in a form specified by the Commission) by another consultant psychiatrist following referral of the matter to him or her by the first-mentioned psychiatrist,

and the consent, or as the case may be, approval and authorisation shall be valid for a period of 3 months and thereafter for periods of 3 months, if, in respect of each period, the like consent or, as the case may be, approval and authorisation is obtained."
9. During the four day hearing, a number of witnesses testified regarding the treatment regime. I would emphasise that all the evidence indicates that the greatest care has been taken by each of the practitioners involved in the plaintiff's care in a unique and very difficult situation.
The evidence on capacity

Dr. Paul O'Connell
10. Dr. Paul O'Connell is employed as Consultant Forensic Psychiatrist in the Central Mental Hospital. Earlier in the case, he set out the nature of his first involvement in the provision of care to the plaintiff. He is the primary treating psychiatrist responsible for her care. He gave a detailed account of the course of her treatment, along with her medical and forensic history dating from 2007.

11. The plaintiff's diagnosis is one of treatment resistant paranoid schizophrenia, the salient symptoms of which include auditory hallucinations, which take the form of mocking voices, which are at different times attributed to members of the staff or laughter of small children. Associated with these hallucinations, the plaintiff has reported the delusional belief that she has been

controlled by the voices or, more often, by members of staff. When acutely psychotic, the plaintiff admits to urges to assault or kill members of staff. At times, she exhibits various behaviours including agitated pacing, facial expression of excitement and fixed staring at those she believes are mocking her. At such times she has made efforts to, and has assaulted, members of staff. As was pointed out earlier, prior to being placed in the Central Mental Hospital, she harboured urges to harm, or even to kill small children.

12. In the course of the hearing of these proceedings, Dr. O'Connell gave further testimony on the question of capacity. He was satisfied, as the treating consultant that the plaintiff was not capable of fully understanding the nature, purpose and likely risks of the proposed treatment. He concluded the plaintiff's understanding was made up of different components. His clinical view has remained consistently, that the plaintiff could not form a balanced judgment in relation to the treatment being afforded to her. She saw both the staff and himself as a threat to her. She was delusional, and while she would not admit to hallucinating, he was of the strong clinical conclusion that she was hallucinating. He was also of the firm clinical opinion that the plaintiff lacked capacity because of her mental disorder and therefore was, to quote him, "unable to consent to, or refuse, either the administration of anti-psychotic medication, or the ancillary and necessary blood tests associated with that treatment course".

13. The witness went on to conclude that the plaintiff's illness has the effect of impairing her reasoning, emotional regulation, and judgment. Although she is able to register and retain information with respect to her care and treatment, she remains unable to exercise her judgment in coming to a balanced decision about that treatment, insofar as she lacks insight and fails to appreciate the nature of her mental illness and the need to receive treatment. She fails to appreciate that her illness, if untreated, would represent a serious and immediate risk to herself and others, and would inevitably deteriorate, exacerbating that risk.

Professor Harry Kennedy

14. Professor Harry Kennedy, Consultant Forensic Psychiatrist and Executive Clinical Director of the National Mental Health Service at the Central Mental Hospital testified that his function was as leader of the team of psychiatrists working in the hospital. He described his responsibility for clinical governance and for the planning of modernised services. He testified that when ill, the plaintiff has homicidal preoccupations which focus particularly on children, or on the children of those who come into contact with her. He said that the plaintiff loses insight, and her capacity to give or withhold consent to treatment, is at its lowest. He, too, testified that when the plaintiff became agitated, she attacked doctors and nurses causing significant injuries. On such occasions, it was necessary that she be secluded for her own safety, and that of others. At times, this seclusion has had to be for prolonged periods which have been monitored by the Mental Health Commission Inspectorate of Mental Health Services.

15. Professor Kennedy pointed out, importantly, that capacity can fluctuate, and that many patients in the hospital experience differing levels of capacity at different times. He considered that it would be profoundly wrong to assume that all patients in the hospital lack capacity. Where a patient has capacity, they are encouraged to take their full role in the therapeutic decision making regarding their care and treatment. Professor Kennedy has a particular professional interest in this issue. He has led a research team that has published learned articles on the assessment of mental capacity to consent to treatment, and that subject forms part of his teaching responsibilities. He too, was of the strong professional opinion that the plaintiff lacked capacity to give or withhold consent to treatment. She does not understand the information about her mental health and the treatment options, lacks the ability to reason about these options, and is unable to compare such choices. She is unable to reason about the possible or potential side effects or consequences of the treatment. He testified that she is unable to appreciate the importance of information about mental health and mental illness for herself. She does not believe information because of her paranoia, her delusions, and her impaired capacity to reflect on her situation.

16. Professor Kennedy highlighted a number of the procedural safeguards in place in the Central Mental Hospital. All patients in the hospital are subjected to regular multi-disciplinary review. A treating doctor in a situation such as this does not act alone. He pointed out that there is in being, a process of obtaining second opinions from a consultant psychiatrist who is not attached to the hospital. This is not unique to this case but is rather a consistent feature of treatment in the hospital since the commencement of the Act of 2001.

17. The witness took issue with a typification of the treatment regime as being one "imposed against the plaintiff's will". He stated that, rather, treatment is provided in the absence of her capacity to make decisions, and subject always to independent review and safeguards. Second, he testified that it was the plaintiff's illness, and not the views of her treating doctors, that deprived her of the ability to consent to, or refuse treatment. Every effort is made to engage a patient in the decision-making process. If, and when, a patient such as the plaintiff regained sufficient mental capacity, she will then be again empowered to make decisions regarding her treatment including the then regained ability to give or withhold consent. Professor Kennedy also expressed the view that the UNCRPD, to which reference was made earlier, did not contain any explicit condemnation of "paternalism", which he summarised as being an ethical principle of protecting the best interests of vulnerable persons and which, he claimed, was not in conflict with a rights based respect for disabled people as persons. This part of the testimony is particularly relevant, and I will return to it later.

18. The witness took issue with a contention that disability was seen through medical criteria as a deviation from the norm which he characterised as a polemic "straw man". He distinguished between "disability" (not an inherently

medical categorisation being a qualitative term defining status in society before the law), and, on the other hand, medical measurements of impairment due to disorder which are quantitative. The former "qualitative" approach is inherently more reductive, and hence lends itself to ease of definition and legal convenience; as opposed to the latter quantitative medical approach which recognises degrees of impaired and restored mental capacity. He entirely rejected any suggestion that the plaintiff had been subjected to inhuman or degrading treatment. In fairness, it must be pointed out that any such suggestion was withdrawn by the plaintiff's legal advisers. Professor Kennedy's view was that it was the plaintiff's own lack of capacity which constituted an infringement on her rights and rendered her unable to exercise those rights. He described it as unhelpful and damaging to therapeutic relationships to imply that a "finding" by psychiatrists, rather than the absence of capacity of itself, was what was important.

Dr. Ian Bownes

19. It is important here to re-emphasise that the defendant, (the HSE), assisted in the retention of an independent psychiatrist to testify on behalf of the plaintiff. Dr. Ian Bownes is a Consultant Forensic Psychiatrist with the South Eastern Health and Social Trust in Northern Ireland. He is a Forensic Psychiatrist with the Northern Ireland Prison Service. His report was furnished to the Court and admitted in evidence. He examined the plaintiff on behalf of her solicitors, and presented a report to the court with his assessment of her condition. That assessment is largely, if not entirely corroborative of the views of Dr. O'Connell and Professor Kennedy.

Dr. Brendan Kelly's evidence – the "Form 17" procedure

20. Dr. Brendan Kelly is a Consultant Psychiatrist at the Mater Misericordiae University Hospital and Senior Lecturer in Psychiatry at University College, Dublin. He was retained by the HSE on a national panel of consultants who are in a position to carry out assessments for the purposes of s. 60 of the Act of 2001. He explained that the function of the independent psychiatrist, carrying out a s. 60 assessment, is to exercise a fully independent clinical judgment in appraising the situation. He noted that, in the past, he had had occasion to disagree with responsible consultant psychiatrists, and had no difficulty in so doing. On a number of occasions in this case, Dr. Kelly completed the Mental Health Commission forms recording his decisions pursuant to s. 60 authorising the continued administration of medicine without consent to the plaintiff. These forms are referred to as "Form 17".

21. In evidence, Dr. Kelly described the number of occasions when he carried out examinations in pursuance of the Form 17 procedure. He described the structure of such an examination as follows. First, the clinician considers whether a patient suffers from a mental disorder as understood in the 2001 Act. Second, that clinician considers the question of capacity and insight. This includes a consideration of whether the patient has any understanding of his or her illness, (including whether they accept that they are in fact ill), the proposed treatment, and the purposes of that treatment. Third, if the patient has capacity or is found to so have, the question of whether the patient is willing to undergo the treatment is next considered. Fourth, the proposed medication regime is

considered, and particularly, whether it will likely benefit the patient. Finally, the clinician records his notes in writing in accordance with the structured mental state examination structure. In doing so he summarises the key issues, before forming a view on the entire examination which is then reflected on the completed Form 17, which is checked and then signed.

22. Dr. Kelly was satisfied that each time he was requested to authorise the continuance of medication to the plaintiff without her consent, he carried out an independent examination and assessment, and concluded that, first, the plaintiff was unable to consent to treatment, and second, that she would benefit from the continuation of the treatment with the medication in question. He had examined the plaintiff on at least six occasions between November 2010 and December 2011. Finally, he agreed with an analysis of the plaintiff's doctors regarding the taking of blood samples in conjunction with the administration of the anti-psychotic medication in question, and noted that, to date, and to the best of his knowledge, nobody in the State had died from Agranulocytosis resulting from the administration of Clozapine following the introduction of a mandatory blood testing requirement.

Findings on the section 60 procedure

23. I am satisfied that each of the doctors faithfully complied with the procedure laid down under Form 17, which, itself, forms part of treatment under section 60. The evidence established conclusively that the situation which existed is not one where the treatment regime was being administered under s. 57 which, among other areas, deals with treatment which is required urgently to safeguard a patient's life or to restore him or her to health. Section 57 treatment arises when the patient is "incapable" of giving consent. The evidence clearly establishes that here the medicine has been, to use the terms deployed in s. 60 of the Act, "administered to a patient for the purposes of ameliorating … her mental disorder for a continuous period of 3 months" and where "the patient is unable or unwilling to give consent".

24. Some idea of the extent of the difficulty in this case can be derived from Dr. Bownes reports, where he described visiting X on a number of occasions. On those occasions her mood fluctuated. On the first occasion, she was pacing backwards and forwards, muttering to herself relentlessly for the duration of the interview. She became increasingly agitated on questioning, and her narrative became tangential, poorly structured, contradictory and internally inconsistent.

25. On a later visit, on 26th February, 2012 the plaintiff welcomed him warmly with a handshake using his correct name and recalled the previous examination. She was able to sit at peace during the session. Nevertheless, during the course of the interview, her mood became increasingly low, irritable, and perplexed, and she evinced extraordinarily hostile and homicidal attitudes towards her doctors. She felt that her doctors were poisoning her, and were administering her medication which was in some sense being kept a secret from her. She also showed suicidal ideation, and stated that she would kill herself "at the first opportunity". She stated that her family never visited her, but that her

children were well looked after and there was now no need for her to stay alive. It is difficult, therefore, to exaggerate the extremely tragic nature of the plaintiff's illness.

26. Section 60 of the Act addresses the limited circumstances in which a finding of incapacity takes place. It requires that two decisions be made, the first on the appropriateness of the medicine proposed, and the second on the issue of consent by the responsible consultant. These decisions must then be approved by the independent consultant psychiatrist before the treatment can be authorised. All this was done in the plaintiff's case. The case, insofar as it relates to a challenge to the constitutionality of s. 57 of the Act is unsustainable. I am unable to conclude that the provisions of s. 57(1) are engaged at all. Moreover, I think it would be inconsistent with the earlier judgment in these proceedings to adopt anything but a broad and purposive approach to the concept of "treatment". As such, any treatment which is ancillary to principal "treatment" administered pursuant to s. 60 of the Act must benefit from the same protections and prescriptions as that principal treatment. This does not absolve the Court from a consideration of the issues arising from the treatment regime however.

The procedural safeguards under s. 60 of the Act

27. The focus of analysis in this judgment must be confined to the terms of s. 60 on the administration of medicine and the safeguards identified in that section. This is not a case where there is a dispute in relation to the correctness of the treatment. It is clear that the responsible treating consultant psychiatrist, and the independent consultant, Dr. Kelly, at an early stage clinically assessed the plaintiff's capacity to consent to the proposed treatment as part of their respective functions. Dr Bownes agreed with this diagnosis and proposed treatment.

Matters not addressed in Form 17

28. It is important also to emphasise, however, that the contents of Form 17 are set out in what might be termed "box" form. After a description of the patient, her location, the treating psychiatrist, the medication intended, and how it will benefit the patient, the form simply sets out options for the independent consultant to identify whether the patient is unable or unwilling to give consent to the treatment. Dr. Kelly indicated that the plaintiff was unable to give such consent. The form, thereafter, identifies the name of the independent consultant psychiatrist and how the details of the treatment will benefit the patient. However, it goes no further. The form does not address the patient's views at all. This has consequences which are addressed later in the judgment. I now turn to consider whether the UNCRPD is directly effective in the State.

Section 1 – Can the issues be decided and finally disposed of by an issue of law other than constitutional law?

The United Nations Convention on the Rights of Persons with Disabilities

29. The European Union acceded to the UNCRPD through Council Decision 2010/48/EC, formally adopted on 26 November, 2009. The instrument of ratification on behalf of the EU was then deposited in December 2010. This was

the first occasion that the EU became a party to an international human rights treaty, and that an intergovernmental organization had joined with a United Nations human rights treaty. Although a signatory to the UNCRPD, Ireland has not, as yet, itself ratified the Convention.

30. The Convention specifies rights and obligations with regard to persons with disabilities. Of particular relevance to the present case are Articles 12(1) and (2) which provide:

"1. States Parties reaffirm that persons with disabilities have the right to recognition everywhere as persons before the law.
2. States Parties shall recognize that persons with disabilities enjoy legal capacity on an equal basis with others in all aspects of life."

It is right to say that the values enunciated in the Convention constitute a "paradigm-shift" in the manner in which persons with disabilities are to be treated by, and before, the law. However, the Convention, in its preamble, also acknowledges the diversity of persons with disabilities. Therefore, in considering the applicability and the interpretation of the Convention, due regard must be had to the individual circumstances of each individual. What is the legal status of the Convention within the State?

31. Article 300(7) of the Treaty for the Establishment of the European Community ("TEC") provides that international treaties, once concluded by the EU, are binding on European institutions and Member States, provided that they relate to areas of EU competence. The European Court of Justice ("ECJ") has adopted a "monist" approach to international agreements, whereby such agreements have legal effect without the requirement for further active implementation (see the decision in Haegemen v. Belgium [1974] E.C.R. 449). Under certain conditions, international agreements can, in principle, be invoked before a national court by an individual, if there is direct effect (see Demirel v. Stadt Schwabish Gmund [1987] ECR I-3719). In order for there to be such effect, the provisions sought to be relied on must be clear, precise and unconditional. It is argued that the terms of Article 12 come within these criteria.
32. Counsel for the plaintiff contends that the main objective of the UNCRPD is the equal treatment of, and the prohibition of discrimination against, disabled persons. It is important to the argument now made, to state that it is the plaintiff's contention that this area is also covered in 'large measure' by Community law – for example, Directive 2000/43/EC, which governs non-discrimination on the grounds of ethnic origin; Directive 2000/78/EC, which establishes a general framework for equal treatment in employment and occupation; Directive 2002/73/EC, which governs the equal treatment of men and women in the employment sphere; and Directive 97/80/EC, which governs matters of proof in sexual discrimination cases. The plaintiff argues that as a Member State of the European Union, Irish law must give force to Article 12 as part of their obligations under the EU's legal order.

33. Two questions arise from these contentions. First, this Court must consider whether the principles set out in the UNCRPD, despite Ireland's non-ratification, have the force of law in this jurisdiction. In order to establish her case, the plaintiff would be required to establish (a) that the relevant provision of the UNCRPD falls within a community competence which had been exercised to a "large degree" or was an "integral part of Community law"; and, also, (b) that the provision sought to be enforced is sufficiently clear, concise and unconditional as to be capable of itself directly regulating the legal position of individuals. Alternatively, the Court is asked to consider whether the UNCRPD is a "guiding instrument" in respect of the interpretation of the plaintiff's constitutional rights, or her rights under the European Convention of Human Rights.

(a) Community competence

34. The UNCRPD is a mixed international agreement where the EU, its member states, and other third party states are contracting parties. As a mixed agreement, the UNCRPD does, in fact, cover fields that, in part, fall within the competence of the EU; in part within the competence of member states; and in part within the shared competence of the EU and its member states. This issue will be explained in greater detail later. However, it is not the case that, once the EU ratifies an international convention, its subject matter automatically falls within its competence, and is thus directly enforceable in its member states. Nor is such convention enforceable simply by virtue of the fact that the EU has legislated in some of the areas which the Convention addresses.

35. Member states, when participating in mixed agreements, are subject to a duty of loyal cooperation between one another and the EU, deriving from Article 4(3) of the TFEU. This duty of loyal co-operation embraces two sets of obligations. First, member states must take appropriate measures, whether general or particular, to ensure fulfilment of the obligations arising out of the TFEU, or resulting from action taken by EU institutions. Second, member states must facilitate the achievement of the EU's tasks, and abstain from any measures which could jeopardise the attainment of the objectives of the TFEU.

36. The plaintiff relies on principles enunciated in Commission v. France [2004] E.C.R. I-09352, in which the issue was whether France, in failing to take all appropriate measures to prevent, abate and combat heavy pollution of the lagoon area known as the Étang de Berre, had breached its obligations under Articles 4(1) and 8 of the Convention for the Protection of the Mediterranean Sea Against Pollution and its Protocol, which had been signed and approved on behalf of the European Economic Community by two Council Decisions. The European Court of Justice held that the fact that there had been no EEC legislation covering the nature of the breach committed by France did not release that state from its obligations under the Convention. The breach fell within Community law, because the Convention and Protocol was a mixed agreement in a field in "a large measure covered by Community law". Thus, in such cases, there was "a Community interest in compliance by both the Community and its Member States with commitments entered into". Therefore, a member state must implement such a mixed agreement, provided the

measure to be implemented falls within the competence of the EU, either by way of being covered by Community legislation, or, where the particular issue was "covered in large measure" by Community legislation.

37. At Article 44(1), the UNCRPD requires regional integration organisations such as the EU, who accede to the Convention to declare the extent of their competence in their instruments of formal confirmation or accession. The Council Decision sets out the legal basis under the Treaties by which the EU has ratified the UNCRPD, and also lists EU instruments that demonstrate its competence. The Council Decision also provided that the extent of the EU's competence must be assessed by reference to the precise provisions of each measure, and in particular, the extent to which the provisions establish common rules. The Decision goes on to say that the scope and the exercise of EU competence are subject to continuous development, and that the EU will complete or amend its declaration, if necessary in accordance with Article 44(1) of the UNCRPD. It is thus possible to identify which areas of the UNCPRD fall under EU competence, and which do not.

38. Despite a Commission proposal to use a number of legal bases (Articles 13, 26, 47(2), 55, 71(1), 80(2), 89, 93, 95 and 285 EC in conjunction with Article 300(2), and the first subparagraph of Article 300(3) EC), in fact the Council selected only two substantive legal bases, namely Article 13 and Article 95 EC, in conjunction with the (procedural) provisions of Article 300(2) EC and Article 300(3) EC, as authorising the EU to conclude the UNCRPD. This has some legal significance, in that the ECJ has ruled that the legal basis cited gives an indication to the other contracting parties of the extent of EU competence, and the division of competence between the EU and its member states (see Commission v. Council [2006] E.C.R I-00001). However, although the choice of legal basis for the decision is of some significance, it is not decisive for implementation, as the ECJ has also held that it is not necessary for the same provisions to be used as the legal basis for the adoption of the measures intended to implement the agreement at Community level (see Commission v. Parliament [2006] E.C.R. I-00107).

39. The Court has been referred to a report compiled by the European Foundation Centre in response to a request by the European Commission in 2010 to carry out a study in relation to the implementation of the UNCRPD. The aim of the study was to analyse in detail the obligations set out there, and to gather information about the various practices relating to the implementation of the Convention by the EU and its member states. This study was designed to support the objectives of the current EU Disability Acton Plan; which, too, emphasised full participation and equal opportunities for all people with disabilities, and which was intended to contribute to the preparation of the new EU Disability Strategy, based more explicitly on the UNCRPD. The project team carrying out the study included a wide range of experts in the field of disability law and policy, including many persons who took part in the negotiations of the UNCRPD, and who made submissions to the ad hoc committee of the UNCRPD as to the drafting of the Convention. This report has

been admitted into the case without any dispute. I am prepared, therefore, to admit it as being a useful reference work and as an aid to interpretation. The plaintiff's submissions face an immediate difficulty here.

40. In a table provided therein at p. 40, the Article in question here, Article 12 is stated to fall solely within the competence of Member States. It is not within EU competence, or the shared competence of the EU and Member States.

41. The report also notes that before the Council Decision issued, the High Level Group on Disability (HLGD), in its first report on UNCRPD, identified nine areas of interest for the EU, considering both the EU, and its member states, with regard to implementation. These areas included legal capacity under Article 12. The Report points out that some of the matters addressed by the HLGD were beyond the EU competence to act. Notwithstanding this, in 2008, member states confirmed that collaboration at European level would be of added value in implementing the UNCRPD, and that the EU would become the "platform" to facilitate this collaboration. However, the only clear inference from this is that, as matters stand, Article 12 lies outside the EU competence. The Report also points out that some member states expressed reservations in relation to Article 12.

42. By way of distinction, the ECJ recent addressed the direct applicability of international agreements in Lesoochranarske Zoskupenie, C-240/09, 8th March 2011, where the issue at stake was Article 9(3) of the Aarhus Convention dealing with access to administrative or judicial procedures. There, the ECJ specifically held that the objective of the Aarhus Convention was consistent with the objectives of the Community's environmental policy listed in Article 174 of the EC Treaty. This was found to be an area in which the Community did share competence with its member states, and where a comprehensive body of legislation was evolving and contributing to the achievement of the objective of the Convention, not only by its institutions, but also by public bodies within its member states.

43. As matters stand, however, the same cannot be said of the law relating to mental capacity, an area in which to date, the EU has not assumed any large or appreciable jurisdiction. Furthermore, the measures to which the plaintiff referred, do not support the assertion that, at present, the EU has legislated or exercised a large degree of competence in the matters governed by Article 12. I am not convinced that Directive 2000/43/EC, Directive 2002/73/EC, nor Directive 97/80/EC are, in the relevant particulars, comparable to the questions of legal capacity, or to the detention and treatment of persons in the category of the plaintiff. I must accept the submission made on behalf of the Attorney General that the Commission v. France case is distinguishable as that case concerned a shared competence between the EU and member states.

44. There being no such competence here, I must conclude, therefore, that as the law stands, the plaintiff's argument on this point cannot succeed.

(b) Direct applicability

45. The question also arises as to whether Article 12 is capable of being directly applicable. It is contended on behalf of the Attorney General that the Article constitutes a "principle not a rule" and is dependent on subsequent measures to identify a particular manner in which the principle may be respected. It is not necessary for this Court to express a view on this point. For the reasons outlined earlier, the court does not consider that the UNCRPD can, as yet, be seen as a rule in the interpretation of an application of EHCR jurisprudence or, through that avenue, to E.U. rights law. This does not, however, prevent the UNCRPD being a guiding principle in the identification of standards of care and review of persons in this category.

46. As matters stand, the realm of EU law has not yet extended to the area of mental health law, nor to the issue of legal capacity. However, the rights of equal treatment and non-discrimination are core values in the EU legal order. As far as the present case goes, it has not been shown the right to equal treatment, as enshrined in the UNCRPD, is presently part of the EU's legal order such that Article 12 UNCRPD creates directly enforceable rights or obligations.

47. The law in this area is evolving, both in the legislative and judicial realm. It is of interest that a recent judgment, R. (on the application of NM) v. the London Borough of Islington and Northamptonshire County Council and Others [2012] EWHC 414, Sales J. observed at para. 102 that:-

"In principle, a point might be reached when the [UN]CPRD has been ratified by sufficient European states, or when sufficient European states have brought their domestic law and practice into line with the standards set out in the CPRD, that the CPRD or the practice flowing from it could be taken to amount to a relevant European consensus to inform the interpretation and application of the Convention rights. Also, though the position is less clear, a point might be reached where the CPRD is taken to be a leading international instrument establishing an appropriate standard against which to judge the conduct of member states of the Council of Europe, as in relation to other international instruments…"

48. However, that judge expressed reservations as to whether the Convention has yet acquired this significance for the purposes of interpretation in light of the significant number of member states which have yet to ratify it. Sales J. observed that none of the Strasbourg authorities cited to him in that case went as far as to say that an individual could, in substance, rely on the provisions of UNCRPD under the guise of relying on ECHR rights. If the rights asserted here are not to be found in EU law which is directly effective in the State, can they be found elsewhere and if so, precisely which rights?

Section 2 – Decision as to the constitutionality of the impugned provisions

Constitutional requirements

49. What are the applicable constitutional and legal principles? The facts of the present case from two legal authorities where the question of consent has been very comprehensively considered. These were Fitzpatrick & Anor. v. K. [2009] 2 I.R. 7 and Re Ward of Court (Withholding Medical Treatment) (No. 2)

[1996] 2 I.R. 79. By way of distinction from Fitzpatrick, we are not dealing, here, with a person, who was, at least prima facie, of full capacity although as was held, there, that the patient's capacity had been affected by the influence of others. Nor are we considering a situation such as that which arose in Re Ward of Court (No. 2), where the ward was in a condition known as P.V.S. or persistent vegetative state. But what is involved here is involuntary medication, together with the invasive taking of blood samples by a syringe on a regular basis. The plaintiff strongly objects to the procedure. The invasive nature of the treatment results in a loss of bodily integrity and dignity. (see the judgment of Denham J. in Re Ward of Court, cited above, at p.158 of the report)

50. In the latter case, the High Court, at first instance, had the opportunity of considering evidence from family members of the ward as to what her wishes would have been had she been in a position to speak about her tragic situation. By virtue of the ward's legal status, the court was vested with jurisdiction over all matters relating to her person and estate, and in the exercise of its jurisdiction, was subject only to the provisions of the Constitution. The High Court, and on appeal the Supreme Court, held that, in the exercise of that jurisdiction, the prime and paramount consideration must be the best interests of the ward. Both Courts found that, although the views of the committee and family of the ward were factors to be taken into consideration, they could not prevail over the court's view as to what was in the ward's best interests. The Supreme Court upheld the finding of the trial judge that the court should approach from the standpoint of a prudent, good and loving parent in deciding what course should be adopted, and held that the treatment being afforded by means of a gastrostomy tube, surgically inserted into the stomach was an intrusive interference with the ward's bodily integrity, and could not be regarded as a "means of nourishment". The care and treatment being afforded constituted medical treatment and not merely medical care. The Supreme Court held that the nature of the right to life, and its importance, imposed a strong presumption in favour of taking all steps capable of preserving it, save in exceptional circumstances. However, it concluded that, if the ward had been mentally competent, she would have had the right to forego or discontinue her treatment, and the exercise of that right would be lawful in the pursuance of her constitutional right to self determination implicit in her right to bodily integrity and privacy. However, this right did not include the right to have life terminated, or death accelerated, and was confined to the natural process of dying. The court decided that the loss by the ward of her mental capacity did not result in any diminution of her personal rights recognised by the Constitution, including the right to life, bodily integrity, privacy (including self determination), or the right to refuse medical treatment.

51. At the statutory level, s. 60 provides for a mechanism whereby the plaintiff's rights, and those of the community, can be balanced and protected. That is not to say, of course, that her rights could not also be vindicated under the inherent jurisdiction of this court, that jurisdiction having been invoked in this case. But there are constitutional dimensions to this case which cannot be ignored. In the next paragraphs, the main emphasis is on the concept of

decision making. It logically follows that the observations which are made here, also apply to a right of independent review, a statutory right provided by s. 60 itself.

52. The plaintiff's complaint is that the review procedure, as outlined earlier, insufficiently vindicates her constitutional rights, and fails to give recognition to rights identified in the jurisprudence of the European Court of Human Rights. Her counsel contends that the effect of the current procedure results in what is termed "substituted decision-making" (bearing the hallmarks of a paternalistic approach to the treatment of mental health patients), rather than "assisted decision-making" which better vindicates the range of rights engaged. For brevity, the range of values and rights involved will be collectively referred to as "personal capacity rights". These comprise the Article 40.3 values of self-determination, bodily integrity, privacy, autonomy and dignity, all unenumerated, but identified in case-law, as well as the explicit right to equality before the law, as identified in, and qualified by, Article 40.1 of the Constitution. For the purposes of consideration here, these are all, whether characterised as values or rights, capable of vindication in the courts. The case is now made that both the treatment regime, and the protections therein, fail properly to reflect the changes and provisions under the United Nations Convention on the Rights of Persons with Disabilities which, by contrast, aims at encouraging assisted decision-making and seeks to vindicate the interests of disabled persons.

53. Prior to a consideration of those rights, it is worthwhile recollecting the observations of Costello J. in R.T. v. Director of the Central Mental Hospital [1995] 2 I.R. 65, where he drew attention to the concept that, in considering the safeguards necessary to protect the rights of vulnerable people, regard should be had to the standards set by the recommendations and conventions of international organisations of which this country is a member. The superior courts have resorted to international human rights instruments in order to interpret appropriate constitutional standards in a number of cases. In The State (Healy) v. Donoghue [1976] I.R. 325, the Supreme Court had regard to Article 6 of the European Convention of Human Rights and also to the United States Constitution. In O'Leary v. The Attorney General [1993] 1 I.R. 102, Costello J. referred to Article 6(2) ECHR; Article 11 of the United Nations Universal Declaration on Human Rights; Article 8 (2) of the American Convention on Human Rights; and Article 7 of the African Charter of Human Rights in holding that the presumption of innocence in a criminal trial was one which enjoyed "universal recognition". Are these principles of interpretation applicable here?

54. Article 40.1 of the Constitution provides:-

"1.All citizens shall, as human persons, be held equal before the law.
This shall not be held to mean that the State shall not in its enactments have due regard to differences of capacity, physical and moral, and of social function…."

At Article 40.3 it is provided:-

"1. The State guarantees in its laws to respect, and, as far as practicable, by its laws to defend and vindicate the personal rights of the citizen.
2. The State shall, in particular, by its laws protect as best it may from unjust attack and, in the case of injustice done, vindicate the life, person, good name, and property rights of every citizen."

55. Hitherto, arising from the facts in each case, decisions of the Superior Courts in this area have tended to lay emphasis on a paternalistic intent of legislation concerning persons with incapacity. This approach, very much in line with long-established decided authority, was most recently reiterated by the Supreme Court in E.H. v. Clinical Director of St. Vincent's Hospital [2009] 3 I.R. 774.
56. By way of illustration of the approach, in Gooden v. St. Otteran's Hospital [2005] 3 I.R. 617, McGuinness J. pointed out, at p.633, that:-

"In Re Philip Clarke [1950] I.R. 235 the former Supreme Court considered the constitutionality of s. 165 of the Act of 1945. O'Byrne J. who delivered the judgment of the court described the general aim of the Act of 1945 at pp. 247-248 thus:-

'The impugned legislation is of a paternal character clearly intended for the care and custody of persons suspected to be suffering from mental infirmity and for the safety and wellbeing of the public generally. The existence of mental infirmity is too widespread to be overlooked and was, no doubt, present to the minds of the draftsmen/draughtsmen when it was proclaimed in Article 40.1 of the Constitution that though all citizens as human persons are to be held equal before the law, the State, may, nevertheless in its enactments, have due regard to differences of capacity, physical and moral, and of social function. We do not see how the common good would be promoted or the dignity and freedom of the individual assured by allowing persons, alleged to be suffering from such infirmity to remain at large to the possible danger of themselves and others.'"
(emphasis added)
57. In E.H., Kearns J., speaking on behalf of the Supreme Court, observed that the same principle should be adopted in interpreting the provisions of the Mental Health Act 2001, again, in issues concerning personal liberty. He stated:-
"I do not see why any different approach should be adopted in relation to the Mental Health Act 2001, nor, having regard to the Convention, do I believe that any different approach is mandated or required by Article 5 of the European Convention on Human Rights 1950."
58. However, it is noteworthy that these observations, very understandably on the facts, deal with the interpretation and application of the statutes predominantly in the context of the right to liberty and the right to fair trial. The position here is distinct. The case before this Court does not concern the right to liberty or fair trial, but rather, the plaintiff's entitlements while being treated in involuntary care.

59. I do not think there is anything inconsistent with the avowedly paternalistic nature of the legislation or that jurisprudence, insofar as they concern liberty, in also ensuring that the wishes and choices of a person suffering from a disability, while under such care, should be guaranteed in a manner which, "as far as practicable" (to use the phrase adopted in Article 40.3.1 of the Constitution), vindicates his or her personal capacity rights. The interpretation of the Constitution in this area of the law should be informed by, and have regard to international conventions. This principle of interpretation, of course, applies a fortiori in relation to the regard which, as a matter of law, must be had to decisions of the European Court of Human Rights (see ss. 2-5 of the European Convention on Human Rights Act 2003).

60. That the Constitution is a living instrument which adapts to protect rights that develop over time cannot be controverted. In The State (Healy) v. Donoghue [1976] I.R. 325, O'Higgins C.J. observed of the values espoused in the preamble to the Constitution that:-

"The judges must therefore, as best they can from their training and their experience interpret these rights in accordance with their ideas of prudence, justice and charity. It is but natural that from time to time the prevailing ideas of these virtues may be conditioned by the passage of time; no interpretation of the Constitution is intended to be final for all time. It is given in the light of prevailing ideas and concepts…"

61. Should this Court then have reference to the UNCRPD if not as a rule, then at least as a guiding principle? The values in question here are in no sense contrary to any provision of the Constitution. The UN Convention affirms the contemporary existence of fundamental rights for persons with a mental disorder. Although the UN Convention itself is not part of our law, it can form a helpful reference point for the identification of "prevailing ideas and concepts", which are to be assessed in harmony with the constitutional requirements of what is "practicable" in mind. A court will, of course, (subject to the qualification pronounced in McD. v L. [2010] 2 I.R. 199) also "have regard" to the jurisprudence of the European Court of Human Rights to which Ireland also adheres on the basis of an international convention. As well as the UNCRPD itself, are there also relevant principles, ideas and concepts identified in Strasbourg case law? By virtue of ss. 2-5 of the European Convention on Human Rights Act 2003, this court is required to interpret laws of this State in compliance with the State's obligation under the ECHR provisions. Judicial notice is to be taken of decisions of the ECHR and the principles contained therein. This allows a court in an appropriate case to consider whether those principles may inform present day interpretation of "prevailing ideas and concepts" provided such principles accord with the Constitution.

62. Shtukaturov v. Russia, (Application no. 44009/05, ECHR, 27th June 2008) concerned the issue of capacity in mental health. There, the ECtHR had regard to "Principles concerning the legal protection of incapable adults", Recommendation No. R (99) 4, adopted by the Council of Europe on the 23rd February 1999. The Court referred in its judgment to Principle 3 of the Recommendation which stipulates that legislative frameworks relating to

persons suffering from incapacity should as far as possible recognise that different degrees of capacity may exist and that incapacity may vary from time to time. Accordingly, measures of protection should not result automatically in a complete removal of legal capacity. Principle 3.2 specifically provides that measures of protection should not automatically deprive a person of "… the right to consent or refuse consent in the health field…"

63. While it was suggested in argument in this case that the European Court of Human Rights had not specifically approved the United Nations Convention on the Rights of Persons with Disabilities, I do not think this is so. The judgment of the ECtHR in Glor v. Switzerland (Application No. 13444/04, ECHR, 30th April 2009), is noteworthy for pointing out that the UNCRPD signalled the existence of a European and universal consensus on the need to protect persons with disabilities from discriminatory treatment.

64. In Kiss v. Hungary (Application No. 38832/06, ECHR, 20th May, 2010) the ECtHR pointed out:-

"The court further considers that the treatment as a single class of those with intellectual or mental disabilities is a questionable classification, and the curtailment of their rights must be subject to strict scrutiny. This approach is reflected in other instruments of international law …"

65. More immediately relevant is the decision of the ECtHR in X v. Finland (Application no. 34806/04, ECHR, 3rd July 2012). That judgment of the Court will now be analysed. The applicant complained that her involuntary confinement in a mental hospital following psychiatric examination was in breach of her right to liberty conferred by Article 5, particularly in the absence of an independent second opinion. The Court agreed with this contention. It stated at paras. 169-171:-

"169. The Court first draws attention to the fact that, in the present case, the decisions to continue the applicant's involuntary confinement after the initial care order were made by the head physician of the Vanha Vaasa hospital after having obtained a medical observation statement by another physician of that establishment. In the Finnish system the medical evaluation is thus made by two physicians of the same mental hospital in which the patient is detained. The patients do not therefore have a possibility to benefit from a second, independent psychiatric opinion. The Court finds such a possibility to be an important safeguard against possible arbitrariness in the decision-making when the continuation of confinement to involuntary care is concerned. In this respect the Court also refers to the CPT's recommendation that the periodic review of an order to treat a patient against his or her will in a psychiatric hospital should involve a psychiatric opinion which is independent of the hospital in which the patient is detained (see paragraph 133 above). This covers all of the criteria in section 8 of the Mental Health Act.

170. Secondly, the Court notes that the periodic review of the need to continue a person's involuntary treatment in Finnish mental hospitals takes place every six months. Leaving aside the question whether a period of six months can be

considered as a reasonable interval or not, the Court draws attention to the fact that, according to section 17(2) of the Mental Health Act, this renewal is initiated by the domestic authorities. A patient who is detained in a mental hospital does not appear to have any possibilities of initiating any proceedings in which the issue of whether the conditions for his or her confinement to an involuntary treatment are still met could be examined. The Court has found in its earlier case-law that a system of periodic review in which the initiative lay solely with the authorities was not sufficient on its own (see mutatis mutandis Rakevich v. Russia, no. 58973/00, §§ 43-44, 28 October 2003; and Gorshkov v. Ukraine, no. 67531/01, § 44, 8 November 2005). In the present case this situation is aggravated by the fact that in Finland a care order issued for an involuntary hospitalisation of a psychiatric patient is understood to contain also an automatic authorisation to treat the patient, even against his or her will. A patient cannot invoke any immediate remedy in that respect either.

171. The Court considers, in the light of the above considerations, that the procedure prescribed by national law did not provide in the present case adequate safeguards against arbitrariness. The domestic law was thus not in conformity with the requirements imposed by Article 5 § 1 (e) of the Convention and, accordingly, there has been a violation of the applicant's rights under that Article in respect of her initial confinement to involuntary care in a mental hospital."

66. The ECtHR further examined claims that the forced administration of medication was in breach of the applicant's rights under Article 8 of the ECHR. The Court noted that under Finnish law, an involuntary care order also included an automatic authorisation to treat such a patient, even against his or her will. It also found that the decisions of a treating doctor are not subject to appeal. In those circumstances, it concluded, at paras. 220-222:-
"220. The Court considers that forced administration of medication represents a serious interference with a person's physical integrity and must accordingly be based on a "law" that guarantees proper safeguards against arbitrariness. In the present case such safeguards were missing. The decision to confine the applicant to involuntary treatment included an automatic authorisation to proceed to forced administration of medication when the applicant refused the treatment. The decision-making was solely in the hands of the treating doctors who could take even quite radical measures regardless of the applicant's will. Moreover, their decision-making was free from any kind of immediate judicial scrutiny: the applicant did not have any remedy available whereby she could require a court to rule on the lawfulness, including proportionality, of the forced administration of medication and to have it discontinued.
221. On these grounds the Court finds that the forced administration of medication in the present case was implemented without proper legal safeguards. The Court concludes that, even if there could be said to be a general legal basis for the measures provided for in Finnish law, the absence of sufficient safeguards against forced medication by the treating doctors deprived the applicant of the minimum degree of protection to which she was entitled under the rule of law in a democratic society (see Herczegfalvy v. Austria, cited

above, § 91; and, mutatis mutandis, Narinen v. Finland, no. 45027/98, § 36, 1 June 2004).

222. The Court finds that in these circumstances it cannot be said that the interference in question was "in accordance with the law" as required by Article 8 § 2 of the Convention. There has therefore been a violation of Article 8 of the Convention." (emphasis added)

67. The emphasised part of the passages quoted leave it unclear whether access to a court is thought to be mandatory, or, as I believe, whether there must be a right of access capable of vindication other than just by State initiative. This is considered in section 3 of this judgment.
68. The Article 13 contention, that the applicant was denied an effective remedy to challenge the forced administration of medication, was not examined on the basis of the findings in relation to Article 8.

"229. The Court reiterates that the applicant complained in essence about the lack of an effective remedy to challenge the forced administration of medication.
230. In view of the submissions of the applicant in the present case and of the grounds on which it has found a violation of Article 8 of the Convention, the Court considers that there is no need to examine separately the complaint under Article 13 of the Convention."

69. The issues raised are relevant to the instant case. The decision clearly establishes that adequate safeguards must be placed in legislation apparently permitting a patient's involuntary detention and involuntary treatment. It was held that these safeguards were not present in the Finnish legislation. In the instant case, the detention procedures are not being questioned. Therefore, this aspect of the case has limited application.
70. How then should these concepts and principles be applied here? Under the provisions of s. 60 itself, the right to independent review and independent determination of capacity are already, in effect, recognised statutory procedural rights; the provisions give effect to the duty of the State to vindicate the plaintiff's personal capacity rights. Professor Kennedy's evidence establishes that the proper vindication of these rights is "practicable".

71. But what is at issue here are truly fundamental constitutional rights in more than just name. What is at stake is truly, in the words of Kenny J. in Ryan v. Attorney General [1965] I.R. 294 at p. 313, the right to the "integrity of the person". Each of the rights affected under s. 60 fall within that category, should be policed and monitored by the courts, and are susceptible to judicial supervision, where necessary. Do they necessitate ancillary rights, analogous to the right to legal aid in defence of a serious criminal charge, which itself derives from the constitutional right under Article 38.1 to a criminal trial "in due course of law"?

72. As in the Irish and ECtHR authorities identified, I believe the broader range of constitutional "personal capacity rights" identified earlier, now fall to be informed by the United Nations Convention on the Rights of Persons with Disabilities, as well as the principles enunciated in the judgments of the European Court of Human Rights. The vindication of these rights to a sufficiently high level is necessary because of the serious incursion into bodily integrity and the other personal capacity rights which arises in the case of persons who are subject to orders made under s. 60 of the Act of 2001. Decisions of this type, involving the continued administration of an involuntary drug regime and the taking of blood samples require, in the words of the European Court of Human Rights, "heightened scrutiny".

73. I believe a constitutional reading of s. 60 of the Act of 2001 now requires that this range of rights must be recognised at the constitutional as well as the legal level, especially if the present application of that legal provision does not vindicate those rights "as far as practicable". The constitutional protections must act as an appropriate counterweight to the nature of the incursion into fundamental constitutional rights. Professor Kennedy's evidence establishes that every effort is made to engage a patient in the decision-making process, and that when a patient regains sufficient mental capacity, they will again be empowered to make decisions regarding their treatment, including the then regained ability to give or withhold consent. Why then should the voice of a patient not be heard, and if not by the patient, then through a representative? This was not a situation, unfortunately, where the plaintiff had family members to speak for her. Such a situation may arise in other cases. What is necessary is to achieve the maximum protection which is "practicable". If a patient lacks capacity, does it not follow that, in order to vindicate these rights, the patient should, where necessary, be assisted in expressing their view as part of the decision-making process? It cannot be said that such a process is impractical. I think the constitutional duty involved here is a positive one. I do not think even a retrospective declaration of incompatibility under the European Convention on Human Rights Act 2003 could be a sufficient protection. A sub-constitutional, and possibly retrospective, remedy is not commensurate with the nature of the rights engaged, and the extent of the possible incursion into such rights.

74. There is, of course, the irony that in this case, on its unique facts, the entire process involved in this extensive court hearing may already be seen as a vindication of each one of the rights claimed, including that of assisted decision-making. The function of counsel for the plaintiff in this case has been nothing less than to put forward, in as comprehensive a manner as is practicable, the views and choices of the plaintiff regarding her treatment regime under s. 60.

75. But the unique nature of the case gives rise to an obstacle from the plaintiff's point of view. Decision-making, even assisted decision-making, does not predetermine the outcome of the deciding process. The nature of this case necessitated that it went to court because of the unusual legal issues which arose. The plaintiff has a right of access to court under the Constitution. As discussed at other points in this judgment, I do not envisage that a court

procedure will be necessary or mandatory in the vast range of other such cases involving patients subject to s. 60 of the Act. In my view, it would require a truly exceptional case to necessitate a court application. What I think is constitutionally necessary is a right of access to the courts, independent of any State agency, should the need arise. I do not think that an assisted decision-making process of this type need necessarily involve lawyers. The views of the patient might be expressed by carers, social workers or, perhaps most appropriately, by family members. Very frequently, such decisions are ones in which the courts will have little expertise. I would also observe that the evidence of Professor Kennedy indicates that, at least in part, these entitlements are already observed as a matter of course in the hospital where, as he testified, patients are asked to participate in decisions regarding their own treatment. This begs the question as to why this participation process cannot be performed on behalf of the incapacitated patient by another, suitably qualified, person. The case has not been made that assisted decision-making is not practicable; the contrary is so. To judge from experience in neighbouring jurisdictions, and in light of legislative proposals on mental capacity here, such a form of decision making must be seen as "practicable".

76. But, here, the plaintiff indisputably does not have capacity to make decisions. There is no controversy on the point. Therefore, having heard the parties, it fell to this court to make decisions as to her treatment, applying the best interest test identified in Re Ward of Court (No. 2). This test has been applied, having examined whether the choices made are the least restrictive, and involve the minimum practical incursion into the plaintiff's rights.

77. Having made that determination, however, it should not be thought that what is involved here is the application of what is termed a "status" approach. This involves making an "across the board" assessment of a person's capacity or views capacity in "all or nothing terms". A "once and for all" status approach in cases in this narrow category does not, I think, vindicate rights as far as practicable. It would not take into account patients whose capacity fluctuates, or those who have episodic mental illness. It may also not take into account the actual capacity of otherwise incapacitated individuals to make decisions in a particular sphere. However, here, there is the real problem that the patient wished to make a decision, which would be not only detrimental to her own health, but would place her life, and the life of others, at risk.

78. In adopting the best interest test, it might be suggested that what was applied then was an "outcome approach" involving the court assessing the patient's wishes, based on an assessment of the outcome of the process. Failure to make what might be a "prudent" decision will not always, of itself, be an indicator of want of decision making capacity. Here, one must look at not only the decision itself, but the quality of the plaintiff's decision making capacity. Unavoidably in this instance, the nature of the decision and the dangerous nature of the plaintiff's wishes must be a factor. The court cannot disregard that it has constitutional duties toward the plaintiff and the public.

79. As the ECtHR judgments point out, however, such decision-making in this area should seek to apply a "functional" approach" to capacity, involving both an issue-specific and time-specific assessment of the plaintiff's decision-making ability. One determination should not be permanent; the process must refer to "differences in capacity" (Article 40.3 of the Constitution). This involves analysing, not only differences in capacity between patients, but also variations in each patient's capacity at particular times. Only in that manner can their rights be properly vindicated in accordance with the constitutional requirement.

80. In all this, there must be both trust and commonsense. Every decision cannot be made by a court. This case is one where, sadly, on the indications so far, the plaintiff has an ongoing condition. While her capacity fluctuates, the evidence does not show that, at any point since the initiation of these proceedings, she has reached a point where she is capable of making a decision independently. It has not been suggested that any decisions have been made which were not in the plaintiff's best interests, or at a time, when she actually had capacity to make decisions as to her treatment.

Conclusion

81. In summary, I conclude that the plaintiff is entitled to both an independent review and to an assisted decision-making process in vindication of her rights. But the entire process here involved a vindication of other rights. It has been necessary for this Court to make the ultimate decision because of her incapacity. In the strict sense, therefore, the plaintiff cannot be entitled to the reliefs she claims. It has not been shown that s. 60 of the Act of 2001, constitutionally interpreted, is repugnant to the Constitution. Applying the principle of double construction what then is necessary for a constitutional interpretation and application of the section? What is required is that it should be applied in a constitutional manner, giving effect to rights to be found within the Constitution itself (see East Donegal Co-operative Ltd v Attorney General [1970] I.R. 319). The constitutional application of that section should have regard to international norms and conventions identified in this part of the judgment.

82. For the future, I think it will be necessary to review the Form 17 procedure, adopted under s. 60. This can be done in a manner so as to ensure that the range of "personal capacity rights" of a patient objecting to treatment under s. 60 of the Act are vindicated, not only in form but in substance. There should be independent review and the patient's decision or choice, albeit whether assisted or not, should be recorded and due regard given to it. The patient's choice, however conveyed, will not always be determinative, but must always be part of the balance. But the role of the consultant psychiatrists remains pivotal. I turn now to another aspect of the relief claimed.

83. The plaintiff, at paragraph 1 of the statement of claim has sought also a declaration that the finding in respect of capacity must be subject to independent tribunal or court review. In this case, I think that right has already been vindicated to date, and will continue to be. But then the claim goes rather

deeper. Does a s. 60 treatment-decision necessitate ongoing court review on a mandatory basis?
Section 3 – Is the plaintiff entitled to a declaration of incompatibility under the ECHR Act and is there an ECHR right to an independent court or tribunal to consider future treatment?
84. It is now contended that, if the HSE should continue to administer treatment on the basis that the plaintiff lacks capacity, that defendant must convincingly show that such treatment is necessary before an independent tribunal or court. I would observe here that because of the highly unusual nature of this case it was proper that the matter should be dealt with by the Court. Can a genuine right to a court or tribunal hearing in all cases of this type be found? Do the constitutional rights, to be vindicated in each case, necessitate a mandatory ongoing court involvement in every such case? I am not persuaded that a mandatory engagement, even in a narrow category of cases involving difficult clinical decisions, can be seen as "practicable". In my view, it would involve a degree of legal involvement in the field of psychiatry, which would be unprecedented, and, I believe, often impractical. Even on this basis alone, it would be very difficult to give recognition to such a right. Does such a right nonetheless exist under the ECHR? Is the plaintiff, therefore, entitled to a declaration that s. 60 is incompatible with the provisions of the ECHR under s. 5 of the Act of 2003?

85. Even having regard to the decision in X v. Finland, I am not persuaded that such a right exists in ECHR jurisprudence. That case must be seen as still pending as at present an application for admission to a Grand Chamber hearing remains to be considered. I think the passages cited earlier lack clarity as to whether what is in question is a right to a court hearing as alleged, or, rather a right of access to a court. The rights identified in the cases which follow lay particular emphasis on review of detention procedures. Clearly, at a minimum, there must be a right of court access. Decisions as to involuntary medical treatment must be subject to the rule of law, and must be independently reviewed. They must be capable of being assessed by a court, and cannot be arbitrary. The case of Storck v Germany (Application 61603/00, ECHR, 16th September 2005), addresses involuntary treatment and detention but is based on very different facts. There was a real question there as to the plaintiff's incapacity, and as to the lawfulness of her detention. The ECtHR held that under Article 5 and Article 8 ECHR, there were positive obligations to ensure that an involuntary deprivation of liberty was carried out in accordance with a procedure prescribed by a rule of law. Significantly, it held that special procedural safeguards may be necessary to protect the interests of persons not fully capable of acting for themselves; that even a minor interference with the physical integrity of an individual was to be regarded as an interference with the respect for private life, if carried out against that person's will; and that the State had a positive obligation to protect the applicant against interference with her private life guaranteed by Article 8 of the Convention. By way of distinction with that case, there is no question here that the plaintiff has been wrongly diagnosed, or as to her decision-making capacity. The detention process, here, is in accordance with law. The treatment has been independently

assessed by Dr. Kelly, Dr. Bownes and by this Court. It cannot be said that any part of the process is arbitrary therefore.

86. Earlier, in Winterwerp v. The Netherlands [1979 – 80] 2 E.H.R.R. 387, the applicant had been compulsorily detained pursuant to successive court orders, was not allowed to appear or be represented at proceedings and was not notified when such proceedings were in progress. As a consequence of his detention, the applicant also automatically lost the capacity to administer his property. There, the ECtHR unanimously held that the applicant's ability to have his detention reviewed by a court and the failure to hear him constituted a violation of Article 5(4) of the Convention. I do not think this case is on point here.

87. Three further decisions of the ECtHR were cited to this Court. All must now be seen in light of the decision in X v. Finland. The first, Shtukaturov, has already been briefly referred to. The applicant there suffered from a mental disorder but despite this was a relatively autonomous person. His mother lodged an application with the District Court of St. Petersburg seeking to deprive him of his legal capacity. An expert team assessed the applicant and concluded that he was suffering from "simple schizophrenia". A hearing then occurred, of which the applicant was neither notified nor present, where the judge declared the applicant to be legally incapable and his mother was appointed to be a legal guardian. The hearing lasted only ten minutes. At his mother's request he was then placed in a psychiatric institution where he was prohibited from having contact with the outside world. Unsurprisingly, the European Court of Human Rights in that case held that although domestic courts had a certain margin of appreciation, there had been a breach of the applicant's right to fair trial, as guaranteed under Article 6 of the Convention. This arose because, in assessing whether or not a particular measure such as the exclusion of the applicant from a hearing was necessary, relevant factors had to be taken into account including the nature and complexity of the issue which had been before the domestic courts, what had been at stake for the applicant and whether the applicant's appearance in person represented any threat to others or to himself. It was held that the domestic court proceedings had been unfair. The court observed that the applicant had played a double role in the proceedings, that of interested party and also the main object of the court's examination. His participation was therefore necessary not only so that he could present his own case but so as to afford the judge the opportunity to form an opinion about the applicant's mental capacity. The court also held that the declaration of the domestic court with the effect that the applicant was regarded as having full incapacity for an indefinite period which could not be challenged otherwise than through the guardian constituted a breach of Article 8 of the Convention.

88. It is significant in the context of this case that the ECtHR laid emphasis on the right of a person, the subject matter of an order, to representation and participation in the proceedings concerning a very significant incursion in their right to liberty and to private life.

89. Similar observations were made by the court in Stanev. v. Bulgaria (Application no. 36760/06, ECHR, 17th January 2012), where, in national court proceedings on capacity, the applicant was denied the right to have a lawyer of his choice. This had not been authorised by his guardian. He could not perform legal transactions or take part in court proceedings without his guardian's consent; although the guardian's decisions were subject to review by an authority, there was no clarity as to whether the applicant as a partially incapacitated person could challenge the decisions of that authority by way of judicial review. As a consequence, the court held that there were breaches of Article 5(4) involving an entitlement to institute proceedings reviewing a decision and a denial of direct access to courts in violation of Article 6(1) of the Convention. Again, the facts are very different from those in the instant case.
The Wilkinson case
90. In the earlier judgment, I made reference to the decision in R. (On the Application of Wilkinson) v. Broadmoor Special Hospital Authority and Others [2002] 1 W.L.R 419. As well as pursuing remedies in domestic legislation, the plaintiff in that case, also sought to pursue his rights in the European Court of Human Rights in Wilkinson v. United Kingdom, (Application No. 14659/02, 28th February, 2006).

91. The applicant had been detained in a psychiatric institution under the Mental Health Act 1983 in England following conviction for rape of a minor in 1969. Though a clinical consensus existed at the relevant time that he suffered from psychopathic personality disorder, opposing views had been expressed as to whether he suffered from a recognised mental illness. In 1999, his treating doctor sought to administer antipsychotic medication without consent, on the basis that it was necessary to relieve the applicant of 'paranoid ideation'. The treatment was administered moments after an independent doctor approved it under s. 58(3) of the 1983 Act, without notice to the applicant (due to the prospect that he would respond violently). The applicant resisted the injections and had to be physically restrained. On the first occasion, he suffered an angina attack and had to be secluded. The medication was administered on one further occasion, and thereafter he engaged solicitors to contest the treatment.

92. Wilkinson is significant because the provisions at issue were broadly akin to those which arise in these proceedings. Section 63 of the 1983 United Kingdom Act removed the general requirement for obtaining a patient's consent for any treatment given to him for his mental disorder so long as the treatment was approved by the clinician in charge of his treatment subject to special requirements stipulated in the case of long term medication, ECT and psychosurgery, equivalent to ss. 58, 59 and 60 of the Act of 2001. However, I think that the observations of the ECtHR must now be seen in the light of the Glor, Kiss and X v. Finland judgments referred to earlier.

93. At the time of the hearing, I was not referred to any of the ECHR jurisprudence involving a right to ongoing court or tribunal engagement as to ongoing treatment decisions. However, counsel subsequently brought to my

attention the case of X v. Finland (Application no.34806/04, 3 July, 2012), where a request to the Grand Chamber is pending. The findings of the ECtHR have been set out earlier.

94. I fully agree that the interference with a patient's rights, in cases like the present, is so serious to require adequate safeguards against arbitrariness. What is necessary is a clearly defined procedure, in accordance with law, which vindicates ECHR rights to privacy and autonomy involving proper clinical decision-making procedures. I believe such safeguards are to be found in s. 60 through the requirement for a second opinion from an independent consultant, in relation to the proposed treatment, at regular three month intervals, together with such charges as may be necessitated by this judgment. I would add that a further consequence of assisted decision-making is that it enhances the right of access to the court on behalf of a s. 60 patient. But I do not think any of the ECtHR case law goes further than the rights identified here under the Constitution. In short, I do not understand the law, whether national or under the ECHR, presently to require a mandatory court hearing in every case. I note the X. v Finland case remains pending before the Grand Chamber. I should re-iterate that, in the instant case, the plaintiff here was, thanks both to the HSE and to her lawyers, able to have the legality of her treatment procedure reviewed by this Court. But the plaintiff is not, in my view, entitled to a declaration of incompatibility under s. 5. The provisions of s. 60 are of course to be interpreted and applied in a manner compatible with the State's obligations under the ECHR. On my understanding of the ECHR jurisprudence, this objective is achieved by virtue of the adherence to the constitutionally compliant procedures under s. 60 of the Act, outlined earlier in this judgment.

Section 4 - Locus Standi

95. It is necessary finally to address the question of the plaintiff's locus standi. This case directly arose from questions which were raised in the earlier case wherein the plaintiff in these proceedings was the defendant. The questions directly related to the proper interpretation of the Act of 2001. The plaintiff was directly concerned with how Part 4 of the Act applied to her. It must be recollected also that the HSE, the plaintiff in the original proceedings, as an alternative to the statutory argument, advanced the contention that the Court would be entitled to grant the reliefs sought, pursuant to its inherent jurisdiction. The issues in this case, in my view could only properly have been resolved by court proceedings.

96. Even though it cannot be said that the plaintiff has succeeded on the issues, this case comes within one of the exceptions identified by Henchy J. in Cahill v. Sutton [1980] I.R. 269, as being one where the legal provisions involved were directed to, or operable against a group which includes the plaintiff and where the plaintiff may be said to have a common interest, albeit in circumstances where it may be difficult to segregate the plaintiff's own position from the rights of other persons similarly affected. The law in this area is in a state of evolution and the issues here required judicial determination. In an area where the law required clarification, I therefore conclude that the plaintiff did have locus standi.

97. Having regard to all the circumstances, I must find that the plaintiff is not entitled to relief under the headings identified in the claim.

98. I would like to express appreciation to counsel for the parties and the notice parties whose submissions helped to chart the way through the shoals of this difficult area of jurisprudence. It is to be hoped their efforts have resulted in the arrival at a destination which best protects the interests and rights of the plaintiff and those in similar situations.

DIRECTIVE 2006/54/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 5 July 2006

on the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation (recast)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 141(3) thereof,

Having regard to the proposal from the Commission,

Having regard to the opinion of the European Economic and Social Committee ([1]),

Acting in accordance with the procedure laid down in Article 251 of the Treaty ([2]),

Whereas:

(1) Council Directive 76/207/EEC of 9 February 1976 on the implementation of the principle of equal treatment for men and women as regards access to employment, vocational training and promotion, and working conditions ([3]) and Council Directive 86/378/EEC of 24 July 1986 on the implementation of the principle of equal treatment for men and women in occupational social security schemes ([4]) have been significantly amended ([5]). Council Directive 75/117/EEC of 10 February 1975 on the approximation of the laws of the Member States relating to the application of the principle of equal pay for men and women ([6]) and Council Directive 97/80/EC of 15 December 1997 on the burden of proof in cases of discrimination based on sex ([7]) also contain provisions which have as their purpose the implementation of the principle of equal treatment between men and women. Now that new amendments are being made to the said Directives, it is desirable, for reasons of clarity, that the provisions in question should be recast by bringing together in a single text the main provisions existing in this field as well as certain developments arising out of the case-law of the Court of Justice of the European Communities (hereinafter referred to as the Court of Justice).

([1]) OJ C 157, 28.6.2005, p. 83.

([2]) Opinion of the European Parliament of 6 July 2005 (not yet published in the Official Journal), Council Common Position of 10 March 2006(OJ C 126 E, 30.5.2006, p. 33) and Position of the European Parliament of 1 June 2006 (not yet published in the Official Journal).

([3]) OJ L 39, 14.2.1976, p. 40. Directive as amended by Directive 2002/73/EC of the European Parliament and of the Council (OJ L 269, 5.10.2002, p. 15).

([4]) OJ L 225, 12.8.1986, p. 40. Directive as amended by Directive 96/97/EC (OJ L 46, 17.2.1997, p. 20).

([5]) See Annex I Part A.

([6]) OJ L 45, 19.2.1975, p. 19.

([7]) OJ L 14, 20.1.1998, p. 6. Directive as amended by Directive 98/52/EC (OJ L 205, 22.7.1998, p. 66).

(2) Equality between men and women is a fundamental principle of Community law under Article 2 and Article 3(2) of the Treaty and the case-law of the Court of Justice. Those Treaty provisions proclaim equality between men and women as a 'task' and an 'aim' of the Community and impose a positive obligation to promote it in all its activities.

(3) The Court of Justice has held that the scope of the principle of equal treatment for men and women cannot be confined to the prohibition of discrimination based on the fact that a person is of one or other sex. In view of its purpose and the nature of the rights which it seeks to safeguard, it also applies to discrimination arising from the gender reassignment of a person.

(4) Article 141(3) of the Treaty now provides a specific legal basis for the adoption of Community measures to ensure the application of the principle of equal opportunities and equal treatment in matters of employment and occupation, including the principle of equal pay for equal work or work of equal value.

(5) Articles 21 and 23 of the Charter of Fundamental Rights of the European Union also prohibit any discrimination on grounds of sex and enshrine the right to equal treatment between men and women in all areas, including employment, work and pay.

(6) Harassment and sexual harassment are contrary to the principle of equal treatment between men and women and constitute discrimination on grounds of sex for the purposes of this Directive. These forms of discrimination occur not only in the workplace, but also in the context of access to employment, vocational training and promotion. They should therefore be prohibited and should be subject to effective, proportionate and dissuasive penalties.

(7) In this context, employers and those responsible for vocational training should be encouraged to take measures to combat all forms of discrimination on grounds of sex and, in particular, to take preventive measures against harassment and sexual harassment in the workplace and in access to employment, vocational training and promotion, in accordance with national law and practice.

(8) The principle of equal pay for equal work or work of equal value as laid down by Article 141 of the Treaty and consistently upheld in the case-law of the Court of Justice constitutes an important aspect of the principle of equal treatment between men and women and an essential and

indispensable part of the *acquis communautaire*, including the case-law of the Court concerning sex discrimination. It is therefore appropriate to make further provision for its implementation.

(9) In accordance with settled case-law of the Court of Justice, in order to assess whether workers are performing the same work or work of equal value, it should be determined whether, having regard to a range of factors including the nature of the work and training and working conditions, those workers may be considered to be in a comparable situation.

(10) The Court of Justice has established that, in certain circumstances, the principle of equal pay is not limited to situations in which men and women work for the same employer.

(11) The Member States, in collaboration with the social partners, should continue to address the problem of the continuing gender-based wage differentials and marked gender segregation on the labour market by means such as flexible working time arrangements which enable both men and women to combine family and work commitments more successfully. This could also include appropriate parental leave arrangements which could be taken up by either parent as well as the provision of accessible and affordable child-care facilities and care for dependent persons.

(12) Specific measures should be adopted to ensure the implementation of the principle of equal treatment in occupational social security schemes and to define its scope more clearly.

(13) In its judgment of 17 May 1990 in Case C-262/88 ([1]), the Court of Justice determined that all forms of occupational pension constitute an element of pay within the meaning of Article 141 of the Treaty.

(14) Although the concept of pay within the meaning of Article 141 of the Treaty does not encompass social security benefits, it is now clearly established that a pension scheme for public servants falls within the scope of the principle of equal pay if the benefits payable under the scheme are paid to the worker by reason of his/her employment relationship with the public employer, notwithstanding the fact that such scheme forms part of a general statutory scheme. According to the judgments of the Court of Justice in Cases C-7/93 ([2]) and C-351/00 ([3]), that condition will be satisfied if the pension scheme concerns a particular category of workers and its benefits are directly related to the period of service and calculated by reference to the public servant's final salary. For reasons of clarity, it is therefore appropriate to make specific provision to that effect.

([1]) C-262/88: Barber v Guardian Royal Exchange Assurance Group (1990 ECR I-1889).

([2]) C-7/93: Bestuur van het Algemeen Burgerlijk Pensioenfonds v G. A. Beune (1994 ECR I-4471).

([3]) C-351/00: Pirkko Niemi (2002 ECR I-7007).

(15) The Court of Justice has confirmed that whilst the contributions of male and female workers to a defined-benefit pension scheme are covered by Article 141 of the Treaty, any inequality in employers' contributions paid under funded defined-benefit schemes which is due to the use of actuarial factors differing according to sex is not to be assessed in the light of that same provision.

(16) By way of example, in the case of funded defined-benefit schemes, certain elements, such as conversion into a capital sum of part of a periodic pension, transfer of pension rights, a reversionary pension payable to a dependant in return for the surrender of part of a pension or a reduced pension where the worker opts to take earlier retirement, may be unequal where the inequality of the amounts results from the effects of the use of actuarial factors differing according to sex at the time when the scheme's funding is implemented.

(17) It is well established that benefits payable under occupational social security schemes are not to be considered as remuneration insofar as they are attributable to periods of employment prior to 17 May 1990, except in the case of workers or those claiming under them who initiated legal proceedings or brought an equivalent claim under the applicable national law before that date. It is therefore necessary to limit the implementation of the principle of equal treatment accordingly.

(18) The Court of Justice has consistently held that the Barber Protocol ([4]) does not affect the right to join an occupational pension scheme and that the limitation of the effects in time of the judgment in Case C-262/88 does not apply to the right to join an occupational pension scheme. The Court of Justice also ruled that the national rules relating to time limits for bringing actions under national law may be relied on against workers who assert their right to join an occupational pension scheme, provided that they are not less favourable for that type of action than for similar actions of a domestic nature and that they do not render the exercise of rights conferred by Community law impossible in practice. The Court of Justice has also pointed out that the fact that a worker can claim retroactively to join an occupational pension scheme does not allow the worker to avoid paying the contributions relating to the period of membership concerned.

(19) Ensuring equal access to employment and the vocational training leading thereto is fundamental to the application of the principle of equal treatment of men and women in matters of employment and occupation. Any exception to this principle should therefore be limited to those occupational activities which necessitate the employment of a person of a particular sex by reason of their nature or the context in which they are carried out, provided that the objective sought is legitimate and complies with the principle of proportionality.

([4]) Protocol 17 concerning Article 141 of the Treaty establishing the European Community (1992).

(20) This Directive does not prejudice freedom of association, including the right to establish unions with others and to join unions to defend one's interests. Measures within the meaning of Article 141(4) of the Treaty may include membership or the continuation of the activity of organisations or unions whose main objective is the promotion, in practice, of the principle of equal treatment between men and women.

(21) The prohibition of discrimination should be without prejudice to the maintenance or adoption of measures intended to prevent or compensate for disadvantages suffered by a group of persons of one sex. Such measures permit organisations of persons of one sex where their main object is the promotion of the special needs of those persons and the promotion of equality between men and women.

(22) In accordance with Article 141(4) of the Treaty, with a view to ensuring full equality in practice between men and women in working life, the principle of equal treatment does not prevent Member States from maintaining or adopting measures providing for specific advantages in order to make it easier for the under-represented sex to pursue a vocational activity or to prevent or compensate for disadvantages in professional careers. Given the current situation and bearing in mind Declaration No 28 to the Amsterdam Treaty, Member States should, in the first instance, aim at improving the situation of women in working life.

(23) It is clear from the case-law of the Court of Justice that unfavourable treatment of a woman related to pregnancy or maternity constitutes direct discrimination on grounds of sex. Such treatment should therefore be expressly covered by this Directive.

(24) The Court of Justice has consistently recognised the legitimacy, as regards the principle of equal treatment, of protecting a woman's biological condition during pregnancy and maternity and of introducing maternity protection measures as a means to achieve substantive equality. This Directive should therefore be without prejudice to Council Directive 92/85/EEC of 19 October 1992 on the introduction of measures to encourage improvements in the safety and health at work of pregnant workers and workers who have recently given birth or are breastfeeding ([1]). This Directive should further be without prejudice to Council Directive 96/34/EC of 3 June 1996 on the framework agreement on parental leave concluded by UNICE, CEEP and the ETUC ([2]).

(25) For reasons of clarity, it is also appropriate to make express provision for the protection of the employment rights of women on maternity leave and in particular their right to return to the same or an equivalent post, to suffer no detriment in their terms and conditions as a result of taking such leave and to benefit from any improvement in working conditions to which they would have been entitled during their absence.

(26) In the Resolution of the Council and of the Ministers for Employment and Social Policy, meeting within the Council, of 29 June 2000 on the balanced participation of women and men in family and working life ([3]), Member States were encouraged to consider examining the scope for their respective legal systems to grant working men an individual and non-transferable right to paternity leave, while maintaining their rights relating to employment.

(27) Similar considerations apply to the granting by Member States to men and women of an individual and non-transferable right to leave subsequent to the adoption of a child. It is for the Member States to determine whether or not to grant such a right to paternity and/or adoption leave and also to determine any conditions, other than dismissal and return to work, which are outside the scope of this Directive.

(28) The effective implementation of the principle of equal treatment requires appropriate procedures to be put in place by the Member States.

(29) The provision of adequate judicial or administrative procedures for the enforcement of the obligations imposed by this Directive is essential to the effective implementation of the principle of equal treatment.

(30) The adoption of rules on the burden of proof plays a significant role in ensuring that the principle of equal treatment can be effectively enforced. As the Court of Justice has held, provision should therefore be made to ensure that the burden of proof shifts to the respondent when there is a *prima facie* case of discrimination, except in relation to proceedings in which it is for the court or other competent national body to investigate the facts. It is however necessary to clarify that the appreciation of the facts from which it may be presumed that there has been direct or indirect discrimination remains a matter for the relevant national body in accordance with national law or practice. Further, it is for the Member States to introduce, at any appropriate stage of the proceedings, rules of evidence which are more favourable to plaintiffs.

(31) With a view to further improving the level of protection offered by this Directive, associations, organisations and other legal entities should also be empowered to engage in proceedings, as the Member States so determine, either on behalf or in support of a complainant, without prejudice to national rules of procedure concerning representation and defence.

(32) Having regard to the fundamental nature of the right to effective legal protection, it is appropriate to ensure that workers continue to enjoy such protection even after the relationship giving rise to an alleged breach of the principle

([1]) OJ L 348, 28.11.1992, p. 1.

([2]) OJ L 145, 19.6.1996, p. 4. Directive as amended by Directive 97/75/EC (OJ L 10, 16.1.1998, p. 24).

([3]) OJ C 218, 31.7.2000, p. 5.

of equal treatment has ended. An employee defending or giving evidence on behalf of a person protected under this Directive should be entitled to the same protection.

(33) It has been clearly established by the Court of Justice that in order to be effective, the principle of equal treatment implies that the compensation awarded for any breach must be adequate in relation to the damage sustained. It is therefore appropriate to exclude the fixing of any prior upper limit for such compensation, except where the employer can prove that the only damage suffered by an applicant as a result of discrimination within the meaning of this Directive was the refusal to take his/her job application into consideration.

(34) In order to enhance the effective implementation of the principle of equal treatment, Member States should promote dialogue between the social partners and, within the framework of national practice, with non-governmental organisations.

(35) Member States should provide for effective, proportionate and dissuasive penalties for breaches of the obligations under this Directive.

(36) Since the objectives of this Directive cannot be sufficiently achieved by the Member States and can therefore be better achieved at Community level, the Community may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(37) For the sake of a better understanding of the different treatment of men and women in matters of employment and occupation, comparable statistics disaggregated by sex should continue to be developed, analysed and made available at the appropriate levels.

(38) Equal treatment of men and women in matters of employment and occupation cannot be restricted to legislative measures. Instead, the European Union and the Member States should continue to promote the raising of public awareness of wage discrimination and the changing of public attitudes, involving all parties concerned at public and private level to the greatest possible extent. The dialogue between the social partners could play an important role in this process.

(39) The obligation to transpose this Directive into national law should be confined to those provisions which represent a substantive change as compared with the earlier Directives. The obligation to transpose the provisions which are substantially unchanged arises under the earlier Directives.

(40) This Directive should be without prejudice to the obligations of the Member States relating to the time limits for transposition into national law and application of the Directives set out in Annex I, Part B.

(41) In accordance with paragraph 34 of the Interinstitutional agreement on better law-making [1], Member States are encouraged to draw up, for themselves and in the interest of the Community, their own tables, which will, as far as possible, illustrate the correlation between this Directive and the transposition measures and to make them public,

HAVE ADOPTED THIS DIRECTIVE:

TITLE I

GENERAL PROVISIONS

Article 1

Purpose

The purpose of this Directive is to ensure the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation.

To that end, it contains provisions to implement the principle of equal treatment in relation to:

(a) access to employment, including promotion, and to vocational training;

(b) working conditions, including pay;

(c) occupational social security schemes.

It also contains provisions to ensure that such implementation is made more effective by the establishment of appropriate procedures.

Article 2

Definitions

1. For the purposes of this Directive, the following definitions shall apply:

(a) 'direct discrimination': where one person is treated less favourably on grounds of sex than another is, has been or would be treated in a comparable situation;

(b) 'indirect discrimination': where an apparently neutral provision, criterion or practice would put persons of one sex at a particular disadvantage compared with persons of the other sex, unless that provision, criterion or practice is objectively justified by a legitimate aim, and the means of achieving that aim are appropriate and necessary;

(c) 'harassment': where unwanted conduct related to the sex of a person occurs with the purpose or effect of violating the dignity of a person, and of creating an intimidating, hostile, degrading, humiliating or offensive environment;

[1] OJ C 321, 31.12.2003, p. 1.

(d) 'sexual harassment': where any form of unwanted verbal, non-verbal or physical conduct of a sexual nature occurs, with the purpose or effect of violating the dignity of a person, in particular when creating an intimidating, hostile, degrading, humiliating or offensive environment;

(e) 'pay': the ordinary basic or minimum wage or salary and any other consideration, whether in cash or in kind, which the worker receives directly or indirectly, in respect of his/her employment from his/her employer;

(f) 'occupational social security schemes': schemes not governed by Council Directive 79/7/EEC of 19 December 1978 on the progressive implementation of the principle of equal treatment for men and women in matters of social security ([1]) whose purpose is to provide workers, whether employees or self-employed, in an undertaking or group of undertakings, area of economic activity, occupational sector or group of sectors with benefits intended to supplement the benefits provided by statutory social security schemes or to replace them, whether membership of such schemes is compulsory or optional.

2. For the purposes of this Directive, discrimination includes:

(a) harassment and sexual harassment, as well as any less favourable treatment based on a person's rejection of or submission to such conduct;

(b) instruction to discriminate against persons on grounds of sex;

(c) any less favourable treatment of a woman related to pregnancy or maternity leave within the meaning of Directive 92/85/EEC.

Article 3

Positive action

Member States may maintain or adopt measures within the meaning of Article 141(4) of the Treaty with a view to ensuring full equality in practice between men and women in working life.

([1]) OJ L 6, 10.1.1979, p. 24.

TITLE II

SPECIFIC PROVISIONS

CHAPTER 1

Equal pay

Article 4

Prohibition of discrimination

For the same work or for work to which equal value is attributed, direct and indirect discrimination on grounds of sex with regard to all aspects and conditions of remuneration shall be eliminated.

In particular, where a job classification system is used for determining pay, it shall be based on the same criteria for both men and women and so drawn up as to exclude any discrimination on grounds of sex.

CHAPTER 2

Equal treatment in occupational social security schemes

Article 5

Prohibition of discrimination

Without prejudice to Article 4, there shall be no direct or indirect discrimination on grounds of sex in occupational social security schemes, in particular as regards:

(a) the scope of such schemes and the conditions of access to them;

(b) the obligation to contribute and the calculation of contributions;

(c) the calculation of benefits, including supplementary benefits due in respect of a spouse or dependants, and the conditions governing the duration and retention of entitlement to benefits.

Article 6

Personal scope

This Chapter shall apply to members of the working population, including self-employed persons, persons whose activity is interrupted by illness, maternity, accident or involuntary unemployment and persons seeking employment and to retired and disabled workers, and to those claiming under them, in accordance with national law and/or practice.

Article 7

Material scope

1. This Chapter applies to:

(a) occupational social security schemes which provide protection against the following risks:

(i) sickness,

(ii) invalidity,

(iii) old age, including early retirement,

(iv) industrial accidents and occupational diseases,

(v) unemployment;

(b) occupational social security schemes which provide for other social benefits, in cash or in kind, and in particular survivors' benefits and family allowances, if such benefits constitute a consideration paid by the employer to the worker by reason of the latter's employment.

2. This Chapter also applies to pension schemes for a particular category of worker such as that of public servants if the benefits payable under the scheme are paid by reason of the employment relationship with the public employer. The fact that such a scheme forms part of a general statutory scheme shall be without prejudice in that respect.

Article 8

Exclusions from the material scope

1. This Chapter does not apply to:

(a) individual contracts for self-employed persons;

(b) single-member schemes for self-employed persons;

(c) insurance contracts to which the employer is not a party, in the case of workers;

(d) optional provisions of occupational social security schemes offered to participants individually to guarantee them:

(i) either additional benefits,

(ii) or a choice of date on which the normal benefits for self-employed persons will start, or a choice between several benefits;

(e) occupational social security schemes in so far as benefits are financed by contributions paid by workers on a voluntary basis.

2. This Chapter does not preclude an employer granting to persons who have already reached the retirement age for the purposes of granting a pension by virtue of an occupational social security scheme, but who have not yet reached the retirement age for the purposes of granting a statutory retirement pension, a pension supplement, the aim of which is to make equal or more nearly equal the overall amount of benefit paid to these persons in relation to the amount paid to persons of the other sex in the same situation who have already reached the statutory retirement age, until the persons benefiting from the supplement reach the statutory retirement age.

Article 9

Examples of discrimination

1. Provisions contrary to the principle of equal treatment shall include those based on sex, either directly or indirectly, for:

(a) determining the persons who may participate in an occupational social security scheme;

(b) fixing the compulsory or optional nature of participation in an occupational social security scheme;

(c) laying down different rules as regards the age of entry into the scheme or the minimum period of employment or membership of the scheme required to obtain the benefits thereof;

(d) laying down different rules, except as provided for in points (h) and (j), for the reimbursement of contributions when a worker leaves a scheme without having fulfilled the conditions guaranteeing a deferred right to long-term benefits;

(e) setting different conditions for the granting of benefits or restricting such benefits to workers of one or other of the sexes;

(f) fixing different retirement ages;

(g) suspending the retention or acquisition of rights during periods of maternity leave or leave for family reasons which are granted by law or agreement and are paid by the employer;

(h) setting different levels of benefit, except in so far as may be necessary to take account of actuarial calculation factors which differ according to sex in the case of defined-contribution schemes; in the case of funded defined-benefit schemes, certain elements may be unequal where the inequality of the amounts results from the effects of the use of actuarial factors differing according to sex at the time when the scheme's funding is implemented;

(i) setting different levels for workers' contributions;

(j) setting different levels for employers' contributions, except:

(i) in the case of defined-contribution schemes if the aim is to equalise the amount of the final benefits or to make them more nearly equal for both sexes,

(ii) in the case of funded defined-benefit schemes where the employer's contributions are intended to ensure the adequacy of the funds necessary to cover the cost of the benefits defined;

(k) laying down different standards or standards applicable only to workers of a specified sex, except as provided for in points (h) and (j), as regards the guarantee or retention of entitlement to deferred benefits when a worker leaves a scheme.

2. Where the granting of benefits within the scope of this Chapter is left to the discretion of the scheme's management bodies, the latter shall comply with the principle of equal treatment.

Article 10

Implementation as regards self-employed persons

1. Member States shall take the necessary steps to ensure that the provisions of occupational social security schemes for self-employed persons contrary to the principle of equal treatment are revised with effect from 1 January 1993 at the latest or for Member States whose accession took place after that date, at the date that Directive 86/378/EEC became applicable in their territory.

2. This Chapter shall not preclude rights and obligations relating to a period of membership of an occupational social security scheme for self-employed persons prior to revision of that scheme from remaining subject to the provisions of the scheme in force during that period.

Article 11

Possibility of deferral as regards self-employed persons

As regards occupational social security schemes for self-employed persons, Member States may defer compulsory application of the principle of equal treatment with regard to:

(a) determination of pensionable age for the granting of old-age or retirement pensions, and the possible implications for other benefits:

(i) either until the date on which such equality is achieved in statutory schemes,

(ii) or, at the latest, until such equality is prescribed by a directive;

(b) survivors' pensions until Community law establishes the principle of equal treatment in statutory social security schemes in that regard;

(c) the application of Article 9(1)(i) in relation to the use of actuarial calculation factors, until 1 January 1999 or for Member States whose accession took place after that date until the date that Directive 86/378/EEC became applicable in their territory.

Article 12

Retroactive effect

1. Any measure implementing this Chapter, as regards workers, shall cover all benefits under occupational social security schemes derived from periods of employment subsequent to 17 May 1990 and shall apply retroactively to that date, without prejudice to workers or those claiming under them who have, before that date, initiated legal proceedings or raised an equivalent claim under national law. In that event, the implementation measures shall apply retroactively to 8 April 1976 and shall cover all the benefits derived from periods of employment after that date. For Member States which acceded to the Community after 8 April 1976, and before 17 May 1990, that date shall be replaced by the date on which Article 141 of the Treaty became applicable in their territory.

2. The second sentence of paragraph 1 shall not prevent national rules relating to time limits for bringing actions under national law from being relied on against workers or those claiming under them who initiated legal proceedings or raised an equivalent claim under national law before 17 May 1990, provided that they are not less favourable for that type of action than for similar actions of a domestic nature and that they do not render the exercise of rights conferred by Community law impossible in practice.

3. For Member States whose accession took place after 17 May 1990 and which were on 1 January 1994 Contracting Parties to the Agreement on the European Economic Area, the date of 17 May 1990 in the first sentence of paragraph 1 shall be replaced by 1 January 1994.

4. For other Member States whose accession took place after 17 May 1990, the date of 17 May 1990 in paragraphs 1 and 2 shall be replaced by the date on which Article 141 of the Treaty became applicable in their territory.

Article 13

Flexible pensionable age

Where men and women may claim a flexible pensionable age under the same conditions, this shall not be deemed to be incompatible with this Chapter.

CHAPTER 3

Equal treatment as regards access to employment, vocational training and promotion and working conditions

Article 14

Prohibition of discrimination

1. There shall be no direct or indirect discrimination on grounds of sex in the public or private sectors, including public bodies, in relation to:

(a) conditions for access to employment, to self-employment or to occupation, including selection criteria and recruitment conditions, whatever the branch of activity and at all levels of the professional hierarchy, including promotion;

(b) access to all types and to all levels of vocational guidance, vocational training, advanced vocational training and retraining, including practical work experience;

(c) employment and working conditions, including dismissals, as well as pay as provided for in Article 141 of the Treaty;

(d) membership of, and involvement in, an organisation of workers or employers, or any organisation whose members carry on a particular profession, including the benefits provided for by such organisations.

2. Member States may provide, as regards access to employment including the training leading thereto, that a difference of treatment which is based on a characteristic related to sex shall not constitute discrimination where, by reason of the nature of the particular occupational activities concerned or of the context in which they are carried out, such a characteristic constitutes a genuine and determining occupational requirement, provided that its objective is legitimate and the requirement is proportionate.

Article 15

Return from maternity leave

A woman on maternity leave shall be entitled, after the end of her period of maternity leave, to return to her job or to an equivalent post on terms and conditions which are no less favourable to her and to benefit from any improvement in working conditions to which she would have been entitled during her absence.

Article 16

Paternity and adoption leave

This Directive is without prejudice to the right of Member States to recognise distinct rights to paternity and/or adoption leave. Those Member States which recognise such rights shall take the necessary measures to protect working men and women against dismissal due to exercising those rights and ensure that, at the end of such leave, they are entitled to return to their jobs or to equivalent posts on terms and conditions which are no less favourable to them, and to benefit from any improvement in working conditions to which they would have been entitled during their absence.

TITLE III

HORIZONTAL PROVISIONS

CHAPTER 1

Remedies and enforcement

Section 1

Remedies

Article 17

Defence of rights

1. Member States shall ensure that, after possible recourse to other competent authorities including where they deem it appropriate conciliation procedures, judicial procedures for the enforcement of obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.

2. Member States shall ensure that associations, organisations or other legal entities which have, in accordance with the criteria laid down by their national law, a legitimate interest in ensuring that the provisions of this Directive are complied with, may engage, either on behalf or in support of the complainant, with his/her approval, in any judicial and/or administrative procedure provided for the enforcement of obligations under this Directive.

3. Paragraphs 1 and 2 are without prejudice to national rules relating to time limits for bringing actions as regards the principle of equal treatment.

Article 18

Compensation or reparation

Member States shall introduce into their national legal systems such measures as are necessary to ensure real and effective compensation or reparation as the Member States so determine for the loss and damage sustained by a person injured as a result of discrimination on grounds of sex, in a way which is dissuasive and proportionate to the damage suffered. Such compensation or reparation may not be restricted by the fixing of a prior upper limit, except in cases where the employer can prove that the only damage suffered by an applicant as a result of discrimination within the meaning of this Directive is the refusal to take his/her job application into consideration.

Section 2

Burden of proof

Article 19

Burden of proof

1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence which are more favourable to plaintiffs.

3. Member States need not apply paragraph 1 to proceedings in which it is for the court or competent body to investigate the facts of the case.

4. Paragraphs 1, 2 and 3 shall also apply to:

(a) the situations covered by Article 141 of the Treaty and, insofar as discrimination based on sex is concerned, by Directives 92/85/EEC and 96/34/EC;

(b) any civil or administrative procedure concerning the public or private sector which provides for means of redress under national law pursuant to the measures referred to in (a) with the exception of out-of-court procedures of a voluntary nature or provided for in national law.

5. This Article shall not apply to criminal procedures, unless otherwise provided by the Member States.

CHAPTER 2

Promotion of equal treatment — dialogue

Article 20

Equality bodies

1. Member States shall designate and make the necessary arrangements for a body or bodies for the promotion, analysis, monitoring and support of equal treatment of all persons without discrimination on grounds of sex. These bodies may form part of agencies with responsibility at national level for the defence of human rights or the safeguard of individuals' rights.

2. Member States shall ensure that the competences of these bodies include:

(a) without prejudice to the right of victims and of associations, organisations or other legal entities referred to in Article 17(2), providing independent assistance to victims of discrimination in pursuing their complaints about discrimination;

(b) conducting independent surveys concerning discrimination;

(c) publishing independent reports and making recommendations on any issue relating to such discrimination;

(d) at the appropriate level exchanging available information with corresponding European bodies such as any future European Institute for Gender Equality.

Article 21

Social dialogue

1. Member States shall, in accordance with national traditions and practice, take adequate measures to promote social dialogue between the social partners with a view to fostering equal treatment, including, for example, through the monitoring of practices in the workplace, in access to employment, vocational training and promotion, as well as through the monitoring of collective agreements, codes of conduct, research or exchange of experience and good practice.

2. Where consistent with national traditions and practice, Member States shall encourage the social partners, without prejudice to their autonomy, to promote equality between men and women, and flexible working arrangements, with the aim of facilitating the reconciliation of work and private life, and to conclude, at the appropriate level, agreements laying down anti-discrimination rules in the fields referred to in Article 1 which fall within the scope of collective bargaining. These agreements shall respect the provisions of this Directive and the relevant national implementing measures.

3. Member States shall, in accordance with national law, collective agreements or practice, encourage employers to promote equal treatment for men and women in a planned and systematic way in the workplace, in access to employment, vocational training and promotion.

4. To this end, employers shall be encouraged to provide at appropriate regular intervals employees and/or their representatives with appropriate information on equal treatment for men and women in the undertaking.

Such information may include an overview of the proportions of men and women at different levels of the organisation; their pay and pay differentials; and possible measures to improve the situation in cooperation with employees' representatives.

Article 22

Dialogue with non-governmental organisations

Member States shall encourage dialogue with appropriate non-governmental organisations which have, in accordance with their national law and practice, a legitimate interest in contributing to

the fight against discrimination on grounds of sex with a view to promoting the principle of equal treatment.

CHAPTER 3

General horizontal provisions

Article 23

Compliance

Member States shall take all necessary measures to ensure that:

(a) any laws, regulations and administrative provisions contrary to the principle of equal treatment are abolished;

(b) provisions contrary to the principle of equal treatment in individual or collective contracts or agreements, internal rules of undertakings or rules governing the independent occupations and professions and workers' and employers' organisations or any other arrangements shall be, or may be, declared null and void or are amended;

(c) occupational social security schemes containing such provisions may not be approved or extended by administrative measures.

Article 24

Victimisation

Member States shall introduce into their national legal systems such measures as are necessary to protect employees, including those who are employees' representatives provided for by national laws and/or practices, against dismissal or other adverse treatment by the employer as a reaction to a complaint within the undertaking or to any legal proceedings aimed at enforcing compliance with the principle of equal treatment.

Article 25

Penalties

Member States shall lay down the rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive, and shall take all measures necessary to ensure that they are applied. The penalties, which may comprise the payment of compensation to the victim, must be effective, proportionate and dissuasive. The Member States shall notify those provisions to the Commission by 5 October 2005 at the latest and shall notify it without delay of any subsequent amendment affecting them.

Article 26

Prevention of discrimination

Member States shall encourage, in accordance with national law, collective agreements or practice, employers and those responsible for access to vocational training to take effective measures to prevent all forms of discrimination on grounds of sex, in particular harassment and sexual harassment in the workplace, in access to employment, vocational training and promotion.

Article 27

Minimum requirements

1. Member States may introduce or maintain provisions which are more favourable to the protection of the principle of equal treatment than those laid down in this Directive.

2. Implementation of this Directive shall under no circumstances be sufficient grounds for a reduction in the level of protection of workers in the areas to which it applies, without prejudice to the Member States' right to respond to changes in the situation by introducing laws, regulations and administrative provisions which differ from those in force on the notification of this Directive, provided that the provisions of this Directive are complied with.

Article 28

Relationship to Community and national provisions

1. This Directive shall be without prejudice to provisions concerning the protection of women, particularly as regards pregnancy and maternity.

2. This Directive shall be without prejudice to the provisions of Directive 96/34/EC and Directive 92/85/EEC.

Article 29

Gender mainstreaming

Member States shall actively take into account the objective of equality between men and women when formulating and implementing laws, regulations, administrative provisions, policies and activities in the areas referred to in this Directive.

Article 30

Dissemination of information

Member States shall ensure that measures taken pursuant to this Directive, together with the provisions already in force, are brought to the attention of all the persons concerned by all suitable means and, where appropriate, at the workplace.

TITLE IV

FINAL PROVISIONS

Article 31

Reports

1. By 15 February 2011, the Member States shall communicate to the Commission all the information necessary for the Commission to draw up a report to the European Parliament and the Council on the application of this Directive.

2. Without prejudice to paragraph 1, Member States shall communicate to the Commission, every four years, the texts of any measures adopted pursuant to Article 141(4) of the Treaty, as well as reports on these measures and their implementation. On the basis of that information, the Commission will adopt and publish every four years a report establishing a comparative assessment of any measures in the light of Declaration No 28 annexed to the Final Act of the Treaty of Amsterdam.

3. Member States shall assess the occupational activities referred to in Article 14(2), in order to decide, in the light of social developments, whether there is justification for maintaining the exclusions concerned. They shall notify the Commission of the results of this assessment periodically, but at least every 8 years.

Article 32

Review

By 15 February 2011 at the latest, the Commission shall review the operation of this Directive and if appropriate, propose any amendments it deems necessary.

Article 33

Implementation

Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 15 August 2008 at the latest or shall ensure, by that date, that management and labour introduce the requisite provisions by way of agreement. Member States may, if necessary to take account of particular difficulties, have up to one additional year to comply with this Directive. Member States shall take all necessary steps to be able to guarantee the results imposed by this Directive. They shall forthwith communicate to the Commission the texts of those measures.

When Member States adopt these measures, they shall contain a reference to this Directive or be accompanied by such reference on the occasion of their official publication. They shall also include a statement that references in existing laws, regulations and administrative provisions to the Directives repealed by this Directive shall be construed as references to this Directive. Member States shall determine how such reference is to be made and how that statement is to be formulated.

The obligation to transpose this Directive into national law shall be confined to those provisions which represent a substantive change as compared with the earlier Directives. The obligation to transpose the provisions which are substantially unchanged arises under the earlier Directives.

Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

Article 34

Repeal

1. With effect from 15 August 2009 Directives 75/117/EEC, 76/207/EEC, 86/378/EEC and 97/80/EC shall be repealed without prejudice to the obligations of the Member States relating to the time-limits for transposition into national law and application of the Directives set out in Annex I, Part B.

2. References made to the repealed Directives shall be construed as being made to this Directive and should be read in accordance with the correlation table in Annex II.

Article 35

Entry into force

This Directive shall enter into force on the 20th day following its publication in the *Official Journal of the European Union*.

Article 36

Addressees

This Directive is addressed to the Member States.

COUNCIL DIRECTIVE 2004/113/EC

of 13 December 2004

implementing the principle of equal treatment between men and women in the access to and supply of goods and services

THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community and in particular Article 13(1) thereof,

Having regard to the proposal from the Commission,

Having regard to the Opinion of the European Parliament [1],

Having regard to the Opinion of the European Economic and Social Committee [2],

Having regard to the opinion of the Committee of the Regions [3],

Whereas:

(1) In accordance with Article 6 of the Treaty on European Union, the Union is founded on the principles of liberty, democracy, respect for human rights and fundamental freedoms and the rule of law, principles which are common to the Member States, and respects fundamental rights as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms and as they result from the constitutional traditions common to the Member States as general principles of Community law.

(2) The right to equality before the law and protection against discrimination for all persons constitutes a universal right recognised by the Universal Declaration of Human Rights, the United Nations Convention on the Elimination of all forms of Discrimination Against Women, the International Convention on the Elimination of all forms of Racial Discrimination and the United Nations Covenants on Civil and Political Rights and on Economic, Social and Cultural Rights and by the European Convention for the Protection of Human Rights and Fundamental Freedoms, to which all Member States are signatories.

(3) While prohibiting discrimination, it is important to respect other fundamental rights and freedoms, including the protection of private and family life and transactions carried out in that context and the freedom of religion.

(4) Equality between men and women is a fundamental principle of the European Union. Articles 21 and 23 of the Charter of Fundamental Rights of the European Union prohibit any discrimination on grounds of sex and require equality between men and women to be ensured in all areas.

(5) Article 2 of the Treaty establishing the European Community provides that promoting such equality is one of the Community's essential tasks. Similarly, Article 3(2) of the Treaty requires the Community to aim to eliminate inequalities and to promote equality between men and women in all its activities.

(6) The Commission announced its intention of proposing a directive on sex discrimination outside of the labour market in its Communication on the Social Policy Agenda. Such a proposal is fully consistent with Council Decision 2001/51/EC of 20 December 2000 establishing a Programme relating to the Community framework strategy on gender equality (2001-2005) [4] covering all Community policies and aimed at promoting equality for men and women by adjusting these policies and implementing practical measures to improve the situation of men and women in society.

(7) At its meeting in Nice of 7 and 9 December 2000, the European Council called on the Commission to reinforce equality-related rights by adopting a proposal for a directive on promoting gender equality in areas other than employment and professional life.

[1] Opinion delivered on 30 March 2004 (not yet published in the Official Journal).
[2] OJ C 241, 28.9.2004, p. 44.
[3] OJ C 121, 30.4.2004, p. 27.
[4] OJ L 17, 19.1.2001, p. 22.

(8) The Community has adopted a range of legal instruments to prevent and combat sex discrimination in the labour market. These instruments have demonstrated the value of legislation in the fight against discrimination.

(9) Discrimination based on sex, including harassment and sexual harassment, also takes place in areas outside of the labour market. Such discrimination can be equally damaging, acting as a barrier to the full and successful integration of men and women into economic and social life.

(10) Problems are particularly apparent in the area of the access to and supply of goods and services. Discrimination based on sex, should therefore be prevented and eliminated in this area. As in the case of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial and ethnic origin [1], this objective can be better achieved by means of Community legislation.

(11) Such legislation should prohibit discrimination based on sex in the access to and supply of goods and services. Goods should be taken to be those within the meaning of the provisions of the Treaty establishing the European Community relating to the free movement of goods. Services should be taken to be those within the meaning of Article 50 of that Treaty.

(12) To prevent discrimination based on sex, this Directive should apply to both direct discrimination and indirect discrimination. Direct discrimination occurs only when one person is treated less favourably, on grounds of sex, than another person in a comparable situation. Accordingly, for example, differences between men and women in the provision of healthcare services, which result from the physical differences between men and women, do not relate to comparable situations and therefore, do not constitute discrimination.

(13) The prohibition of discrimination should apply to persons providing goods and services, which are available to the public and which are offered outside the area of private and family life and the transactions carried out in this context. It should not apply to the content of media or advertising nor to public or private education.

(14) All individuals enjoy the freedom to contract, including the freedom to choose a contractual partner for a transaction. An individual who provides goods or services may have a number of subjective reasons for his or her choice of contractual partner. As long as the choice of partner is not based on that person's sex, this Directive should not prejudice the individual's freedom to choose a contractual partner.

(15) There are already a number of existing legal instruments for the implementation of the principle of equal treatment between men and women in matters of employment and occupation. Therefore, this Directive should not apply in this field. The same reasoning applies to matters of self-employment insofar as they are covered by existing legal instruments. The Directive should apply only to insurance and pensions which are private, voluntary and separate from the employment relationship.

(16) Differences in treatment may be accepted only if they are justified by a legitimate aim. A legitimate aim may, for example, be the protection of victims of sex-related violence (in cases such as the establishment of single-sex shelters), reasons of privacy and decency (in cases such as the provision of accommodation by a person in a part of that person's home), the promotion of gender equality or of the interests of men or women (for example single-sex voluntary bodies), the freedom of association (in cases of membership of single-sex private clubs), and the organisation of sporting activities (for example single-sex sports events). Any limitation should nevertheless be appropriate and necessary in accordance with the criteria derived from case law of the Court of Justice of the European Communities.

(17) The principle of equal treatment in the access to goods and services does not require that facilities should always be provided to men and women on a shared basis, as long as they are not provided more favourably to members of one sex.

(18) The use of actuarial factors related to sex is widespread in the provision of insurance and other related financial services. In order to ensure equal treatment between men and women, the use of sex as an actuarial factor should not result in differences in individuals' premiums and benefits. To avoid a sudden readjustment of the market, the implementation of this rule should apply only to new contracts concluded after the date of transposition of this Directive.

[1] OJ L 180, 19.7.2000, p. 22.

(19) Certain categories of risks may vary between the sexes. In some cases, sex is one but not necessarily the only determining factor in the assessment of risks insured. For contracts insuring those types of risks, Member States may decide to permit exemptions from the rule of unisex premiums and benefits, as long as they can ensure that underlying actuarial and statistical data on which the calculations are based, are reliable, regularly up-dated and available to the public. Exemptions are allowed only where national legislation has not already applied the unisex rule. Five years after transposition of this Directive, Member States should re-examine the justification for these exemptions, taking into account the most recent actuarial and statistical data and a report by the Commission three years after the date of transposition of this Directive.

(20) Less favourable treatment of women for reasons of pregnancy and maternity should be considered a form of direct discrimination based on sex and therefore prohibited in insurance and related financial services. Costs related to risks of pregnancy and maternity should therefore not be attributed to the members of one sex only.

(21) Persons who have been subject to discrimination based on sex should have adequate means of legal protection. To provide a more effective level of protection, associations, organisations and other legal entities should also be empowered to engage in proceedings, as the Member States so determine, either on behalf or in support of any victim, without prejudice to national rules of procedure concerning representation and defence before the courts.

(22) The rules on the burden of proof should be adapted when there is a prima facie case of discrimination and for the principle of equal treatment to be applied effectively, the burden of proof should shift back to the defendant when evidence of such discrimination is brought.

(23) The effective implementation of the principle of equal treatment requires adequate judicial protection against victimisation.

(24) With a view to promoting the principle of equal treatment, Member States should encourage dialogue with relevant stakeholders, which have, in accordance with national law and practice, a legitimate interest in contributing to the fight against discrimination on grounds of sex in the area of access to and supply of goods and services.

(25) Protection against discrimination based on sex should itself be strengthened by the existence of a body or bodies in each Member State, with competence to analyse the problems involved, to study possible solutions and to provide concrete assistance for the victims. The body or bodies may be the same as those with responsibility at national level for the defence of human rights or the safeguarding of individuals' rights, or the implementation of the principle of equal treatment.

(26) This Directive lays down minimum requirements, thus giving the Member States the option of introducing or maintaining more favourable provisions. The implementation of this Directive should not serve to justify any regression in relation to the situation, which already prevails in each Member State.

(27) Member States should provide for effective, proportionate and dissuasive penalties in cases of breaches of the obligations under this Directive.

(28) Since the objectives of this Directive, namely to ensure a common high level of protection against discrimination in all the Member States, cannot be sufficiently achieved by the Member States and can, therefore, by reason of the scale and effects of the action, be better achieved at Community level, the Community may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(29) In accordance with paragraph 34 of the interinstitutional agreement on better law-making [1], Member States are encouraged to draw up, for themselves and in the interest of the Community, their own tables, which will, as far as possible, illustrate the correlation between the Directive and the transposition measures and to make them public,

[1] OJ C 321, 31.12.2003, p. 1.

HAS ADOPTED THIS DIRECTIVE:

CHAPTER I

GENERAL PROVISIONS

Article 1

Purpose

The purpose of this Directive is to lay down a framework for combating discrimination based on sex in access to and supply of goods and services, with a view to putting into effect in the Member States the principle of equal treatment between men and women.

Article 2

Definitions

For the purposes of this Directive, the following definitions shall apply:

(a) direct discrimination: where one person is treated less favourably, on grounds of sex, than another is, has been or would be treated in a comparable situation;

(b) indirect discrimination: where an apparently neutral provision, criterion or practice would put persons of one sex at a particular disadvantage compared with persons of the other sex, unless that provision, criterion or practice is objectively justified by a legitimate aim and the means of achieving that aim are appropriate and necessary;

(c) harassment: where an unwanted conduct related to the sex of a person occurs with the purpose or effect of violating the dignity of a person and of creating an intimidating, hostile, degrading, humiliating or offensive environment;

(d) sexual harassment: where any form of unwanted physical, verbal, non-verbal or physical conduct of a sexual nature occurs, with the purpose or effect of violating the dignity of a person, in particular when creating an intimidating, hostile, degrading, humiliating or offensive environment.

Article 3

Scope

1. Within the limits of the powers conferred upon the Community, this Directive shall apply to all persons who provide goods and services, which are available to the public irrespective of the person concerned as regards both the public and private sectors, including public bodies, and which are offered outside the area of private and family life and the transactions carried out in this context.

2. This Directive does not prejudice the individual's freedom to choose a contractual partner as long as an individual's choice of contractual partner is not based on that person's sex.

3. This Directive shall not apply to the content of media and advertising nor to education.

4. This Directive shall not apply to matters of employment and occupation. This Directive shall not apply to matters of self-employment, insofar as these matters are covered by other Community legislative acts.

Article 4

Principle of equal treatment

1. For the purposes of this Directive, the principle of equal treatment between men and women shall mean that

(a) there shall be no direct discrimination based on sex, including less favourable treatment of women for reasons of pregnancy and maternity;

(b) there shall be no indirect discrimination based on sex.

2. This Directive shall be without prejudice to more favourable provisions concerning the protection of women as regards pregnancy and maternity.

3. Harassment and sexual harassment within the meaning of this Directive shall be deemed to be discrimination on the grounds of sex and therefore prohibited. A person's rejection of, or submission to, such conduct may not be used as a basis for a decision affecting that person.

4. Instruction to direct or indirect discrimination on the grounds of sex shall be deemed to be discrimination within the meaning of this Directive.

5. This Directive shall not preclude differences in treatment, if the provision of the goods and services exclusively or primarily to members of one sex is justified by a legitimate aim and the means of achieving that aim are appropriate and necessary.

Article 5

Actuarial factors

1. Member States shall ensure that in all new contracts concluded after 21 December 2007 at the latest, the use of sex as a factor in the calculation of premiums and benefits for the purposes of insurance and related financial services shall not result in differences in individuals' premiums and benefits.

2. Notwithstanding paragraph 1, Member States may decide before 21 December 2007 to permit proportionate differences in individuals' premiums and benefits where the use of sex is a determining factor in the assessment of risk based on relevant and accurate actuarial and statistical data. The Member States concerned shall inform the Commission and ensure that accurate data relevant to the use of sex as a determining actuarial factor are compiled, published and regularly updated. These Member States shall review their decision five years after 21 December 2007, taking into account the Commission report referred to in Article 16, and shall forward the results of this review to the Commission.

3. In any event, costs related to pregnancy and maternity shall not result in differences in individuals' premiums and benefits.

Member States may defer implementation of the measures necessary to comply with this paragraph until two years after 21 December 2007 at the latest. In that case the Member States concerned shall immediately inform the Commission.

Article 6

Positive action

With a view to ensuring full equality in practice between men and women, the principle of equal treatment shall not prevent any Member State from maintaining or adopting specific measures to prevent or compensate for disadvantages linked to sex.

Article 7

Minimum requirements

1. Member States may introduce or maintain provisions which are more favourable to the protection of the principle of equal treatment between men and women than those laid down in this Directive.

2. The implementation of this Directive shall in no circumstances constitute grounds for a reduction in the level of protection against discrimination already afforded by Member States in the fields covered by this Directive.

CHAPTER II

REMEDIES AND ENFORCEMENT

Article 8

Defence of rights

1. Member States shall ensure that judicial and/or administrative procedures, including where they deem it appropriate conciliation procedures, for the enforcement of the obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.

2. Member States shall introduce into their national legal systems such measures as are necessary to ensure real and effective compensation or reparation, as the Member States so determine, for the loss and damage sustained by a person injured as a result of discrimination within the meaning of this Directive, in a way which is dissuasive and proportionate to the damage suffered. The fixing of a prior upper limit shall not restrict such compensation or reparation.

3. Member States shall ensure that associations, organisations or other legal entities, which have, in accordance with the criteria laid down by their national law, a legitimate interest in ensuring that the provisions of this Directive are complied with, may engage, on behalf or in support of the complainant, with his or her approval, in any judicial and/or administrative procedure provided for the enforcement of obligations under this Directive.

4. Paragraphs 1 and 3 shall be without prejudice to national rules on time limits for bringing actions relating to the principle of equal treatment.

Article 9

Burden of proof

1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence, which are more favourable to plaintiffs.

3. Paragraph 1 shall not apply to criminal procedures.

4. Paragraphs 1, 2 and 3 shall also apply to any proceedings brought in accordance with Article 8(3).

5. Member States need not apply paragraph 1 to proceedings in which it is for the court or other competent authority to investigate the facts of the case.

Article 10

Victimisation

Member States shall introduce into their national legal systems such measures as are necessary to protect persons from any adverse treatment or adverse consequence as a reaction to a complaint or to legal proceedings aimed at enforcing compliance with the principle of equal treatment.

Article 11

Dialogue with relevant stakeholders

With a view to promoting the principle of equal treatment, Member States shall encourage dialogue with relevant stakeholders which have, in accordance with national law and practice, a legitimate interest in contributing to the fight against discrimination on grounds of sex in the area of access to and supply of goods and services.

CHAPTER III

BODIES FOR THE PROMOTION OF EQUAL TREATMENT

Article 12

1. Member States shall designate and make the necessary arrangements for a body or bodies for the promotion, analysis, monitoring and support of equal treatment of all persons without discrimination on the grounds of sex. These bodies may form part of agencies charged at national level with the defence of human rights or the safeguard of individuals' rights, or the implementation of the principle of equal treatment.

2. Member States shall ensure that the competencies of the bodies referred to in paragraph 1 include:

(a) without prejudice to the rights of victims and of associations, organisations or other legal entities referred to in Article 8(3), providing independent assistance to victims of discrimination in pursuing their complaints about discrimination;

(b) conducting independent surveys concerning discrimination;

(c) publishing independent reports and making recommendations on any issue relating to such discrimination.

CHAPTER IV

FINAL PROVISIONS

Article 13

Compliance

Member States shall take the necessary measures to ensure that the principle of equal treatment is respected in relation to the access to and supply of goods and services within the scope of this Directive, and in particular that:

(a) any laws, regulations and administrative provisions contrary to the principle of equal treatment are abolished;

(b) any contractual provisions, internal rules of undertakings, and rules governing profit-making or non-profit-making associations contrary to the principle of equal treatment are, or may be, declared null and void or are amended.

Article 14

Penalties

Member States shall lay down the rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive and shall take all measures necessary to ensure that they are applied. The penalties, which may comprise the payment of compensation to the victim, shall be effective, proportionate and dissuasive. Member States shall notify those provisions to the Commission by 21 December 2007 at the latest and shall notify it without delay of any subsequent amendment affecting them.

Article 15

Dissemination of information

Member States shall take care that the provisions adopted pursuant to this Directive, together with the relevant provisions already in force, are brought to the attention of the persons concerned by all appropriate means throughout their territory.

Article 16

Reports

1. Member States shall communicate all available information concerning the application of this Directive to the Commission, by 21 December 2009. and every five years thereafter.

The Commission shall draw up a summary report, which shall include a review of the current practices of Member States in relation to Article 5 with regard to the use of sex as a factor in the calculation of premiums and benefits. It shall submit this report to the European Parliament and to the Council no later 21 December 2010. Where appropriate, the Commission shall accompany its report with proposals to modify the Directive.

2. The Commission's report shall take into account the viewpoints of relevant stakeholders.

Article 17

Transposition

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 21 December 2007 at the latest. They shall forthwith communicate to the Commission the text of those provisions.

When Member States adopt these measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. The methods of making such publication of reference shall be laid down by the Member States.

2. Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

Article 18

Entry into force

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Union*.

Article 19

Addressees

This Directive is addressed to the Member States.

Done at Brussels, 13 December 2004.

For the Council
The President
B. R. BOT

COUNCIL DIRECTIVE 2000/43/EC

of 29 June 2000

implementing the principle of equal treatment between persons irrespective of racial or ethnic origin

THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community and in particular Article 13 thereof,

Having regard to the proposal from the Commission [1],

Having regard to the opinion of the European Parliament [2],

Having regard to the opinion of the Economic and Social Committee [3],

Having regard to the opinion of the Committee of the Regions [4],

Whereas:

(1) The Treaty on European Union marks a new stage in the process of creating an ever closer union among the peoples of Europe.

(2) In accordance with Article 6 of the Treaty on European Union, the European Union is founded on the principles of liberty, democracy, respect for human rights and fundamental freedoms, and the rule of law, principles which are common to the Member States, and should respect fundamental rights as guaranteed by the European Convention for the protection of Human Rights and Fundamental Freedoms and as they result from the constitutional traditions common to the Member States, as general principles of Community Law.

(3) The right to equality before the law and protection against discrimination for all persons constitutes a universal right recognised by the Universal Declaration of Human Rights, the United Nations Convention on the Elimination of all forms of Discrimination Against Women, the International Convention on the Elimination of all forms of Racial Discrimination and the United Nations Covenants on Civil and Political Rights and on Economic, Social and Cultural Rights and by the European Convention for the Protection of Human Rights and Fundamental Freedoms, to which all Member States are signatories.

(4) It is important to respect such fundamental rights and freedoms, including the right to freedom of association. It is also important, in the context of the access to and provision of goods and services, to respect the protection of private and family life and transactions carried out in this context.

(5) The European Parliament has adopted a number of Resolutions on the fight against racism in the European Union.

(6) The European Union rejects theories which attempt to determine the existence of separate human races. The use of the term 'racial origin' in this Directive does not imply an acceptance of such theories.

(7) The European Council in Tampere, on 15 and 16 October 1999, invited the Commission to come forward as soon as possible with proposals implementing Article 13 of the EC Treaty as regards the fight against racism and xenophobia.

(8) The Employment Guidelines 2000 agreed by the European Council in Helsinki, on 10 and 11 December 1999, stress the need to foster conditions for a socially inclusive labour market by formulating a coherent set of policies aimed at combating discrimination against groups such as ethnic minorities.

(9) Discrimination based on racial or ethnic origin may undermine the achievement of the objectives of the EC Treaty, in particular the attainment of a high level of employment and of social protection, the raising of the standard of living and quality of life, economic and social cohesion and solidarity. It may also undermine the objective of developing the European Union as an area of freedom, security and justice.

(10) The Commission presented a communication on racism, xenophobia and anti-Semitism in December 1995.

(11) The Council adopted on 15 July 1996 Joint Action (96/443/JHA) concerning action to combat racism and xenophobia [5] under which the Member States undertake to ensure effective judicial cooperation in respect of offences based on racist or xenophobic behaviour.

(12) To ensure the development of democratic and tolerant societies which allow the participation of all persons irrespective of racial or ethnic origin, specific action in the field of discrimination based on racial or ethnic origin should go beyond access to employed and self-employed activities and cover areas such as education, social protection including social security and healthcare, social advantages and access to and supply of goods and services.

[1] Not yet published in the Official Journal.
[2] Opinion delivered on 18.5.2000 (not yet published in the Official Journal).
[3] Opinion delivered on 12.4.2000 (not yet published in the Official Journal).
[4] Opinion delivered on 31.5.2000 (not yet published in the Official Journal).
[5] OJ L 185, 24.7.1996, p. 5.

(13) To this end, any direct or indirect discrimination based on racial or ethnic origin as regards the areas covered by this Directive should be prohibited throughout the Community. This prohibition of discrimination should also apply to nationals of third countries, but does not cover differences of treatment based on nationality and is without prejudice to provisions governing the entry and residence of third-country nationals and their access to employment and to occupation.

(14) In implementing the principle of equal treatment irrespective of racial or ethnic origin, the Community should, in accordance with Article 3(2) of the EC Treaty, aim to eliminate inequalities, and to promote equality between men and women, especially since women are often the victims of multiple discrimination.

(15) The appreciation of the facts from which it may be inferred that there has been direct or indirect discrimination is a matter for national judicial or other competent bodies, in accordance with rules of national law or practice. Such rules may provide in particular for indirect discrimination to be established by any means including on the basis of statistical evidence.

(16) It is important to protect all natural persons against discrimination on grounds of racial or ethnic origin. Member States should also provide, where appropriate and in accordance with their national traditions and practice, protection for legal persons where they suffer discrimination on grounds of the racial or ethnic origin of their members.

(17) The prohibition of discrimination should be without prejudice to the maintenance or adoption of measures intended to prevent or compensate for disadvantages suffered by a group of persons of a particular racial or ethnic origin, and such measures may permit organisations of persons of a particular racial or ethnic origin where their main object is the promotion of the special needs of those persons.

(18) In very limited circumstances, a difference of treatment may be justified where a characteristic related to racial or ethnic origin constitutes a genuine and determining occupational requirement, when the objective is legitimate and the requirement is proportionate. Such circumstances should be included in the information provided by the Member States to the Commission.

(19) Persons who have been subject to discrimination based on racial and ethnic origin should have adequate means of legal protection. To provide a more effective level of protection, associations or legal entities should also be empowered to engage, as the Member States so determine, either on behalf or in support of any victim, in proceedings, without prejudice to national rules of procedure concerning representation and defence before the courts.

(20) The effective implementation of the principle of equality requires adequate judicial protection against victimisation.

(21) The rules on the burden of proof must be adapted when there is a prima facie case of discrimination and, for the principle of equal treatment to be applied effectively, the burden of proof must shift back to the respondent when evidence of such discrimination is brought.

(22) Member States need not apply the rules on the burden of proof to proceedings in which it is for the court or other competent body to investigate the facts of the case. The procedures thus referred to are those in which the plaintiff is not required to prove the facts, which it is for the court or competent body to investigate.

(23) Member States should promote dialogue between the social partners and with non-governmental organisations to address different forms of discrimination and to combat them.

(24) Protection against discrimination based on racial or ethnic origin would itself be strengthened by the existence of a body or bodies in each Member State, with competence to analyse the problems involved, to study possible solutions and to provide concrete assistance for the victims.

(25) This Directive lays down minimum requirements, thus giving the Member States the option of introducing or maintaining more favourable provisions. The implementation of this Directive should not serve to justify any regression in relation to the situation which already prevails in each Member State.

(26) Member States should provide for effective, proportionate and dissuasive sanctions in case of breaches of the obligations under this Directive.

(27) The Member States may entrust management and labour, at their joint request, with the implementation of this Directive as regards provisions falling within the scope of collective agreements, provided that the Member States take all the necessary steps to ensure that they can at all times guarantee the results imposed by this Directive.

(28) In accordance with the principles of subsidiarity and proportionality as set out in Article 5 of the EC Treaty, the objective of this Directive, namely ensuring a common high level of protection against discrimination in all the Member States, cannot be sufficiently achieved by the Member States and can therefore, by reason of the scale and impact of the proposed action, be better achieved by the Community. This Directive does not go beyond what is necessary in order to achieve those objectives,

HAS ADOPTED THIS DIRECTIVE:

CHAPTER I

GENERAL PROVISIONS

Article 1

Purpose

The purpose of this Directive is to lay down a framework for combating discrimination on the grounds of racial or ethnic origin, with a view to putting into effect in the Member States the principle of equal treatment.

Article 2

Concept of discrimination

1. For the purposes of this Directive, the principle of equal treatment shall mean that there shall be no direct or indirect discrimination based on racial or ethnic origin.

2. For the purposes of paragraph 1:

(a) direct discrimination shall be taken to occur where one person is treated less favourably than another is, has been or would be treated in a comparable situation on grounds of racial or ethnic origin;

(b) indirect discrimination shall be taken to occur where an apparently neutral provision, criterion or practice would put persons of a racial or ethnic origin at a particular disadvantage compared with other persons, unless that provision, criterion or practice is objectively justified by a legitimate aim and the means of achieving that aim are appropriate and necessary.

3. Harassment shall be deemed to be discrimination within the meaning of paragraph 1, when an unwanted conduct related to racial or ethnic origin takes place with the purpose or effect of violating the dignity of a person and of creating an intimidating, hostile, degrading, humiliating or offensive environment. In this context, the concept of harassment may be defined in accordance with the national laws and practice of the Member States.

4. An instruction to discriminate against persons on grounds of racial or ethnic origin shall be deemed to be discrimination within the meaning of paragraph 1.

Article 3

Scope

1. Within the limits of the powers conferred upon the Community, this Directive shall apply to all persons, as regards both the public and private sectors, including public bodies, in relation to:

(a) conditions for access to employment, to self-employment and to occupation, including selection criteria and recruitment conditions, whatever the branch of activity and at all levels of the professional hierarchy, including promotion;

(b) access to all types and to all levels of vocational guidance, vocational training, advanced vocational training and retraining, including practical work experience;

(c) employment and working conditions, including dismissals and pay;

(d) membership of and involvement in an organisation of workers or employers, or any organisation whose members carry on a particular profession, including the benefits provided for by such organisations;

(e) social protection, including social security and healthcare;

(f) social advantages;

(g) education;

(h) access to and supply of goods and services which are available to the public, including housing.

2. This Directive does not cover difference of treatment based on nationality and is without prejudice to provisions and conditions relating to the entry into and residence of third-country nationals and stateless persons on the territory of Member States, and to any treatment which arises from the legal status of the third-country nationals and stateless persons concerned.

Article 4

Genuine and determining occupational requirements

Notwithstanding Article 2(1) and (2), Member States may provide that a difference of treatment which is based on a characteristic related to racial or ethnic origin shall not constitute discrimination where, by reason of the nature of the particular occupational activities concerned or of the context in which they are carried out, such a characteristic constitutes a genuine and determining occupational requirement, provided that the objective is legitimate and the requirement is proportionate.

Article 5

Positive action

With a view to ensuring full equality in practice, the principle of equal treatment shall not prevent any Member State from maintaining or adopting specific measures to prevent or compensate for disadvantages linked to racial or ethnic origin.

Article 6

Minimum requirements

1. Member States may introduce or maintain provisions which are more favourable to the protection of the principle of equal treatment than those laid down in this Directive.

2. The implementation of this Directive shall under no circumstances constitute grounds for a reduction in the level of protection against discrimination already afforded by Member States in the fields covered by this Directive.

CHAPTER II

REMEDIES AND ENFORCEMENT

Article 7

Defence of rights

1. Member States shall ensure that judicial and/or administrative procedures, including where they deem it appropriate conciliation procedures, for the enforcement of obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.

2. Member States shall ensure that associations, organisations or other legal entities, which have, in accordance with the criteria laid down by their national law, a legitimate interest in ensuring that the provisions of this Directive are complied with, may engage, either on behalf or in support of the complainant, with his or her approval, in any judicial and/or administrative procedure provided for the enforcement of obligations under this Directive.

3. Paragraphs 1 and 2 are without prejudice to national rules relating to time limits for bringing actions as regards the principle of equality of treatment.

Article 8

Burden of proof

1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence which are more favourable to plaintiffs.

3. Paragraph 1 shall not apply to criminal procedures.

4. Paragraphs 1, 2 and 3 shall also apply to any proceedings brought in accordance with Article 7(2).

5. Member States need not apply paragraph 1 to proceedings in which it is for the court or competent body to investigate the facts of the case.

Article 9

Victimisation

Member States shall introduce into their national legal systems such measures as are necessary to protect individuals from any adverse treatment or adverse consequence as a reaction to a complaint or to proceedings aimed at enforcing compliance with the principle of equal treatment.

Article 10

Dissemination of information

Member States shall take care that the provisions adopted pursuant to this Directive, together with the relevant provisions already in force, are brought to the attention of the persons concerned by all appropriate means throughout their territory.

Article 11

Social dialogue

1. Member States shall, in accordance with national traditions and practice, take adequate measures to promote the social dialogue between the two sides of industry with a view to fostering equal treatment, including through the monitoring of workplace practices, collective agreements, codes of conduct, research or exchange of experiences and good practices.

2. Where consistent with national traditions and practice, Member States shall encourage the two sides of the industry without prejudice to their autonomy to conclude, at the appropriate level, agreements laying down anti-discrimination rules in the fields referred to in Article 3 which fall within the scope of collective bargaining. These agreements shall respect the minimum requirements laid down by this Directive and the relevant national implementing measures.

Article 12

Dialogue with non-governmental organisations

Member States shall encourage dialogue with appropriate non-governmental organisations which have, in accordance with their national law and practice, a legitimate interest in contributing to the fight against discrimination on grounds of racial and ethnic origin with a view to promoting the principle of equal treatment.

CHAPTER III

BODIES FOR THE PROMOTION OF EQUAL TREATMENT

Article 13

1. Member States shall designate a body or bodies for the promotion of equal treatment of all persons without discrimination on the grounds of racial or ethnic origin. These bodies may form part of agencies charged at national level with the defence of human rights or the safeguard of individuals' rights.

2. Member States shall ensure that the competences of these bodies include:

— without prejudice to the right of victims and of associations, organisations or other legal entities referred to in Article 7(2), providing independent assistance to victims of discrimination in pursuing their complaints about discrimination,

— conducting independent surveys concerning discrimination,

— publishing independent reports and making recommendations on any issue relating to such discrimination.

CHAPTER IV

FINAL PROVISIONS

Article 14

Compliance

Member States shall take the necessary measures to ensure that:

(a) any laws, regulations and administrative provisions contrary to the principle of equal treatment are abolished;

(b) any provisions contrary to the principle of equal treatment which are included in individual or collective contracts or agreements, internal rules of undertakings, rules governing profit-making or non-profit-making associations, and rules governing the independent professions and workers' and employers' organisations, are or may be declared, null and void or are amended.

Article 15

Sanctions

Member States shall lay down the rules on sanctions applicable to infringements of the national provisions adopted pursuant to this Directive and shall take all measures necessary to ensure that they are applied. The sanctions, which may comprise the payment of compensation to the victim, must be effective, proportionate and dissuasive. The Member States shall notify those provisions to the Commission by 19 July 2003 at the latest and shall notify it without delay of any subsequent amendment affecting them.

Article 16

Implementation

Member States shall adopt the laws, regulations and administrative provisions necessary to comply with this Directive by 19 July 2003 or may entrust management and labour, at their joint request, with the implementation of this Directive as regards provisions falling within the scope of collective agreements. In such cases, Member States shall ensure that by 19 July 2003, management and labour introduce the necessary measures by agreement, Member States being required to take any necessary measures to enable them at any time to be in a position to guarantee the results imposed by this Directive. They shall forthwith inform the Commission thereof.

When Member States adopt these measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. The methods of making such a reference shall be laid down by the Member States.

Article 17

Report

1. Member States shall communicate to the Commission by 19 July 2005, and every five years thereafter, all the information necessary for the Commission to draw up a report to the European Parliament and the Council on the application of this Directive.

2. The Commission's report shall take into account, as appropriate, the views of the European Monitoring Centre on Racism and Xenophobia, as well as the viewpoints of the social partners and relevant non-governmental organisations. In accordance with the principle of gender mainstreaming, this report shall, *inter alia*, provide an assessment of the impact of the measures taken on women and men. In the light of the information received, this report shall include, if necessary, proposals to revise and update this Directive.

Article 18

Entry into force

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Communities*.

Assisted by Mr Régis BRILLAT, Executive Secretary,

Having deliberated on 1 April 2008 and 3 June 2008,

On the basis of the report presented by Mrs Polonca Končar,

Delivers the following decision adopted on this last date:

PROCEDURE

1. The complaint dated 15 February 2007 was registered on 20 February 2007. The Mental Disability Advocacy Centre (MDAC) alleges that the situation in Bulgaria is not in conformity with Article 17§2 alone and in conjunction with Article E of the Revised European Social Charter (the "Revised Charter") because children living in homes for intellectually disabled children in Bulgaria receive no education.

2. On 26 June 2007, the Committee declared the complaint admissible.

3. In accordance with Article 7§1 and §2 of the Protocol providing for a system of collective complaints ("the Protocol") and with the Committee's decision on the admissibility of the complaint, on 2 July 2007 the Executive Secretary communicated the text of the admissibility decision to the Bulgarian Government ("the Government"), the MDAC, the Contracting Parties to the Protocol and the states that have made a declaration in accordance with Article D§2 of the Revised Charter, and on 6 July 2007 to the international employers' organisations and trade unions referred to in Article 27§2 of the 1961 European Social Charter, i.e. the European Trade Union Confederation (ETUC), Businesseurope (former UNICE) and the International Organisation of Employers (IOE).

4. In accordance with Article 31§1 of the Committee's Rules, the Committee set a deadline of 28 September 2007 for presentation of the Government's submissions on the merits. It also set 28 September 2007 as the deadline for the Contracting Parties to the Protocol, the states that have made a declaration in accordance with Article D§2 of the Revised Charter and the international employers' organisations and trade unions referred to in paragraph 2 of Article 27 of the 1961 European Social Charter to submit any observations on the merits.

5. The Government's submissions on the merits of the complaint were registered on 1 October 2007.

6. In accordance with Article 31§2 of the Rules, the President of the Committee invited the MDAC to reply to these submissions by 30 November 2007. The MDAC's reply was registered on 30 November 2007 and forwarded to the Government on 6 December 2007.

SUBMISSIONS OF THE PARTIES

a. The complainant organisation

7. The MDAC asks the Committee to find that the Government's failure to provide education for children with moderate, severe or profound intellectual disabilities living in homes for mentally disabled children in Bulgaria violates Article 17§2 of the Revised Charter, alone and in conjunction with Article E.

b. The Government

8. The Government invites the Committee:

i. to recognise its efforts to secure equal access to education;

ii. to note the legal and practical steps that have been taken to overcome the problems of offering children living in homes for mentally disabled children access to schooling, and its political commitment to ensuring that these continue to be implemented and put into practice, in accordance with the objectives of the Revised Charter and subject to available resources;

iii. to reject the MDAC's application as unfounded.

RELEVANT DOMESTIC LAW

9. The relevant provisions of Bulgarian law concerning access to education for mentally disabled children are as follows:

10. The Constitution of the Republic of Bulgaria of 13 July 1991;

Articles 6 and 53 of the Constitution read:

Article 6

"1. All persons are born free and equal in dignity and rights.

2. All persons shall be equal before the law. There shall be no privileges or restriction of rights on grounds of race, national or social origin, ethnic affiliation, sex, origin, religion, education, opinion, political affiliation, personal or social status or wealth."

Article 53

"1. Everyone shall have the right to education.

2. School attendance up to the age of 16 shall be compulsory.

3. Primary and secondary education in state and municipal schools shall be free. In circumstances established by law, higher educational establishments shall provide education free of charge.

4. Higher educational establishments shall enjoy academic autonomy.

5. Citizens and organisations shall be free to found schools in accordance with conditions and procedures established by law. The education they provide shall comply with the requirements of the state.

6. The state shall promote education by opening and financing schools, by supporting capable school and university students, and by providing opportunities for occupational training and retraining. It shall exercise control over all kinds and levels of schooling.

11. National Education Act 1991, as amended by the Act of 2002

Article 4:

"(1) All citizens shall have the right to education. They shall be entitled to constantly heighten their education and qualifications.
(2) Restrictions or privileges based on race, nationality, sex, ethnic and social origin, religion and social status shall be inadmissible."

Article 7:

"(1) Schooling up to the age of 16 shall be compulsory.
(2) (Amended Official Journal (OJ) No. 36/1998) Schooling shall start at the age of 7, where such age shall have been attained in the year of enrolment in the first (1st) grade. Children who have turned 6 shall also be entitled to enrolment in the first (1st) grade provided their physical and mental development, at their parents' or guardians' discretion, so allows."

Article 9:

"(1) Every citizen shall exercise his right to education in the school and type of education of his choice in keeping with his personal preferences and potential.
(2) The right pursuant to Paragraph (1) for minors shall be used by their parents or guardians."

Article 14:

"Schools and kindergartens shall create conditions for the normal physical and mental development of children and pupils."

Article 16:

"State educational requirements shall be applicable to: (…)
8. (Amended, OJ No. 90/2002) teaching of children and pupils with special educational needs and/or chronic conditions"

Article 21:

(Amended, OJ No. 90/2002)
"(1) Children with special educational needs and/or chronic conditions shall be enrolled at kindergartens pursuant to Article 18.
(2) Kindergartens under Paragraph (1) shall be obligated to accept children with special educational needs and/or chronic conditions.
(3) Special kindergartens and auxiliary units may also be established for children with special educational needs and/or chronic conditions.
(4) Children with special educational needs and/or chronic conditions shall be enrolled in the kindergartens and auxiliary units under Paragraph (3) only where all other opportunities for education at state-owned or municipal kindergartens and auxiliary units have been exhausted and where the parents or guardians have expressed such a wish in writing."

Article 27:

(Amended, OJ No. 90/2002)

"(1) Children with special educational needs and/or chronic conditions shall be offered integrated education at the schools under Article 26, Paragraph (1), Items 1 through 10.

(2) Schools under Paragraph (1) shall be obligated to accept children with special educational needs and/or chronic conditions.

(3) Special schools and auxiliary units may also be established for children with special educational needs and/or chronic conditions.

(4) Children with special educational needs and/or chronic conditions shall be enrolled in the schools and auxiliary units under Paragraph (3) only where all other opportunities for education at state-owned or municipal schools have been exhausted and where the parents or guardians have expressed such a wish in writing."

Article 43:

"(1) (Previous Article 43, OJ 36/1998, amended, OJ No. 90/2002) The Ministry of Education and Science shall ensure favourable conditions for identifying and training particularly gifted children. It shall establish furtherance funds to award scholarships to gifted children, as well as scholarship funds for children with chronic ailments and for children with special educational needs.

(2) (New, OJ No. 36/1998) The Ministry of Education and Science shall ensure additional educational opportunities for potential drop-out students."

12. Integration of Disabled Persons Act

Act of 14 September 2006 amending and extending the Integration of Disabled Persons Act of 17 September 2004.

Chapter II - Education and vocational training

Article 16

"(1) Teams for the comprehensive educational assessment and integrated education of children with disabilities shall be set up at the regional inspectorates of the Ministry of Education and Science.

(2) Special integrated education centres, under the authority of the Ministry of Education and Science, shall be opened with a view to facilitating the integrated education of children with disabilities."

Article 17

"The Ministry of Education and Science shall provide:

(1) Education for children with disabilities at pre-school and school age in the schools and kindergartens referred to in Article 26, paragraph (1)3, and Article 18 of the National Education Act;

(2) An environment conducive to integrated education for children with disabilities;

(3) Appropriate remedial speech and hearing therapy and corrective treatment for children suffering from partial or total loss of visual acuity;

(4) Modern schoolbooks, teaching materials, technologies and technical tools for the education of children with disabilities up to the age of 18 or until the end of their secondary education;

(5) Vocational training for children with disabilities."

Article 18

"The Ministry of Education and Science shall make provision for the education of children with special educational needs who are not integrated into the mainstream education environment."

13. Implementing regulation of the National Education Act (revised)
(published on 30 July 1999 and amended on several occasions, the last on 8 November 2005)

Article 6a

(new Article, adopted in 2003)
"The team in charge of assessing difficult cases in terms of educational needs may:
…
(4) single out up to two pupils with special educational needs per class; these pupils shall be transferred to the least crowded classes.
…
(8) … (b) facilitate the integrated education of children with special educational needs by co-ordinating, supervising and providing methodological assistance to teams in kindergartens and schools into which children with special educational needs and/or chronic conditions have been integrated."

Article 7

(text amended in 2003)
"Kindergartens, schools and auxiliary units shall work with funding authorities to provide an environment conducive to the integrated education of children with special educational needs and/or chronic conditions."

Article 26

"(1) Kindergartens are preparatory institutions forming part of the national education system, in which children are educated and taught from the age of three up to their entry into the first year of primary school.
(2) (text amended in 2003) Children with special educational needs and/or chronic conditions shall be integrated into the kindergartens described in paragraph (1) above, which are legally required to accept them.

Article 27

"(1) Kindergartens may be:
1. full-time, part-time or organised on a weekly basis;
2. (text amended in 2003)special schools for children with special educational needs and/or chronic conditions."

Article 28

(text amended in 2003)
"(2) The kindergartens referred to in Article 27, paragraph (1)2, shall admit children with special educational needs and/or chronic conditions, subject to the written consent of parents or guardians, where all other possibilities of attending the kindergartens referred to in Article 27 (1)1 have been exhausted.
(3) The kindergartens referred to in Article 27 (1)1 shall cater for up to two children with special educational needs per group."

Article 50

"(6) (text amended in 2001) State and municipal schools shall cater for up to five pupils with chronic physical or sensory conditions per class. Vocational schools shall also cater for children placed in orphanages.
(7) (text amended in 2003) In cases other than those provided for in paragraph (6) above, state and municipal schools may also provide integrated education for two pupils per class with special educational needs on a proposal by the team in charge of comprehensive educational assessment."

14. Order no 6 on children with special educational needs and/or chronic conditions (published in August 2002)

Article 2

(1) Children with special educational needs and/or chronic conditions shall be given an integrated education in mainstream kindergartens, schools and auxiliary units.
(2) Children with special educational needs and/or chronic conditions may be educated in special kindergartens, schools and auxiliary units.
(3) Children shall attend special schools only where all other possibilities of attending mainstream kindergartens and schools have been exhausted, subject to the explicit consent of parents or tutors."

15. Case-law

Case no 13789/06, Sofia court of first instance, decision of 18 May 2007

"The court finds that the requirement for the Ministry of Education to create a conducive environment is a prerequisite to integrated schooling. Therefore, the equal right to education of children with disabilities is only effective if such an environment is created in every school … and the failure to create such an environment amounts in itself to unequal treatment of children with disabilities in that they do not then have the same opportunities as children without disabilities" (pages 7-8).

THE LAW

THE ALLEGED VIOLATION OF ARTICLES 17§2 AND E OF THE REVISED SOCIAL CHARTER

16. Article 17§2 of the Revised Charter reads:

Article 17 – The right of children and young persons to social, legal and economic protection

Part I: "*Children and young persons have the right to appropriate social, legal and economic protection*."

Part II: "*With a view to ensuring the effective exercise of the right of children and young persons to grow up in an environment which encourages the full development of their personality and of their physical and mental capacities, the Parties undertake, either directly or in co-operation with public and private organisations, to take all appropriate and necessary measures designed*:

(…)

2 to provide to children and young persons a free primary and secondary education as well as to encourage regular attendance at schools."

17. Article E of the Revised Charter reads:

Article E – Non-discrimination

"*The enjoyment of the rights set forth in this Charter shall be secured without discrimination on any ground such as race, colour, sex, language, religion, political or other opinion, national extraction or social origin, health, association with a national minority, birth or other status*."

A. Submissions of the parties

a. The complainant organisation

18. The MDAC maintains that Bulgaria's failure to provide education for the children falling within the subject matter of the scope of the complaint violates its obligations under Article 17§2 of the Revised Charter, alone and in conjunction with Article E. It argues that Article 17§2 of the Revised Charter requires the Government to provide primary education for all children, including children with intellectual disabilities.

19. The MDAC restricts the scope of its complaint to the situation of children with moderate, severe or profound intellectual disabilities living in homes for mentally disabled children (hereafter "HMDCs"), thus excluding children with mild intellectual disabilities and those not living in HMDCs.

20. The MDAC states that HMDCs come under the authority of the Ministry of Labour and Social Policy. They admit children aged over 2. Most of these children have been diagnosed as having moderate, severe or profound intellectual disabilities and have been either abandoned by their parents or orphaned. The HMDCs are residential establishments open throughout the year, in which the children spend all their time. There are other kinds of centres for intellectually disabled children in Bulgaria but they are not the subject of the complaint. The complaint concerns the 28 HMDCs throughout the country. According to the MDAC no education is provided in HMDCs and the Government has made little effort to educate children in these homes.

21. According to the MDAC, in order to meet certain quality standards education systems must satisfy the criteria of availability, accessibility, acceptability and adaptability, as laid down by the UN Committee on Economic, Social and Cultural Rights in its general comment no. 13 on the right to education (E/C.12/1999/10 of 8 December 1999, §6).

22. The MDAC states that until a reform in 2002, children with moderate, severe or profound intellectual disabilities were considered to be uneducable and hence given no access to education. Under the National Education Act 2002, the Bulgarian state has undertaken to provide these children with education.

23. The complaint is based on various sources, in particular the 2005 report of the Bulgarian child protection agency. This included figures on the situation in 18 HMDCs. According to the data in this report, only 32 children (i.e. 2.8%) living in the HMDCs which were visited were being taught in mainstream primary schools while 39 children (i.e. 3.4%) were in special schools, meaning that a total of only 71 children were attending any kind of school. In certain establishments, as in Sofia, none of the children attended schools, whereas in others, such as the one in Turnava, all the children were in school, though this was solely attributable to the personal initiative of the director. The MDAC claims that certain children are refused admission even though they want to go to school and are apt, in that they are able to write

their full names and ages despite never having attended school. It concludes that the existing education system in Bulgaria is clearly depriving these children of access to education, which is a direct infringement of their right to education without discrimination.

24. The complainant also alleges that ordinary schools are not equipped to the abilities and needs of children from HMDCs. Teacher training is inadequate and teaching materials for intellectually disabled children are either totally unavailable or unsuited to their needs. According to the MDAC, this means that Bulgaria is in direct violation of the right to education and directly discriminates against these children on account of their disability.

25. In respect of the children who do not attend an outside educational structure, the complainant highlights that HMDCs are not educational institutions and therefore the children are ineligible for a diploma attesting completion of primary school education. They are therefore legally prevented from entering secondary education. The MDAC concludes that the treatment of children in HMDCs does not satisfy the criterion of the acceptability of the education provided and cannot be considered to be a form of education.

26. Finally, the MDAC maintains that the Government cannot rely on lack of resources or argue that it is implementing these rights gradually to show that it is not discriminating against disabled children with regard to their access to education. It notes firstly that certain measures are not expensive, such as informing directors of HMDCs of the contents of the 2002 legislation so that they know that from now on the children in their charge are not only “educable” but also entitled to be educated in ordinary or special schools. The same applies where it comes to informing the municipal officials to whom HMDCs are accountable as well as local schools. The MDAC states that, in practice, HMDC directors and municipal officials know little or nothing about the changes created by the 2002 legislation. The MDAC also states that the Government has chosen to use the resources that are available for educating disabled children to improve access to schools for children with physical disabilities while spending very little on the education of intellectually disabled children. According to the MDAC, the Government's failure to provide education for children with moderate, severe or profound intellectual disabilities is the result of serious and unreasonable policy failures and not of the alleged resource shortages.

b. The Government

27. The Government describes its efforts to implement the right of intellectually disabled children to equal access to education.

28. In particular, it argues that Bulgarian legislation offers sufficient safeguards. Article 6 of the Constitution embodies the principle of equality before the law and prohibits all discrimination. Article 53 establishes the right to education. The Government also refers to the legislative and practical steps it has taken to overcome the problems of access to education of children living in HMDCs. In particular, the National Education Act 1991, as amended by the

Act of 10 September 2002, requires schools to admit disabled children and create the conditions for their integration. The Government has also adopted several action plans. It refers specifically to the national plan for integrating children with special educational needs and/or chronic conditions into the national education system, approved by the government in December 2003, which implements Regulation No. 6 and lays down a timetable for integration from 1 January 2004 to 1 January 2007. It also cites the action plans on Bulgarian mental health policy (2004-2012) and on equal opportunities for disabled persons (2006-2007 and 2008-2015).

29. The Government also refers to its political commitment to these measures and to ensuring that they are implemented, in accordance with the Revised Charter and subject to available resources.

30. The Government says that the trend is towards integrating most children with disabilities into mainstream schools. Its education policy is to reduce the number of special schools and increase the number of children with special educational needs in mainstream schools. This calls for the adaptation of premises to these children's specific needs, appropriate school textbooks and other written material and equipment, and specialist staff qualified to work with children with disabilities. Teams to assess the needs of disabled children are gradually being introduced. Training has been organised for regional education inspectorates, nursery school heads, teachers and representatives of local government.

31. The Government acknowledges that a high number of children do not attend school or leave school very early. However this does not just concern intellectually disabled children and so, according to the Government, the MDAC's contention that such children are being systematically discriminated against is unfounded.

32. The Government reiterates that it has a consistent and clearly defined policy on the integration of children living in special institutions, which extends to its education policy. This is an ongoing process, the visible results of which will become evident in the long term and which will require considerable financial input. The Government hopes to achieve the Revised Charter's objectives "within a reasonable period of time", with measurable progress and with the fullest possible use of available resources.

B – Assessment of the Committee

i – The alleged violation of Article 17§2 of the Revised Charter

Preliminary remarks

33. Referring to its admissibility decision and the issue of the delimitation of the material scope of Articles 15 and 17, the Committee considers that the fact that the right to education of persons with disabilities is guaranteed by

Article 15§1 of the Revised Charter does not exclude that relevant issues relating to the right of children and young persons with disabilities to education may not be examined in the framework of Article 17§2, *inter alia*.

34. The Committee begins by pointing out that both the first and the second paragraphs of Article 17 of the Revised Charter guarantee children's right to education. The Committee considers that Article 17§2 applies fully in this case as it covers all children and hence concerns children with intellectual disabilities. The Committee recalls in this respect that:

"Therefore Article 17 as a whole requires states to establish and maintain an education system that is both accessible and effective. In assessing whether the system is effective the Committee will examine under Article 17: … whether, considering that equal access to education should be guaranteed for all children, particular attention is paid to vulnerable groups such as children from minorities, children seeking asylum, refugee children, children in hospital, children in care, pregnant teenagers, teenage mothers, children deprived of their liberty etc. and whether necessary special measures have been taken to ensure equal access to education for these children" *(Conclusions 2003, Bulgaria, Article 17§2).*

"States need to ensure a high quality of teaching and to ensure that there is equal access to education for all children, in particular vulnerable groups" *(Conclusions 2005, Bulgaria, Article 17§2).*

35. Firstly, as regards taking special account of children with disabilities, the Committee points out that, while it is acceptable for a distinction to be made between children with and without disabilities in the application of Article 17§2, the integration of children with disabilities into mainstream schools in which arrangements are made to cater for their special needs should be the norm and teaching in specialised schools must be the exception (Autism-Europe v. France, Complaint No.13/2000, decision on the merits of 4 November 2003, §49).

36. In addition, for any special education that is set up to be in conformity with Article 17§2, the children concerned must be given sufficient instruction and training and complete their schooling in equivalent proportions to those of children in mainstream schools (Conclusions 2005, Bulgaria, Article 17§2).

37. The Committee considers that all education provided by states must fulfil the criteria of availability, accessibility, acceptability and adaptability. It notes in this respect General Comment No. 13 of the Committee on Economic, Social and Cultural Rights of the United Nations International Covenant on Economic, Social and Cultural Rights on the right to education (document E/C.12/1999/10 of 8 December 1999, §6). In the present case, the criteria of accessibility and adaptability are at stake, i.e. educational institutions and curricula have to be accessible to everyone, without discrimination and teaching has to be designed to respond to children with special needs.

38. As regards the respect for the right to education of intellectually disabled children residing in HMDCs, the Committee takes note of the efforts made by the Government, particularly through the adoption of legislation and the setting up of action plans. It considers this to be a necessary first step but

one that is insufficient to bring a situation into conformity with the Revised Charter. It reiterates that "the aim and purpose of the Charter, being a human rights protection instrument, is to protect rights not merely theoretically, but also in fact" (International Commission of Jurists v. Portugal, Complaint No. 1/1998, decision on the merits of 10 September 1999, §32). Consequently, the manner in which this legislation and these action plans are implemented is decisive.

39. The Committee points out that when it is exceptionally complex and expensive to secure one of the rights protected by the Revised Charter, the measures taken by the state to achieve the Revised Charter's aims must fulfil the following three criteria: "(i) a reasonable timeframe, (ii) a measurable progress and (iii) a financing consistent with the maximum use of available resources" (European Roma Rights Centre v. Bulgaria, Complaint No. 31/2005, decision on the merits of 18 October 2006, §37; Autism-Europe v. France, Complaint No.13/2000, decision on the merits of 4 November 2003, §53). It also recalls that "States Parties must be particularly mindful of the impact that their choices will have for groups with heightened vulnerabilities" and that they must also take "practical action to give full effect to the rights recognised in the Charter" (Autism-Europe v. France, Complaint No.13/2000, decision on the merits of 4 November 2003, §53). Similarly, "States enjoy a margin of appreciation in determining the steps to be taken to ensure compliance with the Charter, in particular as regards to the balance to be struck between the general interest and the interest of a specific group and the choices which must be made in terms of priorities and resources" (European Roma Rights Centre v. Bulgaria, Complaint No. 31/2005, decision on the merits of 18 October 2006, §35).

40. The Committee points out that where precise facts are used to support allegations that a state has infringed the Revised Charter, it is for the Government to answer the allegations using specific evidence such as measures introduced, statistics or examples of relevant case-law (see European Roma Rights Centre v. Greece, Complaint No. 15/2003, decision on the merits of 8 December 2004, §50). The MDAC has submitted precise elements to the Committee with a view to demonstrate that the manner in which Bulgaria's legislation and action plans are implemented is highly inadequate. The Committee notes that the Government, however, has failed to provide evidence to refute these.

41. In addition, the Committee notes that the Government describes the situation of children with disabilities in general and not the specific case of children with moderate, severe or profound intellectual disabilities residing in HMDCs, who are the subjects of this complaint.

42. To be able to assess the situation of these children, the Committee must therefore rely on the data referred to in the 2005 report prepared by the Bulgarian national child protection agency, which is mentioned by the MDAC in its complaint and not disputed by the Government.

43. The Committee refers to Order No. 6 on children with special educational needs and/or chronic conditions, 2002, which entitles children with any type of intellectual disability to be educated in special schools or mainstream schools of their parent's or tutor's choice. The Committee notes that only 2.8% of the children with intellectual disabilities residing in HMDCs are integrated in mainstream primary schools, which is extremely low whereas integration should be the norm. Mainstream educational institutions and curricula are not accessible in practice to these children. There also appears to be insufficient evidence to show real attempts to integrate these children into mainstream education. The Committee considers therefore that the criterion of accessibility is not fulfilled.

44. For the very few children integrated into mainstream primary schools, the way in which they are dealt with should be suited to their special needs. The Committee finds on this point in particular that teachers have not been trained sufficiently to teach intellectually disabled children and teaching materials are inadequate in mainstream schools. These schools are therefore not suited to meet the needs of children with intellectual disabilities and hence to provide their education. The Committee concludes that neither therefore is the criterion of adaptability met.

45. The Committee notes that only 3.4% of children with intellectual disabilities residing in HMDCs attend the special classes set up for them. Despite the fact that special classes should not be the norm but only an exception to mainstream education, the figure is very low and demonstrates that special education is not accessible to children with intellectual disabilities residing in HMDCs.

46. As to the educational activities that intellectually disabled children follow within the HMDCs, the Committee takes note that the HMDCs are not themselves be regarded as educational institutions, that, consequently, the children are ineligible for a diploma attesting completion of primary school education and that they are therefore prevented from entering secondary education. The Committee notes, in addition, that the programmes of activity implemented at HMDCs were drawn up by the Ministry of Labour and Social Policy before the 2002 reform, at a time when intellectually disabled children were still officially regarded as being uneducable. The Committee also notes that it has been confirmed by various eye-witness reports and studies that the children do not receive any education in the HMDCs. The Committee concludes that the activities pursued by intellectually disabled children living in HMDCs who attend neither a mainstream school nor a special class cannot be considered to be a form of education.

47. As to the Government's argument that the right of children with intellectual disabilities residing in HMDCs to education is being implemented progressively, the Committee is aware of Bulgaria's financial constraints. It notes that any progress that has been made has been very slow and mainly concerns the adoption of legislation and policies (or action plans), with little or no implementation. It would have been possible to take some specific steps at no excessive additional cost (for example HMDC directors and the municipal

officials to whom HMDCs and primary schools are accountable could have been informed about and given training on the new legislation and action plans). The choices made by the Government resulted in the situation described above (see in particular §§ 43 et 45). Progress is therefore patently insufficient at the current rate and there is no prospect that the situation will be in conformity with article 17§2 within a reasonable time. Consequently, the Committee considers that the measures taken do not fulfil the three criteria referred to above, i.e. a reasonable timeframe, measurable progress and financing consistent with the maximum use of available resources. In view of this situation, the Committee considers that Bulgaria's financial constraints cannot be used to justify the fact that children with intellectual disabilities in HMDCs cannot enjoy their right to an education.

48. Consequently, the Committee holds that the situation in Bulgaria constitutes a violation of Article 17§2 of the Revised Charter because children with moderate, severe or profound intellectual disabilities residing in HMDCs do not have the effective right to an education.

ii – The alleged violation of Article 17§2 of the Revised Charter read in conjunction with Article E

49. Article E prohibits any discrimination in the enjoyment of the rights set forth in the Revised Charter. Although disability is not explicitly included in the list of grounds of discrimination prohibited by Article E, the Committee has found previously that it is "adequately covered by the reference to 'other status'" (Autism-Europe v. France, Complaint No.13/2000, decision on the merits of 4 November 2003, §51).

50. The Committee has previously observed that:

"The wording of Article E is almost identical to the wording of Article 14 of the European Convention on Human Rights. As the European Court of Human Rights has repeatedly stressed in interpreting Article 14 and most recently in the Thlimmenos case [*Thlimmenos v. Greece* [GC], no 34369/97, ECHR 2000-IV, §44)], the principle of equality that is reflected therein means treating equals equally and unequals unequally. In particular it is said in the above mentioned case:

> 'The right not to be discriminated against in the enjoyment of the rights guaranteed under the Convention is also violated when States without an objective and reasonable justification fail to treat differently persons whose situations are significantly different'.

In other words, human difference in a democratic society should not only be viewed positively but should be responded to with discernment in order to ensure real and effective equality." (Autism-Europe v. France, Collective Complaint No. 13/2002, decision on the merits of 4 November 2003, §52).

51. Therefore, the Committee notes that failure to take appropriate measures to take account of existing differences may amount to discrimination.

52. The Committee recalls its case law regarding disputes about discrimination in matters covered by the Revised Charter, adopted in the framework of reporting procedure, that the burden of proof should not rest entirely on the complainant, but should be the subject of an appropriate adjustment. It also applies to the collective complaints procedure. The Committee therefore relies on the specific data sent to it by the complainant organisation, such as its statistics which show unexplained differences. It is then for the Government to demonstrate that there is no ground for this allegation of discrimination.

53. The Committee refers to the data cited above, according to which only 6.2% of the intellectually disabled children living in HMDCs are educated in mainstream primary schools or in special schools. It notes that, in reply, the Government states that a high percentage of children in Bulgaria do not go to school and that this does not just apply to children with intellectual disabilities. However, the Government fails to support this assertion with statistical data or to specify whether this is already a problem at primary school level or affects only secondary schools. The Committee underlines that it has already noted that, for the period 1997-2000, primary school attendance rates were 93% for girls and 95% for boys, despite a regrettable, excessively high drop-out rate (Conclusions 2005, Article 17§2, Bulgaria). The disparity between these figures is so great that it demonstrates that there is discrimination against children with intellectual disabilities residing in HMDCs in comparison with all other children with regard to access to education in Bulgaria.

54. Consequently, the Committee holds that the situation in Bulgaria constitutes a violation of Article 17§2 of the Revised Charter read in conjunction with Article E because of the discrimination against children with moderate, severe or profound intellectual disabilities residing in HMDCs as a result of the low number of such children receiving any type of education when compared to other children.

CONCLUSION

55. For these reasons the Committee concludes

- unanimously that there is a violation of Article 17§2 of the Revised Charter because children with moderate, severe or profound intellectual disabilities residing in HMDCs do not have an effective right to education;
- by 12 votes to 1 that there is a violation of Article 17§2 of the Revised Charter taken in conjunction with Article E because there is discrimination against children with moderate, severe or profound intellectual disabilities residing in HMDCs as a result of the low number of such children receiving any type of education when compared to other children.

EUROPEAN COMMITTEE OF SOCIAL RIGHTS
COMITE EUROPEEN DES DROITS SOCIAUX

COUNCIL OF EUROPE CONSEIL DE L'EUROPE

DECISION ON THE MERITS

COMPLAINT No. 13/2002

By Autism - Europe
against France

The European Committee of Social Rights, committee of independent experts established under Article 25 of the European Social Charter (hereafter referred to as "the Committee"), during its 197th session attended by:

Messrs	Jean-Michel BELORGEY, President
	Nikitas ALIPRANTIS, Vice-President
Ms	Polonca KONCAR, Vice-President
Messrs	Stein EVJU, General Rapporteur
	Rolf BIRK
	Matti MIKKOLA
	Konrad GRILLBERGER
	Tekin AKILLIOĞLU
	Alfredo BRUTO DA COSTA
Ms	Csilla KOLLONAY LEHOCZKY
Messrs	Gerard QUINN
	Lucien FRANCOIS
	Andrzej SWIATKOWSKI

Assisted by Mr Régis BRILLAT, Executive Secretary of the European Social Charter

After having deliberated on the 3 and 4 November 2003,

On the basis of the report presented by Mr Gerard QUINN,

Delivers the following decision adopted on this last date:

PROCEDURE

1. On 12 December 2002, the Committee declared the complaint admissible.

2. In accordance with Article 7§1 and §2 of the Protocol providing for a system of collective complaints and with the Committee's decision on the admissibility of the complaint, the Executive Secretary communicated, on 13 December 2002, the text of the admissibility decision to the French Government, to Autism-Europe, to the Contracting Parties to the Protocol, to the states that have made a declaration in accordance with Article D§2 of the revised European Social Charter, as well as to the European Trade Union Confederation (ETUC), the Union of the Confederations of Industry and Employers of Europe (UNICE) and the International Organisation of Employers (IOE), inviting them to submit their observations on the merits of the complaint. In accordance with Article 25§2 of the Committee's Rules of Procedure, the President fixed a deadline of 15 February 2003 for the presentation of observations.

3. On 11 February 2003, the French Government presented its observations on the merits of the complaint.

4. The President set 11 April 2003 as the deadline for Autism-Europe to present its observations in response to the Government. The observations were registered on 10 April 2003.

5. During its 193rd session (31 March – 4 April 2003), the European Committee of Social Rights decided, in accordance with Article 7§4 of the Protocol providing for a system of collective complaints and Article 29§1 of the Committee's Rules of Procedure, to organise a public hearing.

6. The hearing took place in public at the Human Rights Building in Strasbourg on 29 September 2003. Autism-Europe was represented by E. FRIEDEL, Lawyer, and by Ms D. PAGETTI-VIVANTI, President of Autism-Europe. The Government was represented by Mr A. BUCHET, Deputy Director of Human Rights, Legal Affairs Department at the Ministry of Foreign Affairs, Mr P. DIDIER-COURBIN, Deputy Director for Persons with Disabilities, General Directorate of Social Action at the Ministry for Health, the Family and Disabled Persons, Ms M-C. COURTEIX, Head of the task force: School adaptation and integration, Directorate for school education at the Ministry for National Education, and Ms J. VILLIGER, Office for Disabled Adults, General Directorate of Social Action at the Ministry for Health, the Family and Disabled Persons.

According to Article 29§2 of its Rules of Procedure, the Committee invited the ETUC to participate in the hearing. ETUC was represented by Mr G. FONTENEAU, Social Adviser, and by Mr K. LÖRCHER, Legal Adviser.

The Committee heard addresses by E. FRIEDEL, Mr. A. BUCHET, and Mr. G. FONTENEAU and replies to questions put by members of the Committee.

SUBMISSIONS OF THE PARTICIPANTS IN THE PROCEDURE

a) The Complainant Organisation

7. Autism-Europe asked the Committee:

- to rule that France is failing to satisfactorily apply its obligations under Articles 15§1 and 17§1 of Part II of the Revised European Social Charter because children and adults with autism do not and are not likely to effectively exercise, in sufficient numbers and to an adequate standard, their right to education in mainstream schooling or through adequately supported placements in specialised institutions that offer education and related services;

  and

- to rule that France is in violation of the non-discrimination principle embodied in Article E of Part V of the Revised European Social Charter since persons with autism do not benefit from the right to education recognized to persons with disabilities by Article 15§1 and generally set out in Article 17§1 of Part II of the Charter.

The complainant alleged that France is not taking enough action as required under the revised European Social Charter to secure children and adults with autism a right to education as effective as that of all the other children.

b) The French Government

8. The French Government (hereafter "the Government") asked the Committee to reject the complaint as unfounded in each respect. It considers that the relevant legislation and the practice concerning the provision of education for persons with autism did not infringe Articles 15, 17 and E of the Revised European Social Charter (hereinafter Revised Charter).

c) The European Trade Union Confederation (ETUC)

9. The ETUC argues that France does not comply with Articles 15, 17 and E of the Revised Charter.

RELEVANT DOMESTIC LAW

10. On the basis of the submissions by the parties, the relevant domestic law on the provision of education for persons with autism may be summarised as follows:

The right to education of persons with disabilities is enshrined in two Acts:

- Act no. 75/534 of 30 June 1975, People with disabilities (policy) act,

- and Act no. 75/535 of 30 June 1975 on social and medico-social institutions,

Part of Act no. 75/534 has been enshrined in Act no. 89/486 of 10 July 1989 laying down framework provisions on education. Another piece of legislation makes more detailed

provision for persons with autism (Act no. 96/1076 of 11 December 1996 on social and medico-social institutions and making adapted provision for persons with autism). All the above legislation has now been codified in the Code of Social Action and the Education Code respectively.

11. The relevant provisions of the Education Code are Articles L.111-1, L.112-1 to L.112-3, and L.351-1.

Article L.111-1 provides that:

> "the right to education is secured to all".

More particularly, and dealing with children and young persons with disabilities, Article L.112-1 states that:

> "Schooling is compulsory for children and young persons with disabilities. They shall meet the compulsory-education requirement either through integration in the ordinary education system or, failing that, through special education, as decided by the *départemen*t special education board in accordance with the individual's particular needs".

Article L.112-2 continues:

> "Educational integration of young people with disabilities shall be facilitated".

The scope of special education is defined by Article L.112-3, which provides:

> "Special education shall combine educational, psychological, social, medical and paramedical action; it shall be delivered either at establishments within the general system or by specialist establishments or services….".

With respect to the delivery of special education Article L.351-1 provides that:

> "… The state shall pay for the education and initial vocational training of children and adolescents with disabilities:
>
> 1. preferably, by integrating into ordinary classes … all children capable of being integrated despite their disabilities;
> 2. or by making qualified staff for whom the education minister is responsible available to establishments and services set up and maintained by other ministries, by public law entities or by authorised non-profit groups or bodies …
> 3. or by entering into contracts or partnerships with private education establishments …"

That is, Article L.112-1 and Article L.351-1 establish a statutory preference in favour of the education of children with disabilities in the mainstream.

12. The relevant provisions of the Code of Social Action are Articles L.114-1, L.114-2, L.116-1, L.116-2, L.242-4 and 10, and L.246-1.

According to Article L.114-1, the State is obliged to guarantee the right of persons with disabilities to have access to fundamental rights, including the right to education.

The right to the enjoyment of these rights in a mainstream environment is acknowledged by Article L.114-2 insofar as it provides that:

"The action taken shall, whenever the aptitudes of the person with disability and the capabilities of the family so allow, ensure access for the minor or adult with disability to those institutions open to the whole population…".

The overall goals of social and medical action are set out under Article L.116-1 and 2 as follows:

"Social and medico-social action shall promote, within an inter-ministerial framework, the autonomy and protection of persons … prevent exclusion and correct its effects. It shall be based on continuous evaluation of needs and of expectations … in particular those of people with disabilities … and on making facilities and allowances available to them. It shall be performed by the state, the local authorities and the public establishments run by them, social-security agencies, the voluntary sector and social and medico-social institutions…

Social and medico-social action shall be so conducted as to respect the equal dignity of all human beings, with the aim of making adapted provision to meet the needs of each individual and affording them equitable access throughout the country."

Early intervention is mandated by Article L.242-4, which provides that:

"The earliest possible provision is necessary. It shall be possible for it to continue for as long as the condition of the person with the disability warrants it and without any limit of age or duration ….".

With respect to the financing of these measures, Article L.242-10 reads:

"Expenses for accommodation and care in special education establishments and vocational establishments, together with the cost of outside care in connection with such education, with the exception of expenses falling to be met by the state under Article L.242-1[1], shall be wholly met by the sickness insurance schemes, subject to the rates which are the basis for calculation of benefit. Where such costs are not covered by the sickness-insurance schemes, they shall be covered by social assistance[2]…."

Article L.246-1 makes more particular provision for persons with autism:

"Any person with a disability resulting from autism syndrome or related disorders shall receive, regardless of age, multidisciplinary provision catering for his or her specific needs and difficulties. Such provision shall be adapted to the condition and age of the individual and have regard to the resources available. It may be educational, therapeutic or social."

13. To summarise, persons with autism may attend mainstreaming education, either in their own right (individual mainstreaming) in ordinary classes with the assistance of special auxiliary staff, or as part of a group (collective mainstreaming) through school integration classes (CLIS) at primary level and educational integration units (UPI) at secondary level. Persons who, by reason of the severity of their autism, cannot integrate the ordinary educational system may receive special education in a specialised institution or through medico-social services (SESSAD – special education and domiciliary care services). Specialised institutions include: IME – medical-educational institutes; IMP – medical-teaching institutes; IMPRO – medical-occupational institutes; MAS – Special residential establishments and FDT – double-charging establishment for the most severely disabled.

14. The individual mainstreaming into regular schooling is financed through the general education budget. However, the mainstreaming of individuals through collective mainstreaming is financed through the sickness-insurance budget. Also all the above

[1] This article expressly refers to the aforementioned Article L.351-1 of the Education Code.

[2] These provisions also appear in Article L.321-1 of the Social Security Code.

forms of special education are financed mainly through the sickness-insurance budget and, in the case of autism, by the special appropriations system addressed to it. Teachers in special education and special auxiliary staff in these specialised institutions are paid out of the national education budget.

15. According to the prevalence rate used, the number of persons with autism varies largely. The complainant assumed that, on the basis of the most recent scientific knowledge, the appropriate prevalence rate is 16 per 10 000 persons. As a consequence, it is claimed that there are approximately 100 000 persons with autism in France, of whom 25 000 children and young people. The Government opted for a prevalence rate of 4-5.6 per 10 000 persons: accordingly, there are approximately 7,000 children and 20,000 adults with autism in France. The complaint alleges that a certain number of French children with autism attend institutions in Belgium.

AS TO THE LAW

I. ARGUMENTS OF THE PARTIES

16. Autism-Europe initially argued, but did not pursue at the hearing, that the relevant parts of French law are as such, in violation of Articles 15§1 and 17§1 of the Revised Charter. Having abandoned that line of argumentation the complainant argued instead that the implementation of the law, or the *de facto,* situation, is in violation of the said Articles. More specifically, the complainant finally argued that, in practice, insufficient provision is made for the education of children and adults with autism due to identifiable shortfalls – both quantitative and qualitative - in the provision of both mainstream education as well as in the so-called special education sector.

17. The Committee therefore finds it unnecessary to proceed further with respect to the original argument. Accordingly, its analysis will be confined to the question whether the relevant French practice constitutes, as alleged by the complainant, a violation of Articles 15§1, 17§1 and E of the Revised Charter.

18. Articles 15§1, 17§1 and E of the Revised Charter read as follows:

"Article 15 - The right of persons with disabilities to independence, social integration and participation in the life of the community

> With a view to ensuring to persons with disabilities, irrespective of age and the nature and origin of their disabilities, the effective exercise of the right to independence, social integration and participation in the life of the community, the Parties undertake, in particular:
> 1. to take the necessary measures to provide persons with disabilities with guidance, education and vocational training in the framework of general schemes wherever possible or, where this is not possible, through specialised bodies, public or private;
> ……

Article 17 - The right of children and young persons to social, legal and economic protection

> With a view to ensuring the effective exercise of the right of children and young persons to grow up in an environment which encourages the full development of their personality and of their physical and mental capacities, the Parties undertake, either directly or in co-operation with public and private organisations, to take all appropriate and necessary measures designed:
> 1. a to ensure that children and young persons, taking account of the rights and duties of their parents, have the care, the assistance, the education and the training they need, in particular by providing for the establishment or maintenance of institutions and services sufficient and adequate for this purpose;
> ……

Article E – Non-discrimination

> The enjoyment of the rights set forth in this Charter shall be secured without discrimination on any ground such as race, colour, sex, language, religion, political or other opinion, national extraction or social origin, health, association with a national minority, birth or other status. "

A. The alleged unavailability of special education institutions and services

19. Autism-Europe argued that the special education institutions and socio-medical services allocated for the education of children and adults with autism have been historically inadequate. The 1995-2000 catch-up plan for persons with autism failed to overcome the backlog; likewise, the 2001-2003 multi-annual plan on disabled children, young persons and adults, which addressed also persons with autism, is alleged to be far from filling the gap. It also asserted that 75 000 persons with autism (of whom 19 000 are children) are in need of special education, but that only 10% of them have a place (about 8,000 places in all are currently available).

20. According to Autism-Europe, the current situation as regards placements in special education stands as follows:

Situation as compiled by Autism-Europe: Number of places per 75 000 persons with autism in France

Number in 1995	Actually established 1995-2000	To be opened 2001-2003	Total	Remaining needs	Rate of satisfaction
5400	1400	1053	7853	67147	11.6%

Official figures[3]: number of places per 48 000 persons with autism in France

Number in 1995	Officially established 1995-2000	To be opened 2001-2003	Total	Remaining needs	Rate of satisfaction
5400	2033	1053	8486	39514	21.4%

[3] As from DGAS, Report to the Parliament on the implementation of Act no.96/1076, "Autism: evaluation of action 1995-2000", December 2000. The difference as regards the estimate of the number of persons with autism is due to the retained incidence rate of the disability.

21. The complainant alleges that even if the official French rate of prevalence is accepted (which it asserts is lower that the one retained by the Health World Organisation), the finances dedicated to the 1995-2000 catch-up plan could only envisage the creation of 1 400 wholly new places, and not the 2033 places officially claimed to be opened. It further alleges that the 2001-2003 multi-annual plan would not really help to change the situation since it would only enable the creation of 1053 additional places for a budget of € 22.87 million.

22. According to the complainant, on average, 300 places have been created annually since 1995, which represents an annual increasing rate of 0.7% in comparison with the official needs. At this pace, it will take one hundred years to resorb the deficit of places, and this without taking into account the natural increase of the autistic population, which, on the basis of the official figures, it is estimates will grow by 160 persons per year.

23. In reply the Government acknowledged that the catch-up plan of 1995-2000 had fallen short of real needs. In its written memorials, the Government indicated that, within the framework of the 2001-2003 multi-annual plan or other exceptional plans, these special appropriations amounting in total to about €30 million enabled, or will enable, the creation of 1053 places reserved specifically for persons with autism. It further asserted that 1756 SESSAD (special education and domiciliary care) places for the educational integration of children with disabilities, including autistic children, and young people had been created (on a budget of € 36.95 million), and 507 were planned in 2003. In total 3228 SESSAD places have been created between 2001 and 2003. It asserted that there were 5500 places in specialist residential establishments (MAS), residential establishments with medical facilities (FAM) and special employment centers (CAT) for severely disabled adults, some of whom would include autistic persons. Finally, it asserted that the 2003 Social Security Finance Act set aside € 70 million for severely disabled adults and € 9 million for improving facilities in establishments and other services and on the educational integration of disabled children through the establishment of additional places in residential and non-residential centers with educational and medical facilities and in SESSAD (special education and domiciliary care services).

24. At the hearing, the Government indicated that 94 000 children and young persons with disabilities (0-20 years of age) are taken care of in special education institutions, socio-medical services, or health institutions. More precisely, as regards autism, it reaffirmed that, through the catch-up plan of 1995-2000, a total of about 2033 places (820 for children and 1213 for adults) have been created. In addition, the multi-annual plan 2001-2003 and special appropriations has finally permitted, as of September 2003, the creation of some other 1306 places for children, young people and adults with autism.

25. The Government acknowledged that part of figures provided did not concern directly persons with autism, but in general disabled or seriously disabled persons. However, it argued that, on the one hand, the approach chosen by France is not the provision of specialised services for any category of disabled persons, but their reception in multipurpose establishments and services; and, on the other hand, that statistic programmes aiming at disaggregating data concerning specifically persons with autism (which currently do not exist) have been recently launched.

26. In any event, the Government considered that, even if the creation of places, and thereby the allocation of resources, were insufficient to cover all needs, the catch-up for educational provision of autistic persons did not only lie in allocating additional funding, but also in diversifying the offer of services at *département* level by implementing Act no. 2002/2 containing reforms of social and medico-social provision.

B. Separation and limitation of budgetary resources

27. Autism-Europe advanced a structural reason why there is inadequate funding for the education of children and young adults with autism and argued that this violates Article 15§1 in combination with Article 17§1. Special education, it is alleged, is at an automatic disadvantage because it does not fall under the finance Act and is not therefore considered to be a public service that the State is obliged to provide. Hence, unlike ordinary education, its financing is not calculated according to the number of children in the system and those forecast for the future.

28. Autism-Europe observed that the financing of special education comes mainly under the sickness-insurance budget approved through the social security finance Act, to the exception of teachers provided by the national system to the special education sector who are paid by the State budget. This implies for the complainant that the expenditure is not determined according to the real needs of the number of people with disabilities who need adapted educational provision. Thus, it argued that, because of the budgeting mechanism chosen, persons with disabilities do not in practice (despite the legislation) benefit from the right to education because they cannot do so for as long as the funding of special education placements remains outside the national education system and is treated as “social assistance” or “care” to which health or social-action expenditure limits apply.

29. As far as persons with autism are concerned, the complainant specifically argued that, unless France alters its budgetary and financial policy, the shortfall on educational provision for autistic persons will never be made up and the quantitative needs will never be met.

30. The Government contested the complainant’s argument and considered that, on the basis of Article L.112-1 of the Education Code, children with disabilities are fully covered by the educational public service requirement, either through ordinary or special education. According to Article L.112-3, special education is much more than just a form of care, since it combines educational, psychological, social, medical and paramedical inputs. Moreover, the Government recalled that special education is not financed solely by the sickness insurance scheme since the state pays for its educational component (Article L.242-1 of the Social Action Code). Accordingly, 5 400 teachers are assigned to medical-social establishments and services and health establishments to assist 94,000 children and young persons with disabilities.

31. Finally, the Government contested that the financing of the part of special education met by the sickness insurance system through the ONDAM - the national objective for sickness insurance expenditure - is less generous than what would be a state financing within the education budget. On the contrary, it held that such a system is more flexible because the growth rate applied to the expenditure objective for services and establishments, depending on the social security system, is determined by public health needs and national priorities.

C. The alleged inadequacy of early intervention

32. Autism-Europe argued that early intervention to assist children with autism is virtually non-existent.

33. The Government considered that early medical-social action centers (CAMSPs) make specific provision for the early detection of disability, or risk of disability, and outpatient treatment by multidisciplinary teams for children under six with sensory, motor or mental disabilities. From 1996, the number of these centers has sharply increased: they are now 260 in all but one of the *departments,* and the 2001-2003 three-year plan for disabled children, young persons and adults has set aside € 3 million a year to finance their establishment and extension. The recently established four autism resource centers in Brest, Reims, Montpellier and Tours are responsible for carrying out diagnoses in particularly complex or sensitive cases. The complainant sustained that this information concerned disabled children as a whole rather than children with autism.

D. The alleged inadequacy of mainstream education

34. Notwithstanding the regulations in force, the complainant argued that the mainstreaming of autistic children and young people is still the exception rather than the rule and, even when it occurs, it is confined to an average of just a few hours per week. The complainant asserted that structures charged with integration – school integration classes (CLIS), educational integration units (UPI) and the domiciliary care and special education services (SESSAD), are generally and even officially acknowledged as insufficient in number[4]. The complainant cited official figures concerning mainstreaming. According to the report of the Senate, only 7% of children with disabilities (about 60,000 as a whole) are integrated into ordinary schools[5]. According to the Ministry of Education, mainstreamed disabled children and young people represent 1.3% of the total school population in each department, while the Court of Auditors rates their integration to less than 1%[6]. At the hearing, the complainant asserted that out of 6,000 children with autism who could be mainstreamed only 250 are individually integrated, that is about 5%. Another 400 are collectively integrated, making a total of 650 on a total school population of 15 million children, teenagers and students.

[4] Ministry of Employment and Solidarity (General Inspectorate of Social Affairs), Ministry of Education (General Inspectorate of Education), Report on access to education for children and young people with disabilities, March 1999; M. Fardeau , DGAS Report to the Ministry of Employment and Solidarity, Disability: a comparative and forward analysis of provision.
[5] Senate, P. Blanc, Report of the Social Affairs Commission on the policy for compensating disability.
[6] Court of Auditors, Life with a disability, Public report, June 2003.

35. The Government contested this argument and affirmed that for the State mainstreaming is a priority, both in legislation (Articles L.114-1 of the Social Action and Family Code in general terms and Articles L.112-1 and L.112-3 of the Education Code, Education Act, No. 89-486) and in relevant regulations (*Handiscol* circular), and also through the provision of the necessary resources.

36. The Government asserted that full-time or part-time integration may occur individually or collectively through the creation of special classes (CLIS and UPIS) within ordinary schools. In its written memorials, it indicated that, at the start of the 2001-2002 academic year there were 3381 CLIS (compared with 3170 the previous year) and 303 UPIS (compared with 202). At the hearing, the Government contested the complainant's figures about mainstreaming of persons with autism, but it was unable to offer precise data concerning them. It only affirmed that, in 2002-2003, the total number of disabled persons integrated into ordinary school amounted to 89 000 (67 000 at primary level and 22 000 at secondary level).

37. The Government pointed out that the *Handiscol* project assists in the integration process by providing information, assistance in improving access to school establishments, training of teachers, and the supply of support staff to accompany children who need it.

38. Finally, the Government indicated a new range of measures decided on 21 January 2003 for further improving the integration of pupils with disabilities by developing special classes in secondary schools and increasing the number of special auxiliary staff to 6,000 (Decree no. 40/2003 on auxiliary staff).

E. The alleged deficiencies in special education: administrative unwieldiness and teacher training

39. Autism-Europe alleged that persons with autism find it hard to receive adapted education in specialised institutions because administrative unwieldiness gets in the way of providing new specialised facilities. The long and time-consuming administrative process is also held to be at the origin of French persons with autism integrating Belgian special education institutions.

40. The complainant affirmed that there are no binding rules requiring the teaching staff of specialised education facilities to be specifically trained to cater for autistic persons[7] and the training for staff is in fact non-existent or ill-adapted. This appears to be confirmed by official sources[8].

41. The Government contested the allegation and indicated all measures implemented so far to train professionals working with autistic persons:

- for seven years the National training and study centre for maladjusted children (CNEIFEI) organises an autism module as part of its training for teachers studying for a specialised teaching certificate in educational adjustment and integration (CAPSAIS, option D). In 2002-2003, 12 specialist teacher trainees and 97 other persons (national education personnel and parents) took part in this module;

[7] There is only Circular no. 98/232 on training for staff working with persons with autism.

[8] Ministry of Employment and Solidarity (General Inspectorate of Social Affairs), Ministry of Education (General Inspectorate of Education), Report on access to education for children and young people with disabilities, March 1999.

- since 1998, seventy continuing training sessions have been held each year, attended by an average of 500 trainees, to form professional working with persons with autism;
- new measures announced by the Government include training for all staff and the development of specialist teacher training in university teacher training institutions (IUFM).

42. In addition, the Government held that Act No. 2002/2 on social and medical-social action should help reducing the number of steps and time required to set-up specialist establishments.

F. The alleged deficiencies in the educational placements of adults with autism

43. As a consequence of the lack of legal rules, Autism-Europe argued that educational provision for autistic adults is non-existent.

44. The Government contested the allegation and described all the different medical and medical-social establishments and services catering for adults with disabilities, thereby including adults with autism.

G. Reliance on Hospitalisation of Children and Adults with Autism

45. Autism-Europe alleged that, as a consequence of the lack of places, persons with autism seek care abroad, mainly in Belgium, and that hospitals cannot be considered "sufficient and adequate" institutions and services for educational provision of autistic persons. This latter aspect, the complainant added, is confirmed by official sources[9].

46. The Government contested the allegation and indicated that the newly planned places already referred to are particularly concerned with offering autistic persons local accommodation so that they are not cut off from their families. Moreover, placement in psychiatric hospital occurs when specialist care, which like all medical care is prescribed by doctors, is necessary for persons with autism, as for anyone else.

II. ASSESSMENT OF THE COMMITTEE

47. The Committee considers that the arguments of the complainant alleging the violation of Articles 15§1and 17§1 and of Article E are so intertwined as to be inseparable. Its assessment, therefore, will deal with the question whether the situation in France is in conformity with Articles 15§1 and 17§1 whether alone or when read in combination with Article E of the Revised Charter.

48. As emphasised in the General Introduction to its Conclusions of 2003 (p. 10), the Committee views Article 15 of the Revised Charter as both reflecting and advancing a profound shift of values in all European countries over the past decade away from treating them as objects of pity and towards respecting them as equal citizens – an approach that the Council of Europe contributed to promote, with the adoption by the Committee of Ministers of Recommendation (92) 6 of 1992 on a coherent policy for people with disabilities. The underlying vision of Article 15 is one of equal citizenship for persons with

[9] Ministry of Employment and Solidarity (General Inspectorate of Social Affairs), Ministry of Education (General Inspectorate of Education), Report on access to education for children and young people with disabilities, March 1999.

disabilities and, fittingly, the primary rights are those of "independence, social integration and participation in the life of the community". Securing a right to education for children and others with disabilities plays an obviously important role in advancing these citizenship rights. This explains why education is now specifically mentioned in the revised Article 15 and why such an emphasis is placed on achieving that education "in the framework of general schemes, wherever possible". It should be noted that Article 15 applies to all persons with disabilities regardless of the nature and origin of their disability and irrespective of their age. It thus clearly covers both children and adults with autism.

49. Article 17 is predicated on the need to ensure that children and young persons grow up in an environment which encourages the "full development of their personality and of their physical and mental capacities". This approach is just as important for children with disabilities as it is for others and arguably more in circumstances where the effects of ineffective or untimely intervention are ever likely to be undone. The Committee views Article 17, which deals more generally, *inter alia,* with the right to education for all, as also embodying the modern approach of mainstreaming. Article 17§1, in particular, requires the establishment and maintenance of sufficient and adequate institutions and services for the purpose of education. Since Article 17§1 deals only with children and young persons it is important to read it in conjunction with Article 15§1 as far as adults are concerned.

50. Autism-Europe also argued that Article E of the Revised Charter is violated since the net result of alleged shortfalls is that persons with autism do not benefit, as effectively as other citizens, from a right to education as embodied both in Articles 15§1 and 17§1.

51. The Committee considers that the insertion of Article E into a separate Article in the Revised Charter indicates the heightened importance the drafters paid to the principle of non-discrimination with respect to the achievement of the various substantive rights contained therein. It further considers that its function is to help secure the equal effective enjoyment of all the rights concerned regardless of difference. Therefore, it does not constitute an autonomous right which could in itself provide independent grounds for a complaint. It follows that the Committee understands the arguments of the complainant as implying that the situation as alleged violates Articles 15§1 and 17§1 when read in combination with Article E of the Revised Charter.

Although disability is not explicitly listed as a prohibited ground of discrimination under Article E, the Committee considers that it is adequately covered by the reference to "other status". Such an interpretative approach, which is justified in its own rights, is fully consistent with both the letter and the spirit of the Political Declaration adopted by the 2nd European conference of ministers responsible for integration policies for people with disabilities (Malaga, April, 2003), which reaffirmed the anti-discriminatory and human rights framework as the appropriate one for development of European policy in this field.

52. The Committee observes further that the wording of Article E is almost identical to the wording of Article 14 of the European Convention on Human Rights. As the European Court of Human Rights has repeatedly stressed in interpreting Article 14 and most recently in the Thlimmenos case [*Thlimmenos c. Grèce* [GC], n° 34369/97, CEDH 2000-IV, § 44)], the principle of equality that is reflected therein means treating equals equally and unequals unequally. In particular it is said in the above mentioned case:

> "The right not to be discriminated against in the enjoyment of the rights guaranteed under the Convention is also violated when States without an objective and reasonable justification fail to treat differently persons whose situations are significantly different."

In other words, human difference in a democratic society should not only be viewed positively but should be responded to with discernment in order to ensure real and effective equality.

In this regard, the Committee considers that Article E not only prohibits direct discrimination but also all forms of indirect discrimination. Such indirect discrimination may arise by failing to take due and positive account of all relevant differences or by failing to take adequate steps to ensure that the rights and collective advantages that are open to all are genuinely accessible by and to all.

53. The Committee recalls, as stated in its decision relative to Complaint No.1/1998 (International Commission of Jurist v. Portugal, § 32), that the implementation of the Charter requires the State Parties to take not merely legal action but also practical action to give full effect to the rights recognised in the Charter. When the achievement of one of the rights in question is exceptionally complex and particularly expensive to resolve, a State Party must take measures that allows it to achieve the objectives of the Charter within a reasonable time, with measurable progress and to an extent consistent with the maximum use of available resources. States Parties must be particularly mindful of the impact that their choices will have for groups with heightened vulnerabilities as well as for others persons affected including, especially, their families on whom falls the heaviest burden in the event of institutional shortcomings.

54. In the light of the afore-mentioned, the Committee notes that in the case of autistic children and adults, notwithstanding a national debate going back more than twenty years about the number of persons concerned and the relevant strategies required, and even after the enactment of the Disabled Persons Policy Act of 30 June 1975, France has failed to achieve sufficient progress in advancing the provision of education for persons with autism. It specifically notes that most of the French official documents, in particular those submitted during the procedure, still use a more restrictive definition of autism than that adopted by the World Heath Organisation and that there are still insufficient official statistics with which to rationally measure progress through time. The Committee considers that the fact that the establishments specialising in the education and care of disabled children (particularly those with autism) are not in general financed from the same budget as normal schools, does not in itself amount to discrimination, since it is primarily for States themselves to decide on the modalities of funding.

Nevertheless, it considers, as the authorities themselves acknowledge, and whether a broad or narrow definition of autism is adopted, that the proportion of children with autism being educated in either general or specialist schools is much lower than in the case of other children, whether or not disabled. It is also established, and not contested by the authorities, that there is a chronic shortage of care and support facilities for autistic adults.

CONCLUSION

For these reasons, the Committee concludes by 11 votes to 2 that the situation constitutes a violation of Articles 15§1 and 17§1 whether alone or read in combination with Article E of the revised European Social Charter.

DIRECTIVES

DIRECTIVE 2010/64/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 20 October 2010

on the right to interpretation and translation in criminal proceedings

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular point (b) of the second subparagraph of Article 82(2) thereof,

Having regard to the initiative of the Kingdom of Belgium, the Federal Republic of Germany, the Republic of Estonia, the Kingdom of Spain, the French Republic, the Italian Republic, the Grand-Duchy of Luxembourg, the Republic of Hungary, the Republic of Austria, the Portuguese Republic, Romania, the Republic of Finland and the Kingdom of Sweden [1],

After transmission of the draft legislative act to the national parliaments,

Acting in accordance with the ordinary legislative procedure [2],

Whereas:

(1) The Union has set itself the objective of maintaining and developing an area of freedom, security and justice. According to the Presidency Conclusions of the European Council in Tampere of 15 and 16 October 1999, and in particular point 33 thereof, the principle of mutual recognition of judgments and other decisions of judicial authorities should become the cornerstone of judicial cooperation in civil and criminal matters within the Union because enhanced mutual recognition and the necessary approximation of legislation would facilitate cooperation between competent authorities and the judicial protection of individual rights.

(2) On 29 November 2000, the Council, in accordance with the Tampere Conclusions, adopted a programme of measures to implement the principle of mutual recognition of decisions in criminal matters [3]. The introduction to the programme states that mutual recognition is 'designed to strengthen cooperation between Member States but also to enhance the protection of individual rights'.

(3) The implementation of the principle of mutual recognition of decisions in criminal matters presupposes that Member States have trust in each other's criminal justice systems. The extent of mutual recognition is very much dependent on a number of parameters, which include mechanisms for safeguarding the rights of suspected or accused persons and common minimum standards necessary to facilitate the application of the principle of mutual recognition.

(4) Mutual recognition of decisions in criminal matters can operate effectively only in a spirit of trust in which not only judicial authorities but all actors in the criminal process consider decisions of the judicial authorities of other Member States as equivalent to their own, implying not only trust in the adequacy of other Member States' rules, but also trust that those rules are correctly applied.

(5) Article 6 of the European Convention for the Protection of Human Rights and Fundamental Freedoms (hereinafter the ECHR) and Article 47 of the Charter of Fundamental Rights of the European Union (hereinafter the Charter) enshrine the right to a fair trial. Article 48(2) of the Charter guarantees respect for the right of defence. This Directive respects those rights and should be implemented accordingly.

[1] OJ C 69, 18.3.2010, p. 1.

[2] Position of the European Parliament of 16 June 2010 (not yet published in the Official Journal) and decision of the Council of 7 October 2010.

[3] OJ C 12, 15.1.2001, p. 10.

(6) Although all the Member States are party to the ECHR, experience has shown that that alone does not always provide a sufficient degree of trust in the criminal justice systems of other Member States.

(7) Strengthening mutual trust requires a more consistent implementation of the rights and guarantees set out in Article 6 of the ECHR. It also requires, by means of this Directive and other measures, further development within the Union of the minimum standards set out in the ECHR and the Charter.

(8) Article 82(2) of the Treaty on the Functioning of the European Union provides for the establishment of minimum rules applicable in the Member States so as to facilitate mutual recognition of judgments and judicial decisions and police and judicial cooperation in criminal matters having a cross-border dimension. Point (b) of the second subparagraph of Article 82(2) refers to 'the rights of individuals in criminal procedure' as one of the areas in which minimum rules may be established.

(9) Common minimum rules should lead to increased confidence in the criminal justice systems of all Member States, which, in turn, should lead to more efficient judicial cooperation in a climate of mutual trust. Such common minimum rules should be established in the fields of interpretation and translation in criminal proceedings.

(10) On 30 November 2009, the Council adopted a resolution on a Roadmap for strengthening procedural rights of suspected or accused persons in criminal proceedings [1]. Taking a step-by-step approach, the Roadmap called for the adoption of measures regarding the right to translation and interpretation (measure A), the right to information on rights and information about the charges (measure B), the right to legal advice and legal aid (measure C), the right to communication with relatives, employers and consular authorities (measure D), and special safeguards for suspected or accused persons who are vulnerable (measure E).

(11) In the Stockholm programme, adopted on 10 December 2009, the European Council welcomed the Roadmap and made it part of the Stockholm programme (point 2.4). The European Council underlined the non-exhaustive character of the Roadmap, by inviting the Commission to examine further elements of minimum procedural rights for suspected and accused persons, and to assess whether other issues, for instance the presumption of innocence, need to be addressed, in order to promote better cooperation in that area.

(12) This Directive relates to measure A of the Roadmap. It lays down common minimum rules to be applied in the fields of interpretation and translation in criminal proceedings with a view to enhancing mutual trust among Member States.

(13) This Directive draws on the Commission proposal for a Council Framework Decision on the right to interpretation and to translation in criminal proceedings of 8 July 2009, and on the Commission proposal for a Directive of the European Parliament and of the Council on the right to interpretation and translation in criminal proceedings of 9 March 2010.

(14) The right to interpretation and translation for those who do not speak or understand the language of the proceedings is enshrined in Article 6 of the ECHR, as interpreted in the case-law of the European Court of Human Rights. This Directive facilitates the application of that right in practice. To that end, the aim of this Directive is to ensure the right of suspected or accused persons to interpretation and translation in criminal proceedings with a view to ensuring their right to a fair trial.

(15) The rights provided for in this Directive should also apply, as necessary accompanying measures, to the execution of a European arrest warrant [2] within the limits provided for by this Directive. Executing Members States should provide, and bear the costs of, interpretation and translation for the benefit of the requested persons who do not speak or understand the language of the proceedings.

(16) In some Member States an authority other than a court having jurisdiction in criminal matters has competence for imposing sanctions in relation to relatively minor offences. That may be the case, for example, in relation to traffic offences which are committed on a large scale and which might be established following a traffic control. In such situations, it would be unreasonable to require that the competent authority ensure all the rights under this Directive. Where the law of a Member State provides for the imposition of a sanction regarding minor offences by such an authority and there is a right of appeal to a court having jurisdiction in criminal matters, this Directive should therefore apply only to the proceedings before that court following such an appeal.

[1] OJ C 295, 4.12.2009, p. 1.

[2] Council Framework Decision 2002/584/JHA of 13 June 2002 on the European arrest warrant and the surrender procedures between Member States (OJ L 190, 18.7.2002, p. 1).

(17) This Directive should ensure that there is free and adequate linguistic assistance, allowing suspected or accused persons who do not speak or understand the language of the criminal proceedings fully to exercise their right of defence and safeguarding the fairness of the proceedings.

(18) Interpretation for the benefit of the suspected or accused persons should be provided without delay. However, where a certain period of time elapses before interpretation is provided, that should not constitute an infringement of the requirement that interpretation be provided without delay, as long as that period of time is reasonable in the circumstances.

(19) Communication between suspected or accused persons and their legal counsel should be interpreted in accordance with this Directive. Suspected or accused persons should be able, inter alia, to explain their version of the events to their legal counsel, point out any statements with which they disagree and make their legal counsel aware of any facts that should be put forward in their defence.

(20) For the purposes of the preparation of the defence, communication between suspected or accused persons and their legal counsel in direct connection with any questioning or hearing during the proceedings, or with the lodging of an appeal or other procedural applications, such as an application for bail, should be interpreted where necessary in order to safeguard the fairness of the proceedings.

(21) Member States should ensure that there is a procedure or mechanism in place to ascertain whether suspected or accused persons speak and understand the language of the criminal proceedings and whether they need the assistance of an interpreter. Such procedure or mechanism implies that competent authorities verify in any appropriate manner, including by consulting the suspected or accused persons concerned, whether they speak and understand the language of the criminal proceedings and whether they need the assistance of an interpreter.

(22) Interpretation and translation under this Directive should be provided in the native language of the suspected or accused persons or in any other language that they speak or understand in order to allow them fully to exercise their right of defence, and in order to safeguard the fairness of the proceedings.

(23) The respect for the right to interpretation and translation contained in this Directive should not compromise any other procedural right provided under national law.

(24) Member States should ensure that control can be exercised over the adequacy of the interpretation and translation provided when the competent authorities have been put on notice in a given case.

(25) The suspected or accused persons or the persons subject to proceedings for the execution of a European arrest warrant should have the right to challenge the finding that there is no need for interpretation, in accordance with procedures in national law. That right does not entail the obligation for Member States to provide for a separate mechanism or complaint procedure in which such finding may be challenged and should not prejudice the time limits applicable to the execution of a European arrest warrant.

(26) When the quality of the interpretation is considered insufficient to ensure the right to a fair trial, the competent authorities should be able to replace the appointed interpreter.

(27) The duty of care towards suspected or accused persons who are in a potentially weak position, in particular because of any physical impairments which affect their ability to communicate effectively, underpins a fair administration of justice. The prosecution, law enforcement and judicial authorities should therefore ensure that such persons are able to exercise effectively the rights provided for in this Directive, for example by taking into account any potential vulnerability that affects their ability to follow the proceedings and to make themselves understood, and by taking appropriate steps to ensure those rights are guaranteed.

(28) When using videoconferencing for the purpose of remote interpretation, the competent authorities should be able to rely on the tools that are being developed in the context of European e-Justice (e.g. information on courts with videoconferencing equipment or manuals).

(29) This Directive should be evaluated in the light of the practical experience gained. If appropriate, it should be amended so as to improve the safeguards which it lays down.

(30) Safeguarding the fairness of the proceedings requires that essential documents, or at least the relevant passages of such documents, be translated for the benefit of suspected or accused persons in accordance with this Directive. Certain documents should always be considered essential for that purpose and should therefore be translated, such as any decision depriving a person of his liberty, any charge or indictment, and any judgment. It is for the competent authorities of the Member States to decide, on their own motion or upon a request of suspected or accused persons or of their legal counsel, which other documents are essential to safeguard the fairness of the proceedings and should therefore be translated as well.

(31) Member States should facilitate access to national databases of legal translators and interpreters where such databases exist. In that context, particular attention should be paid to the aim of providing access to existing databases through the e-Justice portal, as planned in the multiannual European e-Justice action plan 2009-2013 of 27 November 2008 ([1]).

(32) This Directive should set minimum rules. Member States should be able to extend the rights set out in this Directive in order to provide a higher level of protection also in situations not explicitly dealt with in this Directive. The level of protection should never fall below the standards provided by the ECHR or the Charter as interpreted in the case-law of the European Court of Human Rights or the Court of Justice of the European Union.

(33) The provisions of this Directive that correspond to rights guaranteed by the ECHR or the Charter should be interpreted and implemented consistently with those rights, as interpreted in the relevant case-law of the European Court of Human Rights and the Court of Justice of the European Union.

(34) Since the objective of this Directive, namely establishing common minimum rules, cannot be sufficiently achieved by the Member States and can therefore, by reason of its scale and effects, be better achieved at Union level, the Union may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve that objective.

(35) In accordance with Article 3 of the Protocol (No 21) on the position of the United Kingdom and Ireland in respect of the Area of Freedom, Security and Justice, annexed to the Treaty on European Union and to the Treaty on the Functioning of the European Union, those Member States have notified their wish to take part in the adoption and application of this Directive.

(36) In accordance with Articles 1 and 2 of the Protocol (No 22) on the position of Denmark, annexed to the Treaty on European Union and to the Treaty on the Functioning of the European Union, Denmark is not taking part in the adoption of this Directive and is not bound by it or subject to its application,

HAVE ADOPTED THIS DIRECTIVE:

Article 1

Subject matter and scope

1. This Directive lays down rules concerning the right to interpretation and translation in criminal proceedings and proceedings for the execution of a European arrest warrant.

2. The right referred to in paragraph 1 shall apply to persons from the time that they are made aware by the competent authorities of a Member State, by official notification or otherwise, that they are suspected or accused of having committed a criminal offence until the conclusion of the proceedings, which is understood to mean the final determination of the question whether they have committed the offence, including, where applicable, sentencing and the resolution of any appeal.

3. Where the law of a Member State provides for the imposition of a sanction regarding minor offences by an authority other than a court having jurisdiction in criminal matters, and the imposition of such a sanction may be appealed to such a court, this Directive shall apply only to the proceedings before that court following such an appeal.

([1]) OJ C 75, 31.3.2009, p. 1.

4. This Directive does not affect national law concerning the presence of legal counsel during any stage of the criminal proceedings, nor does it affect national law concerning the right of access of a suspected or accused person to documents in criminal proceedings.

Article 2

Right to interpretation

1. Member States shall ensure that suspected or accused persons who do not speak or understand the language of the criminal proceedings concerned are provided, without delay, with interpretation during criminal proceedings before investigative and judicial authorities, including during police questioning, all court hearings and any necessary interim hearings.

2. Member States shall ensure that, where necessary for the purpose of safeguarding the fairness of the proceedings, interpretation is available for communication between suspected or accused persons and their legal counsel in direct connection with any questioning or hearing during the proceedings or with the lodging of an appeal or other procedural applications.

3. The right to interpretation under paragraphs 1 and 2 includes appropriate assistance for persons with hearing or speech impediments.

4. Member States shall ensure that a procedure or mechanism is in place to ascertain whether suspected or accused persons speak and understand the language of the criminal proceedings and whether they need the assistance of an interpreter.

5. Member States shall ensure that, in accordance with procedures in national law, suspected or accused persons have the right to challenge a decision finding that there is no need for interpretation and, when interpretation has been provided, the possibility to complain that the quality of the interpretation is not sufficient to safeguard the fairness of the proceedings.

6. Where appropriate, communication technology such as videoconferencing, telephone or the Internet may be used, unless the physical presence of the interpreter is required in order to safeguard the fairness of the proceedings.

7. In proceedings for the execution of a European arrest warrant, the executing Member State shall ensure that its competent authorities provide persons subject to such proceedings who do not speak or understand the language of the proceedings with interpretation in accordance with this Article.

8. Interpretation provided under this Article shall be of a quality sufficient to safeguard the fairness of the proceedings, in particular by ensuring that suspected or accused persons have knowledge of the case against them and are able to exercise their right of defence.

Article 3

Right to translation of essential documents

1. Member States shall ensure that suspected or accused persons who do not understand the language of the criminal proceedings concerned are, within a reasonable period of time, provided with a written translation of all documents which are essential to ensure that they are able to exercise their right of defence and to safeguard the fairness of the proceedings.

2. Essential documents shall include any decision depriving a person of his liberty, any charge or indictment, and any judgment.

3. The competent authorities shall, in any given case, decide whether any other document is essential. Suspected or accused persons or their legal counsel may submit a reasoned request to that effect.

4. There shall be no requirement to translate passages of essential documents which are not relevant for the purposes of enabling suspected or accused persons to have knowledge of the case against them.

5. Member States shall ensure that, in accordance with procedures in national law, suspected or accused persons have the right to challenge a decision finding that there is no need for the translation of documents or passages thereof and, when a translation has been provided, the possibility to complain that the quality of the translation is not sufficient to safeguard the fairness of the proceedings.

6. In proceedings for the execution of a European arrest warrant, the executing Member State shall ensure that its competent authorities provide any person subject to such proceedings who does not understand the language in which the European arrest warrant is drawn up, or into which it has been translated by the issuing Member State, with a written translation of that document.

7. As an exception to the general rules established in paragraphs 1, 2, 3 and 6, an oral translation or oral summary of essential documents may be provided instead of a written translation on condition that such oral translation or oral summary does not prejudice the fairness of the proceedings.

8. Any waiver of the right to translation of documents referred to in this Article shall be subject to the requirements that suspected or accused persons have received prior legal advice or have otherwise obtained full knowledge of the consequences of such a waiver, and that the waiver was unequivocal and given voluntarily.

9. Translation provided under this Article shall be of a quality sufficient to safeguard the fairness of the proceedings, in particular by ensuring that suspected or accused persons have knowledge of the case against them and are able to exercise their right of defence.

Article 4

Costs of interpretation and translation

Member States shall meet the costs of interpretation and translation resulting from the application of Articles 2 and 3, irrespective of the outcome of the proceedings.

Article 5

Quality of the interpretation and translation

1. Member States shall take concrete measures to ensure that the interpretation and translation provided meets the quality required under Article 2(8) and Article 3(9).

2. In order to promote the adequacy of interpretation and translation and efficient access thereto, Member States shall endeavour to establish a register or registers of independent translators and interpreters who are appropriately qualified. Once established, such register or registers shall, where appropriate, be made available to legal counsel and relevant authorities.

3. Member States shall ensure that interpreters and translators be required to observe confidentiality regarding interpretation and translation provided under this Directive.

Article 6

Training

Without prejudice to judicial independence and differences in the organisation of the judiciary across the Union, Member States shall request those responsible for the training of judges, prosecutors and judicial staff involved in criminal proceedings to pay special attention to the particularities of communicating with the assistance of an interpreter so as to ensure efficient and effective communication.

Article 7

Record-keeping

Member States shall ensure that when a suspected or accused person has been subject to questioning or hearings by an investigative or judicial authority with the assistance of an interpreter pursuant to Article 2, when an oral translation or oral summary of essential documents has been provided in the presence of such an authority pursuant to Article 3(7), or when a person has waived the right to translation pursuant to Article 3(8), it will be noted that these events have occurred, using the recording procedure in accordance with the law of the Member State concerned.

Article 8

Non-regression

Nothing in this Directive shall be construed as limiting or derogating from any of the rights and procedural safeguards that are ensured under the European Convention for the Protection of Human Rights and Fundamental Freedoms, the Charter of Fundamental Rights of the European Union, other relevant provisions of international law or the law of any Member State which provides a higher level of protection.

Article 9

Transposition

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 27 October 2013.

2. Member States shall transmit the text of those measures to the Commission.

3. When Member States adopt those measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. The methods of making such reference shall be laid down by the Member States.

Article 10

Report

The Commission shall, by 27 October 2014, submit a report to the European Parliament and to the Council, assessing the extent to which the Member States have taken the necessary measures in order to comply with this Directive, accompanied, if necessary, by legislative proposals.

Article 11

Entry into force

This Directive shall enter into force on the 20th day following its publication in the *Official Journal of the European Union*.

Article 12

Addressees

This Directive is addressed to the Member States in accordance with the Treaties.

DIRECTIVE 2006/54/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 5 July 2006

on the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation (recast)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 141(3) thereof,

Having regard to the proposal from the Commission,

Having regard to the opinion of the European Economic and Social Committee [1],

Acting in accordance with the procedure laid down in Article 251 of the Treaty [2],

Whereas:

(1) Council Directive 76/207/EEC of 9 February 1976 on the implementation of the principle of equal treatment for men and women as regards access to employment, vocational training and promotion, and working conditions [3] and Council Directive 86/378/EEC of 24 July 1986 on the implementation of the principle of equal treatment for men and women in occupational social security schemes [4] have been significantly amended [5]. Council Directive 75/117/EEC of 10 February 1975 on the approximation of the laws of the Member States relating to the application of the principle of equal pay for men and women [6] and Council Directive 97/80/EC of 15 December 1997 on the burden of proof in cases of discrimination based on sex [7] also contain provisions which have as their purpose the implementation of the principle of equal treatment between men and women. Now that new amendments are being made to the said Directives, it is desirable, for reasons of clarity, that the provisions in question should be recast by bringing together in a single text the main provisions existing in this field as well as certain developments arising out of the case-law of the Court of Justice of the European Communities (hereinafter referred to as the Court of Justice).

(2) Equality between men and women is a fundamental principle of Community law under Article 2 and Article 3 (2) of the Treaty and the case-law of the Court of Justice. Those Treaty provisions proclaim equality between men and women as a 'task' and an 'aim' of the Community and impose a positive obligation to promote it in all its activities.

(3) The Court of Justice has held that the scope of the principle of equal treatment for men and women cannot be confined to the prohibition of discrimination based on the fact that a person is of one or other sex. In view of its purpose and the nature of the rights which it seeks to safeguard, it also applies to discrimination arising from the gender reassignment of a person.

(4) Article 141(3) of the Treaty now provides a specific legal basis for the adoption of Community measures to ensure the application of the principle of equal opportunities and equal treatment in matters of employment and occupation, including the principle of equal pay for equal work or work of equal value.

(5) Articles 21 and 23 of the Charter of Fundamental Rights of the European Union also prohibit any discrimination on grounds of sex and enshrine the right to equal treatment between men and women in all areas, including employment, work and pay.

(6) Harassment and sexual harassment are contrary to the principle of equal treatment between men and women and constitute discrimination on grounds of sex for the purposes of this Directive. These forms of discrimination occur not only in the workplace, but also in the context of access to employment, vocational training and promotion. They should therefore be prohibited and should be subject to effective, proportionate and dissuasive penalties.

(7) In this context, employers and those responsible for vocational training should be encouraged to take measures to combat all forms of discrimination on grounds of sex and, in particular, to take preventive measures against harassment and sexual harassment in the workplace and in access to employment, vocational training and promotion, in accordance with national law and practice.

(8) The principle of equal pay for equal work or work of equal value as laid down by Article 141 of the Treaty and consistently upheld in the case-law of the Court of Justice constitutes an important aspect of the principle of equal treatment between men and women and an essential and

indispensable part of the *acquis communautaire*, including the case-law of the Court concerning sex discrimination. It is therefore appropriate to make further provision for its implementation.

(9) In accordance with settled case-law of the Court of Justice, in order to assess whether workers are performing the same work or work of equal value, it should be determined whether, having regard to a range of factors including the nature of the work and training and working conditions, those workers may be considered to be in a comparable situation.

(10) The Court of Justice has established that, in certain circumstances, the principle of equal pay is not limited to situations in which men and women work for the same employer.

(11) The Member States, in collaboration with the social partners, should continue to address the problem of the continuing gender-based wage differentials and marked gender segregation on the labour market by means such as flexible working time arrangements which enable both men and women to combine family and work commitments more successfully. This could also include appropriate parental leave arrangements which could be taken up by either parent as well as the provision of accessible and affordable child-care facilities and care for dependent persons.

(12) Specific measures should be adopted to ensure the implementation of the principle of equal treatment in occupational social security schemes and to define its scope more clearly.

(13) In its judgment of 17 May 1990 in Case C-262/88 ([1]), the Court of Justice determined that all forms of occupational pension constitute an element of pay within the meaning of Article 141 of the Treaty.

(14) Although the concept of pay within the meaning of Article 141 of the Treaty does not encompass social security benefits, it is now clearly established that a pension scheme for public servants falls within the scope of the principle of equal pay if the benefits payable under the scheme are paid to the worker by reason of his/her employment relationship with the public employer, notwithstanding the fact that such scheme forms part of a general statutory scheme. According to the judgments of the Court of Justice in Cases C-7/93 ([2]) and C-351/00 ([3]), that condition will be satisfied if the pension scheme concerns a particular category of workers and its benefits are directly related to the period of service and calculated by reference to the public servant's final salary. For reasons of clarity, it is therefore appropriate to make specific provision to that effect.

([1]) C-262/88: Barber v Guardian Royal Exchange Assurance Group (1990 ECR I-1889).

([2]) C-7/93: Bestuur van het Algemeen Burgerlijk Pensioenfonds v G. A. Beune (1994 ECR I-4471).

([3]) C-351/00: Pirkko Niemi (2002 ECR I-7007).

(15) The Court of Justice has confirmed that whilst the contributions of male and female workers to a defined-benefit pension scheme are covered by Article 141 of the Treaty, any inequality in employers' contributions paid under funded defined-benefit schemes which is due to the use of actuarial factors differing according to sex is not to be assessed in the light of that same provision.

(16) By way of example, in the case of funded defined-benefit schemes, certain elements, such as conversion into a capital sum of part of a periodic pension, transfer of pension rights, a reversionary pension payable to a dependant in return for the surrender of part of a pension or a reduced pension where the worker opts to take earlier retirement, may be unequal where the inequality of the amounts results from the effects of the use of actuarial factors differing according to sex at the time when the scheme's funding is implemented.

(17) It is well established that benefits payable under occupational social security schemes are not to be considered as remuneration insofar as they are attributable to periods of employment prior to 17 May 1990, except in the case of workers or those claiming under them who initiated legal proceedings or brought an equivalent claim under the applicable national law before that date. It is therefore necessary to limit the implementation of the principle of equal treatment accordingly.

(18) The Court of Justice has consistently held that the Barber Protocol ([4]) does not affect the right to join an occupational pension scheme and that the limitation of the effects in time of the judgment in Case C-262/88 does not apply to the right to join an occupational pension scheme. The Court of Justice also ruled that the national rules relating to time limits for bringing actions under national law may be relied on against workers who assert their right to join an occupational pension scheme, provided that they are not less favourable for that type of action than for similar actions of a domestic nature and that they do not render the exercise of rights conferred by Community law impossible in practice. The Court of Justice has also pointed out that the fact that a worker can claim retroactively to join an occupational pension scheme does not allow the worker to avoid paying the contributions relating to the period of membership concerned.

(19) Ensuring equal access to employment and the vocational training leading thereto is fundamental to the application of the principle of equal treatment of men and women in matters of employment and occupation. Any exception to this principle should therefore be limited to those occupational activities which necessitate the employment of a person of a particular sex by reason of their nature or the context in which they are carried out, provided that the objective sought is legitimate and complies with the principle of proportionality.

([4]) Protocol 17 concerning Article 141 of the Treaty establishing the European Community (1992).

(20) This Directive does not prejudice freedom of association, including the right to establish unions with others and to join unions to defend one's interests. Measures within the meaning of Article 141(4) of the Treaty may include membership or the continuation of the activity of organisations or unions whose main objective is the promotion, in practice, of the principle of equal treatment between men and women.

(21) The prohibition of discrimination should be without prejudice to the maintenance or adoption of measures intended to prevent or compensate for disadvantages suffered by a group of persons of one sex. Such measures permit organisations of persons of one sex where their main object is the promotion of the special needs of those persons and the promotion of equality between men and women.

(22) In accordance with Article 141(4) of the Treaty, with a view to ensuring full equality in practice between men and women in working life, the principle of equal treatment does not prevent Member States from maintaining or adopting measures providing for specific advantages in order to make it easier for the under-represented sex to pursue a vocational activity or to prevent or compensate for disadvantages in professional careers. Given the current situation and bearing in mind Declaration No 28 to the Amsterdam Treaty, Member States should, in the first instance, aim at improving the situation of women in working life.

(23) It is clear from the case-law of the Court of Justice that unfavourable treatment of a woman related to pregnancy or maternity constitutes direct discrimination on grounds of sex. Such treatment should therefore be expressly covered by this Directive.

(24) The Court of Justice has consistently recognised the legitimacy, as regards the principle of equal treatment, of protecting a woman's biological condition during pregnancy and maternity and of introducing maternity protection measures as a means to achieve substantive equality. This Directive should therefore be without prejudice to Council Directive 92/85/EEC of 19 October 1992 on the introduction of measures to encourage improvements in the safety and health at work of pregnant workers and workers who have recently given birth or are breastfeeding ([1]). This Directive should further be without prejudice to Council Directive 96/34/EC of 3 June 1996 on the framework agreement on parental leave concluded by UNICE, CEEP and the ETUC ([2]).

(25) For reasons of clarity, it is also appropriate to make express provision for the protection of the employment rights of women on maternity leave and in particular their right to return to the same or an equivalent post, to suffer no detriment in their terms and conditions as a result of taking such leave and to benefit from any improvement in working conditions to which they would have been entitled during their absence.

(26) In the Resolution of the Council and of the Ministers for Employment and Social Policy, meeting within the Council, of 29 June 2000 on the balanced participation of women and men in family and working life ([3]), Member States were encouraged to consider examining the scope for their respective legal systems to grant working men an individual and non-transferable right to paternity leave, while maintaining their rights relating to employment.

(27) Similar considerations apply to the granting by Member States to men and women of an individual and non-transferable right to leave subsequent to the adoption of a child. It is for the Member States to determine whether or not to grant such a right to paternity and/or adoption leave and also to determine any conditions, other than dismissal and return to work, which are outside the scope of this Directive.

(28) The effective implementation of the principle of equal treatment requires appropriate procedures to be put in place by the Member States.

(29) The provision of adequate judicial or administrative procedures for the enforcement of the obligations imposed by this Directive is essential to the effective implementation of the principle of equal treatment.

(30) The adoption of rules on the burden of proof plays a significant role in ensuring that the principle of equal treatment can be effectively enforced. As the Court of Justice has held, provision should therefore be made to ensure that the burden of proof shifts to the respondent when there is a *prima facie* case of discrimination, except in relation to proceedings in which it is for the court or other competent national body to investigate the facts. It is however necessary to clarify that the appreciation of the facts from which it may be presumed that there has been direct or indirect discrimination remains a matter for the relevant national body in accordance with national law or practice. Further, it is for the Member States to introduce, at any appropriate stage of the proceedings, rules of evidence which are more favourable to plaintiffs.

(31) With a view to further improving the level of protection offered by this Directive, associations, organisations and other legal entities should also be empowered to engage in proceedings, as the Member States so determine, either on behalf or in support of a complainant, without prejudice to national rules of procedure concerning representation and defence.

(32) Having regard to the fundamental nature of the right to effective legal protection, it is appropriate to ensure that workers continue to enjoy such protection even after the relationship giving rise to an alleged breach of the principle

([1]) OJ L 348, 28.11.1992, p. 1.

([2]) OJ L 145, 19.6.1996, p. 4. Directive as amended by Directive 97/75/EC (OJ L 10, 16.1.1998, p. 24).

([3]) OJ C 218, 31.7.2000, p. 5.

of equal treatment has ended. An employee defending or giving evidence on behalf of a person protected under this Directive should be entitled to the same protection.

(33) It has been clearly established by the Court of Justice that in order to be effective, the principle of equal treatment implies that the compensation awarded for any breach must be adequate in relation to the damage sustained. It is therefore appropriate to exclude the fixing of any prior upper limit for such compensation, except where the employer can prove that the only damage suffered by an applicant as a result of discrimination within the meaning of this Directive was the refusal to take his/her job application into consideration.

(34) In order to enhance the effective implementation of the principle of equal treatment, Member States should promote dialogue between the social partners and, within the framework of national practice, with non-governmental organisations.

(35) Member States should provide for effective, proportionate and dissuasive penalties for breaches of the obligations under this Directive.

(36) Since the objectives of this Directive cannot be sufficiently achieved by the Member States and can therefore be better achieved at Community level, the Community may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(37) For the sake of a better understanding of the different treatment of men and women in matters of employment and occupation, comparable statistics disaggregated by sex should continue to be developed, analysed and made available at the appropriate levels.

(38) Equal treatment of men and women in matters of employment and occupation cannot be restricted to legislative measures. Instead, the European Union and the Member States should continue to promote the raising of public awareness of wage discrimination and the changing of public attitudes, involving all parties concerned at public and private level to the greatest possible extent. The dialogue between the social partners could play an important role in this process.

(39) The obligation to transpose this Directive into national law should be confined to those provisions which represent a substantive change as compared with the earlier Directives. The obligation to transpose the provisions which are substantially unchanged arises under the earlier Directives.

(40) This Directive should be without prejudice to the obligations of the Member States relating to the time limits for transposition into national law and application of the Directives set out in Annex I, Part B.

(41) In accordance with paragraph 34 of the Interinstitutional agreement on better law-making [1], Member States are encouraged to draw up, for themselves and in the interest of the Community, their own tables, which will, as far as possible, illustrate the correlation between this Directive and the transposition measures and to make them public,

HAVE ADOPTED THIS DIRECTIVE:

TITLE I

GENERAL PROVISIONS

Article 1

Purpose

The purpose of this Directive is to ensure the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation.

To that end, it contains provisions to implement the principle of equal treatment in relation to:

(a) access to employment, including promotion, and to vocational training;

(b) working conditions, including pay;

(c) occupational social security schemes.

It also contains provisions to ensure that such implementation is made more effective by the establishment of appropriate procedures.

Article 2

Definitions

1. For the purposes of this Directive, the following definitions shall apply:

(a) 'direct discrimination': where one person is treated less favourably on grounds of sex than another is, has been or would be treated in a comparable situation;

(b) 'indirect discrimination': where an apparently neutral provision, criterion or practice would put persons of one sex at a particular disadvantage compared with persons of the other sex, unless that provision, criterion or practice is objectively justified by a legitimate aim, and the means of achieving that aim are appropriate and necessary;

(c) 'harassment': where unwanted conduct related to the sex of a person occurs with the purpose or effect of violating the dignity of a person, and of creating an intimidating, hostile, degrading, humiliating or offensive environment;

[1] OJ C 321, 31.12.2003, p. 1.

(d) 'sexual harassment': where any form of unwanted verbal, non-verbal or physical conduct of a sexual nature occurs, with the purpose or effect of violating the dignity of a person, in particular when creating an intimidating, hostile, degrading, humiliating or offensive environment;

(e) 'pay': the ordinary basic or minimum wage or salary and any other consideration, whether in cash or in kind, which the worker receives directly or indirectly, in respect of his/her employment from his/her employer;

(f) 'occupational social security schemes': schemes not governed by Council Directive 79/7/EEC of 19 December 1978 on the progressive implementation of the principle of equal treatment for men and women in matters of social security [1] whose purpose is to provide workers, whether employees or self-employed, in an undertaking or group of undertakings, area of economic activity, occupational sector or group of sectors with benefits intended to supplement the benefits provided by statutory social security schemes or to replace them, whether membership of such schemes is compulsory or optional.

2. For the purposes of this Directive, discrimination includes:

(a) harassment and sexual harassment, as well as any less favourable treatment based on a person's rejection of or submission to such conduct;

(b) instruction to discriminate against persons on grounds of sex;

(c) any less favourable treatment of a woman related to pregnancy or maternity leave within the meaning of Directive 92/85/EEC.

Article 3

Positive action

Member States may maintain or adopt measures within the meaning of Article 141(4) of the Treaty with a view to ensuring full equality in practice between men and women in working life.

[1] OJ L 6, 10.1.1979, p. 24.

TITLE II

SPECIFIC PROVISIONS

CHAPTER 1

Equal pay

Article 4

Prohibition of discrimination

For the same work or for work to which equal value is attributed, direct and indirect discrimination on grounds of sex with regard to all aspects and conditions of remuneration shall be eliminated.

In particular, where a job classification system is used for determining pay, it shall be based on the same criteria for both men and women and so drawn up as to exclude any discrimination on grounds of sex.

CHAPTER 2

Equal treatment in occupational social security schemes

Article 5

Prohibition of discrimination

Without prejudice to Article 4, there shall be no direct or indirect discrimination on grounds of sex in occupational social security schemes, in particular as regards:

(a) the scope of such schemes and the conditions of access to them;

(b) the obligation to contribute and the calculation of contributions;

(c) the calculation of benefits, including supplementary benefits due in respect of a spouse or dependants, and the conditions governing the duration and retention of entitlement to benefits.

Article 6

Personal scope

This Chapter shall apply to members of the working population, including self-employed persons, persons whose activity is interrupted by illness, maternity, accident or involuntary unemployment and persons seeking employment and to retired and disabled workers, and to those claiming under them, in accordance with national law and/or practice.

Article 7

Material scope

1. This Chapter applies to:

(a) occupational social security schemes which provide protection against the following risks:

(i) sickness,

(ii) invalidity,

(iii) old age, including early retirement,

(iv) industrial accidents and occupational diseases,

(v) unemployment;

(b) occupational social security schemes which provide for other social benefits, in cash or in kind, and in particular survivors' benefits and family allowances, if such benefits constitute a consideration paid by the employer to the worker by reason of the latter's employment.

2. This Chapter also applies to pension schemes for a particular category of worker such as that of public servants if the benefits payable under the scheme are paid by reason of the employment relationship with the public employer. The fact that such a scheme forms part of a general statutory scheme shall be without prejudice in that respect.

Article 8

Exclusions from the material scope

1. This Chapter does not apply to:

(a) individual contracts for self-employed persons;

(b) single-member schemes for self-employed persons;

(c) insurance contracts to which the employer is not a party, in the case of workers;

(d) optional provisions of occupational social security schemes offered to participants individually to guarantee them:

(i) either additional benefits,

(ii) or a choice of date on which the normal benefits for self-employed persons will start, or a choice between several benefits;

(e) occupational social security schemes in so far as benefits are financed by contributions paid by workers on a voluntary basis.

2. This Chapter does not preclude an employer granting to persons who have already reached the retirement age for the purposes of granting a pension by virtue of an occupational social security scheme, but who have not yet reached the retirement age for the purposes of granting a statutory retirement pension, a pension supplement, the aim of which is to make equal or more nearly equal the overall amount of benefit paid to these persons in relation to the amount paid to persons of the other sex in the same situation who have already reached the statutory retirement age, until the persons benefiting from the supplement reach the statutory retirement age.

Article 9

Examples of discrimination

1. Provisions contrary to the principle of equal treatment shall include those based on sex, either directly or indirectly, for:

(a) determining the persons who may participate in an occupational social security scheme;

(b) fixing the compulsory or optional nature of participation in an occupational social security scheme;

(c) laying down different rules as regards the age of entry into the scheme or the minimum period of employment or membership of the scheme required to obtain the benefits thereof;

(d) laying down different rules, except as provided for in points (h) and (j), for the reimbursement of contributions when a worker leaves a scheme without having fulfilled the conditions guaranteeing a deferred right to long-term benefits;

(e) setting different conditions for the granting of benefits or restricting such benefits to workers of one or other of the sexes;

(f) fixing different retirement ages;

(g) suspending the retention or acquisition of rights during periods of maternity leave or leave for family reasons which are granted by law or agreement and are paid by the employer;

(h) setting different levels of benefit, except in so far as may be necessary to take account of actuarial calculation factors which differ according to sex in the case of defined-contribution schemes; in the case of funded defined-benefit schemes, certain elements may be unequal where the inequality of the amounts results from the effects of the use of actuarial factors differing according to sex at the time when the scheme's funding is implemented;

(i) setting different levels for workers' contributions;

(j) setting different levels for employers' contributions, except:

(i) in the case of defined-contribution schemes if the aim is to equalise the amount of the final benefits or to make them more nearly equal for both sexes,

(ii) in the case of funded defined-benefit schemes where the employer's contributions are intended to ensure the adequacy of the funds necessary to cover the cost of the benefits defined;

(k) laying down different standards or standards applicable only to workers of a specified sex, except as provided for in points (h) and (j), as regards the guarantee or retention of entitlement to deferred benefits when a worker leaves a scheme.

2. Where the granting of benefits within the scope of this Chapter is left to the discretion of the scheme's management bodies, the latter shall comply with the principle of equal treatment.

Article 10

Implementation as regards self-employed persons

1. Member States shall take the necessary steps to ensure that the provisions of occupational social security schemes for self-employed persons contrary to the principle of equal treatment are revised with effect from 1 January 1993 at the latest or for Member States whose accession took place after that date, at the date that Directive 86/378/EEC became applicable in their territory.

2. This Chapter shall not preclude rights and obligations relating to a period of membership of an occupational social security scheme for self-employed persons prior to revision of that scheme from remaining subject to the provisions of the scheme in force during that period.

Article 11

Possibility of deferral as regards self-employed persons

As regards occupational social security schemes for self-employed persons, Member States may defer compulsory application of the principle of equal treatment with regard to:

(a) determination of pensionable age for the granting of old-age or retirement pensions, and the possible implications for other benefits:

(i) either until the date on which such equality is achieved in statutory schemes,

(ii) or, at the latest, until such equality is prescribed by a directive;

(b) survivors' pensions until Community law establishes the principle of equal treatment in statutory social security schemes in that regard;

(c) the application of Article 9(1)(i) in relation to the use of actuarial calculation factors, until 1 January 1999 or for Member States whose accession took place after that date until the date that Directive 86/378/EEC became applicable in their territory.

Article 12

Retroactive effect

1. Any measure implementing this Chapter, as regards workers, shall cover all benefits under occupational social security schemes derived from periods of employment subsequent to 17 May 1990 and shall apply retroactively to that date, without prejudice to workers or those claiming under them who have, before that date, initiated legal proceedings or raised an equivalent claim under national law. In that event, the implementation measures shall apply retroactively to 8 April 1976 and shall cover all the benefits derived from periods of employment after that date. For Member States which acceded to the Community after 8 April 1976, and before 17 May 1990, that date shall be replaced by the date on which Article 141 of the Treaty became applicable in their territory.

2. The second sentence of paragraph 1 shall not prevent national rules relating to time limits for bringing actions under national law from being relied on against workers or those claiming under them who initiated legal proceedings or raised an equivalent claim under national law before 17 May 1990, provided that they are not less favourable for that type of action than for similar actions of a domestic nature and that they do not render the exercise of rights conferred by Community law impossible in practice.

3. For Member States whose accession took place after 17 May 1990 and which were on 1 January 1994 Contracting Parties to the Agreement on the European Economic Area, the date of 17 May 1990 in the first sentence of paragraph 1 shall be replaced by 1 January 1994.

4. For other Member States whose accession took place after 17 May 1990, the date of 17 May 1990 in paragraphs 1 and 2 shall be replaced by the date on which Article 141 of the Treaty became applicable in their territory.

Article 13

Flexible pensionable age

Where men and women may claim a flexible pensionable age under the same conditions, this shall not be deemed to be incompatible with this Chapter.

CHAPTER 3

Equal treatment as regards access to employment, vocational training and promotion and working conditions

Article 14

Prohibition of discrimination

1. There shall be no direct or indirect discrimination on grounds of sex in the public or private sectors, including public bodies, in relation to:

(a) conditions for access to employment, to self-employment or to occupation, including selection criteria and recruitment conditions, whatever the branch of activity and at all levels of the professional hierarchy, including promotion;

(b) access to all types and to all levels of vocational guidance, vocational training, advanced vocational training and retraining, including practical work experience;

(c) employment and working conditions, including dismissals, as well as pay as provided for in Article 141 of the Treaty;

(d) membership of, and involvement in, an organisation of workers or employers, or any organisation whose members carry on a particular profession, including the benefits provided for by such organisations.

2. Member States may provide, as regards access to employment including the training leading thereto, that a difference of treatment which is based on a characteristic related to sex shall not constitute discrimination where, by reason of the nature of the particular occupational activities concerned or of the context in which they are carried out, such a characteristic constitutes a genuine and determining occupational requirement, provided that its objective is legitimate and the requirement is proportionate.

Article 15

Return from maternity leave

A woman on maternity leave shall be entitled, after the end of her period of maternity leave, to return to her job or to an equivalent post on terms and conditions which are no less favourable to her and to benefit from any improvement in working conditions to which she would have been entitled during her absence.

Article 16

Paternity and adoption leave

This Directive is without prejudice to the right of Member States to recognise distinct rights to paternity and/or adoption leave. Those Member States which recognise such rights shall take the necessary measures to protect working men and women against dismissal due to exercising those rights and ensure that, at the end of such leave, they are entitled to return to their jobs or to equivalent posts on terms and conditions which are no less favourable to them, and to benefit from any improvement in working conditions to which they would have been entitled during their absence.

TITLE III

HORIZONTAL PROVISIONS

CHAPTER 1

Remedies and enforcement

Section 1

Remedies

Article 17

Defence of rights

1. Member States shall ensure that, after possible recourse to other competent authorities including where they deem it appropriate conciliation procedures, judicial procedures for the enforcement of obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.

2. Member States shall ensure that associations, organisations or other legal entities which have, in accordance with the criteria laid down by their national law, a legitimate interest in ensuring that the provisions of this Directive are complied with, may engage, either on behalf or in support of the complainant, with his/her approval, in any judicial and/or administrative procedure provided for the enforcement of obligations under this Directive.

3. Paragraphs 1 and 2 are without prejudice to national rules relating to time limits for bringing actions as regards the principle of equal treatment.

Article 18

Compensation or reparation

Member States shall introduce into their national legal systems such measures as are necessary to ensure real and effective compensation or reparation as the Member States so determine for the loss and damage sustained by a person injured as a result of discrimination on grounds of sex, in a way which is dissuasive and proportionate to the damage suffered. Such compensation or reparation may not be restricted by the fixing of a prior upper limit, except in cases where the employer can prove that the only damage suffered by an applicant as a result of discrimination within the meaning of this Directive is the refusal to take his/her job application into consideration.

Section 2

Burden of proof

Article 19

Burden of proof

1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence which are more favourable to plaintiffs.

3. Member States need not apply paragraph 1 to proceedings in which it is for the court or competent body to investigate the facts of the case.

4. Paragraphs 1, 2 and 3 shall also apply to:

(a) the situations covered by Article 141 of the Treaty and, insofar as discrimination based on sex is concerned, by Directives 92/85/EEC and 96/34/EC;

(b) any civil or administrative procedure concerning the public or private sector which provides for means of redress under national law pursuant to the measures referred to in (a) with the exception of out-of-court procedures of a voluntary nature or provided for in national law.

5. This Article shall not apply to criminal procedures, unless otherwise provided by the Member States.

CHAPTER 2

Promotion of equal treatment — dialogue

Article 20

Equality bodies

1. Member States shall designate and make the necessary arrangements for a body or bodies for the promotion, analysis, monitoring and support of equal treatment of all persons without discrimination on grounds of sex. These bodies may form part of agencies with responsibility at national level for the defence of human rights or the safeguard of individuals' rights.

2. Member States shall ensure that the competences of these bodies include:

(a) without prejudice to the right of victims and of associations, organisations or other legal entities referred to in Article 17(2), providing independent assistance to victims of discrimination in pursuing their complaints about discrimination;

(b) conducting independent surveys concerning discrimination;

(c) publishing independent reports and making recommendations on any issue relating to such discrimination;

(d) at the appropriate level exchanging available information with corresponding European bodies such as any future European Institute for Gender Equality.

Article 21

Social dialogue

1. Member States shall, in accordance with national traditions and practice, take adequate measures to promote social dialogue between the social partners with a view to fostering equal treatment, including, for example, through the monitoring of practices in the workplace, in access to employment, vocational training and promotion, as well as through the monitoring of collective agreements, codes of conduct, research or exchange of experience and good practice.

2. Where consistent with national traditions and practice, Member States shall encourage the social partners, without prejudice to their autonomy, to promote equality between men and women, and flexible working arrangements, with the aim of facilitating the reconciliation of work and private life, and to conclude, at the appropriate level, agreements laying down anti-discrimination rules in the fields referred to in Article 1 which fall within the scope of collective bargaining. These agreements shall respect the provisions of this Directive and the relevant national implementing measures.

3. Member States shall, in accordance with national law, collective agreements or practice, encourage employers to promote equal treatment for men and women in a planned and systematic way in the workplace, in access to employment, vocational training and promotion.

4. To this end, employers shall be encouraged to provide at appropriate regular intervals employees and/or their representatives with appropriate information on equal treatment for men and women in the undertaking.

Such information may include an overview of the proportions of men and women at different levels of the organisation; their pay and pay differentials; and possible measures to improve the situation in cooperation with employees' representatives.

Article 22

Dialogue with non-governmental organisations

Member States shall encourage dialogue with appropriate non-governmental organisations which have, in accordance with their national law and practice, a legitimate interest in contributing to

the fight against discrimination on grounds of sex with a view to promoting the principle of equal treatment.

CHAPTER 3

General horizontal provisions

Article 23

Compliance

Member States shall take all necessary measures to ensure that:

(a) any laws, regulations and administrative provisions contrary to the principle of equal treatment are abolished;

(b) provisions contrary to the principle of equal treatment in individual or collective contracts or agreements, internal rules of undertakings or rules governing the independent occupations and professions and workers' and employers' organisations or any other arrangements shall be, or may be, declared null and void or are amended;

(c) occupational social security schemes containing such provisions may not be approved or extended by administrative measures.

Article 24

Victimisation

Member States shall introduce into their national legal systems such measures as are necessary to protect employees, including those who are employees' representatives provided for by national laws and/or practices, against dismissal or other adverse treatment by the employer as a reaction to a complaint within the undertaking or to any legal proceedings aimed at enforcing compliance with the principle of equal treatment.

Article 25

Penalties

Member States shall lay down the rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive, and shall take all measures necessary to ensure that they are applied. The penalties, which may comprise the payment of compensation to the victim, must be effective, proportionate and dissuasive. The Member States shall notify those provisions to the Commission by 5 October 2005 at the latest and shall notify it without delay of any subsequent amendment affecting them.

Article 26

Prevention of discrimination

Member States shall encourage, in accordance with national law, collective agreements or practice, employers and those responsible for access to vocational training to take effective measures to prevent all forms of discrimination on grounds of sex, in particular harassment and sexual harassment in the workplace, in access to employment, vocational training and promotion.

Article 27

Minimum requirements

1. Member States may introduce or maintain provisions which are more favourable to the protection of the principle of equal treatment than those laid down in this Directive.

2. Implementation of this Directive shall under no circumstances be sufficient grounds for a reduction in the level of protection of workers in the areas to which it applies, without prejudice to the Member States' right to respond to changes in the situation by introducing laws, regulations and administrative provisions which differ from those in force on the notification of this Directive, provided that the provisions of this Directive are complied with.

Article 28

Relationship to Community and national provisions

1. This Directive shall be without prejudice to provisions concerning the protection of women, particularly as regards pregnancy and maternity.

2. This Directive shall be without prejudice to the provisions of Directive 96/34/EC and Directive 92/85/EEC.

Article 29

Gender mainstreaming

Member States shall actively take into account the objective of equality between men and women when formulating and implementing laws, regulations, administrative provisions, policies and activities in the areas referred to in this Directive.

Article 30

Dissemination of information

Member States shall ensure that measures taken pursuant to this Directive, together with the provisions already in force, are brought to the attention of all the persons concerned by all suitable means and, where appropriate, at the workplace.

TITLE IV

FINAL PROVISIONS

Article 31

Reports

1. By 15 February 2011, the Member States shall communicate to the Commission all the information necessary for the Commission to draw up a report to the European Parliament and the Council on the application of this Directive.

2. Without prejudice to paragraph 1, Member States shall communicate to the Commission, every four years, the texts of any measures adopted pursuant to Article 141(4) of the Treaty, as well as reports on these measures and their implementation. On the basis of that information, the Commission will adopt and publish every four years a report establishing a comparative assessment of any measures in the light of Declaration No 28 annexed to the Final Act of the Treaty of Amsterdam.

3. Member States shall assess the occupational activities referred to in Article 14(2), in order to decide, in the light of social developments, whether there is justification for maintaining the exclusions concerned. They shall notify the Commission of the results of this assessment periodically, but at least every 8 years.

Article 32

Review

By 15 February 2011 at the latest, the Commission shall review the operation of this Directive and if appropriate, propose any amendments it deems necessary.

Article 33

Implementation

Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 15 August 2008 at the latest or shall ensure, by that date, that management and labour introduce the requisite provisions by way of agreement. Member States may, if necessary to take account of particular difficulties, have up to one additional year to comply with this Directive. Member States shall take all necessary steps to be able to guarantee the results imposed by this Directive. They shall forthwith communicate to the Commission the texts of those measures.

When Member States adopt these measures, they shall contain a reference to this Directive or be accompanied by such reference on the occasion of their official publication. They shall also include a statement that references in existing laws, regulations and administrative provisions to the Directives repealed by this Directive shall be construed as references to this Directive. Member States shall determine how such reference is to be made and how that statement is to be formulated.

The obligation to transpose this Directive into national law shall be confined to those provisions which represent a substantive change as compared with the earlier Directives. The obligation to transpose the provisions which are substantially unchanged arises under the earlier Directives.

Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

Article 34

Repeal

1. With effect from 15 August 2009 Directives 75/117/EEC, 76/207/EEC, 86/378/EEC and 97/80/EC shall be repealed without prejudice to the obligations of the Member States relating to the time-limits for transposition into national law and application of the Directives set out in Annex I, Part B.

2. References made to the repealed Directives shall be construed as being made to this Directive and should be read in accordance with the correlation table in Annex II.

Article 35

Entry into force

This Directive shall enter into force on the 20th day following its publication in the *Official Journal of the European Union*.

Article 36

Addressees

This Directive is addressed to the Member States.

Done at Strasbourg, 5 July 2006.

COUNCIL DIRECTIVE 2004/113/EC

of 13 December 2004

implementing the principle of equal treatment between men and women in the access to and supply of goods and services

THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community and in particular Article 13(1) thereof,

Having regard to the proposal from the Commission,

Having regard to the Opinion of the European Parliament [1],

Having regard to the Opinion of the European Economic and Social Committee [2],

Having regard to the opinion of the Committee of the Regions [3],

Whereas:

(1) In accordance with Article 6 of the Treaty on European Union, the Union is founded on the principles of liberty, democracy, respect for human rights and fundamental freedoms and the rule of law, principles which are common to the Member States, and respects fundamental rights as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms and as they result from the constitutional traditions common to the Member States as general principles of Community law.

(2) The right to equality before the law and protection against discrimination for all persons constitutes a universal right recognised by the Universal Declaration of Human Rights, the United Nations Convention on the Elimination of all forms of Discrimination Against Women, the International Convention on the Elimination of all forms of Racial Discrimination and the United Nations Covenants on Civil and Political Rights and on Economic, Social and Cultural Rights and by the European Convention for the Protection of Human Rights and Fundamental Freedoms, to which all Member States are signatories.

(3) While prohibiting discrimination, it is important to respect other fundamental rights and freedoms, including the protection of private and family life and transactions carried out in that context and the freedom of religion.

(4) Equality between men and women is a fundamental principle of the European Union. Articles 21 and 23 of the Charter of Fundamental Rights of the European Union prohibit any discrimination on grounds of sex and require equality between men and women to be ensured in all areas.

(5) Article 2 of the Treaty establishing the European Community provides that promoting such equality is one of the Community's essential tasks. Similarly, Article 3(2) of the Treaty requires the Community to aim to eliminate inequalities and to promote equality between men and women in all its activities.

(6) The Commission announced its intention of proposing a directive on sex discrimination outside of the labour market in its Communication on the Social Policy Agenda. Such a proposal is fully consistent with Council Decision 2001/51/EC of 20 December 2000 establishing a Programme relating to the Community framework strategy on gender equality (2001-2005) [4] covering all Community policies and aimed at promoting equality for men and women by adjusting these policies and implementing practical measures to improve the situation of men and women in society.

(7) At its meeting in Nice of 7 and 9 December 2000, the European Council called on the Commission to reinforce equality-related rights by adopting a proposal for a directive on promoting gender equality in areas other than employment and professional life.

[1] Opinion delivered on 30 March 2004 (not yet published in the Official Journal).
[2] OJ C 241, 28.9.2004, p. 44.
[3] OJ C 121, 30.4.2004, p. 27.
[4] OJ L 17, 19.1.2001, p. 22.

(8) The Community has adopted a range of legal instruments to prevent and combat sex discrimination in the labour market. These instruments have demonstrated the value of legislation in the fight against discrimination.

(9) Discrimination based on sex, including harassment and sexual harassment, also takes place in areas outside of the labour market. Such discrimination can be equally damaging, acting as a barrier to the full and successful integration of men and women into economic and social life.

(10) Problems are particularly apparent in the area of the access to and supply of goods and services. Discrimination based on sex, should therefore be prevented and eliminated in this area. As in the case of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial and ethnic origin [1], this objective can be better achieved by means of Community legislation.

(11) Such legislation should prohibit discrimination based on sex in the access to and supply of goods and services. Goods should be taken to be those within the meaning of the provisions of the Treaty establishing the European Community relating to the free movement of goods. Services should be taken to be those within the meaning of Article 50 of that Treaty.

(12) To prevent discrimination based on sex, this Directive should apply to both direct discrimination and indirect discrimination. Direct discrimination occurs only when one person is treated less favourably, on grounds of sex, than another person in a comparable situation. Accordingly, for example, differences between men and women in the provision of healthcare services, which result from the physical differences between men and women, do not relate to comparable situations and therefore, do not constitute discrimination.

(13) The prohibition of discrimination should apply to persons providing goods and services, which are available to the public and which are offered outside the area of private and family life and the transactions carried out in this context. It should not apply to the content of media or advertising nor to public or private education.

(14) All individuals enjoy the freedom to contract, including the freedom to choose a contractual partner for a transaction. An individual who provides goods or services may have a number of subjective reasons for his or her choice of contractual partner. As long as the choice of partner is not based on that person's sex, this Directive should not prejudice the individual's freedom to choose a contractual partner.

(15) There are already a number of existing legal instruments for the implementation of the principle of equal treatment between men and women in matters of employment and occupation. Therefore, this Directive should not apply in this field. The same reasoning applies to matters of self-employment insofar as they are covered by existing legal instruments. The Directive should apply only to insurance and pensions which are private, voluntary and separate from the employment relationship.

(16) Differences in treatment may be accepted only if they are justified by a legitimate aim. A legitimate aim may, for example, be the protection of victims of sex-related violence (in cases such as the establishment of single-sex shelters), reasons of privacy and decency (in cases such as the provision of accommodation by a person in a part of that person's home), the promotion of gender equality or of the interests of men or women (for example single-sex voluntary bodies), the freedom of association (in cases of membership of single-sex private clubs), and the organisation of sporting activities (for example single-sex sports events). Any limitation should nevertheless be appropriate and necessary in accordance with the criteria derived from case law of the Court of Justice of the European Communities.

(17) The principle of equal treatment in the access to goods and services does not require that facilities should always be provided to men and women on a shared basis, as long as they are not provided more favourably to members of one sex.

(18) The use of actuarial factors related to sex is widespread in the provision of insurance and other related financial services. In order to ensure equal treatment between men and women, the use of sex as an actuarial factor should not result in differences in individuals' premiums and benefits. To avoid a sudden readjustment of the market, the implementation of this rule should apply only to new contracts concluded after the date of transposition of this Directive.

[1] OJ L 180, 19.7.2000, p. 22.

(19) Certain categories of risks may vary between the sexes. In some cases, sex is one but not necessarily the only determining factor in the assessment of risks insured. For contracts insuring those types of risks, Member States may decide to permit exemptions from the rule of unisex premiums and benefits, as long as they can ensure that underlying actuarial and statistical data on which the calculations are based, are reliable, regularly up-dated and available to the public. Exemptions are allowed only where national legislation has not already applied the unisex rule. Five years after transposition of this Directive, Member States should re-examine the justification for these exemptions, taking into account the most recent actuarial and statistical data and a report by the Commission three years after the date of transposition of this Directive.

(20) Less favourable treatment of women for reasons of pregnancy and maternity should be considered a form of direct discrimination based on sex and therefore prohibited in insurance and related financial services. Costs related to risks of pregnancy and maternity should therefore not be attributed to the members of one sex only.

(21) Persons who have been subject to discrimination based on sex should have adequate means of legal protection. To provide a more effective level of protection, associations, organisations and other legal entities should also be empowered to engage in proceedings, as the Member States so determine, either on behalf or in support of any victim, without prejudice to national rules of procedure concerning representation and defence before the courts.

(22) The rules on the burden of proof should be adapted when there is a prima facie case of discrimination and for the principle of equal treatment to be applied effectively, the burden of proof should shift back to the defendant when evidence of such discrimination is brought.

(23) The effective implementation of the principle of equal treatment requires adequate judicial protection against victimisation.

(24) With a view to promoting the principle of equal treatment, Member States should encourage dialogue with relevant stakeholders, which have, in accordance with national law and practice, a legitimate interest in contributing to the fight against discrimination on grounds of sex in the area of access to and supply of goods and services.

(25) Protection against discrimination based on sex should itself be strengthened by the existence of a body or bodies in each Member State, with competence to analyse the problems involved, to study possible solutions and to provide concrete assistance for the victims. The body or bodies may be the same as those with responsibility at national level for the defence of human rights or the safeguarding of individuals' rights, or the implementation of the principle of equal treatment.

(26) This Directive lays down minimum requirements, thus giving the Member States the option of introducing or maintaining more favourable provisions. The implementation of this Directive should not serve to justify any regression in relation to the situation, which already prevails in each Member State.

(27) Member States should provide for effective, proportionate and dissuasive penalties in cases of breaches of the obligations under this Directive.

(28) Since the objectives of this Directive, namely to ensure a common high level of protection against discrimination in all the Member States, cannot be sufficiently achieved by the Member States and can, therefore, by reason of the scale and effects of the action, be better achieved at Community level, the Community may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(29) In accordance with paragraph 34 of the interinstitutional agreement on better law-making [1], Member States are encouraged to draw up, for themselves and in the interest of the Community, their own tables, which will, as far as possible, illustrate the correlation between the Directive and the transposition measures and to make them public,

[1] OJ C 321, 31.12.2003, p. 1.

HAS ADOPTED THIS DIRECTIVE:

CHAPTER I

GENERAL PROVISIONS

Article 1

Purpose

The purpose of this Directive is to lay down a framework for combating discrimination based on sex in access to and supply of goods and services, with a view to putting into effect in the Member States the principle of equal treatment between men and women.

Article 2

Definitions

For the purposes of this Directive, the following definitions shall apply:

(a) direct discrimination: where one person is treated less favourably, on grounds of sex, than another is, has been or would be treated in a comparable situation;

(b) indirect discrimination: where an apparently neutral provision, criterion or practice would put persons of one sex at a particular disadvantage compared with persons of the other sex, unless that provision, criterion or practice is objectively justified by a legitimate aim and the means of achieving that aim are appropriate and necessary;

(c) harassment: where an unwanted conduct related to the sex of a person occurs with the purpose or effect of violating the dignity of a person and of creating an intimidating, hostile, degrading, humiliating or offensive environment;

(d) sexual harassment: where any form of unwanted physical, verbal, non-verbal or physical conduct of a sexual nature occurs, with the purpose or effect of violating the dignity of a person, in particular when creating an intimidating, hostile, degrading, humiliating or offensive environment.

Article 3

Scope

1. Within the limits of the powers conferred upon the Community, this Directive shall apply to all persons who provide goods and services, which are available to the public irrespective of the person concerned as regards both the public and private sectors, including public bodies, and which are offered outside the area of private and family life and the transactions carried out in this context.

2. This Directive does not prejudice the individual's freedom to choose a contractual partner as long as an individual's choice of contractual partner is not based on that person's sex.

3. This Directive shall not apply to the content of media and advertising nor to education.

4. This Directive shall not apply to matters of employment and occupation. This Directive shall not apply to matters of self-employment, insofar as these matters are covered by other Community legislative acts.

Article 4

Principle of equal treatment

1. For the purposes of this Directive, the principle of equal treatment between men and women shall mean that

(a) there shall be no direct discrimination based on sex, including less favourable treatment of women for reasons of pregnancy and maternity;

(b) there shall be no indirect discrimination based on sex.

2. This Directive shall be without prejudice to more favourable provisions concerning the protection of women as regards pregnancy and maternity.

3. Harassment and sexual harassment within the meaning of this Directive shall be deemed to be discrimination on the grounds of sex and therefore prohibited. A person's rejection of, or submission to, such conduct may not be used as a basis for a decision affecting that person.

4. Instruction to direct or indirect discrimination on the grounds of sex shall be deemed to be discrimination within the meaning of this Directive.

5. This Directive shall not preclude differences in treatment, if the provision of the goods and services exclusively or primarily to members of one sex is justified by a legitimate aim and the means of achieving that aim are appropriate and necessary.

Article 5

Actuarial factors

1. Member States shall ensure that in all new contracts concluded after 21 December 2007 at the latest, the use of sex as a factor in the calculation of premiums and benefits for the purposes of insurance and related financial services shall not result in differences in individuals' premiums and benefits.

2. Notwithstanding paragraph 1, Member States may decide before 21 December 2007 to permit proportionate differences in individuals' premiums and benefits where the use of sex is a determining factor in the assessment of risk based on relevant and accurate actuarial and statistical data. The Member States concerned shall inform the Commission and ensure that accurate data relevant to the use of sex as a determining actuarial factor are compiled, published and regularly updated. These Member States shall review their decision five years after 21 December 2007, taking into account the Commission report referred to in Article 16, and shall forward the results of this review to the Commission.

3. In any event, costs related to pregnancy and maternity shall not result in differences in individuals' premiums and benefits.

Member States may defer implementation of the measures necessary to comply with this paragraph until two years after 21 December 2007 at the latest. In that case the Member States concerned shall immediately inform the Commission.

Article 6

Positive action

With a view to ensuring full equality in practice between men and women, the principle of equal treatment shall not prevent any Member State from maintaining or adopting specific measures to prevent or compensate for disadvantages linked to sex.

Article 7

Minimum requirements

1. Member States may introduce or maintain provisions which are more favourable to the protection of the principle of equal treatment between men and women than those laid down in this Directive.

2. The implementation of this Directive shall in no circumstances constitute grounds for a reduction in the level of protection against discrimination already afforded by Member States in the fields covered by this Directive.

CHAPTER II

REMEDIES AND ENFORCEMENT

Article 8

Defence of rights

1. Member States shall ensure that judicial and/or administrative procedures, including where they deem it appropriate conciliation procedures, for the enforcement of the obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.

2. Member States shall introduce into their national legal systems such measures as are necessary to ensure real and effective compensation or reparation, as the Member States so determine, for the loss and damage sustained by a person injured as a result of discrimination within the meaning of this Directive, in a way which is dissuasive and proportionate to the damage suffered. The fixing of a prior upper limit shall not restrict such compensation or reparation.

3. Member States shall ensure that associations, organisations or other legal entities, which have, in accordance with the criteria laid down by their national law, a legitimate interest in ensuring that the provisions of this Directive are complied with, may engage, on behalf or in support of the complainant, with his or her approval, in any judicial and/or administrative procedure provided for the enforcement of obligations under this Directive.

4. Paragraphs 1 and 3 shall be without prejudice to national rules on time limits for bringing actions relating to the principle of equal treatment.

Article 9

Burden of proof

1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence, which are more favourable to plaintiffs.

3. Paragraph 1 shall not apply to criminal procedures.

4. Paragraphs 1, 2 and 3 shall also apply to any proceedings brought in accordance with Article 8(3).

5. Member States need not apply paragraph 1 to proceedings in which it is for the court or other competent authority to investigate the facts of the case.

Article 10

Victimisation

Member States shall introduce into their national legal systems such measures as are necessary to protect persons from any adverse treatment or adverse consequence as a reaction to a complaint or to legal proceedings aimed at enforcing compliance with the principle of equal treatment.

Article 11

Dialogue with relevant stakeholders

With a view to promoting the principle of equal treatment, Member States shall encourage dialogue with relevant stakeholders which have, in accordance with national law and practice, a legitimate interest in contributing to the fight against discrimination on grounds of sex in the area of access to and supply of goods and services.

CHAPTER III

BODIES FOR THE PROMOTION OF EQUAL TREATMENT

Article 12

1. Member States shall designate and make the necessary arrangements for a body or bodies for the promotion, analysis, monitoring and support of equal treatment of all persons without discrimination on the grounds of sex. These bodies may form part of agencies charged at national level with the defence of human rights or the safeguard of individuals' rights, or the implementation of the principle of equal treatment.

2. Member States shall ensure that the competencies of the bodies referred to in paragraph 1 include:

(a) without prejudice to the rights of victims and of associations, organisations or other legal entities referred to in Article 8(3), providing independent assistance to victims of discrimination in pursuing their complaints about discrimination;

(b) conducting independent surveys concerning discrimination;

(c) publishing independent reports and making recommendations on any issue relating to such discrimination.

CHAPTER IV

FINAL PROVISIONS

Article 13

Compliance

Member States shall take the necessary measures to ensure that the principle of equal treatment is respected in relation to the access to and supply of goods and services within the scope of this Directive, and in particular that:

(a) any laws, regulations and administrative provisions contrary to the principle of equal treatment are abolished;

(b) any contractual provisions, internal rules of undertakings, and rules governing profit-making or non-profit-making associations contrary to the principle of equal treatment are, or may be, declared null and void or are amended.

Article 14

Penalties

Member States shall lay down the rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive and shall take all measures necessary to ensure that they are applied. The penalties, which may comprise the payment of compensation to the victim, shall be effective, proportionate and dissuasive. Member States shall notify those provisions to the Commission by 21 December 2007 at the latest and shall notify it without delay of any subsequent amendment affecting them.

Article 15

Dissemination of information

Member States shall take care that the provisions adopted pursuant to this Directive, together with the relevant provisions already in force, are brought to the attention of the persons concerned by all appropriate means throughout their territory.

Article 16

Reports

1. Member States shall communicate all available information concerning the application of this Directive to the Commission, by 21 December 2009. and every five years thereafter.

The Commission shall draw up a summary report, which shall include a review of the current practices of Member States in relation to Article 5 with regard to the use of sex as a factor in the calculation of premiums and benefits. It shall submit this report to the European Parliament and to the Council no later 21 December 2010. Where appropriate, the Commission shall accompany its report with proposals to modify the Directive.

2. The Commission's report shall take into account the viewpoints of relevant stakeholders.

Article 17

Transposition

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 21 December 2007 at the latest. They shall forthwith communicate to the Commission the text of those provisions.

When Member States adopt these measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. The methods of making such publication of reference shall be laid down by the Member States.

2. Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

Article 18

Entry into force

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Union*.

Article 19

Addressees

This Directive is addressed to the Member States.

Done at Brussels, 13 December 2004.

For the Council
The President
B. R. BOT

COUNCIL DIRECTIVE 2000/43/EC

of 29 June 2000

implementing the principle of equal treatment between persons irrespective of racial or ethnic origin

THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community and in particular Article 13 thereof,

Having regard to the proposal from the Commission [1],

Having regard to the opinion of the European Parliament [2],

Having regard to the opinion of the Economic and Social Committee [3],

Having regard to the opinion of the Committee of the Regions [4],

Whereas:

(1) The Treaty on European Union marks a new stage in the process of creating an ever closer union among the peoples of Europe.

(2) In accordance with Article 6 of the Treaty on European Union, the European Union is founded on the principles of liberty, democracy, respect for human rights and fundamental freedoms, and the rule of law, principles which are common to the Member States, and should respect fundamental rights as guaranteed by the European Convention for the protection of Human Rights and Fundamental Freedoms and as they result from the constitutional traditions common to the Member States, as general principles of Community Law.

(3) The right to equality before the law and protection against discrimination for all persons constitutes a universal right recognised by the Universal Declaration of Human Rights, the United Nations Convention on the Elimination of all forms of Discrimination Against Women, the International Convention on the Elimination of all forms of Racial Discrimination and the United Nations Covenants on Civil and Political Rights and on Economic, Social and Cultural Rights and by the European Convention for the Protection of Human Rights and Fundamental Freedoms, to which all Member States are signatories.

(4) It is important to respect such fundamental rights and freedoms, including the right to freedom of association. It is also important, in the context of the access to and provision of goods and services, to respect the protection of private and family life and transactions carried out in this context.

(5) The European Parliament has adopted a number of Resolutions on the fight against racism in the European Union.

(6) The European Union rejects theories which attempt to determine the existence of separate human races. The use of the term 'racial origin' in this Directive does not imply an acceptance of such theories.

(7) The European Council in Tampere, on 15 and 16 October 1999, invited the Commission to come forward as soon as possible with proposals implementing Article 13 of the EC Treaty as regards the fight against racism and xenophobia.

(8) The Employment Guidelines 2000 agreed by the European Council in Helsinki, on 10 and 11 December 1999, stress the need to foster conditions for a socially inclusive labour market by formulating a coherent set of policies aimed at combating discrimination against groups such as ethnic minorities.

(9) Discrimination based on racial or ethnic origin may undermine the achievement of the objectives of the EC Treaty, in particular the attainment of a high level of employment and of social protection, the raising of the standard of living and quality of life, economic and social cohesion and solidarity. It may also undermine the objective of developing the European Union as an area of freedom, security and justice.

(10) The Commission presented a communication on racism, xenophobia and anti-Semitism in December 1995.

(11) The Council adopted on 15 July 1996 Joint Action (96/443/JHA) concerning action to combat racism and xenophobia [5] under which the Member States undertake to ensure effective judicial cooperation in respect of offences based on racist or xenophobic behaviour.

(12) To ensure the development of democratic and tolerant societies which allow the participation of all persons irrespective of racial or ethnic origin, specific action in the field of discrimination based on racial or ethnic origin should go beyond access to employed and self-employed activities and cover areas such as education, social protection including social security and healthcare, social advantages and access to and supply of goods and services.

[1] Not yet published in the Official Journal.
[2] Opinion delivered on 18.5.2000 (not yet published in the Official Journal).
[3] Opinion delivered on 12.4.2000 (not yet published in the Official Journal).
[4] Opinion delivered on 31.5.2000 (not yet published in the Official Journal).
[5] OJ L 185, 24.7.1996, p. 5.

(13) To this end, any direct or indirect discrimination based on racial or ethnic origin as regards the areas covered by this Directive should be prohibited throughout the Community. This prohibition of discrimination should also apply to nationals of third countries, but does not cover differences of treatment based on nationality and is without prejudice to provisions governing the entry and residence of third-country nationals and their access to employment and to occupation.

(14) In implementing the principle of equal treatment irrespective of racial or ethnic origin, the Community should, in accordance with Article 3(2) of the EC Treaty, aim to eliminate inequalities, and to promote equality between men and women, especially since women are often the victims of multiple discrimination.

(15) The appreciation of the facts from which it may be inferred that there has been direct or indirect discrimination is a matter for national judicial or other competent bodies, in accordance with rules of national law or practice. Such rules may provide in particular for indirect discrimination to be established by any means including on the basis of statistical evidence.

(16) It is important to protect all natural persons against discrimination on grounds of racial or ethnic origin. Member States should also provide, where appropriate and in accordance with their national traditions and practice, protection for legal persons where they suffer discrimination on grounds of the racial or ethnic origin of their members.

(17) The prohibition of discrimination should be without prejudice to the maintenance or adoption of measures intended to prevent or compensate for disadvantages suffered by a group of persons of a particular racial or ethnic origin, and such measures may permit organisations of persons of a particular racial or ethnic origin where their main object is the promotion of the special needs of those persons.

(18) In very limited circumstances, a difference of treatment may be justified where a characteristic related to racial or ethnic origin constitutes a genuine and determining occupational requirement, when the objective is legitimate and the requirement is proportionate. Such circumstances should be included in the information provided by the Member States to the Commission.

(19) Persons who have been subject to discrimination based on racial and ethnic origin should have adequate means of legal protection. To provide a more effective level of protection, associations or legal entities should also be empowered to engage, as the Member States so determine, either on behalf or in support of any victim, in proceedings, without prejudice to national rules of procedure concerning representation and defence before the courts.

(20) The effective implementation of the principle of equality requires adequate judicial protection against victimisation.

(21) The rules on the burden of proof must be adapted when there is a prima facie case of discrimination and, for the principle of equal treatment to be applied effectively, the burden of proof must shift back to the respondent when evidence of such discrimination is brought.

(22) Member States need not apply the rules on the burden of proof to proceedings in which it is for the court or other competent body to investigate the facts of the case. The procedures thus referred to are those in which the plaintiff is not required to prove the facts, which it is for the court or competent body to investigate.

(23) Member States should promote dialogue between the social partners and with non-governmental organisations to address different forms of discrimination and to combat them.

(24) Protection against discrimination based on racial or ethnic origin would itself be strengthened by the existence of a body or bodies in each Member State, with competence to analyse the problems involved, to study possible solutions and to provide concrete assistance for the victims.

(25) This Directive lays down minimum requirements, thus giving the Member States the option of introducing or maintaining more favourable provisions. The implementation of this Directive should not serve to justify any regression in relation to the situation which already prevails in each Member State.

(26) Member States should provide for effective, proportionate and dissuasive sanctions in case of breaches of the obligations under this Directive.

(27) The Member States may entrust management and labour, at their joint request, with the implementation of this Directive as regards provisions falling within the scope of collective agreements, provided that the Member States take all the necessary steps to ensure that they can at all times guarantee the results imposed by this Directive.

(28) In accordance with the principles of subsidiarity and proportionality as set out in Article 5 of the EC Treaty, the objective of this Directive, namely ensuring a common high level of protection against discrimination in all the Member States, cannot be sufficiently achieved by the Member States and can therefore, by reason of the scale and impact of the proposed action, be better achieved by the Community. This Directive does not go beyond what is necessary in order to achieve those objectives,

HAS ADOPTED THIS DIRECTIVE:

CHAPTER I

GENERAL PROVISIONS

Article 1

Purpose

The purpose of this Directive is to lay down a framework for combating discrimination on the grounds of racial or ethnic origin, with a view to putting into effect in the Member States the principle of equal treatment.

Article 2

Concept of discrimination

1. For the purposes of this Directive, the principle of equal treatment shall mean that there shall be no direct or indirect discrimination based on racial or ethnic origin.

2. For the purposes of paragraph 1:

(a) direct discrimination shall be taken to occur where one person is treated less favourably than another is, has been or would be treated in a comparable situation on grounds of racial or ethnic origin;

(b) indirect discrimination shall be taken to occur where an apparently neutral provision, criterion or practice would put persons of a racial or ethnic origin at a particular disadvantage compared with other persons, unless that provision, criterion or practice is objectively justified by a legitimate aim and the means of achieving that aim are appropriate and necessary.

3. Harassment shall be deemed to be discrimination within the meaning of paragraph 1, when an unwanted conduct related to racial or ethnic origin takes place with the purpose or effect of violating the dignity of a person and of creating an intimidating, hostile, degrading, humiliating or offensive environment. In this context, the concept of harassment may be defined in accordance with the national laws and practice of the Member States.

4. An instruction to discriminate against persons on grounds of racial or ethnic origin shall be deemed to be discrimination within the meaning of paragraph 1.

Article 3

Scope

1. Within the limits of the powers conferred upon the Community, this Directive shall apply to all persons, as regards both the public and private sectors, including public bodies, in relation to:

(a) conditions for access to employment, to self-employment and to occupation, including selection criteria and recruitment conditions, whatever the branch of activity and at all levels of the professional hierarchy, including promotion;

(b) access to all types and to all levels of vocational guidance, vocational training, advanced vocational training and retraining, including practical work experience;

(c) employment and working conditions, including dismissals and pay;

(d) membership of and involvement in an organisation of workers or employers, or any organisation whose members carry on a particular profession, including the benefits provided for by such organisations;

(e) social protection, including social security and healthcare;

(f) social advantages;

(g) education;

(h) access to and supply of goods and services which are available to the public, including housing.

2. This Directive does not cover difference of treatment based on nationality and is without prejudice to provisions and conditions relating to the entry into and residence of third-country nationals and stateless persons on the territory of Member States, and to any treatment which arises from the legal status of the third-country nationals and stateless persons concerned.

Article 4

Genuine and determining occupational requirements

Notwithstanding Article 2(1) and (2), Member States may provide that a difference of treatment which is based on a characteristic related to racial or ethnic origin shall not constitute discrimination where, by reason of the nature of the particular occupational activities concerned or of the context in which they are carried out, such a characteristic constitutes a genuine and determining occupational requirement, provided that the objective is legitimate and the requirement is proportionate.

Article 5

Positive action

With a view to ensuring full equality in practice, the principle of equal treatment shall not prevent any Member State from maintaining or adopting specific measures to prevent or compensate for disadvantages linked to racial or ethnic origin.

Article 6

Minimum requirements

1. Member States may introduce or maintain provisions which are more favourable to the protection of the principle of equal treatment than those laid down in this Directive.

2. The implementation of this Directive shall under no circumstances constitute grounds for a reduction in the level of protection against discrimination already afforded by Member States in the fields covered by this Directive.

CHAPTER II

REMEDIES AND ENFORCEMENT

Article 7

Defence of rights

1. Member States shall ensure that judicial and/or administrative procedures, including where they deem it appropriate conciliation procedures, for the enforcement of obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.

2. Member States shall ensure that associations, organisations or other legal entities, which have, in accordance with the criteria laid down by their national law, a legitimate interest in ensuring that the provisions of this Directive are complied with, may engage, either on behalf or in support of the complainant, with his or her approval, in any judicial and/or administrative procedure provided for the enforcement of obligations under this Directive.

3. Paragraphs 1 and 2 are without prejudice to national rules relating to time limits for bringing actions as regards the principle of equality of treatment.

Article 8

Burden of proof

1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence which are more favourable to plaintiffs.

3. Paragraph 1 shall not apply to criminal procedures.

4. Paragraphs 1, 2 and 3 shall also apply to any proceedings brought in accordance with Article 7(2).

5. Member States need not apply paragraph 1 to proceedings in which it is for the court or competent body to investigate the facts of the case.

Article 9

Victimisation

Member States shall introduce into their national legal systems such measures as are necessary to protect individuals from any adverse treatment or adverse consequence as a reaction to a complaint or to proceedings aimed at enforcing compliance with the principle of equal treatment.

Article 10

Dissemination of information

Member States shall take care that the provisions adopted pursuant to this Directive, together with the relevant provisions already in force, are brought to the attention of the persons concerned by all appropriate means throughout their territory.

Article 11

Social dialogue

1. Member States shall, in accordance with national traditions and practice, take adequate measures to promote the social dialogue between the two sides of industry with a view to fostering equal treatment, including through the monitoring of workplace practices, collective agreements, codes of conduct, research or exchange of experiences and good practices.

2. Where consistent with national traditions and practice, Member States shall encourage the two sides of the industry without prejudice to their autonomy to conclude, at the appropriate level, agreements laying down anti-discrimination rules in the fields referred to in Article 3 which fall within the scope of collective bargaining. These agreements shall respect the minimum requirements laid down by this Directive and the relevant national implementing measures.

Article 12

Dialogue with non-governmental organisations

Member States shall encourage dialogue with appropriate non-governmental organisations which have, in accordance with their national law and practice, a legitimate interest in contributing to the fight against discrimination on grounds of racial and ethnic origin with a view to promoting the principle of equal treatment.

CHAPTER III

BODIES FOR THE PROMOTION OF EQUAL TREATMENT

Article 13

1. Member States shall designate a body or bodies for the promotion of equal treatment of all persons without discrimination on the grounds of racial or ethnic origin. These bodies may form part of agencies charged at national level with the defence of human rights or the safeguard of individuals' rights.

2. Member States shall ensure that the competences of these bodies include:

— without prejudice to the right of victims and of associations, organisations or other legal entities referred to in Article 7(2), providing independent assistance to victims of discrimination in pursuing their complaints about discrimination,

— conducting independent surveys concerning discrimination,

— publishing independent reports and making recommendations on any issue relating to such discrimination.

CHAPTER IV

FINAL PROVISIONS

Article 14

Compliance

Member States shall take the necessary measures to ensure that:

(a) any laws, regulations and administrative provisions contrary to the principle of equal treatment are abolished;

(b) any provisions contrary to the principle of equal treatment which are included in individual or collective contracts or agreements, internal rules of undertakings, rules governing profit-making or non-profit-making associations, and rules governing the independent professions and workers' and employers' organisations, are or may be declared, null and void or are amended.

Article 15

Sanctions

Member States shall lay down the rules on sanctions applicable to infringements of the national provisions adopted pursuant to this Directive and shall take all measures necessary to ensure that they are applied. The sanctions, which may comprise the payment of compensation to the victim, must be effective, proportionate and dissuasive. The Member States shall notify those provisions to the Commission by 19 July 2003 at the latest and shall notify it without delay of any subsequent amendment affecting them.

Article 16

Implementation

Member States shall adopt the laws, regulations and administrative provisions necessary to comply with this Directive by 19 July 2003 or may entrust management and labour, at their joint request, with the implementation of this Directive as regards provisions falling within the scope of collective agreements. In such cases, Member States shall ensure that by 19 July 2003, management and labour introduce the necessary measures by agreement, Member States being required to take any necessary measures to enable them at any time to be in a position to guarantee the results imposed by this Directive. They shall forthwith inform the Commission thereof.

When Member States adopt these measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. The methods of making such a reference shall be laid down by the Member States.

Article 17

Report

1. Member States shall communicate to the Commission by 19 July 2005, and every five years thereafter, all the information necessary for the Commission to draw up a report to the European Parliament and the Council on the application of this Directive.

2. The Commission's report shall take into account, as appropriate, the views of the European Monitoring Centre on Racism and Xenophobia, as well as the viewpoints of the social partners and relevant non-governmental organisations. In accordance with the principle of gender mainstreaming, this report shall, *inter alia*, provide an assessment of the impact of the measures taken on women and men. In the light of the information received, this report shall include, if necessary, proposals to revise and update this Directive.

Article 18

Entry into force

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Communities*.

Article 19

Addressees

This Directive is addressed to the Member States.

JUDGMENT OF THE COURT (Second Chamber)

19 April 2012 (*)

(Directives 2000/43/EC, 2000/78/EC and 2006/54/EC – Equal treatment in employment and occupation – Worker showing that he meets the requirements listed in a job advertisement – Right of that worker to have access to information indicating whether the employer has recruited another applicant)

In Case C-415/10,

REFERENCE for a preliminary ruling under Article 267 TFEU from the Bundesarbeitsgericht (Germany), made by decision of 20 May 2010, received at the Court on 20 August 2010, in the proceedings

Galina Meister

v

Speech Design Carrier Systems GmbH,

THE COURT (Second Chamber),

composed of J.N. Cunha Rodrigues, President of the Chamber, U. Lõhmus, A. Rosas (Rapporteur), A. Arabadjiev and C.G. Fernlund, Judges,

Advocate General: P. Mengozzi,

Registrar: K. Malacek, Administrator,

having regard to the written procedure and further to the hearing on 30 November 2011,

after considering the observations submitted on behalf of:

– Galina Meister, by R. Wißbar, Rechtsanwalt,

– Speech Design Carrier Systems GmbH, by U. Kappelhoff, Rechtsanwältin,

– the German Government, by T. Henze and J. Möller, acting as Agents,

– the European Commission, by V. Kreuschitz, acting as Agent,

after hearing the Opinion of the Advocate General at the sitting on 12 January 2012,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Article 8(1) of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin (OJ 2000 L 180, p. 22), Article 10(1) of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation (OJ 2000 L 303, p. 16) and Article 19(1) of Directive 2006/54/EC of the European Parliament and of the Council of 5 July 2006 on the

implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation (OJ 2006 L 204, p. 23).

2 The reference has been made in proceedings between Ms Meister and Speech Design Carrier Systems GMbH ('Speech Design') concerning the discrimination on the grounds of sex, age and ethnic origin that she claims to have suffered during a recruitment procedure.

Legal context

European Union legislation

Directive 2000/43

3 Recital 15 in the preamble to Directive 2000/43 states that '[t]he appreciation of the facts from which it may be inferred that there has been direct or indirect discrimination is a matter for national judicial or other competent bodies, in accordance with rules of national law or practice. Such rules may provide in particular for indirect discrimination to be established by any means including on the basis of statistical evidence'.

4 Under Recital 21 of that directive, '[t]he rules on the burden of proof must be adapted when there is a prima facie case of discrimination and, for the principle of equal treatment to be applied effectively, the burden of proof must shift back to the respondent when evidence of such discrimination is brought.'

5 Under Article 1 of the directive:

'The purpose of this Directive is to lay down a framework for combating discrimination on the grounds of racial or ethnic origin, with a view to putting into effect in the Member States the principle of equal treatment.'

6 Article 3(1) of the same directive provides:

'Within the limits of the areas of competence conferred on the Community, this Directive shall apply to all persons, as regards both the public and private sectors, including public bodies, in relation to:

(a) conditions for access to employment, to self-employment and to occupation, including selection criteria and recruitment conditions, whatever the branch of activity and at all levels of the professional hierarchy, including promotion;

…'

7 Article 7(1) of Directive 2000/43 provides:

'Member States shall ensure that judicial and/or administrative procedures, including where they deem it appropriate conciliation procedures, for the enforcement of the obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.'

8 Article 8 of that directive, entitled 'Burden of proof', is worded as follows:

'1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence which are more favourable to plaintiffs.

3. Paragraph 1 shall not apply to criminal procedures.

4. Paragraphs 1, 2 and 3 shall also apply to any proceedings brought in accordance with Article 7(2).

5. Member States need not apply paragraph 1 to proceedings in which it is for the court or other competent authority to investigate the facts of the case.'

Directive 2000/78

9 Recital 15 in the preamble to Directive 2000/78 states that '[t]he appreciation of the facts from which it may be inferred that there has been direct or indirect discrimination is a matter for national judicial or other competent bodies, in accordance with rules of national law or practice. Such rules may provide in particular for indirect discrimination to be established by any means including on the basis of statistical evidence'.

10 Recital 31 of that directive states that '[t]he rules on the burden of proof must be adapted when there is a prima facie case of discrimination and, for the principle of equal treatment to be applied effectively, the burden of proof must shift back to the respondent when evidence of such discrimination is brought. However, it is not for the respondent to prove that the plaintiff adheres to a particular religion or belief, has a particular disability, is of a particular age or has a particular sexual orientation'.

11 Under Article 1 of the directive:

'The purpose of this Directive is to lay down a general framework for combating discrimination on the grounds of religion or belief, disability, age or sexual orientation as regards employment and occupation, with a view to putting into effect in the Member States the principle of equal treatment'.

12 Article 3(1) of the same directive provides:

'Within the limits of the areas of competence conferred on the Community, this Directive shall apply to all persons, as regards both the public and private sectors, including public bodies, in relation to:

(a) conditions for access to employment, to self-employment and to occupation, including selection criteria and recruitment conditions, whatever the branch of activity and at all levels of the professional hierarchy, including promotion;

…'

13 Article 9(1) of Directive 2000/78 provides:

'Member States shall ensure that judicial and/or administrative procedures, including where they deem it appropriate conciliation procedures, for the enforcement of the obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.'

14 Article 10 of the directive, entitled 'Burden of proof', states:

'1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence, which are more favourable to plaintiffs.

3. Paragraph 1 shall not apply to criminal procedures.

4. Paragraphs 1, 2 and 3 shall also apply to any proceedings brought in accordance with Article 9(2).

5. Member States need not apply paragraph 1 to proceedings in which it is for the court or other competent authority to investigate the facts of the case.'

Directive 2006/54

15 Recital 30 in the preamble to Directive 2006/54 is worded as follows:

'The adoption of rules on the burden of proof plays a significant role in ensuring that the principle of equal treatment can be effectively enforced. As the Court of Justice has held, provision should therefore be made to ensure that the burden of proof shifts to the respondent when there is a prima facie case of discrimination, except in relation to proceedings in which it is for the court or other competent national body to investigate the facts. It is however necessary to clarify that the appreciation of the facts from which it may be presumed that there has been direct or indirect discrimination remains a matter for the relevant national body in accordance with national law or practice. Further, it is for the Member States to introduce, at any appropriate stage of the proceedings, rules of evidence which are more favourable to plaintiffs.'

16 Under Article 1 of that directive:

'The purpose of this Directive is to ensure the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation.

To that end, it contains provisions to implement the principle of equal treatment in relation to:

(a) access to employment, including promotion, and to vocational training;

…'

17 Article 14(1) of the same directive states:

'There shall be no direct or indirect discrimination on grounds of sex in the public or private sectors, including public bodies, in relation to:

(a) conditions for access to employment, to self-employment or to occupation, including selection criteria and recruitment conditions, whatever the branch of activity and at all levels of the professional hierarchy, including promotion;

…'

18 Article 17(1) of Directive 2006/54 provides:

'Member States shall ensure that, after possible recourse to other competent authorities including where they deem it appropriate conciliation procedures, judicial procedures for the enforcement of obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.'

19 Article 19 of that directive, entitled 'Burden of proof', is worded as follows:

'1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence which are more favourable to plaintiffs.

3. Member States need not apply paragraph 1 to proceedings in which it is for the court or competent body to investigate the facts of the case.

4. Paragraphs 1, 2 and 3 shall also apply to:

(a) the situations covered by Article 141 of the [EC] Treaty and, insofar as discrimination based on sex is concerned, by Directives 92/85/EEC and 96/34/EC;

(b) any civil or administrative procedure concerning the public or private sector which provides for means of redress under national law pursuant to the measures referred to in (a) with the exception of out-of-court procedures of a voluntary nature or provided for in national law.

5. This Article shall not apply to criminal procedures, unless otherwise provided by the Member States.'

National legislation

20 Paragraph 1 of the General Law on equal treatment (Allgemeines Gleichbehandlungsgesetz), of 14 August 2006 (BGBl. 2006 I, p. 1897), in the version applicable at the material time ('the AGG'), is worded as follows:

'The purpose of this Law is to prevent or to eliminate discrimination on the grounds of race or ethnic origin, gender, religion or belief, disability, age or sexual orientation.'

21 Under Paragraph 3(1) of the AGG:

'Direct discrimination shall be taken to occur where one person is treated less favourably than another is, has been or would be treated in a comparable situation, on any of the grounds referred to in Paragraph 1. Direct discrimination on the ground of sex shall also be taken to occur within the meaning of Paragraph 2(1) Nos 1 to 4 where a woman is treated less favourably on account of pregnancy or maternity.'

22 Paragraph 6(1) of the AGG states:

'For the purposes of this Law, "worker" means:

1. persons in salaried employment;

2. persons employed for the purposes of their vocational training;

3. persons of similar status to salaried persons on account of their dependent economic status, including those who work from home and those comparable to persons who work from home.

"Worker" shall also refer to job applicants and persons whose employment relationship has ended.'

23 Under Paragraph 7(1) of AGG workers must not suffer discrimination on any of the grounds referred to in Paragraph 1. That prohibition also applies where the person responsible for the

discrimination merely assumes, when exercising the discrimination, that one of the grounds given in Paragraph 1 exists.

24 Under Paragraph 15(2) of the AGG:

'The worker may claim appropriate financial compensation for non-pecuniary damage. In the event of non-recruitment, the compensation shall not exceed three months' salary if the worker would not have been recruited even if the selection had been free from discrimination.'

25 Paragraph 22 of the AGG provides:

'Where, in the event of conflict, one of the parties is able to establish factual evidence from which it may be presumed that there has been discrimination on one of the grounds referred to in Paragraph 1, it shall be for the other party to prove that there has been no breach of the provisions prohibiting discrimination.'

The dispute in the main proceedings and the questions referred for a preliminary ruling

26 Ms Meister, a Russian national, was born on 7 September 1961. She holds a Russian degree in systems engineering, the equivalence of which to a German degree awarded by a Fachhochschule (university of applied science) has been recognised in Germany.

27 Speech Design published a newspaper advertisement for the purposes of recruiting an 'experienced software developer', to which Ms Meister responded by applying for the post on 5 October 2006. By a letter of 11 October 2006, Speech Design rejected her application without inviting her to a job interview. Not long afterwards, a second advertisement, with the same content as the first, was published by that company on the internet. On 19 October 2006 Ms Meister reapplied, but Speech Design once again rejected her application, without inviting her to an interview and without telling her on what ground her application was unsuccessful.

28 There is nothing in the file before the Court to suggest that Speech Design claimed that Ms Meister's level of expertise did not correspond to that sought in that recruitment process.

29 Being of the view that she met the requirements of the post in question, Ms Meister considered that she suffered less favourable treatment than another person in a comparable situation, on the grounds of her sex, age and ethnic origin. She therefore brought an action against Speech Design before the Arbeitsgericht (Labour Court), seeking, first, compensation from that company for employment discrimination and, secondly, the production of the file for the person who was engaged, which would enable her to prove that she is more qualified than that person.

30 As Ms Meister's action was dismissed at first instance, she brought an appeal against that judgment before the Landesarbeitsgericht (Higher Labour Court) which also dismissed her appeal. She brought an appeal on a point of law before the Bundesarbeitsgericht (Federal Labour Court). That court questions whether Ms Meister can claim a right to information on the basis of Directives 2000/43, 2000/78 and 2006/54 and, if so, what are the consequences of a refusal of disclosure by Speech Design.

31 In those circumstances, the Bundesarbeitsgericht decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

'1. Are Article 19(1) of Directive 2006/54 …, Article 8(1) of … Directive 2000/43 … and Article 10(1) of … Directive 2000/78 … to be interpreted as meaning that, where a worker shows that he meets the requirements for a post advertised by an employer, he has a right vis-à-vis that employer, if he does not obtain the post, to information as to whether the employer has engaged another applicant and, if so, as to the criteria on the basis of which that appointment has been made?

2. If the answer to the first question is affirmative:

Where the employer does not disclose the requested information, does that fact give rise to a presumption that the discrimination alleged by the worker exists?'

Consideration of the questions referred

The first question

32 By its first question, the referring court asks, in essence, whether Article 8(1) of Directive 2000/43, Article 10(1) of Directive 2000/78 and Article 19(1) of Directive 2006/54 must be interpreted as entitling a worker who claims plausibly that he meets the requirements listed in a job advertisement and whose application was rejected to have access to information indicating whether the employer engaged another applicant at the end of the recruitment process and, if so, on the basis of which criteria.

33 At the outset, it should be recalled that it follows from Article 3(1)(a) of Directive 2000/43, Article 3(1)(a) of Directive 2000/78 and indent (a) of the second subparagraph of Article 1 and Article 14(1)(a) of Directive 2006/54 that those directives apply to a person seeking employment, and also in regard to the selection criteria and recruitment conditions of that employment.

34 Those same directives provide, in essence, in Article 8(1) of Directive 2000/43, Article 10(1) of Directive 2000/78 and Article 19(1) of Directive 2006/54, that the Member States are to take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it is for the respondent to prove that there has been no breach of that principle.

35 It should be noted that the wording of those provisions is almost identical to that of Article 4(1) of Council Directive 97/80/EC of 15 December 1997 on the burden of proof in cases of discrimination based on sex (OJ 1998 L 14, p. 6), a provision which the Court has interpreted, in particular in Case C-104/10 *Kelly* [2011] ECR I-0000. Article 4(1), which was repealed by Directive 2006/54 with effect from 15 August 2009, along with Directive 97/80 in its entirety, made cases of discrimination on the grounds of sex subject to the same legal rules on the burden of proof as the directives in question in the main proceedings.

36 Interpreting Article 4(1) of Directive 97/80 in *Kelly*, the Court held in paragraph 30 of the judgment that it is the person who considers himself to have been wronged because the principle of equal treatment has not been applied to him who must initially establish the facts from which it may be presumed that there has been direct or indirect discrimination. It is only where that person has established such facts that it is then for the defendant to prove that there has been no breach of the principle of non-discrimination.

37 The Court also held that the assessment of the facts from which it may be presumed that there has been direct or indirect discrimination is a matter for national judicial or other competent bodies, in accordance with national law or practice (*Kelly*, paragraph 31), as stated in Recital 15 of Directives 2000/43 and 2000/78 and Recital 30 of Directive 2006/54.

38 Moreover, the Court stated that Directive 97/80, pursuant to Article 1 thereof, seeks to ensure that the measures taken by the Member States to implement the principle of equal treatment are made more effective, in order to enable all persons who consider themselves wronged because the principle of equal treatment has not been applied to them to have their rights asserted by judicial process after possible recourse to other competent bodies (*Kelly*, paragraph 33). In that regard, it should be noted that Article 7(1) of Directive 2000/43, Article 9(1) of Directive 2000/78 and Article 17(1) of Directive 2006/54 refer to the same principle.

39 In those circumstances the Court concluded, at paragraph 34 of *Kelly,* that although Article 4(1) of that Directive 97/80 does not specifically entitle persons who consider themselves wronged because the principle of equal treatment has not been correctly applied to them to information in order that they may establish 'facts from which it may be presumed that there has been direct or indirect discrimination' in accordance with that provision, it is not however inconceivable that a refusal of disclosure by the defendant, in the context of establishing such facts, is liable to compromise the achievement of the objective pursued by that directive and, in particular to deprive that provision of its effectiveness.

40 As was noted at paragraph 35 of the present judgment, Directive 97/80 was repealed and replaced by Directive 2006/54. However, having regard to the wording and scheme of the articles concerned by the present reference for a preliminary ruling, there is nothing to suggest that, in adopting Directives 2000/43, 2000/78 and 2006/54, the European Union legislator intended to amend the rules on the burden of proof established by Article 4(1) of Directive 97/80. Consequently, in the context of establishing the facts from which it may be presumed that there has been direct or indirect discrimination, it must be ensured that a refusal of disclosure by the defendant is not liable to compromise the achievement of the objectives pursued by Directives 2000/43, 2000/78 and 2006/54.

41 According to the wording of the second and third subparagraphs respectively of Article 4(3) TEU, the Member States inter alia 'shall take any appropriate measure, general or particular, to ensure fulfilment of the obligations arising out of the Treaties or resulting from the acts of the institutions of the Union' and 'shall … refrain from any measure which could jeopardise the attainment of the Union's objectives', including those pursued by directives (see Case C-61/11 PPU *El Dridi* [2011] ECR I-0000, paragraph 56, and *Kelly*, paragraph 36).

42 Therefore, it is for the referring court to ensure that the refusal of disclosure by Speech Design, in the context of establishing facts from which it may be presumed that there has been direct or indirect discrimination against Ms Meister, is not liable to compromise the achievement of the objectives pursued by Directives 2000/43, 2000/78 and 2006/54. It must, in particular, take account of all the circumstances of the main proceedings, in order to determine whether there is sufficient evidence for a finding that the facts from which it may be presumed that there has been such discrimination have been established.

43 In that regard, it should be recalled that, as is clear from Recital 15 of Directives 2000/43 and 2000/78 and Recital 30 of Directive 2006/54, national law or the national practices of the Member States may provide, in particular, that indirect discrimination may be established by any means including on the basis of statistical evidence.

44 Among the factors which may be taken into account is, in particular, the fact that, unlike in *Kelly,* the employer in question in the main proceedings seems to have refused Ms Meister any access to the information that she seeks to have disclosed.

45 Moreover, as the Advocate General noted in paragraphs 35 to 37 of his Opinion, account can also be taken of, in particular, the fact that Speech Design does not dispute that Ms Meister's level of expertise matches that referred to in the job advertisement, as well as the facts that, notwithstanding this, the employer did not invite her to a job interview and she was not invited to interview under the new procedure to select applicants for the post in question.

46 In the light of the foregoing, the answer to the first question is that Article 8(1) of Directive 2000/43, Article 10(1) of Directive 2000/78 and Article 19(1) of Directive 2006/54 must be interpreted as not entitling a worker who claims plausibly that he meets the requirements listed in a job advertisement and whose application was rejected to have access to information indicating whether the employer engaged another applicant at the end of the recruitment process.

47 Nevertheless, it cannot be ruled out that a defendant's refusal to grant any access to information may be one of the factors to take into account in the context of establishing facts from which it may be presumed that there has been direct or indirect discrimination. It

is for the referring court to determine whether that is the case in the main proceedings, taking into account all the circumstances of the case before it.

The second question

48 In view of the answer given to the first question, there is no need to reply to the second question referred by the national court.

Costs

49 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Second Chamber) hereby rules:

Article 8(1) of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin, Article 10(1) of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation and Article 19(1) of Directive 2006/54/EC of the European Parliament and of the Council of 5 July 2006 on the implementation of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation must be interpreted as not entitling a worker who claims plausibly that he meets the requirements listed in a job advertisement and whose application was rejected to have access to information indicating whether the employer engaged another applicant at the end of the recruitment process.

Nevertheless, it cannot be ruled out that a defendant's refusal to grant any access to information may be one of the factors to take into account in the context of establishing facts from which it may be presumed that there has been direct or indirect discrimination. It is for the referring court to determine whether that is the case in the main proceedings, taking into account all the circumstances of the case before it.

JUDGMENT OF THE COURT (Second Chamber)

21 July 2011 (*)

(Directives 76/207/EEC, 97/80/EC and 2002/73/EC – Access to vocational training – Equal treatment for men and women – Rejection of candidature – Access of an applicant for vocational training to information on the qualifications of the other applicants)

In Case C-104/10,

REFERENCE for a preliminary ruling under Article 267 TFEU from the High Court (Ireland), made by decision of 29 January 2010, received by the Court on 24 February 2010, in the proceedings

Patrick Kelly

v

National University of Ireland (University College, Dublin),

THE COURT (Second Chamber),

composed of J.N. Cunha Rodrigues, President of the Chamber, A. Arabadjiev, A. Rosas (Rapporteur), U. Lõhmus and P. Lindh, Judges,

Advocate General: P. Mengozzi,

Registrar: L. Hewlett, Principal Administrator,

having regard to the written procedure and further to the hearing on 13 January 2011,

after considering the observations submitted on behalf of:

– Mr Kelly, in person,

– the National University of Ireland (University College, Dublin), by M. Bolger SC, instructed by E. O'Sullivan, Solicitor,

– the German Government, by J. Möller, acting as Agent,

– the European Commission, by M. van Beek and N. Yerrell, acting as Agents,

having decided, after hearing the Advocate General, to proceed to judgment without an Opinion,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of European Union law and, in particular, of Article 4 of Council Directive 76/207/EEC of 9 February 1976 on the implementation of the principle of equal treatment for men and women as regards access to employment, vocational training and promotion, and working conditions (OJ 1976 L 39, p. 40), Article 4(1) of Council Directive 97/80/EC of 15 December 1997 on the burden of proof in cases of discrimination based on sex (OJ 1998 L 14, p. 6) and Article 1(3) of Directive

2002/73/EC of the European Parliament and of the Council of 23 September 2002 amending Directive 76/207 (OJ 2002 L 269, p. 15).

2 The reference has been made in the course of legal proceedings brought by Mr Kelly against the National University of Ireland (University College Dublin) ('UCD'), following the latter's refusal to disclose unredacted documents relating to the selection procedure for a vocational training course.

Legal context

European Union legislation

Directive 76/207

3 Directive 76/207, applicable at the time of the facts which gave rise to the complaint of discrimination on grounds of sex, that is to say, during March and April 2002, provided in Article 4 as follows:

'Application of the principle of equal treatment with regard to access to all types and to all levels, of vocational guidance, vocational training, advanced vocational training and retraining, means that Member States shall take all necessary measures to ensure that:

(a) any laws, regulations and administrative provisions contrary to the principle of equal treatment shall be abolished;

(b) any provisions contrary to the principle of equal treatment which are included in collective agreements, individual contracts of employment, internal rules of undertakings or in rules governing the independent occupations and professions shall be, or may be declared, null and void or may be amended;

(c) without prejudice to the freedom granted in certain Member States to certain private training establishments, vocational guidance, vocational training, advanced vocational training and retraining shall be accessible on the basis of the same criteria and at the same levels without any discrimination on grounds of sex.'

4 Article 6 of that directive provided:

'Member States shall introduce into their national legal systems such measures as are necessary to enable all persons who consider themselves wronged by failure to apply to them the principle of equal treatment within the meaning of Articles 3, 4 and 5 to pursue their claims by judicial process after possible recourse to other competent authorities.'

Directive 2002/73

5 Directive 76/207 was amended by Directive 2002/73, the first subparagraph of Article 2(1) of which states that Member States were to bring into force the laws, regulations and administrative provisions necessary to comply with that directive by 5 October 2005 at the latest.

6 Directive 2002/73 revokes, in particular, Article 4 of Directive 76/207 and, pursuant to Article 1(3), gives the following wording to Article 3 of Directive 76/207:

'1. Application of the principle of equal treatment means that there shall be no direct or indirect discrimination on the grounds of sex in the public or private sectors, including public bodies, in relation to:

…

(b) access to all types and to all levels of vocational guidance, vocational training, advanced vocational training and retraining, including practical work experience;

…

2. To that end, Member States shall take the necessary measures to ensure that:

(a) any laws, regulations and administrative provisions contrary to the principle of equal treatment are abolished;

(b) any provisions contrary to the principle of equal treatment which are included in contracts or collective agreements, internal rules of undertakings or rules governing the independent occupations and professions and workers' and employers' organisations shall be, or may be declared, null and void or are amended.'

Directive 97/80

7 Directive 97/80, the date of transposition of which was fixed at 1 January 2001, institutes rules relating to the burden of proof in cases of discrimination based on sex.

8 According to recital 13 in the preamble to that directive, the appreciation of the facts from which it may be presumed that there has been direct or indirect discrimination is a matter for national judicial or other competent bodies, in accordance with national law or practice.

9 Recital 18 in the preamble to that directive states that the Court of Justice has held that the rules on the burden of proof must be adapted when there is a prima facie case of discrimination and that, for the principle of equal treatment to be applied effectively, the burden of proof must shift back to the respondent when evidence of such discrimination is brought.

10 Article 1 of that directive states that its aim is to ensure that the measures taken by the Member States to implement the principle of equal treatment are made more effective, in order to enable all persons who consider themselves wronged because the principle of equal treatment has not been applied to them to have their rights asserted by judicial process after possible recourse to other competent bodies.

11 Under Article 3(1)(a) of Directive 97/80, the directive is to apply to the situations covered by Directive 76/207.

12 Article 4(1) of Directive 97/80 reads as follows:

'Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.'

National legislation

13 It is apparent from the decision for reference that the principles relating to disclosure of documents under Order 57A rule 6(6) of the Circuit Court Rules correspond to the principles relating to discovery and inspection of documents under Order 32 of the Rules of the Circuit 2001-2006 and Order 31 of the Rules of the Superior Courts 1986, as amended.

14 Pursuant to those rules, discovery will be granted where it can be shown that the documents sought are relevant to the issues in the proceedings and, in particular, necessary for disposing fairly of the matter.

15 Notwithstanding the fact that documents are considered both relevant and necessary, their production may be refused where the documents, inter alia, are privileged or subject to confidentiality.

16 In case of conflict between the right to obtain production of a document, on the one hand, and the duty to protect confidentiality or to uphold any other countervailing obligation or entitlement, on the other, the national court hearing the action must balance both the nature of the claim advanced and the degree of confidentiality alleged, as against the public interest in full disclosure as part of the administration of justice.

The dispute in the main proceedings and the questions referred for a preliminary ruling

17 Mr Kelly is a qualified teacher and resident in Dublin.

18 UCD is a higher education establishment. For the academic period 2002-2004, it was offering a course entitled 'Master's degree in Social Science (Social Worker) mode A'.

19 On 23 December 2001, Mr Kelly submitted an application to UCD seeking admission to the course. At the end of the selection process he was informed by letter dated 15 March 2002 that his application had not been successful.

20 Dissatisfied with that decision, Mr Kelly made a formal complaint of discrimination on grounds of sex to the Director of the Equality Tribunal in April 2002, claiming that he was better qualified than the least-qualified female candidate to be offered a place.

21 On 2 November 2006, an Equality Officer handling the complaint under the aegis of the Director of the Equality Tribunal reached a decision concluding that the complainant had failed to establish prima facie discrimination on grounds of sex. Mr Kelly appealed against that decision to the Circuit Court.

22 On 4 January 2007 Mr Kelly also applied to the Circuit Court, under Order 57A rule 6(6) of the Circuit Court Rules, seeking from UCD copies of certain specified documents ('the disclosure application'). He requested copies of the retained applications, copies of the documents appended to or included with those applications, and copies of the 'scoring sheets' of the candidates whose application forms had been retained.

23 The President of the Circuit Court refused the disclosure application by order of 12 March 2007. On 14 March 2007, Mr. Kelly appealed against that order to the High Court.

24 On 23 April 2007, Mr Kelly also applied to the High Court for a reference for a preliminary ruling to be made to the Court of Justice of the European Communities. On 14 March 2008, the High Court decided that such a reference was premature since it had not finally determined whether access to the documents in question could be granted under national law. Once it had completed its examination, the High Court concluded that, pursuant to national law, UCD did not have to disclose, pursuant to Mr Kelly's application, the documents in unredacted form.

25 Being unsure as to whether refusal of the disclosure request is contrary to European Union law, the High Court referred the following questions to the Court for a preliminary ruling:

'1. Does Article 4(1) of Council Directive 97/80 … entitle an applicant for vocational training, who believes that he or she has been denied access to vocational training because the principle of equal treatment was not applied to him or her, to information on the respective qualifications of the other applicants for the course in question and in particular the applicants who were not denied access to vocational training so that the applicant can "establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination"?

2. Does Article 4 of Council Directive 76/207 … entitle an applicant for vocational training, who believes that he or she has been denied access to vocational training "on the basis of the same criteria" and discriminated against "on grounds of sex" in terms of accessing vocational training, to information held by the course provider on the

respective qualifications of the other applicants for the course in question and in particular the applicants who were not denied access to vocational training?

3. Does Article [1(3)] of Council Directive 2002/73 … prohibiting "direct or indirect discrimination on the grounds of sex" in relation to "access" to vocational training entitle an applicant for vocational training, who claims to have been discriminated against "on the grounds of sex" in terms of accessing vocational training, to information held by the course provider on the respective qualifications of the other applicants for the course in question and in particular the applicants who were not denied access to vocational training?

4. Does the nature of the obligation under paragraph 3 of Article 267 TFEU differ in a Member State with an adversarial (as opposed to inquisitorial) legal system and, if so, in what respect?

5. Can any entitlement to information under the aforesaid directives be affected by the operation of national or European laws relating to confidentiality?'

Consideration of the questions referred

The first question

26 By its first question, the national court asks, in essence, whether Article 4(1) of Council Directive 97/80 must be interpreted as entitling an applicant for vocational training, who believes that his application was not accepted because of an infringement of the principle of equal treatment, to information held by the course provider on the qualifications of the other applicants for the course in question, in order that he may establish 'facts from which it may be presumed that there has been direct or indirect discrimination' in accordance with that provision.

Arguments of the parties

27 Mr Kelly submits that under Article 4(1) of Directive 97/80 persons who consider themselves wronged because the principle of equal treatment has not been applied to them are entitled to information that would, if that principle has wrongly not been applied to them, establish, or assist in establishing, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination. For applicants for a course of vocational training who consider themselves wronged because that principle has not been applied to them, this includes information on the qualifications of the other applicants.

28 The German Government contends that there is nothing in the wording of Article 4(1) of Directive 97/80 to indicate the grant of a right to disclosure. UCD and the Commission share its view that that provision sets out the conditions in which the burden of proof is shifted from the claimant to the respondent. According to those parties, that shift occurs only where a candidate has already established facts from which it may be presumed that there has been direct or indirect discrimination.

Findings of the Court

29 Directive 97/80 provides in Article 4(1) that the Member States are to take such measures as are necessary to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of that principle (see Case C-196/02 *Nikoloudi* [2005] ECR I-1789, paragraph 68).

30 Thus, it is the person who considers himself to have been wronged because the principle of equal treatment has not been applied to him who must initially establish the facts from which it may be presumed that there has been direct or indirect discrimination. It is only

where that person has established such facts that it is then for the defendant to prove that there has been no breach of the principle of non-discrimination.

31 In that regard, it is apparent from recital 13 in the preamble to Directive 97/80 that the appreciation of the facts from which it may be presumed that there has been direct or indirect discrimination is a matter for national judicial or other competent bodies, in accordance with national law or practice.

32 In consequence, it is for the national court or some other competent Irish body to assess, in accordance with Irish law and/or national practice, whether Mr Kelly has established the facts from which it may be presumed that there has been direct or indirect discrimination.

33 Nevertheless, it must be stated that Directive 97/80, pursuant to Article 1 thereof, seeks to ensure that the measures taken by the Member States to implement the principle of equal treatment are made more effective, in order to enable all persons who consider themselves wronged because the principle of equal treatment has not been applied to them to have their rights asserted by judicial process after possible recourse to other competent bodies.

34 Thus, although Article 4(1) of that directive does not specifically entitle persons who consider themselves wronged because the principle of equal treatment has not been correctly applied to them to information in order that they may establish 'facts from which it may be presumed that there has been direct or indirect discrimination' in accordance with that provision, the fact remains that it cannot be excluded that a refusal of disclosure by the defendant, in the context of establishing such facts, could risk compromising the achievement of the objective pursued by that directive and thus depriving that provision in particular of its effectiveness.

35 In that regard, it must be borne in mind that Member States may not apply rules which are liable to jeopardise the achievement of the objectives pursued by a directive and, therefore, deprive it of its effectiveness (see Case C-61/11 PPU *El Dridi* [2011] ECR I-0000, paragraph 55).

36 According to the wording of the second and third subparagraphs respectively of Article 4(3) TEU, the Member States inter alia 'shall take any appropriate measure, general or particular, to ensure fulfilment of the obligations arising out of the Treaties or resulting from the acts of the institutions of the Union' and 'shall … refrain from any measure which could jeopardise the attainment of the Union's objectives', including those pursued by directives (see *El Dridi*, paragraph 56).

37 In the present case, it is, however, apparent from the decision for reference that, although the President of the Circuit Court refused the disclosure application, UCD offered to provide Mr Kelly with part of the information requested, which he does not dispute.

38 Accordingly, the answer to the first question is that Article 4(1) of Council Directive 97/80 must be interpreted as meaning that it does not entitle an applicant for vocational training, who believes that his application was not accepted because of an infringement of the principle of equal treatment, to information held by the course provider on the qualifications of the other applicants for the course in question, in order that he may establish 'facts from which it may be presumed that there has been direct or indirect discrimination' in accordance with that provision.

39 Nevertheless, it cannot be ruled out that a refusal of disclosure by the defendant, in the context of establishing such facts, could risk compromising the achievement of the objective pursued by that directive and thus depriving, in particular, Article 4(1) thereof of its effectiveness. It is for the national court to ascertain whether that is the case in the main proceedings.

The second and third questions

40 By its second and third questions, which should be examined together, the national court asks, in essence, whether Article 4 of Directive 76/207 or Article 1(3) of Directive 2002/73 must be interpreted as entitling an applicant for vocational training to information held by the course provider on the qualifications of the other applicants for the course in question, either because he believes that he has been denied access to vocational training on the basis of the same criteria as the other candidates and discriminated against on grounds of sex, referred to in Article 4 of Directive 76/207, or because that applicant complains that he was discriminated against on the grounds of sex, referred to in Article 1(3) of Directive 2002/73, in terms of accessing that vocational training.

Arguments of the parties

41 Mr Kelly submits that Article 4 of Directive 76/207 and Article 1(3) of Directive 2002/73 entitle persons who believe that they have been denied access to a vocational training course because of sex discrimination to information on the qualifications of the other applicants for that vocational training course.

42 The German Government and the Commission contend that those provisions contain substantive rules prohibiting discrimination on grounds of sex and that they do not extend to the issue of procedural rules. They argue that those provisions are not sufficiently specific to be understood as affording entitlement to a specific measure, such as entitlement to information.

Findings of the Court

43 It does not emerge from the wording of Article 4 of Directive 76/207 or Article 1(3) of Directive 2002/73 that an applicant for vocational training is entitled to access to information held by the course provider concerning the qualifications of other applicants for that course.

44 Article 4(c) of Directive 76/207 provides that application of the principle of equal treatment with regard to access to all types and to all levels, of vocational guidance, vocational training, advanced vocational training and retraining, means that Member States are to take all necessary measures to ensure that, without prejudice to the freedom granted in certain Member States to certain private training establishments, vocational training is to be accessible on the basis of the same criteria and at the same levels without any discrimination on grounds of sex.

45 Article 1(3) of Directive 2002/73 provides that application of the principle of equal treatment means that there is to be no direct or indirect discrimination on the grounds of sex in the public or private sectors, including public bodies, in relation to access to all types and to all levels of vocational guidance, vocational training, advanced vocational training and retraining, including practical work experience. To that end, Member States are to take the necessary measures to ensure that any laws, regulations and administrative provisions contrary to the principle of equal treatment are abolished.

46 Those provisions seek to implement the application of the principle of equal treatment as regards access to training but, in accordance with the third paragraph of Article 288 TFEU, leave it, as to form and methods, to the national authorities to take the necessary measures to ensure that 'any laws, regulations and administrative provisions' contrary to that principle are abolished.

47 Thus, it is not possible to derive from those provisions a specific obligation to grant an applicant for vocational training access to information concerning the qualifications of other applicants for that course.

48 Accordingly, the answer to the second and third questions is that Article 4 of Directive 76/207 and Article 1(3) of Directive 2002/73 must be interpreted as meaning that they do not entitle an applicant for vocational training to information held by the course provider on the qualifications of the other applicants for the course in question, either because he believes that he has been denied access to vocational training on the basis of the same

criteria as the other candidates and discriminated against on grounds of sex, referred to in Article 4 of Directive 76/207, or because that applicant complains that he was discriminated against on the grounds of sex, referred to in Article 1(3) of Directive 2002/73, in terms of accessing that vocational training.

The fifth question

49 By its fifth question, which it is appropriate to consider before the fourth question, the national court asks whether any entitlement to information under Directives 76/207, 97/80 and 2002/73 is affected by rules of national or European Union law relating to confidentiality.

50 Having regard to the answer to the first three questions and given that, under the procedure laid down in Article 267 TFEU, the Court has no jurisdiction to interpret national law, that task being exclusively for the national court (see Case C-53/04 *Marrosu and Sardino* [2006] ECR I-7213, paragraph 54, and Joined Cases C-250/09 and C-268/09 *Georgiev* [2010] ECR I-0000, paragraph 75), the fifth question must be understood as meaning that the national court asks, in essence, whether any right to rely on one of the directives referred to in the first three questions, in order to obtain access to the information held by the provider of vocational training concerning the qualifications of the applicants for that course, can be affected by rules of European Union law relating to confidentiality.

Arguments of the parties

51 According to Mr Kelly, a legally binding European Union act, including a directive as defined in the third paragraph of Article 288 TFEU, cannot be affected by national laws or their operation but only by another legally binding European Union act.

52 UCD and the German Government submit that that question should be answered only in the alternative since there is no entitlement to information as described by the plaintiff in the main proceedings pursuant to the provisions of Article 4 of Directive 76/207 or Article 1(3) of Directive 2002/73. However, if the Court were to conclude that the provisions at issue did afford Mr Kelly such entitlement, confidentiality, which is a concept recognised by European Union law and enshrined in a number of its acts, would take precedence over that entitlement.

Findings of the Court

53 It must be borne in mind that the Court has held, in paragraph 38 of the present judgment, that Article 4(1) of Council Directive 97/80 does not entitle an applicant for vocational training, who believes that his application was not accepted because of an infringement of the principle of equal treatment, to information held by the course provider on the qualifications of the other applicants for the course in question, in order that he may establish 'facts from which it may be presumed that there has been direct or indirect discrimination' in accordance with that provision.

54 Nevertheless, it has also been held, in paragraph 39 of this judgment, that it cannot be excluded that a refusal of disclosure by the defendant, in the context of establishing such facts, could risk compromising the achievement of the objective pursued by that directive and thus depriving Article 4(1) thereof in particular of its effectiveness.

55 In assessing such facts, national courts or other competent bodies must take into account the rules governing confidentiality which follow from European Union legal acts, such as Directive 95/46/EC of the European Parliament and of the Council of 24 October 1995 on the protection of individuals with regard to the processing of personal data and on the free movement of such data (OJ 1995 L 281, p. 31) and Directive 2002/58/EC of the European Parliament and of the Council of 12 July 2002 concerning the processing of personal data and the protection of privacy in the electronic communications sector (Directive on privacy and electronic communications) (OJ 2002 L 201, p. 37), as amended by Directive 2009/136/EC of the European Parliament and of the Council of 25 November 2009 (OJ 2009

L 337, p. 11). The protection of personal data is also provided for in Article 8 of the Charter of Fundamental Rights of the European Union.

56 Accordingly, the answer to the fifth question is that, where an applicant for vocational training can rely on Directive 97/80 in order to obtain access to information held by the course provider on the qualifications of the other applicants for the course in question, that entitlement to access can be affected by rules of European Union law relating to confidentiality.

The fourth question

57 By its fourth question, the national court asks whether the nature of the obligation contained in the third paragraph of Article 267 TFEU differs according to whether a Member State has an adversarial rather than an inquisitorial legal system and, if so, in what respect.

Arguments of the parties

58 Mr Kelly argues that a national court's obligation to refer questions to the Court for a preliminary ruling is wider in scope in an adversarial legal system than that on a court of a Member State in which there is an inquisitorial legal system, since it is the parties and not the court who determine the form, content and timing of the proceedings in an adversarial legal system. Thus a national court in such a system cannot materially alter the content of a question raised by a party or submit to the court its own opinion suggesting an answer to the question.

59 UCD, the German Government and the Commission share the view that the nature of the obligation under the third paragraph of Article 267 TFEU does not depend on the individual characteristics of Member States' legal systems. Furthermore, according to Case 283/81 *Cilfit and Others* [1982] ECR 3415, it is for the national court to decide if and, where necessary, how, to make a reference for a preliminary ruling.

Findings of the Court

60 It is apparent from the settled case-law of the Court that Article 267 TFEU establishes a preliminary ruling mechanism which aims to avoid divergences in the interpretation of European Union law that the national courts have to apply and seeks to ensure this application by making available to national courts a means of eliminating difficulties which may be occasioned by the requirement of giving European Union law its full effect within the framework of the judicial systems of the Member States (see, to that effect, Opinion 1/09 [2011] ECR I-0000, paragraph 83 and the case-law cited).

61 Article 267 TFEU confers on national courts the power and, in certain circumstances, an obligation, to make a reference to the Court once the national court considers, either of its own motion or at the request of the parties, that the substance of the dispute involves a question which falls within the scope of the first paragraph of that article. It follows that the national courts have the most extensive power to make a reference to the Court if they consider that a case pending before them raises issues involving an interpretation or assessment of the validity of provisions of European Union law and requiring a decision by them (see, inter alia, Case C-210/06 *Cartesio* [2008] ECR I-9641, paragraph 88, and Joined Cases C-188/10 and C-189/10 *Melki and Abdeli* [2010] ECR I-0000, paragraph 41).

62 Moreover, the Court has already held that the system established by Article 267 TFEU with a view to ensuring that European Union law is interpreted uniformly throughout the Member States institutes direct cooperation between the Court of Justice and the national courts by means of a procedure which is completely independent of any initiative by the parties (see, inter alia, *Cartesio*, paragraph 90).

63 In that regard, the system of references for a preliminary ruling is based on a dialogue between one court and another, the initiation of which depends entirely on the national court's assessment as to whether a reference is appropriate and necessary (*Cartesio*, paragraph 91).

64 Thus, not only is it for the national court to assess whether an interpretation of European Union law is necessary to enable it to resolve the dispute before it, having regard to the procedural mechanism laid down in Article 267 TFEU, but it is also for that court to decide the manner in which those questions are to be worded.

65 Although that court is at liberty to request the parties to the dispute before it to suggest wording suitable for the question to be referred, the fact remains that it is for it alone ultimately to decide both its form and content.

66 Consequently, the answer to the fourth question is that the obligation contained in the third paragraph of Article 267 TFEU does not differ according to whether a Member State has an adversarial or an inquisitorial legal system.

Costs

67 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Second Chamber) hereby rules:

1. **Article 4(1) of Council Directive 97/80/EC of 15 December 1997 on the burden of proof in cases of discrimination based on sex must be interpreted as meaning that it does not entitle an applicant for vocational training, who believes that his application was not accepted because of an infringement of the principle of equal treatment, to information held by the course provider on the qualifications of the other applicants for the course in question, in order that he may establish 'facts from which it may be presumed that there has been direct or indirect discrimination' in accordance with that provision.**

   Nevertheless, it cannot be ruled out that a refusal of disclosure by the defendant, in the context of establishing such facts, could risk compromising the achievement of the objective pursued by that directive and thus depriving Article 4(1) thereof in particular of its effectiveness. It is for the national court to ascertain whether that is the case in the main proceedings.

2. **Article 4 of Council Directive 76/207/EEC of 9 February 1976 on the implementation of the principle of equal treatment for men and women as regards access to employment, vocational training and promotion, and working conditions and Article 1(3) of Directive 2002/73/EC of the European Parliament and of the Council of 23 September 2002 amending Directive 76/207 must be interpreted as meaning that they do not entitle an applicant for vocational training to information held by the course provider on the qualifications of the other applicants for the course in question, either because he believes that he has been denied access to vocational training on the basis of the same criteria as the other candidates and discriminated against on grounds of sex, referred to in Article 4 of Directive 76/207, or because that applicant complains that he was discriminated against on the grounds of sex, referred to in Article 1(3) of Directive 2002/73, in terms of accessing that vocational training.**

3. **Where an applicant for vocational training can rely on Directive 97/80 in order to obtain access to information held by the course provider on the qualifications of the other applicants for the course in question, that entitlement to access can be affected by rules of European Union law relating to confidentiality.**

4. **The obligation contained in the third paragraph of Article 267 TFEU does not differ according to whether a Member State has an adversarial or an inquisitorial legal system.**

JUDGMENT OF THE COURT (Grand Chamber)

8 March 2011 (*)

(Environment – Aarhus Convention – Public participation in the decision-making process and access to justice in environmental matters – Direct effect)

In Case C-240/09,

REFERENCE for a preliminary ruling under Article 234 EC from the Najvyšší súd Slovenskej republiky (Slovakia), made by decision of 22 June 2009, received at the Court on 3 July 2009, in the proceedings

Lesoochranárske zoskupenie VLK

v

Ministerstvo životného prostredia Slovenskej republiky,

THE COURT (Grand Chamber),

composed of V. Skouris, President, A. Tizzano, J.N. Cunha Rodrigues, K. Lenaerts, J.-C. Bonichot (Rapporteur), K. Schiemann and D. Šváby, Presidents of Chambers, A. Rosas, R. Silva de Lapuerta, U. Lõhmus, A. Ó Caoimh, M. Safjan and M. Berger, Judges,

Advocate General: E. Sharpston,

Registrar: R. Şereş, Administrator,

having regard to the written procedure and further to the hearing on 4 May 2010,

after considering the observations submitted on behalf of:

– Lesoochranárske zoskupenie VLK, by I. Rajtáková, advokátka,

– the Slovak Government, by B. Ricziová, acting as Agent,

– the German Government, by M. Lumma and B. Klein, acting as Agents,

– the Greek Government, by G. Karipsiadis and T. Papadopoulou, acting as Agents,

– the French Government, by G. de Bergues and S. Menez, acting as Agents,

– the Polish Government, by M. Dowgielewicz, D. Krawczyk and M. Nowacki, acting as Agents,

– the Finnish Government, by J. Heliskoski and M. Pere, acting as Agents,

– the Swedish Government, by A. Falk, acting as Agent,

– the United Kingdom Government, by L. Seeboruth and J. Stratford, acting as Agents,

– the European Commission, by P. Oliver and A. Tokár, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 15 July 2010,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Article 9(3) of the Convention on access to information, public participation in decision-making and access to justice in environmental matters approved on behalf of the European Community by Council Decision 2005/370/EC of 17 February 2005 (OJ 2005 L 124, p. 1) ('the Aarhus Convention').

2 The reference has been made in proceedings between Lesoochranárske zoskupenie VLK ('zoskupenie'), an association established in accordance with Slovak law whose objective is the protection of the environment, and the Ministerstvo životného prostredia Slovenskej republiky (Ministry of the Environment of the Slovak Republic) ('the Ministerstvo životného prostredia'), concerning the association's request to be a 'party' to the administrative proceedings relating to the grant of derogations to the system of protection for species such as the brown bear, access to protected countryside areas, or the use of chemical substances in such areas.

Legal context

International law

3 Article 9 of the Aarhus Convention states:

'1. Each Party shall, within the framework of its national legislation, ensure that any person who considers that his or her request for information under Article 4 has been ignored, wrongfully refused, whether in part or in full, inadequately answered, or otherwise not dealt with in accordance with the provisions of that article, has access to a review procedure before a court of law or another independent and impartial body established by law.

In the circumstances where a Party provides for such a review by a court of law, it shall ensure that such a person also has access to an expeditious procedure established by law that is free of charge or inexpensive for reconsideration by a public authority or review by an independent and impartial body other than a court of law.

Final decisions under this paragraph 1 shall be binding on the public authority holding the information. Reasons shall be stated in writing, at least where access to information is refused under this paragraph.

2. Each Party shall, within the framework of its national legislation, ensure that members of the public concerned:

(a) having a sufficient interest or, alternatively,

(b) maintaining impairment of a right, where the administrative procedural law of a Party requires this as a precondition,

have access to a review procedure before a court of law and/or another independent and impartial body established by law, to challenge the substantive and procedural legality of any decision, act or omission subject to the provisions of Article 6 and, where so provided for under national law and without prejudice to paragraph 3 below, of other relevant provisions of this Convention.

What constitutes a sufficient interest and impairment of a right shall be determined in accordance with the requirements of national law and consistently with the objective of giving the public concerned wide access to justice within the scope of this Convention. To this end, the interest of any non-governmental organisation meeting the requirements

referred to in Article 2(5) shall be deemed sufficient for the purpose of subparagraph (a) above. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) above.

The provisions of this paragraph 2 shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

3. In addition and without prejudice to the review procedures referred to in paragraphs 1 and 2 above, each Party shall ensure that, where they meet the criteria, if any, laid down in its national law, members of the public have access to administrative or judicial procedures to challenge acts and omissions by private persons and public authorities which contravene provisions of its national law relating to the environment.

…'

4 Article 19(4) and (5) of the Aarhus Convention states:

'4. Any organisation referred to in Article 17 which becomes a Party to this Convention without any of its Member States being a Party shall be bound by all the obligations under this Convention. If one or more of such an organisation's Member States is a Party to this Convention, the organisation and its Member States shall decide on their respective responsibilities for the performance of their obligations under this Convention. In such cases, the organisation and the Member States shall not be entitled to exercise rights under this Convention concurrently.

5. In their instruments of ratification, acceptance, approval or accession, the regional economic integration organisations referred to in Article 17 shall declare the extent of their competence with respect to the matters governed by this Convention. These organisations shall also inform the Depositary of any substantial modification to the extent of their competence.'

European Union ('EU') law

5 Article 12(1) of Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora (OJ 1992 L 206, p. 7) ('the Habitats Directive') provides:

'Member States shall take the requisite measures to establish a system of strict protection for the animal species listed in Annex IV(a) in their natural range, prohibiting:

(a) all forms of deliberate capture or killing of specimens of these species in the wild;

(b) deliberate disturbance of these species, particularly during the period of breeding, rearing, hibernation and migration;

(c) deliberate destruction or taking of eggs from the wild;

(d) deterioration or destruction of breeding sites or resting places.'

6 Article 16(1) of the Habitats Directive further states:

'Provided that there is no satisfactory alternative and the derogation is not detrimental to the maintenance of the populations of the species concerned at a favourable conservation status in their natural range, Member States may derogate from the provisions of Articles 12, 13, 14 and 15(a) and (b):

(a) in the interest of protecting wild fauna and flora and conserving natural habitats;

(b) to prevent serious damage, in particular to crops, livestock, forests, fisheries and water and other types of property;

(c) in the interests of public health and public safety, or for other imperative reasons of overriding public interest, including those of a social or economic nature and beneficial consequences of primary importance for the environment;

(d) for the purpose of research and education, of repopulating and re-introducing these species and for the breeding operations necessary for these purposes, including the artificial propagation of plants;

(e) to allow, under strictly supervised conditions, on a selective basis and to a limited extent, the taking or keeping of certain specimens of the species listed in Annex IV in limited numbers specified by the competent national authorities.'

7 Annex IV to the Habitats Directive relating to animal and plant species of Community interest in need of strict protection, mentions, in particular, the species 'Ursus arctos'.

8 Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information and repealing Council Directive 90/313/EEC (OJ 2003 L 41, p. 26) states in recital 5 in the preamble thereto:

'On 25 June 1998 the European Community signed the UN/ECE Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters ("the Aarhus Convention"). Provisions of Community law must be consistent with that Convention with a view to its conclusion by the European Community.'

9 Article 6 of Directive 2003/4 implements Article 9(1) of the Aarhus Convention, and reproduces almost word for word its provisions.

10 Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment and amending with regard to public participation and access to justice Council Directives 85/337/EEC and 96/61/EC states in recitals 5, 9 and 11 in the preamble thereto:

'(5) On 25 June 1998 the Community signed the UN/ECE Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters ("the Århus Convention"). Community law should be properly aligned with that Convention with a view to its ratification by the Community;

…

(9) Article 9(2) and (4) of the Århus Convention provides for access to judicial or other procedures for challenging the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of Article 6 of the Convention.

…

(11) Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment [OJ 1985 L 175, p. 40], and Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control [OJ 1996 L 257, p. 26] should be amended to ensure that they are fully compatible with the provisions of the Århus Convention, in particular Article 6 and Article 9(2) and (4) thereof.'

11 Articles 3(7) and 4(4) of Directive 2003/35 introduce respectively Article 10a into Directive 85/337 and Article 15a into Directive 96/61 in order to implement Article 9(2) of the Aarhus Convention, which they reproduce in almost identical terms.

12 Decision 2005/370 states, in recitals 4 to 7 in the preamble thereto:

'(4) Under the terms of the Aarhus Convention, a regional economic integration organisation must declare in its instrument of ratification, acceptance, approval or accession, the extent of its competence in respect of the matters governed by the Convention.

(5) The Community, in accordance with the Treaty, and in particular Article 175(1) thereof, is competent, together with its Member States, for entering into international agreements, and for implementing the obligations resulting therefrom, which contribute to the pursuit of the objectives listed in Article 174 of the Treaty.

(6) The Community and most of its Member States signed the Aarhus Convention in 1998 and since then have pursued their efforts in view of their approval of the Convention. In the meantime, relevant Community legislation is being made consistent with the Convention.

(7) The objective of the Aarhus Convention, as set forth in its Article 1 thereof, is consistent with the objectives of the Community's environmental policy, listed in Article 174 of the Treaty, pursuant to which the Community, which shares competence with its Member States, has already adopted a comprehensive set of legislation which is evolving and contributes to the achievement of the objective of the Convention, not only by its own institutions, but also by public authorities in its Member States.'

13 Article 1 of Decision 2005/370 provides:

'The UN/ECE Convention on access to information, public participation in decision-making and access to justice in environmental matters, (Aarhus Convention) is hereby approved on behalf of the Community.'

14 In its declaration of competence made pursuant to Article 19(5) of the Aarhus Convention and annexed to Decision 2005/370, the Commission stated, in particular, 'that the legal instruments in force do not cover fully the implementation of the obligations resulting from Article 9(3) of the Convention as they relate to administrative and judicial procedures to challenge acts and omissions by private persons and public authorities other than the institutions of the European Community as covered by Article 2(2)(d) of the Convention, and that, consequently, its Member States are responsible for the performance of these obligations at the time of approval of the Convention by the European Community and will remain so unless and until the Community, in the exercise of its powers under the EC Treaty, adopts provisions of Community law covering the implementation of those obligations'.

15 Articles 10 to 12 of Regulation (EC) No 1367/2006 of the European Parliament and of the Council of 6 September 2006 on the application of the provisions of the Aarhus Convention on Access to Information, Public Participation in Decision-making and Access to Justice in Environmental Matters to Community institutions and bodies (OJ 2006 L 264, p. 13) aim to ensure access to justice by non-governmental organisations with respect to administrative acts adopted by the institutions and bodies of the European Union or omissions by the latter, in accordance with Article 9(3) of the Aarhus Convention.

Slovak law

16 Pursuant to Article 82(3) of Law No 543/2002 on the protection of nature and the countryside, as amended, (zákon č. 543/2002 Z.z. o ochrane prírody a krajiny), which applies to the dispute in the main proceedings, an association having legal personality is to be regarded as a 'participant' in administrative proceedings, within the meaning of that provision, if, for at least one year, it has had the object of protecting nature and the countryside, and it has given written notice of its participation in those proceedings within the period prescribed in that article. The status of 'participant' confers on it the right to be informed of all pending administrative proceedings relating to the protection of nature and the countryside.

17 In accordance with Article 15a(2) of the Code of Administrative Procedure (Správny poriadok), 'a participant' is entitled to be informed that administrative proceedings have

been initiated, to have access to files submitted by the parties to the administrative proceedings, to attend hearings and on-the-spot inspections, and to produce evidence and other information on the basis of which the decision will be taken.

18 Under Article 250(2) of the Code of Civil Procedure (Občiansky súdny poriadok) any natural or legal person who/which claims that his/its rights, as a party to the administrative proceedings, have been prejudiced by the decision taken or by the procedure followed by the administrative authority is to have the status of an applicant. Any natural or legal person not appearing at the administrative proceedings and whose presence, as a party to the proceedings has been requested, may also be an applicant.

19 According to Article 250(m) of the Code of Civil Procedure, persons having the status of parties to the proceedings are those who were parties to the administrative proceedings and the administrative body whose decision is to be reviewed.

The dispute in the main proceedings and the questions referred for a preliminary ruling

20 The zoskupenie was informed of the initiation of a number of administrative proceedings brought by various hunting associations or other persons concerning the grant of derogations to the system of protection for species such as the brown bear, access to protected countryside areas or the use of chemical substances in such areas.

21 The zoskupenie therefore applied to the Ministerstvo životného prostredia to be a 'party' to the administrative proceedings concerning the grant of those derogations or authorisations and relied on the Aarhus Convention for that purpose. The Ministerstvo životného prostredia rejected that request and the administrative appeal subsequently brought by the zoskupenie against that rejection.

22 The zoskupenie then brought a contentious appeal against the two decisions, arguing in particular that the provisions in Article 9(3) of the Aarhus Convention had direct effect.

23 In those circumstances, the Najvyšší súd Slovenskej republiky decided to stay the proceedings and refer the following questions to the Court of Justice for a preliminary ruling:

'1. Is it possible to recognise Article 9 and in particular Article 9(3) of the Aarhus Convention of 25 June 1998, given that the principal objective pursued by that international treaty is to change the classic definition of *locus standi* by according the status of a party to proceedings to the public, or the public concerned, as having the direct effect of an international treaty ("self-executing effect") in a situation where the European Union acceded to that international treaty on 17 February 2005 but to date has not adopted Community legislation in order to transpose the treaty concerned into Community law?

2. Is it possible to recognise Article 9 and in particular Article 9(3) of the Aarhus Convention, which has become a part of Community law, as having the direct applicability or direct effect of Community law within the meaning of the settled case-law of the Court of Justice?

3. If the answer to the first or the second question is in the affirmative, is it then possible to interpret Article 9(3) of the Aarhus Convention, given the principal objective pursued by that international treaty, as meaning that it is necessary also to include within the concept "act of a public authority" an act consisting in the delivery of decisions, that is to say, that the right of public access to judicial hearings intrinsically also includes the right to challenge the decision of an administrative body, the unlawfulness of which lies in its effect on the environment?'

24 By order of the President of the Court of 23 October 2009, the referring court's request that the accelerated procedure provided for in the first paragraph of Article 104a of the Rules of Procedure be applied to the present case was rejected.

Consideration of the questions referred

Admissibility

25 The Polish and United Kingdom Governments submit that the questions are admissible only in so far as they concern the provisions of Article 9(3) of the Aarhus Convention, and are inadmissible for the remainder on the ground that the interpretation of EU law requested bears no relation to the actual facts of the main action or its purpose.

26 In answer to those arguments, it is sufficient to note that the questions referred relate essentially only to Article 9(3) of the Aarhus Convention, and do not concern the other subparagraphs of that article.

27 In those circumstances, there are no grounds for the Court to rule that the questions referred are partially inadmissible because they concern provisions other than those in Article 9(3) of the Aarhus Convention.

The first and second questions

28 By its first two questions, which it is appropriate to examine together, the referring court asks essentially whether individuals, and in particular environmental protection associations, where they wish to challenge a decision to derogate from a system of environmental protection, such as that put in place by the Habitats Directive for a species mentioned in Annex IV thereto, may derive a right to bring proceedings under EU law, having regard, in particular, to the provisions of Article 9(3) of the Aarhus Convention on direct effect, to which its questions relate.

29 A preliminary point to be made is that Article 300(7) EC provides that '[a]greements concluded under the conditions set out in this Article shall be binding on the institutions of the Community and on Member States'.

30 The Aarhus Convention was signed by the Community and subsequently approved by Decision 2005/370. Therefore, according to settled case-law, the provisions of that convention now form an integral part of the legal order of the European Union (see, by analogy, Case C-344/04 *IATA and ELFAA* [2006] ECR I-403, paragraph 36, and Case C-459/03 *Commission* v *Ireland* [2006] ECR I-4635, paragraph 82). Within the framework of that legal order the Court therefore has jurisdiction to give preliminary rulings concerning the interpretation of such an agreement (see, inter alia, Case 181/73 *Haegeman* [1974] ECR 449, paragraphs 4 to 6, and Case 12/86 *Demirel* [1987] ECR 3719, paragraph 7).

31 Since the Aarhus Convention was concluded by the Community and all the Member States on the basis of joint competence, it follows that where a case is brought before the Court in accordance with the provisions of the EC Treaty, in particular Article 234 EC thereof, the Court has jurisdiction to define the obligations which the Community has assumed and those which remain the sole responsibility of the Member States in order to interpret the Aarhus Convention (see, by analogy, Joined Cases C-300/98 and C-392/98 *Dior and Others* [2000] ECR I-11307, paragraph 33, and Case C-431/05 *Merck Genéricos – Produtos Farmacêuticos* [2007] ECR I-7001, paragraph 33).

32 Next, it must be determined whether, in the field covered by Article 9(3) of the Aarhus Convention, the European Union has exercised its powers and adopted provisions to implement the obligations which derive from it. If that were not the case, the obligations deriving from Article 9(3) of the Aarhus Convention would continue to be covered by the national law of the Member States. In those circumstances, it would be for the courts of those Member States to determine, on the basis of national law, whether individuals could rely directly on the rules of that international agreement relevant to that field or whether the courts must apply those rules of their own motion. In that case, EU law does not require or forbid the legal order of a Member State to accord to individuals the right to rely directly on a rule laid down in the Aarhus Convention or to oblige the courts to apply that rule of their own motion (see, by analogy, *Dior and Others*, paragraph 48 and*MerckGenéricos – Produtos Farmacêuticos*, paragraph 34).

33 However, if it were to be held that the European Union has exercised its powers and adopted provisions in the field covered by Article 9(3) of the Aarhus Convention, EU law would apply and it would be for the Court of Justice to determine whether the provision of the international agreement in question has direct effect.

34 Therefore, it is appropriate to examine whether, in the particular field into which Article 9(3) of the Aarhus Convention falls, the European Union has exercised its powers and adopted provisions to implement obligations deriving from it (see, by analogy, *MerckGenéricos – Produtos Farmacêuticos*, paragraph 39).

35 In that connection, it must be observed first of all, that, in the field of environmental protection, the European Union has explicit external competence pursuant to Article 175 EC, read in conjunction with Article 174(2) EC (see, *Commission* v *Ireland*, paragraphs 94 and 95).

36 Furthermore, the Court has held that a specific issue which has not yet been the subject of EU legislation is part of EU law, where that issue is regulated in agreements concluded by the European Union and the Member State and it concerns a field in large measure covered by it (see, by analogy, Case C-239/03*Commission* v *France* [2004] ECR I-9325, paragraphs 29 to 31).

37 In the present case, the dispute in the main proceedings concerns whether an environmental protection association may be a 'party' to administrative proceedings concerning, in particular, the grant of derogations to the system of protection for species such as the brown bear. That species is mentioned in Annex IV(a) to the Habitats Directive, so that, under Article 12 thereof, it is subject to a system of strict protection from which derogations may be granted only under the conditions laid down in Article 16 of that directive.

38 It follows that the dispute in the main proceedings falls within the scope of EU law.

39 It is true that, in its declaration of competence made in accordance with Article 19(5) of the Aarhus Convention and annexed to Decision 2005/370, the Community stated, in particular, that 'the legal instruments in force do not cover fully the implementation of the obligations resulting from Article 9(3) of the Convention as they relate to administrative and judicial procedures to challenge acts and omissions by private persons and public authorities other than the institutions of the European Community as covered by Article 2(2)(d) of the Convention, and that, consequently, its Member States are responsible for the performance of these obligations at the time of approval of the Convention by the European Community and will remain so unless and until the Community, in the exercise of its powers under the EC Treaty, adopts provisions of Community law covering the implementation of those obligations'.

40 However, it cannot be inferred that the dispute in the main proceedings does not fall within the scope of EU law because, as stated in paragraph 36 of this judgment, a specific issue which has not yet been subject to EU legislation may fall within the scope of EU law if it relates to a field covered in large measure by it.

41 In that connection, it is irrelevant that Regulation No 1367/2006, which is intended to implement the provisions of Article 9(3) of the Aarhus Convention, only concerns the institutions of the European Union and cannot be regarded as the adoption by the European Union of provisions implementing the obligations which derive from Article 9(3) of the Aarhus Convention with respect to national administrative or judicial proceedings.

42 Where a provision can apply both to situations falling within the scope of national law and to situations falling within the scope of EU law, it is clearly in the interest of the latter that, in order to forestall future differences of interpretation, that provision should be interpreted uniformly, whatever the circumstances in which it is to apply (see, in particular, Case C-130/95 *Giloy* [1997] ECR I-4291, paragraph 28, and Case C-53/96 *Hermès* [1998] ECR I-3603, paragraph 32).

43 It follows that the Court has jurisdiction to interpret the provisions of Article 9(3) of the Aarhus Convention and, in particular, to give a ruling on whether or not they have direct effect.

44 In that connection, a provision in an agreement concluded by the European Union with a non-member country must be regarded as being directly applicable when, regard being had to its wording and to the purpose and nature of the agreement, the provision contains a clear and precise obligation which is not subject, in its implementation or effects, to the adoption of any subsequent measure (see, in particular, Case C-265/03 *Simutenkov* [2005] ECR I-2579, paragraph 21, and Case C-372/06 *Asda Stores* [2007] ECR I-11223, paragraph 82).

45 It must be held that the provisions of Article 9(3) of the Aarhus Convention do not contain any clear and precise obligation capable of directly regulating the legal position of individuals. Since only members of the public who meet the criteria, if any, laid down by national law are entitled to exercise the rights provided for in Article 9(3), that provision is subject, in its implementation or effects, to the adoption of a subsequent measure.

46 However, it must be observed that those provisions, although drafted in broad terms, are intended to ensure effective environmental protection.

47 In the absence of EU rules governing the matter, it is for the domestic legal system of each Member State to lay down the detailed procedural rules governing actions for safeguarding rights which individuals derive from EU law, in this case the Habitats Directive, since the Member States are responsible for ensuring that those rights are effectively protected in each case (see, in particular, Case C-268/06 *Impact* [2008] ECR I-2483, paragraphs 44 and 45).

48 On that basis, as is apparent from well-established case-law, the detailed procedural rules governing actions for safeguarding an individual's rights under EU law must be no less favourable than those governing similar domestic actions (principle of equivalence) and must not make it in practice impossible or excessively difficult to exercise rights conferred by EU law (principle of effectiveness) (*Impact*, paragraph 46 and the case-law cited).

49 Therefore, if the effective protection of EU environmental law is not to be undermined, it is inconceivable that Article 9(3) of the Aarhus Convention be interpreted in such a way as to make it in practice impossible or excessively difficult to exercise rights conferred by EU law.

50 It follows that, in so far as concerns a species protected by EU law, and in particular the Habitats Directive, it is for the national court, in order to ensure effective judicial protection in the fields covered by EU environmental law, to interpret its national law in a way which, to the fullest extent possible, is consistent with the objectives laid down in Article 9(3) of the Aarhus Convention.

51 Therefore, it is for the referring court to interpret, to the fullest extent possible, the procedural rules relating to the conditions to be met in order to bring administrative or judicial proceedings in accordance with the objectives of Article 9(3) of the Aarhus Convention and the objective of effective judicial protection of the rights conferred by EU law, so as to enable an environmental protection organisation, such as the zoskupenie, to challenge before a court a decision taken following administrative proceedings liable to be contrary to EU environmental law (see, to that effect, Case C-432/05 *Unibet* [2007] ECR I-2271, paragraph 44, and*Impact*, paragraph 54).

52 In those circumstances, the answer to the first and second questions referred is that Article 9(3) of the Aarhus Convention does not have direct effect in EU law. It is, however, for the referring court to interpret, to the fullest extent possible, the procedural rules relating to the conditions to be met in order to bring administrative or judicial proceedings in accordance with the objectives of Article 9(3) of that convention and the objective of effective judicial protection of the rights conferred by EU law, in order to enable an environmental protection organisation, such as the zoskupenie, to challenge before a court a decision taken following administrative proceedings liable to be contrary to EU environmental law.

The third question

53 In the light of the reply given to the first and second questions, it is not necessary to reply to the third question.

Costs

54 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

Article 9(3) of the Convention on access to information, public participation in decision-making and access to justice in environmental matters approved on behalf of the European Community by Council Decision 2005/370/EC of 17 February 2005 does not have direct effect in European Union law. It is, however, for the referring court to interpret, to the fullest extent possible, the procedural rules relating to the conditions to be met in order to bring administrative or judicial proceedings in accordance with the objectives of Article 9(3) of that convention and the objective of effective judicial protection of the rights conferred by European Union law, in order to enable an environmental protection organisation, such as the Lesoochranárske zoskupenie, to challenge before a court a decision taken following administrative proceedings liable to be contrary to European Union environmental law.

JUDGMENT OF THE COURT (Grand Chamber)

19 January 2010 (*)

(Principle of non-discrimination on grounds of age – Directive 2000/78/EC – National legislation on dismissal not taking into account the period of employment completed before the employee reaches the age of 25 in calculating the notice period – Justification for the measure – National legislation contrary to the directive – Role of the national court)

In Case C-555/07,

REFERENCE for a preliminary ruling under Article 234 EC from the Landesarbeitsgericht Düsseldorf (Germany), made by decision of 21 November 2007, received at the Court on 13 December 2007, in the proceedings

Seda Kücükdeveci

v

Swedex GmbH & Co. KG,

THE COURT (Grand Chamber),

composed of V. Skouris, President, J.N. Cunha Rodrigues, K. Lenaerts, J.-C. Bonichot, R. Silva de Lapuerta, P. Lindh (Rapporteur) and C. Toader, Presidents of Chambers, C.W.A. Timmermans, A. Rosas, P. Kūris, T. von Danwitz, A. Arabadjiev and J.-J. Kasel, Judges,

Advocate General: Y. Bot,

Registrar: K. Malacek, Administrator,

having regard to the written procedure and further to the hearing on 31 March 2009,

after considering the observations submitted on behalf of:

– Swedex GmbH & Co. KG, by M. Nebeling, Rechtsanwalt,

– the German Government, by M. Lumma and J. Möller, acting as Agents,

– the Czech Government, by M. Smolek, acting as Agent,

– the Danish Government, by J. Bering Liisberg, acting as Agent,

– Ireland, by D. O'Hagan, acting as Agent, and N. Travers BL and A. Collins SC,

– the Netherlands Government, by C. Wissels and M. de Mol, acting as Agents,

– the United Kingdom Government, by I. Rao, acting as Agent, and J. Stratford, Barrister,

– the Commission of the European Communities, by V. Kreuschitz and J. Enegren, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 7 July 2009,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of the principle of non-discrimination on grounds of age and of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation (OJ 2000 L 303, p. 16).

2 The reference was made in the course of proceedings between Ms Kücükdeveci and her former employer Swedex GmbH & Co. KG ('Swedex') concerning the calculation of the notice period applicable to her dismissal.

Legal context

European Union legislation

3 Directive 2000/78 was adopted on the basis of Article 13 EC. Recitals 1, 4 and 25 in the preamble to the directive read as follows:

'(1) In accordance with Article 6 of the Treaty on European Union, the European Union is founded on the principles of liberty, democracy, respect for human rights and fundamental freedoms, and the rule of law, principles which are common to all Member States and it respects fundamental rights, as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms [signed at Rome on 4 November 1950] and as they result from the constitutional traditions common to the Member States, as general principles of Community law.

…

(4) The right of all persons to equality before the law and protection against discrimination constitutes a universal right recognised by the Universal Declaration of Human Rights, the United Nations Convention on the Elimination of All Forms of Discrimination against Women, United Nations Covenants on Civil and Political Rights and on Economic, Social and Cultural Rights and by the European Convention for the Protection of Human Rights and Fundamental Freedoms, to which all Member States are signatories. Convention No 111 of the International Labour Organisation (ILO) prohibits discrimination in the field of employment and occupation.

…

(25) The prohibition of age discrimination is an essential part of meeting the aims set out in the Employment Guidelines and encouraging diversity in the workforce. However, differences in treatment in connection with age may be justified under certain circumstances and therefore require specific provisions which may vary in accordance with the situation in Member States. It is therefore essential to distinguish between differences in treatment which are justified, in particular by legitimate employment policy, labour market and vocational training objectives, and discrimination which must be prohibited.'

4 According to Article 1 of Directive 2000/78, its purpose is to lay down a general framework for combating discrimination on the grounds of religion or belief, disability, age or sexual orientation as regards employment and occupation, with a view to putting into effect in the Member States the principle of equal treatment.

5 Article 2 of the directive states:

'1. For the purposes of this Directive, the "principle of equal treatment" shall mean that there shall be no direct or indirect discrimination whatsoever on any of the grounds referred to in Article 1.

2. For the purposes of paragraph 1:

(a) direct discrimination shall be taken to occur where one person is treated less favourably than another is, has been or would be treated in a comparable situation, on any of the grounds referred to in Article 1;

…'

6 Article 3(1) of the directive provides:

'Within the limits of the areas of competence conferred on the Community, this Directive shall apply to all persons, as regards both the public and private sectors, including public bodies, in relation to:

…

(c) employment and working conditions, including dismissals and pay;

…'

7 Article 6(1) of the directive provides:

'Notwithstanding Article 2(2), Member States may provide that differences of treatment on grounds of age shall not constitute discrimination, if, within the context of national law, they are objectively and reasonably justified by a legitimate aim, including legitimate employment policy, labour market and vocational training objectives, and if the means of achieving that aim are appropriate and necessary.

Such differences of treatment may include, among others:

(a) the setting of special conditions on access to employment and vocational training, employment and occupation, including dismissal and remuneration conditions, for young people, older workers and persons with caring responsibilities in order to promote their vocational integration or ensure their protection;

(b) the fixing of minimum conditions of age, professional experience or seniority in service for access to employment or to certain advantages linked to employment;

(c) the fixing of a maximum age for recruitment which is based on the training requirements of the post in question or the need for a reasonable period of employment before retirement.'

8 In accordance with the first paragraph of Article 18 of the directive, it was to be transposed into the legal systems of the Member States by 2 December 2003 at the latest. The second paragraph of Article 18 provided, however, that:

'In order to take account of particular conditions, Member States may, if necessary, have an additional period of three years from 2 December 2003, that is to say a total of six years, to implement the provisions of this Directive on age and disability discrimination. In that event they shall inform the Commission forthwith …'

9 The Federal Republic of Germany made use of that option, so that the provisions of the directive relating to discrimination on grounds of age and disability were to be transposed in that Member State by 2 December 2006 at the latest.

National legislation

The General Law on equal treatment

10 Paragraphs 1, 2 and 10 of the General Law on equal treatment (Allgemeines Gleichbehandlungsgesetz) of 14 August 2006 (BGBl. 2006 I, p. 1897), which transposed Directive 2000/78, provide:

'Paragraph 1 – Object of the Law

The object of this law is to prevent or eliminate discrimination on grounds of race, ethnic origin, sex, religion or belief, disability, age or sexual orientation.

Paragraph 2 – Scope

…

(4) For dismissals, the provisions on general and specific protection against dismissal apply exclusively.

…

Paragraph 10 – Permissible different treatment on grounds of age

Paragraph 8 notwithstanding, different treatment on grounds of age is also permissible if it is objectively and reasonably justified by a legitimate aim. The means of achieving that aim must be appropriate and necessary. Such differences of treatment may include in particular the following:

…

1. the setting of special conditions on access to employment and vocational training, employment and occupation, including conditions of remuneration and termination of employment relationships, for young people, older workers and persons with caring responsibilities in order to promote their vocational integration or ensure their protection,

…'

Legislation on the notice period for dismissal

11 Paragraph 622 of the German Civil Code (Bürgerliches Gesetzbuch, 'the BGB') provides:

'(1) Notice may be given to terminate the employment relationship of an employee with a notice period of four weeks to the 15th or to the end of a calendar month.

(2) For termination by the employer, the notice period, if the employment relationship in the business or undertaking

1. has lasted for two years, is one month to the end of a calendar month,

2. has lasted five years, is two months to the end of a calendar month,

3. has lasted eight years, is three months to the end of a calendar month,

4. has lasted 10 years, is four months to the end of a calendar month,

5. has lasted 12 years, is five months to the end of a calendar month,

6. has lasted 15 years, is six months to the end of a calendar month,

7. has lasted 20 years, is seven months to the end of a calendar month.

In calculating the length of employment, periods prior to the completion of the employee's 25th year of age are not taken into account.'

The main proceedings and the order for reference

12 Ms Kücükdeveci was born on 12 February 1978. She was employed from 4 June 1996, in other words from the age of 18, by Swedex.

13 Swedex dismissed her by letter of 19 December 2006 with effect, taking account of the statutory notice period, from 31 January 2007. The employer calculated the notice period as if the employee had three years' length of service, although she had been in its employment for 10 years.

14 Ms Kücükdeveci contested her dismissal before the Arbeitsgericht Mönchengladbach (Labour Court, Mönchengladbach). She argued before that court that her period of notice should have been four months from 31 December 2006, that is, to 30 April 2007, pursuant to point 4 of the second sentence of Paragraph 622(2) of the BGB. That period corresponded to 10 years' service. The dispute in the main proceedings is thus between two individuals, Ms Kücükdeveci on the one hand and Swedex on the other.

15 According to Ms Kücükdeveci, in so far as it provides that periods of employment completed before the age of 25 are not to be taken into account in calculating the notice period, the second sentence of Paragraph 622(2) of the BGB is a measure which discriminates on grounds of age, contrary to European Union law, and must be disapplied.

16 The Landesarbeitsgericht Düsseldorf (Higher Labour Court, Düsseldorf), hearing the case on appeal, found that the period for transposing Directive 2000/78 had expired by the date of the dismissal. That court also considered that Paragraph 622 of the BGB contains a difference of treatment directly linked to age, and, while it is not convinced that it is unconstitutional, it regards its compatibility with European Union law as doubtful. It is not sure in this respect whether the possible existence of direct discrimination on grounds of age must be assessed by reference to primary European Union law, as the judgment in Case C-144/04 *Mangold*[2005] ECR I-9981 appears to suggest, or by reference to Directive 2000/78. Noting that the national provision at issue is clear and could not be interpreted, if that were necessary, in a manner compatible with the directive, the court is also uncertain whether, to be able to disapply that provision in a dispute between private individuals, it must first, in order to ensure the protection of the legitimate expectations of persons subject to the law, make a reference to the Court for a preliminary ruling so that the Court can confirm that the provision is incompatible with European Union law.

17 In those circumstances, the Landesarbeitsgericht Düsseldorf decided to stay the proceedings and refer the following questions to the Court for a preliminary ruling:

'(1) (a) Does a national provision under which the periods of notice to be observed by employers are extended incrementally as the length of employment increases, but the employee's periods of employment before the age of 25 are disregarded, infringe the Community law prohibition of discrimination on grounds of age, in particular primary Community law or Directive 2000/78 …?

(b) Can the fact that employers are required to observe only a basic period of notice when terminating the employment of younger employees be justified on the grounds that employers are recognised as having an operational interest in flexibility as regards staffing – an interest which would be adversely affected by longer periods of notice – and that younger employees are not recognised as having the protection available to older employees (by means of longer notice periods) with respect to their employment status or arrangements, for example because, having regard to their age and/or their lesser social, family and private obligations, they are assumed to have greater occupational and personal flexibility and mobility?

(2) If Question 1(a) is answered in the affirmative and Question 1(b) is answered in the negative:

In legal proceedings between private individuals, must a court of a Member State disapply a statutory provision which is explicitly contrary to Community law, or is the legitimate expectation of persons subject to the law – that national laws which are in force will be applied – to be taken into account so that a provision becomes inapplicable only after the Court of Justice has ruled on the disputed provision or a substantially similar provision?'

The questions referred for a preliminary ruling

Question 1

18 By its first question, the referring court asks essentially whether national legislation such as that at issue in the main proceedings, under which periods of employment completed by the employee before reaching the age of 25 are not taken into account in calculating the notice period for dismissal, constitutes a difference of treatment on grounds of age prohibited by European Union law, in particular primary law or Directive 2000/78. It is unsure, in particular, whether such legislation is justified on the ground that only a basic notice period is to be observed in the case of dismissal of younger workers, first, in order to enable employers to manage their personnel flexibly, which would not be possible with longer notice periods, and, second, because it is reasonable to require greater personal and occupational mobility from younger workers than from older ones.

19 To answer that question, it must first be ascertained, as the referring court suggests, whether the question should be examined by reference to primary European Union law or to Directive 2000/78.

20 In the first place, that the Council of the European Union adopted Directive 2000/78 on the basis of Article 13 EC, and the Court has held that that directive does not itself lay down the principle of equal treatment in the field of employment and occupation, which derives from various international instruments and from the constitutional traditions common to the Member States, but has the sole purpose of laying down, in that field, a general framework for combating discrimination on various grounds including age (see *Mangold*, paragraph 74).

21 In that context, the Court has acknowledged the existence of a principle of non-discrimination on grounds of age which must be regarded as a general principle of European Union law (see, to that effect, *Mangold*, paragraph 75). Directive 2000/78 gives specific expression to that principle (see, by analogy, Case 43/75 *Defrenne*[1976] ECR 455, paragraph 54).

22 It should also be noted that Article 6(1) TEU provides that the Charter of Fundamental Rights of the European Union is to have the same legal value as the Treaties. Under Article 21(1) of the charter, '[a]ny discrimination based on … age … shall be prohibited'.

23 For the principle of non-discrimination on grounds of age to apply in a case such as that at issue in the main proceedings, that case must fall within the scope of European Union law.

24 In contrast to the situation concerned in Case C-427/06 *Bartsch* [2008] ECR I-7245, the allegedly discriminatory conduct adopted in the present case on the basis of the national legislation at issue occurred after the expiry of the period prescribed for the Member State concerned for the transposition of Directive 2000/78, which, for the Federal Republic of Germany, ended on 2 December 2006.

25 On that date, that directive had the effect of bringing within the scope of European Union law the national legislation at issue in the main proceedings, which concerns a matter governed by that directive, in this case the conditions of dismissal.

26 A national provision such as the second sentence of Paragraph 622(2) of the BGB, in that it provides that, in calculating the notice period, periods of employment completed before the employee reaches the age of 25 are not taken into account, affects the conditions of

dismissal of employees. Such a provision must therefore be regarded as laying down rules on the conditions of dismissal.

27 It follows that it is the general principle of European Union law prohibiting all discrimination on grounds of age, as given expression in Directive 2000/78, which must be the basis of the examination of whether European Union law precludes national legislation such as that at issue in the main proceedings.

28 In the second place, as regards the question whether the legislation at issue in the main proceedings contains a difference of treatment on grounds of age, it should be recalled that under Article 2(1) of Directive 2000/78, for the purposes of that directive, the 'principle of equal treatment' means that there is to be no direct or indirect discrimination whatsoever on any of the grounds referred to in Article 1 of the directive. Article 2(2)(a) of the directive states that, for the purposes of Article 2(1), direct discrimination is to be taken to occur where one person is treated less favourably than another person in a comparable situation, on any of the grounds referred to in Article 1 (see Case C-411/05 *Palacios de la Villa* [2007] ECR I-8531, paragraph 50, and Case C-388/07 *Age Concern England* [2009] ECR I-0000, paragraph 33).

29 In the present case, the second sentence of Paragraph 622(2) of the BGB affords less favourable treatment to employees who entered the employer's service before the age of 25. That national provision thus introduces a difference of treatment between persons with the same length of service, depending on the age at which they joined the undertaking.

30 Thus in the case of two employees each with 20 years' seniority in service, the one who joined the undertaking at the age of 18 will be entitled to a notice period of five months, whereas the period will be seven months for the one who joined at the age of 25. Moreover, as the Advocate General observes in point 36 of his Opinion, the national legislation at issue in the main proceedings disadvantages younger workers generally compared to older ones, in that the former – as the situation of Ms Kücükdeveci shows – may, despite several years' seniority in service in the undertaking, be excluded from benefiting from the progressive extension of notice periods in the case of dismissal according to the length of the employment relationship, from which older workers of comparable seniority will, by contrast, be able to benefit.

31 It follows that the national legislation at issue contains a difference of treatment on grounds of age.

32 In the third place, it must be examined whether that difference of treatment is liable to constitute discrimination prohibited by the principle of non-discrimination on grounds of age given expression by Directive 2000/78.

33 The first subparagraph of Article 6(1) of Directive 2000/78 states that a difference of treatment on grounds of age does not constitute discrimination if, within the context of national law, it is objectively and reasonably justified by a legitimate aim, including legitimate employment policy, labour market and vocational training objectives, and if the means of achieving that aim are appropriate and necessary.

34 According to the information provided by the referring court and the statements made at the hearing by the German Government, Paragraph 622 of the BGB originates in a law of 1926. That that law set the threshold at 25 was the outcome of a compromise between, first, the government of the time, which wanted a uniform extension by three months of the notice period for the dismissal of workers aged over 40, second, the supporters of a progressive extension of that period for all workers, and, third, the supporters of a progressive extension of the notice period without taking the period of employment into account, the purpose of the rule being to give employers partial relief from lengthy periods of notice for workers aged under 25.

35 The referring court states that the second sentence of Paragraph 622(2) of the BGB reflects the legislature's assessment that young workers generally react more easily and more rapidly to the loss of their jobs and greater flexibility can be demanded of them. A shorter

notice period for younger workers also facilitates their recruitment by increasing the flexibility of personnel management.

36 Objectives of the kind mentioned by the German Government and the referring court clearly belong to employment and labour market policy within the meaning of Article 6(1) of Directive 2000/78.

37 It remains to be ascertained, in accordance with the wording of that provision, whether the means of achieving such a legitimate aim are 'appropriate and necessary'.

38 The Member States enjoy a broad discretion in the choice of the measures capable of achieving their objectives in the field of social and employment policy (see*Mangold*, paragraph 63, and *Palacios de la Villa*, paragraph 68).

39 The referring court indicates that the aim of the national legislation at issue in the main proceedings is to afford employers greater flexibility in personnel management by alleviating the burden on them in respect of the dismissal of young workers, from whom it is reasonable to expect a greater degree of personal or occupational mobility.

40 However, the legislation is not appropriate for achieving that aim, since it applies to all employees who joined the undertaking before the age of 25, whatever their age at the time of dismissal.

41 As regards the aim pursued by the legislature at the time of adoption of the national legislation at issue in the main proceedings, adduced by the German Government, of strengthening the protection of workers according to their length of service in the undertaking, it is clear that, under that legislation, the extension of the notice period for dismissal according to the employee's seniority in service is delayed for all employees who joined the undertaking before the age of 25, even if the person concerned has a long length of service in the undertaking at the time of dismissal. The legislation cannot therefore be regarded as appropriate for achieving that aim.

42 It should be added that, as the referring court points out, the national legislation at issue in the main proceedings affects young employees unequally, in that it affects young people who enter active life early after little or no vocational training, but not those who start work later after a long period of training.

43 It follows from all the above considerations that the answer to Question 1 is that European Union law, more particularly the principle of non-discrimination on grounds of age as given expression by Directive 2000/78, must be interpreted as precluding national legislation, such as that at issue in the main proceedings, which provides that periods of employment completed by an employee before reaching the age of 25 are not taken into account in calculating the notice period for dismissal.

Question 2

44 By its second question, the referring court asks whether, where it is hearing proceedings between individuals, in order to disapply a national provision which it considers to be contrary to European Union law, it must first, to ensure protection of the legitimate expectations of persons subject to the law, make a reference to the Court under Article 267 TFEU, so that the Court can confirm that the legislation is incompatible with European Union law.

45 As regards, first, the role of the national court when called on to give judgment in proceedings between individuals in which it is apparent that the national legislation at issue is contrary to European Union law, the Court has held that it is for the national courts to provide the legal protection which individuals derive from the rules of European Union law and to ensure that those rules are fully effective (see, to that effect, Joined Cases C-397/01 to C-403/01 *Pfeiffer and Others*[2004] ECR I-8835, paragraph 111, and Case C-268/06 *Impact* [2008] ECR I-2483, paragraph 42).

46 In this respect, where proceedings between individuals are concerned, the Court has consistently held that a directive cannot of itself impose obligations on an individual and cannot therefore be relied on as such against an individual (see, inter alia, Case 152/84 *Marshall* [1986] ECR 723, paragraph 48; Case C-91/92*Faccini Dori* [1994] ECR I-3325, paragraph 20; and *Pfeiffer and Others*, paragraph 108).

47 However, the Member States' obligation arising from a directive to achieve the result envisaged by that directive and their duty to take all appropriate measures, whether general or particular, to ensure the fulfilment of that obligation are binding on all the authorities of the Member States including, for matters within their jurisdiction, the courts (see, inter alia, to that effect, Case 14/83 *von Colson and Kamann* [1984] ECR 1891, paragraph 26; Case C-106/89 *Marleasing* [1990] ECR I-4135, paragraph 8; *Faccini Dori*, paragraph 26; Case C-129/96 *Inter-Environnement Wallonie* [1997] ECR I-7411, paragraph 40; *Pfeiffer and Others*, paragraph 110; and Joined Cases C-378/07 to C-380/07 *Angelidaki and Others* [2009] ECR I-0000, paragraph 106).

48 It follows that, in applying national law, the national court called on to interpret it is required to do so, as far as possible, in the light of the wording and the purpose of the directive in question, in order to achieve the result pursued by the directive and thereby comply with the third paragraph of Article 288 TFEU (see, to that effect, *von Colson and Kamann*, paragraph 26; *Marleasing*, paragraph 8; *Faccini Dori*, paragraph 26; and *Pfeiffer and Others*, paragraph 113). The requirement for national law to be interpreted in conformity with European Union law is inherent in the system of the Treaty, since it permits the national court, within the limits of its jurisdiction, to ensure the full effectiveness of European Union law when it determines the dispute before it (see, to that effect, *Pfeiffer and Others*, paragraph 114).

49 According to the national court, however, because of its clarity and precision, the second sentence of Paragraph 622(2) of the BGB is not open to an interpretation in conformity with Directive 2000/78.

50 It must be recalled here that, as stated in paragraph 20 above, Directive 2000/78 merely gives expression to, but does not lay down, the principle of equal treatment in employment and occupation, and that the principle of non-discrimination on grounds of age is a general principle of European Union law in that it constitutes a specific application of the general principle of equal treatment (see, to that effect, *Mangold*, paragraphs 74 to 76).

51 In those circumstances, it for the national court, hearing a dispute involving the principle of non-discrimination on grounds of age as given expression in Directive 2000/78, to provide, within the limits of its jurisdiction, the legal protection which individuals derive from European Union law and to ensure the full effectiveness of that law, disapplying if need be any provision of national legislation contrary to that principle (see, to that effect, *Mangold*, paragraph 77).

52 As regards, second, the obligation of the national court, hearing proceedings between individuals, to make a reference to the Court for a preliminary ruling on the interpretation of European Union law before it can disapply a national provision which it considers to be contrary to that law, it is apparent from the order for reference that this aspect of the question has been raised because, under national law, the referring court cannot decline to apply a national provision in force unless that provision has first been declared unconstitutional by the Bundesverfassungsgericht (Federal Constitutional Court).

53 The need to ensure the full effectiveness of the principle of non-discrimination on grounds of age, as given expression in Directive 2000/78, means that the national court, faced with a national provision falling within the scope of European Union law which it considers to be incompatible with that principle, and which cannot be interpreted in conformity with that principle, must decline to apply that provision, without being either compelled to make or prevented from making a reference to the Court for a preliminary ruling before doing so.

54 The possibility thus given to the national court by the second paragraph of Article 267 TFEU of asking the Court for a preliminary ruling before disapplying the national provision that is

contrary to European Union law cannot, however, be transformed into an obligation because national law does not allow that court to disapply a provision it considers to be contrary to the constitution unless the provision has first been declared unconstitutional by the Constitutional Court. By reason of the principle of the primacy of European Union law, which extends also to the principle of non-discrimination on grounds of age, contrary national legislation which falls within the scope of European Union law must be disapplied (see, to that effect, *Mangold*, paragraph 77).

55 It follows that the national court, hearing proceedings between individuals, is not obliged but is entitled to make a reference to the Court for a preliminary ruling on the interpretation of the principle of non-discrimination on grounds of age, as given expression by Directive 2000/78, before disapplying a provision of national law which it considers to be contrary to that principle. The optional nature of such a reference is not affected by the conditions of national law under which a court may disapply a national provision which it considers to be contrary to the constitution.

56 In the light of the foregoing, the answer to Question 2 is that it is for the national court, hearing proceedings between individuals, to ensure that the principle of non-discrimination on grounds of age, as given expression in Directive 2000/78, is complied with, disapplying if need be any contrary provision of national legislation, independently of whether it makes use of its entitlement, in the cases referred to in the second paragraph of Article 267 TFEU, to ask the Court for a preliminary ruling on the interpretation of that principle.

Costs

57 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

1. **European Union law, more particularly the principle of non-discrimination on grounds of age as given expression by Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation, must be interpreted as precluding national legislation, such as that at issue in the main proceedings, which provides that periods of employment completed by an employee before reaching the age of 25 are not taken into account in calculating the notice period for dismissal.**

2. **It is for the national court, hearing proceedings between individuals, to ensure that the principle of non-discrimination on grounds of age, as given expression in Directive 2000/78, is complied with, disapplying if need be any contrary provision of national legislation, independently of whether it makes use of its entitlement, in the cases referred to in the second paragraph of Article 267 TFEU, to ask the Court of Justice of the European Union for a preliminary ruling on the interpretation of that principle.**

JUDGMENT OF THE COURT (Second Chamber)

10 July 2008 (*)

(Directive 2000/43/EC – Discriminatory criteria for selecting staff – Burden of proof – Penalties)

In Case C-54/07,

REFERENCE for a preliminary ruling under Article 234 EC from the Arbeidshof te Brussel (Belgium), made by decision of 24 January 2007, received at the Court on 6 February 2007, in the proceedings

Centrum voor gelijkheid van kansen en voor racismebestrijding

v

Firma Feryn NV,

THE COURT (Second Chamber),

composed of C.W.A. Timmermans, President of the Chamber, L. Bay Larsen, K. Schiemann, J. Makarczyk and J.-C. Bonichot (Rapporteur), Judges,

Advocate General: M. Poiares Maduro,

Registrar: B. Fülöp, Administrator,

having regard to the written procedure and further to the hearing on 28 November 2007,

after considering the observations submitted on behalf of:

– Centrum voor gelijkheid van kansen en voor racismebestrijding, by C. Bayart, advocaat,

– the Belgian Government, by L. Van den Broeck and C. Pochet, acting as Agents,

– Ireland, by D. O'Hagan and P. McGarry, acting as Agents,

– the United Kingdom Government, by T. Harris, acting as Agent, and by T. Ward, barrister, and J. Eady, solicitor,

– the Commission of the European Communities, by M. van Beek and J. Enegren, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 12 March 2008, gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin (OJ 2000 L 180, p. 22).

2 The reference has been made in the course of proceedings between Centrum voor gelijkheid van kansen en voor racismebestrijding (Centre for equal opportunities and combating racism), applicant in the main proceedings, and Firma Feryn NV ('Feryn'), defendant in the main proceedings, following the remarks of one of its directors publicly confirming that his company did not wish to recruit 'immigrants'.

Legal context

Community legislation

3 According to Article 1 of Directive 2000/43, 'the purpose of this Directive is to lay down a framework for combating discrimination on the grounds of racial or ethnic origin, with a view to putting into effect in the Member States the principle of equal treatment'.

4 Under Article 2(2)(a) of that directive:

'direct discrimination shall be taken to occur where one person is treated less favourably than another is, has been or would be treated in a comparable situation on grounds of racial or ethnic origin.'

5 Article 3(1)(a) of the Directive states that it covers 'conditions for access to employment, to self-employment and to occupation, including selection criteria and recruitment conditions, whatever the branch of activity and at all levels of the professional hierarchy, including promotion'. By contrast, according to Article 3(2) thereof, that directive does not cover 'difference of treatment based on nationality'.

6 Under Article 6(1) of Directive 2000/43:

'Member States may introduce or maintain provisions which are more favourable to the protection of the principle of equal treatment than those laid down in this Directive.'

7 Article 7 of that directive states that:

'1. Member States shall ensure that judicial and/or administrative procedures, including where they deem it appropriate conciliation procedures, for the enforcement of obligations under this Directive are available to all persons who consider themselves wronged by failure to apply the principle of equal treatment to them, even after the relationship in which the discrimination is alleged to have occurred has ended.

2. Member States shall ensure that associations, organisations or other legal entities, which have, in accordance with the criteria laid down by their national law, a legitimate interest in ensuring that the provisions of this Directive are complied with, may engage, either on behalf or in support of the complainant, with his or her approval, in any judicial and/or administrative procedure provided for the enforcement of obligations under this Directive.

…'

8 Article 8(1) of the Directive lays down, in addition, that:

'Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.'

9 Article 13(1) of Directive 2000/43 requires Member States to designate a body or bodies for the promotion of equal treatment. Under Article 13(2) of that directive:

'Member States shall ensure that the competences of these bodies include:

– without prejudice to the right of victims and of associations, organisations or other legal entities referred to in Article 7(2), providing independent assistance to victims of discrimination in pursuing their complaints about discrimination,

…'

10 Lastly, Article 15 of the Directive confers on Member States responsibility for determining the rules on sanctions applicable and specifies that those sanctions may comprise the payment of compensation to the victim and that they must be 'effective, proportionate and dissuasive'.

National legislation

11 The Law of 25 February 2003 on combating discrimination and amending the Law of 15 February 1993 establishing a Centre for Equal Opportunities and Combating Racism (*Moniteur belge* of 17 March 2003, p. 12844), as amended by the Law of 20 July 2006 on various provisions (*Moniteur belge* of 28 July 2006, p. 36940, 'the Law of 25 February 2003'), seeks to transpose Directive 2000/43 into Belgian law.

12 Article 2 of the Law of 25 February 2003 prohibits any direct or indirect discrimination concerning the conditions of access to employed activity. Article 19 of that law is intended to transpose Article 8 of Directive 2000/43 relating to the burden of proof.

13 The Law of 25 February 2003 also authorises criminal or civil proceedings against discrimination. The court may, pursuant to Article 19 of that Law, order cessation of the act of discrimination (Article 19(1)) and publication of its decision (Article 19(2)) or, pursuant to Article 20 of the Law, it may impose a fine.

14 The Belgian legislature granted Centrum voor gelijkheid van kansen en voor racismebestrijding the possibility of being a party to judicial proceedings where discrimination exists or could exist, without a prior complaint being necessary in that regard.

The dispute in the main proceedings and the questions referred for a preliminary ruling

15 Centrum voor gelijkheid van kansen en voor racismebestrijding, which is a Belgian body designated, pursuant to Article 13 of Directive 2000/43, to promote equal treatment, applied to the Belgian labour courts for a finding that Feryn, which specialises in the sale and installation of up-and-over and sectional doors, applied a discriminatory recruitment policy.

16 Centrum voor gelijkheid van kansen en voor racismebestrijding is acting on the basis of the public statements of the director of Feryn to the effect that his undertaking was looking to recruit fitters, but that it could not employ 'immigrants' because its customers were reluctant to give them access to their private residences for the period of the works.

17 By order of 26 June 2006, the Voorzitter van de arbeidsrechtbank te Brussel (the President of the Labour Court, Brussels) dismissed Centrum voor gelijkheid van kansen en voor racismebestrijding's application, stating, in particular, that there was no proof nor was there a presumption that a person had applied for a job and had not been employed as a result of his ethnic origin.

18 Against that background, the Arbeidshof te Brussel (Labour Court, Brussels), to which Centrum voor gelijkheid van kansen en voor racismebestrijding had appealed, decided to stay the proceedings and to refer the following questions to the Court of Justice for a preliminary ruling:

‘(1) Is there direct discrimination within the meaning of Article 2(2)(a) of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin where an employer, after putting up a conspicuous job vacancy notice, publicly states:

‘I must comply with my customers’ requirements. If you say “I want that particular product or I want it like this and like that”, and I say “I’m not doing it, I’ll send those people”, then you say “I don’t need that door”. Then I’m putting myself out of business. We must meet the customers’ requirements. This isn’t my problem. I didn’t create this problem in Belgium. I want the firm to do well and I want us to achieve our turnover at the end of the year, and how do I do that? – I must do it the way the customer wants it done!’[?]

(2) Is it sufficient for a finding of direct discrimination in the conditions for access to paid employment to establish that the employer applies directly discriminatory selection criteria?

(3) For the purpose of establishing that there is direct discrimination within the meaning of Article 2(2)(a) of Council Directive 2000/43/EC …, may account be taken of the recruitment of exclusively indigenous fitters by an affiliated company of the employer in assessing whether that employer’s recruitment policy is discriminatory?

(4) What is to be understood by ‘facts from which it may be presumed that there has been direct or indirect discrimination’ within the terms of Article 8(1) of Directive 2004/43? How strict must a national court be in assessing facts which give rise to a presumption of discrimination?

(a) To what extent do earlier acts of discrimination (public announcement of directly discriminatory selection criteria in April 2005) constitute ‘facts from which it may be presumed that there has been direct or indirect discrimination’ within the terms of Article 8(1) of [Directive 2000/43]?

(b) Does an established act of discrimination in April 2005 (public announcement in April 2005) subsequently give rise to a presumption of the continuation of a directly discriminatory recruitment policy? Having regard to the facts in the main proceedings, is it sufficient, in order to raise the presumption (that an employer operates and continues to pursue a discriminatory recruitment policy) that, in April 2005, in answer to the question whether, as an employer, he did not treat people from foreign and indigenous backgrounds in the same manner and was thus actually a bit racist, he publicly stated: ‘I must comply with my customers’ requirements. If you say “I want that particular product or I want it like this and like that”, and I say “I’m not doing it, I’ll send those people”, then you say “I don’t need that door”. Then I’m putting myself out of business. We must meet the customers’ requirements. This isn’t my problem. I didn’t create this problem in Belgium. I want the firm to do well and I want us to achieve our turnover at the end of the year, and how do I do that? – I must do it the way the customer wants it done!’[?]

(c) Having regard to the facts in the main proceedings, can a joint press release issued by an employer and the national body for combating discrimination, in which acts of discrimination are at least implicitly confirmed by the employer, give rise to such a presumption?

(d) Does the fact that an employer does not employ any fitters from ethnic minorities give rise to a presumption of indirect discrimination when that same employer some time previously had experienced great difficulty in recruiting fitters and, moreover, had also stated publicly that his customers did not like working with fitters who were immigrants?

(e) Is one fact sufficient in order to raise a presumption of discrimination?

(f) Having regard to the facts in the main proceedings, can a presumption of discrimination on the part of the employer be inferred from the recruitment of exclusively indigenous fitters by an affiliated company of that employer?

(5) How strict must the national court be in assessing the evidence in rebuttal which must be produced when a presumption of discrimination within the meaning of Article 8(1) of Directive 2000/43 has been raised? Can a presumption of discrimination within the meaning of Article 8(1) of Directive 2000/43 … be rebutted by a simple and unilateral statement by the employer in the press that he does not or does not any longer discriminate and that fitters from ethnic minorities are welcome; and/or by a simple declaration by the employer that his company, excluding the sister company, has filled all vacancies for fitters and/or by the statement that a Tunisian cleaning lady has been taken on and/or, having regard to the facts in the main proceedings, can the presumption be rebutted only by actual recruitment of fitters from ethnic minorities and/or by fulfilling commitments given in the joint press release?

(6) What is to be understood by an 'effective, proportionate and dissuasive' sanction, as provided for in Article 15 of Directive 2000/43 …? Having regard to the facts in the main proceedings, does the abovementioned requirement of Article 15 of Directive 2000/43 permit the national court merely to declare that there has been direct discrimination? Or does it, on the contrary, also require the national court to grant a prohibitory injunction, as provided for in national law? Having regard to the facts in the main proceedings, to what extent is the national court further required to order the publication of the forthcoming judgment as an effective, proportionate and dissuasive sanction?'

The questions referred for a preliminary ruling

19 It should be noted, at the outset, that Article 234 EC does not empower the Court to apply rules of Community law to a particular case, but only to rule on the interpretation of the EC Treaty and of acts adopted by European Community institutions (see, inter alia, Case 100/63 *van der Veen* [1964] ECR 565, 572, and Case C-203/99 *Veedfald* [2001] ECR I-3569, paragraph 31). The Court may, however, in the framework of the judicial cooperation provided for by that article and on the basis of the material presented to it, provide the national court with an interpretation of Community law which may be useful to it in assessing the effects of one or other of its provisions (Case 20/87 *Gauchard* [1987] ECR 4879, paragraph 5, and Joined Cases C-515/99, C-519/99 to C-524/99 and C-526/99 to C-540/99 *Reisch and Others* [2002] ECR I-2157, paragraph 22).

20 The national court has requested the Court to interpret the provisions of Directive 2000/43 for the purpose, essentially, of assessing the scope of the concept of direct discrimination in the light of the public statements made by an employer in the course of a recruitment procedure (first and second questions), the conditions in which the rule of the reversal of the burden of proof laid down in that directive can be applied (third to fifth questions) and what penalties may be considered appropriate in a case such as that in the main proceedings (sixth question).

The first and second questions

21 With regard to the first and second questions, Ireland and the United Kingdom of Great Britain and Northern Ireland maintain that it is not possible for there to be direct discrimination within the meaning of Directive 2000/43, so that the directive is inapplicable where the alleged discrimination results from public statements made by an employer concerning its recruitment policy but there is no identifiable complainant contending that he has been the victim of that discrimination.

22 It is true that, as those two Member States contend, Article 2(2) of Directive 2000/43 defines direct discrimination as a situation in which one person 'is treated' less favourably than another is, has been or would be treated in a comparable situation on grounds of racial

or ethnic origin. Likewise, Article 7 of that directive requires Member States to ensure that judicial procedures are available to 'all persons who consider themselves wronged by failure to apply the principle of equal treatment to them' and to public interest bodies bringing judicial proceedings 'on behalf or in support of the complainant'.

23 Nevertheless, it cannot be inferred from this that the lack of an identifiable complainant leads to the conclusion that there is no direct discrimination within the meaning of Directive 2000/43. The aim of that directive, as stated in recital 8 of its preamble, is 'to foster conditions for a socially inclusive labour market'. For that purpose, Article 3(1)(a) states that the directive covers, inter alia, selection criteria and recruitment conditions.

24 The objective of fostering conditions for a socially inclusive labour market would be hard to achieve if the scope of Directive 2000/43 were to be limited to only those cases in which an unsuccessful candidate for a post, considering himself to be the victim of direct discrimination, brought legal proceedings against the employer.

25 The fact that an employer declares publicly that it will not recruit employees of a certain ethnic or racial origin, something which is clearly likely to strongly dissuade certain candidates from submitting their candidature and, accordingly, to hinder their access to the labour market, constitutes direct discrimination in respect of recruitment within the meaning of Directive 2000/43. The existence of such direct discrimination is not dependant on the identification of a complainant who claims to have been the victim.

26 The question of what constitutes direct discrimination within the meaning of Directive 2000/43 must be distinguished from that of the legal procedures provided for in Article 7 of that directive for a finding of failure to comply with the principle of equal treatment and the imposition of sanctions in that regard. Those legal procedures must, in accordance with the provisions of that article, be available to persons who consider that they have suffered discrimination. However, the requirements of Article 7 of Directive 2000/43 are, as stated in Article 6 thereof, only minimum requirements and the Directive does not preclude Member States from introducing or maintaining provisions which are more favourable to the protection of the principle of equal treatment.

27 Consequently, Article 7 of Directive 2000/43 does not preclude Member States from laying down, in their national legislation, the right for associations with a legitimate interest in ensuring compliance with that directive, or for the body or bodies designated pursuant to Article 13 thereof, to bring legal or administrative proceedings to enforce the obligations resulting therefrom without acting in the name of a specific complainant or in the absence of an identifiable complainant. It is, however, solely for the national court to assess whether national legislation allows such a possibility.

28 In the light of the foregoing, the answer to the first and second questions must be that the fact that an employer states publicly that it will not recruit employees of a certain ethnic or racial origin constitutes direct discrimination in respect of recruitment within the meaning of Article 2(2)(a) of Directive 2000/43, such statements being likely strongly to dissuade certain candidates from submitting their candidature and, accordingly, to hinder their access to the labour market.

The third to fifth questions

29 The third to fifth questions concern the application of the rule of the reversal of the burden of proof laid down in Article 8(1) of Directive 2000/43 to a situation in which the existence of a discriminatory recruitment policy is alleged by reference to remarks made publicly by an employer concerning its recruitment policy.

30 Article 8 of Directive 2000/43 states in that regard that, where there are facts from which it may be presumed that there has been direct or indirect discrimination, it is for the defendant to prove that there has been no breach of the principle of equal treatment. The precondition of the obligation to adduce evidence in rebuttal which thus arises for the alleged perpetrator of the discrimination is a simple finding that a presumption of discrimination has arisen on the basis of established facts.

31 Statements by which an employer publicly lets it be known that, under its recruitment policy, it will not recruit any employees of a certain ethnic or racial origin may constitute facts of such a nature as to give rise to a presumption of a discriminatory recruitment policy.

32 It is, thus, for that employer to adduce evidence that it has not breached the principle of equal treatment, which it can do, inter alia, by showing that the actual recruitment practice of the undertaking does not correspond to those statements.

33 It is for the national court to verify that the facts alleged against that employer are established and to assess the sufficiency of the evidence which the employer adduces in support of its contentions that it has not breached the principle of equal treatment.

34 Consequently, the answer to the third to fifth questions must be that public statements by which an employer lets it be known that under its recruitment policy it will not recruit any employees of a certain ethnic or racial origin are sufficient for a presumption of the existence of a recruitment policy which is directly discriminatory within the meaning of Article 8(1) of Directive 2000/43. It is then for that employer to prove that there was no breach of the principle of equal treatment. It can do so by showing that the undertaking's actual recruitment practice does not correspond to those statements. It is for the national court to verify that the facts alleged are established and to assess the sufficiency of the evidence submitted in support of the employer's contentions that it has not breached the principle of equal treatment.

The sixth question

35 The sixth question asks, essentially, what sanctions may be considered to be appropriate for employment discrimination established on the basis of the employer's public statements.

36 Article 15 of Directive 2000/43 confers on Member States responsibility for determining the rules on sanctions for breaches of national provisions adopted pursuant to that directive. Article 15 specifies that those sanctions must be effective, proportionate and dissuasive and that they may comprise the payment of compensation to the victim.

37 Article 15 of Directive 2000/43 thus imposes on Member States the obligation to introduce into their national legal systems measures which are sufficiently effective to achieve the aim of that directive and to ensure that they may be effectively relied upon before the national courts in order that judicial protection will be real and effective. Directive 2000/43 does not, however, prescribe a specific sanction, but leaves Member States free to choose between the different solutions suitable for achieving its objective.

38 In a case such as that referred by the national court, where there is no direct victim of discrimination but a body empowered to do so by law seeks a finding of discrimination and the imposition of a penalty, the sanctions which Article 15 of Directive 2000/43 requires to be laid down in national law must also be effective, proportionate and dissuasive.

39 If it appears appropriate to the situation at issue in the main proceedings, those sanctions may, where necessary, include a finding of discrimination by the court or the competent administrative authority in conjunction with an adequate level of publicity, the cost of which is to be borne by the defendant. They may also take the form of a prohibitory injunction, in accordance with the rules of national law, ordering the employer to cease the discriminatory practice, and, where appropriate, a fine. They may, moreover, take the form of the award of damages to the body bringing the proceedings.

40 The answer to the sixth question must therefore be that Article 15 of Directive 2000/43 requires that rules on sanctions applicable to breaches of national provisions adopted in order to transpose that directive must be effective, proportionate and dissuasive, even where there is no identifiable victim.

Costs

41 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Second Chamber) hereby rules:

1. **The fact that an employer states publicly that it will not recruit employees of a certain ethnic or racial origin constitutes direct discrimination in respect of recruitment within the meaning of Article 2(2)(a) of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin, such statements being likely strongly to dissuade certain candidates from submitting their candidature and, accordingly, to hinder their access to the labour market.**

2. **Public statements by which an employer lets it be known that under its recruitment policy it will not recruit any employees of a certain ethnic or racial origin are sufficient for a presumption of the existence of a recruitment policy which is directly discriminatory within the meaning of Article 8(1) of Directive 2000/43. It is then for that employer to prove that there was no breach of the principle of equal treatment. It can do so by showing that the undertaking's actual recruitment practice does not correspond to those statements. It is for the national court to verify that the facts alleged are established and to assess the sufficiency of the evidence submitted in support of the employer's contentions that it has not breached the principle of equal treatment.**

3. **Article 15 of Directive 2000/43 requires that rules on sanctions applicable to breaches of national provisions adopted in order to transpose that directive must be effective, proportionate and dissuasive, even where there is no identifiable victim.**

JUDGMENT OF THE COURT (Sixth Chamber)

26 June 2001 (1)

(Equal pay for men and women - Conditions of application - Difference in pay - Definition of 'the same work☐ and 'work of equal value☐ - Classification, under a collective agreement, in the same job category - Burden of proof - Objective justification for unequal pay - Effectiveness of a specific employee's work)

In Case C-381/99,

REFERENCE to the Court under Article 234 EC by the Oberlandesgericht Wien (Austria) for a preliminary ruling in the proceedings pending before that court between

Susanna Brunnhofer

and

Bank der österreichischen Postsparkasse AG,

on the interpretation of Article 119 of the EC Treaty (Articles 117 to 120 of the EC Treaty have been replaced by Articles 136 EC to 143 EC) and of Council Directive 75/117/EEC of 10 February 1975 on the approximation of the laws of the Member States relating to the application of the principle of equal pay for men and women (OJ 1975 L 45, p. 19),

THE COURT (Sixth Chamber),

composed of: C. Gulmann, President of the Chamber, V. Skouris, R. Schintgen (Rapporteur), F. Macken and J.N. Cunha Rodrigues, Judges,

Advocate General: L.A. Geelhoed,

Registrar: R. Grass,

after considering the written observations submitted on behalf of:

- Ms Brunnhofer, by G. Jöchl, Rechtsanwalt,

- the Austrian Government, by C. Pesendorfer, acting as Agent,

- the Commission of the European Communities, by H. Michard and W. Bogensberger, acting as Agents,

having regard to the report of the Judge-Rapporteur,

after hearing the Opinion of the Advocate General at the sitting on 15 March 2001,

gives the following

Judgment

1. By order of 15 June 1999, received at the Court on 8 October 1999, the Oberlandsgericht Wien referred to the Court for a preliminary ruling under Article 234 EC a number of questions on the interpretation of Article 119 of the EC Treaty (Articles 117 to 120 of the EC Treaty have been replaced by Articles 136 EC to 143 EC) and of Council Directive 75/117/EEC of 10 February 1975 on the approximation of the laws of the

Member States relating to the application of the principle of equal pay for men and women (OJ 1975 L 45, p. 19, 'the Directive☐).

2. The questions were raised in proceedings between Susanna Brunnhofer and the Bank der österreichischen Postsparkasse AG ('the Bank☐) concerning the difference between the remuneration paid by the Bank to Ms Brunnhofer and that paid to one of her male colleagues.

Legal background

3. Article 119 of the Treaty lays down the principle that men and women should receive equal pay for equal work.

4. The second and third paragraphs of Article 119 provide:

'For the purpose of this Article, ☐pay☐ means the ordinary basic or minimum wage or salary and any other consideration, whether in cash or in kind, which the worker receives, directly or indirectly, in respect of his employment from his employer.

Equal pay without discrimination based on sex means:

(a) that pay for the same work at piece rates shall be calculated on the basis of the same unit of measurement;

(b) that pay for work at time rates shall be the same for the same job.☐

5. Under Article 1 of the Directive:

'The principle of equal pay for men and women outlined in Article 119 of the Treaty, hereinafter called ☐principle of equal pay☐, means, for the same work or for work to which equal value is attributed, the elimination of all discrimination on grounds of sex with regard to all aspects and conditions of remuneration.

In particular, where a job classification system is used for determining pay, it must be based on the same criteria for both men and women and so drawn up as to exclude any discrimination on grounds of sex.☐

6. Article 3 of the Directive provides:

'Member States shall abolish all discrimination between men and women arising from laws, regulations or administrative provisions which is contrary to the principle of equal pay.☐

7. Article 4 of the Directive states:

'Member States shall take the necessary measures to ensure that provisions appearing in collective agreements, wage scales, wage agreements or individual contracts of employment which are contrary to the principle of equal pay shall be, or may be declared, null and void or may be amended.☐

The main proceedings and the questions referred to the Court

8. According to the order for reference, Ms Brunnhofer, who was employed by the Bank from 1 July 1993 to 31 July 1997, considers that she has suffered discrimination based on

sex, contrary to the principle of equal pay, on the ground that she received a monthly salary lower than that paid to a male colleague recruited by the Bank on 1 August 1994.

9. The national court found that, although their basic salary was identical, the difference in salary between the two employees arose from the fact that, under his employment contract, Ms Brunnhofer's male colleague received an individual supplement the monthly amount of which was approximately ATS 2 000 higher than the supplement which she received under her contract with the Bank.

10. It is common ground that, when they took up their duties, Ms Brunnhofer and her male colleague were classified in salary group V, which covers employees with training in banking who carry out skilled banking work on their own, as provided for by the collective agreement applicable to banking employees and bankers in Austria ('the collective agreement□).

11. From this circumstance Ms Brunnhofer concludes that she was performing the same work as her male colleague or at any rate work of equal value.

12. It appears from the documents in the case that Ms Brunnhofer was posted to the 'Foreign□ department of the Bank and that her job was to supervise loans. It was expected that after a period of training she would be appointed to a management post in that department. As a result of professional and personal problems which arose before her male colleague was appointed, she did not, however, obtain such an appointment, but was posted to the legal service where, it seems, her work was not considered satisfactory either. She was dismissed on 31 July 1997.

13. Ms Brunnhofer took her case to the Equal Treatment Commission of the Federal Chancellor's Office, which concluded that discrimination within the meaning of the Austrian Law on Equal Treatment, which was intended to transpose the Directive, could not be ruled out in respect of the fixing of her salary.

14. Ms Brunnhofer then brought a legal action before the Arbeits- und Sozialgericht Wien (Austria) asking that the Bank be ordered to pay her more than ATS 160 000 as compensation for the salary discrimination on grounds of sex which she claimed to have suffered.

15. At first instance her action was dismissed by judgment of 16 December 1998. Ms Brunnhofer then appealed to the Oberlandesgericht Wien.

16. The Bank denies that Ms Brunnhofer suffered any discrimination contrary to the principal of equal pay.

17. First, it contends that the total salary of the two employees concerned was not in fact different, since, unlike her male colleague, Ms Brunnhofer was not required regularly to work the full overtime hours allotted to her.

18. Second, it contends that there were objective reasons for the difference in the individual supplement awarded to each of them.

19. According to the Bank, even though the two jobs in question were initially regarded as being of equal value, Ms Brunnhofer's male colleague in fact carried out more important functions in so far as he was responsible for important customers and was authorised to enter into binding commitments on behalf of the Bank. No such authority was given to Ms Brunnhofer, who had less client contact, which explains why she received a lower salary supplement than that given to her male colleague.

20. The quality of the work of the two employees in question was also different. After a promising start, Ms Brunnhofer's work deteriorated, in particular from the beginning of 1994, that is to say at a time when her male colleague had not yet been recruited.

21. Ms Brunnhofer's response is that work effectiveness is not relevant for the purposes of fixing pay on recruitment, since the value of work done can only be assessed as the employment contract is performed.

22. According to the national court, the decision in the case depends essentially on whether, as Ms Brunnhofer claims, it is possible to consider that work is the same or of equal value where, under a collective agreement, the employees concerned are classified in the same job category, or whether, as the Bank contends, a difference in the individual work capacity of two employees, reflected in particular by the poor quality of the work of one of them, which obviously cannot emerge until some time after that person's appointment, is capable of justifying unequal pay.

23. The Oberlandesgericht Wien decided to stay proceedings and refer the following questions to the Court:

'1(a) In assessing whether work is ☐equal work☐ or constitutes ☐the same job☐ within the meaning of Article 119 of the EC Treaty (now Article 141 EC) or is ☐the same work☐ or ☐work to which equal value is attributed☐ within the meaning of Directive 75/117/EEC, is it sufficient, where individual contracts of employment stipulate supplements to pay fixed by collective agreement, to ascertain whether the two workers being compared are classified in the same job, category under the collective agreement?

(b) If the reply to Question 1(a) is in the negative:

In the situation described in Question 1(a), is the same classification under the collective agreement evidence of the same work or work of equal value withinthe meaning of Article 119 (now Article 141) of the Treaty and of Directive 75/117/EEC, with the result that it is for the employer to prove that the work is different?

(c) Can the employer rely on circumstances not taken into account in the collective agreements in order to justify a difference in pay?

(d) If the reply to Question 1(a) or 1(b) is in the affirmative:

Does this also apply if the classification in the job category under the collective agreement is based on a job description couched in very general terms?

2(a) Are Article 119 (now Article 141) of the Treaty and Directive 75/117/EEC based on a definition of ☐worker☐ which is uniform at least in so far as the worker's obligations under the contract of employment depend not only on generally defined standards but also on the individual capacity of the worker himself?

(b) Are Article 119 (now Article 141) of the Treaty and Article 1 of Directive 75/117/EEC to be interpreted as meaning that the fixing of different pay may be objectively justified by circumstances which can be established only *ex post facto*, such as in particular a specific employee's work performance?☐

The questions referred for a preliminary ruling

Preliminary remarks

24. It is clear from the documents in the case that the national court has made a reference to the Court on the interpretation of Article 119 of the Treaty and Article 1 of the Directive in order to assess whether there is discrimination on grounds of sex prohibited by Community law in a case where the woman concerned receives the same basic pay, fixed by a collective agreement, as her male comparator, but from the start of her employment receives a monthly salary supplement, stipulated in her individual employment contract, which proves to be less than that paid to the man, although both employees are classified in the same grade of the same job category under the collective agreement governing their employment.

25. The questions raised by the national court, which can be examined together, essentially concern (i) the concepts of 'the same work□, 'the same job□ and 'work to which equal value is attributed□ within the meaning of Article 119 of the Treaty and Article 1 of the Directive, (ii) the rules of evidence concerning the existence of unequal pay for men and women and of possible objective justification for any difference in treatment and (iii) the question whether certain specific factors, such as the personal capacity or work performance, may be relied on by an employer in order to justify paying an employee,such as the plaintiff in this case, remuneration lower than that paid to her male colleague.

26. Those questions therefore relate both to some of the conditions determining the actual application of the principle of equal pay for men and women and to the various circumstances relied on by the employer in this case to justify the existence of a difference in the amount of the individual salary supplement paid to each of the employees concerned.

27. It should be recalled at the outset that Article 119 of the Treaty lays down the principle that the same work or work to which equal value is attributed must be remunerated in the same way, whether it is performed by a man or a woman (see, to that effect, *inter alia* Case C-236/98 *JämO* [2000] ECR I-2189, paragraph 36).

28. As the Court has already held in Case 43/75 *Defrenne II* [1976] ECR 455, paragraph 12, that principle, which is a particular expression of the general principle of equality which prohibits comparable situations from being treated differently unless the difference is objectively justified, forms part of the foundations of the Community.

29. The Court has also repeatedly held that the Directive is essentially designed to facilitate the practical application of the principle of equal pay laid down in Article 119 of the Treaty and in no way alters the scope or content of that principle as defined in Article 119 (see, in particular, Case C-262/88 *Barber* [1990] ECR I-1889, paragraph 11, and *JämO*, cited above, paragraph 37), so that the terms used in the Treaty article and in the Directive have the same meaning (see, as regards 'pay□, Case C-167/97 *Seymour-Smith and Perez* [1999] ECR I-623, paragraph 35, and as regards 'the same work□, Case C-309/97 *Angestelltenbetriebsrat der Wiener Gebietskrankenkasse* [1999] ECR I-2865, paragraph 23).

30. So understood, the fundamental principle laid down in Article 119 of the Treaty and elaborated by the Directive precludes unequal pay as between men and women for the same job or work of equal value, whatever the mechanism which produces such inequality (see *Barber*, cited above, paragraph 32), unless the difference in pay is justified by objective factors unrelated to any discrimination linked to the difference in sex (see, in particular, Case 129/79 *Macarthys* [1980] ECR 1275, paragraph 12, and Case C-243/95 *Hill and Stapleton* [1998] ECR I-3739, paragraph 34).

31. In order to help the national court, those various elements must be considered in turn.

Existence of unequal pay between men and women

32. It follows from the case-law of the Court that, since Article 119 of the Treaty has binding effect, the prohibition of discrimination between men and women applies not only to the action of the public authorities but also, as is indeed clear from the wordingof Article 4 of the Directive, to all agreements which are intended to regulate paid labour collectively as well as to contracts between private individuals (see, to that effect, in particular *Defrenne II*, cited above, paragraph 39).

33. It is also settled case-law that the concept of pay in Article 119 of the Treaty and Article 1 of the Directive covers any other consideration, in cash or in kind, present or future, provided that the worker receives it, even indirectly, in respect of his employment from his employer (see, *inter alia*, *Barber*, paragraph 12, and*JämO*, paragraph 39, both cited above).

34.

The monthly salary supplement in question in the present case incontestedly constitutes consideration stipulated in the individual employment contract and paid by the employer to the two employees concerned in respect of their employment with the Bank. That supplement must, therefore, be classified as pay for the purposes of Article 119 of the Treaty and Article 1 of the Directive.

35. As regards the method to be used for comparing the pay of the workers concerned in order to determine whether the principle of equal pay is being complied with, again according to the case-law, genuine transparency permitting an effective review is assured only if that principle applies to each aspect of remuneration granted to men and women, excluding any general overall assessment of all the consideration paid to workers (see *Barber,* paragraphs 34 and 35).

36. That interpretation is indeed borne out by the actual terms of Article 1 of the Directive, according to which the principle of granting men and women equal pay for the same work, as laid down in Article 119 of the Treaty and elaborated by the Directive, means eliminating, for the same work or work to which equal value is attributed, all discrimination on grounds of sex with regard to all aspects and conditions of remuneration.

37. In the circumstances, the national court identified quite rightly an inequality between the unequal amount of individual salary supplement paid monthly to the plaintiff and that paid to her male comparator, although it is undisputed that the two employees concerned receive the same basic pay and regardless of the Bank's contention that their overall salary is identical.

38. That finding is not, however, a sufficient basis for concluding that discrimination prohibited by Community law exists.

39. First, since the principle of equal pay as laid down in Article 119 of the Treaty and Article 1 of the Directive presupposes that the men and women to whom it applies are in identical or comparable situations (see, to that effect, Case C-132/92 *Roberts* [1993] ECR I-5579, paragraph 17), it must also be ascertained whether the employees concerned are performing the same work or work to which equal value may be attributed.

40. Second, the differences in treatment prohibited by Article 119 are exclusively those based on the difference in sex of the employees concerned (Case 96/80*Jenkins* [1981] ECR 911, paragraph 10).

Determining whether work is the same or of equal value

41. The national court is asking essentially whether the fact that the female employee claiming discrimination on grounds of sex and the male comparator are classified in the same job category under the collective agreement governing their employment is sufficient to reach the conclusion that the two employees concerned are performing the same work or work to which equal value is attributed within the meaning of Article 119 of the Treaty and Article 1 of the Directive.

42. In replying to this point raised by the reference, it must be borne in mind that it is clear from the Court's case-law that the terms 'the same work□, 'the same job□ and 'work of equal value□ in Article 119 of the Treaty and Article 1 of the Directive are entirely qualitative in character in that they are exclusively concerned with the nature of the work actually performed (see *Macarthys*, cited above, paragraph 11, and Case 237/85 *Rummler* [1986] ECR 2101, paragraphs 13 and 23).

43. The Court has repeatedly held that, in order to determine whether employees perform the same work or work to which equal value can be attributed, it is necessary to ascertain whether, taking account of a number of factors such as the nature of the work, the training requirements and the working conditions, those persons can be considered to be in a comparable situation (see Case C-400/93 *Royal Copenhagen* [1995] ECR I-1275, paragraphs 32 and 33, and*Angestelltenbetriebsrat der Wiener Gebietskrankenkasse*, cited above, paragraph 17).

44.

It follows that the fact that the employees concerned are classified in the same job category under the collective agreement applicable to their employment is not in itself sufficient for concluding that they perform the same work or work of equal value.

45. Such a classification does not exclude the existence of other evidence to support that conclusion.

46. That interpretation is not undermined by the fact, pointed out by the national court in Question 1(d), that the collective agreement defines the job covered by the relevant job category in very general terms.

47. As a matter of evidence, the general indications provided in the collective agreement must in any event be corroborated by precise and concrete factors based on the activities actually performed by the employees concerned.

48. It is therefore necessary to ascertain whether, when a number of factors are taken into account, such as the nature of the activities actually entrusted to each of the employees in question in the case, the training requirements for carrying them out and the working conditions in which the activities are actually carried out, those persons are in fact performing the same work or comparable work.

49. It is for the national court, which alone has jurisdiction to find and assess the facts, to determine whether, in the light of the actual nature of the activities carried out by those concerned, equal value can be attributed to them (*JämO*, cited above, paragraph 48).

50. More particularly, in the present case, the national court must determine whether the plaintiff and the male comparator perform comparable work, even though, as is clear from the order for reference, the male colleague is responsible for dealing with important customers and has authority to enter into binding commitments, whereas Ms Brunnhofer, who supervises loans, has less contact with clients and cannot enter into commitments that directly bind her employer.

The burden of proof

51. By this part of the reference, the national court is asking essentially which party to the main proceedings bears the burden of proving the existence of an inequality in pay between men and women and any circumstances capable of objectively justifying such a difference in treatment.

52. As to that point, it should be observed that it is normally for the person alleging facts in support of a claim to adduce proof of such facts. Thus, in principle, the burden of proving the existence of sex discrimination in the matter of pay lies with the worker who, believing himself to be the victim of such discrimination, brings legal proceedings against his employer with a view to having the discrimination removed (see Case C-127/92 *Enderby* [1993] ECR I-5535, paragraph 13).

53. However, it is clear from the case-law of the Court that the burden of proof may shift when this is necessary to avoid depriving workers who appear to be the victims of discrimination of any effective means of enforcing the principle of equal pay (see *Enderby*, cited above, paragraph 14).

54. In particular, where an undertaking applies a system of pay with a mechanism for applying individual supplements to the basic salary, which is wholly lacking in transparency, it is for the employer to prove that his practice in the matter of wages is not discriminatory if a female worker establishes, in relation to a relatively large number of employees, that the average pay for women is less than that for men (Case 109/88 *Danfoss* [1989] ECR 3199, paragraph 16).

55. Under such a system, female employees are unable to compare the different components of their salary with those of the pay of their male colleagues belonging tothe same salary group and can establish differences only in average pay, so that in practice they would be deprived of any possibility of effectively examining whether the principle of

equal pay was being complied with if the employer did not have to indicate how he applied the criteria concerning supplements (see*Danfoss*, cited above, paragraphs 10, 13 and 15).

56. However, there are no such special circumstances in the present case, which concerns the inequality, which is not denied, of a precise component of the overall remuneration granted by the employer to two particular employees of different sex, so that the case-law set out in paragraphs 53 to 55 above is not applicable to this case.

57. In accordance with the normal rules of evidence, it is therefore for the plaintiff in the main proceedings to establish before the national court that the conditions giving rise to a presumption that there is unequal pay prohibited by Article 119 of the Treaty and by the Directive are fulfilled.

58. It is accordingly for the plaintiff to prove by any form of allowable evidence that the pay she receives from the Bank is less than that of her chosen comparator, and that she does the same work or work of equal value, comparable to that performed by him, so that prima facie she is the victim of discrimination which can be explained only by the difference in sex.

59. Contrary to what the national court seems to accept, the employer is not therefore bound to show that the activities of the two employees concerned are different.

60. If the plaintiff in the main proceedings adduced evidence to show that the criteria for establishing the existence of a difference in pay between a woman and a man and for identifying comparable work are satisfied in this case, a prima facie case of discrimination would exist and it would then be for the employer to prove that there was no breach of the principle of equal pay.

61. To do this, the employer could deny that the conditions for the application of the principle were met, by establishing by any legal means *inter alia* that the activities actually performed by the two employees were not in fact comparable.

62. The employer could also justify the difference in pay by objective factors unrelated to any discrimination based on sex, by proving that there was a difference, unrelated to sex, to explain the payment of a higher monthly supplement to the chosen comparator.

Objective justifications for unequal pay

63. The national court is essentially asking whether a difference between a woman's and a man's pay for the same work or work of equal value is capable of being objectively justified, first, by circumstances not taken into consideration under the collectiveagreement applicable to the employees concerned and, second, by factors which are known only after the employees have taken up their duties and which can be assessed only while the employment contract is being performed, such as a difference in the individual work capacity of the employees concerned or in the effectiveness of an employee's work in relation to that of a colleague.

64. The national court is thereby seeking to determine legal criteria which would enable the existence of an objective justification for unequal treatment prima facie based on sex to be established.

65. In preliminary ruling proceedings, although it is ultimately for the national court, which alone is competent to assess the facts, to establish whether, in the particular case before it, there are objective grounds unrelated to any discrimination based on sex to justify such inequality, the Court of Justice, which is called on to provide answers of use to the national court, may nevertheless provide guidance based on the documents in the file and on the written and oral observations which have been submitted to it, in order to enable the national court to give judgment (see *Seymour-Smith and Perez*, cited above, paragraphs 67 and 68).

66. It is appropriate to recall here the case-law according to which a difference in the remuneration paid to women in relation to that paid to men for the same work or work of

equal value must, in principle, be considered contrary to Article 119 of the Treaty and, consequently, to the Directive. It would be otherwise only if the difference in treatment were justified by objective factors unrelated to any discrimination based on sex (see, *inter alia*, *Macarthys*, paragraph 12, and *Hill and Stapleton*, paragraph 34).

67. Furthermore, the grounds put forward by the employer to explain the inequality must correspond to a real need of the undertaking, be appropriate to achieving the objectives pursued and necessary to that end (Case 170/84 *Bilka* [1986] ECR 1607, paragraph 36).

68. As regards the first part of that latter aspect of the reference, as reformulated, concerning possible justifications for unequal treatment, it need merely be stated that it follows from the foregoing that the employer may validly explain the difference in pay, in particular by circumstances not taken into consideration under the collective agreement applicable to the employees concerned, in so far as they constitute objectively justified reasons unrelated to any discrimination based on sex and in conformity with the principle of proportionality.

69. It is for the national court to make such an assessment of the facts in each case before it, in the light of all the evidence.

70. With regard to the second part of this aspect of the reference, as reformulated, it must be pointed out that the third paragraph of Article 119 makes a distinction between work paid at piece rates and work paid at time rates.

71. In the first case, that provision states that pay is to be calculated on the basis of the same unit of measurement, without giving further details.

72. In the case of work paid at time rates, it is essential for the employer to be able to take employees' productivity into account and therefore their individual work capacity.

73. In that context, the Court has, moreover, held that, where the unit of measurement is the same for two groups of workers carrying out the same work at piece rates, the principle of equal pay does not prohibit those workers from receiving different pay if that is due to different individual output (see, to that effect, *Royal Copenhagen*, cited above, paragraph 21).

74. However, in the second case, the criterion used in the third paragraph of Article 119 is 'the same job□, a term which is equivalent to 'the same work□ used in the first paragraph of that provision and Article 1 of the Directive.

75. As was pointed out in paragraphs 42, 43 and 48 of this judgment, such a term is defined on the basis of objective criteria, which do not include the essentially subjective and variable factor of each employee's productivity taken in isolation.

76. In so far as the questions clearly concern work paid at time rates, as the national court has, moreover, stated in its order for reference, it follows from the foregoing that circumstances linked to the person of the employee which cannot be determined objectively at the time of that person's appointment but come to light only during the actual performance of the employee's activities, such as personal capacity or the effectiveness or quality of the work actually done by the employee, cannot be relied upon by the employer to justify the fixing, right from the start of the employment relationship, of pay different from that paid to a colleague of the other sex performing identical or comparable work.

77. As the Commission has rightly pointed out in relation to work paid at time rates, an employer cannot therefore pay an unequal salary on the basis of the effectiveness or quality of the work done in the actual performance of the tasks initially conferred except by conferring different duties on the employees concerned, for example by moving the employee whose work has not met expectations to another post. In circumstances such as those described in the previous paragraph, there is nothing to stop individual work capacity from being taken into account and from having an effect on the employee's career development as compared with that of her colleague, and hence on the subsequent posting and pay of the persons concerned, even though they might, at the beginning of

the employment relationship, have been regarded as performing the same work or work of equal value.

78. It should also be pointed out in this connection that, contrary to what the national court appears to accept, it is not possible to treat in the same way all the factors directly concerning the person of the employee and therefore, in particular, to assimilate theprofessional training necessary to perform the activity in question to its concrete results. Although professional training is a valid criterion not only for ascertaining whether or not employees are doing the same work, but also as an objective justification for a difference in pay granted to employees doing comparable work (see, to that effect, *Angestelltenbetriebsrat der Wiener Gebietskrankenkasse*, cited above, paragraph 19), that is because it is a factor which is objectively known at the time when the employee is appointed, whereas work performance can be assessed only subsequently and cannot therefore constitute a proper ground for unequal treatment right from the start of the employment of the employees concerned.

79. In those circumstances, the employer cannot, at the time when the employees concerned are appointed, pay to a specific employee remuneration lower than that paid to a colleague of the other sex and later justify that difference on the ground that the latter's work is superior, or on the ground that the quality of the former's work steadily deteriorated after that employee's recruitment, where it is established that the employees concerned are actually performing the same work or at any rate work of equal value. If that latter condition is met, a justification for unequal treatment based on future assessment of the work of each employee concerned still cannot exclude the existence of considerations based on the different sex of the employees concerned. As is already clear from paragraphs 30 and 66 of this judgment, the difference in pay between a woman and a man occupying the same job can be justified only by objective factors unrelated to any discrimination linked to the difference in sex.

80. In the light of all the foregoing considerations, the reply to be given to the questions referred must be that the principle of equal pay for men and women laid down in Article 119 of the Treaty and elaborated by the Directive must be interpreted as follows:

- a monthly salary supplement to which the employees concerned are entitled under their individual employment contracts, paid by the employer in respect of their employment, constitutes pay within the scope of Article 119 of the Treaty and the Directive; equal pay must be ensured not only on the basis of an overall assessment of all the consideration granted to employees but also in the light of each aspect of pay taken in isolation;

- the fact that a female employee who claims to be the victim of discrimination on grounds of sex and the male comparator are classified in the same job category under the collective agreement governing their employment is not in itself sufficient for concluding that the two employees concerned are performing the same work or work to which equal value is attributed within the meaning of Article 119 of the Treaty and Article 1 of the Directive, since this fact is only one indication amongst others that this criterion is met;

- as a general rule, it is for employees who consider themselves to be the victims of discrimination to prove that they are receiving lower pay than that paid by the employer to a colleague of the other sex and that they are in factperforming the same work or work of equal value, comparable to that performed by the chosen comparator; the employer may then not only dispute the fact that the conditions for the application of the principle of equal pay for men and women are met in the case but also put forward objective grounds, unrelated to any discrimination based on sex, to justify the difference in pay;

- a difference in pay is capable of being justified by circumstances not taken into consideration under the collective agreement applicable to the employees concerned, provided that they constitute objective reasons unrelated to any discrimination based on sex and in conformity with the principle of proportionality;

- in the case of work paid at time rates, a difference in pay awarded, at the time of their appointment, to two employees of different sex for the same job or work of equal value

cannot be justified by factors which become known only after the employees concerned take up their duties and which can be assessed only once the employment contract is being performed, such as a difference in the individual work capacity of the persons concerned or in the effectiveness of the work of a specific employee compared with that of a colleague.

Costs

81. The costs incurred by the Austrian Government and by the Commission, which have submitted observations to the Court, are not recoverable. Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court.

On those grounds,

THE COURT (Sixth Chamber),

in answer to the questions referred to it by the Oberlandesgericht Wien by order of 15 June 1999, hereby rules:

The principle of equal pay for men and women laid down in Article 119 of the EC Treaty (Articles 117 to 120 of the EC Treaty have been replaced by Articles 136 EC to 143 EC) and elaborated by Directive 75/117/EEC of 10 February 1975 on the approximation of the laws of the Member States relating to the application of the principle of equal pay for men and women must be interpreted as follows:

- a monthly salary supplement to which the employees concerned are entitled under their individual employment contracts, paid by the employer in respect of their employment, constitutes pay within the scope of Article 119of the Treaty and the Directive; equal pay must be ensured not only on the basis of an overall assessment of all the consideration granted to employees but also in the light of each aspect of pay taken in isolation;

- the fact that a female employee who claims to be the victim of discrimination on grounds of sex and the male comparator are classified in the same job category under the collective agreement governing their employment is not in itself sufficient for concluding that the two employees concerned are performing the same work or work to which equal value is attributed within the meaning of Article 119 of the Treaty and Article 1 of the Directive, since this fact is only one indication amongst others that this criterion is met;

- as a general rule, it is for employees who consider themselves to be the victims of discrimination to prove that they are receiving lower pay than that paid by the employer to a colleague of the other sex and that they are in fact performing the same work or work of equal value, comparable to that performed by the chosen comparator; the employer may then not only dispute the fact that the conditions for the application of the principle of equal pay for men and women are met in the case but also put forward objective grounds, unrelated to any discrimination based on sex, to justify the difference in pay;

EUROPEAN COURT OF HUMAN RIGHTS
COUR EUROPÉENNE DES DROITS DE L'HOMME

SECOND SECTION

CASE OF HORVÁTH AND KISS v. HUNGARY

(Application no. 11146/11)

JUDGMENT

STRASBOURG

29 January 2013

FINAL

29/04/2013

This judgment has become final under Article 44 § 2 of the Convention. It may be subject to editorial revision.

In the case of Horváth and Kiss v. Hungary,

The European Court of Human Rights (Second Section), sitting as a Chamber composed of:

Guido Raimondi, *President,*
Danutė Jočienė,
Peer Lorenzen,
András Sajó,
Işıl Karakaş,
Nebojša Vučinić,
Helen Keller, *judges,*
and Stanley Naismith, *Section Registrar,*

Having deliberated in private on 18 December 2012,

Delivers the following judgment, which was adopted on that date:

PROCEDURE

1. The case originated in an application (no. 11146/11) against the Republic of Hungary lodged with the Court under Article 34 of the Convention for the Protection of Human Rights and Fundamental Freedoms ("the Convention") by two Hungarian nationals, Mr István Horváth and Mr András Kiss ("the applicants"), on 11 February 2011.

2. The applicants were represented by Mrs L. Farkas, a lawyer practising in Budapest, and the European Roma Rights Centre, a non-governmental organisation with its seat in Budapest. The Hungarian Government ("the Government") were represented by Mr Z. Tallódi, Agent, Ministry of Public Administration and Justice.

3. The applicants alleged under Article 2 of Protocol No. 1 read in conjunction with Article 14 of the Convention that their education in a remedial school had amounted to direct and/or indirect discrimination in the enjoyment of their right to education, on the basis of their Roma origin, in that their schooling assessments had been paper-based and culturally biased, their parents could not exercise their participatory rights, they had been placed in schools designed for the mentally disabled whose curriculum had been limited, and they had been stigmatised in consequence.

4. On 4 January 2012 the application was communicated to the Government. It was also decided to rule on the admissibility and merits of the application at the same time (Article 29 § 1).

THE FACTS

I. THE CIRCUMSTANCES OF THE CASE

5. The applicants were born in 1994 and 1992 respectively and live in Nyíregyháza.

A. General background

6. The applicants are two young Roma men, who were diagnosed as having mental disabilities. As a result of these diagnoses, the applicants were educated at the Göllesz Viktor Remedial Primary and Vocational School, a remedial school ("special educational programme" or "special" school) in the city of Nyíregyháza, created for children with mental disabilities.

7. The proportion of Roma students at the Göllesz Viktor Remedial Primary and Vocational School was 40 to 50% in the last ten years. Statistical data indicate that in 2007 Roma represented 8.7% of the total number of pupils attending primary school in Nyíregyháza. In 1993, the last year when ethnic data were officially collected in public education in Hungary, at least 42% of the children in special educational programme were of Roma origin according to official estimates, though they represented only 8.22% of the total student body.

8. According to statistical data in the Statistical Yearbook of Education, in 2007/2008 only 0.4–0.6% of students with special needs had the opportunity to participate in integrated mainstream secondary education providing the Baccalaureate. Although one of the second applicant's classmates was admitted to a secondary vocational school offering the Baccalaureate, neither of the applicants was enrolled in a Baccalaureate programme, which limited their access to higher education and employment. The first applicant was unable to follow a course to become a dance teacher, the career of his father; instead, he received special vocational training to become a baker. The second applicant continued his studies in a mainstream secondary vocational school which did not offer the Baccalaureate, and was unable to pursue his ambition to become a car mechanic.

B. Societal context

9. Scholarly literature suggests that the systemic misdiagnosis of Roma children as mentally disabled has been a tool to segregate Roma children from non-Roma children in the Hungarian public school system since at least the 1970s.

10. The national Gypsy research in 1971 made it clear that a major obstacle to the education of Gypsy children was the existence of remedial (special) schools. In 1974/1975, 11.7% of Gypsy children attended special schools and classes. Due to the steady increase in Gypsy enrolment, by 1985/1986 their proportion had reached 17.5%, whereas only 2% of majority Hungarian students studied in special schools and classes. Eight grades finished in special education amounted to six grades in a normal school. Between 1972 and 1975, almost 50% of the lower grade special school students in Budapest were re-tested. The most significant result of the Budapest review was that if the borderline between sound and disabled mental abilities were set at IQ 70, the figure recommended by the World Health Organisation (WHO), then only 49.3% of students participating in special education qualified as mentally disabled, whereas 50.7% qualified as normal, of whom 12% had average intellect and 38.7% were borderline cases, that is, on the brink of mental retardation. However, only 7% were qualified as having average mental abilities through a complex evaluation. The complex evaluation qualified children whose test results suggested otherwise as intellectually disabled. In order to come to this conclusion, the category of familial intellectual disability was introduced, a notion distinct from pathological mental disability.

11. According to the Hungarian authorities, in 2004, 5.3% of primary school children were mentally disabled in Hungary, whereas this ratio stood at 2.5% in the European Union. In the last decade the rate of mentally disabled children has been continuously increasing in Hungary, especially in the ‘mild mental disability’ and ‘other disability’ categories. Children with disadvantaged background, especially Roma ones, are significantly over-represented amongst children with a disability.

12. The shortcomings of the diagnostic system were acknowledged by State authorities when in 2003 the Ministry of Education launched a programme entitled “Out of the Back Bench” with the stated aim of reviewing children and, after re-diagnosis, channelling those back to mainstream school who had been misdiagnosed. Through the programme, 2,100 children were reassessed and 11% of the re-diagnosed children were channelled back to normal school. In Szabolcs-Szatmár-Bereg County, where the applicants are from, this rate was 16%.

13. Part of the reason for the fact that so many children were considered disabled was that the definition of special educational needs in Act no. LXXIX of 1993 on Public Education (“the PEA”) and the definition of mental disability prior to 1 September 2003 (see paragraph 63 below) went beyond mental disability and included educational challenge, dyslexia and behavioural problems.

14. In 2007, the National Expert and Rehabilitation Committee (NERC) explained that an IQ between 70 and 85 represented a borderline intellect. A child in this range of IQ could have serious and persistent learning

impairment. The expert evaluating each case had to assess what factors tilted the balance towards mental disability or sound mental ability. For example, weak abilities of abstraction or associative learning could indicate mental disability even above IQ 70. "Borderline intellect" was not on its own considered as mental retardation or a cause for placement in special school.

15. In 2004 the Minister of Education requested the expert panels to stop transferring children with scores above IQ 70 to special schools. That year, a new protocol and new standardised proceedings were adopted, calling for the disadvantaged situation of the child to be taken into account. If a child spoke the language of an ethnic minority, for instance, he or she could not be examined using verbal tests in Hungarian. Still, inequalities persisted. The greatest difference between Roma and non-Roma children occurred in a performance test, the so-called "Mosaic Test". One explanation for this is that Roma children have less experience with toys and games where units from bits or pictures from pieces (e.g. toy cubes with different pictures on each side, or puzzles, etc.) had to be assembled.

C. Mr Horváth's assessments

16. Mr Horváth started elementary education in the Göllesz Viktor Remedial Primary and Vocational School on the basis of the recommendation of the Expert and Rehabilitation Panel of Szabolcs-Szatmár-Bereg County ("the Expert Panel"). His examination was requested on 19 April 2001 by the nursery he was attending at that time. The nursery claimed that his mental and social abilities were lower than normal for his age, which showed in his sense of logic, drafting skills and communication. He spent very little time in the nursery, as he was sick most of the time. This, although a common cause for bad performance in tests, was not taken into account when his results were assessed.

17. The examination requested by the nursery was performed on 17 May 2001. In addition to the observation of his behaviour, his abilities (verbal, counting, cognitive, attention/concentration, visuo-motor coordination) and his performance, the following IQ tests were done: "Budapest Binet Test" – IQ 64; "Coloured Raven Test" – IQ 83; "Goodenough 'draw-a-person' Test" – DQ 67. The Expert Panel did not elaborate in its opinion on the causes of the disparate results.

18. In its opinion, the Expert Panel diagnosed Mr Horváth with "mild mental disability", of which the origin was declared unknown. The diagnosis stated that Mr Horváth was "two and a half years behind normal", together with an immature central nervous system. Therefore, he was channelled to remedial school. As opposed to the WHO value of IQ 70, expert panels in Hungary applied, according to the Ministry of National Resources, IQ 86 as a border value between sound intellectual ability and mild mental disability.

19. Mr Horváth's parents had been told by the Expert Panel even before the examination took place that he was going to be placed in a remedial school and they had been asked to sign the expert opinion before the examination took place.

20. On 3 December 2002 the Expert Panel re-examined Mr Horváth. It found that there was no development in his abilities, and reported that he was still suffering from mild mental disability.

21. On 28 April 2005 the Expert Panel again examined Mr Horváth. According to this examination, his "Raven Test" result was IQ 61. Therefore the Expert Panel declared that his status had not changed and upheld its previous opinion.

22. On 20 March 2007 another examination took place. This time, Mr Horváth's "Raven Test" value was IQ 71. The Expert Panel noted that he had better knowledge than this test score reflected, had good results at school in 2006 and 2007, was integrated in his school system and able to study individually, had no impediment in speech and only needed some reassurance. In addition, it noted that he was active in classes, hard-working and complied with all the requirements of the curriculum. Noting that Mr Horváth studied in a remedial school, the Expert Panel again diagnosed him with mild mental disability and special educational needs. Therefore it upheld his placement in remedial school.

23. Mr Horváth's parents were not invited to participate in the diagnostic assessments. His father signed only the opinion of 17 May 2001. It is unclear if the parents were provided with information about the procedure and their respective rights, including a right to appeal, or if a copy of the opinion was given to them. His father accompanied Mr Horváth to the first examination but was not allowed to attend the examination itself. The parents were told the result but no explanation about the consequences was given.

24. On 26 September and 2 October 2008 Mr Horváth was re-examined by the NERC as ordered by the first instance court (see paragraph 38 below). This opinion stated that the applicant had "mild mental disability" although the causes of the disability could not be established.

D. Mr Kiss's assessments

25. After spending seven months in nursery, Mr Kiss started elementary education in September 1999 in a mainstream school, Primary School No. 13 located in a Roma settlement of Nyíregyháza. In its decision of 4 January 1999, the local pedagogical advisory service concluded that he had learning difficulties "deriving from his disadvantaged social and cultural background" and advised him to be educated under a special programme but in a mainstream school. On 14 December 1999 the school requested an expert diagnosis based on his results in the first quarter of the

school year, claiming that he had poor results, was often tired, his attention was volatile and his vocabulary poor. His IQ then measured 73.

26. On 15 May 2000 the Expert Panel diagnosed Mr Kiss with "mild mental disability". According to the "Budapest Binet Test", his IQ was 63, and he scored IQ 83 in the "Raven Test". Relying on the results, the Expert Panel arranged for Mr Kiss to be placed at a school for children with mild mental disabilities. As rehabilitation, the Expert Panel proposed that his concentration and analytical-synthetical ability should be developed. The Panel's opinion did not contain any explanation for the discrepancies between Mr Kiss's IQ results in the various tests.

27. Mr Kiss's parents objected to the placement of their child in the remedial school and insisted that he should be educated in a mainstream school, but in vain. They were not informed of their right to appeal against the Panel's decision. Mr Kiss was then placed in Göllesz Viktor Remedial Primary and Vocational School.

28. During his studies, Mr Kiss won numerous competitions, including a poetry reading contest and sports competitions, and he was an A student until 7th grade. However, his teacher told him that he could not continue his studies to become a car mechanic as he intended to, because as a remedial school pupil, he could only choose between training courses offered by a special vocational school.

29. The Expert Panel subsequently re-assessed Mr Kiss twice, on 14 December 2002 and 27 April 2005. On the latter occasion the Expert Panel noted that, despite the fact that he had achieved good results at school, his analytical thinking was underdeveloped. His IQ based on the "Raven Test" scored 71, yet the Expert Panel stated that he needed to be educated further at the remedial school.

30. During the court procedure in the case (see below), the first-instance court ordered that Mr Kiss be examined by the NERC. According to the expert opinion of 20 November 2008, his mental capacity was normal, he was not mentally disabled and his SQ (social quotient) score was 90, which excluded mental disability. However, he had significant deficiencies with regard to acquired knowledge and had a learning impairment. As with the first applicant, the NERC found that the Expert Panel's decision should have noted that socio-cultural factors had played a significant role in the shaping of their status from an early age, but in fact these factors and Mr Kiss's disadvantaged situation were not taken into account.

The NERC concluded that both applicants were provided with education adequate to their abilities.

E. Review of the applicants' intellectual ability by independent experts

31. In August 2005 both applicants participated in a summer camp where the testing of 61 children with 'special educational needs' took place. The testing was carried out by independent experts.

32. Both applicants were assessed with various tests. With regard to Mr Horváth, the experts noted that his "Raven Test" (IQ 83) was under the average, but did not correspond to the "mentally disabled" score; therefore, he was not mentally disabled. His "Bender B Test" referred to immature nervous system potentially causing behavioural problems and problems in studying but he was not considered mentally disabled or unfit for an integrated mainstream class.

33. Mr Kiss's "Raven Test" score was IQ 90, his "MAVGYI-R Test" score was IQ 79, and his verbal intelligence was 91. According to the assessment, he suffered from immaturity of the nervous system and dyslexia. The experts noted that he was sound of mind and could be educated in a school with a normal curriculum. They suggested immediate intervention by the authorities in order to place him into a mainstream school and to provide him with appropriate education. The experts also suggested a thorough pedagogical examination and the development of a subsequent individual learning plan with pedagogical and psychological help. They noted that he had to catch up with his studies in order to reduce the deficiencies he had as a result of studying under a lower curriculum.

34. The experts noted that the diagnostic methods applied should be reviewed, and that Roma children could have performed better in the tests if those had not been designed for children belonging to the ethnic majority. They stressed that the "Raven Test" measured intelligence only in a narrow margin and therefore provided less data with regard to intelligence. The experts further recommended that the "MAVGYI-R" child intelligence test should be reviewed and updated as it was outmoded and because oral tests were culturally biased and poorly compatible with the present lifestyle and knowledge of children. The experts also noted that the intelligence tests had a close correlation with school qualification; therefore education in a remedial class might significantly influence the results of an intelligence test of a 13/14-year-old child.

The NERC found the independent experts' conclusions open to doubt.

F. First-instance court proceedings

35. On 13 November 2006 the applicants filed a claim for damages with the Szabolcs-Szatmár-Bereg County Regional Court, requesting the court to establish a violation of the principle of equal treatment amounting to a violation of their personality rights under section 76 of the Civil Code and section 77(3) of the PEA. The action was directed against the Expert Panel, the Szabolcs-Szatmár-Bereg County Council and the Göllesz Viktor Remedial Primary and Vocational School.

36. The applicants claimed that the Expert Panel had discriminated against them and misdiagnosed them as being "mildly mentally disabled" on the basis of their ethnicity, social and economic background, and had subsequently ordered them to be educated in a special school, although they

had normal abilities. They asserted that the expert panels were free to choose the tests applied by them, and it was well-known among experts that some tests were culturally biased and led to misdiagnosis of disadvantaged children, especially Roma ones. This systemic error originated in the flawed diagnostic system itself, which did not take into account the social or cultural background of Roma children, was as such culturally biased, and therefore led to the misdiagnosis of Roma children. They claimed that it was the responsibility of the experts who were required by the law to be experienced in the field of mental disabilities and thus obliged to know the symptoms of such disabilities to ensure that only children with real mental disability were educated in special/disabled/special educational needs classes. In addition, and in violation of the respective rules of procedure, the applicants' parents had not been informed of the Panel's procedure or its consequences or of their rights to participate in the proceedings and to appeal against the decisions in question, so their constitutional right to a remedy was violated.

37. The applicants further asserted that the County Council had failed effectively to control the Expert Panel. They also claimed that the teachers working at the Remedial School should have noticed that they were of normal abilities.

38. The Regional Court ordered the applicants to be examined by the NERC.

39. On 27 May 2009 the Regional Court found that the aggregate of the respondents' handlings of the applicants' education had amounted to a violation of their rights to equal treatment and education and therefore ordered them, jointly and severally, to pay 1,000,000 Hungarian forints (HUF) in damages to each applicant.

The court explained that it was called on to investigate whether the respondents had complied with the Constitution and the PEA, that is, ensured the applicants' civil rights without any discrimination, promoted the realisation of equality before the law with positive measures aiming to eliminate their inequalities of opportunity, and provided them with education in accordance with their abilities. It reasoned that – while the statutory definition of "special needs" had been amended several times in the relevant period – the relevant regulations clearly stipulated that the expert panels should individualise each case, decide on possible special needs in each case according to the needs and circumstances of the individual child, identify the reasons underlying any special needs, and establish specific support services which a child needed according to the extent of disability.

40. The court held that this kind of individualisation was lacking with regard to the applicants' diagnoses and that the Expert Panel had failed to identify those specific professional services that would help the applicants in their education. It had failed to establish during the applicants'

examination and re-examination the reasons for which they were in need of special education, and whether they needed that as a result of their behaviour or of organic or non-organic reasons.

41. The court emphasised that the principle of equal treatment required that the Expert Panel decide whether children reaching school age might study in schools with a standard curriculum or in remedial schools with a special one. At the same time, the court noted that, in the present case, the operation of the Expert Panel was stalled due to ongoing restructuring and the low number of professional and other staff. Therefore, the Expert Panel could not perform its duty of continuous control examinations.

42. Moreover, in the court's view, the County Council had failed to ensure effective control over the Expert Panel and therefore failed to note that the Panel had not informed the parents appropriately. In addition, the County Council had not ensured that the expert decisions were individualised according to the law.

Therefore, the respondents had violated the applicants' right to equal treatment.

G. Appeal procedure

43. The Expert Panel did not appeal and so the above decision became final and enforceable with regard to it.

On appeal by the Remedial School and the County Council, on 5 November 2009 the Debrecen Court of Appeal reversed the first-instance judgment and dismissed the applicants' claims against those respondents.

44. The Court of Appeal accepted the Remedial School's defence, namely that it had done no more than enrol the applicants according to the Expert Panel's decision. It held that it was for the County Council to ensure effective control over the lawful operation of the Remedial School and the Expert Panel. An omission in this regard might establish the County Council's liability, in particular because the parents' participatory rights had not been respected.

45. The Court of Appeal further noted that, in order to prevent the misdiagnosis and consequent segregation of Roma children into remedial schools, there was a need, unfulfilled as yet, for the development of a new diagnostic testing system which should take into account the cultural, linguistic and social background of children. However, it held that the lack of appropriate diagnostic tools and the subsequent placement of the applicants into remedial schools did not have any connection to their ethnic origin, and therefore found no discrimination against the applicants, concluding that their personality rights had not been violated. In its view, the applicants had not suffered any damage as a result of the unlawful conduct of the respondents, since, according to the court-appointed experts' opinion, they had been educated in accordance with their mental abilities. That opinion effectively confirmed the Expert Panel's decisions.

The Court of Appeal's judgment further contains the following passage:

> "Examining the – not at all comprehensive – amendments [of the PEA and the decrees on its implementation which occurred after 1 January 2007], it can be established on the one hand that those amendments were predominantly and evidently occasioned by the progress of related science, the researches and the results of surveys, and on the other hand that the following of legislative developments in this period was almost an impossible task for those applying the law."

H. Review proceedings

46. The applicants subsequently submitted a petition for review to the Supreme Court. They argued that there was no national professional standard established with regard to the diagnostic system in Hungary. The well-known systemic errors of the diagnostic system, together with the disregard of the socially, culturally and linguistically disadvantaged background, had resulted in a disproportionately high number of Roma children diagnosed as having "mild mental disability".

47. The applicants requested the Supreme Court to establish, as an analogy with the case of *D.H. and Others v. the Czech Republic* ([GC], no. 57325/00, ECHR 2007-IV), the misdiagnosis of Roma children, that is, that the channelling of Roma children with normal mental abilities into remedial schools constituted discrimination. Such misdiagnosis represented direct – or alternatively indirect – discrimination, based on the ethnic, social and economic background of the applicants.

48. The applicants further claimed that the Court of Appeal had wrongly concluded that there was no connection between the lack of appropriate diagnostic tools and the ethnic origin of the applicants. The fact that the tests themselves had no indication of ethnicity did not preclude that they forced a disproportionately high number of Roma children into a disadvantaged position in comparison with majority children. This practice amounted to a violation of section 9 (indirect discrimination) of Act no. CXXV of 2003 on Equal Treatment and the Promotion of Equal Opportunities ("the ETA"). In addition, the fact that the experts had disregarded the specific social, cultural and language components when assessing the test results had led to direct discrimination in breach of section 8 of the ETA.

49. The applicants also asserted that the respondents had not acted with due diligence in the circumstances, when – aware of the systemic error of the diagnostic system – they had failed to act according to international standards. In addition, Mr Kiss had been placed in a remedial school despite the explicit objection of the parents.

50. The Supreme Court reviewed the second-instance judgment and found it partly unfounded. It stated as follows:

> "Considering the relevant provisions of the [ETA] and the [PEA] ... the Supreme Court has to decide whether the respondents discriminated against the plaintiffs on the

> basis of their ethnic, social, economic and cultural background, which resulted in the deprivation of their rights to be educated in accordance with their abilities and therefore their rights to equal treatment, and subsequently whether their personality rights have been violated."

51. The Supreme Court upheld the second-instance judgment with regard to the finding that the conduct of the Remedial School and the County Council had not violated the applicants' right to equal treatment, either in terms of direct or indirect discrimination.

52. The Supreme Court further noted:

> "The systemic errors of the diagnostic system leading to misdiagnosis – regardless of its impact on the applicants – could not establish the respondents' liability ... The creation of an appropriate professional protocol which considers the special disadvantaged situation of Roma children and alleviates the systemic errors of the diagnostic system is the duty of the State."

53. The Supreme Court noted, however, that:

> "[T]he failure of the State to create such a professional protocol and [an eventual] violation of the applicants' human rights as a result of these systemic errors exceed the competence of the Supreme Court ... the applicants may seek to have a violation of their human rights established before the European Court of Human Rights. Therefore the Supreme Court has not decided on the merit of this issue."

54. The Supreme Court further examined whether the respondents' liability could be established under the general rules of tort liability regardless of the fact that it had not established a violation of the applicants' personality rights. It found no such liability in respect of the Remedial School. However, it observed that the Expert Panel's handling of the parental rights had violated the relevant law (Ministerial Decree no. 14/1994. (VI.24.) MKM). The County Council was found liable for this on account of its failure to supervise the legality, or to organise the supervision of the legality, of the functioning of the Expert Panel, as well as to put an end to the unlawful practice. The prejudice to the applicants was caused by their deprivation of the right to a remedy provided for by law and thereby of the theoretical chance of obtaining a more favourable assessment of their learning abilities.

The Supreme Court consequently upheld the first-instance judgment with regard to the payment of HUF 1,000,000 in damages to each applicant by the Expert Panel, out of which sum the County Council was obliged to pay HUF 300,000, on account of its deficient control.

This decision was served on 11 August 2010.

II. RELEVANT DOMESTIC LAW

A. Elements of domestic law submitted by the Government

55. The work of the expert and rehabilitation committees examining learning abilities was, at the material time, regulated by Ministerial Decree no. 14/1994. (VI.24.) MKM. This Decree dealt with procedural issues, regulated the operation of expert committees, secured the complexity of the expert and rehabilitation committee examinations, and required that the committees' recommendations be based on a complex assessment of the results of medical, pedagogical and psychological examinations. As to the methods of examination to be used, a protocol was outlined in a manual entitled "Transfer Examinations" ("the Manual"), the publication of which was commissioned by the Ministry of Education in the 1980s.

56. The Manual states with emphasis that performance disorders may have two causes: the lack of knowledge or the lack of ability. It specifies the diagnostic signs indicating that the lack of knowledge is not caused by ability disorder as follows: where the lack of knowledge is explained by previous poor developmental conditions and poor socio-cultural environment; where the task can be simplified so as to suit the child's level of knowledge and at that level no performance disorder can be observed; where during the examination the manner of making use by the child of the help provided by the examining teacher and the child's capability to be oriented and taught indicate that his abilities are developable; and where the child's social maturity, general knowledge and performance in life situations indicate that his abilities are intact.

57. Consequently, in examining a child's task-solving performance, the interdependence of four factors shall always be examined, namely previous educational effects, the child's scope of knowledge, the child's abilities and his age-related maturity.

58. The Manual further contains the following guidelines:

> "Where a child from a socio-culturally retarded environment is being examined, tests free of cultural elements should be used. Certain tasks of a given test may be transformed in order to adjust them – at the same level of difficulty – to the child's scope of knowledge...
>
> When a socially disadvantaged child is being examined, special attention must be paid to his capability to learn in the examination situation..."

59. The Manual also draws experts' attention to the desirable procedures to be followed in examining a child of Roma ethnicity as follows:

> "The fact that a child does not know the language of school instruction or that his command of language does not attain the level of mother tongue would, in itself, constitute a serious disadvantage even if the child had no school integration problems resulting from social and/or cultural problems. Therefore, the special education or psychological examination of children coming from a disadvantageous social situation

and underdeveloped linguistic environment should be carried out with special care. From a delay in speech development no conclusions concerning the child's mental maturity should be drawn. In such cases the child's practical intelligence should be assessed, or his cognitive abilities should be examined through non-verbal tasks."

60. This protocol was reviewed and updated between 2004 and 2008 and a new Manual was published. In 2010 a new Ministerial Decree (no. 4/2010. (I.19.) OKM) was issued for the regulation of the work of the pedagogical expert services. This Decree prescribes a uniform procedural order for expert and rehabilitation committees, and specifies the professional requirements to be met in carrying out the examinations, based on which expert opinions are drafted; moreover, in addition to the remedies formerly introduced, it provides for the involvement of an independent equal opportunity expert, if appropriate.

B. Elements of domestic law submitted by the applicants

61. Before the ETA entered into force in 2004, discrimination based on ethnic origin had been prohibited by the Constitution, the Civil Code and the PEA. On the enactment of the ETA, the PEA was amended to provide that the requirement of equal treatment shall apply to all participants in public education and permeate all segments and procedures of the same.

62. Relevant provisions of the PEA are as follows:

Section 4

"(7) Those co-operating in the organisation, control and operation of public education and in the performance of the tasks of public education shall take account of the children's interest, which is placed above everything else, when making decisions and taking measures.

The children's interests which are placed above everything else are the following in particular: ...

b) that they should be given every kind of assistance to evolve their abilities and talents, to develop their personalities and to update their knowledge continually as prescribed by this Act;..."

Section 10

"(3) Children and pupils have the following rights:

a) they shall receive education and teaching according to their abilities, interest and faculties, continue their studies according to their abilities and participate in primary art education in order that their talent should be recognised and developed; ...

f) they shall receive particular care – special nurture or care with the purpose of rehabilitation – according to their conditions and personal endowments, they shall appeal to the institution of pedagogical assistance service, irrespective of their age; ..."

63. The PEA further gives the definition of special educational needs ("SEN").

Between 1 September 1996 and 1 September 2003, it provided as follows:

Section 121

"(18) (later 20): [The term of] other disability [concerns] those children/pupils who, on the basis of the opinion of the expert and rehabilitation committee:

a) struggle with pervasive development disorder (for example, autism), or

b) struggle with disorders in school performance ... because of other psychic disorders ... as a consequence of which are lastingly impeded in development and learning (for example, dyslexia ...); ..."

64. By 1 September 2003 the PEA was amended; and the term SEN was introduced instead of 'other disability':

Section 121

"(29) [C]hildren/pupils with [SEN] are those who, on the basis of the opinion of the expert and rehabilitation committee:

a) suffer from physical, sensory, mental, speech deficiency or autism, or multiple disabilities in case of the joint occurrence thereof, or

b) are lastingly and substantially impeded in development and learning because of psychic disorders (for example, dyslexia ...); ..."

65. As of 1 September 2007, section 121 of the PEA reads as relevant:

"(29) [C]hildren/pupils with special educational needs are those who, on the basis of the opinion of the expert and rehabilitation committee:

a) suffer from physical, sensory, mental, speech deficiency or autism, or multiple disabilities in case of the joint occurrence thereof, and struggle with lasting and serious disorders in the cognitive functions or behavioural development, attributable to organic causes, or

b) struggle with long-term and serious disorders in the cognitive functions or behavioural development, not attributable to organic causes."

66. As demonstrated above, as of 1996, the PEA differentiated between two categories of disability, namely the category of mentally disabled children and the one of those who suffered from adaptive, learning or behavioural difficulties.

As of 2003, the term SEN was introduced and the category of mentally disabled children was defined as SEN(a) whereas the one of those who suffered from adaptive, learning or behavioural difficulties was defined as SEN(b).

In 2007, the law redefined these categories and since then has differentiated between the two categories according to the origin of special needs: organic disabilities correspond to SEN(a) whereas special needs with non-organic causes correspond to SEN(b). If the disability is attributable to organic causes, the child is declared by the rehabilitation committee of experts as having mild mental disability and will be educated in a

specialised institution with specialised teachers. If the special needs do not originate in organic causes then the child can be educated in an integrated way, that is, in normal mainstream schools but with the support of special education teachers. Nevertheless, the PEA also allowed 'SEN(b) children' to be educated in special schools or classes, under a special curriculum; in order to change this practice, a subsequent amendment was introduced to the effect that only those mentally disabled children should be placed in segregated special schools whose disability derived from organic causes.

However, in 2008, a new amendment reinstalled the previous provision of educating SEN children, again allowing children who were not mentally disabled and had no organic disability to be educated in segregated special schools.

67. As of 1 September 2007 the PEA introduced a provision for pupils suffering from adaptive, learning or behavioural difficulties, who can be educated in an integrated way:

Section 30

"(7) If a child/pupil struggles with adaptive, learning or behavioural difficulties ... or the chronic and serious derangement of cognitive functions or of development of behaviour ascribable to organic reasons, he or she is entitled to developmental education. ...

(8) The question whether a child/pupil struggles with adaptive, learning or behavioural difficulties or has special educational needs shall be decided by the rehabilitation committee of experts at the request of the educational counselling service."

68. As of 2003, the PEA also regulates the necessary conditions for educating children with special educational needs:

Section 121

"(28) The necessary conditions for the education and teaching of children with special educational needs are as follows: employment of conductive therapists and therapeutic teachers according to the separate kindergarten education or school education and teaching of children/pupils and the type and severity of the special educational need; application of a special curriculum, textbooks or any other special aids necessary for education and teaching; engagement of therapeutic teachers with qualifications in a special field necessary for private tuition, integrated kindergarten education, school education and teaching, developmental preparation and activities specified by the competent committee of experts; a special curriculum, textbooks and special therapeutic and technical tools necessary for the activities; provision of the professional services specified by the rehabilitation committee of experts for children students; ..."

69. Under the PEA, the term "special curriculum" means that 'SEN children' may be exempt from certain subjects fully or partially, according to the opinion of the expert and rehabilitation committee or the pedagogical advisory committee.

70. Lastly, the PEA also defines the different categories of secondary education and provides that, in order to educate children with special educational needs, secondary schools shall operate as special vocational school. Such schools shall educate those pupils who, as a result of their disabilities, cannot be educated in mainstream school.

C. National Social Inclusion Strategy (Extreme Poverty, Child Poverty, the Roma) (2011–2020)

71. This document, published by the Ministry of Public Administration and Justice (State Secretariat for Social Inclusion) in December 2011, contains the following passages:

"II.2. Providing an inclusive school environment, reinforcing the ability of education to compensate for social disadvantages

The development of an inclusive school environment that supports integrated education and provides education that breaks the inheritance of segregation and disadvantages as well as the development of services assisting inclusion play a primary role in the reduction of the educational failures of disadvantaged children, including Roma children.

As emphasised in the national strategy "Making Things Better for Our Children" (2007), « in an educational system creating opportunities, children, regardless of whether they come from poor, under-educated families, live in segregated living conditions, are disabled, migrants or blessed with outstanding talent, must receive education suited to their abilities and talents throughout their lifetime, without their education being influenced or affected by prejudices, stereotypes, biased expectations or discrimination. Therefore, this must be the most important priority of Hungary's educational policy. »

In the interest of reducing the extent of educational exclusion, we must reduce the selectivity of the educational system. Institutions must have effective tools against discrimination and need major methodological support for promoting the integration of pupils encumbered with socio-cultural disadvantages; this is also the way to reduce the out-migration of non-Roma pupils from certain schools. The development and application of an inclusive school model is a fundamental criterion concerning the regulation, management and coordination of public education that is also key in methodological developments as well as in the renewal of teacher training and the determination of the content of cooperation between institutions.

In the interest of ensuring that, likewise, children should not be unnecessarily declared disabled, we must provide for the enforcement of procedures determined in the relevant rule of law and professional criteria concerning the examinations serving as the basis for the subsequent expert opinion by providing professional assistance on an ongoing basis and with independent and effective inspections. In the spirit of prevention and in the interest of ensuring the timely and professional development of children, we must create standard procedures, professional contents and requirements also in the areas of early childhood development, educational consulting and speech therapy. The range of tests, examination methods and means used in the course of the testing and examination of children must be continuously extended. We must pay particular attention to avoiding declaring children disabled unnecessarily in the case

of disadvantaged children transferred into long-term foster care and the Roma and must ensure that the tests, methods and procedures employed for the determination of the child's actual abilities should be able to separate any deficiencies that may arise from environmental disadvantages."

III. RELEVANT INTERNATIONAL TEXTS

A. Council of Europe sources

72. Recommendation no. R(2000)4 of the Committee of Ministers to member States on the education of Roma/Gypsy children in Europe (adopted by the Committee of Ministers on 3 February 2000 at the 696th meeting of the Ministers' Deputies) provides as follows:

"The Committee of Ministers, under the terms of Article 15.b of the Statute of the Council of Europe,

Noting that the problems faced by Roma/Gypsies in the field of schooling are largely the result of long-standing educational policies of the past, which led either to assimilation or to segregation of Roma/Gypsy ...

Bearing in mind that policies aimed at addressing the problems faced by Roma/Gypsies in the field of education should be comprehensive, based on an acknowledgement that the issue of schooling for Roma/Gypsy children is linked with a wide range of other factors and pre-conditions, namely the economic, social and cultural aspects, and the fight against racism and discrimination;

Bearing in mind that educational policies in favour of Roma/Gypsy children should be backed up by an active adult education and vocational education policy; ...

Recommends that in implementing their education policies the governments of the member States:

– be guided by the principles set out in the appendix to this Recommendation;

– bring this Recommendation to the attention of the relevant public bodies in their respective countries through the appropriate national channels."

The relevant sections of the Appendix to Recommendation No. R(2000)4 read as follows:

"Guiding principles of an education policy for Roma/Gypsy children in Europe

I. Structures

5. Particular attention should also be paid to the need to ensure better communication with parents, where necessary using mediators from the Roma/Gypsy community which could then lead to specific career possibilities. Special information and advice should be given to parents about the necessity of education and about the support mechanisms that municipalities can offer families. There has to be mutual understanding between parents and schools. The parents' exclusion and lack of knowledge and education (even illiteracy) also prevent children from benefiting from the education system.

6. Appropriate support structures should be set up in order to enable Roma/Gypsy children to benefit, in particular through positive action, from equal opportunities at school.

7. The member States are invited to provide the necessary means to implement the above-mentioned policies and arrangements in order to close the gap between Roma/Gypsy pupils and majority pupils.

II. Curriculum and teaching material

8. Educational policies in favour of Roma/Gypsy children should be implemented in the framework of broader intercultural policies, taking into account the particular features of the Romani culture and the disadvantaged position of many Roma/Gypsies in the member States.

9. The curriculum, on the whole, and the teaching material should therefore be designed so as to take into account the cultural identity of Roma/Gypsy children. Romani history and culture should be introduced in the teaching material in order to reflect the cultural identity of Roma/Gypsy children. The participation of representatives of the Roma/Gypsy community should be encouraged in the development of teaching material on the history, culture or language of the Roma/Gypsies.

10. However, the member States should ensure that this does not lead to the establishment of separate curricula, which might lead to the setting up of separate classes."

73. The Opinion on Hungary of the Advisory Committee on the Framework Convention for the Protection of National Minorities, adopted on 22 September 2000 (CM(2000)165)), contains the following passage:

"41. The Advisory Committee is deeply concerned about the well documented cases of improper treatment of Roma children in the field of education, notably through putting them in "special schools", which are reserved ostensibly for mentally disabled children. The Advisory Committee stresses that placing children in such special schools should take place only when it is absolutely necessary on the basis of consistent, objective and comprehensive tests, which avoid the pitfalls of culturally biased testing. It considers it a positive step that the existence of and the need to address this unacceptable phenomenon has been recognised by the Ministry of Education. The Advisory Committee considers that the current situation is not compatible with Article 12(3) of the Framework Convention and must be remedied."

74. The Follow-up Report on Hungary (2002-2005) of the Council of Europe Commissioner for Human Rights (29 March 2006) (CommDH(2006)11) contains the following passages:

"29. The Ministry of Education estimates that 95% of children of school age are registered school attenders. Alongside the normal schooling programme, there is special educational provision for children regarded as requiring special attention on account of handicap. While the maximum size of ordinary classes is 25 children, the special classes have a maximum of 13 so as to ensure quality instruction. The per-pupil grant which central government makes to local authorities is doubled for children in the special classes.

30. Around 20% of Roma children continue to be assigned to special classes as against only 2% of Hungarian children. It should be noted that dyslexia is regarded as

a serious difficulty requiring placement in a special class and that social marginality has sometimes also been treated as a handicap. As a result, whereas the proportion of handicapped children in Europe is 2.5%, it is 5.5% in Hungary on account of inappropriate or abusive placements of this kind.

31. A protection mechanism has recently been introduced which requires parental consent for a child to be placed in a special class. In addition, the child must be tested without delay to assess its abilities. During the visit it was explained to the delegation that the files of 2,000 children regarded as handicapped had been thoroughly checked to make sure that placement in a special class was strictly necessary and to put right any abusive placements which authorities had made for financial or segregation reasons. Of the 2,000 children concerned, 10% had been returned to ordinary schooling after the check – evidence that close supervision of placements must continue."

75. The Report on Hungary of the European Commission against Racism and Intolerance (ECRI) (fourth monitoring cycle), adopted on 20 June 2008 and published on 24 February 2009, contains the following passages:

"81. [Of] the three levels of disabilities into which children in special schools may fall ("very serious" (requiring residential care), "medium-severe" or "mild" disability), the vast majority of children assessed as having a "mild disability" could, in the view of many NGOs, be integrated relatively easily in the ordinary school system: many children are misdiagnosed due to a failure to take due account of cultural differences or of the impact of socio-economic disadvantage on the child's development, and others suffer from only very minor learning disabilities that do not warrant the child's removal from the mainstream system. ECRI repeatedly heard that investments in teacher training should primarily be directed towards ensuring that teachers in the mainstream school system are equipped to deal with diverse, integrated classes, rather than towards perpetuating a system from which children, once streamed into it, are unlikely to break out, and which overwhelmingly results in low levels of educational achievement and a high risk of unemployment. Some actors have suggested that – bearing in mind that the best way of ensuring that children do not wrongly become trapped in special schools is to ensure that they are never sent down that track in the first place – the category of children with mild disabilities should simply be deleted from the Education Act and all children with mild disabilities integrated in the mainstream school system.

82. ECRI notes that the efforts made to date to combat the disproportionate representation of Roma children in special schools for children with mental disabilities, though they have had some positive effects, cannot be said to have had a major impact in practice so far. It stresses that, in parallel to assisting wrongly diagnosed children already in the special school system to return to the mainstream system, putting an end to this form of segregation also implies ensuring that children are not wrongly streamed into special schools."

B. Other international texts

76. For other relevant international texts, see *D.H. and Others v. the Czech Republic* [GC], cited above, §§ 81 to 107; and *Oršuš and Others v. Croatia* [GC], no. 15766/03, §§ 87 to 97, ECHR 2010.

THE LAW

I. ALLEGED VIOLATION OF ARTICLE 2 OF PROTOCOL No. 1 READ IN CONJUNCTION WITH ARTICLE 14 OF THE CONVENTION

77. The applicants argued that their education in a remedial school represented ethnic discrimination in the enjoyment of their right to education, in breach of Article 2 of Protocol No. 1 read in conjunction with Article 14 of the Convention.

Article 2 of Protocol No. 1 provides:

> "No person shall be denied the right to education. In the exercise of any functions which it assumes in relation to education and to teaching, the State shall respect the right of parents to ensure such education and teaching in conformity with their own religious and philosophical convictions."

Article 14 of the Convention provides:

> "The enjoyment of the rights and freedoms set forth in [the] Convention shall be secured without discrimination on any ground such as sex, race, colour, language, religion, political or other opinion, national or social origin, association with a national minority, property, birth or other status."

78. The Government contested that argument.

A. Admissibility

1. The parties' submissions

a. Victim status

i. The Government

79. The Government argued that the applicants could no longer claim to be victims of a violation of their rights within the meaning of Article 34 of the Convention given that the Regional Court had found in respect of the Expert Panel that the applicants' right to equal treatment and education had been violated by the Expert Panel's failure to individualise their diagnoses or to specify the cause and nature of their special educational needs. Each of the applicants had been awarded HUF 1,000,000 as non-pecuniary damages. Moreover, the Supreme Court had found that the County Council was liable for its failure to supervise the legality of the functioning of the Expert Panel which had conducted a gravely unlawful practice by failing to observe the legal guarantees concerning the parents' rights to be present, be informed, consent or seek a remedy. The prejudice suffered on account of the applicants' deprivation of the right to a remedy provided for by law and

thereby of the theoretical chance of obtaining a more favourable assessment of their learning abilities had been compensated by non-pecuniary damages.

ii. The applicants

80. The applicants contested the Government's assertion that these judgments fully and effectively remedied the violation of their rights. The damages provided in regard to the omissions of the County Council and the Expert Panel did not respond to their claim of structural direct/indirect discrimination, i.e. the flawed system of diagnosis in Hungary, or to their claim of misdiagnosis and inadequate education. It was also established by the Regional Court that the damage caused derived from the convergence of the actions of each of the respondents. Because of the appellate process, it was only with regard to the Expert Panel that the judgment had become final. However, the applicants asserted that a final judgment in respect to an authority last in line of culpability, i.e. the Expert Panel, could not effectively remedy the violation of their rights to equal treatment in education. Given that respondents' actions had been inseparable, the Expert Panel alone could not have changed the structure under which the applicants had been misdiagnosed. Therefore, they continued to be victims of a violation of their rights under the Convention.

b. Exhaustion of domestic remedies

i. The Government

81. Concerning the applicants' claim that the assessment of their learning abilities had not been made with culturally unbiased tests which amounted to a general claim of a systemic error, the Government submitted that in this respect the applicants had failed to exhaust domestic remedies in accordance with Article 35 § 1 of the Convention. Such claims should have been raised by the applicants in proceedings instituted against the ministry responsible for education. The availability of this remedy was undisputable and there was record of successful such actions. Moreover, as to the issue of segregation, the Government submitted that this issue had not been raised before the competent domestic authorities; in particular, the question of the County Council's liability for the eventual discriminatory effect of its education policy had been not addressed by the applicants in the domestic proceedings although the local authorities were better placed to determine the adequacy of an education policy to the needs of the children concerned. It was true that the applicants had initially filed an action against the County Council on account of its alleged failure to provide them with an education adequate to their abilities, however, they had withdrawn that action on 26 February 2007 and 9 March 2007, respectively.

ii. The applicants

82. The applicants contested the Government's position, claiming that they had submitted their claim before the domestic courts against respondents who were – each to a different extent as part of a system – all responsible for their misdiagnoses. They claimed that the ministry responsible for education oversaw the whole education sector, while at the local level it was the county councils which maintained, supervised and controlled the expert panels assessing children. In Hungary, certain State duties were transferred to local public authorities due to decentralisation of the public administration.

c. Six-month time-limit

i. The Government

83. The Government were of the opinion that the application was also inadmissible for the applicants' failure to observe the six-month time-limit laid down in Article 35 § 1 of the Convention. On the issue of whether the applicants' education was channelled into special education on the basis of assessments made with culturally biased or unbiased tests and methods, the Regional Court's judgment of 27 May 2009 had been the final domestic decision. This judgment became final in regard to the Expert Panel on 2 July 2009. The applicants, however, had not submitted their application until 11 February 2011, that is, more than six months later.

ii. The applicants

84. In order to find redress for the violation of their rights, the applicants stressed that they had needed to exhaust all effective domestic remedies available to them against all respondents who bore joint liability for the alleged breaches. Therefore the six-month time-limit ran from the receipt of the Supreme Court judgment on 11 August 2010. Indeed, the Government did not claim that the review by the Supreme Court had not been an effective remedy.

2. The Court's assessment

85. The Court finds that the above objections are interrelated and must be examined together. In so far as the applicants' claim of discrimination and/or misdiagnosis is concerned, the Court observes that the Supreme Court did not sustain the applicants' claim of discrimination and breach of equal treatment. In particular, it confirmed the position of the lower courts regarding the respondents' joint liability, finding that, in the adjudication of the claims against the appealing parties, it was appropriate to evaluate the conduct of the School and the County Council in relation to the unlawful acts of the Expert Panel, as established by the Regional Court, even if the

latter's judgment had become final in the absence of appeal in regard to the Expert Panel. In view of this finding of joint liability, the Court will consider the alleged violations as deriving from the joint acts of the School, the County Council and the Expert Panel. However, the applicants obtained redress only in regard to the Expert Panel's handling (see paragraphs 43 to 54 above), and none in regard to their claims of discrimination. In these circumstances, the Court is satisfied that the applicants have retained their victim status for the purposes of Article 34 of the Convention.

86. Moreover, the Court observes that the applicants pursued claims of discrimination and unequal treatment before all domestic judicial instances, including the Supreme Court, which however held in essence (see paragraph 53 above) that the applicants' claim of systemic error amounting to a violation of their Convention rights could not, in the circumstances, be redressed by means of the national law. The Court is therefore satisfied that – in respect of the alleged discrimination in the enjoyment of their right to education – the applicants have taken all the requisite steps to exhaust domestic remedies that can be reasonably expected in the circumstances.

87. Concerning the applicants' claim about the unsuitability of the test battery applied in their case, the Court notes that the applicants could have brought an action against the education authorities under this head. However, they did not do so. This aspect of the case cannot therefore be examined on the merits for non-exhaustion of domestic remedies (see also *Horváth and Vadászi v. Hungary* (dec.), no. 2351/06, 9 November 2010).

88. It follows from the above considerations that, to the extent that the applicants have exhausted domestic remedies, the six-month time-limit ran from the service of the Supreme Court's judgment on 11 August 2010 and has thus been respected.

89. Furthermore, the Court notes that the application is not manifestly ill-founded within the meaning of Article 35 § 3 (a) of the Convention. It further notes that it is not inadmissible on any other grounds. It must therefore be declared admissible, apart from the applicants' claim about the unsuitability of the test battery applied in their cases (see paragraph 87 above), which must be rejected for non-exhaustion of domestic remedies, pursuant to Article 35 §§ 1 and 4.

B. Merits

1. The parties' arguments

a. The applicants

90. According to the applicants, the improper shunting of Roma children into special schools constituted indirect discrimination, and was impermissible under Article 2 of Protocol No. 1. Under domestic law, indirect discrimination occurred where an apparently neutral provision,

criterion or practice would put persons of a specific racial or ethnic origin at a particular disadvantage compared with other persons, unless that provision, criterion or practice was objectively justified by a legitimate aim and the means of achieving that aim were appropriate and necessary.

91. The applicants submitted that Roma were uniquely burdened by the current system; no other protected group had been shown to have suffered wrongful placement in special schools based on the diagnostic system. Social deprivation was in great part linked to the concept of familial disability. This notion had been formulated during the first big wave of re-diagnosis of Roma children transferred to special schools in the 1970s. According to contemporary research, familial disability could not amount to any type or form of mental disability, as it was in essence based on the social deprivation and the non-mainstream, minority cultural background of Roma families and children. The definition of mental disability as comprising social deprivation and/or having a minority culture amounted to bias and prejudice.

92. In addition, the tests used for placement had been culturally biased and knowledge-based, putting Roma children at a particular disadvantage. None of the applicants had been observed in their home, and their ethnicity had not been taken into account when assessing the results. Consequently, their socio-cultural disadvantaged background resulting from their ethnicity had not been taken into consideration.

93. The applicants further faulted the examination process for its not being sufficiently individualised. After the first assessment, based on which the applicants had been transferred to a special school, the applicants had in fact not been re-examined. The "review" had been paper-based, their diagnoses had never been individualised, and their parents' rights had not been respected. These failures had been established by the domestic courts. Indeed, it had been a violation to assign them to special schools when their tests had indicated IQ scores higher than WTO standards for mental disability. For the applicants, the issue was why the Government had allowed expert panels across the country and in Nyíregyháza in particular to diagnose mild mental disability contrary to WHO standards. Given that the WHO standards had been applicable at the time, the development of science and the changing terminology could not serve as a reasonable justification for the misdiagnoses of the applicants and the deprivation of their right to access adequate education. Until 2007, special schools had not only educated mentally disabled children, but also educated children with special education needs, including educational challenge and poor socio-economic background. Due to an amendment in 2007, the PEA had prescribed that all children who had been sent to special schools because of "psychological disorders" or "learning difficulties" had to be re-tested in order to establish whether the disorder was the result of organic reasons; if not, those children had to be transferred back to normal schools.

b. The Government

94. The Government denied that the applicants had been treated less favourably than non-Roma children in a comparable situation. Moreover, inasmuch as their treatment in education had been different from that of non-Roma (and other Roma) children of the same age, it had had an objective and reasonable justification. Moreover, they had not been treated differently from non-Roma children with similar socio-cultural disadvantages.

95. The Government were of the opinion that tests and standards tailored to the Roma population would have no sensible meaning from the point of view of assessing a child's ability to cope with the mainstream education system – which was the purpose of the assessment of learning abilities of children and of the psychometric tests applied in the process. They referred to NERC's expert opinion of 28 June 2007, which stated that the culture-bias of the "Budapest Binet Test" was less apparent in younger ages (three to six years of age) because it measured primarily basic practical knowledge. When this test was applied, its cultural bias could be compensated by a pedagogical examination aimed at exploring practical knowledge. Moreover, this one had not been the only test applied; and the applicants had been tested with a complex method. The diagnoses that the applicants needed special education had not been based on a single test; they had not even been exclusively based on the results of various tests obtained in a single examination session.

96. Moreover, the results of standardising the recently developed "WISC-IV Child Intelligence Test" showed that there were no ethnically determined differences between the test scores of Roma and non-Roma children. Therefore, in light of foreign experience gained in this field, it had been decided in the standardisation process not to lay down separate norms specifically applicable to Roma children but to use other means to ensure the fair assessment of all children in the course of the application of standardised tests. Relying on expert opinions, the Government claimed that socio-cultural background had been decisive for the mental development of the child, and when the actual level of a child's mental development (IQ) had been measured, the result had necessarily been influenced by the same socio-cultural effects that had shaped the child's mental development. In sum, the above results of the standardisation proved that IQ tests did not measure any difference between Roma and non-Roma culture or any cultural differences between Roma and non-Roma children. What they did measure was the effect of cultural deprivation or insufficient cultural stimuli in early childhood on the mental development of children, irrespective of their ethnic origin. Disproportionate representation of Roma children in special education was explained by their disproportionate representation in the group deprived of the beneficial effects of modernisation on the mental development of children. These factors concerned areas of social

development which fell outside the scope of the right to education or any of the rights enshrined in the Convention.

97. The Government were further of the opinion that the testing (or assessment) of the applicants' abilities had been sufficiently individualised even if their diagnoses had not been so, as it had been established and redressed by the Regional Court's final judgment against the Expert Panel.

98. Moreover, the Government agreed that the ensuing possibility of errors of assessment resulting from eventual personal biases or professional mistakes being committed must be counterbalanced by appropriate safeguards. Such procedural safeguards, including the parents' rights to be present, be informed, consent or seek remedy, were provided for by Hungarian law. The fact that these safeguards had not been respected in the applicants' case was not disputed: it had been established by the Supreme Court which had found that the Expert Panel had conducted a gravely unlawful practice in this respect and that the County Council had also been liable for this on account of its failure to supervise the legality of the functioning of the Expert Panel, as well as to put an end to the unlawful practice.

99. The assessment by the Expert Panel had not been carried out for medical purposes but with a view to determining whether the applicants could successfully be educated in a mainstream school. Therefore, contrary to the applicants' opinion, it could not be regarded as misdiagnosis if a diagnosis of learning disability, in terms of special education, did not coincide with a medical diagnosis of mild mental retardation as defined by the WHO.

100. Therefore, it had not been unreasonable for the Supreme Court to examine the applicants' diagnoses, contrary to the medical approach proposed by them, from the point of view of their right to an education adequate to their abilities and to find that, from this aspect, the Expert Panel's original diagnoses establishing that the applicants had needed education under a special curriculum had been confirmed by the forensic experts' opinion, even in the second applicant's case.

2. The Court's assessment

a. General principles

101. The Court has established in its case-law that discrimination means treating differently, without an objective and reasonable justification, persons in relevantly similar situations. However, Article 14 does not prohibit a member State from treating groups differently in order to correct "factual inequalities" between them; indeed in certain circumstances a failure to attempt to correct inequality through different treatment may in itself give rise to a breach of the Article.

Discrimination on account of, *inter alia*, a person's ethnic origin is a form of racial discrimination. Racial discrimination is a particularly invidious kind of discrimination and, in view of its perilous consequences, requires from the authorities special vigilance and a vigorous reaction. It is for this reason that the authorities must use all available means to combat racism, thereby reinforcing democracy's vision of a society in which diversity is not perceived as a threat but as a source of enrichment. The Court has also held that no difference in treatment which is based exclusively or to a decisive extent on a person's ethnic origin is capable of being objectively justified in a contemporary democratic society built on the principles of pluralism and respect for different cultures (see *D.H. and Others*, cited above, §§ 175-176).

102. The Court has further established that, as a result of their turbulent history and constant uprooting, the Roma have become a specific type of disadvantaged and vulnerable minority. They therefore require special protection. Their vulnerable position means that special consideration should be given to their needs and their different lifestyle both in the relevant regulatory framework and in reaching decisions in particular cases (see *Oršuš and Others*, cited above, §§ 147-148).

103. Furthermore, the Court reiterates that the word "respect" in Article 2 of Protocol No. 1 means more than "acknowledge" or "take into account"; in addition to a primarily negative undertaking, it implies some positive obligation on the part of the State (see *Campbell and Cosans v. the United Kingdom*, 25 February 1982, § 37, Series A no. 48). Nevertheless, the requirements of the notion of "respect", which appears also in Article 8 of the Convention, vary considerably from case to case, given the diversity of the practices followed and the situations obtaining in the Contracting States. As a result, the Contracting States enjoy a wide margin of appreciation in determining the steps to be taken to ensure compliance with the Convention with due regard to the needs and resources of the community and of individuals (see *Lautsi and Others v. Italy* [GC], no. 30814/06, § 61, ECHR–2011 (extracts); *Leyla Şahin v. Turkey* [GC], no. 44774/98, § 135, ECHR 2005-XI; *Case "relating to certain aspects of the laws on the use of languages in education in Belgium"* (merits), 23 July 1968, pp. 30-31, § 3, Series A no. 6).

104. In the context of the right to education of members of groups which suffered past discrimination in education with continuing effects, structural deficiencies call for the implementation of positive measures in order, *inter alia*, to assist the applicants with any difficulties they encountered in following the school curriculum. These obligations are particularly stringent where there is an actual history of direct discrimination. Therefore, some additional steps are needed in order to address these problems, such as active and structured involvement on the part of the relevant social services (see *Oršuš and Others*, cited above, § 177).

The Court would note in this context Recommendation no. R(2000)4 of the Committee of Ministers (see paragraph 72 above) according to which appropriate support structures should be set up in order to enable Roma/Gypsy children to benefit, in particular through positive action, from equal opportunities at school.

105. Furthermore, the Court has already accepted in previous cases that a difference in treatment may take the form of disproportionately prejudicial effects of a general policy or measure which, though couched in neutral terms, discriminates against a group. Such a situation may amount to "indirect discrimination", which does not necessarily require a discriminatory intent (see, amongst other authorities, *D.H. and Others*, cited above, § 184).

A general policy or measure which is apparently neutral but has disproportionately prejudicial effects on persons or groups of persons who, as for instance in the present case, are identifiable on the basis of an ethnic criterion, may be considered discriminatory notwithstanding that it is not specifically aimed at that group, unless that measure is objectively justified by a legitimate aim and the means of achieving that aim are appropriate, necessary and proportionate (see *Oršuš and Others*, cited above, § 150). Furthermore, discrimination potentially contrary to the Convention may result from a *de facto* situation (see *Zarb Adami v. Malta*, no. 17209/02, § 76, ECHR 2006-VIII).

106. Where it has been shown that legislation produces such indirect discriminatory effect, the Court would add that, as with cases concerning employment or the provision of services (see, *mutatis mutandis*, *Nachova and Others v. Bulgaria* [GC], nos. 43577/98 and 43579/98, § 157, ECHR 2005-VII), it is not necessary, in cases in the educational sphere, to prove any discriminatory intent on the part of the relevant authorities (see *D.H. and Others*, cited above, § 194).

107. When it comes to assessing the impact of a measure or practice on an individual or group, statistics which appear on critical examination to be reliable and significant will be sufficient to constitute the *prima facie* evidence the applicant is required to produce. This does not, however, mean that indirect discrimination cannot be proved without statistical evidence (see *D.H. and Others*, cited above, § 188).

108. Where an applicant alleging indirect discrimination establishes a rebuttable presumption that the effect of a measure or practice is discriminatory, the burden of proof shifts to the respondent State. The latter must show that the difference in treatment is not discriminatory (see, *mutatis mutandis*, *Nachova and Others*, loc. cit.). Regard being had in particular to the specificity of the facts and the nature of the allegations made in this type of case (see, *mutatis mutandis*, *Nachova and Others*, cited above, § 147), it would be extremely difficult in practice for applicants to prove indirect discrimination without such a shift in the burden of proof.

b. Application of those principles to the present case

109. The Court notes that the applicants in the present case made complaints under Article 2 of Protocol No. 1 read in conjunction with Article 14 of the Convention, claiming that the fact that they had been assigned to a remedial school for children with special educational needs during their primary education violated their right to receive an education and their right to be free from discrimination. In their submission, all that has to be established is that, without objective and reasonable justification, they were assigned to a school where, because of the limited curriculum, they were treated less favourably than non-Roma children in a comparable situation and that this amounted in their case to indirect discrimination (compare with the above-mentioned *D.H. and Others* judgment, § 183).

110. The Court notes that Roma children have been overrepresented among the pupils at the Göllesz Viktor Remedial Primary and Vocational School (see paragraph 7 above) and that Roma appear to have been overrepresented in the past in remedial schools due to the systematic misdiagnosis of mental disability (see paragraph 10 above). The underlying figures not having been disputed by the Government – who have not produced any alternative statistical evidence – the Court considers that these figures reveal a dominant trend. It must thus be observed that a general policy or measure exerted a disproportionately prejudicial effect on the Roma, a particularly vulnerable group. For the Court, this disproportionate effect is noticeable even if the policy or the testing in question may have similar effect on other socially disadvantaged groups as well. The Court cannot accept the applicants' argument that the different treatment as such resulted from a *de facto* situation that affected only the Roma. However, it is uncontested – and the Court sees no reason to hold otherwise – that the different, and potentially disadvantageous, treatment applied much more often in the case of Roma than for others. The Government could not offer a reasonable justification of such disparity, except that they referred, in general terms, to the high occurrence of disadvantageous social background among the Roma (see paragraph 96 above).

111. Although the policy and the testing in question have not been argued to aim specifically at that group, for the Court there is consequently a *prima facie* case of indirect discrimination. It thus falls on the Government to prove that in the case of applicants the difference in treatment had no disproportionately prejudicial effects due to a general policy or measure that is couched in neutral terms, and that therefore the difference in treatment was not discriminatory.

112. The Court reiterates that a difference in treatment is discriminatory if "it has no objective and reasonable justification", that is, if it does not pursue a "legitimate aim" or if there is not a "reasonable relationship of proportionality" between the means employed and the aim sought to be realised (see, among many other authorities, *Oršuš and Others*, cited above,

§ 196; *Larkos v. Cyprus* [GC], no. 29515/95, § 29, ECHR 1999-I; *Stec and Others v. the United Kingdom* [GC], no. 65731/01, § 51, ECHR 2006-VI). The Court stresses that where the difference in treatment is based on race, colour or ethnic origin, the notion of objective and reasonable justification must be interpreted as strictly as possible.

113. The Court notes the Government's submissions (see paragraph 94 above) according to which the impugned treatment is neutral (that is, based on objective criteria) and results in the different treatment of different people, and moreover the education programme in its existing form is beneficial to pupils with different abilities. The Court accepts that the Government's position to retain the system of special schools/classes has been motivated by the desire to find a solution for children with special educational needs. However, it shares the disquiet of the other Council of Europe institutions who have expressed concerns about the more basic curriculum followed in these schools and, in particular, the segregation which the system causes (see paragraphs 73 to 75 above) – even if in the present case the applicants were not placed in ethnically segregated classes.

114. The Court notes that the Hungarian authorities took a number of measures to avoid misdiagnoses in the placement of children. Nevertheless, the Council of Europe Commissioner for Human Rights found in 2006 that 20% of Roma children continued to be assigned to special classes, as compared with only 2% of majority children (see paragraph 74 above). Moreover, the ECRI Report published in 2009 (see paragraph 75 above) indicated a high number of misplaced Roma pupils. For the Court, these facts raise serious concerns about the adequacy of these measures at the material time.

115. The Court notes that the misplacement of Roma children in special schools has a long history across Europe.

Regarding the Czech Republic, the Advisory Committee on the Framework Convention for the Protection of National Minorities pointed out that children who were not mentally handicapped were frequently and quasi-automatically placed in Czech remedial schools "[owing] to real or perceived language and cultural differences between Roma and the majority" (see *D.H. and Others*, cited above, § 68).

In Hungary, the concept of "familial disability" (see paragraphs 10 and 91 above) resulted in comparable practices. The ECRI Report published in 2009 notes that the vast majority of children with mild learning disabilities could easily be integrated into mainstream schools; and many are misdiagnosed because of socio-economic disadvantage or cultural differences. These children are unlikely to break out of this system of inferior education, resulting in their lower educational achievement and poorer prospects of employment. The Report also noted that efforts to combat the high proportion of Roma children in special schools – both by

assisting wrongly diagnosed children and preventing misdiagnosis in the first place – have not yet had a major impact (see paragraph 75 above).

116. In such circumstances – and in light of the recognised bias in past placement procedures (see paragraph 115 above) – the Court considers that the State has specific positive obligations to avoid the perpetuation of past discrimination or discriminative practices disguised in allegedly neutral tests.

117. While in the present case the Court is not called on to examine the alleged structural problems of biased testing, the related complaint being inadmissible (see paragraph 87 above), it is nevertheless incumbent on the State to demonstrate that the tests and their application were capable of determining fairly and objectively the school aptitude and mental capacity of the applicants.

118. The Court observes that the Hungarian authorities set the borderline value of mental disability at IQ 86, significantly higher than the WHO guideline of IQ 70 (see paragraph 18 above). The Expert Panel found disparate measurements of Mr Horváth's IQ between IQ 61 and 83. Mr Kiss had an IQ of 63 according to the "Budapest Binet Test" and an IQ of 83 according to the "Raven Test". However, when taking the latter test at a summer camp (see paragraph 31 above), Mr Horváth scored IQ 83 and Mr Kiss IQ 90.

The Court cannot take a position as to the acceptability of IQ scores as the sole indicators of school aptitude but finds it troubling that the national authorities significantly departed from the WHO standards.

119. The Court observes, further, that the tests used to assess the applicants' learning abilities or difficulties have given rise to controversy and continue to be the subject of scientific debate and research. The Court is aware that it is not its role to judge the validity of such tests, or to identify the state-of-the-art, least culturally biased test of educational aptitude. It is only called on to ascertain whether good faith efforts were made to achieve non-discriminatory testing. Nevertheless, various factors in the instant case lead the Court to conclude that the results of the tests carried out in regard to applicants did not provide the necessary safeguards against misdiagnosis that would follow from the positive obligations incumbent on the State in a situation where there is a history of discrimination against ethnic minority children.

120. In the first place, the Court notes that it was common ground between the parties that all the children who were examined sat the same tests, irrespective of their ethnic origin.

The Government acknowledged that at least part of the test battery applied (namely, the "Budapest Binet Test") was culturally biased (see paragraph 95 above).

Moreover, certain tests used in the case of the applicants were found to be obsolete by independent experts (see paragraph 34 above).

121. In these circumstances, the Court considers that, at the very least, there is a danger that the tests were culturally biased. For the Court, the issue is therefore to ascertain to what extent special safeguards were applied that would have allowed the authorities to take into consideration, in the placement and regular biannual review process, the particularities and special characteristics of the Roma applicants who sat them, in view of the high risk of discriminatory misdiagnosis and misplacement.

122. The Court relies in this regard on the facts established by the Regional Court which were not contradicted on appeal (see paragraphs 39 to 42 above). This court found that the Expert Panel had failed to individualise the applicants' diagnoses or to specify the cause and nature of their special educational needs and therefore violated the applicants' rights to equal opportunity. Moreover, the social services administering the placement had been subject to constant reorganisation. In this regard, the court had found that the conditions necessary for the functioning of the Expert Panel had not been provided. Consequently, the Expert Panel and the County Council could not provide the necessary guarantees against misplacement which was historically more likely to affect Roma. Moreover, after a careful analysis of the applicable law, the Court of Appeal and the Supreme Court concluded that, as of 2003, children with special educational needs had included students with psychological developmental troubles (learning disabilities). It was not clear whether the applicants had mental (or learning) disabilities that could not have been taken into consideration within the normal education system by providing additional opportunities to catch up with the normal curriculum. Those courts found that, because of the changes in legislation, related to changing concepts on integrated education, there was lack of legal certainty from 1 January until 1 September 2007 (see paragraph 45 *in fine* above)

123. In the face of these findings, it is difficult for the Court to conceive that there was adequate protection in place safeguarding the applicants' proper placement. Therefore, the tests in question, irrespective of their allegedly biased nature, cannot be considered to serve as sufficient justification for the impugned treatment.

124. As regards the question of parental consent, the Court accepts the Government's submission that in this regard the violation of the applicants' rights to education was recognised and adequate remedies were provided in the domestic procedure (see paragraph 79 above). However, in the case of Mr Kiss, the absence of parental participation and the parents' express objection to the placement can be seen as having contributed to the discrimination.

125. The Court notes that the identification of the appropriate educational programme for the mentally disabled and students with a learning disability, especially in the case of Roma children, as well as the choice between a single school for everyone, highly specialised structures

and unified structures with specialised sections is not an easy one. It entails a difficult balancing exercise between the competing interests. The Court notes in the Hungarian context that the 2003 programme (see paragraph 12 above) and the 2011 National Inclusion Strategy (see paragraph 71 above) advocate an integrated approach in this respect.

As to the setting and planning of the curriculum, this mainly involves questions of expediency on which it is not for the Court to rule (see *Valsamis v. Greece*, 18 December 1996, § 28, *Reports of Judgments and Decisions* 1996-VI).

126. Nevertheless, whenever discretion capable of interfering with the enjoyment of a Convention right is conferred on national authorities, the procedural safeguards available to the individual will be especially material in determining whether the respondent State has, when fixing the regulatory framework, remained within its margin of appreciation (see *Buckley v. the United Kingdom*, 25 September 1996, § 76, *Reports* 1996–IV, and *Connors v. the United Kingdom*, no. 66746/01, § 83, 27 May 2004).

127. The facts of the instant case indicate that the schooling arrangements for Roma applicants with allegedly mild mental disability or learning disability were not attended by adequate safeguards that would ensure that, in the exercise of its margin of appreciation in the education sphere, the State took into account their special needs as members of a disadvantaged class (see, *mutatis mutandis*, *Buckley*, cited above, § 76, and *Connors*, cited above, § 84). Furthermore, as a result of the arrangements, the applicants were placed in schools for children with mental disabilities where a more basic curriculum was followed than in ordinary schools and where they were isolated from pupils from the wider population. As a consequence, they received an education which did not offer the necessary guarantees stemming from the positive obligations of the State to undo a history of racial segregation in special schools. The education provided might have compounded their difficulties and compromised their subsequent personal development instead of helping them to integrate into the ordinary schools and develop the skills that would facilitate life among the majority population.

In that connection, the Court notes with interest that the new legislation intends to move out students with learning disabilities from special schools and provides for children with special educational needs, including socially disadvantaged children, to be educated in ordinary schools enabling the diminution of the statistical overrepresentation of Roma in the special school population. This integration process requires the use of state-of-the-art testing.

However, in the present case the Court is not called on to examine the adequacy of education testing as such in Hungary.

128. Since it has been established that the relevant legislation, as applied in practice at the material time, had a disproportionately prejudicial effect

on the Roma community, and that the State, in a situation of *prima facie* discrimination, failed to prove that it has provided the guarantees needed to avoid the misdiagnosis and misplacement of the Roma applicants, the Court considers that the applicants necessarily suffered from the discriminatory treatment. In this connection – and with regard to the vulnerability of persons with mental disabilities as such, as well as their past history of discrimination and prejudice – the Court also recalls its considerations pronounced in the case of *Alajos Kiss v. Hungary* (no. 38832/06, 20 May 2010):

> "[I]f a restriction on fundamental rights applies to a particularly vulnerable group in society, who have suffered considerable discrimination in the past, such as the mentally disabled, then the State's margin of appreciation is substantially narrower and it must have very weighty reasons for the restrictions in question....[T]he treatment as a single class of those with intellectual or mental disabilities is a questionable classification, and the curtailment of their rights must be subject to strict scrutiny." (paragraphs 42 and 44).

129. Consequently, there has been a violation in the instant case of Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1 in respect of each of the applicants.

II. APPLICATION OF ARTICLE 41 OF THE CONVENTION

130. Article 41 of the Convention provides:

> "If the Court finds that there has been a violation of the Convention or the Protocols thereto, and if the internal law of the High Contracting Party concerned allows only partial reparation to be made, the Court shall, if necessary, afford just satisfaction to the injured party."

A. Damage

131. The applicants made no damages claims.

B. Costs and expenses

132. The applicants claimed, jointly, 6,000 euros (EUR) for the costs and expenses incurred before the Court. This claim corresponds to 100 hours of legal work billable by their lawyer at an hourly rate of EUR 60.

133. The Government contested this claim.

134. According to the Court's case-law, an applicant is entitled to the reimbursement of costs and expenses only in so far as it has been shown that these have been actually and necessarily incurred and are reasonable as to quantum. In the present case, regard being had to the documents in its possession and the above criteria, the Court considers it reasonable to award

the sum of EUR 4,500 jointly to the applicants, who were represented by a lawyer and a non-governmental organisation, covering costs under all heads.

C. Default interest

135. The Court considers it appropriate that the default interest rate should be based on the marginal lending rate of the European Central Bank, to which should be added three percentage points.

FOR THESE REASONS, THE COURT UNANIMOUSLY

1. *Declares* the complaint concerning the alleged unsuitability of the test battery applied in the applicants' case inadmissible and the remainder of the application admissible;

2. *Holds* that there has been a violation of Article 2 of Protocol No. 1 read in conjunction with Article 14 of the Convention;

3. *Holds*
   (a) that the respondent State is to pay the applicants, jointly, within three months from the date on which the judgment becomes final in accordance with Article 44 § 2 of the Convention, EUR 4,500 (four thousand five hundred euros), to be converted into the currency of the respondent State at the rate applicable at the date of settlement, plus any tax that may be chargeable to the applicants, in respect of costs and expenses;

   (b) that from the expiry of the above-mentioned three months until settlement simple interest shall be payable on the above amount at a rate equal to the marginal lending rate of the European Central Bank during the default period plus three percentage points;

4. *Dismisses* the remainder of the applicants' claim for just satisfaction.

Done in English, and notified in writing on 29 January 2013, pursuant to Rule 77 §§ 2 and 3 of the Rules of Court.

EUROPEAN COURT OF HUMAN RIGHTS
COUR EUROPÉENNE DES DROITS DE L'HOMME

SECOND SECTION

CASE OF Z.H. v. HUNGARY

(Application no. 28973/11)

JUDGMENT

STRASBOURG

8 November 2012

FINAL

08/02/2013

This judgment has become final under Article 44 § 2 of the Convention. It may be subject to editorial revision.

In the case of Z.H. v. Hungary,

The European Court of Human Rights (Second Section), sitting as a Chamber composed of:

Ineta Ziemele, *President,*
Danutė Jočienė,
Isabelle Berro-Lefèvre,
András Sajó,
Işıl Karakaş,
Paulo Pinto de Albuquerque,
Helen Keller, *judges,*
and Stanley Naismith, *Section Registrar,*

Having deliberated in private on 9 October 2012,

Delivers the following judgment, which was adopted on that date:

PROCEDURE

1. The case originated in an application (no. 28973/11) against the Republic of Hungary lodged with the Court under Article 34 of the Convention for the Protection of Human Rights and Fundamental Freedoms ("the Convention") by a Hungarian national, Mr Z.H. ("the applicant"), on 19 November 2011.

2. The applicant, who had been granted legal aid, was represented by Mr D. Karsai, a lawyer practising in Budapest. The Hungarian Government ("the Government") were represented by Mr Z. Tallódi, Agent, Ministry of Public Administration and Justice.

3. The applicant alleged, in particular, that on account of his disabilities, he could not benefit from proper information about the reasons for his arrest, in breach of Article 5 § 2, and his subsequent incarceration amounted to inhuman and degrading treatment, an infringement of Article 3 of the Convention.

4. On 13 February 2012 the application was communicated to the Government. It was also decided to rule on the admissibility and merits of the application at the same time (Article 29 § 1).

5. On 7 June 2012 the Mental Disability Advocacy Center (MDAC), a non-governmental organisation with its seat in Budapest, was granted leave to intervene in the proceedings as third party (Rule 44 § 3 of the Rules of Court).

THE FACTS

I. THE CIRCUMSTANCES OF THE CASE

6. The applicant was born in 1987 and lives in the village of A. in eastern Hungary.

7. The applicant is innately deaf and dumb and has medium-grade intellectual disability. He is illiterate.

8. According to the bill of indictment preferred in the case, on 10 April 2011 the applicant – a multiple recidivist offender with the most recent conviction dating from 2 November 2009 – mugged a passer-by in Gyüre. He was then halted for an identity check by officers of the Vásárosnamény Police Department. He attempted to escape but was apprehended while still in possession of the stolen item. He was committed to the police station.

9. Since the applicant was perceived to use a sort of sign language, a sign-language interpreter was appointed for him at once. Later in the day he was interrogated as a suspect of robbery. No lawyer was present.

10. The Government submitted that the applicant had understood the charges brought against him but made no complaint about it and admitted the commission of the offence by signing the minutes of the interrogation. The applicant denied this, arguing that the sign language used by him and the one used by the interpreter were different and thus no comprehension had been possible between them.

The applicant's signature on the minutes in question consists of his scribbled nickname, hardly legible.

11. Between 10 April and 4 July 2011 the applicant was detained on remand on the charge of mugging at Szabolcs-Szatmár-Bereg County Prison.

12. The applicant maintained that the conditions of detention were inapt to his condition and that he had been molested, sexually and otherwise, by the other inmates. The Government argued that special measures had been put in place to address the applicant's situation (in particular, the prison governor issued an instruction to that effect on 23 May 2011) – an assertion of which the efficacy has been disputed by the applicant (for details, see paragraphs 25 and 26 below).

13. On 4 July 2011 the applicant was released from detention and placed under house arrest. The Vásárosnamény District Court, having noted that he did not know any sign language and was able to communicate only with his mother, was of the view that the time spent by the applicant in detention had be to be reduced to a minimum.

14. Meanwhile, on 20 June 2011 the applicant was indicted for robbery. His mental condition was noted by the prosecution. A public defence counsel and a sign-language interpreter were appointed for him.

15. While detained, the applicant was examined by a forensic psychiatrist. On 30 June 2011 the expert gave the opinion that the applicant's faculties were to a large extent reduced and that he should be placed under partial guardianship. This was done by the Vásárosnamény District Court on 27 September 2011. The court noted that the applicant's IQ was 39, he was deaf and dumb, he had medium-grade intellectual disability, he could not count and did not know sign language; the only person with whom he could communicate was his mother.

16. The criminal proceedings conducted against the applicant are still pending.

17. The applicant submitted the testimonies of a Mr F. and a Mr R. who were present when Mr Karsai met with the applicant on 6 May 2012 to discuss his representation before the Court. According to these testimonies, the applicant communicated using a peculiar sign-language-like method, essentially only intelligible to his mother, which appeared to be completely different from the standard sign language.

II. RELEVANT DOMESTIC LAW

18. Act no. XIX of 1998 on the Code of Criminal Procedure provides as follows:

Section 129

"(2) A defendant's pre-trial detention may be ordered in proceedings conducted for a criminal offence punishable by imprisonment and only if:

a) the defendant has escaped or absconded from the reach of the court, the prosecutor or the investigating authority or attempted to do so, or if other proceedings for an intentional criminal offence punishable by imprisonment has been instituted against him during the procedure,

b) due to the risk of his escape or absconding or for other reasons it can reasonably be assumed that his attendance at the procedural acts cannot be ensured otherwise,

c) it can reasonably be assumed that if left at large he would frustrate, obstruct or jeopardise the taking of evidence, especially by influencing or intimidating the witnesses, or by destroying, falsifying or concealing physical evidence or documents,

d) it can reasonably be assumed that if left at large he would accomplish the attempted or prepared criminal offence, or would commit another criminal offence punishable by imprisonment."

III. RELEVANT INTERNATIONAL TEXTS

19. The United Nations Convention on the Rights of Persons with Disabilities[1] contains the following provisions:

Article 2 - Definitions

"For the purposes of the present Convention:

...

"Reasonable accommodation" means necessary and appropriate modification and adjustments not imposing a disproportionate or undue burden, where needed in a particular case, to ensure to persons with disabilities the enjoyment or exercise on an equal basis with others of all human rights and fundamental freedoms; ..."

Article 13 - Access to justice

"1. States Parties shall ensure effective access to justice for persons with disabilities on an equal basis with others, including through the provision of procedural and age-appropriate accommodations, in order to facilitate their effective role as direct and indirect participants, including as witnesses, in all legal proceedings, including at investigative and other preliminary stages."

Article 14 - Liberty and security of the person

"2. States Parties shall ensure that if persons with disabilities are deprived of their liberty through any process, they are, on an equal basis with others, entitled to guarantees in accordance with international human rights law and shall be treated in compliance with the objectives and principles of the present Convention, including by provision of reasonable accommodation."

20. The Interim Report of the Special Rapporteur on the question of torture and other cruel, inhuman or degrading treatment or punishment, submitted on 28 July 2008 by the Office of the United Nations High Commissioner for Human Rights to the 63rd session of the General Assembly of the UN (A/63/175), contains the following passages:

"The Special Rapporteur draws the attention of the General Assembly to the situation of persons with disabilities, who are frequently subjected to neglect, severe forms of restraint and seclusion, as well as physical, mental and sexual violence. He is concerned that such practices, perpetrated in public institutions, as well as in the private sphere, remain invisible and are not recognized as torture or other cruel, inhuman or degrading treatment or punishment." [summary]

"Persons with disabilities are often segregated from society in institutions, including prisons, social care centres, orphanages and mental health institutions. They are deprived of their liberty for long periods of time including what may amount to a lifelong experience, either against their will or without their free and informed consent. Inside these institutions, persons with disabilities are frequently subjected to unspeakable indignities, neglect, severe forms of restraint and seclusion, as well as physical, mental and sexual violence. The lack of reasonable accommodation in

[1] Ratified by Hungary on 20 July 2007.

detention facilities may increase the risk of exposure to neglect, violence, abuse, torture and ill-treatment." [paragraph 38]

"Persons with disabilities often find themselves in ... situations [of powerlessness], for instance when they are deprived of their liberty in prisons or other places ... In a given context, the particular disability of an individual may render him or her more likely to be in a dependant situation and make him or her an easier target of abuse ..." [paragraph 50]

"States have the further obligation to ensure that treatment or conditions in detention do not directly or indirectly discriminate against persons with disabilities. If such discriminatory treatment inflicts severe pain or suffering, it may constitute torture or other form of ill-treatment. ..." [paragraph 53]

"The Special Rapporteur notes that under article 14, paragraph 2, of the [Convention on the Rights of Persons with Disabilities], States have the obligation to ensure that persons deprived of their liberty are entitled to 'provision of reasonable accommodation'. This implies an obligation to make appropriate modifications in the procedures and physical facilities of detention centres ... to ensure that persons with disabilities enjoy the same rights and fundamental freedoms as others, when such adjustments do not impose disproportionate or undue burden. The denial or lack of reasonable accommodation for persons with disabilities may create detention ... conditions that amount to ill-treatment and torture." [paragraph 54]

THE LAW

I. ALLEGED VIOLATION OF ARTICLE 3 OF THE CONVENTION

21. The applicant complained that his detention amounted to inhuman and degrading treatment, in breach of Article 3, on account of the fact that he was mentally disabled, deaf and dumb.

Article 3 reads as follows:

"No one shall be subjected to torture or to inhuman or degrading treatment or punishment."

22. The Government contested that argument.

A. Admissibility

23. The Court notes that this complaint is not manifestly ill-founded within the meaning of Article 35 § 3 (a) of the Convention. It further notes that it is not inadmissible on any other grounds. It must therefore be declared admissible.

B. Merits

1. Arguments of the parties

(a) The Government

24. The Government submitted that the applicant had given no indication to the prison authorities of any assault against him or of the alleged inappropriateness of the detention conditions. They noted that the governor of Szabolcs-Szatmár-Bereg County Prison had issued a special instruction addressing the treatment of the applicant.

25. In the Government's view, during his detention the applicant could express himself and communicate with the prison personnel despite the fact that he did not use a hearing aid and is illiterate. They also submitted that special arrangements had been made to accommodate his needs: he had been placed in a cell shared with a relative, located in an "open" section of the prison, next to the service place of the unit warden so that he could immediately indicate his problems. Furthermore, to facilitate communication with the applicant, the prison warden was regularly in contact with the applicant's mother and a sign-language interpreter was made available during the prison admission procedure, the visits and on the occasions when the applicant received official documents. Fellow inmates assisted the applicant in writing letters and the warden paid special attention to the forwarding of his letters, to prevent any abuse.

(b) The applicant

26. The applicant submitted that his detention gave rise to a violation of Article 3 of the Convention as it was inapt to his conditions. He further claimed that he had been mobbed and sexually assaulted by other inmates. He explained that, due to his intellectual impairment and general inability to communicate, he was not in a position to complain of any assault or give indication of the inappropriateness of his circumstances, and that it was unreasonable to expect him to do so. He also noted that the visits of his mother, limited to two occasions per month, were not sufficient to address his problems and his communication needs occurring in detention. With regard to the governor's special instruction, the applicant asserted that it was unsuitable to deal with the situation of a deaf and dumb, intellectually disabled and illiterate person.

(c) The third party

27. The Mental Disability Advocacy Center submitted that persons with disabilities were particularly vulnerable to torture and ill-treatment, including sexual abuse, in prison and other detention settings. Making reference *inter alia* to the relevant provisions of the UN Convention on the Rights of Persons with Disabilities (see paragraph 19 above), they argued

that the prevention of ill-treatment of detainees with disabilities must include the provision of "reasonable accommodations" on an individualised basis.

2. The Court's assessment

(a) General principles

28. The Court reiterates that ill-treatment must attain a minimum level of severity if it is to fall within the scope of Article 3. The assessment of this minimum level of severity is relative; it depends on all the circumstances of the case, such as the duration of the treatment, its physical and mental effects and, in some cases, the sex, age and state of health of the victim. In considering whether treatment is "degrading" within the meaning of Article 3, one of the factors which the Court will take into account is the question whether its object was to humiliate and debase the person concerned, although the absence of any such purpose cannot conclusively rule out a finding of violation of Article 3 (see among many other authorities *Price v. the United Kingdom*, no. 33394/96, § 24, ECHR 2001-VII; *Peers v. Greece*, no. 28524/95, §§ 67-68 and 74, ECHR 2001–III; and *Engel v. Hungary*, no. 46857/06, § 26, 20 May 2010).

29. Moreover, where the authorities decide to detain a person with disabilities, they should demonstrate special care in guaranteeing such conditions as correspond to the person's individual needs resulting from his disability (see mutatis mutandis *Jasinskis v. Latvia*, no. 45744/08, § 59, 21 December 2010; *Price v. the United Kingdom*, op.cit., § 30). States have an obligation to take particular measures which provide effective protection of vulnerable persons and include reasonable steps to prevent ill-treatment of which the authorities had or ought to have had knowledge (see *Z and Others v. the United Kingdom* [GC], no. 29392/95, § 73, ECHR 2001-V). Any interference with the rights of persons belonging to particularly vulnerable groups – such as those with mental disorders – is required to be subject to strict scrutiny, and only very weighty reasons could justify any restriction (see *Alajos Kiss v. Hungary*, no. 38832/06, § 42, 20 May 2010).

(b) Application of those principles to the present case

30. In the instant application, the Court observes that Mr Z.H. – deaf and dumb, suffering from intellectual disability, illiterate and unable to avail himself of the official sign language – was detained at Szabolcs-Szatmár-Bereg County Prison for a period lasting almost three months (see paragraph 11 above). It notes the Government's submission according to which special measures, incarnated by an instruction issued by the prison governor, were put in place to address his situation, as of 23 May 2011 (see paragraph 12 above). However, it is unclear to what extent these

measures concerned the phase of the applicant's detention occurring prior to this date, that is, between 10 April and 23 May 2011.

31. In any case, the Court is not convinced that even the aggregate of the measures referred to by the Government – namely, the applicant's incarceration together with a relative in a cell close to the warden's office, the involvement of other inmates and the applicant's mother in handling the situation and the facilitation of his correspondence (see paragraph 25 above) – was sufficient to remove the applicant's treatment from the scope of Article 3.

Given that the applicant undoubtedly belongs to a particularly vulnerable group (see paragraphs 20 and 29 *in fine* above) and that as such he should have benefited from reasonable steps on the side of the authorities to prevent situations likely to result in inhuman and degrading treatment, the Court considers that it was incumbent on the Government to prove that the authorities took the requisite measures. This redistribution of the burden of proof is analogous to the manner in which the Court examines situations where an individual is taken into police custody in good health but is found to be injured at the time of release, so that it is incumbent on the State to provide a plausible explanation of how those injuries were caused, failing which a clear issue arises under Article 3 of the Convention (see among many other authorities *Selmouni v. France* [GC], no. 25803/94, § 87, ECHR 1999-V).

32. In the present circumstances, however, the Court notes that the Government have failed to meet this burden of proof in a satisfactory manner, especially in respect of the initial period of the detention.

The Court considers in particular that the inevitable feeling of isolation and helplessness flowing from the applicant's disabilities, coupled with the presumable lack of comprehension of his own situation and of that of the prison order¸ must have caused the applicant to experience anguish and inferiority attaining the threshold of inhuman and degrading treatment, especially in the face of the fact that he had been severed from the only person (his mother) with whom he could effectively communicate. Moreover, while the applicant's allegations about being molested by other inmates have not been supported by evidence, the Court would add that had this been the case, the applicant would have faced significant difficulties in bringing such incidents to the wardens' attention, which may have resulted in fear and the feeling of being exposed to abuse.

The Court also observes that the District Court eventually released the applicant for quite similar considerations.

33. In sum, the Court cannot but conclude that – despite the authorities laudable but belated efforts to address his situation – the applicant's incarceration without the requisite measures taken within a reasonable time must have resulted in a situation amounting to inhuman and degrading

treatment, in breach of Article 3 of the Convention, on account of his multiple disabilities.

There has accordingly been a breach of that provision.

II. ALLEGED VIOLATION OF ARTICLE 5 § 2 OF THE CONVENTION

34. The applicant also submitted that, due to his condition, the procedure followed by the authorities on his arrest fell short of the requirements of Article 5 § 2 of the Convention, which provides as follows:

> "Everyone who is arrested shall be informed promptly, in a language which he understands, of the reasons for his arrest and of any charge against him."

35. The Government contested that argument.

A. Admissibility

36. The Court notes that this complaint is not manifestly ill-founded within the meaning of Article 35 § 3 (a) of the Convention. It further notes that it is not inadmissible on any other grounds. It must therefore be declared admissible.

B. Merits

1. Arguments of the parties

(a) The Government

37. The Government submitted that the applicant's pre-trial detention had been in conformity with the requirements of Article 5 § 2 of the Convention. They argued that all the guarantees envisaged by the Convention had been applied, including the requisite consideration dedicated to the applicant's disability and special conditions.

38. As to the question whether the applicant had been informed, in a language which he had understood, of the reasons for his arrest, the Government noted that the applicant had been interrogated in the presence of a sign-language interpreter and, in their opinion, he had understood the charge against him. They also stressed that he had made no complaint about the procedure and had signed the minutes of the interrogation.

(b) The applicant

39. The applicant submitted that, when arrested, he had not been informed, in a language which he had understood, of the reasons for his arrest and the charges against him. Relying essentially on the decisions of the Vásárosnamény District Court dated 4 July and 27 September 2011 (see paragraphs 13 and 15 above), the applicant contested the Government's

submission that he understood the official sign language. In support of this argument, he further submitted two witness testimonies stating that he used a special method of communication different from the official sign language (see paragraph 17 above). He stressed that he was only able to communicate with his mother using a special type of sign-language. He explained that his signature on the minutes of the interrogation could not be considered valid, given that he was deaf, dumb and illiterate. He argued that, taking into consideration his intellectual disability, he should have been assisted by a lawyer or a person authorised to act on his behalf, so that he could understand the grounds for his arrest.

(c) The third party

40. The Mental Disability Advocacy Center submitted that, when interpreting the guarantees enshrined in Article 5 § 2 of the Convention, the provisions of the UN Convention on the Rights of Persons with Disabilities should be taken into account. They argued that this instrument required States to provide reasonable accommodations to persons with disabilities in order to ensure their effective access to justice. They explained that, in the present case, reasonable accommodation would have required the presence of a person who could have effectively communicated with the applicant and assisted him during the interrogation.

2. The Court's assessment

(a) General principles

41. The Court reiterates that paragraph 2 of Article 5 contains the elementary safeguard that any person arrested should know why he is being deprived of his liberty. This provision is an integral part of the scheme of protection afforded by Article 5: by virtue of paragraph 2, any person arrested must be told, in simple, non-technical language that he can understand, the essential legal and factual grounds for his arrest, so as to be able, if he sees fit, to apply to a court to challenge its lawfulness in accordance with paragraph 4. Whether the content and promptness of the information conveyed were sufficient is to be assessed in each case according to its special features (see *Fox, Campbell and Hartley v. the United Kingdom*, 30 August 1990, § 40, Series A no. 182).

Article 5 § 2 neither requires that the necessary information be given in a particular form, nor that it consists of a complete list of the charges held against the arrested person (see *X. v. Germany*, no. 8098/77, Commission decision of 13 December 1978, Decisions and Reports 16, p. 111). However, in the Court's view, if the condition of a person with intellectual disability is not given due consideration in this process, it cannot be said that he was provided with the requisite information enabling him to make effective and intelligent use of the right ensured by Article 5 § 4 to

challenge the lawfulness of detention unless a lawyer or another authorised person was informed in his stead (see *X. v. the United Kingdom*, no. 6998/75, Commission's report of 16 July 1980, § 111, Series B no. 41).

(b) Application of those principles to the present case

42. The applicant was interrogated at the Vásárosnamény police station in the sole presence of a sign-language interpreter. As already noted above (see paragraph 30 above), the applicant is deaf and dumb, illiterate and has an intellectual disability. Moreover, he cannot communicate by means of the official sign language, an interpreter of which was present. In these circumstances, the Court is not persuaded that he can be considered to have obtained the information required to enable him to challenge his detention – and this notwithstanding the fact that the signature of his nickname figures on the minutes of the interrogation.

43. The Court further finds it regrettable that the authorities did not make any truly "reasonable steps" (cf. *Z and Others*, loc.cit.) – a notion quite akin to that of "reasonable accommodation" in Articles 2, 13 and 14 of the UN Convention on the Rights of Persons with Disabilities (see paragraph 19 above) – to address the applicant's condition, in particular by procuring for him assistance by a lawyer or another suitable person. For the Court, the police officers interrogating him must have realised that no meaningful communication was possible in the situation and they should have sought assistance in the first place from the applicant's mother (who could have at least informed the officers about the magnitude of the applicant's communication problems) – rather than simply making the applicant sign the minutes of the interrogation.

44. The foregoing considerations are sufficient to enable the Court to conclude that there has been a violation of Article 5 § 2 of the Convention.

III. OTHER ALLEGED VIOLATIONS OF THE CONVENTION

45. The applicant also complained under Article 5 § 1 that his detention had been unjustified and, under Articles 6 and 13, that the criminal proceedings conducted against him had been unfair.

The Court notes that the applicant, a multiple recidivist, was detained on remand on suspicion of mugging and considers that this measure as such cannot be regarded as unjustified deprivation of liberty, in breach of Article 5 § 1 (c), quite apart from the previous findings in the context of Articles 3 and 5 § 2 (see paragraphs 33 and 44 above). This complaint is therefore manifestly ill-founded within the meaning of Article 35 § 3 (a) and must be rejected, pursuant to Article 35 § 4 of the Convention.

Moreover, the criminal proceedings against the applicant are still pending and consequently, the complaints concerning their fairness are

premature. This complaint must thus be rejected, pursuant to Article 35 §§ 1 and 4.

IV. APPLICATION OF ARTICLE 41 OF THE CONVENTION

46. Article 41 of the Convention provides:

> "If the Court finds that there has been a violation of the Convention or the Protocols thereto, and if the internal law of the High Contracting Party concerned allows only partial reparation to be made, the Court shall, if necessary, afford just satisfaction to the injured party."

A. Damage

47. The applicant claimed 30,000 euros (EUR) in respect of non-pecuniary damage.

48. The Government contested this claim.

49. The Court considers that the applicant must have suffered some non-pecuniary damage and awards him, on the basis of equity, EUR 16,000 under this head.

B. Costs and expenses

50. The applicant also claimed EUR 9,000 for the costs and expenses incurred before the Court. This sum corresponds to 35 hours of legal work billable by his lawyer at an hourly rate of EUR 200 plus VAT and includes 110 euros of clerical costs.

51. The Government contested this claim.

52. According to the Court's case-law, an applicant is entitled to the reimbursement of costs and expenses only in so far as it has been shown that these have been actually and necessarily incurred and are reasonable as to quantum. In the present case, regard being had to the documents in its possession and the above criteria, the Court considers it reasonable to award the sum of EUR 3,000 covering costs under all heads, from which amount EUR 850 – the sum which has been awarded to the applicant under the Council of Europe's legal-aid scheme – must be deducted.

C. Default interest

53. The Court considers it appropriate that the default interest rate should be based on the marginal lending rate of the European Central Bank, to which should be added three percentage points.

FOR THESE REASONS, THE COURT UNANIMOUSLY

1. *Declares* the complaints concerning Articles 3 and 5 § 2 admissible and the remainder of the application inadmissible;

2. *Holds* that there has been a violation of Article 3 of the Convention;

3. *Holds* that there has been a violation of Article 5 § 2 of the Convention;

4. *Holds*
   (a) that the respondent State is to pay the applicant, within three months from the date on which the judgment becomes final in accordance with Article 44 § 2 of the Convention, the following amounts, to be converted into the currency of the respondent State at the rate applicable at the date of settlement:
      (i) EUR 16,000 (sixteen thousand euros), plus any tax that may be chargeable, in respect of non-pecuniary damage;
      (ii) EUR 2,150 (two thousand one hundred and fifty euros), plus any tax that may be chargeable to the applicant, in respect of costs and expenses;
   (b) that from the expiry of the above-mentioned three months until settlement simple interest shall be payable on the above amounts at a rate equal to the marginal lending rate of the European Central Bank during the default period plus three percentage points;

5. *Dismisses* the remainder of the applicant's claim for just satisfaction.

Done in English, and notified in writing on 8 November 2012, pursuant to Rule 77 §§ 2 and 3 of the Rules of Court.

EUROPEAN COURT OF HUMAN RIGHTS
COUR EUROPÉENNE DES DROITS DE L'HOMME

FOURTH SECTION

CASE OF KĘDZIOR v. POLAND

(Application no. 45026/07)

JUDGMENT

STRASBOURG

16 October 2012

FINAL

16/01/2013

This judgment has become final under Article 44 § 2 of the Convention. It may be subject to editorial revision.

In the case of Kędzior v. Poland,

The European Court of Human Rights (Fourth Section), sitting as a Chamber composed of:

David Thór Björgvinsson, *President,*
Lech Garlicki,
Päivi Hirvelä,
Ledi Bianku,
Zdravka Kalaydjieva,
Nebojša Vučinić,
Vincent A. De Gaetano, *judges,*
and Lawrence Early, *Section Registrar,*

Having deliberated in private on 25 September 2012,

Delivers the following judgment, which was adopted on that date:

PROCEDURE

1. The case originated in an application (no. 45026/07) against the Republic of Poland lodged with the Court under Article 34 of the Convention for the Protection of Human Rights and Fundamental Freedoms ("the Convention") by a Polish national, Mr Stanisław Kędzior ("the applicant"), on 4 October 2007.

2. The applicant was represented by Mr A. Bodnar and Mrs M. Zima, lawyers from the Helsinki Foundation for Human Rights (Warsaw, Poland). The Polish Government ("the Government") were represented by their Agent, Mr J. Wołąsiewicz of the Ministry of Foreign Affairs.

3. The applicant complained, in particular, about his placement in a social care home and his inability to obtain release from the home, in breach of Article 5 §§ 1 and 4 of the Convention.

4. On 7 May 2009 the application was communicated to the Government. It was also decided to rule on the admissibility and merits of the application at the same time (Article 29 § 1).

THE FACTS

I. THE CIRCUMSTANCES OF THE CASE

5. The applicant was born in 1956 and lives in Sośnica.

6. The applicant has been undergoing psychiatric treatment since the age of sixteen. He was hospitalised on several occasions in psychiatric hospitals in Lubliniec and Żurawica.

7. The applicant lived in Nowy Lubliniec with his mother and handicapped sister. At the end of 2000 the applicant's brother, who did not live with them, applied to the court submitting that the applicant had been aggressive, had been refusing to take his medication and had been abusing alcohol.

8. On 22 December 2000 the applicant was partly deprived of his legal capacity by a court because of his mental disorder, as he had been diagnosed with schizophrenia.

9. On 28 August 2001 the Lubaczów District Court appointed his brother, Mr Zbigniew Kędzior, as his guardian (*kurator*). Subsequently, the guardian applied to the court to have the order varied and to have the applicant declared totally incapacitated.

10. In the course of the proceedings, on 22 December 2001, an expert psychiatric opinion was prepared which confirmed that the applicant was suffering from schizophrenia and that he had a tendency to abuse alcohol.

11. On 27 December 2001 the Krosno Regional Court changed its previous decision and decided to declare the applicant totally incapacitated as his mental condition had deteriorated. The applicant's brother remained his guardian (*opiekun prawny*).

12. On an unspecified date the applicant's guardian requested the Ruda Różaniecka Social Care Home (*Dom Pomocy Społecznej*) to admit the applicant.

13. On 8 February 2002 the Lubaczów District Family Centre (*Powiatowe Centrum Pomocy Rodzinie*) decided to place the applicant in the social care home, as requested by his guardian. In terms of domestic law the admission was voluntary and did not require approval by a court.

14. Between 31 October 2001 and 11 February 2002 the applicant was in a psychiatric hospital in Jaroslaw.

15. On 11 February 2002 the applicant was admitted to the Ruda Różaniecka Social Care Home, where he remained for ten years.

16. The applicant complained to the Lubaczów District Court that he had been placed in the care home against his will and without any medical necessity. On 12 April 2002 the president of the court informed him that the placement had been in accordance with the law.

17. On 27 December 2004 the District Family Centre informed the applicant that his guardian was authorised to place him in the care home.

18. On 9 February 2006 the Przemysl Regional Court rejected the applicant's request for proceedings to be initiated to have his legal capacity fully restored. The court considered that the applicant, being legally incapacitated, did not have the authority to lodge such a request, and that his guardian did not support the request.

19. On 23 February 2006 the president of the Lubaczów District Court explained to the applicant again that due to his total incapacitaty he had not been a party to the proceedings relating to his placement in the care home.

20. On 17 March 2006 the president of the Przemysl Regional Court informed the applicant in a letter that there were no grounds to institute proceedings to restore the applicant's legal capacity of the court's own motion.

21. On 5 June 2006 and 15 February 2007 the District Family Centre again replied to the applicant's letters informing him that only his guardian could approve his release from the care home.

22. On 21 September 2006 the Przemysl Regional Court again rejected a request by the applicant to have his legal capacity restored, given his lack of legal standing to initiate such proceedings.

23. On 17 January 2007 the president of the Lubaczów District Court informed the applicant that any variation of his incapacitation order was governed by Article 559 of the Code of Civil Procedure (CCP). The president further clarified that proceedings to vary the incapacitation order could be instituted by a court of its own motion. In addition, the applicant himself, although lacking legal capacity, could apply to the court for such proceedings to be instituted. According to the president, the latter possibility was based on the interpretation of the law as provided in a commentary to the CCP.

24. The applicant again asked the Przemyśl Regional Court to quash the legal incapacitation order. On 8 February 2007 the court rejected the request as inadmissible in law.

25. On 1 March 2007 the president of the Przemysl Regional Court explained to the applicant, in a letter of response to the applicant's query, that only his legal guardian could institute proceedings to have his legal incapacity revoked. Alternatively, the applicant could request the court to institute such proceedings of its own motion, but for that to succeed new medical evidence needed to be provided.

26. On 11 May and 7 August 2007 the Przemysl Regional Court rejected further requests by the applicant for his legal capacity to be restored, on the ground that the applicant had no legal standing to institute such proceedings.

27. On 17 September 2007 the same court rejected a further appeal by the applicant against the decision of 7 August 2007. The court noted that following the Constitutional Court's judgment of 7 March 2007 the domestic law had been amended, and it was now possible for a person lacking legal capacity to institute proceedings to have the incapacitation order set aside. However, the amendments to the CCP had been introduced by the law of 9 May 2007, which would enter into force only on 7 October 2007. Thus, the applicant's request had not been examined.

28. On 13 July 2007 the Jarosław District Prosecutor informed the applicant that his complaints, in particular against Dr F., who had prepared an expert opinion in 2001 in the proceedings concerning his incapacitation, were manifestly ill-founded.

29. On several occasions in 2008 the applicant attempted to institute proceedings to have his incapacitation quashed; however, all his requests were refused for failure to comply with various procedural requirements, including failure to pay court fees in the amount of 40 Polish zlotys (PLN, approx. 10 euros (EUR)). The applicant appealed against all the decisions and submitted new requests for the incapacitation order to be lifted.

30. It appears that a later request was successful, as on 9 March 2009 the Przemysl Regional Court instituted proceedings to have the applicant's legal capacity restored (file no. Ns 23/09). The court decided to have an expert opinion prepared and for the applicant to be heard by a judge in the presence of a psychologist and a psychiatrist.

31. On 20 March 2009 a judge, with a panel of experts, heard the applicant during a twenty-five-minute-long interview.

32. On 7 April 2009 the experts submitted their opinion to the court on the basis of that interview with the applicant. The applicant submitted to the experts that he had been placed in the social care home against his will by his brother seven years previously. In the home he had been independent, had not been drinking alcohol and had been taking his medication. In the past four years he had been given long leaves of absence to visit his home, and had travelled alone. He would like to make his own decisions and to vote in elections and not to be obliged to ask his brother for everything. He also mentioned that if his capacity were restored he would prefer to stay in the social care home and to continue visiting his family home on leaves of absence.

33. The experts concluded that the applicant was suffering from schizophrenia, although for several years he had not experienced psychotic symptoms or displayed aggressive behaviour. However, without a rigorous therapeutic regime the applicant's state of health could worsen. According to the experts the applicant did not consider himself to be a person with a mental disorder, and showed a lack of critical judgment regarding his state of health and his actions. On the basis of the file and the interview with the applicant the experts concluded that his primary intention in applying for restoration of his legal capacity was to leave the social care home. In this context they noted that during the interview the applicant had spontaneously declared that he would prefer to stay in the social care home even if his capacity were restored. Nevertheless, judging from his consistent and extensive correspondence with the courts so far, the experts considered that his sole intention remained "to live freely in the family home and not in the social care institution". The experts concluded that the applicant's mental state had improved but not to the extent that would allow him to function independently.

34. On 8 April 2009 the experts informed the court that they considered it unnecessary to notify the applicant of any court decisions or applications to court, given his state of health.

35. On 9 April 2009 the Przemysl Regional Court decided to stop sending the applicant any notifications of court decisions and appointed a court officer as a guardian to represent his interests in legal proceedings. The applicant submitted that he had never met this guardian.

36. On 9 April 2009 the Przemysl Regional Court dismissed a request by the applicant to have his legal capacity restored. The decision contains no reasons, as it appears that the applicant's guardian had not asked for them. Nor did she lodge an appeal against the decision.

37. On 16 January 2012, at the request of the applicant's guardian, he was transferred to the Sośnica Social Care Home.

II. RELEVANT DOMESTIC LAW AND PRACTICE

38. Article 559 of the Code of Civil Procedure ("the CCP") provides as follows:

> "1. A court may quash legal incapacitation if the reasons for which it was ordered cease to exist; the quashing may take place of the court's own motion.
>
> 2. Where the mental state of an incapacitated person improves, a court may change the total incapacitation to partial; where his or her mental state deteriorates, partial incapacitation may be changed to total."

39. On 7 March 2007 the Constitutional Court gave judgment in case no. K 28/05. The judgment was published and entered into force on 17 March 2007. The court decided that Article 559 of the CCP was unconstitutional in so far as it deprived an incapacitated person of the right to lodge a request to have a legal incapacitation order quashed or varied. As regards the consequences of the judgment, the Constitutional Court considered that the most appropriate means of enforcement would be for the legislature to introduce an amendment to the Code. In that connection it welcomed a bill under examination by Parliament which included a relevant amendment. However, it emphasised that the judgments of the Constitutional Court should be enforced not only by the legislature but also by the ordinary courts. In the present case that would mean changing the unconstitutional practice of courts examining cases concerning incapacitation, and allowing proceedings to be brought by individuals deprived of legal capacity. The Constitutional Court stated:

> "From the date of publication of the judgment in the Official Journal the presumption of the constitutionality of Article 559, taken together with Article 545 §§ 1 and 2 of the CCP, in so far as it prevented an incapacitated person from instituting proceedings to quash or vary an incapacitation order, is no longer applicable. The Constitutional Court wishes to emphasise that that is so in consequence of the judgment of the Constitutional Court itself, whether or not legislative changes are eventually introduced. It should therefore be considered that the finding by the Constitutional Court of the unconstitutionality of limiting an incapacitated person's procedural rights allows the courts to interpret the Code of Civil Procedure in accordance with the Constitution. In the context of this judgment

> the opinion expressed by the Supreme Court's resolution of 2004, to the effect that amelioration of the procedural position of incapacitated persons could not be achieved through interpretation of the existing regulations as that would amount to overstepping the boundaries of judicial power, is no longer applicable. Judges, when carrying out their duties, are subject not only to statute but also to the Constitution, which is the highest law in the Republic of Poland and may – and in cases of conflict with existing statutes confirmed by the Constitutional Court shall – be directly applicable."

40. The Law of 9 May 2007, which entered into force on 7 October 2007, amended the CCP. A new paragraph was added; Article 559 § 3 provides as follows:

> "An application to have a legal incapacitation order quashed or varied may also be lodged by the incapacitated person."

41. According to the 1994 Psychiatric Protection Act (*ustawa o ochronie zdrowa psychicznego*) the admission to a psychiatric hospital of a person who has a mental disorder or is mentally disabled and is unable to express his or her consent must be approved by a civil court (section 22 (2)). A court can also decide on the admission of a person who has a mental disorder but who does not consent to treatment in the hospital. A guardian can express consent to admit an adult who is totally incapacitated, but the latter must agree too, unless he is unable to express agreement. In any event, and in particular in the event of disagreement between the patient and the guardian, the question of admission is decided or confirmed by a court (section 22). Admission to the hospital is preceded by a psychiatric examination.

42. Admission to a social care home is governed by section 38 et seq. of the Act. It provides that a person who, on account of mental disorder or mental disability, is unable to take care of himself or herself and cannot be taken care of by somebody else, and does not need hospital treatment, may be placed in a social care home with his or her consent or the consent of his or her guardian. Only if the person concerned or his or her guardian does not consent to the placement must the decision be taken by a court.

43. According to the Ordinance of the Minister of Justice of 22 February 1995, a regional court must supervise the legality of the admission and continuing residence of individuals confined to psychiatric hospitals and social care homes (section 1). However, an obligation to carry out periodic reviews, every six months, of the need for continuing residence applies only to those admitted to psychiatric hospitals (section 2 (3)).

44. The regulations on the functioning of social care homes were also governed by the 1990 Social Assistance Act (*Ustawa o pomocy społecznej*), replaced by the Act of 2004. According to the relevant regulations, the costs of the person's stay in a social care home must not exceed 70% of his or her income or pension. Both Acts provided that placement of a totally incapacitated person in a social care home may only be done with his or her guardian's consent.

45. The relevant international instruments and conclusions on the comparative law are set out in the judgment of *Stanev v. Bulgaria* [GC], no. 36760/06, §§ 72, 73 and 88-95, ECHR 2012.

THE LAW

I. ALLEGED VIOLATION OF ARTICLE 5 § 1 OF THE CONVENTION

46. The applicant complained that his placement in the social care home had constituted an unlawful deprivation of liberty in breach of Article 5 § 1 of the Convention, which reads as follows:

> "1. Everyone has the right to liberty and security of person. No one shall be deprived of his liberty save in the following cases and in accordance with a procedure prescribed by law:
>
> (e) the lawful detention of persons ... of unsound mind..."

47. The Government contested that argument in general terms.

A. Submissions by the parties

1. The applicant

48. The applicant maintained that his placement in the social care home was in breach of Article 5 § 1 of the Convention. As regards the objective aspect of deprivation of liberty, the applicant submitted that his situation in the Ruda Różaniecka Home had been similar to the conditions examined by the Court in the case of *D.D. v. Lithuania* (no. 13469/06, 14 February 2012). In particular, the applicant could not leave the home freely. Only his guardian could apply to the home's management for a leave of absence for the applicant. The length of the leave of absence was limited and could only be extended exceptionally. In the event of an unauthorised absence the police would be informed. Therefore, the applicant had been entirely under the control of the staff of the social home.

49. From the subjective point of view the applicant's stay in the home should be considered a deprivation of liberty, as he had never consented to be placed in the home and was never asked for his view in that connection. In numerous letters he sent to various authorities and courts over the last ten years the applicant clearly expressed his wish to leave the social care home. On numerous occasions the applicant emphasised that his placement had been illegal and that he wished to return to his family home. The applicant also submitted that he was in conflict with his brother, who had been his guardian since 2001, and that he had not seen him since 2005.

50. The applicant's representative expressed doubts as to whether his placement in the home had been in accordance with domestic law. He submitted that the applicant's brother had submitted a request for the applicant to be placed in the home on 1 December 2001, before he had been officially appointed his brother's guardian, once his brother had become a totally incapacitated person, on 30 January 2002. The applicant's brother did not discuss the matter with the applicant, nor did he apply to a court for approval of his action.

In any event, the applicant's representative considered that his detention had also been illegal in the light of the *Winterwerp* criteria (see *Winterwerp v. the Netherlands*, 24 October 1979, § 39, Series A no. 33). The applicant did not contest the fact that he had a mental illness; however, he considered that placing him in a home against his will had not been the only way to protect his interests and well-being.

2. The Government

51. The Government did not contest the applicant's submissions as regards the applicant's situation in the social care home and the regulations regarding leave of absence. They submitted in general that given the applicant's state of health the social care home had been the best choice for him in order to protect his well-being. The Government also stated that after several years in the Ruda Różaniecka Home the applicant had been granted long leaves of absence so that he could spend a considerable amount of time with his family.

The Government considered that prior to his placement in the social care home on 11 February 2002 the applicant had been examined by a psychiatrist on 22 December 2001 in the context of the incapacitation proceedings.

52. The Government referred in general to the case of *H.M. v Switzerland* (no. 39187/98, ECHR 2002-II) and considered that the circumstances of that case were similar to the present one. They submitted that in 2009, in the course of the proceedings aimed at changing the incapacitation order, the applicant stated that he had no intention to leave the social care home (see paragraph 32 above).

3. The third party

53. The third party, the Mental Disability Advocacy Centre (MDAC) submitted their comments regarding the situation of individuals deprived of legal capacity. They considered that even total incapacitation should not automatically deprive a person of the right to independent living. An assessment of a person's mental state does not necessarily determine that person's functional capacity. According to the World Health Organisation one in four people in the world will have a mental health problem at some

point in their lives. The MDAC considered that if a person with a disability retained the functional capacity to consent to a treatment any involuntary measure in respect of such person should be considered to be in breach of the Convention.

The MDAC underlined that in many countries, including Poland, mental health services were heavily institutionalised and lacked any alternative in a form of community-based, modern and humane mental health and social care services.

B. Admissibility

1. General principles

54. The Court reiterates that in order to determine whether there has been a deprivation of liberty, the starting point must be the particular situation of the individual concerned. Account must be taken of a whole range of factors arising in a particular case, such as the type, duration, effects and manner of implementation of the measure in question (see *Guzzardi v. Italy*, 6 November 1980, § 92, Series A no. 39, and *Ashingdane v. the United Kingdom*, 28 May 1985, § 41, Series A no. 93).

55. The Court further observes that the notion of deprivation of liberty within the meaning of Article 5 § 1 does not only comprise the objective element of a person's confinement in a particular restricted space for a length of time which is more than negligible. A person can only be considered to have been deprived of his liberty if, as an additional subjective element, he has not validly consented to the confinement in question (see *Storck v. Germany*, no. 61603/00, § 74, ECHR 2005-V).

56. The Court notes its case-law to the effect that a person could be considered to have been "detained" for the purposes of Article 5 § 1 even during a period when he or she was in an open ward with regular unescorted access to unsecured hospital grounds and the possibility of unescorted leave outside the hospital (see *H.L. v. the United Kingdom*, no. 45508/99, § 92, ECHR 2004-IX).

The Court also had the opportunity to examine placements in social care homes of mentally incapacitated individuals, and to find that it amounted to deprivation of liberty within the meaning of Article 5 § 1 of the Convention (see *Stanev*, cited above, § 132 and *D.D. v. Lithuania*, cited above, § 152).

2. Application of these principles in the present case

57. As concerns the circumstances of the present case, the Court considers that the key factor in determining whether Article 5 § 1 applies to the applicant's situation is whether the care home's management has exercised complete and effective control over his treatment, care, residence and movement from February 2002, when he was admitted to that

institution, to the present day (see paragraph 44 above and *D.D. v. Lithuania*, cited above, § 149). The applicant was not free to leave the institution without the management's permission. Nor could the applicant himself request leave of absence from the home, as such requests had to be made by the applicant's official guardian. Accordingly, and as in the *Stanev* case, although the applicant was able to undertake certain journeys and to spend time with his family the factors mentioned above lead the Court to consider that the applicant was under constant supervision and was not free to leave the home without permission whenever he wished (see *Stanev*, cited above, § 128). Moreover the Court notes that it would appear that the applicant's extended visits to his family were only authorised during the last few years of his stay in the Ruda Różaniecka Home.

Finally, the management of the care home controlled the remaining 30% of the applicant's disability pension. The Court observes in this respect that the facts of the applicant's situation at the home were largely undisputed.

58. The Court next turns to the "subjective" element, which was partly disputed between the parties. The Court reiterates that the fact that the applicant lacked *de jure* legal capacity to decide matters for himself does not necessarily mean that he was *de facto* unable to understand his situation (see *Shtukaturov v. Russia*, no. 44009/05, § 108, ECHR 2008). Whilst accepting that in certain circumstances, due to the severity of his or her incapacity, an individual may be wholly incapable of expressing consent or objection to being confined in an institution for the mentally handicapped or another secure environment, the Court finds that this was not the applicant's case. The documents presented to the Court indicate that the applicant subjectively perceived his compulsory admission to the Ruda Różaniecka Home as a deprivation of liberty. On a number of occasions the applicant requested the courts to start proceedings to quash his legal incapacitation order, submitting that this would allow him to leave the home. For many years he has been consistently complaining about his placement in the care home, to the courts, the prosecutor and the District Family Centre. Also, in his correspondence with the Court between 2007 and 2012 the applicant consistently asked for help to leave the social care home where he had been placed and was being kept against his will. The Court takes note of the Government's argument relating to the applicant's own declaration made when interviewed by the experts on 7 April 2009 (see paragraphs 32 and 52 above). However, the Court would rely on the assessment of this statement made by the experts themselves who disregarded it as being in clear contradiction to the applicant's real intentions, consistently expressed so far (see paragraph 33 above).

In sum, even though the applicant had been deprived of his legal capacity, he was still able to express an opinion on his situation, and in the

present circumstances the Court finds that the applicant had never agreed to being placed in the social care home.

59. Lastly, the Court notes that although the applicant's admission was requested by the applicant's guardian, a private individual, it was implemented by a State-run institution – the care home. Therefore, the responsibility of the authorities for the situation complained of was engaged (see *Shtukaturov*, cited above, § 110, and *D.D. v. Lithuania*, cited above, § 151).

60. In the light of the foregoing the Court concludes that the applicant was "deprived of his liberty" within the meaning of Article 5 § 1 of the Convention from February 2002 and remains so to this day.

61. The Court notes that this complaint is not manifestly ill-founded within the meaning of Article 35 § 3 (a) of the Convention. It further notes that it is not inadmissible on any other grounds. It must therefore be declared admissible.

C. Merits

62. The Court accepts that the applicant's detention was "lawful", if this term is construed narrowly, in the sense of formal compatibility of the detention with the procedural and material requirements of the domestic law. It appears that the only condition for the applicant's detention was the consent of his official guardian, his brother, who was also the person who had sought the applicant's placement in the care home (see *Shtukaturov*, cited above, § 112).

63. However, the Court reiterates that the notion of "lawfulness" in the context of Article 5 § 1 (e) has also a broader meaning. "The notion underlying the term ['procedure prescribed by law'] is one of fair and proper procedure, namely that any measure depriving a person of his liberty should issue from and be executed by an appropriate authority and should not be arbitrary" (see *Winterwerp*, cited above, § 45). In other words, the detention cannot be considered "lawful" within the meaning of Article 5 § 1 if the domestic procedure does not provide sufficient guarantees against arbitrariness.

64. In its above-mentioned *Winterwerp* judgment, the Court set out three minimum conditions which have to be satisfied in order for there to be "the lawful detention of a person of unsound mind" within the meaning of Article 5 § 1 (e): except in emergency cases, the individual concerned must be reliably shown to be of unsound mind, that is to say, the existence of a true mental disorder must be established by a competent authority on the basis of objective medical expertise; the mental disorder must be of a kind or degree warranting compulsory confinement; and the validity of continued confinement depends upon the persistence of such a disorder.

65. Turning to the present case, the Court notes that it was submitted on behalf of the applicant that his deprivation of liberty had been arbitrary, because he had not been reliably shown to be of unsound mind at the time of his confinement. The Government submitted that the applicant was examined by a psychiatrist about one month before being placed in the home.

66. The Court reiterates that the mental condition of a person must have been established at the time he is deprived of liberty (see *O.H. v. Germany*, no. 4646/08, § 78, 24 November 2011). In the present case a psychiatrist examined the applicant on 22 December 2001 in the course of the incapacitation proceedings, while the decision to place him in the care home was taken one month and seventeen days later, on 8 February 2002.

67. Taking into account the relative brevity of this period, the Court accepts that the authorities could be considered as having based their decision on a recent medical assessment confirming the applicant's mental illness when placing him in the home (compare and contrast; *Stukatorov*, cited above, § 115 where the period amounted to ten months, and *Stanev*, cited above, § 156 where it had been over two years).

68. Nevertheless, the Court considers that the other two requirements of Article 5 § 1 (e) were not satisfied fully in the present case. As regards the need to justify the placement by the severity of the disorder, it notes that the purpose of the 2001 medical report was not to examine whether the applicant's state of health required him to be placed in a home for people with mental disorders, but solely to determine the issue of his legal protection.

69. The Court also notes deficiencies in the assessment of whether the disorders warranting the applicant's confinement still persisted. There is no appearance that the applicant was under the supervision of a psychiatrist and that there had been any periodic psychiatric examinations (see paragraph 43 above). Indeed, no provision was made for such an assessment under the relevant legislation, and the next psychiatric examination of the applicant took place almost eight years later, in April 2009, in the context of proceedings for quashing of the legal incapacitation order (see paragraph 32 above).

70. In view of the above considerations, the Court finds that the regulatory framework for placing in social care homes persons, like the applicant, who have been totally deprived of their legal capacity, did not provide the necessary safeguards at the material time. The Court will revert further to this matter in the context of the applicant's complaint under Article 5 § 4 of the Convention.

71. Having regard to the foregoing, and in particular to the total lack of continued assessment of the applicant's disorder, the Court observes that the applicant's placement in the home was not ordered "in accordance with a procedure prescribed by law" and that his deprivation of liberty was not justified by sub-paragraph (e) of Article 5 § 1.

Furthermore, the Government have not indicated any of the other grounds listed in sub-paragraphs (a) to (f) which might have justified the deprivation of liberty in issue in the present case.

There has therefore been a violation of Article 5 § 1.

II. ALLEGED VIOLATION OF ARTICLE 5 § 4 OF THE CONVENTION

72. The applicant complained that he had not had at his disposal any effective procedure by which he could challenge the necessity for his continued stay in the social care home and obtain his release.

The applicant submitted that he had been admitted to the care home at his guardian's request and without his agreement. The lawfulness of his admission to the home, considered voluntary since it was made by his guardian, had not been reviewed by a court, either upon his admission or at any other time. The domestic law did not impose an obligation to have periodic reviews of the continuing need for him to remain in the social care home. In fact, he was not examined by a psychiatrist during his ten-year stay in the Ruda Różaniecka Home, except once, in 2009 in the course of the proceedings for quashing the legal incapacitation order. Being deprived of his legal capacity, the applicant was prevented from independently pursuing any judicial legal remedy to challenge his continued stay in the social care home.

Article 5 § 4, relied on by the applicant, provides as follows:

> "Everyone who is deprived of his liberty by arrest or detention shall be entitled to take proceedings by which the lawfulness of his detention shall be decided speedily by a court and his release ordered if the detention is not lawful."

73. The Government did not comment on the admissibility and merits of this complaint.

A. Admissibility

74. The Court notes that this complaint is not manifestly ill-founded within the meaning of Article 35 § 3 (a) of the Convention. It further notes that it is not inadmissible on any other grounds. It must therefore be declared admissible.

B. Merits

1. General principles

75. Among the principles emerging from the Court's case-law on Article 5 § 4 concerning "persons of unsound mind" are the following:

(a) a person detained for an indefinite or lengthy period is in principle entitled, at any rate where there is no automatic periodic review of a judicial

character, to bring proceedings "at reasonable intervals" before a court to put in issue the "lawfulness" – within the meaning of the Convention – of his detention;

(b) Article 5 § 4 requires the procedure followed to have a judicial character and to afford the individual concerned guarantees appropriate to the kind of deprivation of liberty in question; in order to determine whether proceedings provide adequate guarantees, regard must be had to the particular nature of the circumstances in which they take place;

(c) the judicial proceedings referred to in Article 5 § 4 need not always be attended by the same guarantees as those required under Article 6 § 1 for civil or criminal litigation. Nonetheless, it is essential that the person concerned should have access to a court and the opportunity to be heard either in person or, where necessary, through some form of representation (see *Megyeri v. Germany*, 12 May 1992, § 22, Series A no. 237-A; see also *Stanev*, cited above, § 171).

76. This is so in cases where the original detention was initially authorised by a judicial authority (see *X v. the United Kingdom*, 5 November 1981, § 52, Series A no. 46), and it is all the more true in the circumstances where the applicant's placement in the care home has been instigated by a private individual, namely the applicant's guardian, and decided upon by the municipal and social care authorities without any involvement by the courts (see *D.D. v. Lithuania*, cited above, § 164).

2. Application of these principles in the present case

77. The Court accepts that the forms of judicial review may vary from one domain to another and may depend on the type of deprivation of liberty at issue. It is not within the province of the Court to inquire into what would be the best or most appropriate system of judicial review in this sphere (see *D.D. v. Lithuania*, cited above, § 165). However, in the present case the courts were not involved in deciding on the applicant's placement in the care home at any moment or in any form. It appears that, in situations such as the applicant's, Polish law does not provide for automatic judicial review of the lawfulness of admitting a person to, and keeping him in, an institution such as a social care home (see paragraphs 41 and 59 above). In addition, a review cannot be initiated by the person concerned if that person has been deprived of his legal capacity. In sum, the applicant was prevented from independently pursuing any legal remedy of a judicial nature to challenge his continued involuntary institutionalisation. This again confirms a lack of an effective regulatory framework in this area (see paragraph 70 above).

78. Moreover, the Court notes that the Government did not make any submissions in respect of this complaint, and did not indicate any procedure that could have given rise to a judicial review of the lawfulness of his placement as required by Article 5 § 4.

79. In the light of the above, the Court holds that there has been a violation of Article 5 § 4 of the Convention.

III. ALLEGED VIOLATION OF ARTICLE 6 OF THE CONVENTION

80. The applicant submitted that he had been prevented from directly applying to a court for restoration of his legal capacity, in spite of the Constitutional Court's judgment finding that the relevant provisions had been unconstitutional. The applicant's representative submitted that the judgment of the Constitutional Court of 7 March 2007 had been directly applicable and had created a right for totally incapacitated individuals, such as the applicant, to directly lodge a request for an incapacitation order to be lifted. Nevertheless, all his requests lodged before the entry into force of the new law amending the Code of Civil Procedure had been refused, in disregard of the Constitutional Court's judgment. This constituted a breach of the applicant's right of access to court.

The applicant relied on Article 6 § 1 of the Convention, the relevant parts of which read:

> "In the determination of his civil rights and obligations ... everyone is entitled to a fair ... hearing ... by [a] ... tribunal ..."

81. The Government did not comment on the admissibility and merits of this complaint.

A. Admissibility

82. The Court notes that this complaint is not manifestly ill-founded within the meaning of Article 35 § 3 (a) of the Convention. It further notes that it is not inadmissible on any other grounds. It must therefore be declared admissible.

B. Merits

1. General principles

83. The Court reiterates that Article 6 § 1 secures to everyone the right to have any claim relating to his or her civil rights and obligations brought before a court or tribunal (see *Golder v. the United Kingdom*, 21 February 1975, § 36, Series A no. 18). This "right to court", of which the right of access is an aspect, may be relied on by anyone who considers on arguable grounds that an interference with the exercise of his or her civil rights is unlawful and complains that no possibility has been afforded to submit that claim to a court meeting the requirements of Article 6 § 1 (see, *inter alia*, *Roche v. the United Kingdom* [GC], no. 32555/96, § 117, ECHR 2005-X, and *Salontaji--Drobnjak v. Serbia*, no. 36500/05, § 132, 13 October 2009).

84. The right of access to court by its very nature calls for regulation by the State and may be subject to limitations. Nevertheless, the limitations applied must not restrict the access allowed the individual in such a way or to such an extent that the very essence of that right is impaired. A limitation will violate the Convention if it does not pursue a legitimate aim and if there is not a reasonable relationship of proportionality between the means employed and the aim sought to be achieved (see, among other authorities, *Kreuz v. Poland*, no. 28249/95, §§ 52-57, ECHR 2001-VI, and *Liakopoulou v. Greece*, no. 20627/04, §§ 19-25, 24 May 2006).

85. The Court has already held, in respect of partially incapacitated individuals, that given the trends emerging in national legislation and the relevant international instruments, Article 6 § 1 of the Convention must be interpreted as guaranteeing a person, in principle, direct access to a court to seek restoration of his or her legal capacity (see *Stanev*, cited above, § 245). In the latter judgment the Court observed that eighteen of the twenty national legal systems studied in 2011 provided for direct access to the courts for any partially incapacitated individuals wishing to have their status reviewed. In seventeen States such access was open even to those declared fully incapable (see *Stanev*, §§ 95 and 243). This indicates that there is now a trend at European level towards granting legally incapacitated individuals direct access to the courts to seek restoration of their capacity.

2. Application of these principles in the present case

86. The Court observes at the outset that in the present case none of the parties disputed the applicability of Article 6 to the proceedings for restoration of legal capacity. The applicant, who has been totally deprived of legal capacity, complained that between March and October 2007 he was prevented from directly applying to a court to have his capacity restored in spite of the Constitutional Court's judgment. The Court has had occasion to clarify that proceedings for restoration of legal capacity are directly decisive for the determination of "civil rights and obligations" (see *Matter v. Slovakia*, no. 31534/96, § 51, 5 July 1999). Article 6 § 1 of the Convention is therefore applicable in the instant case.

87. It remains to be determined whether the applicant's access to court was restricted, and if so whether the restriction pursued a legitimate aim and was proportionate to it.

88. Turning to the facts of the instant case, the Court firstly observes that it is not called here to decide whether under the Convention the right of partially incapacitated persons to have a direct access to court, established in the *Stanev* judgment, should be extended to persons totally incapacitated. The question under consideration arose because the Polish Constitutional Court declared unconstitutional the domestic provision that barred persons deprived of their legal capacity from directly instituting proceedings to have

a legal incapacitation order varied. The Constitutional Court's judgment of 7 March 2007 entered into force ten days later.

The Constitutional Court explicitly addressed the lower courts, reiterating that as a consequence of its own judgment the domestic law should be interpreted as allowing incapacitated individuals access to court. That should be so with or without the relevant amendment to the CCP introduced by the legislator.

In spite of this clear indication, the applicant's requests to have his legal capacity restored were rejected on 11 May, 7 August, and 17 September 2007 as not provided by law (see paragraphs 26 and 27 above). On the last occasion the District Court referred to the Constitutional Court's judgment, but gave no explanation as to why it had not applied it. The Court notes that the Government also failed to provide any explanation in this respect.

89. The Court reiterates that the right to ask a court to review a declaration of incapacity is one of the most important rights for the person concerned, since such a procedure, once initiated, will be decisive for the exercise of all the rights and freedoms affected by the declaration of incapacity, not least in relation to any restrictions that may be placed on the person's liberty (see *Shtukaturov*, cited above, § 71, and *Stanev*, cited above, § 241).

90. The Court considers that the Constitutional Court's judgment, which explicitly urged lower courts not to limit the procedural rights of incapacitated individuals, was legally binding notwithstanding the unfinished legislative process and the domestic court's reluctance to apply directly that judgment. In these circumstances, the applicant was deprived of a clear, practical and effective opportunity to have access to court in respect of his request to restore his legal capacity. All in all, the system was therefore not sufficiently coherent and clear (see *De Geouffre de la Pradelle v. France*, 16 December 1992, § 34, Series A no. 253-B). Also, under those circumstances, refusing the applicant's requests for the incapacitation order to be changed on at least three occasions between March and October 2007 cannot be seen as justified enforcement of a legitimate procedural limitation on the applicant's right of access to court (see *Angel Angelov v. Bulgaria*, no. 51343/99, § 38, 15 February 2007).

The Court takes note that subsequently the relevant provision of the CCP was amended and in 2009 the applicant was finally able to initiate proceedings aimed at varying his incapacitation order (see paragraphs 30 and 40 above). However, this positive development cannot alter the above conclusion, which relates to the period prior to entry into force of the above-mentioned amendment.

91. The Court therefore concludes that there has been a violation of Article 6 § 1 of the Convention.

IV. ALLEGED VIOLATION OF ARTICLE 8 OF THE CONVENTION

92. The applicant further complained under Article 8 of the Convention in that placing him in the social care home for an indefinite period of time constituted an interference with his right to respect for his private and family life. The Government did not comment on the applicant's complaint.

93. The Court notes that his complaint is linked to the ones examined above and must therefore likewise be declared admissible.

94. However, having regard to the reasons which led the Court to find a violation of Articles 5 §§ 1 and 4 of the Convention (see paragraphs 70 and 78 above), the Court finds that no separate issue arises under Article 8 of the Convention, and this complaint does not require a separate examination (see *Stanev*, cited above, § 252).

V. APPLICATION OF ARTICLE 41 OF THE CONVENTION

95. Article 41 of the Convention provides:

> "If the Court finds that there has been a violation of the Convention or the Protocols thereto, and if the internal law of the High Contracting Party concerned allows only partial reparation to be made, the Court shall, if necessary, afford just satisfaction to the injured party."

A. Damage

96. The applicant claimed EUR 10,000 in respect of non-pecuniary damage.

97. The Government contested this claim as excessive.

98. The Court awards the applicant EUR 10,000 in respect of non-pecuniary damage.

B. Costs and expenses

99. The applicant, who was represented by lawyers from the Helsinki Foundation for Human Rights, did not make any claim for costs and expenses.

C. Default interest rate

100. The Court considers it appropriate that the default interest rate should be based on the marginal lending rate of the European Central Bank, to which should be added three percentage points.

FOR THESE REASONS, THE COURT UNANIMOUSLY

1. *Declares* the application admissible;

2. *Holds* that there has been a violation of Article 5 § 1 of the Convention;

3. *Holds* that there has been a violation of Article 5 § 4 of the Convention;

4. *Holds* that there has been a violation of Article 6 § 1 of the Convention;

5. *Holds* that there is no need to examine separately the complaint under Article 8 of the Convention;

6. *Holds*

(a) that the respondent State is to pay the applicant, within three months of the date on which the judgment becomes final in accordance with Article 44 § 2 of the Convention, EUR 10,000 (ten thousand euros), plus any tax that may be chargeable, in respect of non-pecuniary damage, to be converted into the currency of the respondent State at the rate applicable on the date of settlement;

(b) that from the expiry of the above-mentioned three months until settlement simple interest shall be payable on the above amount at a rate equal to the marginal lending rate of the European Central Bank during the default period plus three percentage points.

Done in English, and notified in writing on 16 October 2012, pursuant to Rule 77 §§ 2 and 3 of the Rules of Court.

COUR EUROPÉENNE DES DROITS DE L'HOMME
EUROPEAN COURT OF HUMAN RIGHTS

FIRST SECTION

CASE OF SHTUKATUROV v. RUSSIA

(Application no. 44009/05)

JUDGMENT

STRASBOURG

27 March 2008

FINAL

27/06/2008

In the case of Shtukaturov v. Russia,

The European Court of Human Rights (First Section), sitting as a Chamber composed of:

Christos Rozakis, *President*,
Nina Vajić,
Anatoly Kovler,
Khanlar Hajiyev,
Dean Spielmann,
Giorgio Malinverni,
George Nicolaou, *judges*,
and Søren Nielsen, *Section Registrar*,

Having deliberated in private on 6 March 2008,

Delivers the following judgment, which was adopted on that date:

PROCEDURE

1. The case originated in an application (no. 44009/05) against the Russian Federation lodged with the Court under Article 34 of the Convention for the Protection of Human Rights and Fundamental Freedoms ("the Convention") by a Russian national, Mr Pavel Vladimirovich Shtukaturov ("the applicant"), on 10 December 2005.

2. The applicant, who was granted legal aid, was represented by Mr D. Bartenev, a lawyer practising in St Petersburg. The Russian Government ("the Government") were represented by Mr P. Laptev, the former Representative of the Russian Federation at the European Court of Human Rights.

3. The applicant alleged that, by depriving him of his legal capacity without his participation and knowledge, the domestic courts had breached his rights under Articles 6 and 8 of the Convention. He further alleged that his detention in a psychiatric hospital infringed Articles 3 and 5 of the Convention.

4. On 9 March 2006 the Court decided that an interim measure should be indicated to the Government under Rule 39 of the Rules of Court. The Government was requested to allow the applicant to meet his lawyer in hospital in order to discuss the present case before the Court.

5. On 23 May 2006 the Court decided to give notice of the application to the Government. Under the provisions of Article 29 § 3 of the Convention, it decided to examine the merits of the application at the same time as its admissibility.

THE FACTS

I. THE CIRCUMSTANCES OF THE CASE

6. The applicant was born in 1982 and lives in St Petersburg.

7. Since 2002 the applicant has suffered from a mental disorder. On several occasions he was placed in Hospital no. 6 in St Petersburg for in-patient psychiatric treatment. In 2003 he obtained the status of a disabled person. The applicant lived with his mother; he did not work and received a disability pension.

8. In May 2003 the applicant's grandmother died. The applicant inherited a flat from her in St Petersburg and a house with a plot of land in the Leningrad region.

9. On 27 July 2004 the applicant was placed in Hospital no. 6 for in-patient treatment.

A. Incapacitation proceedings

10. On 3 August 2004 the applicant's mother lodged an application with the Vasileostrovskiy District Court of St Petersburg, seeking to deprive the applicant of legal capacity. She claimed that her son was inert and passive, that he rarely left the house, that he spent his days sitting on a couch, and that sometimes he behaved aggressively. She indicated that her son had recently inherited property from his grandmother; however, he had not taken the necessary steps to register his property rights. This indicated that he was incapable of leading an independent social life and thus needed a guardian. It appears that the applicant was not formally notified about the proceedings that had been brought in respect of him.

11. On 10 August 2004 the judge invited the applicant and his mother to court to discuss the case. However, there is no evidence that the invitation ever reached the applicant. The court also requested the applicant's medical records from Hospital no. 6.

12. On 12 October 2004 the judge of the Vasileostrovskiy District Court of St Petersburg commissioned a psychiatric expert examination of the applicant's mental health. The examination was assigned to the doctors of Hospital no. 6, where the applicant had been undergoing treatment. The judge formulated two questions to the doctors: firstly, whether the applicant suffered from any mental illness; and, secondly, whether he was able to understand his actions and control them.

13. On 12 November 2004 an expert team from Hospital no. 6 examined the applicant and his medical records. The report prepared by the expert team may be summarised as follows. After graduating from college, the applicant worked for a short time as an interpreter. However, some time later he became aggressive, unsympathetic and secluded, and prone to

empty philosophising. He abandoned his job, started attending religious meetings and visiting Buddhist shrines, lost most of his friends, neglected his personal hygiene and became very negative towards his relatives. He suffered from anorexia and was hospitalised because of this.

14. In August 2002 he was placed in a psychiatric hospital for the first time with a diagnosis of "simple schizophrenia". In April 2003 he was discharged from hospital; however, later that same month he was admitted again because of his aggressive behaviour towards his mother. In the following months he was placed in hospital two further times. In April 2004 he was discharged. However, he "continued to live in an antisocial way". He did not work, loitered in the flat, prohibited his mother from preparing him food or from leaving the flat or moving around, and threatened her. She was so afraid of the applicant that she once spent a night at friends of hers and had to complain to the police about her son.

15. The final part of the report concerned the applicant's mental condition at the time of his examination. The doctors noted that the applicant's social maladjustment and autism had worsened. They noted, *inter alia*, that "the applicant did not understand why he had been subjected to a [forensic] psychiatric examination". The doctors further stated that the applicant's "intellectual and mnemonic abilities were without any impairment". However, his behaviour was characterised by several typical features of schizophrenia, such as "formality of contacts, structural thought disorder ..., lack of judgment, emotional emasculation, coldness, reduced energy potential". The expert team concluded that the applicant was suffering from "simple schizophrenia with a manifest emotional and volitional defect" and that he could not understand his actions or control them.

16. On 28 December 2004 Judge A. of the Vasileostrovskiy District Court held a hearing on the merits of the case. The applicant was neither notified nor present at that hearing. The applicant's mother was notified but did not appear. She informed the court that she maintained her initial request and asked the court to examine the case in her absence. The case was examined in the presence of the district prosecutor. A representative of Hospital no. 6 was also present. The representative of the hospital, described in the judgment as "an interested party", asked the court to declare the applicant incapable. It appears that the prosecutor did not make any remarks on the substance of the case. The hearing lasted ten minutes. As a result, the judge declared the applicant legally incapable, referring to the experts' findings.

17. Since no appeal was lodged against the judgment of 28 December 2004 within the ten-day time-limit provided by law, the judgment became final on 11 January 2005.

18. On 14 January 2005 the applicant's mother received a copy of the full text of the judgment of 28 December 2004. Subsequently, on an

unspecified date, she was appointed the applicant's guardian and was authorised by law to act on his behalf in all matters.

19. According to the applicant, he was not sent a copy of the judgment and only became aware of its existence by chance in November 2005, when he found a copy of the judgment among his mother's papers at home.

B. The first meeting with the lawyer

20. On 2 November 2005 the applicant contacted Mr Bartenev, a lawyer with the Mental Disability Advocacy Centre ("the lawyer"), and explained the situation. The applicant and the lawyer met for two hours and discussed the case. According to the lawyer, who holds a degree in medicine from the Petrozavodsk State University, during the meeting the applicant was in an adequate state of mind and fully able to understand complex legal issues and give relevant instructions. On the same day the lawyer helped the applicant draft a request to restore the time-limits for lodging an appeal against the judgment of 28 December 2004.

C. Confinement in the psychiatric hospital in 2005

21. On 4 November 2005 the applicant was placed in Hospital no. 6. Admission to hospital was requested by the applicant's mother, as his guardian; in terms of domestic law it was therefore voluntary and did not require approval by a court (see paragraph 56 below). The applicant claimed, however, that he had been confined to hospital against his will.

22. On 9, 10, 12 and 15 November 2005 the lawyer attempted to meet his client in hospital. The applicant, in turn, requested the hospital administration to allow him to see his lawyer in private. However, Dr Sh., the Director of the hospital, refused permission. He referred to the applicant's mental condition and the fact that the applicant was legally incapable and therefore could only act through his guardian.

23. On 18 November 2005 the lawyer had a telephone conversation with the applicant. Following that conversation the applicant signed a form authorising the lawyer to lodge an application with the European Court of Human Rights in connection with the events described above. That form was then transmitted to the lawyer through a relative of another patient in Hospital no. 6.

24. The lawyer reiterated his request for a meeting. He specified that he was representing the applicant before the European Court and enclosed a copy of the power of attorney. However, the hospital administration refused permission on the ground that the applicant did not have legal capacity. The applicant's guardian also refused to take any action on the applicant's behalf.

25. From December 2005 the applicant was prohibited from having any contact with the outside world; he was not allowed to keep any writing equipment or use a telephone. The applicant's lawyer produced a written statement by Mr S., another former patient in Hospital no. 6. Mr S. met the applicant in January 2006 while Mr S. was in the hospital in connection with attempted suicide. Mr S. and the applicant shared the same room. In the words of Mr S., the applicant was someone friendly and quiet. However, he was treated with strong medicines, such as Haloperidol and Chlorpromazine. The hospital staff prevented him from meeting his lawyer or his friends. He was not allowed to write letters; his diary was confiscated. According to the applicant, he once attempted to escape from the hospital, only to be captured by the staff members who secured him to his bunk bed.

D. Applications for release

26. On 1 December 2005 the lawyer complained to the guardianship office of Municipal District no. 11 of St Petersburg about the actions of the applicant's official guardian, namely his mother. He claimed that the applicant had been placed in the hospital against his will and without medical necessity. The lawyer also complained that the hospital administration was preventing him from meeting the applicant.

27. On 2 December 2005 the applicant himself wrote a letter in similar terms to the district prosecutor. He indicated, in particular, that he was prevented from meeting his lawyer, that his hospitalisation had not been voluntary, and that his mother had placed him in the hospital in order to appropriate his flat.

28. On 7 December 2005 the applicant wrote a letter to the Chief Doctor of Hospital no. 6, asking for his immediate discharge. He claimed that he needed some specialist dental assistance which could not be provided within the psychiatric hospital. In the following weeks, the applicant and his lawyer wrote several letters to the guardianship authority, district prosecutor, public health authority, and so on, calling for the applicant's immediate discharge from the psychiatric hospital.

29. On 14 December 2005 the district prosecutor advised the lawyer that the applicant had been placed in the hospital at the request of his official guardian, and that all questions related to his eventual release should be decided by her.

30. On 16 January 2006 the guardianship office informed the lawyer that the actions of the applicant's guardian had been lawful. According to the guardianship office, on 12 January 2006 the applicant was examined by a dentist. As follows from this letter, the representatives of the guardianship office did not meet the applicant and relied solely on information obtained from the hospital and from his guardian – the applicant's mother.

E. Request under Rule 39 of the Rules of Court

31. In a letter of 10 December 2005, the lawyer requested the Court to indicate to the Government interim measures under Rule 39 of the Rules of Court. In particular, he requested the Court to oblige the Russian authorities to grant him access to the applicant with a view to assisting him in the proceedings and preparing his application to the European Court.

32. On 15 December 2005 the President of the Chamber decided not to take any decision under Rule 39 until more information was received. The parties were invited to produce additional information and comments regarding the subject matter of the case.

33. Based on the information received from the parties, on 6 March 2006 the President of the Chamber decided to indicate to the Government, under Rule 39 of the Rules of Court, interim measures desirable in the interests of the proper conduct of the proceedings before the Court. These measures were as follows: the Government was directed to organise, by appropriate means, a meeting between the applicant and his lawyer. That meeting could take place in the presence of the personnel of the hospital where the applicant was detained, but outside their hearing. The lawyer was to be provided with the necessary time and facilities to consult with the applicant and help him in preparing the application before the European Court. The Government was also requested not to prevent the lawyer from having such a meeting with his client at regular intervals in future. The lawyer, in turn, was obliged to be cooperative and comply with reasonable requirements of hospital regulations.

34. However, the applicant's lawyer was not given access to the applicant. The Chief Doctor of Hospital no. 6 informed the lawyer that he did not regard the Court's decision on interim measures as binding. Furthermore, the applicant's mother objected to the meeting between the applicant and the lawyer.

35. The applicant's lawyer challenged that refusal before the St Petersburg Smolninskiy District Court, referring to the interim measure indicated by the European Court of Human Rights. On 28 March 2006 the court upheld his claim, declaring the ban on meetings between the applicant and his lawyer as unlawful.

36. On 30 March 2006 the former Representative of the Russian Federation at the European Court of Human Rights, Mr P. Laptev, wrote a letter to the President of the Vasileostrovskiy District Court of St Petersburg, informing him of the interim measures applied by the Court in the present case.

37. On 6 April 2006 the Vasileostrovskiy District Court examined, on the applicant's motion, the Court's request under Rule 39 of the Rules of Court and held that the lawyer should be allowed to meet the applicant.

38. The hospital and the applicant's mother appealed against that decision. On 26 April 2006 the St Petersburg City Court examined their appeal and quashed the lower court's judgment of 6 April 2006. The City Court held, in particular, that the District Court had no competence to examine the request lodged by the Representative of the Russian Federation. The City Court further noted that the applicant's official guardian – his mother – had not applied to the court with any requests of this kind. The City Court finally held as follows:

> "... The applicant's complaint [to the European Court] was lodged against the Russian Federation ... The request by the European Court was addressed to the authorities of the Russian Federation. The Russian Federation as a special subject of international relations enjoys immunity from foreign jurisdiction; it is not bound by coercive measures applied by foreign courts and cannot be subjected to such measures ... without its consent. The [domestic] courts have no right to undertake on behalf of the Russian Federation an obligation to comply with the preliminary measures ... This can be decided by the executive ... by way of an administrative decision."

39. On 16 May 2006 the St Petersburg City Court examined the appeal against the judgment of 28 March 2006 lodged by the Chief Doctor of Hospital no. 6. The City Court held that "under Rule 34 of the Rules of Court, the authority of an advocate [representing the applicant before the European Court] should be formalised in accordance with the legislation of the home country". The City Court further held that under Russian law the lawyer could not act on behalf of the client in the absence of an agreement between them. However, no such agreement had been concluded between Mr Bartenev (the lawyer) and the applicant's mother – the person who had the right to act on behalf of the applicant in all legal transactions. As a result, the City Court concluded that the lawyer had no authority to act on behalf of the applicant, and his complaint should be dismissed. The judgment of 28 March 2006 by the Smolninskiy District Court was thus reversed.

40. On the same day the applicant was discharged from hospital and met with his lawyer.

F. Appeals against the judgment of 28 December 2004

41. On 20 November 2005 the applicant's lawyer brought an appeal against the decision of 28 December 2004. He also requested the court to extend the time-limit for lodging the appeal, claiming that the applicant had not been aware of the proceedings in which he had been declared incapable. The appeal was lodged through the registry of the Vasileostrovskiy District Court.

42. On 22 December 2005 Judge A. of the Vasileostrovskiy District Court returned the appeal to the applicant's lawyer without examination.

She indicated that the applicant had no legal capacity to act and, therefore, could only lodge an appeal or any other request through his guardian.

43. On 23 May 2006, after the applicant's discharge from the psychiatric hospital, the applicant's lawyer appealed against the decision of 22 December 2005. By a ruling of 5 July 2006, the St Petersburg City Court upheld the decision of 22 December 2005. The City Court held that the Code of Civil Procedure did not allow for the lodging of applications for restoration of procedural terms by legally incapable persons.

44. In the following months the applicant's lawyer introduced two appeals for supervisory review, but to no avail.

45. According to the applicant's lawyer, in 2007 the applicant was admitted to Hospital no. 6 again, at the request of his mother.

II. RELEVANT DOMESTIC LAW

A. Legal capacity

46. Under Article 21 of the Civil Code of the Russian Federation of 1994, any individual aged 18 or over has, as a rule, full legal capacity (*дееспособность*), which is defined as "the ability to acquire and enjoy civil rights, create and fulfil civil obligations by his own acts". Under Article 22 of the Civil Code legal capacity can be limited, but only on the grounds defined by law and within a procedure prescribed by law.

47. Under Article 29 of the Civil Code, a person who cannot understand or control his or her actions as a result of a mental illness may be declared legally incapable by the court and placed in the care of a guardian (*опека*). All legal transactions on behalf of the incapacitated person are concluded by his guardian. The incapacitated person can be declared fully capable if the grounds on which he or she was declared incapable cease to exist.

48. Article 30 of the Civil Code provides for partial limitation of legal capacity. If a person's addiction to alcohol or drugs is creating serious financial difficulties for his family, he can be declared partially incapable. That means that he is unable to conclude large-scale transactions. He can, however, dispose of his salary or pension and make small transactions, under the control of his guardian.

49. Article 135 § 1 of the Code of Civil Procedure of 2002 establishes that a civil claim lodged by a legally incapable person should be returned to him without examination.

50. Article 281 of the same Code establishes the procedure for declaring a person incapable. A request for incapacitation of a mentally ill person can be brought before a first-instance court by a family member of the person concerned. On receipt of the request, the judge must commission a forensic psychiatric examination of the person concerned.

51. Article 284 of the Code provides that the incapacitation request should be examined in the presence of the person concerned, the plaintiff, the prosecutor and a representative of the guardianship office (*орган опеки и попечительства*). The person whose legal capacity is being examined by the court is to be summoned to the court hearing, unless his state of health prohibits him from attending it.

52. Article 289 of the Code provides that full legal capacity can be restored by the court at the request of the guardian, a close relative, the guardianship office or the psychiatric hospital, but not of the person declared incapable himself.

B. Confinement to a psychiatric hospital

53. The Psychiatric Assistance Act of 2 July 1992, as amended ("the Act"), provides that any recourse to psychiatric aid should be voluntary. However, a person declared fully incapable may be subjected to psychiatric treatment at the request or with the consent of his official guardian (section 4 of the Act).

54. Section 5(3) of the Act provides that the rights and freedoms of persons with mental illnesses cannot be limited solely on the ground of their diagnosis, or the fact that they have been subjected to treatment in a psychiatric hospital.

55. Under section 5 of the Act, a patient in a psychiatric hospital can have a legal representative. However, pursuant to point 2 of section 7, the interests of a person declared fully incapable are represented by his official guardian.

56. Section 28(3) and (4) of the Act ("Grounds for hospitalisation") provides that a person declared incapable can be subjected to hospitalisation in a psychiatric hospital at the request of his guardian. This hospitalisation is regarded as voluntary and does not require approval by the court, as opposed to non-voluntary hospitalisation (sections 39 and 33 of the Act).

57. Section 37(2) of the Act establishes the list of rights of a patient in a psychiatric hospital. In particular, the patient has the right to communicate with his lawyer without censorship. However, under section 37(3) the doctor may limit the applicant's rights to correspond with other persons, have telephone conversations and meet visitors.

58. Section 47 of the Act provides that doctors' actions can be appealed against before the court.

III. RELEVANT INTERNATIONAL DOCUMENTS

59. On 23 February 1999 the Committee of Ministers of the Council of Europe adopted Recommendation No. R (99) 4 on principles concerning the legal protection of incapable adults. The relevant provisions read as follows.

Principle 2 – Flexibility in legal response

"1. The measures of protection and other legal arrangements available for the protection of the personal and economic interests of incapable adults should be sufficient, in scope or flexibility, to enable a suitable legal response to be made to different degrees of incapacity and various situations.

...

4. The range of measures of protection should include, in appropriate cases, those which do not restrict the legal capacity of the person concerned.

..."

Principle 3 – Maximum preservation of capacity

"1. The legislative framework should, so far as possible, recognise that different degrees of incapacity may exist and that incapacity may vary from time to time. Accordingly, a measure of protection should not result automatically in a complete removal of legal capacity. However, a restriction of legal capacity should be possible where it is shown to be necessary for the protection of the person concerned.

2. In particular, a measure of protection should not automatically deprive the person concerned of the right to vote, or to make a will, or to consent or refuse consent to any intervention in the health field, or to make other decisions of a personal character at any time when his or her capacity permits him or her to do so.

..."

Principle 6 – Proportionality

"1. Where a measure of protection is necessary it should be proportional to the degree of capacity of the person concerned and tailored to the individual circumstances and needs of the person concerned.

2. The measure of protection should interfere with the legal capacity, rights and freedoms of the person concerned to the minimum extent which is consistent with achieving the purpose of the intervention."

Principle 13 – Right to be heard in person

"The person concerned should have the right to be heard in person in any proceedings which could affect his or her legal capacity."

Principle 14 – Duration, review and appeal

"1. Measures of protection should, whenever possible and appropriate, be of limited duration. Consideration should be given to the institution of periodical reviews.

...

3. There should be adequate rights of appeal."

THE LAW

60. The Court notes that the applicant submitted several complaints under different Convention provisions. Those complaints relate to his incapacitation, placement in a psychiatric hospital, inability to obtain a review of his status, inability to meet with his lawyer, interference with his correspondence, involuntary medical treatment, and so on. The Court will examine these complaints in chronological sequence. Thus, the Court will start with the complaints related to the incapacitation proceedings – the episode which gave rise to all the subsequent events – and then examine the applicant's hospitalisation and the complaints stemming from it.

I. ALLEGED VIOLATION OF ARTICLE 6 OF THE CONVENTION AS REGARDS THE INCAPACITATION PROCEEDINGS

61. The applicant complained that he had been deprived of his legal capacity as a result of proceedings which had not been "fair" within the meaning of Article 6 of the Convention. The relevant parts of Article 6 § 1 provide as follows:

> "In the determination of his civil rights and obligations ..., everyone is entitled to a fair ... hearing ... by [a] ... tribunal ..."

A. The parties' submissions

62. The Government contended that the proceedings before the Vasileostrovskiy District Court had been fair. Under Russian law, a request to declare a person legally incapable may be lodged by a close relative of the person suffering from a mental disorder. In the present case it was Ms Shtukaturova, the applicant's mother, who had filed such a request. The court ordered a psychiatric examination of the applicant. Having examined the applicant, the doctors concluded that he was unable to understand or control his actions. Given the applicant's medical condition, the court decided not to summon him to the hearing. However, in compliance with Article 284 of the Code of Civil Procedure, a prosecutor and a representative of the psychiatric hospital were present at the hearing. Therefore, the applicant's procedural rights were not breached.

63. The applicant maintained that the proceedings before the first-instance court had been unfair. The judge had not explained why she changed her mind and considered that the applicant's personal presence had not been necessary (see paragraphs 11 et seq. above). The court had decided on the applicant's incapacity without hearing or seeing him, or obtaining any submissions from him. The court based its decision on the written medical report, which the applicant had not seen and had had no opportunity to challenge. The prosecutor who participated in the hearing on

28 December 2004 also supported the application, without having seen the applicant prior to the hearing. The Vasileostrovskiy District Court also failed to question the applicant's mother, who had lodged the application for incapacity. In sum, the court failed to take even minimal measures in order to ensure an objective assessment of the applicant's mental condition. Further, the applicant maintained that he was unable to challenge the judgment of 28 December 2004 because, under Russian law, he lacked standing to lodge an appeal.

B. Admissibility

64. The parties did not dispute the applicability of Article 6, under its "civil" head, to the proceedings in issue, and the Court does not see any reason to hold otherwise (see *Winterwerp v. the Netherlands*, 24 October 1979, § 73, Series A no. 33).

65. The Court notes that the applicant's complaints are not manifestly ill-founded within the meaning of Article 35 § 3 of the Convention. It further notes that they are not inadmissible on any other grounds. They must therefore be declared admissible.

C. Merits

1. General principles

66. In most of the previous cases before the Court involving "persons of unsound mind", the domestic proceedings concerned their detention and were thus examined under Article 5 of the Convention. However, the Court has consistently held that the "procedural" guarantees under Article 5 §§ 1 and 4 are broadly similar to those under Article 6 § 1 of the Convention (see, for instance, *Winterwerp*, cited above, § 60; *Sanchez-Reisse v. Switzerland*, 21 October 1986, Series A no. 107; *Kampanis v. Greece*, 13 July 1995, Series A no. 318-B; and *Ilijkov v. Bulgaria*, no. 33977/96, § 103, 26 July 2001). Therefore, in deciding whether the incapacitation proceedings in the present case were "fair", the Court will have regard, *mutatis mutandis*, to its case-law under Article 5 § 1 (e) and Article 5 § 4 of the Convention.

67. The Court observes that in deciding whether an individual should be detained as a "person of unsound mind", the national authorities are to be recognised as having a certain margin of appreciation. It is in the first place for the national authorities to evaluate the evidence adduced before them in a particular case; the Court's task is to review under the Convention the decisions of those authorities (see *Luberti v. Italy*, 23 February 1984, § 27, Series A no. 75).

68. In the context of Article 6 § 1 of the Convention, the Court assumes that in cases involving a mentally ill person the domestic courts should also enjoy a certain margin of appreciation. Thus, for example, they can make the relevant procedural arrangements in order to secure the proper administration of justice, protection of the health of the person concerned, and so on. However, such measures should not affect the very essence of the applicant's right to a fair trial as guaranteed by Article 6 of the Convention. In assessing whether or not a particular measure, such as exclusion of the applicant from a hearing, was necessary, the Court will take into account all relevant factors (such as the nature and complexity of the issue before the domestic courts, what was at stake for the applicant, whether his appearance in person represented any threat to others or to himself, and so on).

2. Application to the present case

69. It is not disputed that the applicant was unaware of the request for incapacitation made by his mother. Nothing suggests that the court notified the applicant *proprio motu* about the proceedings (see paragraph 10 above). Further, as follows from the report of 12 November 2004 (see paragraph 13 above), the applicant did not realise that he was being subjected to a forensic psychiatric examination. The Court concludes that the applicant was unable to participate in the proceedings before the Vasileostrovskiy District Court in any form. It remains to be ascertained whether, in the circumstances, this was compatible with Article 6 of the Convention.

70. The Government argued that the decisions taken by the national judge had been lawful in domestic terms. However, the crux of the complaint is not the domestic legality but the "fairness" of the proceedings from the standpoint of the Convention and the Court's case-law.

71. In a number of previous cases (concerning compulsory confinement in hospital) the Court confirmed that a person of unsound mind must be allowed to be heard either in person or, where necessary, through some form of representation – see, for example, *Winterwerp*, cited above, § 60. In *Winterwerp*, the applicant's freedom was at stake. However, in the present case the outcome of the proceedings was at least equally important for the applicant: his personal autonomy in almost all areas of his life was in issue, including the eventual limitation of his liberty.

72. Further, the Court notes that the applicant played a double role in the proceedings: he was an interested party, and, at the same time, the main object of the court's examination. His participation was therefore necessary not only to enable him to present his own case, but also to allow the judge to form her personal opinion about the applicant's mental capacity (see, *mutatis mutandis*, *Kovalev v. Russia*, no. 78145/01, §§ 35-37, 10 May 2007).

73. The applicant was indeed an individual with a history of psychiatric problems. From the materials of the case, however, it appears that despite

his mental illness he had been a relatively autonomous person. In such circumstances it was indispensable for the judge to have at least a brief visual contact with the applicant, and preferably to question him. The Court concludes that the decision of the judge to decide the case on the basis of documentary evidence, without seeing or hearing the applicant, was unreasonable and in breach of the principle of adversarial proceedings enshrined in Article 6 § 1 (see *Mantovanelli v. France*, 18 March 1997, § 35, *Reports of Judgments and Decisions* 1997-II).

74. The Court has examined the Government's argument that a representative of the hospital and the district prosecutor attended the hearing on the merits. However, in the Court's opinion, their presence did not make the proceedings truly adversarial. The representative of the hospital acted on behalf of an institution which had prepared the report and was referred to in the judgment as an "interested party". The Government did not explain the role of the prosecutor in the proceedings. In any event, from the record of the hearing it appears that both the prosecutor and the hospital representative remained passive during the hearing, which, moreover, lasted only ten minutes.

75. Finally, the Court observes that it must always assess the proceedings as a whole, including the decision of the appellate court (see *C.G. v. the United Kingdom*, no. 43373/98, § 35, 19 December 2001). The Court notes that in the present case the applicant's appeal was disallowed without examination on the ground that the applicant had no legal capacity to act before the courts (see paragraph 41 above). Regardless of whether or not the rejection of his appeal without examination was acceptable under the Convention, the Court merely notes that the proceedings ended with the first-instance court judgment of 28 December 2004.

76. The Court concludes that in the circumstances of the present case the proceedings before the Vasileostrovskiy District Court were not fair. There has accordingly been a violation of Article 6 § 1 of the Convention.

II. ALLEGED VIOLATION OF ARTICLE 8 OF THE CONVENTION AS REGARDS THE INCAPACITATION OF THE APPLICANT

77. The applicant complained that, by depriving him of his legal capacity, the authorities had breached Article 8 of the Convention. Article 8 provides:

> "1. Everyone has the right to respect for his private and family life, his home and his correspondence.
>
> 2. There shall be no interference by a public authority with the exercise of this right except such as is in accordance with the law and is necessary in a democratic society in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others."

A. The parties' submissions

1. The Government

78. The Government admitted that the judgment depriving the applicant of his legal capacity entailed a number of limitations in the area of private life. However, they claimed that the applicant's rights under Article 8 had not been breached. Their submissions can be summarised as follows. Firstly, the measure adopted by the court was aimed at the protection of the interests and health of other persons. Further, the decision was taken in conformity with the substantive law, namely on the basis of Article 29 of the Civil Code of the Russian Federation.

2. The applicant

79. The applicant insisted in his initial complaint that Article 8 had been breached in his case. He maintained that Article 29 of the Civil Code, which had served as a basis for depriving him of legal capacity, was not formulated with sufficient precision. The law permitted the deprivation of an individual's legal capacity if that person "could not understand the meaning of his actions or control them". However, the law did not explain what kind of "actions" the applicant should understand or control, or how complex these actions should be. In other words, there was no legal test to establish the severity of the reduction in cognitive capacity which called for full deprivation of legal capacity. The law was clearly deficient in this respect; it failed to protect mentally ill people from arbitrary interference with their right to private life. Therefore, the interference with his private life had not been lawful.

80. The applicant further argued that the interference did not pursue a legitimate aim. The authorities did not seek to protect national security, public safety or the economic well-being of the country, or to prevent disorder or crime. As to the protection of the health and morals of others, there was no indication that the applicant represented a threat to the rights of third parties. Finally, with regard to the applicant himself, the Government did not suggest that the incapacitation had had a therapeutic effect on the applicant. Nor was there any evidence that the authorities had sought to deprive the applicant of his capacity because he would otherwise have carried out actions which would result in a deterioration of his health. With regard to his own pecuniary interests, the protection of a person's own rights is not a ground listed in Article 8 § 2, and it cannot therefore serve as a justification for interfering with a person's rights as protected under Article 8 § 1 of the Convention. In sum, the interference with his private life did not pursue any of the legitimate aims listed in Article 8 § 2 of the Convention.

81. Finally, the applicant submitted that the interference had not been "necessary in a democratic society", as there had been no need to restrict his legal capacity. The Vasileostrovskiy District Court did not adduce any reason for its decision: there was no indication that the applicant had had problems managing his property in the past, was unable to work, abused his employment, and so on. The medical report was not corroborated by any evidence, and the court did not assess the applicant's past behaviour in any of the areas where it restricted his legal capacity.

82. Even if the Vasileostrovskiy District Court was satisfied that the applicant could not act in a certain area of life, it could have restricted his capacity in that specific area, without going further. However, Russian law, unlike the legislation in many other European countries, did not allow a partial limitation of one's legal capacity, but provided only for full incapacitation. The restricted capacity option could be used solely for those who abused drugs or alcohol. In such circumstances the court should have refused to apply a measure as drastic as full incapacitation. Instead, the court preferred to strip bluntly the applicant of all of his decision-making powers for an unlimited period of time.

B. Admissibility

83. The parties agreed that the judgment of 28 December 2004 amounted to an interference in the applicant's private life. The Court observes that Article 8 "secure[s] to the individual a sphere within which he can freely pursue the development and fulfilment of his personality" (see *Brüggemann and Scheuten v. Germany*, no. 6959/75, Commission's report of 12 July 1977, Decisions and Reports 10, p. 115, § 55). The judgment of 28 December 2004 deprived the applicant of his capacity to act independently in almost all areas of life: he was no longer able to sell or buy any property on his own, to work, to travel, to choose his place of residence, to join associations, to marry, and so on. Even his liberty could henceforth have been limited without his consent and without any judicial supervision. In sum, the Court concludes that the deprivation of legal capacity amounted to an interference with the private life of the applicant (see *Matter v. Slovakia*, no. 31534/96, § 68, 5 July 1999).

84. The Court further notes that this complaint is not manifestly ill-founded within the meaning of Article 35 § 3 of the Convention, and that it is not inadmissible on any other grounds. It must therefore be declared admissible.

C. Merits

85. The Court reiterates that any interference with an individual's right to respect for his private life will constitute a breach of Article 8 unless it

was "in accordance with the law", pursued a legitimate aim or aims under paragraph 2 and was "necessary in a democratic society" in the sense that it was proportionate to the aims sought.

86. The Court took note of the applicant's contention that the measure applied to him had not been lawful and had not pursued any legitimate aim. However, in the Court's opinion it is not necessary to examine these aspects of the case, since the decision to incapacitate the applicant was in any event disproportionate to the legitimate aim invoked by the Government for the reasons set out below.

1. General principles

87. The applicant claimed that full incapacitation had been an inadequate response to the problems he experienced. Indeed, under Article 8 the authorities must strike a fair balance between the interests of a person of unsound mind and the other legitimate interests concerned. However, as a rule, in such a complex matter as determining somebody's mental capacity, the authorities should enjoy a wide margin of appreciation. This is mostly explained by the fact that the national authorities have the benefit of direct contact with the persons concerned and are therefore particularly well placed to determine such issues. The task of the Court is rather to review under the Convention the decisions taken by the national authorities in the exercise of their powers in this respect (see, *mutatis mutandis*, *Bronda v. Italy*, 9 June 1998, § 59, *Reports* 1998-IV).

88. At the same time, the margin of appreciation to be accorded to the competent national authorities will vary in accordance with the nature of the issues and the importance of the interests at stake (see *Elsholz v. Germany* [GC], no. 25735/94, § 49, ECHR 2000-VIII). A stricter scrutiny is called for in respect of very serious limitations in the sphere of private life.

89. Further, the Court reiterates that, whilst Article 8 of the Convention contains no explicit procedural requirements, "the decision-making process involved in measures of interference must be fair and such as to ensure due respect of the interests safeguarded by Article 8" (see *Görgülü v. Germany*, no. 74969/01, § 52, 26 February 2004). The extent of the State's margin of appreciation thus depends on the quality of the decision-making process. If the procedure was seriously deficient in some respect, the conclusions of the domestic authorities are more open to criticism (see, *mutatis mutandis*, *Sahin v. Germany*, no. 30943/96, §§ 46 et seq., 11 October 2001).

2. Application to the present case

90. Firstly, the Court notes that the interference with the applicant's private life was very serious. As a result of his incapacitation, the applicant became fully dependent on his official guardian in almost all areas of his life. Furthermore, "full incapacitation" was applied for an indefinite period

and could not, as the applicant's case shows, be challenged other than through the guardian, who herself opposed any attempts to discontinue the measure (see also paragraph 52 above).

91. Secondly, the Court has already found that the proceedings before the Vasileostrovskiy District Court were procedurally flawed. Thus, the applicant did not take part in the court proceedings and was not even examined by the judge in person. Further, the applicant was unable to challenge the judgment of 28 December 2004, since the St Petersburg City Court refused to examine his appeal. In sum, his participation in the decision-making process was reduced to zero. The Court is particularly struck by the fact that the only hearing on the merits in the applicant's case lasted ten minutes. In such circumstances it cannot be said that the judge had "had the benefit of direct contact with the persons concerned", which normally would call for judicial restraint on the part of this Court.

92. Thirdly, the Court must examine the reasoning of the judgment of 28 December 2004. In doing so, the Court will have in mind the seriousness of the interference complained of, and the fact that the court proceedings in the applicant's case were perfunctory at best (see above).

93. The Court notes that the District Court relied solely on the findings of the medical report of 12 November 2004. That report referred to the applicant's aggressive behaviour, negative attitudes and "antisocial" lifestyle; it concluded that the applicant suffered from schizophrenia and was thus unable to understand his actions. At the same time, the report did not explain what kind of actions the applicant was incapable of understanding and controlling. The incidence of the applicant's illness is unclear, as are the possible consequences of the applicant's illness for his social life, health, pecuniary interests, and so on. The report of 12 November 2004 was not sufficiently clear on these points.

94. The Court does not cast doubt on the competence of the doctors who examined the applicant and accepts that the applicant was seriously ill. However, in the Court's opinion the existence of a mental disorder, even a serious one, cannot be the sole reason to justify full incapacitation. By analogy with the cases concerning deprivation of liberty, in order to justify full incapacitation the mental disorder must be "of a kind or degree" warranting such a measure (see, *mutatis mutandis*, *Winterwerp*, cited above, § 39). However, the questions to the doctors, as formulated by the judge, did not concern "the kind and degree" of the applicant's mental illness. As a result, the report of 12 November 2004 did not analyse the degree of the applicant's incapacity in sufficient detail.

95. It appears that the existing legislative framework did not leave the judge any other choice. The Russian Civil Code distinguishes between full capacity and full incapacity, but it does not provide for any "borderline" situation other than for drug or alcohol addicts. The Court refers in this respect to the principles formulated by Recommendation No. R (99) 4 of the

Committee of Ministers of the Council of Europe, cited above in paragraph 59. Although these principles have no force of law for this Court, they may define a common European standard in this area. Contrary to these principles, Russian legislation did not provide for a "tailor-made response". As a result, in the circumstances the applicant's rights under Article 8 were restricted more than was strictly necessary.

96. In sum, having examined the decision-making process and the reasoning behind the domestic decisions, the Court concludes that the interference with the applicant's private life was disproportionate to the legitimate aim pursued. There was, therefore, a breach of Article 8 of the Convention on account of the applicant's full incapacitation.

III. ALLEGED VIOLATION OF ARTICLE 5 § 1 OF THE CONVENTION

97. Under Article 5 § 1 of the Convention the applicant complained that his placement in the psychiatric hospital had been unlawful. The relevant parts of Article 5 provide:

> "1. Everyone has the right to liberty and security of person. No one shall be deprived of his liberty save in the following cases and in accordance with a procedure prescribed by law:
>
> ...
>
> (e) the lawful detention of persons ... of unsound mind ..."

A. The parties' submissions

1. The Government

98. The Government claimed that the applicant's placement in the hospital had been lawful. Under sections 28 and 29 of the Psychiatric Assistance Act of 2 July 1992, a person can be placed in a psychiatric hospital pursuant to a court order or at the request of the doctor, provided that the person suffers from a mental disorder. The law distinguishes between non-voluntary and voluntary confinement in hospital. The latter does not require a court order and may be authorised by the official guardian, if the person is legally incapable. The applicant was placed in the hospital at the request of his official guardian in relation to a worsening of his mental condition. In such circumstances, there was no need for a court order authorising the confinement.

99. The Government further indicated that section 47 of the Psychiatric Assistance Act provided for administrative and judicial remedies against the acts or negligence of medical personnel. However, under paragraph 2 of Article 31 of the Civil Code of the Russian Federation, if a person is legally incapable, it is his official guardian who should act in his stead before the

administrative bodies or the courts. The applicant's official guardian was his mother, who did not lodge any complaint. The prosecutor's office, after an inquiry, concluded that the applicant's rights had not been breached. Therefore, the domestic law provided effective remedies to protect the applicant's rights.

100. As to compensation for damages caused by the confinement in a psychiatric hospital, this is only recoverable if there was a fault on the part of the domestic authorities. The Government asserted that the medical personnel had acted lawfully.

2. The applicant

101. The applicant maintained his claims. Firstly, he alleged that his placement in hospital had amounted to a deprivation of his liberty. Thus, he was placed in a locked facility. After he attempted to flee the hospital in January 2006, he was tied to his bed and given an increased dose of sedative medication. He was not allowed to communicate with the outside world until his discharge. Finally, the applicant subjectively perceived his confinement in the hospital as a deprivation of liberty. Contrary to what the Government suggested, he had never regarded his detention as consensual and had unequivocally objected to it throughout the entire duration of his stay in the hospital.

102. Further, the applicant claimed that his detention in the hospital was not "in accordance with a procedure prescribed by law". Thus, under Russian law, his hospitalisation was regarded as voluntary confinement, regardless of his opinion, and, consequently, none of the procedural safeguards usually required in cases of non-voluntary hospitalisation applied to him. There should, however, be some procedural safeguards in place, especially where the person concerned clearly expressed his disagreement with his guardian's decision. In the present case the authorities did not assess the applicant's capacity to make an independent decision of a specific kind at the time of his hospitalisation. They relied on the applicant's status as a legally incapable person, no matter how far removed in time the court decision about his global capacity might be. In the present case it was made more than ten months prior to the hospitalisation.

103. Furthermore, Russian law did not sufficiently reflect the fact that a person's capacity could change over time. There was no mandatory periodic review of the capacity status, nor was there a possibility for the person under guardianship to request such a review. Even assuming that, at the time of the initial court decision declaring him incapable, the applicant's capacity was so badly impaired that he could not decide for himself the question of hospitalisation, his condition might have changed in the meantime.

B. Admissibility

104. The Government may be understood as claiming that the applicant's hospitalisation was, in domestic terms, voluntary, and, as such, did not fall under the scenario of "deprivation of liberty" within the meaning of Article 5 of the Convention. However, the Court cannot subscribe to this thesis.

105. It reiterates that, in order to determine whether there has been a deprivation of liberty, the starting-point must be the concrete situation of the individual concerned. Account must be taken of a whole range of factors arising in a particular case such as the type, duration, effects and manner of implementation of the measure in question (see *Guzzardi v. Italy*, 6 November 1980, § 92, Series A no. 39, and *Ashingdane v. the United Kingdom*, 28 May 1985, § 41, Series A no. 93).

106. The Court further notes that the notion of deprivation of liberty within the meaning of Article 5 § 1 does not only comprise the objective element of a person's confinement in a particular restricted space for a not negligible length of time. A person can only be considered to have been deprived of his or her liberty if, as an additional subjective element, he or she had not validly consented to the confinement in question (see, *mutatis mutandis*, *H.M. v. Switzerland*, no. 39187/98, § 46, ECHR 2002-II).

107. The Court observes in this respect that the applicant's factual situation at the hospital was largely undisputed. The applicant was confined in the hospital for several months, he was not free to leave and his contact with the outside world was seriously restricted. As to the "subjective" element, it was disputed between the parties whether the applicant had consented to his stay in the clinic. The Government mostly relied on the legal construction of "voluntary confinement", whereas the applicant referred to his own perception of the situation.

108. The Court notes in this respect that, indeed, the applicant lacked *de jure* legal capacity to decide for himself. However, this does not necessarily mean that the applicant was *de facto* unable to understand his situation. Firstly, the applicant's own behaviour at the time of his confinement proves the contrary. Thus, on several occasions the applicant requested his discharge from hospital, contacted the hospital administration and a lawyer with a view to obtaining his release, and once attempted to escape from the hospital (see, *a fortiori*, *Storck v. Germany*, no. 61603/00, ECHR 2005-V, where the applicant consented to her stay in the clinic but then attempted to escape). Secondly, it follows from the Court's above conclusions that the findings of the domestic courts on the applicant's mental condition were questionable and quite remote in time (see paragraph 96 above).

109. In sum, even though the applicant was legally incapable of expressing his opinion, the Court is unable to accept in the circumstances the Government's view that the applicant agreed to his continued stay in the

hospital. The Court therefore concludes that the applicant was deprived of his liberty by the authorities within the meaning of Article 5 § 1 of the Convention.

110. The Court further notes that although the applicant's detention was requested by the applicant's guardian, a private person, it was implemented by a State-run institution – a psychiatric hospital. Therefore, the responsibility of the authorities for the situation complained of was engaged.

111. The Court notes that this complaint is not manifestly ill-founded within the meaning of Article 35 § 3 of the Convention. It further notes that it is not inadmissible on any other grounds. It must therefore be declared admissible.

C. Merits

112. The Court accepts that the applicant's detention was "lawful", if this term is construed narrowly, in the sense of formal compatibility of the detention with the procedural and material requirements of the domestic law. It appears that the only condition for the applicant's detention was the consent of his official guardian, his mother, who was also the person who solicited the applicant's placement in the hospital.

113. However, the Court observes that the notion of "lawfulness" in the context of Article 5 § 1 (e) also has a broader meaning. "The notion underlying the term ['procedure prescribed by law'] ... is one of fair and proper procedure, namely that any measure depriving a person of his liberty should issue from and be executed by an appropriate authority and should not be arbitrary" (see *Winterwerp*, cited above, § 45). In other words, the detention cannot be considered "lawful" within the meaning of Article 5 § 1 if the domestic procedure does not provide sufficient guarantees against arbitrariness.

114. In its *Winterwerp* judgment (cited above), the Court set out three minimum conditions which have to be satisfied in order for there to be "the lawful detention of a person of unsound mind" within the meaning of Article 5 § 1 (e): except in emergency cases, the individual concerned must be reliably shown to be of unsound mind, that is to say, a true mental disorder must be established before a competent authority on the basis of objective medical expertise; the mental disorder must be of a kind or degree warranting compulsory confinement; and the validity of continued confinement depends upon the persistence of such a disorder.

115. Turning to the present case, the Court notes that it was submitted on behalf of the applicant that his deprivation of liberty had been arbitrary, because he had not been reliably shown to be of unsound mind at the time of his confinement. The Government submitted nothing to refute this argument. Thus, the Government did not explain what made the applicant's

mother request his hospitalisation on 4 November 2005. Further, the Government did not provide the Court with any medical evidence concerning the applicant's mental condition at the moment of his admission to the hospital. It appears that the decision to hospitalise him relied merely on the applicant's legal status, as had been defined ten months earlier by the court, and probably on his medical history. Indeed, it is inconceivable that the applicant remained in hospital without any examination by specialist doctors. However, in the absence of any supporting documents or submissions by the Government concerning the applicant's mental condition during his placement, the Court has to conclude that it has not been "reliably shown" by the Government that the applicant's mental condition necessitated his confinement.

116. In view of the above, the Court concludes that the applicant's hospitalisation between 4 November 2005 and 16 May 2006 was not "lawful" within the meaning of Article 5 § 1 (e) of the Convention.

IV. ALLEGED VIOLATION OF ARTICLE 5 § 4 OF THE CONVENTION

117. The applicant complains that he was unable to obtain his release from the hospital. Article 5 § 4, relied on by the applicant, provides:

> "Everyone who is deprived of his liberty by arrest or detention shall be entitled to take proceedings by which the lawfulness of his detention shall be decided speedily by a court and his release ordered if the detention is not lawful."

A. The parties' submissions

118. The Government maintained that the applicant had had an effective remedy to challenge his admission to the psychiatric hospital. Thus, he could have applied for release or complained about the actions of the medical staff through his guardian, who represented him before third parties, including the court. Further, the General Prosecutor's Office had carried out a check of the applicant's situation and did not establish any violation of his rights.

119. The applicant claimed that Russian law allowed him to bring court proceedings only through his guardian, who was opposed to his release.

B. Admissibility

120. The Court notes that this complaint is not manifestly ill-founded within the meaning of Article 35 § 3 of the Convention. It further notes that it is not inadmissible on any other grounds. It must therefore be declared admissible.

C. Merits

121. The Court observes that by virtue of Article 5 § 4, a person of unsound mind compulsorily confined in a psychiatric institution for an indefinite or lengthy period is in principle entitled, at any rate where there is no automatic periodic review of a judicial character, to take proceedings at reasonable intervals before a court to put in issue the "lawfulness" – within the meaning of the Convention – of his detention (see *Winterwerp*, cited above, § 55, and *Luberti*, cited above, § 31; see also *Rakevich v. Russia*, no. 58973/00, §§ 43 et seq., 28 October 2003).

122. This is so in cases where the initial detention was initially authorised by a judicial authority (see *X v. the United Kingdom*, 5 November 1981, § 52, Series A no. 46), and it is *a fortiori* true in the circumstances of the present case, where the applicant's confinement was authorised not by a court but by a private person, namely the applicant's guardian.

123. The Court accepts that the forms of judicial review may vary from one domain to another, and depend on the type of deprivation of liberty in issue. It is not within the province of the Court to inquire into what would be the best or most appropriate system of judicial review in this sphere. However, in the present case the courts were not involved in deciding on the applicant's detention at any moment and in any form. It appears that Russian law does not provide for automatic judicial review of confinement in a psychiatric hospital in situations such as the applicant's. Further, the review cannot be initiated by the person concerned if that person has been deprived of his or her legal capacity. Such a reading of Russian law follows from the Government's submissions on the matter. In sum, the applicant was prevented from pursuing independently any legal remedy of judicial character to challenge his continued detention.

124. The Government claimed that the applicant could have initiated legal proceedings through his mother. However, that remedy was not directly accessible to him: the applicant fully depended on his mother who had requested his placement in hospital and opposed his release. As to the inquiry carried out by the prosecution authorities, it is unclear whether it concerned the "lawfulness" of the applicant's detention. In any event, a prosecution inquiry as such cannot be regarded as a judicial review satisfying the requirements of Article 5 § 4 of the Convention.

125. The Court notes its findings that the applicant's hospitalisation was not voluntary. Further, the last time that the courts had assessed the applicant's mental capacity was ten months before his admission to hospital. The "incapacitation" court proceedings were seriously flawed, and, in any event, the court never examined the necessity of the applicant's placement in a closed institution. Nor was this necessity assessed by a court at the time of his placement in hospital. In such circumstances the applicant's inability to obtain judicial review of his detention amounted to a violation of Article 5 § 4 of the Convention.

V. ALLEGED VIOLATION OF ARTICLE 3 OF THE CONVENTION

126. The applicant submitted that the compulsory medical treatment he received in hospital amounted to inhuman and degrading treatment. Furthermore, on one occasion physical restraint was used against him, when he was tied to his bed for more than fifteen hours. Article 3 of the Convention, referred to by the applicant in this respect, provides:

> "No one shall be subjected to torture or to inhuman or degrading treatment or punishment."

127. The Court notes that the complaint under Article 3 relates to two distinct facts: (a) involuntary medical treatment; and (b) the securing of the applicant to his bed after his attempted escape. As regards the second allegation, the Court notes that it was not part of the applicant's initial submissions to the Court and was not sufficiently substantiated. Reference to it appeared only in the applicant's observations in reply to those of the Government. Therefore, this incident falls outside the scope of the present application, and, as such, will not be examined by the Court.

128. It remains to be ascertained, however, whether the medical treatment of the applicant in the hospital amounted to "inhuman and degrading treatment" within the meaning of Article 3. According to the applicant, he was treated with Haloperidol and Chlorpromazine. He described these substances as obsolete medicine with strong and unpleasant side effects. The Court notes that the applicant did not provide any evidence showing that he had actually been treated with this medication. Furthermore, there is no evidence that the medication in question had the unpleasant effects he was complaining of. The applicant does not claim that his health has deteriorated as a result of such treatment. In such circumstances the Court finds that the applicant's allegations in this respect are unsubstantiated.

129. The Court concludes that this part of the application is manifestly ill-founded and must be rejected in accordance with Article 35 §§ 3 and 4 of the Convention.

VI. ALLEGED VIOLATION OF ARTICLE 13 OF THE CONVENTION

130. The applicant complained under Article 13 of the Convention, taken in conjunction with Articles 6 and 8, that he had been unable to obtain a review of his status as a legally incapable person. Article 13 provides:

> "Everyone whose rights and freedoms as set forth in [the] Convention are violated shall have an effective remedy before a national authority notwithstanding that the violation has been committed by persons acting in an official capacity."

131. The Court finds that this complaint is linked to the complaints submitted under Articles 6 and 8 of the Convention, and it should therefore be declared admissible.

132. The Court further notes that, in analysing the proportionality of the measure complained of under Article 8, it took account of the fact that the measure was imposed for an indefinite period of time and could not be challenged by the applicant independently of his mother or other persons empowered by law to seek its withdrawal (see paragraph 90 above). Furthermore, this aspect of the proceedings was considered by the Court in its examination of the overall fairness of the incapacitation proceedings.

133. In these circumstances the Court does not consider it necessary to re-examine this aspect of the case separately through the prism of the "effective remedies" requirement of Article 13.

VII. ALLEGED VIOLATION OF ARTICLE 14 OF THE CONVENTION

134. The Court notes that under Article 14 of the Convention the applicant complained about his alleged discrimination. The Court finds that this complaint is linked to the complaints submitted under Articles 6 and 8 of the Convention, and it should therefore be declared admissible. However, in the circumstances and given its findings under Articles 5, 6 and 8 of the Convention, the Court considers that there is no need to examine the complaint under Article 14 of the Convention separately.

VIII. COMPLIANCE WITH ARTICLE 34 OF THE CONVENTION

135. The applicant maintained that by preventing him from meeting his lawyer in private for a long period of time despite the measure indicated by the Court under Rule 39 of the Rules of Court, Russia had failed to comply with its obligations under Article 34 of the Convention. Article 34 provides:

> "The Court may receive applications from any person, non-governmental organisation or group of individuals claiming to be the victim of a violation by one of the High Contracting Parties of the rights set forth in the Convention or the Protocols thereto. The High Contracting Parties undertake not to hinder in any way the effective exercise of this right."

Rule 39 of the Rules of Court provides:

> "1. The Chamber or, where appropriate, its President may, at the request of a party or of any other person concerned, or of its own motion, indicate to the parties any interim measure which it considers should be adopted in the interests of the parties or of the proper conduct of the proceedings before it.
>
> 2. Notice of these measures shall be given to the Committee of Ministers.
>
> 3. The Chamber may request information from the parties on any matter connected with the implementation of any interim measure it has indicated."

A. The parties' submissions

136. The Government maintained that the applicant had not been prevented from exercising his right of individual petition under Article 34 of the Convention. However, he was able to do so only through his mother – his official guardian. Since his mother had never asked Mr Bartenev (the lawyer) to represent her son, he was not his legal representative in the eyes of the domestic authorities. Consequently, the authorities acted lawfully in not allowing him to meet the applicant in hospital.

137. The applicant submitted that his right of individual petition had been breached. Thus, the hospital authorities prevented him from meeting his lawyer, confiscated writing materials from him and prohibited him from making or receiving telephone calls. The applicant was also threatened with the extension of his confinement if he continued his "litigious behaviour". When the Court indicated an interim measure, the hospital authorities refused to consider the decision of the Court under Rule 39 as legally binding. This position was later confirmed by the Russian courts. As a result, it was virtually impossible for the applicant to work on his case before the European Court during his whole stay in hospital. Moreover, the applicant's lawyer was unable to assess the applicant's condition and collect information about the treatment the applicant was subjected to while in the psychiatric hospital.

B. The Court's assessment

1. Compliance with Article 34 before the indication of an interim measure

138. The Court reiterates that it is of the utmost importance for the effective operation of the system of individual petition instituted by Article 34 that applicants or potential applicants should be able to communicate freely with the Court without being subjected to any form of pressure from the authorities to withdraw or modify their complaints (see *Akdivar and Others v. Turkey*, 16 September 1996, opinion of the

Commission, § 105, *Reports* 1996-IV; see also *Ergi v. Turkey*, 28 July 1998, § 105, *Reports* 1998-IV).

139. The Court notes that an interference with the right of individual petition may take different forms. Thus, in *Boicenco v. Moldova* (no. 41088/05, §§ 157 et seq., 11 July 2006), the Court found that the refusal by the authorities to let the applicant be examined by a doctor in order to substantiate his claims under Article 41 of the Convention constituted an interference with the applicant's right of individual petition, and thus was incompatible with Article 34 of the Convention.

140. In the present case the ban on contact with his lawyer lasted from the applicant's hospitalisation on 4 November 2005 until his discharge on 16 May 2006. Further, telephone calls and correspondence were also banned for virtually the whole period. Those restrictions made it almost impossible for the applicant to pursue his case before the Court, and thus the application form was completed by the applicant only after his discharge from the hospital. The authorities could not have been ignorant of the fact that the applicant had introduced an application with the Court concerning, *inter alia*, his confinement in the hospital. In such circumstances the authorities, by restricting the applicant's contact with the outside world to such an extent, interfered with his rights under Article 34 of the Convention.

2. Compliance with Article 34 after the indication of an interim measure

141. The Court further notes that in March 2006 it indicated to the Government an interim measure under Rule 39. The Court requested the Government to allow the applicant to meet his lawyer on the premises of the hospital and under the supervision of the hospital staff. That measure was supposed to ensure that the applicant was able to pursue his case before this Court.

142. The Court is struck by the authorities' refusal to comply with that measure. The domestic courts which examined the situation found that the interim measure was addressed to the Russian State as a whole, but not to any of its bodies in particular. The courts concluded that Russian law did not recognise the binding force of an interim measure indicated by the Court. Further, they considered that the applicant could not act without the consent of his mother. Therefore, Mr Bartenev (the lawyer) was not regarded as his lawful representative either in domestic terms, or for the purposes of the proceedings before this Court.

143. Such an interpretation of the Convention is contrary to the Convention. As regards the status of Mr Bartenev, it was not for the domestic courts to determine whether or not he was the applicant's representative for the purposes of the proceedings before the Court – it sufficed that the Court regarded him as such.

144. As to the legal force of an interim measure, the Court wishes to reiterate the following (*Aoulmi v. France*, no. 50278/99, § 107, ECHR 2006-I):

> "107. ... [U]nder the Convention system, interim measures, as they have consistently been applied in practice, play a vital role in avoiding irreversible situations that would prevent the Court from properly examining the application and, where appropriate, securing to the applicant the practical and effective benefit of the Convention rights asserted. Accordingly, in these conditions a failure by a respondent State to comply with interim measures will undermine the effectiveness of the right of individual application guaranteed by Article 34 and the State's formal undertaking in Article 1 to protect the rights and freedoms set forth in the Convention
>
> 108. Indications of interim measures given by the Court ... permit it not only to carry out an effective examination of the application but also to ensure that the protection afforded to the applicant by the Convention is effective; such indications also subsequently allow the Committee of Ministers to supervise execution of the final judgment. Such measures thus enable the State concerned to discharge its obligation to comply with the final judgment of the Court, which is legally binding by virtue of Article 46 of the Convention ..."

In sum, an interim measure is binding to the extent that non-compliance with it may lead to a finding of a violation under Article 34 of the Convention. For the Court, it makes no difference whether it was the State as a whole or any of its bodies which refused to implement an interim measure.

145. The Court notes in this respect the case of *Mamatkulov and Askarov v. Turkey* ([GC], nos. 46827/99 and 46951/99, §§ 92 et seq., ECHR 2005-I), in which the Court analysed the State's non-compliance with an interim measure indicated under Rule 39. The Court concluded that "the obligation set out in Article 34 *in fine* requires the Contracting States to refrain ... also from any act or omission which, by destroying or removing the subject matter of an application, would make it pointless or otherwise prevent the Court from considering it under its normal procedure" (§ 102).

146. By not allowing the applicant to communicate with his lawyer, the authorities *de facto* prevented him from complaining to the Court and this obstacle existed so long as the authorities kept the applicant in hospital. Therefore, the aim of the interim measure indicated by the Court was to avoid a situation "that would prevent the Court from properly examining the application and, where appropriate, securing to the applicant the practical and effective benefit of the Convention rights asserted" (see *Aoulmi*, loc. cit.).

147. The Court notes that the applicant was eventually released and met with his lawyer, and was thus able to continue the proceedings before this Court. The Court therefore finally had all the elements to examine the applicant's complaint, despite previous non-compliance with the interim measure. However, the fact that the individual actually managed to pursue his application does not prevent an issue arising under Article 34: should the

Government's action make it more difficult for the individual to exercise his right of petition, this amounts to "hindering" his rights under Article 34 (see *Akdivar and Others*, cited above, § 105, and *Akdivar and Others v. Turkey*, 16 September 1996, opinion of the Commission, § 254, *Reports* 1996-IV). In any event, the applicant's release was not in any way connected with the implementation of an interim measure.

148. The Court takes note that the Russian legal system may have lacked a legal mechanism for implementing interim measures under Rule 39. However, it does not absolve the respondent State from its obligations under Article 34 of the Convention. In sum, in the circumstances the failure of the authorities to comply with an interim measure under Rule 39 amounted to a breach of Article 34 of the Convention.

3. Conclusion

149. Having regard to the material before it, the Court concludes that, by preventing the applicant for a long period of time from meeting his lawyer and communicating with him, as well as by failing to comply with the interim measure indicated under Rule 39 of the Rules of Court, the Russian Federation was in breach of its obligations under Article 34 of the Convention.

IX. APPLICATION OF ARTICLE 41 OF THE CONVENTION

150. Article 41 of the Convention provides:

> "If the Court finds that there has been a violation of the Convention or the Protocols thereto, and if the internal law of the High Contracting Party concerned allows only partial reparation to be made, the Court shall, if necessary, afford just satisfaction to the injured party."

151. The applicant claimed 85,000 euros in respect of non-pecuniary damage.

152. The Government considered these claims "fully unsubstantiated and anyway excessive". Further, the Government claimed that it was the applicant's mother who was entitled to claim any amounts on behalf of the applicant.

153. The Court notes that the applicant has legal standing in his own right within the Strasbourg proceedings and, consequently, can claim compensation under Article 41 of the Convention.

154. The Court considers that the question of the application of Article 41 is not ready for decision. Accordingly, it shall be reserved and the subsequent procedure fixed having regard to any agreement which might be reached between the Government and the applicant (Rule 75 § 1 of the Rules of Court).

FOR THESE REASONS, THE COURT UNANIMOUSLY

1. *Declares* the complaints under Article 5 (concerning confinement to the psychiatric hospital), Article 6 (concerning the incapacitation proceedings), Article 8 (concerning the applicant's incapacitation), Article 13 (concerning the absence of effective remedies) and Article 14 of the Convention (concerning the alleged discrimination) admissible, and the remainder of the application inadmissible;

2. *Holds* that there has been a violation of Article 6 of the Convention as regards the incapacitation proceedings;

3. *Holds* that there has been a violation of Article 8 of the Convention on account of the applicant's full incapacitation;

4. *Holds* that there has been a violation of Article 5 § 1 of the Convention as regards the lawfulness of the applicant's confinement in hospital;

5. *Holds* that there has been a violation of Article 5 § 4 of the Convention as regards the applicant's inability to obtain his release from hospital;

6. *Holds* that there is no need to examine the applicant's complaint under Article 13 of the Convention;

7. *Holds* that there is no need to examine the applicant's complaint under Article 14 of the Convention;

8. *Holds* that the State failed to comply with its obligations under Article 34 of the Convention by hindering the applicant's access to the Court and by not complying with an interim measure indicated by the Court in order to remove this hindrance;

9. *Holds* that the question of the application of Article 41 is not ready for decision;
   accordingly,
   (a) *reserves* the said question in whole;
   (b) *invites* the Government and the applicant to submit, within three months from the date on which the judgment becomes final in accordance with Article 44 § 2 of the Convention, their written observations on the matter and, in particular, to notify the Court of any agreement that they may reach;
   (c) *reserves* the further procedure and *delegates* to the President of the Chamber the power to fix the same if need be.

Done in English, and notified in writing on 27 March 2008, pursuant to Rule 77 §§ 2 and 3 of the Rules of Court.

COUR EUROPÉENNE DES DROITS DE L'HOMME
EUROPEAN COURT OF HUMAN RIGHTS

GRAND CHAMBER

CASE OF D.H. AND OTHERS v. THE CZECH REPUBLIC

(Application no. 57325/00)

JUDGMENT

STRASBOURG

13 November 2007

In the case of D.H. and Others v. the Czech Republic,

The European Court of Human Rights (Second Section), sitting as a Grand Chamber composed of:

Nicolas Bratza, *President*,
Boštjan M. Zupančič,
Rıza Türmen,
Karel Jungwiert,
Josep Casadevall,
Margarita Tsatsa-Nikolovska,
Kristaq Traja,
Vladimiro Zagrebelsky,
Elisabeth Steiner,
Javier Borrego Borrego,
Alvina Gyulumyan,
Khanlar Hajiyev,
Dean Spielmann,
Sverre Erik Jebens,
Ján Šikuta,
Ineta Ziemele,
Mark Villiger, *judges*,

and Michael O'Boyle, *Deputy Registrar*,

Having deliberated in private on 17 January and 19 September 2007,

Delivers the following judgment, which was adopted on the last-mentioned date:

PROCEDURE

1. The case originated in an application (no. 57325/00) against the Czech Republic lodged with the Court on 18 April 2000 under Article 34 of the Convention for the Protection of Human Rights and Fundamental Freedoms ("the Convention") by eighteen Czech nationals ("the applicants"), whose details are set out in the Annex to this judgment.

2. The applicants were represented before the Court by the European Roma Rights Centre based in Budapest, Lord Lester of Herne Hill, QC, Mr J. Goldston, of the New York Bar, and Mr D. Strupek, a lawyer practising in the Czech Republic. The Czech Government ("the Government") were represented by their Agent, Mr V.A. Schorm.

3. The applicants alleged, *inter alia*, that they had been discriminated against in the enjoyment of their right to education on account of their race or ethnic origin.

4. The application was allocated to the Second Section of the Court (Rule 52 § 1 of the Rules of Court). Within that Section, the Chamber that would consider the case (Article 27 § 1 of the Convention) was constituted as provided in Rule 26 § 1.

5. By a decision of 1 March 2005 following a hearing on admissibility and the merits (Rule 54 § 3), the Chamber declared the application partly admissible.

6. On 7 February 2006 a Chamber of that Section composed of Jean-Paul Costa, President, András Baka, Ireneu Cabral Barreto, Karel Jungwiert, Volodymyr Butkevych, Antonella Mularoni and Danutė Jočienė, judges, and Sally Dollé, Section Registrar, delivered a judgment in which it held by six votes to one that there had been no violation of Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1.

7. On 5 May 2006 the applicants requested the referral of their case to the Grand Chamber in accordance with Article 43 of the Convention. On 3 July 2006 a panel of the Grand Chamber granted their request.

8. The composition of the Grand Chamber was determined according to the provisions of Article 27 §§ 2 and 3 of the Convention and Rule 24. At the final deliberations, Kristaq Traja and Josep Casadevall, substitute judges, replaced Christos Rozakis and Peer Lorenzen, who were unable to take part in the further consideration of the case (Rule 24 § 3).

9. The applicants and the Government each filed observations on the merits. In addition third-party comments were received from various non-governmental organisations, namely, the International Step by Step Association, the Roma Education Fund and the European Early Childhood Education Research Association; Interights and Human Rights Watch; Minority Rights Group International, the European Network Against Racism and the European Roma Information Office; and the International Federation for Human Rights (Fédération internationale des ligues des droits de l'Homme – FIDH), each of which had been given leave by the President to intervene in the written procedure (Article 36 § 2 of the Convention and Rule 44 § 2). The Government replied to those comments (Rule 44 § 5).

10. A hearing took place in public in the Human Rights Building, Strasbourg, on 17 January 2007 (Rule 59 § 3).

There appeared before the Court:

(a) *for the Government*
Mr V.A. SCHORM, *Agent*,
Ms M. KOPSOVÁ,
Ms Z. KAPROVÁ,
Ms J. ZAPLETALOVÁ,
Mr R. BARINKA,
Mr P. KONŮPKA, *Counsel*;

(b) *for the applicants*
Lord LESTER OF HERNE HILL, QC,
Mr J. GOLDSTON,
Mr D. STRUPEK, *Counsel*.

The Court heard addresses by Lord Lester of Herne Hill, Mr Goldston and Mr Strupek, and by Mr Schorm.

THE FACTS

I. THE CIRCUMSTANCES OF THE CASE

11. Details of the applicants' names and places of residence are set out in the Annex.

A. Historical background

12. According to documents available on the website of the Roma and Travellers Division of the Council of Europe, the Roma originated from the regions situated between north-west India and the Iranian plateau. The first written traces of their arrival in Europe date back to the fourteenth century. Today there are between eight and ten million Roma living in Europe. They are to be found in almost all Council of Europe member States and indeed, in some central and east European countries, they represent over 5% of the population. The majority of them speak Romany, an Indo-European language that is understood by a very large number of Roma in Europe, despite its many variants. In general, Roma also speak the dominant language of the region in which they live, or even several languages.

13. Although they have been in Europe since the fourteenth century, often they are not recognised by the majority of society as a fully fledged European people and they have suffered throughout their history from

rejection and persecution. This culminated in their attempted extermination by the Nazis, who considered them an inferior race. As a result of centuries of rejection, many Roma communities today live in very difficult conditions, often on the fringe of society in the countries where they have settled, and their participation in public life is extremely limited.

14. In the Czech Republic the Roma have national-minority status and, accordingly, enjoy the special rights associated therewith. The National Minorities Commission of the Government of the Czech Republic, a governmental consultative body without executive power, has responsibility for defending the interests of the national minorities, including the Roma.

As to the number of Roma currently living in the Czech Republic, there is a discrepancy between the official, census-based, statistics and the estimated number. According to the latter, which is available on the website of the Minorities Commission of the Government of the Czech Republic, the Roma community now numbers between 150,000 and 300,000 people.

B. Special schools

15. According to information supplied by the Czech Government, the special schools (*zvláštní školy*) were established after the First World War for children with special needs, including those suffering from a mental or social handicap. The number of children placed in these schools continued to rise (from 23,000 pupils in 1960 to 59,301 in 1988). Owing to the entrance requirements of the primary schools (*základní školy*) and the resulting selection process, prior to 1989 most Roma children attended special schools.

16. Under the terms of the Schools Act (Law no. 29/1984), the legislation applicable in the present case, special schools were a category of specialised school (*speciální školy*) and were intended for children with mental deficiencies who were unable to attend "ordinary" or specialised primary schools. Under the Act, the decision to place a child in a special school was taken by the head teacher on the basis of the results of tests to measure the child's intellectual capacity carried out in an educational psychology centre and was subject to the consent of the child's legal guardian.

17. Following the switch to the market economy in the 1990s, a number of changes were made to the system of special schools in the Czech Republic. These changes also affected the education of Roma pupils. In 1995 the Ministry of Education issued a directive concerning the provision of additional lessons for pupils who had completed their compulsory education in a special school. Since the 1996/97 school year, preparatory classes for children from disadvantaged social backgrounds have been opened in nursery, primary and special schools. In 1998 the Ministry of Education approved an alternative educational curriculum for children of

Roma origin who had been placed in special schools. Roma teaching assistants were also assigned to primary and special schools to assist the teachers and facilitate communication with the families. By virtue of amendment no. 19/2000 to the Schools Act, which came into force on 18 February 2000, pupils who had completed their compulsory education in a special school were also eligible for admission to secondary schools, provided they satisfied the entrance requirements for their chosen course.

18. According to data supplied by the applicants, which was obtained through questionnaires sent in 1999 to the head teachers of the 8 special schools and 69 primary schools in the town of Ostrava, the total number of pupils placed in special schools in Ostrava came to 1,360, of whom 762 (56%) were Roma. Conversely, Roma represented only 2.26% of the total of 33,372 primary-school pupils in Ostrava. Further, although only 1.8% of non-Roma pupils were placed in special schools, in Ostrava the proportion of Roma pupils assigned to such schools was 50.3%. Accordingly, a Roma child in Ostrava was 27 times more likely to be placed in a special school than a non-Roma child.

According to data from the European Monitoring Centre on Racism and Xenophobia (now the European Union Agency for Fundamental Rights), more than half of Roma children in the Czech Republic attend special schools.

The Advisory Committee on the Framework Convention for the Protection of National Minorities observed in its report of 26 October 2005 that, according to unofficial estimates, the Roma represent up to 70% of pupils enrolled in special schools.

Lastly, according to a comparison of data on fifteen countries, including countries from Europe, Asia and North America, gathered by the Organisation for Economic Cooperation and Development in 1999 and cited in the observations of the International Step by Step Association, the Roma Education Fund and the European Early Childhood Education Research Association[1], the Czech Republic ranked second highest in terms of placing children with physiological impairments in special schools and in third place in the table of countries placing children with learning difficulties in such schools. Further, of the eight countries who had provided data on the schooling of children whose difficulties arose from social factors, the Czech Republic was the only one to use special schools; the other countries concerned almost exclusively used ordinary schools for the education of such children.

1. P. Evans (2004), "Educating students with special needs: A comparison of inclusion practices in OECD countries", Education Canada 44 (1): 32-35.

C. The facts of the instant case

19. Between 1996 and 1999 the applicants were placed in special schools in Ostrava, either directly or after a spell in an ordinary primary school.

20. The material before the Court shows that the applicants' parents had consented to and in some instances expressly requested their children's placement in a special school. Consent was indicated by signing a pre-completed form. In the case of applicants nos. 12 and 16, the dates on the forms are later than the dates of the decisions to place the children in special schools. In both instances, the date has been corrected by hand, and one of them is accompanied by a note from the teacher citing a typing error.

The decisions on placement were then taken by the head teachers of the special schools concerned after referring to the recommendations of the educational psychology centres where the applicants had undergone psychological tests. The applicants' school files contained the report on their examination, including the results of the tests with the examiners' comments, drawings by the children and, in a number of cases, a questionnaire for the parents.

The written decision concerning the placement was sent to the children's parents. It contained instructions on the right to appeal, a right which none of them exercised.

21. On 29 June 1999 the applicants received a letter from the school authorities informing them of the possibilities available for transferring from a special school to a primary school. It would appear that four of the applicants (nos. 5, 6, 11 and 16 in the Annex) were successful in aptitude tests and thereafter attended ordinary schools.

22. In the review and appeals procedures referred to below, the applicants were represented by a lawyer acting on the basis of signed written authorities from their parents.

1. Request for reconsideration of the case outside the formal appeal procedure

23. On 15 June 1999 all the applicants apart from those numbered 1, 2, 10 and 12 in the Annex asked the Ostrava Education Authority (*Školský úřad*) to reconsider, outside the formal appeal procedure (*přezkoumání mimo odvolací řízení*), the administrative decisions to place them in special schools. They argued that their intellectual capacity had not been reliably tested and that their representatives had not been adequately informed of the consequences of consenting to their placement in special schools. They therefore asked the Education Authority to revoke the impugned decisions, which they maintained did not comply with the statutory requirements and infringed their right to education without discrimination.

24. On 10 September 1999 the Education Authority informed the applicants that, as the impugned decisions complied with the legislation, the conditions for bringing proceedings outside the appeal procedure were not satisfied in their case.

2. Constitutional appeal

25. On 15 June 1999 applicants nos. 1 to 12 in the Annex lodged a constitutional appeal in which they complained, *inter alia*, of *de facto* discrimination in the general functioning of the special-education system. In that connection, they relied on, *inter alia*, Articles 3 and 14 of the Convention and Article 2 of Protocol No. 1. While acknowledging that they had not appealed against the decisions to place them in special schools, they alleged that they had not been sufficiently informed of the consequences of placement and argued (on the question of the exhaustion of remedies) that their case concerned continuing violations and issues that went far beyond their personal interests.

In their grounds of appeal, the applicants explained that they had been placed in special schools under a practice that had been established in order to implement the relevant statutory rules. In their submission, that practice had resulted in *de facto* racial segregation and discrimination that were reflected in the existence of two separately organised educational systems for members of different racial groups, namely special schools for the Roma and "ordinary" primary schools for the majority of the population. That difference in treatment was not based on any objective and reasonable justification, amounted to degrading treatment, and had deprived them of the right to education (as the curriculum followed in special schools was inferior and pupils in special schools were unable to return to primary school or to obtain a secondary education other than in a vocational training centre). Arguing that they had received an inadequate education and an affront to their dignity, the applicants asked the Constitutional Court (*Ústavní soud*) to find a violation of their rights, to quash the decisions to place them in special schools, to order the respondents (the special schools concerned, the Ostrava Education Authority and the Ministry of Education) to refrain from any further violation of their rights and to restore the status quo ante by offering them compensatory lessons.

26. In their written submissions to the Constitutional Court, the special schools concerned pointed out that all the applicants had been enrolled on the basis of a recommendation from an educational psychology centre and with the consent of their representatives. Furthermore, despite having been notified of the relevant decisions, none of the representatives had decided to appeal. According to the schools, the applicants' representatives had been informed of the differences between the special-school curriculum and the primary-school curriculum. Regular meetings of teaching staff were held to assess pupils (with a view to their possible transfer to primary school). They

added that some of the applicants (nos. 5 to 11 in the Annex) had been advised that there was a possibility of their being placed in primary school.

The Education Authority pointed out in its written submissions that the special schools had their own legal personality, that the impugned decisions contained advice on the right of appeal and that the applicants had at no stage contacted the Schools Inspectorate.

The Ministry of Education denied any discrimination and noted a tendency on the part of the parents of Roma children to have a rather negative attitude to school work. It asserted that each placement in a special school was preceded by an assessment of the child's intellectual capacity and that parental consent was a decisive factor. It further noted that there were eighteen educational assistants of Roma origin in schools in Ostrava.

27. In their final written submissions, the applicants pointed out (i) that there was nothing in their school files to show that their progress was being regularly monitored with a view to a possible transfer to primary school, (ii) that the reports from the educational psychology centres contained no information on the tests that were used, and (iii) that their recommendations for placement in a special school were based on grounds such as an insufficient command of the Czech language, an over-tolerant attitude on the part of the parents or an ill-adapted social environment, etc. They also argued that the gaps in their education made a transfer to primary school impossible in practice and that social or cultural differences could not justify the alleged difference in treatment.

28. On 20 October 1999 the Constitutional Court dismissed the applicants' appeal, partly on the ground that it was manifestly unfounded and partly on the ground that it had no jurisdiction to hear it. It nevertheless invited the competent authorities to give careful and constructive consideration to the applicants' proposals.

(a) With regard to the complaint of a violation of the applicants' rights as a result of their placement in special schools, the Constitutional Court held that, as only five decisions had actually been referred to in the notice of appeal, it had no jurisdiction to decide the cases of those applicants who had not appealed against the decisions concerned.

As to the five applicants who had lodged constitutional appeals against the decisions to place them in special schools (nos. 1, 2, 3, 5 and 9 in the Annex), the Constitutional Court decided to disregard the fact that they had not lodged ordinary appeals against those decisions, as it agreed that the scope of their constitutional appeals went beyond their personal interests. However, it found that there was nothing in the material before it to show that the relevant statutory provisions had been interpreted or applied unconstitutionally, since the decisions had been taken by head teachers vested with the necessary authority on the basis of recommendations by educational psychology centres and with the consent of the applicants' representatives.

(b) With regard to the complaints of insufficient monitoring of the applicants' progress at school and of racial discrimination, the Constitutional Court noted that it was not its role to assess the overall social context and found that the applicants had not furnished concrete evidence in support of their allegations. It further noted that the applicants had had a right of appeal against the decisions to place them in special schools, but had not exercised it. As to the objection that insufficient information had been given about the consequences of placement in a special school, the Constitutional Court considered that the applicants' representatives could have obtained this information by liaising with the schools and that there was nothing in the file to indicate that they had shown any interest in transferring to a primary school. The Constitutional Court therefore ruled that this part of the appeal was manifestly ill-founded.

II. RELEVANT DOMESTIC LAW AND PRACTICE

A. The Schools Act 1984 (Law no. 29/1984 – since repealed by Law no. 561/2004, which came into force on 1 January 2005)

29. Prior to 18 February 2000, section 19(1) of the Schools Act provided that to be eligible for secondary-school education pupils had to have successfully completed their primary-school education.

Following amendment no. 19/2000, which came into force on 18 February 2000, the amended section 19(1) provided that to be eligible for secondary-school education pupils had to have completed their compulsory education and demonstrated during the admission procedure that they satisfied the conditions of eligibility for their chosen course.

30. Section 31(1) provided that special schools were intended for children with "mental deficiencies" (*rozumové nedostatky*) that prevented them from following the curricula in ordinary primary schools or in specialised primary schools (*speciální základní škola*) intended for children suffering from sensory impairment, illness or disability.

B. The Schools Act 2004 (Law no. 561/2004)

31. This new Act on school education no longer provides for special schools in the form that had existed prior to its entry into force. Primary education is now provided by primary schools and specialised primary schools, the latter being intended for pupils with severe mental disability or multiple disabilities and for autistic children.

32. Section 16 contains provisions governing the education of children and pupils with special educational needs. These are defined in subsection 1 as children suffering from a disability, health problems or a social

disadvantage. Section 16(4) provides that for the purposes of the Act a child is socially disadvantaged, *inter alia*, if it comes from a family environment with low socio-cultural status or at risk of socio-pathological phenomena. Subsection 5 provides that the existence of special educational needs is to be assessed by an educational guidance centre.

33. The Act also makes provision, *inter alia*, for educational assistants, individualised education projects, preparatory classes for socially disadvantaged children prior to the period of compulsory school education and additional lessons for pupils who have not received a basic education.

C. Decree no. 127/1997 on specialised schools (since repealed by Decree no. 73/2005, which came into force on 17 February 2005)

34. Article 2 § 4 of the Decree laid down that the following schools were available for pupils suffering from mental disability: specialised nursery schools (*speciální mateřské školy*), special schools, auxiliary schools (*pomocné školy*), vocational training centres (*odborná učiliště*) and practical training schools (*praktické školy*).

35. Article 6 § 2 stipulated that if during the pupil's school career there was a change in the nature of his or her disability or if the specialised school was no longer adapted to the level of disability, the head teacher of the school attended by the pupil was required, after an interview with the pupil's representative, to recommend the pupil's placement in another specialised school or an ordinary school.

36. Article 7 § 1 stipulated that the decision to place a pupil in or transfer a pupil to, *inter alia*, a special school was to be taken by the head teacher, provided that the pupil's legal guardians consented. Article 7 § 2 provided that a proposal for a pupil to be placed, *inter alia*, in a special school could be made to the head teacher by the pupil's legal guardian, the pupil's current school, an educational psychology centre, a hospital or clinic, an authority with responsibility for family and child welfare, a health centre, etc. In the event of the pupil not receiving a place in a special school, the head teacher was required by Article 7 § 3 to notify the pupil's legal guardian and the competent school authority or the municipality in which the pupil was permanently resident of the decision. The education authority was then required, after consulting the municipality, to make a proposal regarding the school in which the pupil would receive his or her compulsory education. Article 7 § 4 required the educational psychology centre to assemble all the documents relevant to the decision and to make a recommendation to the head teacher regarding the type of school.

D. Decree no. 73/2005 on the education of children, pupils and students with special educational needs and gifted children, pupils and students

37. Article 1 of the Decree provides that pupils and students with special educational needs are to be educated with the help of support measures that go beyond or are different from the individualised educational and organisational measures available in ordinary schools.

38. Article 2 provides that children whose special educational needs have been established with the aid of an educational or psychological examination performed by an educational guidance centre will receive special schooling if they have clear and compelling needs that warrant their placement in a special education system.

E. Domestic practice at the material time

1. Psychological examination

39. The testing of intellectual capacity in an educational psychology centre with the consent of the child's legal guardians was neither compulsory nor automatic. The recommendation for the child to sit the tests was generally made by teachers – either when the child first enrolled at the school or if difficulties were noted in its ordinary primary-school education – or by paediatricians.

40. According to the applicants, who cited experts in this field, the most commonly used tests appeared to be variants of the Wechsler Intelligence Scale for Children (PDW and WISC-III) and the Stanford-Binet intelligence test. Citing various opinions, including those of teachers and psychologists and the Head of the Special Schools Department at the Czech Ministry of Education in February 1999, the applicants submitted that the tests used were neither objective nor reliable, as they had been devised solely for Czech children, and had not recently been standardised or approved for use with Roma children. Moreover, no measures had been taken to enable Roma children to overcome their cultural and linguistic disadvantages in the tests. Nor had any instructions been given to restrict the latitude that was given in the administration of the tests and the interpretation of the results. The applicants also drew attention to a 2002 report in which the Czech Schools Inspectorate noted that children without any significant mental deficiencies were still being placed in special schools.

41. In the report submitted by the Czech Republic on 1 April 1999 pursuant to Article 25 § 1 of the Framework Convention for the Protection of National Minorities, it was noted that the psychological tests "are conceived for the majority population and do not take Romany specifics into consideration".

The Advisory Committee on the Framework Convention noted in its first report on the Czech Republic, which was published on 25 January 2002, that while these schools were designed for mentally handicapped children it appeared that many Roma children who were not mentally handicapped were placed in them owing to real or perceived language and cultural differences between Roma and the majority. The Committee stressed that "placing children in such special schools should take place only when it is absolutely necessary and always on the basis of consistent, objective and comprehensive tests".

In its second report on the Czech Republic published on 26 October 2005 the Advisory Committee observed: "Tests and methods used to assess children's intellectual abilities upon school enrolment have already been revised with a view to ensuring that they are not misused to the detriment of Roma children." However, it noted with concern that "revision of the psychological tests used in this context has not had a marked impact. According to unofficial estimates, Roma account for up to 70% of pupils in [special] schools, and this – having regard to the percentage of Roma in the population – raises doubts concerning the tests' validity and the relevant methodology followed in practice".

42. In its report on the Czech Republic published on 21 March 2000, the European Commission against Racism and Intolerance (ECRI) noted that channelling of Roma children to special schools was reported to be often quasi-automatic. According to ECRI, the poor results obtained by these children in the pre-school aptitude tests could be explained by the fact that in the Czech Republic most Roma children did not attend kindergarten education. ECRI therefore considered that the practice of channelling Roma/Gypsy children into special schools for those with mental retardation should be fully examined, to ensure that any testing used was fair and that the true abilities of each child were properly evaluated.

In its next report on the Czech Republic, which was published in June 2004, ECRI noted that the test developed by the Czech Ministry of Education for assessing a child's mental level was not mandatory, and was only one of a battery of tools and methods recommended to the educational guidance centres.

43. In his final report on the human rights situation of the Roma, Sinti and Travellers in Europe of 15 February 2006, the Commissioner for Human Rights observed: "Roma children are frequently placed in classes for children with special needs without an adequate psychological or pedagogical assessment, the real criteria clearly being their ethnic origin."

44. According to the observations submitted by the International Step by Step Association, the Roma Education Fund and the European Early Childhood Education Research Association, countries in east-central and south-eastern Europe typically lacked national definitions of "disability" (related to the placement of students in special schools) and used definitions

in which some form of disability was connected to the socio-cultural background of the child, thus leaving the door to discriminatory practices open. Data on children with disabilities were drawn largely from administrative sources rather than being derived from a thorough assessment of the actual characteristics of the child. Thus, divisive practices and the use of a single test were common in the 1990s.

It is alleged in the observations that the assessment used to place Roma children in special schools in the Ostrava region ran contrary to effective assessment indicators that were well known by the mid 1990s, for example, those published in 1987 by the National Association for the Education of Young Children (USA). These indicators were now associated with the Global Alliance for the Education of Young Children, which included member organisations in Europe and, more particularly, the Czech Republic. Relevant indicators included: ethical principles to guide assessment practices; the use of assessment instruments for their intended purposes and in such a way as to meet professional quality criteria; assessments appropriate to the ages and other characteristics of the children being assessed; recognition of the developmental and educational significance of the subject matter of the assessment; the use of assessment evidence to understand and improve learning; the gathering of assessment evidence from realistic settings and in situations that reflected children's actual performance; the use of multiple sources of evidence gathered over time for assessments; the existence of a link between screening and follow-up; limitations on the use of individually administered, norm-referenced tests; and adequate information for staff and families involved in the assessment process.

Thus, the assessment of Roma children in the Ostrava region did not take into account the language and culture of the children, or their prior learning experiences, or their unfamiliarity with the demands of the testing situation. Single rather than multiple sources of evidence were used. Testing was done in one sitting, not over time. Evidence was not obtained in realistic or authentic settings where children could demonstrate their skills. Undue emphasis was placed on individually administered, standardised tests normed on other populations.

According to studies cited in these observations (UNICEF Innocenti Insight (2005); Save the Children (2001), *Denied a future? The right to education of Roma/Gypsy and Traveller children*; D.J. Losen and G. Orfield (2002), *Introduction: Racial inequity in special education*, Cambridge, MA: Harvard Education Press), disproportionately placing certain groups of students in special education resulted from an array of factors, including "unconscious racial bias on the part of school authorities, large resource inequalities, an unjustifiable reliance on IQ and other evaluation tools, educators' inappropriate responses to the pressures of high-stakes testing, and power differentials between minority parents and school officials".

Thus, school placement through psychological testing often reflected racial biases in the society concerned.

45. The Government observed that the unification of European norms used by psychologists was currently under way and that the State authorities had taken all reasonable steps to ensure that the psychological tests were administered by appropriately qualified experts with university degrees applying the latest professional and ethical standards in their specialised field. In addition, research conducted in 1997 by Czech experts at the request of the Ministry of Education showed that Roma children had attained in a standard test of intelligence (WISC-III) only insignificantly lower results than comparable non-Roma Czech children (one point on the IQ scale).

2. Consent to placement in a special school

46. Article 7 of Decree no. 127/1997 on specialised schools made the consent of the legal guardians a condition *sine qua non* for the child's placement in a special school. The applicants noted that the Czech legislation did not require the consent to be in writing. Nor did information on the education provided by special schools or the consequences of the child's placement in a special school have to be provided beforehand.

47. In its report on the Czech Republic published in March 2000, ECRI observed that Roma parents often favoured the channelling of Roma children to special schools, partly to avoid abuse from non-Roma children in ordinary schools and isolation of the child from other neighbourhood Roma children, and partly owing to a relatively low level of interest in education.

In its report on the Czech Republic published in June 2004, ECRI noted that when deciding whether or not to give their consent parents of Roma children continued "to lack information concerning the long-term negative consequences of sending their children to such schools", which were "often presented to parents as an opportunity for their children to receive specialised attention and be with other Roma children".

48. According to information obtained by the International Federation for Human Rights from its Czech affiliate, many schools in the Czech Republic are reluctant to accept Roma children. That reluctance is explained by the reaction of the parents of non-Roma children, which, in numerous cases, has been to remove their children from integrated schools because the parents fear that the level of the school will fall following the arrival of Roma children or, quite simply, because of prejudice against the Roma. It is in that context that Roma children undergo tests designed to ascertain their capacity to follow the ordinary curriculum, following which parents of Roma children are encouraged to place their children in special schools. The parents' choice to place their children in special schools, where that is what they choose to do, is consistent with the school authorities' desire not to

admit so many Roma children that their arrival might induce the parents of non-Roma children to remove their own children from the school.

3. Consequences

49. Pupils in special schools follow a special curriculum supposedly adapted to their intellectual capacity. After completing their course of compulsory education in this type of school, they may elect to continue their studies in vocational training centres or, since 18 February 2000, in other forms of secondary school (provided they are able to establish during the admissions procedure that they satisfy the entrance requirements for their chosen course).

Further, Article 6 § 2 of Decree no. 127/1997 stipulated that, if during the pupil's school career there was a change in the nature of his or her disability or if the specialised school was no longer adapted to the level of disability, the head teacher of the school attended by the child or pupil was required, after an interview with the pupil's guardian, to recommend the pupil's placement in another specialised school or in an ordinary school.

50. In his final report on the human rights situation of the Roma, Sinti and Travellers in Europe of 15 February 2006, the Commissioner for Human Rights noted: "Being subjected to special schools or classes often means that these children follow a curriculum inferior to those of mainstream classes, which diminishes their opportunities for further education and for finding employment in the future. The automatic placement of Roma children in classes for children with special needs is likely to increase the stigma by labelling the Roma children as less intelligent and less capable. At the same time, segregated education denies both the Roma and non-Roma children the chance to know each other and to learn to live as equal citizens. It excludes Roma children from mainstream society at the very beginning of their lives, increasing the risk of their being caught in the vicious circle of marginalisation."

51. The Advisory Committee on the Framework Convention for the Protection of National Minorities noted in its second report on the Czech Republic, which was published on 26 October 2005, that placement in a special school "makes it more difficult for Roma children to gain access to other levels of education, thus reducing their chances of integrating in the society. Although legislation no longer prevents children from advancing from 'special' to ordinary secondary schools, the level of education offered by 'special' schools generally does not make it possible to cope with the requirements of secondary schools, with the result that most drop out of the system".

52. According to the observations submitted by the International Step by Step Association, the Roma Education Fund and the European Early Childhood Education Research Association, the placement of children in segregated special schools was an example of a very early "tracking" of

students, in this case by assigning children perceived to be of "low ability" or "low potential" to special schools from an early age. Such practices increased educational inequity as they had especially negative effects on the achievement levels of disadvantaged children (see, *inter alia*, the Communication from the Commission of the European Communities to the Council and to the European Parliament on efficiency and equity in European education and training systems (COM/2006/0481, 8 September 2006)). The longer-term consequences of "tracking" included pupils being channelled towards less prestigious forms of education and training and pupils dropping out of school early. Tracking could thus help create a social construction of failure.

53. In their observations to the Court, the organisations Minority Rights Group International, European Network Against Racism and European Roma Information Office noted that children in special schools followed a simplified curriculum that was considered appropriate for their lower level of development. Thus, in the Czech Republic, children in special schools were not expected to know the alphabet or numbers up to ten until the third or fourth year of school, while their counterparts in ordinary schools acquired that knowledge in the first year.

III. COUNCIL OF EUROPE SOURCES

A. The Committee of Ministers

Recommendation No. R (2000) 4 of the Committee of Ministers to member States on the education of Roma/Gypsy children in Europe (adopted by the Committee of Ministers on 3 February 2000 at the 696th meeting of the Ministers' Deputies)

54. The Recommendation provides as follows:

"The Committee of Ministers, under the terms of Article 15.*b* of the Statute of the Council of Europe,

Considering that the aim of the Council of Europe is to achieve greater unity between its members and that this aim may be pursued, in particular, through common action in the field of education;

Recognising that there is an urgent need to build new foundations for future educational strategies toward the Roma/Gypsy people in Europe, particularly in view of the high rates of illiteracy or semi-literacy among them, their high drop-out rate, the low percentage of students completing primary education and the persistence of features such as low school attendance;

Noting that the problems faced by Roma/Gypsies in the field of schooling are largely the result of long-standing educational policies of the past, which led either to assimilation or to segregation of Roma/Gypsy children at school on the grounds that they were 'socially and culturally handicapped';

Considering that the disadvantaged position of Roma/Gypsies in European societies cannot be overcome unless equality of opportunity in the field of education is guaranteed for Roma/Gypsy children;

Considering that the education of Roma/Gypsy children should be a priority in national policies in favour of Roma/Gypsies;

Bearing in mind that policies aimed at addressing the problems faced by Roma/Gypsies in the field of education should be comprehensive, based on an acknowledgement that the issue of schooling for Roma/Gypsy children is linked with a wide range of other factors and pre-conditions, namely the economic, social and cultural aspects, and the fight against racism and discrimination;

Bearing in mind that educational policies in favour of Roma/Gypsy children should be backed up by an active adult education and vocational education policy;

...

Recommends that in implementing their education policies the governments of the member States:

– be guided by the principles set out in the appendix to this Recommendation;

– bring this Recommendation to the attention of the relevant public bodies in their respective countries through the appropriate national channels."

55. The relevant sections of the Appendix to Recommendation No. R (2000) 4 read as follows:

"*Guiding principles of an education policy for Roma/Gypsy children in Europe*

I. Structures

1. Educational policies for Roma/Gypsy children should be accompanied by adequate resources and the flexible structures necessary to meet the diversity of the Roma/Gypsy population in Europe and which take into account the existence of Roma/Gypsy groups which lead an itinerant or semi-itinerant lifestyle. In this respect, it might be envisaged having recourse to distance education, based on new communication technologies.

2. Emphasis should be put on the need to better coordinate the international, national, regional and local levels in order to avoid dispersion of efforts and to promote synergies.

3. To this end member States should make the Ministries of Education sensitive to the question of education of Roma/Gypsy children.

4. In order to secure access to school for Roma/Gypsy children, pre-school education schemes should be widely developed and made accessible to them.

5. Particular attention should also be paid to the need to ensure better communication with parents, where necessary using mediators from the Roma/Gypsy community which could then lead to specific career possibilities. Special information and advice should be given to parents about the necessity of education and about the support mechanisms that municipalities can offer families. There has to be mutual understanding between parents and schools. The parents' exclusion and lack of knowledge and education (even illiteracy) also prevent children from benefiting from the education system.

6. Appropriate support structures should be set up in order to enable Roma/Gypsy children to benefit, in particular through positive action, from equal opportunities at school.

7. The member States are invited to provide the necessary means to implement the above-mentioned policies and arrangements in order to close the gap between Roma/Gypsy pupils and majority pupils.

II. Curriculum and teaching material

8. Educational policies in favour of Roma/Gypsy children should be implemented in the framework of broader intercultural policies, taking into account the particular features of the Romani culture and the disadvantaged position of many Roma/Gypsies in the member States.

9. The curriculum, on the whole, and the teaching material should therefore be designed so as to take into account the cultural identity of Roma/Gypsy children. Romani history and culture should be introduced in the teaching material in order to reflect the cultural identity of Roma/Gypsy children. The participation of representatives of the Roma/Gypsy community should be encouraged in the development of teaching material on the history, culture or language of the Roma/Gypsies.

10. However, the member States should ensure that this does not lead to the establishment of separate curricula, which might lead to the setting up of separate classes.

11. The member States should also encourage the development of teaching material based on good practices in order to assist teachers in their daily work with Roma/Gypsy pupils.

12. In the countries where the Romani language is spoken, opportunities to learn in the mother tongue should be offered at school to Roma/Gypsy children.

III. Recruitment and training of teachers

13. It is important that future teachers should be provided with specific knowledge and training to help them understand better their Roma/Gypsy pupils. The education of Roma/Gypsy pupils should however remain an integral part of the general educational system.

14. The Roma/Gypsy community should be involved in the designing of such curricula and should be directly involved in the delivery of information to future teachers.

15. Support should also be given to the training and recruitment of teachers from within the Roma/Gypsy community.

...”

B. The Parliamentary Assembly

1. Recommendation No. 1203 (1993) on Gypsies in Europe

56. The Parliamentary Assembly made, *inter alia*, the following general observations:

"1. One of the aims of the Council of Europe is to promote the emergence of a genuine European cultural identity. Europe harbours many different cultures, all of them, including the many minority cultures, enriching and contributing to the cultural diversity of Europe.

2. A special place among the minorities is reserved for Gypsies. Living scattered all over Europe, not having a country to call their own, they are a true European minority, but one that does not fit into the definitions of national or linguistic minorities.

3. As a non-territorial minority, Gypsies greatly contribute to the cultural diversity of Europe. In different parts of Europe they contribute in different ways, be it by language and music or by their trades and crafts.

4. With central and east European countries now member States, the number of Gypsies living in the area of the Council of Europe has increased drastically.

5. Intolerance of Gypsies by others has existed throughout the ages. Outbursts of racial or social hatred, however, occur more and more regularly, and the strained relations between communities have contributed to the deplorable situation in which the majority of Gypsies lives today.

6. Respect for the rights of Gypsies, individual, fundamental and human rights and their rights as a minority is essential to improve their situation.

7. Guarantees for equal rights, equal chances, equal treatment, and measures to improve their situation will make a revival of Gypsy language and culture possible, thus enriching the European cultural diversity.

8. The guarantee of the enjoyment of the rights and freedoms set forth in Article 14 of the European Convention on Human Rights is important for Gypsies as it enables them to maintain their individual rights.

..."

57. As far as education is concerned, the Recommendation states:

"...

vi. the existing European programmes for training teachers of Gypsies should be extended;

vii. special attention should be paid to the education of women in general and mothers together with their younger children;

viii. talented young Gypsies should be encouraged to study and to act as intermediaries for Gypsies;

..."

2. Recommendation No. 1557 (2002) on the legal situation of Roma in Europe

58. This Recommendation states, *inter alia*:

"...

3. Today Roma are still subjected to discrimination, marginalisation and segregation. Discrimination is widespread in every field of public and personal life, including access to public places, education, employment, health services and housing, as well as crossing borders and access to asylum procedures. Marginalisation

and the economic and social segregation of Roma are turning into ethnic discrimination, which usually affects the weakest social groups.

4. Roma form a special minority group, in so far as they have a double minority status. They are an ethnic community and most of them belong to the socially disadvantaged groups of society.

...

15. The Council of Europe can and must play an important role in improving the legal status, the level of equality and the living conditions of Roma. The Assembly calls upon the member States to complete the six general conditions, which are necessary for the improvement of the situation of Roma in Europe:

...

c. to guarantee equal treatment for the Romany minority as an ethnic or national minority group in the field of education, employment, housing, health and public services. Member States should give special attention to:

i. promoting equal opportunities for Roma on the labour market;

ii. providing the possibility for Romany students to participate in all levels of education from kindergarten to university;

iii. developing positive measures to recruit Roma in public services of direct relevance to Roma communities, such as primary and secondary schools, social welfare centres, local primary health care centres and local administration;

iv. eradicating all practices of segregated schooling for Romany children, particularly that of routing Romany children to schools or classes for the mentally disabled;

d. to develop and implement positive action and preferential treatment for the socially deprived strata, including Roma as a socially disadvantaged community, in the field of education, employment and housing:

...

e. to take specific measures and create special institutions for the protection of the Romany language, culture, traditions and identity:

...

ii. to encourage Romany parents to send their children to primary school, secondary school and higher education, including college or university, and give them adequate information about the necessity of education;

...

v. to recruit Roma teaching staff, particularly in areas with a large Romany population;

f. to combat racism, xenophobia and intolerance and to ensure non-discriminatory treatment of Roma at local, regional, national and international levels:

...

vi. to pay particular attention to the phenomenon of the discrimination against Roma, especially in the fields of education and employment;

...”

C. The European Commission against Racism and Intolerance (ECRI)

1. *ECRI General Policy Recommendation No. 3: Combating racism and intolerance against Roma/Gypsies (adopted by ECRI on 6 March 1998)*

59. The relevant sections of this Recommendation state:

"The European Commission against Racism and Intolerance:

...

Recalling that combating racism, xenophobia, antisemitism and intolerance forms an integral part of the protection and promotion of human rights, that these rights are universal and indivisible, and that all human beings, without any distinction whatsoever, are entitled to these rights;

Stressing that combating racism, xenophobia, antisemitism and intolerance is above all a matter of protecting the rights of vulnerable members of society;

Convinced that in any action to combat racism and discrimination, emphasis should be placed on the victim and the improvement of his or her situation;

Noting that Roma/Gypsies suffer throughout Europe from persisting prejudices, are victims of a racism which is deeply-rooted in society, are the target of sometimes violent demonstrations of racism and intolerance and that their fundamental rights are regularly violated or threatened;

Noting also that the persisting prejudices against Roma/Gypsies lead to discrimination against them in many fields of social and economic life, and that such discrimination is a major factor in the process of social exclusion affecting many Roma/Gypsies;

Convinced that the promotion of the principle of tolerance is a guarantee of the preservation of open and pluralistic societies allowing for a peaceful coexistence;

recommends the following to Governments of member States:

...

– to ensure that discrimination as such, as well as discriminatory practices, are combated through adequate legislation and to introduce into civil law specific provisions to this end, particularly in the fields of employment, housing and education;

...

– to vigorously combat all forms of school segregation towards Roma/Gypsy children and to ensure the effective enjoyment of equal access to education;

..."

2. ECRI General Policy Recommendation No. 7 on national legislation to combat racism and racial discrimination (adopted by ECRI on 13 December 2002)

60. The following definitions are used for the purposes of this Recommendation:

> "9a) 'racism' shall mean the belief that a ground such as race, colour, language, religion, nationality or national or ethnic origin justifies contempt for a person or a group of persons, or the notion of superiority of a person or a group of persons.
>
> (b) 'direct racial discrimination' shall mean any differential treatment based on a ground such as race, colour, language, religion, nationality or national or ethnic origin, which has no objective and reasonable justification. Differential treatment has no objective and reasonable justification if it does not pursue a legitimate aim or if there is not a reasonable relationship of proportionality between the means employed and the aim sought to be realised.
>
> (c) 'indirect racial discrimination' shall mean cases where an apparently neutral factor such as a provision, criterion or practice cannot be as easily complied with by, or disadvantages ... persons belonging to a group designated by a ground such as race, colour, language, religion, nationality or national or ethnic origin, unless this factor has an objective and reasonable justification. This latter would be the case if it pursues a legitimate aim and if there is a reasonable relationship of proportionality between the means employed and the aim sought to be realised."

61. In the explanatory memorandum to this Recommendation, it is noted (point 8) that the definitions of direct and indirect racial discrimination contained in paragraph 1 (b) and (c) of the Recommendation draw inspiration from those contained in Council Directive 2000/43/EC implementing the principle of equal treatment between persons irrespective of racial or ethnic origin and in Council Directive 2000/78/EC establishing a general framework for equal treatment in employment and occupation, and on the case-law of the European Court of Human Rights.

3. The report on the Czech Republic published in September 1997

62. In the section of the report dealing with the policy aspects of education and training, ECRI stated that public opinion appeared sometimes to be rather negative towards certain groups, especially the Roma/Gypsy community, and suggested that further measures should be taken to raise public awareness of the issues of racism and intolerance and to improve tolerance towards all groups in society. It added that special measures should be taken as regards the education and training of the members of minority groups, particularly members of the Roma/Gypsy community.

4. The report on the Czech Republic published in March 2000

63. In this report, ECRI stated that the disadvantages and effective discrimination faced by members of the Roma/Gypsy community in the field of education were of particularly serious concern. It was noted that

Roma/Gypsy children were vastly over-represented in special schools and that their channelling to special schools was reported to be often quasi-automatic. Roma/Gypsy parents often favoured this solution, partly to avoid abuse from non-Roma/Gypsy children in ordinary schools and isolation of the child from other neighbourhood Roma/Gypsy children, and partly owing to a relatively low level of interest in education. Most Roma/Gypsy children were consequently relegated to educational facilities designed for other purposes, offering little opportunity for skills training or educational preparation and therefore very limited opportunity for further study or employment. Participation of members of the Roma/Gypsy community in education beyond the primary school level was extremely rare.

64. ECRI therefore considered that the practice of channelling Roma/Gypsy children into special schools for those with mental retardation should be fully examined to ensure that any testing used was fair and that the true abilities of each child were properly evaluated. ECRI also considered that it was fundamental that Roma/Gypsy parents should be made aware of the need for their children to receive a normal education. In general, ECRI considered that there was a need for closer involvement of members of the Roma/Gypsy community in matters concerning education. As a start, the authorities needed to ensure that Roma/Gypsy parents were kept fully informed of measures taken and were encouraged to participate in educational decisions affecting their children.

5. The report on the Czech Republic published in June 2004

65. With regard to the access of Roma children to education, ECRI said in this report that it was concerned that Roma children continued to be sent to special schools which, besides perpetuating their segregation from mainstream society, severely disadvantaged them for the rest of their lives. The standardised test developed by the Czech Ministry of Education for assessing a child's mental level was not mandatory and was only one of a battery of tools and methods recommended to the psychological counselling centres. As to the other element required in order to send a child to a special school – the consent of the child's legal guardian – ECRI observed that parents making such decisions continued to lack information concerning the long-term negative consequences of sending their children to such schools, which were often presented to parents as an opportunity for their children to receive specialised help and be with other Roma children. ECRI also said that it had received reports of Roma parents being turned away from ordinary schools.

ECRI also noted that the Schools Act had come into force in January 2000 and provided the opportunity for pupils from special schools to apply for admission to secondary schools. According to various sources, that remained largely a theoretical possibility as special schools did not provide children with the knowledge required to follow the secondary-school

curriculum. There were no measures in place to provide additional education to pupils who had gone through the special-school system to bring them to a level where they would be adequately prepared for ordinary secondary schools.

ECRI had received very positive feedback concerning the success of 'zero-grade courses' (preparatory classes) at pre-school level in increasing the number of Roma children who attended ordinary schools. It expressed its concern, however, over a new trend to maintain the system of segregated education in a new form – this involved special classes in mainstream schools. In that connection, a number of concerned actors were worried that the proposed new Schools Act created the possibility for even further separation of Roma through the introduction of a new category of special programmes for the "socially disadvantaged".

Lastly, ECRI noted that, despite initiatives taken by the Ministry of Education (classroom assistants, training programmes for teachers, revision of the primary-school curriculum), the problem of low levels of Roma participation in secondary and higher education that had been described by ECRI in its second report persisted.

D. Framework Convention for the Protection of National Minorities

1. The report submitted by the Czech Republic on 1 April 1999 pursuant to Article 25 § 1 of the Framework Convention for the Protection of National Minorities

66. The report stated that the government had adopted measures in the education sphere that were focused on providing suitable conditions especially for children from socially and culturally disadvantaged environments, in particular the Roma community, by opening preparatory classes in elementary and special schools. It was noted that "Romany children with average or above-average intellect are often placed in such schools on the basis of results of psychological tests (this happens always with the consent of the parents). These tests are conceived for the majority population and do not take Romany specifics into consideration. Work is being done on restructuring these tests". In some special schools Roma pupils made up between 80% and 90% of the total number of pupils.

2. The report submitted by the Czech Republic on 2 July 2004

67. The Czech Republic accepted that the Roma were particularly exposed to discrimination and social exclusion and said that it was preparing to introduce comprehensive anti-discrimination tools associated with the implementation of the Council Directive implementing the principle of equal treatment. New legislation was due to be enacted in 2004

(the Act, Law no. 561/2004, was passed on 24 September 2004 and came into force on 1 January 2005).

In the field of Roma education, the report said that the State had taken various measures of affirmative action in order to radically change the present situation of Roma children. The government regarded the practice of referring large numbers of Roma children to special schools as untenable. The need for affirmative action was due not only to the socio-cultural handicap of Roma children, but also to the nature of the whole education system and its inability to sufficiently reflect cultural differences. The proposed new Schools Act would bring changes to the special-education system by transforming "special schools" into "special primary schools", thus providing the children targeted assistance in overcoming their socio-cultural handicap. These included preparatory classes, individual study programmes for children in special schools, measures concerning pre-school education, an expanded role for assistants from the Roma community and specialised teacher-training programmes. As one of the main problems encountered by Roma pupils was their poor command of the Czech language, the Ministry of Education considered that the best solution (and the only realistic one) would be to provide preparatory classes at the pre-school stage for children from disadvantaged socio-cultural backgrounds.

The report also cited a number of projects and programmes that had been implemented nationally in this sphere (Support for Roma integration, Programme for Roma integration/Multicultural education reform, and Reintegrating Roma special-school pupils in primary schools).

3. Opinion on the Czech Republic of the Advisory Committee on the Framework Convention for the Protection of National Minorities, published on 25 January 2002

68. The Advisory Committee noted that, while the special schools were designed for mentally handicapped children, it appeared that many Roma children who were not mentally handicapped were placed in these schools due to real or perceived language and cultural differences between Roma and the majority. It considered that this practice was not compatible with the Framework Convention and stressed that placing children in such schools should take place only when absolutely necessary and always on the basis of consistent, objective and comprehensive tests.

69. The special schools had led to a high level of separation of Roma pupils from others and to a low level of educational skills in the Roma community. This was recognised by the Czech authorities. Both governmental and civil society actors agreed on the need for a major reform. There was however disagreement about the precise nature of the reform to be carried out, the amount of resources to be made available and the speed with which reforms were to be implemented. The Advisory Committee was of the opinion that the Czech authorities ought to develop the reform, in

consultation with the persons concerned, so as to ensure equal opportunities for access to schools for Roma children and equal rights to an ordinary education, in accordance with the principles set out in Committee of Ministers Recommendation No. R (2000) 4 on the education of Roma/Gypsy children in Europe.

70. The Advisory Committee noted with approval the initiatives that had been taken to establish so-called zero classes, allowing the preparation of Roma children for basic school education, *inter alia*, by improving their Czech language skills, and encouraged the authorities to make these facilities more broadly available. It also considered the creation of posts of Roma pedagogical advisers in schools, a civil society initiative, to be a most positive step. The Advisory Committee encouraged the State authorities in their efforts to ensure the increase and development of such posts. A further crucial objective was to ensure a much higher number of Roma children had access to and successfully completed secondary education.

4. The Advisory Committee's opinion on the Czech Republic, published on 26 October 2005

71. In this opinion, the Advisory Committee noted that the authorities were genuinely committed to improving the educational situation of Roma children, and were trying, in various ways, to realise this aim in practice. In that connection, it noted that it was too early to determine whether the revised educational system introduced by the new Schools Act (Law no. 561/2004) would substantially change the existing situation of over-representation of Roma children in special schools or special classes.

72. The Advisory Committee noted that the authorities were paying special attention to the unjustified placement of Roma children in special schools. Tests and methods used to assess children's intellectual abilities upon school enrolment had already been revised with a view to ensuring that they were not misused to the detriment of Roma children. Special educational programmes had been launched to help Roma children overcome their problems. These included waiving fees for the last year of pre-school education, relaxing the rules on minimum class sizes, more individualised education, appointing educational assistants (mostly Roma), as well as producing methodological handbooks and guidelines for teachers working with Roma children. Preparatory pre-school classes had also been organised for Roma children, and had worked well, although on a fairly limited scale. To accommodate all the children concerned, these measures needed to be applied more widely. The Advisory Committee also took note of the special support programme for Roma access to secondary and higher education, and of the efforts that had been made to build up a network of qualified Roma teachers and educational assistants.

73. The Advisory Committee noted, however, that although constant monitoring and evaluation of the school situation of Roma children was one

of the government's priorities the relevant report submitted by the Czech Republic said little about the extent to which they were currently integrated in schools, or the effectiveness and impact of the many measures that had been taken for them. It noted with concern that the measures had produced few improvements and that local authorities did not systematically implement the government's school support scheme and did not always have the determination needed to act effectively in this field.

74. The Advisory Committee noted with concern that, according to non-governmental sources, a considerable number of Roma children were still being placed in special schools at a very early age, and that revision of the psychological tests used in this context had not had a marked impact. According to unofficial estimates, Roma accounted for up to 70% of pupils in these schools, and this – having regard to the percentage of Roma in the population – raised doubts concerning the tests' validity and the methodology followed. This situation was made all the more disturbing by the fact that it also made it more difficult for Roma children to gain access to other levels of education, thus reducing their chances of integrating in society. Although legislation no longer prevented children from advancing from special to ordinary secondary schools, the level of education offered by special schools generally did not make it possible to cope with the requirements of secondary schools, with the result that most dropped out of the system. Although estimates of the number of Roma children who remained outside the school system varied, those who did attend school rarely advanced beyond primary school.

75. In addition, the Advisory Committee noted that, in spite of the awareness-raising initiatives taken by the Ministry of Education, many of the Roma children who attended ordinary schools were isolated by other children and by teaching staff, or even placed in separate classes. At the same time, it was recognised that in some schools Roma children were the largest pupil group simply because the schools concerned were located near the places where Roma resided compactly. According to other sources, material conditions in some of the schools they attended were precarious and the teaching they received was still, in most cases, insufficiently adapted to their situation. It was important to ensure that these schools, too, provided quality education.

76. According to the Advisory Committee priority had to go to placing Roma children in ordinary schools, supporting and promoting preparatory classes and also to educational assistants. Recruiting Roma teaching staff and making all education staff aware of the specific situation of Roma children also needed to receive increased attention. An active involvement on the part of the parents, in particular with regard to the implementation of the new Schools Act, also needed to be promoted as a condition *sine qua non* for the overall improvement of the educational situation of the Roma. Lastly, more determined action was needed to combat isolation of Roma

children in both ordinary and special schools. A clearer approach, coupled with instructions and immediate action on all levels, was needed to put an end to unjustified placement of these children in special schools designed for children with mental disabilities. Effective monitoring measures, particularly designed to eliminate undue placement of children in such schools, had to be one of the authorities' constant priorities.

E. Commissioner for Human Rights

Final Report by Mr Alvaro Gil-Robles on the Human Rights Situation of the Roma, Sinti and Travellers in Europe (dated 15 February 2006)

77. In the third section of the report, which concerns discrimination in education, the Commissioner for Human Rights noted that the fact that a significant number of Roma children did not have access to education of a similar standard enjoyed by other children was in part a result of discriminatory practices and prejudices. In that connection, he noted that segregation in education was a common feature in many Council of Europe member States. In some countries there were segregated schools in segregated settlements, in others special classes for Roma children in ordinary schools or a clear over-representation of Roma children in classes for children with special needs. Roma children were frequently placed in classes for children with special needs without an adequate psychological or pedagogical assessment, the real criteria clearly being their ethnic origin. Being subjected to special schools or classes often meant that these children followed a curriculum inferior to those of mainstream classes, which diminished their opportunities for further education and for finding employment in the future. The automatic placement of Roma children in classes for children with special needs was likely to increase the stigma by labelling the Roma children as less intelligent and less capable. At the same time, segregated education denied both the Roma and non-Roma children the chance to know each other and to learn to live as equal citizens. It excluded Roma children from mainstream society at the very beginning of their lives, increasing the risk of their being caught in the vicious circle of marginalisation.

78. The Commissioner was told that in the Czech Republic the young members of the Roma/Gypsy community were drastically over-represented in "special" schools and classes for children with a slight mental disability. At the same time he noted that the authorities had introduced Roma assistant teachers in ordinary classes and set up preliminary classes and that these initiatives had had promising results, though only on a small scale due to the lack of adequate resources. In particular, preparatory classes for socially disadvantaged children had been central in efforts to overcome

excessive attendance of Roma children in special schools. The Czech authorities deemed that preparatory schools attached to nursery schools had been particularly successful in easing the integration of Roma children in ordinary schools. In 2004 the Czech Republic also had 332 teaching assistants who attended to the special needs of Roma pupils.

79. It was also noted that special classes or special curricula for the Roma had been introduced with good intentions, for the purposes of overcoming language barriers or remedying the lack of pre-school attendance of Roma children. Evidently, it was necessary to respond to such challenges, but segregation or systematic placement of Roma children in classes which followed a simplified or a special Romany-language curriculum while isolating them from other pupils was clearly a distorted response. Instead of segregation, significant emphasis had to be placed on measures such as pre-school and in-school educational and linguistic support as well as the provision of school assistants to work alongside teachers. In certain communities, it was crucial to raise the awareness of Roma parents, who themselves might not have had the possibility to attend school, of the necessity and benefits of adequate education for their children.

80. In conclusion, the Commissioner made a number of recommendations related to education. Where segregated education still existed in one form or another, it had to be replaced by ordinary integrated education and, where appropriate, banned through legislation. Adequate resources had to be made available for the provision of pre-school education, language training and school-assistant training in order to ensure the success of desegregation efforts. Adequate assessment had to be made before children were placed in special classes, in order to ensure that the sole criterion in the placement was the objective needs of the child, not his or her ethnicity.

IV. RELEVANT COMMUNITY LAW AND PRACTICE

81. The principle prohibiting discrimination or requiring equality of treatment is well established in a large body of Community law instruments based on Article 13 of the Treaty establishing the European Community. This provision enables the Council, through a unanimous decision following a proposal/recommendation by the Commission and consultation of the European Parliament, to take the measures necessary to combat discrimination based on sex, race or ethnic origin, religion or belief, disability, age or sexual orientation.

82. Thus, Article 2 § 2 of Council Directive 97/80/EC of 15 December 1997 on the burden of proof in cases of discrimination based on sex provides that “indirect discrimination shall exist where an apparently neutral provision, criterion or practice disadvantages a substantially higher

proportion of the members of one sex unless that provision, criterion or practice is appropriate and necessary and can be justified by objective factors unrelated to sex". Article 4 § 1, which concerns the burden of proof, reads: "Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment."

83. Similarly, the aim of Council Directives 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin and 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation is to prohibit in their respective spheres all direct or indirect discrimination based on race, ethnic origin, religion or belief, disability, age or sexual orientation. The preambles to these Directives state as follows: "The appreciation of the facts from which it may be inferred that there has been direct or indirect discrimination is a matter for national judicial or other competent bodies, in accordance with rules of national law or practice. Such rules may provide in particular for indirect discrimination to be established by any means including on the basis of statistical evidence" and "The rules on the burden of proof must be adapted when there is a prima facie case of discrimination and, for the principle of equal treatment to be applied effectively, the burden of proof must shift back to the respondent when evidence of such discrimination is brought."

84. In particular, Directive 2000/43/EC provides as follows:

Article 2
Concept of discrimination

"1. For the purposes of this Directive, the principle of equal treatment shall mean that there shall be no direct or indirect discrimination based on racial or ethnic origin.

2. For the purposes of paragraph 1:

(a) direct discrimination shall be taken to occur where one person is treated less favourably than another is, has been or would be treated in a comparable situation on grounds of racial or ethnic origin;

(b) indirect discrimination shall be taken to occur where an apparently neutral provision, criterion or practice would put persons of a racial or ethnic origin at a particular disadvantage compared with other persons, unless that provision, criterion or practice is objectively justified by a legitimate aim and the means of achieving that aim are appropriate and necessary.

..."

Article 8
Burden of proof

"1. Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.

2. Paragraph 1 shall not prevent Member States from introducing rules of evidence which are more favourable to plaintiffs.

3. Paragraph 1 shall not apply to criminal procedures.

...

5. Member States need not apply paragraph 1 to proceedings in which it is for the court or competent body to investigate the facts of the case."

85. Under the case-law of the Court of Justice of the European Communities (CJEC), discrimination, which entails the application of different rules to comparable situations or the application of the same rule to different situations, may be overt or covert and direct or indirect.

86. In its *Giovanni Maria Sotgiu v. Deutsche Bundespost* judgment of 12 February 1974 (Case 152-73, point 11), the CJEC stated:

"The rules regarding equality of treatment ... forbid not only overt discrimination by reason of nationality but also all covert forms of discrimination which, by the application of other criteria of differentiation, lead in fact to the same result.

..."

87. In its *Bilka-Kaufhaus GmbH v. Karin Weber von Hartz* judgment of 13 May 1986 (Case 170/84, point 31), it stated:

"... Article 119 of the EEC Treaty is infringed by a department store company which excludes part-time employees from its occupational pension scheme, where that exclusion affects a far greater number of women than men, unless the undertaking shows that the exclusion is based on objectively justified factors unrelated to any discrimination on grounds of sex."

88. In *Regina v. Secretary of State for Employment, ex parte Nicole Seymour-Smith and Laura Perez* (judgment of 9 February 1999, Case C-167/97, points 51, 57, 62, 65 and 77), the CJEC observed:

"... the national court seeks to ascertain the legal test for establishing whether a measure adopted by a Member State has disparate effect as between men and women to such a degree as to amount to indirect discrimination. ...

...

... the Commission proposes a 'statistically significant' test, whereby statistics must form an adequate basis of comparison and the national court must ensure that they are not distorted by factors specific to the case. The existence of statistically significant evidence is enough to establish disproportionate impact and pass the onus to the author of the allegedly discriminatory measure.

...

It is also for the national court to assess whether the statistics concerning the situation ... are valid and can be taken into account, that is to say, whether they cover enough individuals, whether they illustrate purely fortuitous or short-term phenomena, and whether, in general, they appear to be significant (see Case C-127/92 *Enderby* [1993] ECR I-5535, paragraph 17). ...

...

Accordingly, ... in order to establish whether a measure adopted by a Member State has disparate effect as between men and women to such a degree as to amount to indirect discrimination for the purposes of Article 119 of the Treaty, the national court must verify whether the statistics available indicate that a considerably smaller percentage of women than men is able to fulfil the requirement imposed by that measure. If that is the case, there is indirect sex discrimination, unless that measure is justified by objective factors unrelated to any discrimination based on sex.

...

... if a considerably smaller percentage of women than men is capable of fulfilling the requirement ... imposed by the disputed rule, it is for the Member State, as the author of the allegedly discriminatory rule, to show that the said rule reflects a legitimate aim of its social policy, that that aim is unrelated to any discrimination based on sex, and that it could reasonably consider that the means chosen were suitable for attaining that aim."

89. In its judgment of 23 October 2003 in *Hilde Schönheit v. Stadt Frankfurt am Main* (Case C-4/02) and *Silvia Becker v. Land Hessen* (Case C-5/02), the CJEC noted at points 67-69 and 71:

"... it must be borne in mind that Article 119 of the Treaty and Article 141(1) and (2) EC set out the principle that men and women should receive equal pay for equal work. That principle precludes not only the application of provisions leading to direct sex discrimination, but also the application of provisions which maintain different treatment between men and women at work as a result of the application of criteria not based on sex where those differences of treatment are not attributable to objective factors unrelated to sex discrimination ...

It is common ground that the provisions of the BeamtVG at issue do not entail discrimination directly based on sex. It is therefore necessary to ascertain whether they can amount to indirect discrimination ...

To establish whether there is indirect discrimination, it is necessary to ascertain whether the provisions at issue have a more unfavourable impact on women than on men ...

...

Therefore it is necessary to determine whether the statistics available indicate that a considerably higher percentage of women than men is affected by the provisions of the BeamtVG entailing a reduction in the pensions of civil servants who have worked part-time for at least a part of their career. Such a situation would be evidence of apparent discrimination on grounds of sex unless the provisions at issue were justified by objective factors unrelated to any discrimination based on sex."

90. In *Debra Allonby v. Accrington & Rossendale College, Education Lecturing Services ... and Secretary of State for Education and Employment* (judgment of 13 January 2004, Case C-256/01), it stated (point 81):

> "... it must be held that a woman may rely on statistics to show that a clause in State legislation is contrary to Article 141(1) EC because it discriminates against female workers. ..."

91. Lastly, in *Commission of the European Communities v. Republic of Austria* (judgment of 7 July 2005, Case C-147/03), the CJEC observed (points 41 and 46-48):

> "According to settled case-law, the principle of equal treatment prohibits not only overt discrimination based on nationality but also all covert forms of discrimination which, by applying other distinguishing criteria, lead in fact to the same result (see, in particular, Case 152/73 *Sotgiu* [1974] ECR 153, paragraph 11; Case C-65/03 *Commission v. Belgium*, cited above, paragraph 28; and Case C-209/03 *Bidar* [2005] ECR [I-02119], paragraph 51).
>
> ...
>
> ... the legislation in question places holders of secondary education diplomas awarded in a Member State other than the Republic of Austria at a disadvantage, since they cannot gain access to Austrian higher education under the same conditions as holders of the equivalent Austrian diploma.
>
> Thus, although paragraph ... applies without distinction to all students, it is liable to have a greater effect on nationals of other Member States than on Austrian nationals, and therefore the difference in treatment introduced by that provision results in indirect discrimination.
>
> Consequently, the differential treatment in question could be justified only if it were based on objective considerations independent of the nationality of the persons concerned and were proportionate to the legitimate aim of the national provisions (Case C-274/96 *Bickel and Franz* [1998] ECR I-7637, paragraph 27, and *D'Hoop*, cited above, paragraph 36)."

V. RELEVANT UNITED NATIONS MATERIALS

A. International Covenant on Civil and Political Rights

92. Article 26 of the Covenant provides:

> "All persons are equal before the law and are entitled without any discrimination to the equal protection of the law. In this respect, the law shall prohibit any discrimination and guarantee to all persons equal and effective protection against discrimination on any ground such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status."

B. United Nations Human Rights Committee

93. In points 7 and 12 of its General Comment No. 18 of 10 November 1989 on non-discrimination, the Committee expressed the following opinion:

> "... the Committee believes that the term 'discrimination' as used in the Covenant should be understood to imply any distinction, exclusion, restriction or preference which is based on any ground such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status, and which has the purpose or effect of nullifying or impairing the recognition, enjoyment or exercise by all persons, on an equal footing, of all rights and freedoms.
>
> ...
>
> ... when legislation is adopted by a State party, it must comply with the requirement of Article 26 that its content should not be discriminatory ..."

94. In point 11.7 of its Views dated 31 July 1995 on Communication no. 516/1992 concerning the Czech Republic, the Committee noted:

> "... The Committee is of the view, however, that the intent of the legislature is not alone dispositive in determining a breach of Article 26 of the Covenant. A politically motivated differentiation is unlikely to be compatible with Article 26. But an act which is not politically motivated may still contravene Article 26 if its effects are discriminatory."

C. International Convention on the Elimination of All Forms of Racial Discrimination

95. Article 1 of this Convention provides:

> "... the term 'racial discrimination' shall mean any distinction, exclusion, restriction or preference based on race, colour, descent, or national or ethnic origin which has the purpose or effect of nullifying or impairing the recognition, enjoyment or exercise, on an equal footing, of human rights and fundamental freedoms in the political, economic, social, cultural or any other field of public life.
>
> ..."

D. Committee on the Elimination of Racial Discrimination

96. In its General Recommendation No. 14 of 22 March 1993 on the definition of discrimination, the Committee noted, *inter alia*:

> "1. ... A distinction is contrary to the Convention if it has either the purpose or the effect of impairing particular rights and freedoms. This is confirmed by the obligation placed upon States Parties by Article 2, paragraph 1 (c), to nullify any law or practice which has the effect of creating or perpetuating racial discrimination.
>
> 2. ... In seeking to determine whether an action has an effect contrary to the Convention, [the Committee] will look to see whether that action has an unjustifiable disparate impact upon a group distinguished by race, colour, descent, or national or ethnic origin.

...”

97. In its General Recommendation No. 19 of 18 August 1995 on racial segregation and apartheid, the Committee observed:

> “3. ... while conditions of complete or partial racial segregation may in some countries have been created by governmental policies, a condition of partial segregation may also arise as an unintended by-product of the actions of private persons. In many cities residential patterns are influenced by group differences in income, which are sometimes combined with differences of race, colour, descent and national or ethnic origin, so that inhabitants can be stigmatized and individuals suffer a form of discrimination in which racial grounds are mixed with other grounds.
>
> 4. The Committee therefore affirms that a condition of racial segregation can also arise without any initiative or direct involvement by the public authorities. ...”

98. In its General Recommendation No. 27 of 16 August 2000 on discrimination against Roma, the Committee made, *inter alia*, the following recommendation in the education sphere:

> “17. To support the inclusion in the school system of all children of Roma origin and to act to reduce drop-out rates, in particular among Roma girls, and, for these purposes, to cooperate actively with Roma parents, associations and local communities.
>
> 18. To prevent and avoid as much as possible the segregation of Roma students, while keeping open the possibility for bilingual or mother-tongue tuition; to this end, to endeavour to raise the quality of education in all schools and the level of achievement in schools by the minority community, to recruit school personnel from among members of Roma communities and to promote intercultural education.
>
> 19. To consider adopting measures in favour of Roma children, in cooperation with their parents, in the field of education.”

99. In its concluding observations of 30 March 1998 following its examination of the report submitted by the Czech Republic, the Committee noted, *inter alia*:

> “13. The marginalization of the Roma community in the field of education is noted with concern. Evidence that a disproportionately large number of Roma children are placed in special schools, leading to *de facto* racial segregation, and that they also have a considerably lower level of participation in secondary and higher education, raises doubts about whether Article 5 of the Convention is being fully implemented.”

E. Convention on the Rights of the Child

100. Articles 28 and 30 of this Convention provide:

Article 28

> “1. States Parties recognize the right of the child to education, and with a view to achieving this right progressively and on the basis of equal opportunity, they shall, in particular:
>
> (a) Make primary education compulsory and available free to all;

(b) Encourage the development of different forms of secondary education, including general and vocational education, make them available and accessible to every child, and take appropriate measures such as the introduction of free education and offering financial assistance in case of need;

(c) Make higher education accessible to all on the basis of capacity by every appropriate means;

(d) Make educational and vocational information and guidance available and accessible to all children;

(e) Take measures to encourage regular attendance at schools and the reduction of drop-out rates.

2. States Parties shall take all appropriate measures to ensure that school discipline is administered in a manner consistent with the child's human dignity and in conformity with the present Convention.

3. States Parties shall promote and encourage international cooperation in matters relating to education, in particular with a view to contributing to the elimination of ignorance and illiteracy throughout the world and facilitating access to scientific and technical knowledge and modern teaching methods. In this regard, particular account shall be taken of the needs of developing countries."

Article 30

"In those States in which ethnic, religious or linguistic minorities or persons of indigenous origin exist, a child belonging to such a minority or who is indigenous shall not be denied the right, in community with other members of his or her group, to enjoy his or her own culture, to profess and practise his or her own religion, or to use his or her own language."

F. Unesco

101. Articles 1 to 3 of the Convention against Discrimination in Education of 14 December 1960 provide:

Article 1

"1. For the purposes of this Convention, the term 'discrimination' includes any distinction, exclusion, limitation or preference which, being based on race, colour, sex, language, religion, political or other opinion, national or social origin, economic condition or birth, has the purpose or effect of nullifying or impairing equality of treatment in education and in particular:

(a) Of depriving any person or group of persons of access to education of any type or at any level;

(b) Of limiting any person or group of persons to education of an inferior standard;

(c) Subject to the provisions of Article 2 of this Convention, of establishing or maintaining separate educational systems or institutions for persons or groups of persons; or

(d) Of inflicting on any person or group of persons conditions which are incompatible with the dignity of man.

...”

Article 2

“When permitted in a State, the following situations shall not be deemed to constitute discrimination, within the meaning of Article [1] of this Convention:

(a) The establishment or maintenance of separate educational systems or institutions for pupils of the two sexes, if these systems or institutions offer equivalent access to education, provide a teaching staff with qualifications of the same standard as well as school premises and equipment of the same quality, and afford the opportunity to take the same or equivalent courses of study;

(b) The establishment or maintenance, for religious or linguistic reasons, of separate educational systems or institutions offering an education which is in keeping with the wishes of the pupil’s parents or legal guardians, if participation in such systems or attendance at such institutions is optional and if the education provided conforms to such standards as may be laid down or approved by the competent authorities, in particular for education of the same level;

(c) The establishment or maintenance of private educational institutions, if the object of the institutions is not to secure the exclusion of any group but to provide educational facilities in addition to those provided by the public authorities, if the institutions are conducted in accordance with that object, and if the education provided conforms with such standards as may be laid down or approved by the competent authorities, in particular for education of the same level.”

Article 3

“In order to eliminate and prevent discrimination within the meaning of this Convention, the States Parties thereto undertake:

(a) To abrogate any statutory provisions and any administrative instructions and to discontinue any administrative practices which involve discrimination in education;

(b) To ensure, by legislation where necessary, that there is no discrimination in the admission of pupils to educational institutions;

...”

102. The Declaration on Race and Racial Prejudice adopted by the Unesco General Conference on 27 November 1978 proclaims as follows:

Article 1

“1. All human beings belong to a single species and are descended from a common stock. They are born equal in dignity and rights and all form an integral part of humanity.

2. All individuals and groups have the right to be different, to consider themselves as different and to be regarded as such. However, the diversity of life styles and the right to be different may not, in any circumstances, serve as a pretext for racial prejudice; they may not justify either in law or in fact any discriminatory practice whatsoever, nor provide a ground for the policy of apartheid, which is the extreme form of racism.

...”

Article 2

"...

2. Racism includes racist ideologies, prejudiced attitudes, discriminatory behaviour, structural arrangements and institutionalized practices resulting in racial inequality as well as the fallacious notion that discriminatory relations between groups are morally and scientifically justifiable; it is reflected in discriminatory provisions in legislation or regulations and discriminatory practices as well as in anti-social beliefs and acts; it hinders the development of its victims, perverts those who practise it, divides nations internally, impedes international cooperation and gives rise to political tensions between peoples; it is contrary to the fundamental principles of international law and, consequently, seriously disturbs international peace and security.

3. Racial prejudice, historically linked with inequalities in power, reinforced by economic and social differences between individuals and groups, and still seeking today to justify such inequalities, is totally without justification."

Article 3

"Any distinction, exclusion, restriction or preference based on race, colour, ethnic or national origin or religious intolerance motivated by racist considerations, which destroys or compromises the sovereign equality of States and the right of peoples to self-determination, or which limits in an arbitrary or discriminatory manner the right of every human being and group to full development is incompatible with the requirements of an international order which is just and guarantees respect for human rights; the right to full development implies equal access to the means of personal and collective advancement and fulfilment in a climate of respect for the values of civilizations and cultures, both national and world-wide."

Article 5

"1. Culture, as a product of all human beings and a common heritage of mankind, and education in its broadest sense, offer men and women increasingly effective means of adaptation, enabling them not only to affirm that they are born equal in dignity and rights, but also to recognize that they should respect the right of all groups to their own cultural identity and the development of their distinctive cultural life within the national and international contexts, it being understood that it rests with each group to decide in complete freedom on the maintenance, and, if appropriate, the adaptation or enrichment of the values which it regards as essential to its identity.

2. States, in accordance with their constitutional principles and procedures, as well as all other competent authorities and the entire teaching profession, have a responsibility to see that the educational resources of all countries are used to combat racism, more especially by ensuring that curricula and textbooks include scientific and ethical considerations concerning human unity and diversity and that no invidious distinctions are made with regard to any people; by training teachers to achieve these ends; by making the resources of the educational system available to all groups of the population without racial restriction or discrimination; and by taking appropriate steps to remedy the handicaps from which certain racial or ethnic groups suffer with regard to their level of education and standard of living and in particular to prevent such handicaps from being passed on to children.

..."

Article 6

"1. The State has prime responsibility for ensuring human rights and fundamental freedoms on an entirely equal footing in dignity and rights for all individuals and all groups.

2. So far as its competence extends and in accordance with its constitutional principles and procedures, the State should take all appropriate steps, *inter alia* by legislation, particularly in the spheres of education, culture and communication, to prevent, prohibit and eradicate racism racist propaganda, racial segregation and apartheid and to encourage the dissemination of knowledge and the findings of appropriate research in natural and social sciences on the causes and prevention of racial prejudice and racist attitudes with due regard to the principles embodied in the Universal Declaration of Human Rights and in the International Covenant on Civil and Political Rights.

3. Since laws proscribing racial discrimination are not in themselves sufficient, it is also incumbent on States to supplement them by administrative machinery for the systematic investigation of instances of racial discrimination, by a comprehensive framework of legal remedies against acts of racial discrimination, by broadly based education and research programmes designed to combat racial prejudice and racial discrimination and by programmes of positive political, social, educational and cultural measures calculated to promote genuine mutual respect among groups. Where circumstances warrant, special programmes should be undertaken to promote the advancement of disadvantaged groups and, in the case of nationals, to ensure their effective participation in the decision-making processes of the community."

Article 9

"1. The principle of the equality in dignity and rights of all human beings and all peoples, irrespective of race, colour and origin, is a generally accepted and recognized principle of international law. Consequently any form of racial discrimination practised by a State constitutes a violation of international law giving rise to its international responsibility.

2. Special measures must be taken to ensure equality in dignity and rights for individuals and groups wherever necessary, while ensuring that they are not such as to appear racially discriminatory. In this respect, particular attention should be paid to racial or ethnic groups which are socially or economically disadvantaged, so as to afford them, on a completely equal footing and without discrimination or restriction, the protection of the laws and regulations and the advantages of the social measures in force, in particular in regard to housing, employment and health; to respect the authenticity of their culture and values; and to facilitate their social and occupational advancement, especially through education.

..."

VI. OTHER SOURCES

A. European Monitoring Centre on Racism and Xenophobia (now the European Union Agency for Fundamental Rights)

103. The information on education in the Czech Republic available on the website of the European Monitoring Centre includes the following.

"In the Czech Republic, there are no official or non-official data on racism and discrimination in education available.

The most serious problem of the Czech education system is still the segregatory placement of children from socially disadvantaged backgrounds (very often Roma) in special schools. More than half of Roma children study there. Such tendencies of the Czech education system especially at elementary schools were proved by extensive research carried out by the Institute of Sociology of the Academy of Sciences of the Czech Republic. Only a very small percentage of Roma youth enter secondary schools."

104. The Monitoring Centre's report entitled "Roma and Travellers in Public Education", which was published in May 2006 and concerned what at the time were twenty-five member States of the European Union, noted, *inter alia*, that although systematic segregation of Roma children no longer existed as educational policy segregation was practised by schools and educational authorities in a number of different, mostly indirect, ways, sometimes as the unintended effect of policies and practices and sometimes as a result of residential segregation. Schools and educational authorities may, for example, segregate pupils on the basis of a perception of "their different needs" and/or as a response to behavioural issues and learning difficulties. The latter could also lead to the frequent placement of Roma pupils in special schools for mentally handicapped children, which was still a worrying phenomenon in member States of the European Union like Hungary, Slovakia and the Czech Republic. However, steps were being taken to review testing and placement procedures taking into account the norms and behavioural patterns of the Roma children's social and cultural background.

B. The House of Lords

105. In its decision of 9 December 2004 in the case of *Regina v. Immigration Officer at Prague Airport and another ex parte European Roma Rights Centre and others*, the House of Lords unanimously held that British immigration officers working at Prague Airport had discriminated against Roma wishing to travel from the airport to the United Kingdom as they had on racial grounds treated them less favourably than other people travelling to the same destination.

106. Baroness Hale of Richmond said, *inter alia*:

"73. ... The underlying concept in both race and sex discrimination laws is that individuals of each sex and all races are entitled to be treated equally. Thus it is just as discriminatory to treat men less favourably than women as it is to treat women less favourably than men; and it is just as discriminatory to treat whites less favourably than blacks as it is to treat blacks less favourably than whites. The ingredients of unlawful discrimination are (i) a difference in treatment between one person and another person (real or hypothetical) from a different sex or racial group; (ii) that the treatment is less favourable to one; (iii) that their relevant circumstances are the same or not materially different; and (iv) that the difference in treatment is on sex or racial

grounds. However, because people rarely advertise their prejudices and may not even be aware of them, discrimination has normally to be proved by inference rather than direct evidence. Once treatment less favourable than that of a comparable person (ingredients (i), (ii) and (iii)) is shown, the court will look to the alleged discriminator for an explanation. The explanation must, of course, be unrelated to the race or sex of the complainant. If there is no, or no satisfactory explanation, it is legitimate to infer that the less favourable treatment was on racial grounds ...

74. If direct discrimination of this sort is shown, that is that. Save for some very limited exceptions, there is no defence of objective justification. The whole point of the law is to require suppliers to treat each person as an individual, not as a member of a group. The individual should not be assumed to hold the characteristics which the supplier associates with the group, whether or not most members of the group do indeed have such characteristics, a process sometimes referred to as stereotyping. ...

75. The complaint in this case is of direct discrimination against the Roma. Indirect discrimination arises where an employer or supplier treats everyone in the same way, but he applies to them all a requirement or condition which members of one sex or racial group are much less likely to be able to meet than members of another: for example, a test of heavy lifting which men would be much more likely to pass than women. This is only unlawful if the requirement is one which cannot be justified independently of the sex or race of those involved ... But it is the requirement or condition that may be justified, not the discrimination. This sort of justification should not be confused with the possibility that there may be an objective justification for discriminatory treatment which would otherwise fall foul of Article 14 of the European Convention on Human Rights.

...

90. It is worth remembering that good equal opportunities practice may not come naturally. Many will think it contrary to common sense to approach all applicants with an equally open mind, irrespective of the very good reasons there may be to suspect some of them more than others. But that is what is required by a law which tries to ensure that individuals are not disadvantaged by the general characteristics of the group to which they belong. In 2001, when the operation with which we are concerned began, the race relations legislation had only just been extended to cover the activities of the immigration service. It would scarcely be surprising if officers acting under considerable pressure of time found it difficult to conform in all respects to procedures and expectations which employers have been struggling to get right for more than quarter of a century.

91. It is against this background that such evidence as there is of what happened on the ground at Prague Airport needs to be assessed. The officers did not make any record of the ethnic origin of the people they interviewed. The respondents cannot therefore provide us with figures of how many from each group were interviewed, for how long, and with what result. This, they suggest, makes it clear that the officers were not relying on the Authorisation: if they had been, they would only have had to record their view of the passenger's ethnicity. If correct, that would have been enough to justify refusal of leave. But what it also shows is that no formal steps were being taken to gather the information which might have helped ensure that this high-risk operation was not being conducted in a discriminatory manner. It also means that the only information available is that supplied by the claimants, and in particular the ERRC which was attempting to monitor the operation. The respondents can cast doubt on the reliability of this, but they cannot contradict it or provide more reliable information themselves. ..."

C. The United States Supreme Court

107. The Supreme Court issued its decision in the case of *Griggs v. Duke Power Co.*, 401 US 424 (1971), in which it established the disparate impact test, after black employees at an electricity generating plant had brought proceedings on the grounds that their employers' practice of requiring them to hold a high school diploma or to pass an aptitude test, even for the least well-paid jobs, was discriminatory. Fewer blacks had managed to obtain the diploma or pass the standardised tests. The Supreme Court stated:

> "The [Civil Rights] Act [of 1964] requires the elimination of artificial, arbitrary, and unnecessary barriers to employment that operate invidiously to discriminate on the basis of race, and, if, as here, an employment practice that operates to exclude Negroes cannot be shown to be related to job performance, it is prohibited, notwithstanding the employer's lack of discriminatory intent. ...
>
> The Act does not preclude the use of testing or measuring procedures, but it does proscribe giving them controlling force unless ... they are demonstrably a reasonable measure of job performance ...
>
> The Act proscribes not only overt discrimination but also practices that are fair in form, but discriminatory in operation. The touchstone is business necessity. If an employment practice which operates to exclude Negroes cannot be shown to be related to job performance, the practice is prohibited.
>
> ... Congress has placed on the employer the burden of showing that any given requirement must have a manifest relationship to the employment in question."

THE LAW

I. SCOPE OF THE GRAND CHAMBER'S JURISDICTION

108. In their final observations, which were lodged with the Grand Chamber on 26 September 2006, the applicants repeated their contention that there had been a violation of their rights under Article 3 and Article 6 § 1 of the Convention.

109. Under the Court's case-law, the "case" referred to the Grand Chamber is the application as it has been declared admissible (see, among other authorities, *Leyla Şahin v. Turkey* [GC], no. 44774/98, § 128, ECHR 2005-XI, and *Üner v. the Netherlands* [GC], no. 46410/99, § 41, ECHR 2006-XII). The Grand Chamber notes that in its partial decision of 1 March 2005 the Chamber declared inadmissible all the applicants' complaints that did not relate to Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1, including those under Articles 3 and 6 § 1 of the Convention. Accordingly, the latter complaints – assuming the applicants

still wish to rely on them – are not within the scope of the case before the Grand Chamber.

II. THE GOVERNMENT'S PRELIMINARY OBJECTION

110. The Court notes that in its decision on the admissibility of the application the preliminary objection made by the Government in their observations of 15 March 2004 of a failure to exhaust domestic remedies was joined to the merits of the complaint under Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1. In its judgment of 7 February 2006 (§ 31), the Chamber found that the parties' submissions on the issue of the exhaustion of domestic remedies raised questions that were closely linked to the merits of the case. It agreed with the Czech Constitutional Court that the application raised points of considerable importance and that vital interests were at stake. Accordingly, and in view of its finding that for other reasons pertaining to the merits there had been no violation, the Chamber did not consider it necessary to examine whether the applicants had satisfied that requirement in the present case.

111. It will be recalled that where a case is referred to it, the Grand Chamber may also examine issues relating to the admissibility of the application, for example where they have been joined to the merits or are otherwise relevant at the merits stage (see *K. and T. v. Finland* [GC], no. 25702/94, § 141, ECHR 2001-VII).

112. In these circumstances, the Grand Chamber considers it necessary to determine whether the applicants have in the instant case satisfied the exhaustion of domestic remedies requirement.

113. The Government argued that the applicants had not used all available means to remedy their position. None of them had exercised their right to appeal against the decisions to place them in special schools. Six had failed to lodge a constitutional appeal. Further, of those applicants who had appealed to the Constitutional Court only five had actually contested the decisions to place them in special schools. No attempt had been made by the applicants to defend their dignity by bringing an action under the Civil Code to protect their personality rights and their parents had not referred the matter to the Schools Inspectorate or the Ministry of Education.

114. The applicants submitted, firstly, that there were no remedies available in the Czech Republic that were effective and adequate to deal with complaints of racial discrimination in the education sphere. More specifically, the right to lodge a constitutional appeal had been rendered ineffective by the reasoning followed by the Constitutional Court in the instant case and its refusal to attach any significance to the general practice that had been referred to by the applicants. In the applicants' submission, no criticism could therefore be made of those applicants who had chosen not to lodge such an appeal. As to why they had not lodged an administrative

appeal, the applicants said that their parents had only gained access to the requisite information after the time allowed for lodging such an appeal had expired. Even the Constitutional Court had disregarded that omission. Finally, an action to protect personality rights could not be regarded as a means of challenging enforceable administrative decisions and the Government had not provided any evidence that such a remedy was effective.

Further, even supposing that an effective remedy existed, the applicants submitted that it did not have to be exercised in cases in which an administrative practice, such as the system of special schools in the Czech Republic, made racism possible or encouraged it. They also drew the Court's attention to the racial hatred and numerous acts of violence directed at Roma in the Czech Republic and to the unsatisfactory nature of the penalties imposed for racist and xenophobic criminal offences.

115. The Court reiterates that the rule of exhaustion of domestic remedies referred to in Article 35 § 1 of the Convention is based on the assumption that the domestic system provides an effective remedy in respect of the alleged breach. It is for the Government claiming non-exhaustion to satisfy the Court that an effective remedy was available in theory and in practice at the relevant time; that is to say, that the remedy was accessible, capable of providing redress in respect of the applicant's complaints and offered reasonable prospects of success (see *V. v. the United Kingdom* [GC], no. 24888/94, § 57, ECHR 1999-IX).

116. The application of the rule of exhaustion of domestic remedies must make due allowance for the fact that it is being applied in the context of machinery for the protection of human rights that the Contracting States have agreed to set up. The Court has accordingly recognised that Article 35 § 1 must be applied with some degree of flexibility and without excessive formalism. It has further recognised that the rule of exhaustion is neither absolute nor capable of being applied automatically; for the purposes of reviewing whether it has been observed, it is essential to have regard to the circumstances of the individual case. This means, in particular, that the Court must take realistic account not only of the existence of formal remedies in the legal system of the Contracting State concerned but also of the general context in which they operate, as well as the personal circumstances of the applicant. It must then examine whether, in all the circumstances of the case, the applicant did everything that could reasonably be expected of him or her to exhaust domestic remedies (see *İlhan v. Turkey* [GC], no. 22277/93, § 59, ECHR 2000-VII).

117. In the present case, the Government complained, firstly, that none of the applicants had sought to appeal against the decision ordering their placement in a special school or brought an action to protect their personality rights.

118. In this connection, the Court, like the applicants, notes that the Czech Constitutional Court decided to disregard that omission (see paragraph 28 above). In these circumstances, it considers that it would be unduly formalistic to require the applicants to exercise a remedy which even the highest court of the country concerned had not obliged them to use.

119. Secondly, the Government stated that of the twelve applicants who had lodged a constitutional appeal, only five had actually contested the decisions to place them in special schools, so enabling the Constitutional Court to hear their cases.

120. The Court notes that by virtue of the fact that the five applicants concerned had brought a constitutional appeal in due form, the Constitutional Court was given an opportunity to rule on all the complaints which the applicants have now referred to the Court. The Constitutional Court also found that the scope of the appeals went beyond the applicants' own personal interests so that, in that sense, its decision was of more general application.

121. Further, it can be seen from its decision of 20 October 1999 that the Constitutional Court confined itself to verifying the competent authorities' interpretation and application of the relevant statutory provisions without considering their impact, which the applicants argued was discriminatory. As regards the complaint of racial discrimination, it also stated that it was not its role to assess the overall social context.

122. In these circumstances, there is nothing to suggest that the Constitutional Court's decision would have been different had it been called upon to decide the cases of the thirteen applicants who did not lodge a constitutional appeal or challenge the decision of the head teacher of the special school. In the light of these considerations, the Court is not satisfied that, in the special circumstances of the present case, this remedy was apt to afford the applicants redress for their complaints or offered reasonable prospects of success.

123. Consequently, the Government's preliminary objection in this case must be rejected.

III. ALLEGED VIOLATION OF ARTICLE 14 OF THE CONVENTION TAKEN IN CONJUNCTION WITH ARTICLE 2 OF PROTOCOL No. 1

124. The applicants maintained that they had been discriminated against in that because of their race or ethnic origin they had been treated less favourably than other children in a comparable situation without any objective and reasonable justification. They relied in that connection on Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1, which provide as follows:

Article 14 of the Convention

"The enjoyment of the rights and freedoms set forth in [the] Convention shall be secured without discrimination on any ground such as sex, race, colour, language, religion, political or other opinion, national or social origin, association with a national minority, property, birth or other status."

Article 2 of Protocol No. 1

"No person shall be denied the right to education. In the exercise of any functions which it assumes in relation to education and to teaching, the State shall respect the right of parents to ensure such education and teaching in conformity with their own religious and philosophical convictions."

A. The Chamber judgment

125. The Chamber held that there had been no violation of Article 14 of the Convention taken in conjunction with Article 2 of Protocol No 1. In its view, the Government had succeeded in establishing that the system of special schools in the Czech Republic had not been introduced solely to cater for Roma children and that considerable efforts had been made in those schools to help certain categories of pupils to acquire a basic education. In that connection, it observed that the rules governing children's placement in special schools did not refer to the pupils' ethnic origin, but pursued the legitimate aim of adapting the education system to the needs, aptitudes and disabilities of the children.

126. The Chamber noted in particular that the applicants had not succeeded in refuting the experts' findings that their learning difficulties were such as to prevent them from following the ordinary primary-school curriculum. It was further noted that the applicants' parents had failed to take any action or had even requested their children's placement or continued placement in a special school themselves.

127. The Chamber accepted in its judgment that it was not easy to choose an education system that reconciled the various competing interests and that there did not appear to be an ideal solution. However, while acknowledging that the statistical evidence disclosed worrying figures and

that the general situation in the Czech Republic concerning the education of Roma children was by no means perfect, it considered that the concrete evidence before it did not enable it to conclude that the applicants' placement or, in some instances, continued placement in special schools was the result of racial prejudice.

B. The parties' submissions

1. The applicants

128. The applicants submitted that the restrictive interpretation the Chamber had given to the notion of discrimination was incompatible not only with the aim of the Convention but also with the case-law of the Court and of other jurisdictions in Europe and beyond.

129. They firstly asked the Grand Chamber to correct the obscure and contradictory test the Chamber had used for deciding whether there had been discrimination. They noted that, while reaffirming the established principle that if a policy or general measure had disproportionately prejudicial effects on a group of people, the possibility of its being considered discriminatory could not be ruled out even if it was not specifically aimed or directed at that group. The Chamber had nevertheless departed from the Court's previous case-law (see *Thlimmenos v. Greece* [GC], no. 34369/97, § 44, ECHR 2000-IV; *Hoogendijk v. the Netherlands* (dec.), no. 58641/00, 6 January 2005; and *Nachova and Others v. Bulgaria* [GC], nos. 43577/98 and 43579/98, § 157, ECHR 2005-VII) by erroneously requiring the applicants to prove discriminatory intent on the part of the Czech authorities. In the applicants' submission, such a requirement was unrealistic and illogical as the question whether or not special schools were designed to segregate along ethnic lines was irrelevant since that was indisputably the effect they had in practice. The reality was that well-intentioned actors often engaged in discriminatory practices through ignorance, neglect or inertia.

130. The applicants observed in particular that in explaining why it had refused to shift the burden of proof in *Nachova and Others* (cited above, § 157) the Court had been careful to distinguish between racially-motivated violent crime and non-violent acts of racial discrimination in, for example, employment or the provision of services. In their submission, racial discrimination in access to education fell precisely in the latter category of discriminatory acts which could be proved in the absence of intent. More recently, the Court had ruled in *Zarb Adami v. Malta* (no. 17209/02, §§ 75-76, ECHR 2006-VIII) that a difference in treatment did not need to be set forth in legislative text in order to breach Article 14 and that a "well-established practice" or "*de facto* situation" could also give rise to discrimination. As, in the instant case, the applicants considered that they

had indisputably succeeded in establishing the existence of a disproportionate impact, the burden of proof had to shift to the Government to prove that the applicants' ethnic origin had had no bearing on the impugned decisions and that sufficient safeguards against discrimination were in place.

131. In that connection, the applicants noted that in its General Policy Recommendation No. 7, ECRI had invited the States to prohibit both direct discrimination and indirect discrimination, with neither concept requiring proof of discriminatory intent. A clear majority of the member States of the Council of Europe had already expressly prohibited discrimination in sections of their national legislation without requiring proof of such intent and this was reflected in the judicial practice of those States. The applicants referred in this context to, *inter alia*, the decision of the House of Lords in the case of *Regina v. Immigration Officer at Prague Airport and another ex parte European Roma Rights Centre and others* (see paragraph 105 above) and to the jurisprudence of the Court of Justice of the European Communities. Lastly, they noted that indirect discrimination was also prohibited under international law, including the International Covenant on Civil and Political Rights and the Convention on the Elimination of Racial Discrimination.

132. Accordingly, in view of the vital importance of Article 14 protection and the need to make it effective, the applicants considered that it would be helpful for the Court to clarify the rules it applied in such situations to ensure, *inter alia*, that the principle of non-discrimination was interpreted and applied consistently by the two European courts. For this reason, the applicants asked the Grand Chamber to give a clear ruling that intent was not necessary to prove discrimination under Article 14, except in cases – such as of racially motivated violence – where it was already an element of the underlying offence.

133. In the instant case, the applicants did not claim that the competent authorities had at the relevant time harboured invidiously racist attitudes towards Roma, or that they had intended to discriminate against Roma, or even that they had failed to take positive measures. All the applicants needed to prove – and, in their submission, had proved – was that the authorities had subjected the applicants to differential adverse treatment in comparison with similarly situated non-Roma, without objective and reasonable justification. The question of a common European standard that had been raised by the Government was, in the applicants' view, more of a political issue and the existence or otherwise of such a standard was of no relevance as the principle of equality of treatment was a binding rule of international law.

134. Similarly, the applicants asked the Grand Chamber to provide guidance concerning the kinds of proof, including but not limited to statistical evidence, which might be relevant to a claim of a violation of

Article 14. They noted that the Chamber had discounted the overwhelming statistical evidence they had adduced, without checking whether or not it was accurate, despite the fact that it had been corroborated by independent specialised intergovernmental bodies (ECRI, the Committee on the Elimination of Racial Discrimination, and the Advisory Committee on the Framework Convention for the Protection of National Minorities) and by the government's own admission (see paragraphs 41 and 66 above). According to this data, although Roma represented only 5% of all primary-school pupils at the time the application was lodged, they made up more than 50% of the population of special schools. Whereas fewer than 2% of non-Roma pupils in Ostrava were assigned to special schools, over 50% of Roma children were sent to such schools. Overall, a Roma child was more than twenty-seven times more likely than a similarly situated non-Roma child to be assigned to a special school.

135. In the applicants' view, these figures strongly suggested that, whether through conscious design or reprehensible neglect, race or ethnicity had infected the process of school assignment to a substantial – perhaps determining – extent. The presumption that they, like other Roma children in the city of Ostrava, had been the victims of discrimination on the grounds of ethnic origin had never been rebutted. It was undisputed that as a result of their assignment to special schools the applicants had received a substantially inferior education as compared with non-Roma children and that this had effectively deprived them of the opportunity to pursue a secondary education other than in a vocational training centre.

136. In this context, they argued that both in Europe and beyond statistical data was often used in cases which, as here, concerned discriminatory effect, as sometimes it was the only means of proving indirect discrimination. Statistical data was accepted as a means of proof of discrimination by the bodies responsible for supervising the United Nations treaties and by the Court of Justice of the European Communities. Council Directive 2000/43/EC expressly provided that indirect discrimination could be established by any means "including on the basis of statistical evidence".

137. With respect to the Convention institutions, the applicants noted that, in finding racial discrimination in *East African Asians v. the United Kingdom* (nos. 4403/70-4530/70, Commission's report of 14 December 1973, Decisions and Reports 78-A, p. 5), the Commission took into account the surrounding circumstances including statistical data on the disproportionate effect the legislation had had on British citizens of Asian origin. Recently, the Court had indicated in its decision in *Hoogendijk* (cited above) that, while statistics alone were not sufficient to prove discrimination, they could – particularly where they were undisputed – amount to prima facie evidence requiring the Government to provide an objective explanation of the differential treatment. Further, in its judgment

in *Zarb Adami* (cited above), the Court had relied, *inter alia*, on statistical evidence of disproportionate effect.

138. The applicants added that it would be helpful for the Grand Chamber to clarify the Court's case-law by determining whether there was an objective and reasonable justification for the purposes of Article 14 for the difference in treatment in the present case and specifying the conclusions that should be drawn in the absence of a satisfactory explanation. Referring to, *inter alia*, the judgments in *Timishev v. Russia* (nos. 55762/00 and 55974/00, § 56, ECHR 2005-XII) and *Moldovan and Others v. Romania (no. 2)* (nos. 41138/98 and 64320/01, § 140, 12 July 2005), they stated that where an applicant had established a difference in treatment the onus was on the respondent State to prove that it was justified. In the absence of a racially neutral explanation, it was legitimate to conclude that the difference in treatment was based on racial grounds. In the applicants' submission, neither an inadequate command of the Czech language, nor poverty nor a different socio-economic status could constitute an objective and reasonable justification in their case. They denied that the disproportionately large number of Roma children in special schools could be explained by the results of intellectual capacity tests or justified by parental consent (see also paragraphs 141-42 below).

139. In view of the importance of the fight against racial and ethnic discrimination that had constantly been reaffirmed by the Strasbourg institutions, the applicants considered that the Grand Chamber should state in clear terms that the States' "margin of appreciation" could not serve to justify segregation in education. The approach adopted by the Chamber, which left an unlimited margin of appreciation to the Czech State, was unjustified in view of the serious allegations of racial and ethnic discrimination in the instant case and was inconsistent with the Court's case-law. The present case warranted all the more the Court's attention in that it concerned one of the most important substantive rights, namely the right to education.

140. The applicants further argued that the Chamber had misinterpreted crucial evidence and drawn inappropriate conclusions on two decisive issues, namely parental consent and the reliability of the psychological tests.

141. There were no uniform rules at the material time governing the manner in which the tests used by the educational psychology centres were administered and the results interpreted, so that much had been left to the discretion of the psychologists and there had been considerable scope for racial prejudice and cultural insensitivity. Further, the tests which they and other Roma children had been forced to sit were scientifically flawed and educationally unsound. The documentary evidence showed that a number of the applicants had been placed in special schools for reasons other than intellectual deficiencies (such as absenteeism, bad behaviour, and even misconduct on the part of the parents). The Czech Government had

themselves acknowledged the discriminatory effect of the tests (see paragraph 66 above). They had also admitted in their observations on the present case that one of the applicants had been placed in a special school despite possessing good verbal communication skills.

142. Nor, in the applicants' submission, could the discriminatory treatment to which they had been subjected be justified by their parents' consent to their placement in the special schools. Governments were legally bound to protect the higher interest of the child and in particular the equal right of all children to education. Neither parental conduct nor parental choice could deprive them of that right.

The credibility of the "consent" allegedly given by the parents of several of the applicants had been called into question by inconsistencies in the school records that raised doubts as to whether they had indeed agreed. In any event, even supposing that consent had been given by all the parents, it had no legal value as the parents concerned had never been properly informed of their right to withhold their consent, of alternatives to placement in a special school or of the risks and consequences of such a placement. The procedure was largely formal: the parents were given a pre-completed form and the results of the psychological tests, results they believed they had no right to contest. As to the alleged right subsequently to request a transfer to an ordinary school, the applicants pointed out that from their very first year at school they had received a substantially inferior education that made it impossible for them subsequently to meet the requirements of the ordinary schools.

Moreover, it was unrealistic to consider the issue of consent without taking into account the history of Roma segregation in education and the absence of adequate information on the choices available to Roma parents. Referring to the view that had been expressed by the Court (see *Håkansson and Sturesson v. Sweden*, 21 February 1990, § 66, Series A no. 171-A) that a waiver may be lawful for certain rights but not for others and that it must not run counter to any important public interest, the applicants submitted that there could be no waiver of the child's right not to be racially discriminated against in education.

143. The instant case raised "a serious issue of general importance", namely whether European governments were capable of coping with increasing racial and ethnic diversity and of protecting vulnerable minorities. In that connection, the most important issue was that of equality of opportunity in education as discrimination against Roma in that sphere persisted in all the member States of the Council of Europe. Putting an end to discrimination at school would enable Roma to enjoy equality of treatment generally.

144. The racial segregation of Roma children in Czech schools had not materially changed since the date the application was filed. The applicants' own futures and lack of prospects revealed the harm that their

discriminatory placement in special schools had caused. Thus, in May 2006 eight of the applicants were continuing their education in a special school while a further six who had completed special school found themselves unemployed. Of the four applicants who had been allowed to attend ordinary primary school after passing the aptitude tests, two were still at school, one was unemployed and the fourth was enrolled in a vocational secondary school. The applicants considered that it was already clear that none of them would receive a general secondary-school education, still less a university education.

145. Finally, the applicants pointed out that a new Schools Act had been passed in late 2004, which had purported to end the special-school system. The new legislation thus acknowledged that the very existence of schools deemed "special" imposed a badge of inferiority on those placed there. In reality, however, the new law had not brought about changes in practice as it had merely altered the criteria on which educational programmes were based. Extensive research carried out by the European Roma Rights Centre in 2005 and 2006 showed that in many cases special schools had simply been renamed "remedial schools" or "practical schools" without any substantial change in the composition of their teaching staff or the content of their curriculum.

2. The Government

146. The Government stated that the case raised complex issues concerning the social problem of the position of Roma in contemporary society. Although the Roma ostensibly enjoyed the same rights as other citizens, in reality their prospects were limited by both objective and subjective factors. There could be no improvement in their situation without the involvement and commitment of all members of the Roma community. When they attempted to eliminate these inequalities, member States were confronted with numerous political, social, economic and technical problems which could not be confined to the question of respect for fundamental rights. It was for this reason that the courts, including the European Court of Human Rights, had to exercise a degree of restraint when examining measures adopted in this field and confine themselves to deciding whether or not the competent authorities had overstepped their margin of appreciation.

147. Referring to their previous written and oral observations, the Government reiterated that race, colour or association with a national minority had not played a determining role in the applicants' education. There was no specific evidence of any difference in treatment of the applicants on the basis of those grounds. The applicants' school files showed beyond doubt that their placement in special schools was not based on their ethnic origin, but on the results of psychological tests carried out at the educational psychology centres. Since the applicants had been placed in

special schools on account of their specific educational needs resulting essentially from their intellectual capacity and since the criteria, the process by which the criteria were applied and the system of special schools were all racially neutral, as the Chamber had confirmed in its judgment, it was not possible to speak of overt or direct discrimination in the instant case.

148. The Government next turned to the applicants' argument that the instant case was one of indirect discrimination which, in some instances, could only be established with the aid of statistics. They contended that the case of *Zarb Adami* (cited above), in which the Court had relied extensively on statistical evidence submitted by the parties, was not comparable to the instant case. Firstly, *Zarb Adami* was far less complex. Secondly, the statistical disparities found in that case between the number of men and women called to perform jury service were the result of a decision by the State, whereas the statistics relied on by the applicants in the instant case reflected first and foremost the parents' wishes for their children to attend special school, not any act or omission on the part of the State. Had the parents not expressed such a wish (by giving their consent) the children would not have been placed in a special school.

Further, the statistical information that had been submitted in the instant case by the applicants was not sufficiently conclusive as the data had been furnished by the head teachers of the schools and therefore only reflected their subjective opinions. There was no official information on the ethnic origin of the pupils. The Government further considered that the statistics had no informative value without an evaluation of the socio-cultural background of the Roma, their family situation and their attitude towards education. They pointed out in that connection that the Ostrava region had one of the largest Roma populations in the Czech Republic.

As to the comparative studies on countries from central and eastern Europe and beyond cited in the observations of the third-party interveners, the Government did not consider that there was any relevant link between those statistics and the substantive issues in the case to hand. In their submission, those studies tended to confirm that creating an education system optimised for Roma children was an extremely complex task.

149. Nevertheless, even assuming that the data submitted by the applicants were reliable and that the State could be considered responsible for the situation, that did not, in the Government's submission, amount to indirect discrimination that was incompatible with the Convention. The impugned measure was consistent with the principle of non-discrimination as it pursued a legitimate aim, namely the adaptation of the education process to the capacity of children with specific educational needs. It was also objectively and reasonably justified.

150. On this latter point, the Government contested the applicants' claim that they had not submitted any satisfactory explanation regarding the large number of Roma in special schools. While admitting that the situation of the

Roma with regard to education was not ideal, the Government considered that they had demonstrated that the special schools had not been established for the Roma community and that ethnic origin had not been a criterion for deciding on placements in special schools. They reiterated that special-school placements were only possible after prior individualised pedagogical and psychological testing. The testing process was a technical tool that was the subject of continuing scientific research and for that reason could only be carried out by qualified personnel. The courts did not possess the necessary qualifications and therefore had to exercise a degree of restraint in this field. As regards the professional standards referred to in the observations of the International Step by Step Association and others, the Government emphasised that these were not legal norms possessing force of law but, at most, non-binding recommendations or indications by specialists and that the failure to apply them could not, by definition, entail international legal responsibility.

151. The files of each of the applicants contained full details of the methods that had been used and the results of the testing. These had not been challenged at the time by any of the applicants. The applicants' allegations that the psychologists had followed a subjective approach appeared to be biased and not based on any evidence.

152. The Government again conceded that there might have been rare situations where the reason for the placement in a special school was on the borderline between learning difficulties and a socio-culturally disadvantaged environment. Among the eighteen cases, this had apparently happened in one case only, that of the ninth applicant. Otherwise, the pedagogical-psychological diagnostics and the testing at the educational psychology centres had proved learning difficulties in the case of all the applicants.

153. The educational psychology centres that had administered the tests had only made recommendations concerning the type of school in which the child should be placed. The essential, decisive factor was the wishes of the parents. In the instant case, the parents had been informed that their children's placement in a special school depended on their consent and the consequences of such a decision had been explained to them. If the effect of their consent was not entirely clear, they could have appealed against the decision regarding placement and could at any time have required their child's transfer to a different type of school. If, as they now alleged, their consent was not informed, they should have sought information from the competent authorities. The Government noted in this respect that Article 2 of Protocol No. 1 emphasised the primary role and responsibility of parents in the education of their children. The State could not intervene if there was nothing in the parents' conduct to indicate that they were unable or unwilling to decide on the most appropriate form of education for their

children. Interference of that sort would contravene the principle that the State had to respect parents' wishes regarding education and teaching.

In the instant case, the Government noted that apart from appealing to the Constitutional Court and lodging an application with the European Court of Human Rights, the applicants' parents had on the whole done nothing to spare their children the alleged discriminatory treatment and had played a relatively passive role in their education.

154. The Government rejected the applicants' argument that their placement in special schools had prevented them from pursuing a secondary or higher education. Whether the applicants had finished their compulsory education before or after the entry into force of the new Schools Act (Law no. 561/2004), it had been open to them to pursue their secondary education, to take additional lessons to bring them up to the appropriate level or to seek career advice. However, none of the applicants had established that they had attempted to do so (albeit unsuccessfully) or that their (alleged) difficulties were due to a more limited education as a result of their earlier placement in a special school. On the contrary, several of the applicants had decided not to pursue their studies or had abandoned them. The Government were firmly convinced that the applicants had deprived themselves of the possibility of continuing their studies through a lack of interest. Their situation, which in many cases was unfavourable, had stemmed mainly from their own lack of interest, and was not something for which the State could be held responsible.

155. The Government conceded that the national authorities had to take all reasonable steps to ensure that measures did not produce disproportionate effects or, if that was not feasible, to mitigate and compensate for such effects. However, neither the Convention nor any other international instrument contained a general definition of the State's positive obligations concerning the education of Roma pupils or, more generally, of children from national or ethnic minorities. The Government noted in this connection that when determining the State's positive obligations the Court sometimes referred to developments in the legislation of the Contracting Parties. However, they said that no European standard or consensus currently existed regarding the criteria to be used to determine whether children should be placed in special schools or how children with special learning needs should be educated and the special school was one of the possible and acceptable solutions to the problem.

156. Moreover, the positive obligations under Article 14 of the Convention could not be construed as an obligation to take affirmative action. That had to remain an option. It was not possible to infer from Article 14 a general obligation on the part of the State actively to compensate for all the disabilities which different sections of the population suffered from.

157. In any event, since special schools had to be regarded as an alternative, but not inferior, form of education, the Government submitted that they had in the instant case adopted reasonable measures to compensate for the disabilities of the applicants, who required a special education as a result of their individual situation, and that they had not overstepped the margin of appreciation which the Convention afforded the States in the education sphere. They observed that the State had allocated twice the level of resources to special schools as to ordinary schools and that the domestic authorities had made considerable efforts to deal with the complex issue of the education of Roma children.

158. The Government went on to provide information on the applicants' current situation obtained from the files of both the school and the Ostrava Job Centre (where those applicants who were unemployed had signed on). As a preliminary, they noted that the Ostrava region was afflicted by a high rate of unemployment and that, in general, young people who had received only a primary education had difficulties in finding work. While it was possible to obtain a qualification and career counselling from the State, the active participation of the job applicant was essential.

In concrete terms, two applicants were currently in their final year at primary school. Seven had begun vocational training in a secondary school in September 2006. Four had started but later abandoned their secondary-school studies, the majority through a lack of interest, and had instead signed on at the job centre. Lastly, five of the applicants had not sought to pursue their studies at secondary-school level but had registered at the job centre. Those applicants who had registered at a job centre had not cooperated with it or shown any interest in the offers of training or employment that had been made, with the result that some of them had already been struck off the job-applicants register (in some instances repeatedly).

159. Lastly, the Government rejected the applicants' claim that nothing had been changed by the introduction of the Schools Act (Law no. 561/2004). The Act unified the previously existing types of primary school and standardised the educational programmes. It did not provide for a separate, independent system of specialised schools, with the exception of schools for pupils with serious mental disorders, autism or combined mental and physical defects. Pupils with disabilities were individually integrated, wherever possible and desirable, into conventional schools. However, schools were authorised to set up separate classes with educational techniques and methods adjusted to their needs. The former "special schools" could continue to function as separate institutions, but were now "primary schools" providing education under a modified educational programme for primary education. Schools at which socially disadvantaged pupils were educated often made use of their right to establish assistant teacher's posts and preparatory classes designed to improve the children's

communication skills and command of the Czech language. Teaching assistants from the Roma community often served as a link between the school, family, and, in some instances, other experts and helped to integrate pupils into the education system. The region where the applicants lived favoured integrating Roma pupils in classes drawn from the majority population.

160. In their concluding submissions, the Government asked the Court carefully to examine the issue of the applicants' access to education in each individual case, though without losing sight of the overall context, and to hold that there had been no violation of the Convention.

3. The third-party interveners

(a) Interights and Human Rights Watch

161. Interights and Human Rights Watch stated that it was essential that Article 14 of the Convention should afford effective protection against indirect discrimination, a concept which the Court had not yet had many occasions to consider. They submitted that aspects of the Chamber's reasoning were out of step with recent developments in cases such as *Timishev* (cited above), *Zarb Adami* (cited above) and *Hoogendijk* (cited above). The Grand Chamber needed to consolidate a purposive interpretation of Article 14 and to bring the Court's jurisprudence on indirect discrimination in line with existing international standards.

162. Interights and Human Rights Watch noted that the Court itself had confirmed in *Zarb Adami* that discrimination was not always direct or explicit and that a policy or general measure could result in indirect discrimination. It had also accepted that intent was not required in cases of indirect discrimination (see *Hugh Jordan v. the United Kingdom*, no. 24746/94, § 154, 4 May 2001). In their submission, it was sufficient in the case of indirect discrimination that the practice or policy resulted in a disproportionate adverse effect on a particular group.

163. As to proof of indirect discrimination, it was widely accepted in Europe and internationally and also by the Court (see *Timishev*, cited above, § 57, and *Hoogendijk*, cited above) that the burden of proof had to shift once a prima facie case of discrimination had been established. In cases of indirect discrimination, where the applicant had demonstrated that significantly more people of a particular category were placed at a disadvantage by a given policy or practice, a presumption of discrimination arose. The burden then shifted to the State to reject the basis for the prima facie case, or to provide a justification for it.

164. It was therefore critical for the Court to engage with the type of evidence that might be produced in order to shift the burden of proof. Interights and Human Rights Watch submitted on this point that the Court's position with regard to statistical evidence, as set out in *Hugh Jordan* (cited

above, § 154), was at variance with international and comparative practice. In Council directives and international instruments, statistics were the key method of proving indirect discrimination. Where measures were neutral on their face, statistics sometimes proved the only effective means of identifying their varying impact on different segments of society. Obviously, courts had to assess the credibility, strength and relevance of the statistics to the case at hand, requiring that they be tied to the applicant's allegations in concrete ways.

If, however, the Court were to maintain the position that statistics alone were not sufficient to disclose a discriminatory practice, Interights and Human Rights Watch submitted that the general social context should be taken into account, as it provided valuable insight into the extent to which the effects of the measure on the applicants were disproportionate.

(b) Minority Rights Group International, the European Network Against Racism and the European Roma Information Office

165. The Minority Rights Group International, the European Network Against Racism and the European Roma Information Office submitted that the wrongful assignment of Roma children to special schools for the mentally disabled was the most obvious and odious form of discrimination against the Roma. Children in such special schools followed a simplified curriculum considered appropriate for their lower level of intellectual development. Thus, for example, in the Czech Republic, children in special schools were not expected to know the Czech alphabet or numbers up to ten until the third or fourth year of school, while their counterparts in ordinary schools acquired that knowledge in the first year.

166. This practice had received considerable attention, both at the European level and within the human rights bodies of the United Nations, which had expressed their concern in various reports as to the over-representation of Roma children in special schools, the adequacy of the tests employed and the quality of the alleged parental consent. All these bodies had found that no objective and reasonable justification could legitimise the disadvantage faced by Roma children in the field of education. The degree of consistency among the institutions and quasi-judicial bodies was persuasive in confirming the existence of widespread discrimination against Roma children.

167. The interveners added that whatever the merits of separate education for children with genuine mental disabilities, the decision to place Roma children in special schools was in the majority of cases not based on any actual mental disability but rather on language and cultural differences which were not taken into account in the testing process. In order to fulfil their obligation to secure equal treatment for Roma in the exercise of their right to education, the first requirement of States was to amend the testing

process so that it was not racially prejudiced against Roma and to take positive measures in the area of language training and social-skills training.

(c) International Step by Step Association, the Roma Education Fund and the European Early Childhood Education Research Association

168. The International Step by Step Association, the Roma Education Fund and the European Early Childhood Education Research Association sought to demonstrate that the assessment used to place Roma children in special schools in the Ostrava region disregarded the numerous effective and appropriate indicators that were well known by the mid-1990s (see paragraph 44 above). In their submission, the assessment had not taken into account the language and culture of the children, their prior learning experiences or their unfamiliarity with the demands of the testing situation. Single rather than multiple sources of evidence had been used. Testing had been done in one sitting, not over time. Evidence had not been obtained in realistic or authentic settings where children could demonstrate their learning. Undue emphasis had been placed on individually administered, standardised tests normed on other populations.

169. Referring to various studies that had been carried out (see paragraph 44 above), the interveners noted that minority children and those from vulnerable families were over-represented in special education in central and eastern Europe. This resulted from an array of factors, including unconscious racial bias on the part of school authorities, large resource inequalities, unjustifiable reliance on IQ and other evaluation tools, educators' inappropriate responses to the pressures of "high stakes" testing and power differentials between minority parents and school officials. School placement through psychological testing often reflected racial biases in the society concerned.

170. The Czech Republic was notable for its placement of children in segregated settings because of "social disadvantage". According to a comparison of data on fifteen countries collected by the Organisation for Economic Co-operation and Development in 1999 (see paragraph 18 *in fine* above), the Czech Republic ranked third in placing pupils with learning difficulties in special-school settings. Of the eight countries that provided data on the placement of pupils as a result of social factors, the Czech Republic was the only one to have recourse to special schools; the other countries almost exclusively used ordinary schools for educating such pupils.

171. Further, the practice of referring children labelled as being of low ability to special schools at an early age (educational tracking) frequently led, whether intentionally or not, to racial segregation and had particularly negative effects on the level of education of disadvantaged children. This had long-term detrimental consequences for both them and society,

including premature exclusion from the education system with the resulting loss of job opportunities for those concerned.

(d) International Federation for Human Rights (*Fédération internationale des ligues des droits de l'Homme* – FIDH)

172. The FIDH considered that the Chamber had unjustifiably placed significant weight in its judgment on the consent the applicants' parents had allegedly given to the situation forming the subject of their complaint to the Court. It noted that under the Court's case-law there were situations in which the waiver of a right was not considered capable of exempting the State from its obligation to guarantee to every person within its jurisdiction the rights and freedoms laid down in the Convention. That applied, in particular, where the waiver conflicted with an important public interest, or was not explicit or unequivocal. Furthermore, in order to be capable of justifying a restriction of the right or freedom of the individual, the waiver of that guarantee by the person concerned had to take place in circumstances from which it could be concluded that he was fully aware of the consequences, in particular the legal consequences, of his choice. In the case of *R. v. Borden* ([1994] 3 RCS 145, p. 162), the Supreme Court of Canada had developed the following principle on that precise point: "[i]n order for a waiver of the right ... to be effective, the person purporting to consent must be possessed of the requisite informational foundation for a true relinquishment of the right. A right to choose requires not only the volition to prefer one option over another, but also sufficient available information to make the preference meaningful."

173. The question therefore arose as to whether, in the light of the nature of the principle of equality of treatment, and of the link between the prohibition of racial discrimination and the wider concept of human dignity, waiver of the right to protection against discrimination ought not to be precluded altogether. In the instant case, the consent obtained from the applicants' parents was binding not solely on the applicants but on all the children of the Roma community. It was perfectly possible – indeed, in the FIDH's submission, probable – that all parents of Roma children would prefer an integrated education for their children, but that, being uncertain as regards the choice that would be made by other parents in that situation, they preferred the "security" offered by special education, which was followed by the vast majority of Roma children. In a context characterised by a history of discrimination against the Roma, the choice available to the parents of Roma children was between (a) placing their children in schools where the authorities were reluctant to admit them and where they feared being the subject of various forms of harassment and of manifestations of hostility on the part of their fellow pupils and of teachers, or (b) placing them in special schools where Roma children were in a large majority and where, consequently, they would not have to fear the manifestation of such

prejudices. In reality, the applicants' parents had chosen what they saw as being the lesser of two evils, in the absence of any real possibility of receiving an integrated education which would unreservedly welcome Roma. The disproportion between the two alternatives was such that the applicants' parents had been obliged to make the choice for which the Government now sought to hold them responsible.

174. For the reasons set out above, the FIDH considered that in the circumstances of the instant case, the alleged waiver by the applicants' parents of the right for their children to receive an education in normal schools could not justify exempting the Czech Republic from its obligations under the Convention.

C. The Court's assessment

1. Recapitulation of the main principles

175. The Court has established in its case-law that discrimination means treating differently, without an objective and reasonable justification, persons in relevantly similar situations (see *Willis v. the United Kingdom*, no. 36042/97, § 48, ECHR 2002-IV, and *Okpisz v. Germany*, no. 59140/00, § 33, 25 October 2005). However, Article 14 does not prohibit a member State from treating groups differently in order to correct "factual inequalities" between them; indeed in certain circumstances a failure to attempt to correct inequality through different treatment may in itself give rise to a breach of the Article (see *Case "relating to certain aspects of the laws on the use of languages in education in Belgium" v. Belgium* (merits), 23 July 1968, p. 34, § 10, Series A no. 6; *Thlimmenos v. Greece* [GC], no. 34369/97, § 44, ECHR 2000-IV; and *Stec and Others v. the United Kingdom* [GC], no. 65731/01, § 51, ECHR 2006-VI). The Court has also accepted that a general policy or measure that has disproportionately prejudicial effects on a particular group may be considered discriminatory notwithstanding that it is not specifically aimed at that group (see *Hugh Jordan*, cited above, and *Hoogendijk*, cited above), and that discrimination potentially contrary to the Convention may result from a *de facto* situation (see *Zarb Adami*, cited above).

176. Discrimination on account of, *inter alia*, a person's ethnic origin is a form of racial discrimination. Racial discrimination is a particularly invidious kind of discrimination and, in view of its perilous consequences, requires from the authorities special vigilance and a vigorous reaction. It is for this reason that the authorities must use all available means to combat racism, thereby reinforcing democracy's vision of a society in which diversity is not perceived as a threat but as a source of enrichment (see *Nachova*, cited above, and *Timishev*, cited above). The Court has also held that no difference in treatment which is based exclusively or to a decisive

extent on a person's ethnic origin is capable of being objectively justified in a contemporary democratic society built on the principles of pluralism and respect for different cultures (see *Timishev*, cited above, § 58).

177. As to the burden of proof in this sphere, the Court has established that once the applicant has shown a difference in treatment it is for the Government to show that it was justified (see, among other authorities, *Chassagnou and Others v. France* [GC], nos. 25088/94, 28331/95 and 28443/95, §§ 91-92, ECHR 1999-III, and *Timishev*, cited above, § 57).

178. As regards the question of what constitutes prima facie evidence capable of shifting the burden of proof on to the respondent State, the Court stated in *Nachova and Others* (cited above, § 147) that in proceedings before it there are no procedural barriers to the admissibility of evidence or predetermined formulae for its assessment. The Court adopts the conclusions that are, in its view, supported by the free evaluation of all evidence, including such inferences as may flow from the facts and the parties' submissions. According to its established case-law, proof may follow from the coexistence of sufficiently strong, clear and concordant inferences or of similar unrebutted presumptions of fact. Moreover, the level of persuasion necessary for reaching a particular conclusion and, in this connection, the distribution of the burden of proof are intrinsically linked to the specificity of the facts, the nature of the allegation made and the Convention right at stake.

179. The Court has also recognised that Convention proceedings do not in all cases lend themselves to a rigorous application of the principle *affirmanti incumbit probatio* (he who alleges something must prove that allegation – see *Aktaş v. Turkey*, no. 24351/94, § 272, ECHR 2003-V). In certain circumstances, where the events in issue lie wholly, or in large part, within the exclusive knowledge of the authorities, the burden of proof may be regarded as resting on the authorities to provide a satisfactory and convincing explanation (see *Salman v. Turkey* [GC], no. 21986/93, § 100, ECHR 2000-VII, and *Anguelova v. Bulgaria*, no. 38361/97, § 111, ECHR 2002-IV). In *Nachova and Others* (cited above, § 157), the Court did not rule out requiring a respondent Government to disprove an arguable allegation of discrimination in certain cases, even though it considered that it would be difficult to do so in that particular case in which the allegation was that an act of violence had been motivated by racial prejudice. It noted in that connection that in the legal systems of many countries proof of the discriminatory effect of a policy, decision or practice would dispense with the need to prove intent in respect of alleged discrimination in employment or in the provision of services.

180. As to whether statistics can constitute evidence, the Court has in the past stated that statistics could not in themselves disclose a practice which could be classified as discriminatory (see *Hugh Jordan*, cited above, § 154). However, in more recent cases on the question of discrimination in which

the applicants alleged a difference in the effect of a general measure or *de facto* situation (see *Hoogendijk*, cited above, and *Zarb Adami*, cited above, §§ 77-78), the Court relied extensively on statistics produced by the parties to establish a difference in treatment between two groups (men and women) in similar situations.

Thus, in *Hoogendijk* the Court stated: "[W]here an applicant is able to show, on the basis of undisputed official statistics, the existence of a prima facie indication that a specific rule – although formulated in a neutral manner – in fact affects a clearly higher percentage of women than men, it is for the respondent Government to show that this is the result of objective factors unrelated to any discrimination on grounds of sex. If the onus of demonstrating that a difference in impact for men and women is not in practice discriminatory does not shift to the respondent Government, it will be in practice extremely difficult for applicants to prove indirect discrimination."

181. Lastly, as noted in previous cases, the vulnerable position of Roma/Gypsies means that special consideration should be given to their needs and their different lifestyle both in the relevant regulatory framework and in reaching decisions in particular cases (see *Chapman v. the United Kingdom* [GC], no. 27238/95, § 96, ECHR 2001-I, and *Connors v. the United Kingdom*, no. 66746/01, § 84, 27 May 2004).

In *Chapman* (cited above, §§ 93-94), the Court also observed that there could be said to be an emerging international consensus among the Contracting States of the Council of Europe recognising the special needs of minorities and an obligation to protect their security, identity and lifestyle, not only for the purpose of safeguarding the interests of the minorities themselves but to preserve a cultural diversity of value to the whole community.

2. Application of the above-mentioned principles to the instant case

182. The Court notes that as a result of their turbulent history and constant uprooting the Roma have become a specific type of disadvantaged and vulnerable minority (see also the general observations in the Parliamentary Assembly's Recommendation No. 1203 (1993) on Gypsies in Europe, cited in paragraph 56 above, and point 4 of its Recommendation no. 1557 (2002) on the legal situation of Roma in Europe, cited in paragraph 58 above). As the Court has noted in previous cases, they therefore require special protection (see paragraph 181 above). As is attested by the activities of numerous European and international organisations and the recommendations of the Council of Europe bodies (see paragraphs 54-61 above), this protection also extends to the sphere of education. The present case therefore warrants particular attention, especially as when the applications were lodged with the Court the

applicants were minor children for whom the right to education was of paramount importance.

183. The applicants' allegation in the present case is not that they were in a different situation from non-Roma children that called for different treatment or that the respondent State had failed to take affirmative action to correct factual inequalities or differences between them (see *Thlimmenos*, cited above, § 44, and *Stec and Others*, cited above, § 51). In their submission, all that has to be established is that, without objective and reasonable justification, they were treated less favourably than non-Roma children in a comparable situation and that this amounted in their case to indirect discrimination.

184. The Court has already accepted in previous cases that a difference in treatment may take the form of disproportionately prejudicial effects of a general policy or measure which, though couched in neutral terms, discriminates against a group (see *Hugh Jordan*, cited above, § 154, and *Hoogendijk*, cited above). In accordance with, for instance, Council Directives 97/80/EC and 2000/43/EC (see paragraphs 82-84 above) and the definition provided by ECRI (see paragraph 60 above), such a situation may amount to "indirect discrimination", which does not necessarily require a discriminatory intent.

(a) Whether a presumption of indirect discrimination arises in the instant case

185. It was common ground that the impugned difference in treatment did not result from the wording of the statutory provisions on placements in special schools in force at the material time. Accordingly, the issue in the instant case is whether the manner in which the legislation was applied in practice resulted in a disproportionate number of Roma children – including the applicants – being placed in special schools without justification, and whether such children were thereby placed at a significant disadvantage.

186. As mentioned above, the Court has noted in previous cases that applicants may have difficulty in proving discriminatory treatment (*Nachova and Others*, cited above, §§ 147 and 157). In order to guarantee those concerned the effective protection of their rights, less strict evidential rules should apply in cases of alleged indirect discrimination.

187. On this point, the Court observes that Council Directives 97/80/EC and 2000/43/EC stipulate that persons who consider themselves wronged because the principle of equal treatment has not been applied to them may establish before a domestic authority by any means, including on the basis of statistical evidence, facts from which it may be presumed that there has been discrimination (see paragraphs 82-83 above). The recent case-law of the Court of Justice of the European Communities (see paragraphs 88-89 above) shows that it permits claimants to rely on statistical evidence and the national courts to take such evidence into account where it is valid and significant.

The Grand Chamber further notes the information furnished by the third-party interveners that the courts of many countries and the supervisory bodies of the United Nations treaties habitually accept statistics as evidence of indirect discrimination in order to facilitate the victims' task of adducing prima facie evidence.

The Court also recognised the importance of official statistics in the above-mentioned cases of *Hoogendijk* and *Zarb Adami* and has shown that it is prepared to accept and take into consideration various types of evidence (see *Nachova and Others*, cited above, § 147).

188. In these circumstances, the Court considers that when it comes to assessing the impact of a measure or practice on an individual or group, statistics which appear on critical examination to be reliable and significant will be sufficient to constitute the prima facie evidence the applicant is required to produce. This does not, however, mean that indirect discrimination cannot be proved without statistical evidence.

189. Where an applicant alleging indirect discrimination thus establishes a rebuttable presumption that the effect of a measure or practice is discriminatory, the burden then shifts to the respondent State, which must show that the difference in treatment is not discriminatory (see, *mutatis mutandis*, *Nachova and Others*, cited above, § 157). Regard being had in particular to the specificity of the facts and the nature of the allegations made in this type of case (ibid., § 147), it would be extremely difficult in practice for applicants to prove indirect discrimination without such a shift in the burden of proof.

190. In the present case, the statistical data submitted by the applicants were obtained from questionnaires that were sent out to the head teachers of special and primary schools in the town of Ostrava in 1999. They indicate that at the time 56% of all pupils placed in special schools in Ostrava were Roma. Conversely, Roma represented only 2.26% of the total number of pupils attending primary school in Ostrava. Further, whereas only 1.8% of non-Roma pupils were placed in special schools, the proportion of Roma pupils in Ostrava assigned to special schools was 50.3%. According to the Government, these figures are not sufficiently conclusive as they merely reflect the subjective opinions of the head teachers. The Government also noted that no official information on the ethnic origin of the pupils existed and that the Ostrava region had one of the largest Roma populations.

191. The Grand Chamber observes that these figures are not disputed by the Government and that they have not produced any alternative statistical evidence. In view of their comment that no official information on the ethnic origin of the pupils exists, the Court accepts that the statistics submitted by the applicants may not be entirely reliable. It nevertheless considers that these figures reveal a dominant trend that has been confirmed both by the respondent State and the independent supervisory bodies which have looked into the question.

192. In their reports submitted in accordance with Article 25 § 1 of the Framework Convention for the Protection of National Minorities, the Czech authorities accepted that in 1999 Roma pupils made up between 80% and 90% of the total number of pupils in some special schools (see paragraph 66 above) and that in 2004 "large numbers" of Roma children were still being placed in special schools (see paragraph 67 above). The Advisory Committee on the Framework Convention observed in its report of 26 October 2005 that according to unofficial estimates Roma accounted for up to 70% of pupils enrolled in special schools. According to the report published by ECRI in 2000, Roma children were "vastly over-represented" in special schools. The Committee on the Elimination of Racial Discrimination noted in its concluding observations of 30 March 1998 that a disproportionately large number of Roma children were placed in special schools (see paragraph 99 above). Lastly, according to the figures supplied by the European Monitoring Centre on Racism and Xenophobia, more than half of Roma children in the Czech Republic attended special school.

193. In the Court's view, the latter figures, which do not relate solely to the Ostrava region and therefore provide a more general picture, show that, even if the exact percentage of Roma children in special schools at the material time remains difficult to establish, their number was disproportionately high. Moreover, Roma pupils formed a majority of the pupils in special schools. Despite being couched in neutral terms, the relevant statutory provisions therefore had considerably more impact in practice on Roma children than on non-Roma children and resulted in statistically disproportionate numbers of placements of the former in special schools.

194. Where it has been shown that legislation produces such a discriminatory effect, the Grand Chamber considers that, as with cases concerning employment or the provision of services (see, *mutatis mutandis*, *Nachova and Others*, cited above, § 157), it is not necessary in cases in the educational sphere to prove any discriminatory intent on the part of the relevant authorities (see paragraph 184 above).

195. In these circumstances, the evidence submitted by the applicants can be regarded as sufficiently reliable and significant to give rise to a strong presumption of indirect discrimination. The burden of proof must therefore shift to the Government, which must show that the difference in the impact of the legislation was the result of objective factors unrelated to ethnic origin.

(b) Objective and reasonable justification

196. The Court reiterates that a difference in treatment is discriminatory if "it has no objective and reasonable justification", that is, if it does not pursue a "legitimate aim" or if there is not a "reasonable relationship of proportionality" between the means employed and the aim sought to be

realised (see, among many other authorities, *Larkos v. Cyprus* [GC], no. 29515/95, § 29, ECHR 1999-I, and *Stec and Others*, cited above, § 51). Where the difference in treatment is based on race, colour or ethnic origin, the notion of objective and reasonable justification must be interpreted as strictly as possible.

197. In the instant case, the Government sought to explain the difference in treatment between Roma children and non-Roma children by the need to adapt the education system to the capacity of children with special needs. In the Government's submission, the applicants were placed in special schools on account of their specific educational needs, essentially as a result of their low intellectual capacity measured with the aid of psychological tests in educational psychology centres. After the centres had made their recommendations regarding the type of school in which the applicants should be placed, the final decision had lain with the applicants' parents and they had consented to the placements. The argument that the applicants were placed in special schools on account of their ethnic origin was therefore unsustainable.

For their part, the applicants strenuously contested the suggestion that the disproportionately high number of Roma children in special schools could be explained by the results of the intellectual capacity tests or be justified by parental consent.

198. The Court accepts that the Government's decision to retain the special-school system was motivated by the desire to find a solution for children with special educational needs. However, it shares the disquiet of the other Council of Europe institutions who have expressed concerns about the more basic curriculum followed in these schools and, in particular, the segregation the system causes.

199. The Grand Chamber observes, further, that the tests used to assess the children's learning abilities or difficulties have given rise to controversy and continue to be the subject of scientific debate and research. While accepting that it is not its role to judge the validity of such tests, various factors in the instant case nevertheless lead the Grand Chamber to conclude that the results of the tests carried out at the material time were not capable of constituting objective and reasonable justification for the purposes of Article 14 of the Convention.

200. In the first place, it was common ground that all the children who were examined sat the same tests, irrespective of their ethnic origin. The Czech authorities themselves acknowledged in 1999 that "Romany children with average or above-average intellect" were often placed in such schools on the basis of the results of psychological tests and that the tests were conceived for the majority population and did not take Roma specifics into consideration (see paragraph 66 above). As a result, they had revised the tests and methods used with a view to ensuring that they "were not misused to the detriment of Roma children" (see paragraph 72 above).

In addition, various independent bodies have expressed doubts over the adequacy of the tests. Thus, the Advisory Committee on the Framework Convention for the Protection of National Minorities observed that children who were not mentally handicapped were frequently placed in these schools "[owing] to real or perceived language and cultural differences between Roma and the majority". It also stressed the need for the tests to be "consistent, objective and comprehensive" (see paragraph 68 above). ECRI noted that the channelling of Roma children to special schools for those with mental retardation was reportedly often "quasi-automatic" and needed to be examined to ensure that any testing used was "fair" and that the true abilities of each child were "properly evaluated" (see paragraphs 63-64 above). The Council of Europe Commissioner for Human Rights noted that Roma children were frequently placed in classes for children with special needs "without an adequate psychological or pedagogical assessment, the real criteria clearly being their ethnic origin" (see paragraph 77 above).

Lastly, in the submission of some of the third-party interveners, placements following the results of the psychological tests reflected the racial prejudices of the society concerned.

201. The Court considers that, at the very least, there is a danger that the tests were biased and that the results were not analysed in the light of the particularities and special characteristics of the Roma children who sat them. In these circumstances, the tests in question cannot serve as justification for the impugned difference in treatment.

202. As regards parental consent, the Court notes the Government's submission that this was the decisive factor without which the applicants would not have been placed in special schools. In view of the fact that a difference in treatment has been established in the instant case, it follows that any such consent would signify an acceptance of the difference in treatment, even if discriminatory, in other words a waiver of the right not to be discriminated against. However, under the Court's case-law, the waiver of a right guaranteed by the Convention – in so far as such a waiver is permissible – must be established in an unequivocal manner, and be given in full knowledge of the facts, that is to say on the basis of informed consent (see *Pfeifer and Plankl v. Austria*, 25 February 1992, §§ 37-38, Series A no. 227) and without constraint (see *Deweer v. Belgium*, 27 February 1980, § 51, Series A no. 35).

203. In the circumstances of the present case, the Court is not satisfied that the parents of the Roma children, who were members of a disadvantaged community and often poorly educated, were capable of weighing up all the aspects of the situation and the consequences of giving their consent. The Government themselves admitted that consent in this instance had been given by means of a signature on a pre-completed form that contained no information on the available alternatives or the differences between the special-school curriculum and the curriculum followed in other

schools. Nor do the domestic authorities appear to have taken any additional measures to ensure that the Roma parents received all the information they needed to make an informed decision or were aware of the consequences that giving their consent would have for their children's futures. It also appears indisputable that the Roma parents were faced with a dilemma: a choice between ordinary schools that were ill-equipped to cater for their children's social and cultural differences and in which their children risked isolation and ostracism, and special schools where the majority of the pupils were Roma.

204. In view of the fundamental importance of the prohibition of racial discrimination (see *Nachova and Others*, cited above, § 145, and *Timishev*, cited above, § 56), the Grand Chamber considers that, even assuming the conditions referred to in paragraph 202 above were satisfied, no waiver of the right not to be subjected to racial discrimination can be accepted, as it would be counter to an important public interest (see, *mutatis mutandis*, *Hermi v. Italy* [GC], no. 18114/02, § 73, ECHR 2006-XII).

(c) Conclusion

205. As is apparent from the documentation produced by ECRI and the report of the Commissioner for Human Rights of the Council of Europe, the Czech Republic is not alone in having encountered difficulties in providing schooling for Roma children: other European States have had similar difficulties. The Court is gratified to note that, unlike some countries, the Czech Republic has sought to tackle the problem and acknowledges that, in its attempts to achieve the social and educational integration of the disadvantaged group which the Roma form, it has had to contend with numerous difficulties as a result of, *inter alia*, the cultural specificities of that minority and a degree of hostility on the part of the parents of non-Roma children. As the Chamber noted in its admissibility decision in the instant case, the choice between a single school for everyone, highly specialised structures and unified structures with specialised sections is not an easy one. It entails a difficult balancing exercise between the competing interests. As to the setting and planning of the curriculum, this mainly involves questions of expediency on which it is not for the Court to rule (see *Valsamis v. Greece*, 18 December 1996, § 28, *Reports of Judgments and Decisions* 1996-VI).

206. Nevertheless, whenever discretion capable of interfering with the enjoyment of a Convention right is conferred on national authorities, the procedural safeguards available to the individual will be especially material in determining whether the respondent State has, when fixing the regulatory framework, remained within its margin of appreciation (see *Buckley v. the United Kingdom*, 25 September 1996, § 76, *Reports* 1996-IV, and *Connors*, cited above, § 83).

207. The facts of the instant case indicate that the schooling arrangements for Roma children were not attended by safeguards (see paragraph 28 above) that would ensure that, in the exercise of its margin of appreciation in the education sphere, the State took into account their special needs as members of a disadvantaged class (see, *mutatis mutandis*, *Buckley*, cited above, § 76, and *Connors*, cited above, § 84). Furthermore, as a result of the arrangements the applicants were placed in schools for children with mental disabilities where a more basic curriculum was followed than in ordinary schools and where they were isolated from pupils from the wider population. As a result, they received an education which compounded their difficulties and compromised their subsequent personal development instead of tackling their real problems or helping them to integrate into the ordinary schools and develop the skills that would facilitate life among the majority population. Indeed, the Government have implicitly admitted that job opportunities are more limited for pupils from special schools.

208. In these circumstances and while recognising the efforts made by the Czech authorities to ensure that Roma children receive schooling, the Court is not satisfied that the difference in treatment between Roma children and non-Roma children was objectively and reasonably justified and that there existed a reasonable relationship of proportionality between the means used and the aim pursued. In that connection, it notes with interest that the new legislation has abolished special schools and provides for children with special educational needs, including socially disadvantaged children, to be educated in ordinary schools.

209. Lastly, since it has been established that the relevant legislation as applied in practice at the material time had a disproportionately prejudicial effect on the Roma community, the Court considers that the applicants as members of that community necessarily suffered the same discriminatory treatment. Accordingly, it does not need to examine their individual cases.

210. Consequently, there has been a violation in the instant case of Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1 as regards each of the applicants.

IV. APPLICATION OF ARTICLE 41 OF THE CONVENTION

211. Article 41 of the Convention provides:

> "If the Court finds that there has been a violation of the Convention or the Protocols thereto, and if the internal law of the High Contracting Party concerned allows only partial reparation to be made, the Court shall, if necessary, afford just satisfaction to the injured party."

A. Damage

212. The applicants did not allege any pecuniary damage.

213. They claimed 22,000 euros (EUR) each (making a total of EUR 396,000) for the non-pecuniary damage they had sustained, including educational, psychological and emotional harm and compensation for the anxiety, frustration and humiliation they had suffered as a result of their discriminatory placement in special schools. They stressed that the effects of this violation were serious and ongoing and affected all areas of their lives.

214. Further, referring to the judgments in *Broniowski v. Poland* ([GC], no. 31443/96, § 189, ECHR 2004-V) and *Hutten-Czapska v. Poland* ([GC], no. 35014/97, §§ 235-37, ECHR 2006-VIII), the applicants said that the violation of their rights "was neither prompted by an isolated incident nor attributable to the particular turn of events in [their] case, but was rather the consequence of administrative and regulatory conduct on the part of the authorities towards an identifiable class of citizens". Accordingly, in their submission, general measures had to be taken at the national level either to remove any hindrance to the implementation of the right of the numerous persons affected by the situation or to provide equivalent redress.

215. The Government submitted, with particular regard to the psychological and educational damage, that it related to the complaints under Article 3 of the Convention and Article 2 of Protocol No. 1 taken individually, which had been declared inadmissible by the Court in its decision of 1 March 2005. In their submission, there was therefore no causal link between any violation of the Convention and the alleged non-pecuniary damage. They further contended that the sum claimed by the applicants was excessive and that any finding of a violation would constitute sufficient just satisfaction.

216. The Court reiterates, firstly, that by virtue of Article 46 of the Convention the High Contracting Parties have undertaken to abide by the final judgments of the Court in any case to which they are parties, execution being supervised by the Committee of Ministers. It follows, *inter alia*, that a judgment in which the Court finds a breach imposes on the respondent State a legal obligation not just to pay those concerned the sums awarded by way of just satisfaction under Article 41, but also to select, subject to supervision

by the Committee of Ministers, the general and/or, if appropriate, individual measures to be adopted in their domestic legal order to put an end to the violation found by the Court and to redress so far as possible the effects. However, the respondent State remains free to choose the means by which it will discharge its legal obligation under Article 46 of the Convention, provided that such means are compatible with the conclusions set out in the Court's judgment (see *Broniowski*, cited above, § 192, and *Čonka v. Belgium*, no. 51564/99, § 89, ECHR 2002-I). The Court notes in this connection that the legislation impugned in the instant case has been repealed and that the Committee of Ministers recently made recommendations to the member States on the education of Roma/Gypsy children in Europe (see paragraphs 54-55 above). Consequently, it does not consider it appropriate to reserve the question.

217. The Court cannot speculate on what the outcome of the situation complained of by the applicants would have been had they not been placed in special schools. It is clear, however, that they have sustained non-pecuniary damage – in particular as a result of the humiliation and frustration caused by the indirect discrimination of which they were victims – for which the finding of a violation of the Convention does not afford sufficient redress. However, the amounts claimed by the applicants are excessive. Ruling on an equitable basis, the Court assesses the non-pecuniary damage sustained by each of the applicants at EUR 4,000.

B. Costs and expenses

218. The applicants have not amended the initial claim they made before the Chamber. The costs and expenses do not, therefore, include those incurred in the proceedings before the Grand Chamber.

The Court notes that the total amount claimed in the request signed by all the applicants' representatives was EUR 10,737, comprising EUR 2,550 (1,750 pounds sterling (GBP)) for the fees invoiced by Lord Lester of Herne Hill, QC, and EUR 8,187 for the costs incurred by Mr D. Strupek in the domestic proceedings and those before the Chamber. However, the bill of costs drawn up by Lord Lester, enclosed with the claim for just satisfaction, put his fees at GBP 11,750 (approximately EUR 17,000), including GBP 1,750 in value-added tax (VAT), for 45 hours of legal work. The applicants' other representatives, Mr J. Goldston and the European Centre for Roma Rights, have not sought the reimbursement of their costs.

219. The Government noted that, apart from a detailed list of the legal services he had provided, Mr Strupek had not submitted any invoice to prove that the alleged costs and expenses had in fact been paid to him by the applicants. They did not comment on the discrepancy between the claim for just satisfaction as formulated by the applicants and the fee note submitted by Lord Lester. The Government further pointed out that only part of the

application had been declared admissible and continued to be the subject of examination by the Court. They therefore submitted that the applicants should not be awarded more than a reasonable portion (not exceeding EUR 3,000) of the costs and expenses claimed.

220. The Court reiterates that legal costs are only recoverable to the extent that they relate to the violation that has been found (see *Beyeler v. Italy* (just satisfaction) [GC], no. 33202/96, § 27, 28 May 2002). In the present case, this is solely the violation of Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1. The Court notes that Lord Lester has submitted details of his professional fees, which were invoiced to the European Centre for Roma Rights. Mr Strupek has produced a breakdown of the 172 hours of legal services he rendered at an hourly rate of EUR 40, to which has to be added VAT at the rate of 19%.

Having regard to all the relevant factors and to Rule 60 § 2 of the Rules of Court, the Court makes a joint award to all the applicants of EUR 10,000 for costs and expenses.

C. Default interest

221. The Court considers it appropriate that the default interest should be based on the marginal lending rate of the European Central Bank, to which should be added three percentage points.

FOR THESE REASONS, THE COURT

1. *Dismisses* unanimously the Government's preliminary objection;

2. *Holds* by thirteen votes to four that there has been a violation of Article 14 taken in conjunction with Article 2 of Protocol No. 1;

3. *Holds* by thirteen votes to four
   (a) that the respondent State is to pay the applicants, within three months, the following amounts together with any tax that may be chargeable:
      (i) to each of the eighteen applicants EUR 4,000 (four thousand euros) in respect of non-pecuniary damage, to be converted into Czech korunas at the rate applicable on the date of payment;
      (ii) jointly, to all the applicants, EUR 10,000 (ten thousand euros) in respect of costs and expenses, to be converted into Czech korunas at the rate applicable on the date of payment;
   (b) that from the expiry of the above-mentioned three months until settlement simple interest shall be payable on the above amounts at a

rate equal to the marginal lending rate of the European Central Bank during the default period plus three percentage points;

4. *Dismisses* unanimously the remainder of the applicants' claim for just satisfaction.

Done in English and in French, and delivered at a public hearing in the Human Rights Building, Strasbourg, on 13 November 2007.

Michael O'Boyle	Nicolas Bratza
Deputy Registrar	President

In accordance with Article 45 § 2 of the Convention and Rule 74 § 2 of the Rules of Court, the following separate opinions are annexed to this judgment:

(a) dissenting opinion of Judge Zupančič;
(b) dissenting opinion of Judge Jungwiert;
(c) dissenting opinion of Judge Borrego Borrego;
(d) dissenting opinion of Judge Šikuta.

N.B.
M.O'B.

DISSENTING OPINION OF JUDGE ZUPANČIČ

I agree entirely with the comprehensive dissenting opinion of Judge Karel Jungwiert. I wish only to add the following.

As the majority explicitly, and implicitly elsewhere in the judgment, admitted in paragraphs 198 and 205, the Czech Republic is the only Contracting State which has in fact tackled the special-educational troubles of Roma children. It then borders on the absurd to find the Czech Republic in violation of anti-discrimination principles. In other words, this "violation" would never have happened had the respondent State approached the problem with benign neglect.

No amount of politically charged argumentation can hide the obvious fact that the Court in this case has been brought into play for ulterior purposes, which have little to do with the special education of Roma children in the Czech Republic.

The future will show what specific purpose this precedent will serve.

DISSENTING OPINION OF JUDGE JUNGWIERT

(Translation)

1. I strongly disagree with the majority's finding in the present case of a violation of Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1.

While I am able to agree to an extent with the formulation of the relevant principles under Article 14 in the judgment, I cannot accept the manner in which the majority have applied those principles in the instant case.

2. Before specifying all the matters with which I disagree, I would like to put this judgment into a more general perspective.

It represents a new development in the Court's case-law, as it set about evaluating and criticising a country's entire education system.

However authoritative the precedents cited at paragraphs 175 to 181 of the judgment may be, in practice they have very little in common with the instant case other perhaps than the Roma origin of the applicants in most of the cases (for instance in *Nachova and Others v. Bulgaria* ([GC], nos. 43577/98 and 43579/98, ECHR 2005-VII) and *Buckley v. the United Kingdom* (25 September 1996, *Reports of Judgments and Decisions* 1996-IV), among others).

3. In my opinion for the principles to be applied correctly requires, firstly, a sound knowledge of the facts and also of the circumstances of the case, primarily the historical context and the situation obtaining in other European countries.

As regards the historical context, the data presented in the judgment (paragraphs 12 to 14) provides information that is inaccurate, inadequate and of a very general nature.

The facts as presented in the judgment do not permit the slightest comparison to be made between Roma communities in Europe with respect, *inter alia*, to such matters as demographic evolution or levels of school attendance.

4. I will endeavour to supply some facts and figures to make up for this lack of information.

I should perhaps begin with the awful truth that, so far as the current territory of the Czech Republic is concerned, we are not talking about an "attempted" extermination of the Roma by the Nazis (see paragraph 13) but about their almost total annihilation. Of the nearly 7,000 Roma who were living in the country at the start of the war, scarcely 600 survived[1].

The situation is thus very different from that in other countries: the Czech Roma, almost all of whom were exterminated, were replaced from 1945 onwards by successive waves of new arrivals in their tens of

1. A. Fraser (M. Miklušáková), *The Gypsies*, Prague, 2002, p. 275.

thousands, mainly from Slovakia, Hungary and Romania. The vast majority of this new population were not only illiterate and completely uprooted, they did not speak the Czech language. The same is not true of other countries on whose territory the Roma have – in principle – been living for decades and even centuries and have attained a degree of familiarity with the environment and language.

To complete and close this incursion into the historical and demographic context, I believe that a further comparison, which helps to explain the scale and complexity of the problem, would be useful.

An estimation of the numbers of Roma living in certain European countries has given the following minimum and maximum figures (which of course remain approximate):

	min	max	population (millions)
Germany	110,000	140,000	80
France	300,000	400,000	60
Italy	90,000	120,000	60
United Kingdom	100,000	150,000	60
Poland	35,000	45,000	38
Portugal	40,000	50,000	10
Belgium	25,000	35,000	10
Czech Republic	200,000	250,000	10[1, 2]

These figures provide an indication of the scale of the problem facing the Czech Republic in the education field.

5. An important question that needs to be asked is what is the position in Europe and what standards or minimum requirements have to be met?

The question of the schooling and education of Roma children has for almost thirty years been the subject of analysis and, on the initiative of the Council of Europe, proposals by the European Commission and other institutions.

The judgment contains more than twenty-five pages (paragraphs 54-107) of citations from Council of Europe texts, Community law and practice, United Nations materials and other sources.

However, the majority of the recommendations, reports and other documents it cites are relatively vague, largely theoretical and, most important of all, were published *after* the period with which the instant case is concerned (1996-99 – see paragraph 19 of the judgment).

1. J.-P. Liégeois, *Roma in Europe*, Council of Europe Publishing, 2008, p. 31.
2. Nevertheless, in a census taken of the population of the Czech Republic on 3 March 1991, only 32,903 people claimed to be members of the Roma (*Statistical Yearbook of the Czech Republic 1993*, Prague, 1993, p. 142).

I should therefore like to quote the author mentioned above, whose opinion I agree with. In his book *Roma in Europe*, Jean-Pierre Liégeois stresses:

> "We must avoid over-use of vague terms ('emancipation', 'autonomy', 'integration', 'inclusion', etc.) which mask reality, put things in abstract terms and have no functional value ...
>
> ... officials often formulate complex questions and demand immediate answers, but such an approach leads only to empty promises or knee-jerk responses that assuage the electorate, or the liberal conscience, in the short term."[1]

In this connection, the sole resolution on the subject that is concrete and accurate – a major founding text of perhaps historic value – is the *Resolution of the Council and the Ministers of Education meeting within the Council of 22 May 1989 on school provision for gypsy and traveller children*[2].

6. Regrettably and to my great surprise, this crucial document is not among the sources cited in the Grand Chamber's judgment.

I should therefore like to quote some of the passages from this resolution:

> "THE COUNCIL AND THE MINISTERS FOR EDUCATION, MEETING WITHIN THE COUNCIL,
>
> ...
>
> Considering that the present situation is disturbing in general, and in particular with regard to schooling, *that only 30 to 40% of gypsy or traveller children attend school with any regularity, that half of them have never been to school* [emphasis added], that a very small percentage attend secondary school and beyond, that the level of educational skills, especially reading and writing, bears little relationship to the presumed length of schooling, and that the illiteracy rate among adults is frequently over 50% and in some places 80% or more,
>
> Considering that over [500,000] children are involved and that this number must constantly be revised upwards on account of the high proportion of young people in gypsy and traveller communities, half of whom are under 16 years of age,
>
> Considering that schooling, in particular by providing the means of adapting to a changing environment and achieving personal and professional autonomy, is a key factor in the cultural, social and economic future of gypsy and traveller communities, that parents are aware of this fact and their desire for schooling for their children is increasing,
>
> ..."

7. How astonishing! In the twelve countries that formed the European Union in 1989 it is acknowledged that between 250,000 and 300,000 children had never attended school.

It is an inescapable fact that the trend since then has tended to confirm this diagnosis. There is nothing to suggest an improvement in the situation

1. Op. cit., pp. 274-75.
2. *Official Journal of the European Communities* C 153 of 21 June 1989, pp. 3 and 4.

in this sphere, especially with the enlargement of the European Union. The population of the Roma community is estimated (by the same source) at 400,000 in Slovakia, 600,000 in Hungary, 750,000 in Bulgaria and 2,100,000 in Romania. In total, there are more than 4,000,000 Roma children in Europe, *approximately 2,000,000 of whom will, in all probability, never attend school in their lifetimes*.

8. I am determined to bring this terrible and largely concealed truth out into the open, as I consider it shameful that such a situation should exist in Europe in the twenty-first century. What has caused this alarming silence?

9. Statistical data on the former Czechoslovakia indicates that in 1960 some 30% of Roma had never attended school. This figure has fallen and was only 10% in 1970.

A numerical comparison of the Czech Republic data on the number of children born and the number attending school shows school-attendance levels attaining almost 100% twenty years later[1].

10. Nevertheless, in this sorry state of affairs, some people consider it necessary to focus criticism on the Czech Republic, one of the few countries in Europe where virtually all children, including Roma children, attend school.

Further, for the school year 1989/90 there were 7,957 teachers for 58,889 pupils and for the school year 1992/93 8,325 teachers for 48,394 pupils[2], that is to say *one teacher for every seven pupils*.

11. For years, European States have produced an often strange mix of achievements and projects which combine successes with failures. The problem concerns the education systems of many countries, not just the special schools[3].

The Czech Republic has chosen to develop a system that was introduced back in the 1920s (see paragraph 15 of the judgment), and to improve it while providing the following procedural safeguards for placements in special schools (see paragraphs 20-21):

– parental consent;
– recommendations of the educational psychology centres;
– a right of appeal;
– an opportunity to transfer back to an ordinary primary school from a special school.

1. *Statistical Yearbook of the Czech Republic 1993*, Prague, 1993, pp. 88 and 302.
2. Op. cit., Prague, 1993, p. 307.
3. In the public debate currently under way in France, it has been noted that "40% of pupils entering the first form do not have a basic education. At the end of the fourth form, 150,000 young people leave the system without mastering any subject (Editorial in *Le Figaro*, 4 September 2007). The same newspaper related in an article on 7 September 2007 that "according to the Education Board, 40% of primary-school pupils – 300,000 children in all – leave each year with severe failings or in great difficulty".

In a way, the Czech Republic has thereby established an education system that is inegalitarian. However, this inegalitarianism has a positive aim: to get children to attend school in order to have a chance to succeed through positive discrimination in favour of a disadvantaged population.

Despite this, the majority feel compelled to say that it is not satisfied that the difference in treatment between Roma children and non-Roma children pursued the legitimate aim of adapting the education system to the needs of the former and that there existed a reasonable relationship of proportionality between the means used and the aim pursued (see paragraph 208 of the judgment).

No one has conveyed the following opinion better than Arthur Schopenhauer, who was the first to express it:

> "This peculiar satisfaction in words contributes more than anything else to the perpetuation of errors. For, relying on the words and phrases received from his predecessors, each one confidently passes over obscurities and problems."[1]

12. I fully accept that, while much has been done to help certain categories of pupil acquire a basic knowledge, the situation regarding the education of Roma children in the Czech Republic is far from ideal and leaves room for improvement.

Nevertheless, a closer examination of the situation leads me to ask but one question: which country in Europe has done more, or indeed as much, in this sphere? To require more, to require an immediate and infallible solution, is to my mind asking too much, perhaps even the impossible, at least as far as the relevant period, which began just a few years after the fall of the communist regime, is concerned.

13. I consider it important both in the analyses and in all the assessments and conclusions for a distinction to be drawn between what is desirable and what one might term realistic, possible or simply feasible.

This rule should also apply to the sphere of law generally and in the instant case *in concreto*. According to the applicants, no measures were taken to enable Roma children to overcome their cultural and linguistic disadvantages in the tests (see paragraph 40).

However, this is but another excellent illustration of their lack of realism. It is, in my view, illusory to think that a situation that has obtained for decades, even centuries, can be changed from one day to the next by a few statutory provisions – unless the idea is to dispense with the tests altogether or to make them an irrelevance.

1. A. Schopenhauer, *The World as Will and Representation (Volume II)*, this translation by E.F.J. Payne, Dover, New York, 1966, p. 145.

14. Nor should it be forgotten that every school system entails not only education but also a process of assessment, differentiation, competition and selection. This fact of life is currently the subject of a wide debate on the reform of the French education system. The President of the French Republic has in a letter of 4 September 2007 to the teaching professions introduced the notion of a selection procedure for entry to lower and higher secondary education:

> "No one should go into the first form unless he has shown that he is able to follow lower secondary-school education. No one should enter the fifth form unless he has demonstrated his ability to follow an upper secondary-school education ..."[1]

15. I find the conclusions reached by the majority (see paragraphs 205-10 of the judgment) somewhat contradictory. They note that difficulties exist in the education of Roma children not just in the Czech Republic but in other European States as well.

To describe *the total absence of a school education for half of Roma children* (see points 6 and 7 above) in a number of States as "difficulties" is an extraordinary euphemism. To explain this illogical approach, the majority note with satisfaction that, unlike some countries, the Czech Republic has chosen to tackle the problem (see paragraph 205 of the judgment).

The implication is that it is probably preferable and less risky to do nothing and to leave things as they are elsewhere, in other words to make no effort to confront the problems with which a large section of the Roma community is faced.

16. In my view, such abstract, theoretical reasoning renders the majority's conclusions wholly unacceptable.

1. *Le Figaro*, 5 September 2007, p. 8.

DISSENTING OPINION OF JUDGE BORREGO BORREGO

(Translation)

1. I am somewhat saddened by the judgment in the present case.

2. In 2002 Judge Bonello said that he found it "*particularly disturbing that the Court, in over fifty years of pertinacious judicial scrutiny, has not, to date, found one single instance of violation of the right [guaranteed by Article 2 or Article 3] induced by the race ... of the victim*" (see *Anguelova v. Bulgaria*, no. 38361/97, ECHR 2002-IV, dissenting opinion). While I agree with Judge Bonello's criticism that the absence, five years ago, of a single case of racial discrimination concerning the core Convention rights was disturbing, the judgment in the present case has now got the Court off to a flying start. The Grand Chamber has in this judgment behaved like a Formula One car, hurtling at high speed into the new and difficult terrain of education and, in so doing, has inevitably strayed far from the line normally followed by the Court.

3. In my opinion, the Second Section's judgment of 17 February 2006 in the present case was sound and wise and a good example of the Court's case-law. Regrettably, I cannot say the same of the Grand Chamber judgment. (The Chamber judgment is seventeen pages long, the Grand Chamber's, seventy-eight pages, which just goes to show that the length of a judgment is no measure of its sagacity.)

I will focus on two points only.

4. The approach:

After noting the concerns of various organisations about the realities of the Roma's situation, the Chamber stated: "*The Court points out, however, that its role is different from that of the aforementioned bodies and that, like the Czech Constitutional Court, it is not its task to assess the overall social context. Its sole task in the instant case is to examine the individual applications* ..." (§ 45).

5. Yet the Grand Chamber does the exact opposite. In contradiction with the role which all judicial bodies assume, the entire judgment is devoted to assessing the overall social context – from the first page ("historical background") to the last paragraph, including a review of the "Council of Europe sources" (fourteen pages), "Community law and practice" (five pages), United Nations materials (seven pages) and "other sources" (three pages, which, curiously, with the exception of the reference to the European Monitoring Centre, are taken exclusively from the Anglo-American system, that is, the House of Lords and the United States Supreme Court). Thus, to cite but one example, the Court states at the start of paragraph 182: "*The Court notes that as a result of their turbulent history and constant uprooting the Roma have become a specific type of*

disadvantaged and vulnerable minority." Is it the Court's role to be doing this?

6. Following this same line, which to my mind is not one appropriate for a court, the Grand Chamber stated in paragraph 209 after finding a discriminatory difference in treatment between Roma and non-Roma children: "*... since it has been established that the relevant legislation ... had a disproportionately prejudicial effect on the Roma community, the Court considers that the applicants as members of that community necessarily suffered the same discriminatory treatment. Accordingly, it does not need to examine their individual cases*."

7. This, then, is the Court's new role: to become a second ECRI (European Commission against Racism and Intolerance) and dispense with an examination of the individual applications, for example the situation of applicants nos. 9, 10, 11, 16 and 17, in complete contrast to the procedure followed by the Chamber in paragraphs 49 and 50 of its judgment.

8. At the hearing on 17 January 2007 the representatives (from London and New York) of the applicant children (from Ostrava) confined themselves in their oral submissions to an account of the discrimination which they say the Roma are subjected to in Europe.

9. None of the applicant children or the parents of those applicants who were still minors were present at the hearing. The individual circumstances of the applicants and their parents were forgotten. Since Rule 36 § 4 of the Rules of Court states that representatives act on behalf of the applicants, I put a very simple question to the two British and American representatives – had they met the minor applicants and/or their parents? And had they been to Ostrava? I did not receive an answer.

10. I still have the same impression: the hearing room of the Grand Chamber had become an ivory tower, divorced from the life and problems of the minor applicants and their parents, a place where those in attendance could display their superiority over the absentees.

11. The Roma parents and the education of their children:

On the subject of the children's education, the Chamber judgment states: "*[T]he Court notes that it was the parents' responsibility, as part of their natural duty to ensure that their children receive an education ...*" (at § 51). After an analysis of the facts the Chamber went on to hold that there had been no violation of Article 14 taken in conjunction with Article 2 of Protocol No. 1.

12. I consider the stance taken by the Grand Chamber with respect to the parents of the minor applicants to be extremely preoccupying and, since it concerned all the Roma parents, one that is quite frankly unacceptable. It represents a major deviation from the norm and reflects a sentiment of superiority that ought to be inconceivable in a court of human rights and strikes at the human dignity of the Roma parents.

13. The Grand Chamber begins by calling into question the capacity of Roma parents to perform their parental duty. The judgment states "*the Court is not satisfied that the parents of the Roma children, who were members of a disadvantaged community and often poorly educated, were capable of weighing up all the aspects of the situation and the consequences of giving their consent*" (at paragraph 203). Such assertions are unduly harsh, superfluous and, above all, unwarranted.

14. The Grand Chamber then proceeds to compound its negative appraisal of the Roma parents: "*[T]he Grand Chamber considers that, even assuming the conditions [for an informed consent] were satisfied, no waiver of the right not to be subjected to racial discrimination can be accepted, as it would be counter to an important public interest ...*" (paragraph 204).

I find this particularly disquieting. The Grand Chamber asserts that *all* parents of Roma children, "even assuming" them to be capable of giving informed consent, are unable to choose their children's school. Such a view can lead to the awful experiences with which we are only too familiar of children being "abducted" from their parents when the latter belong to a particular social group because certain "well intentioned" people feel constrained to impose their conception of life on all. An example of the sad human tradition of fighting racism through racism.

15. How cynical: the parents of the applicant minors are not qualified to bring up their children, even though they are qualified to sign an authority in favour of British and North American representatives whom they do not even know!

16. Clearly, I agree with the dissenting opinions expressed by my colleagues, whose views I wholly subscribe to.

17. Any departure by the European Court from its judicial role will lead it into a state of confusion and that can only have negative consequences for Europe. The deviation from the norm implicit in this judgment is substantial and the fact that all Roma parents are deemed unfit to educate their children is, in my view, insulting. I therefore take my place alongside the victims of that insult and declare: "*Jsem český Rom*" (I am a Czech Rom).

DISSENTING OPINION OF JUDGE ŠIKUTA

To my great regret, I cannot share the opinion of the majority, which has found that in the instant case there has been a violation of Article 14 of the Convention taken in conjunction with Article 2 of Protocol No. 1. I wish to briefly explain my main reasons for not concurring.

I do agree that, in general terms, the situation of Roma in central and eastern Europe is very complex, not easy and simple, and requires efforts from all the key players involved, in particular the governments. This situation, however, has developed over hundreds of years and been influenced by various historical, political, economic, cultural and other factors. Governments have to play a proactive role in this process and are obliged therefore to adopt relevant measures and projects, with a view to reaching a satisfactory situation. The Roma issue should be seen from that perspective, as a living and continuously evolving issue.

The Court's case-law[1] clearly establishes that a difference in treatment of "persons in otherwise similar situations" does not constitute discrimination contrary to Article 14 where it has an objective and reasonable justification; that is, where it can be shown that it pursues "a legitimate aim" or there is "a reasonable relationship of proportionality" between the means employed and the aim sought to be realised. The validity of the justification must be assessed by reference to the aim and effects of the measures under consideration, regard being had to the principles that apply in democratic societies.

In assessing whether and to what extent differences in "otherwise similar situations" justify different treatment, the Court has allowed the Contracting States a certain margin of appreciation[2]. The fact that the Government chose to fulfil the task of providing all children with compulsory education through the establishment of special schools was fully within the scope of their margin of appreciation.

The special schools were introduced for children with special learning difficulties and special learning needs as a way of fulfilling the government's task of securing to all children a basic education, which was fully compulsory. The introduction of special schools should be seen as another step in the above-mentioned process, whose ultimate aim was to reach a satisfactory, or at least an improved, educational situation. The introduction of special schooling, though not a perfect solution, should be seen as positive action on the part of the State to help children with special educational needs to overcome their different level of preparedness to attend an ordinary school and to follow the ordinary curriculum.

---

1. See, for example, *Willis v. the United Kingdom*, no. 36042/97, § 48, ECHR 2002-IV.
2. *Gaygusuz v. Austria*, 16 September 1996, § 42, *Reports of Judgments and Decisions* 1996-IV.

It can therefore be seen that, in general, there existed objective and reasonable justification for treating children placed in special schools differently from those placed in ordinary schools, on the basis of objective results in the psychological tests, administered by qualified professionals, who were able to select suitable methods. I do agree that the treatment of the children attending ordinary schools on the one hand and of those attending special schools on the other was different. But, at the same time, both types of school, ordinary and special, were accessible and also *de facto* attended, at the material time, by both categories of children – Roma and non-Roma.

The only decisive criterion, therefore, for determining which child would be recommended to which type of school was the outcome of the psychological test, a test designed by experts, qualified professionals, whose professionalism none of the parties disputed. The difference in treatment of the children attending either type of school (ordinary or special) was simply determined by the different level of intellectual capacity of the children concerned and by their different level of preparedness and readiness to successfully follow all the requirements imposed by the existing school system represented by the ordinary schools.

Therefore, isolated statistical evidence, especially when from a particular region of the country, does not by itself enable one to conclude that the placement of the applicants in special schools was the result of racial prejudice, because, by way of example, special schools were attended by both Roma and, at the same time, non-Roma children. Statistics are not by themselves sufficient to disclose a practice which could be classified as discriminatory (see *Hugh Jordan v. the United Kingdom*, no. 24746/94, § 154, 4 May 2001). The fact that ordinary schools were attended by Roma children as well proves only that there existed other selection criteria than race or ethnic origin. Also, the fact that some of the applicants were transferred to ordinary schools proves that the situation was not irreversible.

It should also be noted that the parents of the children placed in the special schools agreed to their placement and some of them actually asked the competent authorities to place their children there. Such positive action on the part of the applicants' parents only serves to show that they were sufficiently and adequately informed about the existence of such schools and about their role in the schooling system. I have no doubt that, in general, a professional will be more competent to take a decision on the education of a minor child than its parents. Be that as it may, had there been any doubt that a decision of the parents to place their children in a special school was not "in the best interest of the child", the Child Care Department of the Ostrava Welfare Office, which had the power and duty to bring such cases to the Juvenile Court to assess the best interest of the child, could have intervened. But that was not the case, as neither the Welfare Office, nor the

applicants' parents, turned to the Juvenile Court, which was competent to deal with this issue.

Having said all this, I have come to the conclusion that the *difference in treatment was* between children attending ordinary schools on the one hand and children attending special schools on the other, regardless of whether they were of Roma or non-Roma origin. Such difference in treatment had an objective and reasonable justification and pursued a legitimate aim – providing all children with compulsory education.

However, I have also come to the conclusion that *there was no difference in treatment* between children attending the same special school, which children (Roma and non-Roma) are to be considered as "*persons in otherwise similar situations*". I found no legal or factual ground in the instant case for the conclusion that Roma children attending special school were treated less favourably than non-Roma children attending the same special school. It is not acceptable to conclude that only Roma children attending special schools were discriminated against in comparison to non-Roma children (or all children) attending ordinary schools, since these two groups of children are not "persons in [an] otherwise similar situation". It is also not acceptable to conclude this because both "groups" had the same conditions of access and attended both types of school: non-Roma children were attending special schools and, at the same time, Roma children were attending ordinary schools solely on the basis of the results achieved by passing the psychological test, which test was the same for all children regardless of their race.

Based on the above, I do not share the opinion that the applicants, because of their membership of the Roma community, were subjected to discriminatory treatment by their placement in special schools.

ANNEX

LIST OF THE APPLICANTS

1. Ms D.H. is a Czech national of Roma origin who was born in 1989 and lives in Ostrava-Přívoz;
2. Ms S.H. is a Czech national of Roma origin who was born in 1991 and lives in Ostrava-Přívoz;
3. Mr L.B. is a Czech national of Roma origin who was born in 1985 and lives in Ostrava-Fifejdy;
4. Mr M.P. is a Czech national of Roma origin who was born in 1991 and lives in Ostrava-Přívoz;
5. Mr J.M. is a Czech national of Roma origin who was born in 1988 and lives in Ostrava-Radvanice;
6. Ms N.P. is a Czech national of Roma origin who was born in 1989 and lives in Ostrava;
7. Ms D.B. is a Czech national of Roma origin who was born in 1988 and lives in Ostrava-Heřmanice;
8. Ms A.B. is a Czech national of Roma origin who was born in 1989 and lives in Ostrava-Heřmanice;
9. Mr R.S. is a Czech national of Roma origin who was born in 1985 and lives in Ostrava-Kunčičky;
10. Ms K.R. is a Czech national of Roma origin who was born in 1989 and lives in Ostrava-Mariánské Hory;
11. Ms Z.V. is a Czech national of Roma origin who was born in 1990 and lives in Ostrava-Hrušov;

14. Ms M.P. is a Czech national of Roma origin who was born in 1990 and lives in Ostrava-Hrušov;
15. Ms D.M. is a Czech national of Roma origin who was born in 1991 and lives in Ostrava-Hrušov;
16. Ms M.B. is a Czech national of Roma origin who was born in 1991 and lives in Ostrava 1;
17. Ms K.D. is a Czech national of Roma origin who was born in 1991 and lives in Ostrava-Hrušov;
18. Ms V.Š. is a Czech national of Roma origin who was born in 1990 and lives in Ostrava-Vítkovice.

United Nations CRPD/C/9/D/1/2010

Convention on the Rights of Persons with Disabilities

Distr.: General
23 April 2013

Original: English

Advance unedited version

Committee on the Rights of Persons with Disabilities

Communication No. 1/2010

Views adopted by the Committee at its 9th session, 15 to 19 April 2013

Submitted by:	Szilvia Nyusti and Péter Takács (represented by counsel, Tamás Fazekas, Hungarian Helsinki Committee)
Alleged victims:	The authors
State party:	Hungary
Date of communication:	11 March 2010 (initial submission)
Document references:	Special Rapporteur's rule 70 decision, transmitted to the State party on 20 September 2010 (not issued in document form)
Date of adoption of Views:	16 April 2013
Subject matter:	Failure by the State party's authorities to eliminate discrimination on the ground of disability by a private credit institution and to ensure that persons with visual impairments have an unimpeded access to the services provided by the ATMs on the equal basis with the other clients
Substantive issues:	Equal and effective legal protection against discrimination on the ground of disability, reasonable accommodation; accessibility of information; right to control one's own financial affairs
Procedural issues:	Level of substantiation of a claim; *ratione temporis*
Articles of the Convention:	5, paragraphs 2 and 3; 9 and 12, paragraph 5
Articles of the Optional Protocol:	2 (e) and (f)
	[Annex]

Views of the Committee on the Rights of Persons with Disabilities under article 5 of the Optional Protocol to the Convention on the Rights of Persons with Disabilities (ninth session)

concerning

Communication No. 1/2010*

Submitted by:	Szilvia Nyusti and Péter Takács (represented by counsel, Tamás Fazekas, Hungarian Helsinki Committee)
Alleged victims:	The authors
State party:	Hungary
Date of communication:	11 March 2010 (initial submission)

The Committee on the Rights of Persons with Disabilities, established under article 34 of the Convention on the Rights of Persons with Disabilities,

Meeting on 16 April 2013,

Having concluded its consideration of communication No. 1/2010, submitted to the Committee on the Rights of Persons with Disabilities by Szilvia Nyusti and Péter Takács under the Optional Protocol to the Convention on the Rights of Persons with Disabilities,

Having taken into account all written information made available to it by the authors of the communication, and the State party,

Adopts the following:

Views under article 5 of the Optional Protocol

1. The authors of the communication are Szilvia Nyusti, a Hungarian national born on 8 May 1979 (the first author), and Péter Takács, a Hungarian national born on 31 May 1977 (the second author). The authors claim to be victims of a violation by Hungary of their rights under article 5, paragraphs 2 and 3; article 9 and article 12, paragraph 5, of the Convention on the Rights for Persons with Disabilities (the Convention). The Optional Protocol to the Convention entered into force for the State party on 3 May 2008. The authors are represented by counsel, Tamás Fazekas, Hungarian Helsinki Committee.

* The following members of the Committee participated in the examination of the present communication: Mr. Mohammed Al-Tarawneh, Mr. Munthian Buntan, Ms. Maria Soledad Cisternas Reyes, Ms. Theresia Degener, Mr. Hyung Shik Kim, Mr. Lofti ben Lallahom, Mr. Stig Langvald, Ms. Edah Wangechi Maina, Mr. Ronald McCallum, Ms. Diane Mulligan, Mr. Martin Babu Mwesigwa, Ms. Safak Pavey, Ms. Ana Pelaez Narvaez, Ms. Silvia Judith Quan-Chang, Mr. Carlos Rios Espinosa, Mr. Damjan Tatic and Mr. Germán Xavier Torres Correa.
Pursuant to rule 60 of the Committee's rules of procedure, Committee member Mr. László Gábor Lovászy, did not participate in the adoption of the present Views.

Factual background

2.1 Both authors are persons with severe visual impairments. Independently from each other they concluded contracts[1] for private current account services with the OTP Bank Zrt. credit institution (the OTP), according to which they are entitled to use banking cards. Nevertheless, the authors are unable to use automatic teller machines (the ATMs) without assistance, as the keyboards of the ATMs operated by the OTP are not marked with Braille fonts, and the ATMs do not provide audible instructions and voice assistance for banking card operations. The authors pay annual fees for banking card services and transactions equal to those fees paid by other clients. However, they are unable to use the services provided by these ATMs on the same level as sighted clients and, thus, receive lesser services for the same fees.

2.2 On 11 April 2005, the authors' legal representative lodged a complaint with the OTP, requesting changes to be made to the ATMs in the proximity of his clients' homes.[2] The claim was based on Act CXXV of 2003 on Equal Treatment and the Promotion of Equal Opportunities (the Equal Treatment Act), and asserted that after the entry into force of this Act, the OTP was obliged to comply with the requirement of equal treatment, and to provide services of equal quality to its clients. The complaint was rejected by the OTP on 16 June 2005.

2.3 On 5 August 2005, the authors brought a civil action under articles 76 and 84 of Act IV of the 1959 Civil Code (the Civil Code) to the Metropolitan Court. In their action, they asked the court to recognize that the OTP violated their personal rights, namely the right to equal treatment. They explained that the OTP directly discriminated against them, because due to their disability, they receive services of a lesser quality in comparison to other clients of the OTP, despite the fact that they paid exactly the same fees. The authors claimed that, according to article 84(1)(d) of the Civil Code, the OTP was obliged to bring this infringement to an end by retrofitting all the ATMs operated by the OTP. In case this relief could not be granted, the authors requested the Metropolitan Court to order the retrofitting of the ATMs operated by the OTP throughout the country on an equal basis and on the basis of balanced territorial distribution.[3] The authors sought non-pecuniary damages of 300'000 Hungarian forints each pursuant to article 84(1)(e) of the Civil Code, due to harm suffered to their human dignity.

2.4 In their initial civil action, the authors referred to articles 8 and 30(1)(b) of the Equal Treatment Act, to Act XXVI of 1998 on Securing the Rights and Equal Opportunities of Persons with Disabilities (the Disabilities Act), and to the provisions regarding accessibility of Act LXXVIII of 1997 on the Formation and Protection of Built Environment (the Built Environment Act). According to the Built Environment Act, the ATM is a part of a building, and therefore the accessibility requirements apply to it.

2.5 On 3 October 2005, the OTP requested that the authors' civil action be dismissed. In its opinion, the extra services demanded by the authors would constitute positive

[1] The contract between the first author and the OTP was concluded on 1 November 1996 and was renewed on 1 January 2006. The second author concluded the contract with the OTP on 23 December 2003.

[2] The complaint of 11 April 2005 reads in relevant part as follows: "Please kindly inform me in writing which ATMs of the OTP, in Budapest near my clients' home address, are suitable for their unrestricted use. If you do not have such ATMs, please retrofit them as necessary within 15 days and kindly inform me about this".

[3] The civil action of 5 August 2005 reads in relevant part as follows: "We request that the […] Court obliges [the OTP] […] to cease the situation of infringement and to retrofit a part of its ATMs to ensure their accessibility".

discrimination, which could only be prescribed by law. Consequently, a court could not impose an obligation on the OTP to undertake such measures. The OTP further claimed that it was primarily a governmental obligation to ensure unimpeded access to buildings for persons with disabilities and that the ATMs operated by the OTP were not "buildings" from the standpoint of the Built Environment Act. For these reasons, the accessibility requirements of the Built Environment Act did not apply to the OTP. The OTP also claimed that since both contracts were concluded by the authors prior to the entry into force of the Equal Treatment Act, the latter was inapplicable to the legal relationship in question. Moreover, according to article 5(b) of the Equal Treatment Act, the ATMs did not fall within the definition of "places open to the public for provision of services and products".

2.6 The OTP further explained that, by providing banking card services, it did not discriminate against the authors either directly or indirectly, since the OTP's relations with them within the framework of the execution of the contracts did not constitute an "active behaviour" for the purposes of the Equal Treatment Act. With reference to article 7(2) of the Equal Treatment Act, the OTP also argued that the adjustment of ATMs would create increased banking security risks for visually impaired clients "due to their special situation". Furthermore, such adjustment would impose an unexpected financial burden on the OTP. The OTP also asserted that some of the ATMs could not be retrofitted. Finally, the OTP claimed that, by imposing on it an obligation to provide the services requested by the authors, the court would interfere into the contractual relationships between the parties and thus violate the OTP's constitutional right to freedom of contract.

2.7 On 14 May 2007, the Metropolitan Court ruled that the OTP has violated the authors' right to human dignity and to equal treatment. The Court concluded that the OTP's behaviour resulted in direct discrimination, because due to the authors' visual impairments they could not use the services provided by the ATMs to the same extent as the other clients, despite paying the same fees.[4] The Court held that the services requested by the authors could not be considered as positive discrimination and emphasised the difference between the right to equality and equality of chances. Whereas the right to equality imposes on service providers an obligation to provide equal services for equal fees, it does not necessarily mean that the services have to be provided to every client in the identical manner. Rather, a different way of providing services is required to ensure that clients with visual impairments can access the ATMs on their own and at any time, just like any other clients who pay the same fees.

2.8 The Metropolitan Court held that the OTP had to ensure that its clients with visual impairment could access information necessary for using the ATMs. It found, therefore, that the OTP was responsible for not retrofitting its ATMs since 27 January 2004, when the Equal Treatment Act entered into force. The Court ordered the OTP to retrofit within 120 days at least one of its ATMs in the capital towns of each county, one in each district of Budapest, and four further ATMs in the districts where the authors reside. The Court took into account that the retrofitting of the ATMs could be carried out alongside the annual maintenance services, and that the costs incurred must be calculated per ATM type, and not per ATM. The Court also took into account that approximately one-third of the 1800 ATMs in question could not be retrofitted, and that the purchase of replacement ATMs would constitute a significant financial burden for the OTP.

2.9 In response to the arguments put forward by the OTP, the Metropolitan Court held that article 5 of the Equal Treatment Act extended the scope of its application to all civil

[4] Reference is made to article 8(g) of the Equal Treatment Act, according to which "a provision constitutes direct discrimination if it results in less favourable treatment of a person or a group than comparable persons or group solely because of their perceived or actual disability".

relations, irrespective of whether the parties thereto were public or civil sector operators, where services were provided to numerous clients. The Court also established that even contract offers made prior to the entry into force of the Equal Treatment Act would be covered by its provisions, since the aim of the Act was to make the principle of non-discrimination applicable to any relationship where a larger number of clients could be involved.

2.10 The Metropolitan Court also granted pecuniary damages in the amount of 200'000 Hungarian forints to each of the authors. In establishing the amount of pecuniary damages, it took into consideration, *inter alia*, that the OTP had recently purchased new ATMs that could not be retrofitted and had not taken any measures to facilitate the authors' access to the services provided by the ATMs, even after the entry into force of the Equal Treatment Act. Moreover, the OTP proposed to terminate the authors' contracts, referring the increased security risks.

2.11 On 2 July 2007, the authors appealed against the first instance decision to the Metropolitan Court of Appeal, requesting that all ATMs be made accessible,[5] and that the amount of compensation be raised to 300'000 Hungarian forints. The authors asserted that their activities should not be limited only to those cities where the ATMs were to be made accessible further to the decision of the Metropolitan Court, as they were entitled to freedom of movement and the right to choose their place of residence. The aim of the litigation was to put an end to the discrimination fully, and not only partially. Therefore, in the authors' opinion, the 120 days set out by the Metropolitan Court would be insufficient to make all the ATMs accessible. In their view, the objective could be achieved if a gradual course of action were taken, with a series of appropriate deadlines. Finally, the authors argued that the cost of retrofitting amounts to only 0.12% of the yearly net income of the OTP in 2006, which may not be considered as a disproportionate burden.

2.12 The OTP submitted its appeal against the first instance decision on 13 July 2007, reiterating its request that the authors' civil action be dismissed. The OTP emphasized that the Metropolitan Court did not specifically indicate the legal provision that would require it to retrofit the ATMs after 27 January 2004 and that would result in a violation of human rights, should the OTP fail to comply with this obligation. The number and location of the ATMs was determined in a "broad spectrum" that could not be justified and could not be identified as an essential need of the authors, being residents of Budapest. The OTP further argued that the retrofitting would "motivate blind or visually impaired persons to use the ATMs without help, which would endanger not only the security of property but also personal safety of blind or visually impaired clients of the OTP". The OTP also denied the allegations made by the authors that it had threatened to close down their accounts and that it had purchased new ATMs that could not be retrofitted. The OTP also claimed that the retrofitting of the ATMs would infringe upon the freedom of contract, as intervention into contractual legal relationships was possible solely on the basis of expressed and clear authorization by a legal statute. As to the authors' claim for pecuniary damages, the OTP argued that the fact that blind or visually impaired persons had to be assisted in using the ATMs did not infringe upon their human dignity. Therefore, in the absence of any specific harm, the authors' claim for pecuniary damages was groundless.

2.13 On 10 January 2008, the Metropolitan Court of Appeal rejected the authors' appeal. It held that the Metropolitan Court was right in concluding that the provisions of the

[5] The appeal of 2 July 2007 against the judgment of the Metropolitan Court reads in relevant part as follows: "We request the […] Metropolitan Court of Appeal to require [the OTP] […] to retrofit all of it ATMs into accessible ATMs (that is, exceeding the level defined in the judgment of the first instance [court] in a manner defined in [that] judgment".

Disabilities Act were inapplicable to the legal dispute in question, because the provisions of the said Act applied to the removal of barriers with regard to the built environment, whereas the authors' civil action was related to the baking card services provided by the ATMs and, thus was outside of the scope of the Disabilities Act. Moreover, the Act in question imposed an obligation on the State to enforce the rights of persons with disabilities but made it dependent on the "strength of the national economy". The Metropolitan Court of Appeal therefore held that the Disabilities Act did not contain any provisions that would be applicable to the parties in relation to the authors' civil action, and the provisions of the Constitution, the Civil Code and the Equal Treatment Act should be applied instead. The Metropolitan Court of Appeal further declared that the first instance court was also correct in concluding that the legal relationship at issue fell within the personal and temporal scope of the Equal Treatment Act. Otherwise, the Metropolitan Court of Appeal reached a decision differing from the decision of the first instance court for the following reasons. The Metropolitan Court of Appeal held that there was an indirect discrimination in the authors' case, rather than a direct discrimination.[6] The Court also concluded that the mere fact that the authors needed or might need assistance from other members of the society due to their disability did not violate their human dignity and that, therefore, it may not be considered as a humiliation to the authors as human beings. The Court further established that the OTP was entitled to the freedom of concluding contracts, and this freedom must be respected not only when signing a contract, but also when amending it. Thus, the Court may not, upon request by one party to a contract, intervene into a longstanding contractual relationship and oblige the OTP to fulfil an obligation which did not constitute a part of the contractual agreement. The Court also accepted the argument of the OTP that, due to the increased personal safety risks, the retrofitting would not ensure that the authors could use the ATMs on their own. Finally, the Court found that the authors were not entitled to request the retrofitting of all the ATMs operated by the OTP in Hungary. It held that this kind of request would not be justified by the constitutional principle of freedom to choose one's place of residence. The Metropolitan Court of Appeal concluded, therefore, that the OTP was exempted from the obligation to provide for equal treatment under the Equal Treatment Act.

2.14 On 14 April 2008, the authors submitted a request for an extraordinary judicial review at the Supreme Court, in which they asked the Court to alter the decision of the Metropolitan Court of Appeal.[7] In addition to their initial arguments, the authors asserted that the qualification of discrimination as being direct or indirect was irrelevant to the legal dispute, since the rules regarding exemption from the obligations of equal treatment were the same in both cases. The authors referred to the opinion of the Equal Treatment Advisory Board,[8] according to which the failure to comply with the accessibility requirement of the Disabilities Act qualified as an indirect negative discrimination, since disabled persons received a less favourable treatment than non-disabled persons, as their movement and access to services were impeded and restricted. The authors also argued that freedom of contract was not a basis for exemption from the obligation to apply the Equal Treatment Act, because freedom of contract may not be regarded as a constitutional

[6] The Metropolitan Court of Appeal found that, although everyone may use the ATMs under the same conditions, the authors were put in a less favourable situation compared to the other clients due to their disability.

[7] The appeal of 14 April 2008 against the judgment of the Metropolitan Court of Appeal reads in relevant part as follows: "We are requesting the […] Supreme Court […] to require [the OTP] to retrofit all of it ATMs to ensure their accessibility".

[8] Reference is made to the opinion of the Equal Treatment Advisory Board, 10.007/3/2006.TT.

fundamental right.[9] The authors challenged the assessment of the Metropolitan Court of Appeal that the reliance by persons with disabilities on the assistance of other members of the society did not violate their human dignity, and argued that such approach contradicted the requirement of equal treatment and article 70/A of the Constitution.

2.15 The OTP requested the Supreme Court to uphold the decision of the Metropolitan Court of Appeal and reiterated its arguments concerning the freedom of contract. According to the OTP, the authors concluded their respective contracts of their own free will and with the full knowledge and acceptance of the conditions in relation to the services provided by the OTP.

2.16 The Supreme Court delivered its decision on 4 February 2009, rejecting both the request for a judicial review by the authors, and the request for judicial review by the OTP. The Supreme Court shared the opinion of the Metropolitan Court of Appeal that the ATMs designed for sighted persons put blind or visually impaired persons in a disadvantageous situation, even though it seemed that they may use the ATMs under the same conditions as everybody else. The disadvantageous situation was induced by the fact that no Braille fonts may be found on the ATMs, and the owner of the banking card did not have a voice assistance support when using the machines. The Supreme Court also agreed with the arguments of the second instance court with regard to the exemption of the OTP from the obligation to provide for equal treatment under the Equal Treatment Act. Furthermore, the Supreme Court asserted that the parties concluded a contract for private current account services, the content of which may be freely established by the parties. The Court stated that the authors took note of the contractual terms, including the facility of limited use and, by signing the contract, they agreed to their disadvantaged situation through implied conduct.

2.17 The authors submit that they have exhausted all effective domestic remedies and that this matter has not been and is not currently being examined under any other procedure of international investigation or settlement. With reference to article 2, paragraph (f), of the Optional Protocol, which renders inadmissible any communication when the facts thereof occurred prior to the entry into force of the Optional Protocol for the State party concerned unless those facts continued after that date, the authors argue that the Committee is not precluded from the examination of their communication. They submit that the relevant facts have continued after the entry into force of the Optional Protocol and that the last decision in relation to the present communication was adopted after the entry into force of the Optional Protocol for the State party.

The complaint

3.1 The authors submit that the State party has enacted norms prohibiting discrimination against persons with disabilities, and has included remedies for the violation of these provisions. However, Hungary does not entirely fulfil its obligations by mere enactment of these norms. It is up to the relevant authorities who act on behalf of the State to apply and interpret these norms in such a manner so as to ensure efficient accessibility. The authors submit that the reasoning of the Metropolitan Court shows that it is possible to interpret the State party's legal framework in accordance with the Convention, thus ensuring the protection specified within it. Nevertheless, the Metropolitan Court of Appeal and the Supreme Court interpreted the laws contrary to the Convention, so the protection afforded by the State cannot be considered sufficient, or efficient. The authors claim, therefore, that

[9] Reference is made to the decisions of the Constitutional Court, 229/B/1998 and 61/1992 (XI.20). The authors also make a distinction between the "freedom of contract" and the "freedom to enter into contracts".

by misinterpreting the law, the authorities acting on behalf of the State party did not ensure their rights as provided for in the Convention.

3.2 The authors argue that, due to their disability, they have suffered direct discrimination in accessing the services provided by the ATMs compared to sighted clients of the OTP. They submit that, in defining discrimination, both the Metropolitan Court of Appeal and the Supreme Court ignored the opinion of the Equal Treatment Advisory Board, according to which "[…] failure to ensure accessibility for the disabled constitutes a violation of equal treatment, thus failure to ensure unimpeded access falls within the scope of the Equal Treatment Act. […] Dereliction of the duty to ensure accessibility constitutes direct discrimination, since it means that persons with disabilities are treated less favourably in accessing services when compared to persons without disabilities […]."[10] Furthermore, only the Metropolitan Court has correctly applied the reasonableness test in deciding whether the necessary adjustments of the ATMs would impose a disproportionate financial burden on the OTP (see, paragraph 2.8 above). The criterion of "human dignity" used by the Metropolitan Court of Appeal in applying the reasonableness test (see, paragraph 2.14 above), however, is not only irrelevant in deciding whether there were reasonable grounds for differentiation in treatment but it also runs counter to the primary goals of the Convention, such as respect for inherent dignity, individual autonomy of persons with disabilities and their inclusion in society.

3.3 The authors submit that, by not intervening into a long-term contractual relationship between them and the OTP on their request in order to impose on the OTP an obligation of equal treatment, which had not been included in the contract, the Metropolitan Court of Appeal and the Supreme Court have violated the State party's obligations under article 5, paragraph 2, of the Convention to prohibit all discrimination on the basis of disability and guarantee to persons with disabilities equal and effective legal protection against discrimination on all grounds.

3.4 In light of the above, the authors conclude that they are victims of a violation by the State party of their rights under article 5, paragraphs 2 and 3; article 9 and article 12, paragraph 5, of the Convention, and are, therefore, entitled to a just compensation.

The State party's observations on the admissibility and merits

4.1 22 November 2010, the State party informed that Committee that it would not challenge the admissibility of the present communication.

4.2 On 21 March 2011, the State party submitted its observations on the merits of the communication. It states that, based on the Hungarian regulations in force, the judgment of the Supreme Court of 4 February 2009 was sound but adds that the problem outlined in the communication is real and requires a fair settlement.

4.3 The State party puts forward three aspects in order for a solution acceptable to all parties to be found. Firstly, steps are to be taken for changing the accessibility of the ATMs and other banking services, including accessibility not only for the blind but also for persons with other disabilities. Secondly, given the related costs and technical viability, the above target can be achieved only gradually, by procuring and installing new ATMs facilitating physical and info-communication accessibility as a basic condition. Finally, although the communication concerns the services provided by a specific bank, the above-mentioned requirements would have to be met by each and every Hungarian financial institution.

[10] http://www.egyenlobanasmod.hu/index.php?g=hirek/TTaf 200610.htm

4.4 Based on the above considerations, the State Secretary for Social, Family and Youth Affairs of the Ministry of National Resources sent a letter to the President-CEO of the OTP on 18 March 2011, asking him to provide information on their possible plans and commitments related to the ATMs operated by the bank. The State Secretary suggested that in the future the OTP give priority to the accessibility of the machines when new ATMs are procured.

4.5 Taking into account that ensuring accessibility should not be the duty of one bank only, the State Secretary has contacted the President of the Hungarian Financial Supervisory Authority with the request to identify possible regulatory tools and incentives for all financial institutions.

The authors' comments on the State party's observations

5.1 On 19 December 2011, the authors provided their comments on the State party's observations. The authors submit that they welcome the fact that the State Secretary for Social, Family and Youth Affairs has contacted the OTP and the Hungarian Financial Supervisory Authority in relation to their communication. They consider, however, that his official response to the Committee is contradictory. The State Secretary argues on the one hand that the Supreme Court's reasoning on the authors' case is sound while admitting on the other that there exists a "real" problem requiring "fair settlement". In the authors' opinion, the Supreme Court decided their case in a manner that failed to "fairly settle this real problem", although in the earlier decision on the same case the Metropolitan Court interpreted the State party's legal framework in compliance with the Convention.

5.2 The authors argue that if, in the opinion of the State Secretary, the Supreme Court's decision is in full compliance with the State party's law then Hungary has violated the Convention by not adopting the necessary legislative measures for its implementation at the national level. They specifically refer to the State party's obligations under articles 4 and 5 of the Convention. If, however, the State Secretary is wrong in his assessment and the State party's law can be interpreted in compliance with the Convention – a position the authors take – then Hungary has violated the Convention due to the Supreme Court's failure to uphold the appropriate interpretation. The said failure is attributable to the State party, as it bears responsibility for ensuring judicial protection of the rights of persons with disabilities and correct interpretation of the law by the judiciary in a manner consistent with the State party's obligations under the Convention.

5.3 The authors maintain that the Metropolitan Court of Appeal and the Supreme Court ruled contrary to the spirit of the Convention, thus violating their rights guaranteed under the provisions invoked in the authors' initial submission to the Committee. Furthermore, the Metropolitan Court of Appeal and the Supreme Court also violated their obligation to interpret the State party's law in a way that is compliant with the Convention. The authors also maintain that these courts have misinterpreted and misapplied the Equal Treatment Act, as well as the international directives relevant to their communication and, in particular, provisions thereof which relate to the definition of discrimination and to exoneration. According to them, the fact that the Metropolitan Court interpreted the State party's legal framework in compliance with the said directives makes the failure of the Metropolitan Court of Appeal and the Supreme Court to do the same even more conspicuous.

5.4 The authors recall that the State Secretary outlines three aspects of the ATMs accessibility in his response, arguing that these are important for ensuring a "solution acceptable to everybody". First, "steps are to be taken for changing the accessibility of the ATMs". Second, this change can only be achieved gradually due to the costs involved. Third, the change would create obligations for every bank in Hungary. The authors submit in this regard that while it is unlikely that every single ATM in Hungary would become

accessible within a short period of time, their own situation and that of the other persons with visual impairments remains unchanged due to the Supreme Court's failure to give effect to their rights. The authors add that the attitude of the OTP towards the special needs of the persons with disabilities is illustrated by the fact that it had bought 384 new ATMs while the court proceedings at the national level were still on-going, although 300 of them could not be retrofitted to make them accessible for persons with disabilities. The OTP went as far as to offer the authors to close down their accounts in order to put an end to their contractual relationship.

5.5 The authors state that, having considered the costs associated with the retrofitting and installation of the ATMs which are accessible for persons with disabilities, the Metropolitan Court in its decision ordered a few moderate steps towards the integration of the persons with disabilities into the society. This decision, however, was appealed by the OTP. The authors submit in this regard that the financial burden of defending itself against continued lawsuits for the OTP will soon overweigh the costs of making the ATMs accessible for persons with disabilities.

5.6 The authors express their agreement with the State Secretary in that the obligation to provide equal access to services for persons with disabilities would need to be extended to all financial institutions operating on the State party's territory in order to ensure these persons' integration into the society. They note that other banks in Hungary, unlike the OTP, have already made efforts to install ATMs that are accessible for persons with disabilities. The authors submit, therefore, that a failure of the largest financial institution in Hungary – the OTP – to provide services to persons with disabilities could have a negative impact on the rate of installation of the disability compliant ATMs by other banks.

5.7 The authors conclude by saying that together with the other persons who have visual impairments, they continue to face discriminatory treatment by the OTP due to the failure of the Supreme Court to give effect to their rights provided for in the international treaties ratified by Hungary. In particular, they are requested to pay the same amount of fees as non-disabled clients without, however, being able to receive the same level of services. This discriminatory treatment prevents persons with visual impairments in Hungary from achieving independence and full integration into the society thus violating their human dignity. According to the authors, the State party's courts have failed to protect their rights under the Convention and this failure cannot be rectified by mere sending of letters to the OTP and the Hungarian Financial Supervisory Authority, as they do not create legal obligations.

5.8 The authors, therefore, maintain their initial claims and request the Committee to establish that the State party has violated its obligations under the Convention.

The State party's further observations

6.1 On 12 March 2012, the State party submitted its observations on the authors' comments. It points out that it concurs with the decision of the Supreme Court in the authors' case and fully accepts it. It adds that due to the principles of the rule of law and the separation of powers, the State party cannot reassess the final decision made by an independent judicial body or the reasoning thereof.

6.2 The State party recalls that, further to the submission of the present communication to the Committee, the State Secretary for Social, Family and Youth Affairs sent a letter to the President-CEO of the OTP, requesting him to provide information on the possible plans and commitments related to the accessibility of the ATMs operated by the bank. The State Secretary specifically suggested that the accessibility of the ATMs be treated as high priority throughout the bank's future procurements.

6.3 In his response of 11 April 2011, the President-CEO of the OTP first indicated that the bank had placed great emphasis on the physical accessibility of the ATMs, as a result of which 90% of its branches and thus the ATMs located there were made accessible for persons with limited mobility. The President-CEO also underlined that the bank could first and foremost take responsibility for the accessibility of the ATMs located in the premises of its own branches. In the case of the ATMs located outside of such premises, it was often impossible to ensure full accessibility due to the "features of the environment". In many cases, the lessor of the building accommodating the ATM was not open towards performing the necessary adjustments. Nevertheless, the OTP committed itself to retrofitting all of its ATMs within the framework of a four-year programme in order to make them suitable for an independent use by persons with visual impairments. In the State party's view, this commitment, which is in line with the principle of reasonable accommodation enshrined in the Convention, may bring along a notable and substantive development in the circumstances of the present communication.

6.4 The State party further recalls that the State Secretary for Social, Family and Youth Affairs had sent a letter to the President of the Hungarian Financial Supervisory Authority (HFSA) dated 18 March 2011, requesting him to review regulatory instruments and incentives that would apply to all financial institutions. In his response of 26 April 2011, the President of the HFSA stated that several steps had already been taken in order to improve the situation of persons with disabilities. The President of the HFSA has issued a Recommendation No. 1/2011 (IV. 29) "On the principles of consumer protection expected from financial institutions". It establishes the following under III. 3: "The HFSA considers it best practice for financial institutions to pay extra attention to those consumers with limited ability to represent their own interests, such as minors, the elderly, the disabled and the seriously ill, as well as those who struggle with comprehension of complex terms and information."[11] The State party submits that the significance of the said recommendation lies in its applicability to all financial institutions. Moreover, its implementation is monitored by the HFSA. The President of the HFSA also expressed his readiness to work out further directives in cooperation with the organizations representing the interests of the blind and partially sighted in order to ensure the independent use of banking services by as many persons with visual impairments as possible.

6.5 The State party concludes that the positive feedback received from the President-CEO of the OTP and the President of the HFSA will in the long term promote the equal access of persons with disabilities to banking services.

The authors' further comments on the State party's further observations

7.1 On 31 May 2012, the authors recall that, according to the State party, the decision of the Supreme Court was in full compliance with the State party's law. In this connection, the authors reiterate their earlier line of argument (see, paragraph 5.2 above). They agree that the State party cannot reassess the final decision made by an independent judicial body or the reasoning thereof. They submit, however, that the State's obligation is not to reassess a court decision but to ensure (judicial) protection of the rights of persons with disabilities. If the court has failed to provide the necessary protection, then the State party is obliged to take responsibility for this failure. In the current context, the Ministry of National Resources' acknowledgment of an erroneous application of the otherwise Convention compliant law would not be a violation of the separation of powers principle; otherwise the States Parties could never be called to account for judicial decisions that are contrary to the Convention.

[11] The English translation of the relevant excerpt is provided by the State party.

7.2 While the authors welcome the State party's aspirational statement affirming the importance of ensuring accessibility of the ATMs in future procurements, they point out that the Government has yet to take a legally-binding action to this effect, despite having all necessary means available at its disposal for doing so. With reference to article 4, paragraph 1(a), of the Convention, the authors submit that sending a legally non-binding letter does not meet this burden.

7.3 The authors applaud the OTP's efforts to ensure physical accessibility of its branches. They recall, however, that under article 9 of the Convention, "accessibility" is not limited to removing physical barriers but also includes eliminating obstacles to information, communications and other services. The authors note the acknowledgement made by the OTP itself that its accessibility efforts have been concentrated on persons with limited mobility and not on persons with visual impairments, although the present communication concerns the latter group.

7.4 The authors maintain that the State party has failed to take appropriate measures to ensure and promote "the full realization of all human rights and fundamental freedoms for all persons with disabilities without discrimination", as set out in article 4 of the Convention. They add that the deadlines defined in the Disabilities Act for the implementation of accessibility measures are systematically disregarded and no national accessibility plan has been elaborated. According to them, it is particularly distressing that the State party's law does not define any concrete and enforceable measures in connection with the accessibility of information and communications.

7.5 The authors conclude that the broader definition of discrimination embodied in the concept of reasonable accommodation as set out in article 2 of the Convention, has yet to be introduced into the State party's law. If the State party fails to honor its obligation to provide legal remedies for discrimination to the full extent required by the Convention, the rights of persons with disabilities will continue to be infringed upon. The authors, therefore, maintain their initial claims and request the Committee to establish that the State party has violated its obligations under the Convention.

Issues and proceedings before the Committee

Consideration of admissibility

8.1 Before considering any claims contained in a communication, the Committee on the Rights of Persons with Disabilities must, in accordance with article 2 of the Optional Protocol and rule 65 of the Committee's rules of procedure, decide whether or not it is admissible under the Optional Protocol.

8.2 The Committee notes that the Optional Protocol entered into force for the State party on 3 May 2008 and that the judgment of the Supreme Court dated 4 February 2009 was delivered after that date. The Committee also notes that the State party does not challenge the admissibility of the present communication and that the relevant facts, which are the subject of the communication – inaccessibility of the banking card services provided by the ATMs operated by the OTP to the authors, – continued after the entry into force of the Optional Protocol for the State party. Accordingly, the Committee considers that it is not precluded, by article 2, paragraph (f), of the Optional Protocol, from examining the communication.

8.3 The Committee further notes that the authors have invoked a violation of article 12, paragraph 5, of the Convention, without however providing further substantiation as to how this provision may have been violated, given that according to the information before the Committee, their legal capacity to control their own financial affairs has not been restricted. Therefore, the Committee considers that this part of the communication is insufficiently

substantiated, for purposes of admissibility, and is thus inadmissible under article 2, paragraph (e), of the Optional Protocol.

8.4 The Committee considers that the authors have sufficiently substantiated, for purposes of admissibility, their claims under article 5, paragraphs 2 and 3, and article 9 of the Convention. In the absence of other impediments to the admissibility of the communication, the Committee declares these claims admissible and proceeds to their examination on the merits.

Consideration of the merits

9.1 The Committee on the Rights of Persons with Disabilities has considered this communication in the light of all the information received, in accordance with article 5, of the Optional Protocol and rule 73, paragraph 1, of the Committee's rules of procedure.

9.2 The Committee notes that the authors' initial complaint to the OTP focused on the lack of reasonable accommodation, i.e. the failure by the OTP to provide for individual measures by retrofitting some of its ATMs in the proximity of the authors' homes in order to adjust the banking card services provided by these ATMs to the authors' specific needs so that they become accessible for persons with visual impairments. The Committee further notes that the authors' civil action before the Metropolitan Court and their appeals before the Metropolitan Court of Appeal and the Supreme Court, as well as their communication before the Committee go further and raise a broader claim, i.e. the lack of accessibility for persons with visual impairments to the entire network of the ATMs operated by the OTP. In light of the fact that the authors opted to frame their communication before the Committee under this broader claim – whether the State party has taken appropriate measures to ensure the accessibility of the banking card services provided by the entire network of the ATMs operated by the OTP for persons with visual impairments – the Committee considers that, in the circumstances of the present communication, the totality of the authors' claims should be examined under article 9 of the Convention and that it is therefore unnecessary for it to separately assess whether the State party's obligations under article 5, paragraphs 2 and 3, of the Convention have been fulfilled.

9.3 As to the authors' claim under article 9 of the Convention that the State party has failed to fulfil its obligations by not ensuring accessibility of the banking card services provided by the ATMs operated by the OTP for persons with visual impairments on the equal basis with others, the Committee notes the State party's assertion that the judgment of the Supreme Court of 4 February 2009 was "sound" (see, paragraph 4.2 above) and that the State party "concurs with" and "fully accepts" it (see, paragraph 6.1 above). In the Committee's view, the State party thus effectively takes a position that under its existing legal framework, the obligation to provide for accessibility of information, communications and other services for persons with visual impairments on an equal basis with others does not apply to private entities, such as the OTP, and does not affect contractual relationships.

9.4 In this regard, the Committee recalls that under article 4, paragraph 1(e), of the Convention, States Parties undertake "to take all appropriate measures to eliminate discrimination on the basis of disability by any person, organization or private enterprise". To this end, States Parties are required pursuant to article 9 of the Convention to take appropriate measures to ensure to persons with disabilities access, on an equal basis with others, to, *inter alia*, information, communications and other services, including electronic services, by identifying and eliminating obstacles and barriers to accessibility. States Parties should, in particular, take appropriate measures to develop, promulgate and monitor the implementation of minimum standards and guidelines for the accessibility of facilities and services open or provided to the public (article 9, paragraph 2(a), of the Convention), and ensure that private entities that offer facilities and services which are open or provided to

the public take into account all aspects of accessibility for persons with disabilities (article 9, paragraph 2(b)).

9.5 In the present communication, the Committee notes, firstly, that the State party has acknowledged the fact that the accessibility of the ATMs and other banking services for persons with visual and other types of impairments was a real problem that required a solution acceptable to all parties involved (see, paragraphs 4.2 and 4.3 above). It further notes that the State party has already identified the three aspects to achieve this objective, namely (1) the accessibility of the ATMs and other banking services by all persons with disabilities, (2) the gradual achievability of such comprehensive accessibility due to costs involved, and (3) the accessibility of the ATMs and other banking services provided by all financial institutions operating on the State party's territory and not only by the OTP. The Committee also notes that the State Secretary for Social, Family and Youth Affairs of the Ministry of National Resources suggested to the President-CEO of the OTP that the OTP give priority in the future to the accessibility of newly procured ATMs and that the latter had promised to retrofit the entire network of its ATMs within four years on a voluntary basis. Finally, the Committee notes that the State Secretary has also requested the President of the Hungarian Financial Supervisory Authority to identify possible regulatory tools and incentives applicable to all financial institutions to ensure accessibility to their services for persons with disabilities and that the latter had issued a Recommendation "On the principles of consumer protection expected from financial institutions" (see, paragraph 6.4 above).

9.6 While giving due regard to the measures taken by the State party to enhance the accessibility of the ATMs operated by the OTP and other financial institutions for persons with visual and other types of impairments, the Committee observes that none of these measures have ensured the accessibility to the banking card services provided by the ATMs operated by the OTP for the authors or other persons in a similar situation. The Committee finds accordingly that the State party has failed to comply with its obligations under article 9, paragraph 2(b), of the Convention.

10. The Committee on the Rights of Persons with Disabilities, acting under article 5 of the Optional Protocol to the Convention, is of the view that the State party has failed to fulfil its obligations under article 9, paragraph 2(b), of the Convention. The Committee therefore makes the following recommendations to the State party:

1. Concerning the authors: the State party is under an obligation to remedy the lack of accessibility for the authors to the banking card services provided by the ATMs operated by the OTP. The State party should also provide adequate compensation to the authors for the legal costs incurred during domestic proceedings and costs incurred in filing this communication;

2. General: the State party is under an obligation to take measures to prevent similar violations in the future, including by:

(a) Establishing minimum standards for the accessibility of banking services provided by private financial institutions for persons with visual and other types of impairments. The Committee recommends the State party to create a legislative framework with concrete, enforceable and time-bound benchmarks for monitoring and assessing the gradual modification and adjustment by private financial institutions of previously inaccessible banking services provided by them into accessible ones. The State party should also ensure that all newly procured ATMs and other banking services are fully accessible for persons with disabilities;

(b) Providing for appropriate and regular training on the scope of the Convention and its Optional Protocol to judges and other judicial officials in order for them to adjudicate cases in a disability-sensitive manner;

(c) Ensuring that its legislation and the manner in which it is applied by domestic courts is consistent with the State party's obligations to ensure that legislation does not have the purpose or effect of impairing or nullifying the recognition, enjoyment or exercise of any right for persons with disabilities on an equal basis with others.

11. In accordance with article 5 of the Optional Protocol and rule 75 of the Committee's rules of procedure, the State party shall submit to the Committee, within six months, a written response, including any information on any action taken in the light of the Views and recommendations of the Committee. The State party is also requested to publish the Committee's Views, to have them translated into the official language of the State party, and circulate them widely, in accessible formats, in order to reach all sectors of the population.

[Adopted in English, French, Spanish and Arabic, the English text being the original version. Subsequently to be issued also in Chinese and Russian as part of the Committee's biannual report to the General Assembly.]

United Nations CRPD/C/7/D/3/2011

Convention on the Rights of Persons with Disabilities

Distr.: General
21 May 2012

Original: English

Committee on the Rights of Persons with Disabilities

Communication No. 3/2011

Views adopted by the Committee at its 7th session, 16 to 27 April 2012

Submitted by:	H.M. (represented by Mr. H-E.G. and Mrs. B.G.)
Alleged victim:	The author
State Party:	Sweden
Date of communication:	6 December 2010 (initial submission)
Document references:	Special Rapporteur's rule 70 decision, transmitted to the State party on 9 February 2011 (not issued in document form)
Date of adoption of Views:	19 April 2012
Subject matter:	Refusal to grant building permission for the construction of a hydrotherapy pool for the rehabilitation of a person with a physical disability on grounds of incompatibility of the extension in question with the city development plan
Procedural issues:	Non-substantiation of claims;
Substantive issues:	Purpose of the Convention; discrimination on the basis of disability; reasonable accommodation; general principles enshrined in the Convention; general obligations under the Convention; equality and non-discrimination; accessibility; right to life; liberty and security of the person; living independently and being included in the community; personal mobility; health; habilitation and rehabilitation; adequate standard of living and social protection
Articles of the Convention:	1; 2; 3; 4; 5; 9; 10; 14; 19; 20; 25; 26 and 28
Articles of the Optional Protocol:	2(e)

[Annex]

Annex

Views of the Committee on the Rights of Persons with Disabilities under article 5 of the Optional Protocol to the Convention on the Rights of Persons with Disabilities (7th session)

concerning

Communication No. 3/2011*

Submitted by:	H.M. (represented by Mr. H-E.G. and Mrs. B.G.)
Alleged victim:	The author
State Party:	Sweden
Date of communication:	6 December 2010 (initial submission)

The Committee on the Rights of Persons with Disabilities, established under article 34 of the Convention on the Rights of Persons with Disabilities,

Meeting on 19 April 2012,

Having concluded its consideration of communication No. 3/2011, submitted to the Committee on the Rights of Persons with Disabilities by Ms. H.M. under the Optional Protocol to the Convention on the Rights of Persons with Disabilities,

Having taken into account all written information made available to it by the author of the communication, and the State party,

Adopts the following:

Views under article 5, of the Optional Protocol

1. The author of the communication, dated 6 December 2010, is Ms. H. M., a Swedish national born in 1978. The author claims to be a victim of a violation by Sweden of her rights under articles 1, 2, 3, 4, 5, 9, 10, 14, 19, 20, 25, 26 and 28 of the Convention on the Rights for Persons with Disabilities. The Optional Protocol to the Convention entered into force for Sweden on 15 January 2009. The author is represented by Mr. H-E.G. and Mrs. B.G..

* The following members of the Committee participated in the examination of the present communication: Amna Ali Al-Suwaidi, Mohammed Al-Tarawneh, Monsur Ahmed Chowdhury, Maria Soledad Cisternas Reyes, Theresia Degener, Gábor Gombos, Fatiha Hadj-Salah, Hyung Shik Kim, Lofti ben Lallahom, Stig Langvald, Edah Wangechi Maina, Ronald McCallum, Ana Pelaez Narvaez, Silvia Judith Quan-Chang, Carlos Rios Espinosa, Damjan Tatic, Germán Xavier Torres Correa and Jia Yang.

The facts as presented by the author

2.1 The author has a chronic connective tissue disorder, Ehlers-Danlos Syndrome (EDS), which has led to hypermobility (excessive over-flexibility of joints), severe luxations and sub-luxations (dislocation of joints), fragile and easily damaged blood vessels, weak muscles and severe chronic neuralgia. She has not been able to walk or stand for the last eight years, and she has difficulty sitting and lying down. Her impairment has resulted in her being bedridden for the last two years, which has weakened her even further. The author cannot take medicines, since she also has atypical hypersensitivity to medicines.

2.2 The author can no longer leave her house or be transported to hospital or rehabilitation care because of the increased risk of injuries that may be incurred due to her impairment. The destructive course of the impairment is still continuing and the only type of rehabilitation that could stop its progress is hydrotherapy, which in the author's circumstances would only be practicable in an indoor pool in her house. Water therapy is recommended for Ehlers-Danlos Syndrome by specialists. In the author's case, it would improve her quality of life as, for example, her joints would become more stable, she would build more muscle, her blood circulation would improve and her pain and suffering would be alleviated.

2.3 On 7 December 2009, the author applied for planning permission for an extension of approximately 63 square metres to the house on her privately owned piece of land. The extension would to a large extent (approximately 45 square metres)[1] be on land where building is not permitted.

2.4 On 17 December 2009, the request for building permission was rejected by the Örebo Local Housing Committee. The author appealed the decision of the Local Housing Committee to the Örebro County Council. The appeal was rejected on 3 March 2010. This decision was appealed to the Karlstad Administrative Court. On 28 April 2010, the Administrative Court granted the appeal and referred the author's application for planning permission back to the Örebro Local Housing Committee for a new hearing of the case.

2.5 The Administrative Court stated, in particular, the following:

"*Against the background of the fact that the major part of the remaining plot of land must not be built on, an alternative placement according to the plan is not possible. […] It has not been stated that H. M. could meet the need for an exercise pool with a smaller extension in closer accordance with the plan. As far as the documents of this case go, it is not a realistic alternative to move to another house where her need for an exercise pool can be met, or to move to another suitable institution. Furthermore it is evident from the medical documents that an exercise pool would be of particularly great importance to the life situation and life quality of H. M. and that it would also be cost saving for her future care and attention. With reference to what has now been stated, the Administrative Court, in a balance of interests in accordance with Chapter 1, § 5 of the Planning and Building Act, finds that the interests of H. M. to use the land for the extension in question should have preference over the general public interest to preserve the area in complete compliance with the detail plan. Against the background of the extraordinary cause which is the basis for this evaluation, the Administrative Court cannot see a risk that an approval would lead*

[1] The Administrative Court of Appeal in its decision of 1 July 2010 refers to 48 square metres (see para. 2.6).

to similar applications for the approval of similar measures on other properties in the area. Consequently, the grounds referred to by the Local Housing Committee do not constitute a reason for refusing a building permission."[2]

2.6 The Municipality of Örebro appealed the decision of the Administrative Court to the Administrative Court of Appeal (Gothenburg) and, on 1 July 2010, the Administrative Court of Appeal refused the author's application for planning permission. It stated, in particular, the following:

"*The building permission that H. M. has applied for goes against the regulations of the detail plan in the sense that the proposed construction to a large extent (approximately 48 square meters) will be placed on the so-called "dotted land", which means on land where, according to the plan, it is not allowed to build. Like the County Council has stated, such a construction cannot be permitted to be built even as a minor divergence from the detail plan with regard to what is stated in Chapter 8, § 11 of the Planning and Building Act*."[3]

2.7 The author petitioned the Supreme Administrative Court (Stockholm) for leave to appeal the decision of the Administrative Court of Appeal. The author's petition was refused on 5 August 2010.

The complaint

3.1 The author claims that she has been discriminated against by the decisions of the State party's administrative bodies and courts, since they have failed to take into account her rights to equal opportunity for rehabilitation and improved health. She has thereby been refused her right to a worthwhile quality of life. The refusals are based merely on public interest to preserve the development plan and have become more of a matter of principle, which has a severe impact on the living conditions of a person with disability. Furthermore, her house has previously been adapted to her disability-related needs at a cost of EUR 42,000. The new extension would not be visible from the street, and the land parcel behind her house, for which the planning permission has been applied, is thickly wooded, with many bushes and clumps of trees. The neighbours have also given their consent to the extension. The author argues that a single departure from the development plan, should the application be approved, would not be detrimental to the surroundings. Given the exceptional nature of her case, there would be no risk of repeated similar requests.

3.2 The author maintains that the only hope of rehabilitation is hydrotherapy at home, any other options being excluded, and encloses two medical certificates dated 29 September 2009 and 28 June 2010 as documentary evidence that, for her rehabilitation, no alternative to hydrotherapy at home exists. The author also considers that the health, interest and well-being of a person with disability come above the public interest of not allowing any buildings on land that has been marked out as areas which should not be built on. She also recalls that she is an owner of the piece of land for which the building permission in question was requested.

3.3 The consequences of planning permission not being granted would result in a significant risk for the author of becoming bedridden for an indefinite period of time, with severe muscular atrophy, stretched ligaments, severe dislocations with, inter alia, reduced

[2] Translation provided by the author.
[3] Translation provided by the author.

chest expansion, which would impede full inhalation and cause acute pain. In the absence of rehabilitation, the author runs the risk of eventually having to enter a care institution.

3.4 The author requests the Committee to determine whether the Convention has priority over the decision of the Local Housing Committee, which was based on the State party's Planning and Building Act. In other words, the Committee is requested to decide on whether the author's needs for rehabilitation and care due to her disability are of primary consideration over the public interest as protected by the Local Housing Committee.

State party's observations on admissibility and merits

4.1 On 5 September 2011, the State party provided its observations on the admissibility and merits of the author's communication. It submits that the Planning and Building Act contains provisions concerning the planning of land and water areas and concerning building. Municipalities regulate the use and development of land via a detailed development plan. Both public and private interests are to be considered when issues are addressed under the Act. A building permit is required for most new buildings and extensions. In order for a building permit to be granted within an area covered by a detailed development plan, the planned measures must not contravene the detailed development plan.

4.2 A building permit may be granted for a measure that involves a minor departure from the development plan, if the departure is compatible with the purpose of the plan. Examples of what constitutes a minor departure include a construction that encroaches on protected land by just a few metres, or that exceeds the maximum building height for structural reasons. The Supreme Administrative Court considered, in a judgement delivered in 1990, that a measure which involved construction on 125 square metres of protected land did not constitute a minor departure. When an authority or court assesses whether a certain measure which departs from the detailed development plan could be considered a minor departure, both private and public interests should be taken into account. The author has not claimed that the measure for which she has applied for a building permit constitutes a minor departure from the detailed development plan in force. Under such circumstances, the granting of a building permit is not possible under the Planning and Building Act.

4.3 According to the Health and Medical Services Act, the obligation to offer good health and medical services is incumbent on county councils. The obligation includes, inter alia, offering rehabilitation and supplying assistive devices for persons with disabilities. These measures should be planned in consultation with the individual. A patient should always be offered treatment, where a scientifically proven, tried and tested treatment is available. When several treatment options are available, the patient should be given the option of choosing the treatment he or she prefers. However, in the case of multiple treatment options, the benefits of a certain treatment must be weighed against its cost. The Discrimination Act contains provisions concerning the prohibition of discrimination connected with disabilities.

4.4 The State party states that in November 2009, the author applied to Örebro Municipality for a building permit to build an extension on land of which large parts are protected under the detailed development plan. The extension would cover approximately 65 square metres (45 square metres of which on protected land) and contain a hydrotherapy pool for rehabilitation. She requested an exemption from the prohibition on building under the applicable development plan, with reference to her complicated health situation. She

submitted medical certificates from a doctor for the purpose of corroborating her need for a hydrotherapy pool. The doctor in question does not work for the county council. In a supplementary document to her application for a building permit, she stated that the proposed location of the planned extension was the only possible location on the property, primarily for functional reasons.

4.5 In December 2009, the Municipality rejected the author's request, considering that the extension would not constitute a minor departure from the development plan. In January 2010, the author filed an appeal to the County Administrative Board, arguing that there were exceptional grounds for granting a building permit, given her health problems, and referred to documentation submitted previously. The documents stated that a pool of the specified size is necessary for the alleviation of her symptoms and rehabilitation. The author also submitted that she has practically no opportunity to leave the property due to the high risk of infection and mobility problems. In March 2010, the County Administrative Board rejected her appeal on the grounds that the measure contravenes the provisions of the development plan and the departure from the plan is of a type and size that cannot be considered minor.

4.6 The author appealed against this decision to the Administrative Court in Karlstad, maintaining that hydrotherapy in a pool in her home environment is the only possibility of improving her situation. She claimed that transportation by ambulance to other hydrotherapy facilities is not an option, as ambulance staff are unwilling to transport her due to her fragile condition; nor can she move out, since she is dependent on her parents, who live nearby. She added that the extension would not be visible from the street, affect the overall appearance of the area or alter its character. In April 2010, the Administrative Court overturned the decision of the municipality, and the case was referred back to the municipality for new consideration. The Court found that the author's interest in using the land for the extension in question should take precedence over the public interest in maintaining the area entirely in accordance with the development plan. The judgement was not unanimous.

4.7 In May 2010, Örebro Municipality appealed against the judgement to the Administrative Court of Appeal in Gothenburg. In July 2010, the Administrative Court of Appeal overturned the judgement of the Administrative Court, and upheld the decision of the Municipality and the County Administrative Board, stating that the decision-making authorities and courts cannot disregard existing legislation and other provisions when assessing a building permit matter, that the building permit for which the author had applied contravenes the development plan and that such a measure cannot be considered a minor departure from the plan. The judgement was adopted unanimously.

4.8 In July 2010, the author appealed against the decision of the Administrative Court of Appeal to the Supreme Administrative Court, claiming that the decision to reject her application was not reasonable or proportionate to the damage caused to her. She maintained that her need for a hydrotherapy pool outweighs the interest of following the existing development plan. On 5 August 2010, the Supreme Administrative Court decided not to grant leave to appeal, whereby the decision to reject the author's application became final and not subject to further appeal.

4.9 With regard to the admissibility of the communication, the State party submits that it is not aware of the present matter having been or being examined under another procedure of international investigation or settlement and acknowledges that all domestic remedies

have been exhausted, as required by article 2(c) and 2(d) of the Optional Protocol. However, it maintains that the author's claims fail to rise to the basic level of substantiation required for purposes of admissibility and should be declared inadmissible pursuant to article 2(e) of the Optional Protocol.

4.10 On the merits, the State party notes the author's claims that she has been discriminated against as a result of negative decisions adopted by the Swedish authorities and courts because her right to rehabilitation and good health has not been taken into consideration, and the principle of proportionality has not been applied. The State party further submits that the burden of proof for an alleged violation of the Convention, at least initially, rests with the author. This includes the onus of demonstrating the existence of the circumstances invoked in support of the complaint. It also points out, with reference to the request that the author be granted a building permit, that the Committee does not have the authority to overturn a judgement by a Swedish Court or a decision by a Swedish authority. Nor does it have the power to replace the domestic judgement or decision with a decision of its own. The Committee can only conclude either that the circumstances of the case reveal a violation of the Convention or that there has been no such violation.

4.11 The State party maintains that the author has merely referred to a number of articles of the Convention without advancing grounds for how her rights under these articles have been violated. Therefore, it can only explain in general terms how Swedish legislation relates to and fulfils the requirements contained in the articles that may be relevant in this case. Other articles referred to by the author do not have a bearing on the present case and the State party would not submit any comments with regard to them.

4.12 Article 5 of the Convention prescribes that all persons are equal before and under the law and prohibits any discrimination on grounds of disability. This is a fundamental and clear premise in Swedish legislation and follows from the Swedish Constitution. The relevant Act in this case, the Planning and Building Act, is applied in the same way to all, whether they have disabilities or not. Nor are there any clauses in the Act that might lead indirectly to discrimination against persons with disabilities. The rejection of the application for a building permit in this case is in no way due to the author's disability, but rather consistent with practice that applies equally to all.

4.13 As to the author's claim under article 19 of the Convention, there is nothing in Swedish legislation to prevent persons with disabilities from choosing their place of residence or way of life. All measures offered at municipal level, e.g. service accommodation, are non-compulsory for individuals. A number of alternative measures are available from municipalities in order to make it easier for individuals with specific needs to live in their own homes, e.g. contribution to home adaptation, personal assistance and home help.

4.14 With regard to the claims under articles 25 and 26 of the Convention, the State party recalls that in Sweden county councils have the obligation to provide health and medical services, including rehabilitation, to everyone who is resident in the county council area. Accordingly, it is not the application of the Planning and Building Act that should secure the author's rights in accordance with articles 25 and 26 of the Convention. Instead, these rights should be fulfilled by way of the county council carrying out its obligations according to the Health and Medical Services Act. The State party maintains that it must be up to the author to account for her contacts with the county council and for the treatment she has been offered, for example by submitting relevant medical documentation. However,

she has not made any such submissions in this regard. In the absence of an account by the applicant on this issue, the State party assumes that the author has been offered treatment in accordance with her needs. The author has not substantiated her allegation that she cannot obtain adequate care if she is not allowed to build a hydrotherapy pool in accordance with her request for a building permit.

4.15 In the light of the foregoing, the laws applied in the present case are not discriminatory. The decisions and judgements delivered by domestic authorities were not motivated by the author's disability and are therefore not discriminatory within the meaning of article 5 of the Convention. Moreover, none of these decisions violates article 5 or any other provisions of the Convention in any other way.

4.16 In conclusion, the State party submits that the present communication does not reveal a violation of the Convention. Since the author's claims under various articles of the Convention fail to rise to the basic level of substantiation, the communication should be declared inadmissible for lack of substantiation.

Author's comments on the State party's observations

5.1 On 14 November 2011, the author provided her comments on the State party's observations on admissibility and merits.

5.2 The author claims that the refusal to issue building permission amounts to discrimination, since all possible avenues of recourse that might ensure her rehabilitation, as a "functionally disabled person", have been exhausted. The opposition to the construction of a hydrotherapy pool in connection with the adapted accommodation in her home would deprive her of treatment absolutely necessary for her health condition. She submits that the application of laws and regulations which appear to be neutral has proved to be unfair towards her and will have an indirect effect of discrimination. The fact that a Swedish "functionally disabled citizen" cannot obtain the lawful right to adequate rehabilitation, through an application for building permission for special adaptation of her home, will amount to a violation of the Convention.

5.3 The author notes that the State party in its observations contends that no violation of the Convention has taken place, and refers to a building permission case from 1990 which received a negative decision against a departure from the plan of an area of 125 square metres – a considerably larger area than the building extension of 45 square metres requested by her. The author questions the relevance of the reference to a case dating from 1990, on a matter of a completely different kind. She claims that, in her case, a restrictive interpretation of the Building Act of 1987 regarding protected land has been applied.

5.4 The author further notes that, notwithstanding the magnitude of the departure from the plan in the building permission, there is still a requirement for life-enhancing circumstances for a "functionally disabled person" with a rightful claim to equality with regard to quality of life. Claims for the applicability of the principle of proportionality can be made in a case where the purpose and interest of the individual would strongly outweigh the interests of society at large. A nominally larger departure from the Planning and Building Act can probably be regarded as relatively small from the point of view of society, while it would be of vital importance in ensuring her quality of life, including her right to good health.

5.5 It is right that both the Planning and Building Act and the Health Act are stipulated, to uphold the building regulations and health rights relating to citizens with regard both to building norms and health laws. However, the author claims that her rights as a "functionally disabled person" cannot be accommodated via the national health laws. Since a departure from the Planning and Building Act is not permitted for the specific purpose, a disabled person is not being provided with proper health care appropriate to his/her condition. As a result, the "functionally disabled person" in question is exposed to discrimination, since no measures have been taken in order to comply with her right to good health care.

5.6 According to the author, due to the degree of disability and the state of her health, her right to rehabilitation, as set out in articles 25 and 26 of the Convention, can only be secured by way of an application for building permission. In the author's opinion, the extent of the State party's reliance on the national health laws is of little concern when the obvious need of a person with a disability cannot be met through the interpretation and application of these laws.

5.7 With regard to the State party's argument that everyone is equal before the law, the author submits that it must be possible to apply the law in such a manner that no one in society suffers. She claims that, by ratifying the Convention, the State party has undertaken to provide for the rights of persons with disabilities.

5.8 As to her health situation, the author submits that the doctor who issued the certificate has his own practice and is connected to the County Council. She further claims that relevant medical documentation was supplied with the application for the building permission. This doctor visits her regularly since she is no longer able to go to the County Council's institutions for health care and rehabilitation due to her seriously reduced functional ability. Information as to her psychological condition, as well as the medical measures warranted, was provided with the application for building permission and with the subsequent appeals. The national health laws referred to by the State party cannot be claimed to apply to the author's case.

5.9 The author has also provided a supplementary medical report issued by the Head of the Neurology Clinic of the Örebro University Hospital on 24 October 2007. According to the report, the author's "condition is hereditary and medically untreatable. Different types of aids can be offered but they must always be adapted to the situation of the patient […] Treatment is also often required in the home since the patient cannot be moved to different institutions for treatment. This leads to higher costs of living and handicap compensation can therefore come into question when an assessment has been completed".[4] The author concludes that treatment at home was previously prescribed in 2007 and that, in order to maintain the muscular structure, protect the connective tissue and reduce the pain which cannot be treated with medicine, her last resort is rehabilitative hydrotherapy at home. Her already limited anatomical ability would not allow for any other form of treatment. The right to the claims of the National Health law can only be fulfilled by allowing a specific departure from the plan in the building permission for her special needs.

[4] Translation provided by the author.

State party's further observations

6. On 10 January 2012, the State party informed the Committee that it maintains its observations on admissibility and merits of the communication, as submitted to the Committee on 5 September 2011.

Issues and proceedings before the Committee

Consideration of admissibility

7.1 Before considering any claims contained in a communication, the Committee on the Rights of Persons with Disabilities must, in accordance with rule 65 of its rules of procedure, decide whether or not it is admissible under the Optional Protocol to the Convention.

7.2 The Committee has ascertained, as required under article 2(c) of the Optional Protocol, that the same matter has not already been examined by the Committee or has been or is being examined under another procedure of international investigation or settlement. The Committee notes that no objection has been raised by the State party in connection with the exhaustion of domestic remedies and considers that the requirements of article 2(d) of the Optional Protocol have been met.

7.3 The Committee considers that articles 1 and 2 of the Convention, in view of their general character, do not in principle give rise to free-standing claims under the Convention, and therefore can be invoked in the framework of individual communications under the Optional Protocol only in conjunction with other substantive rights guaranteed under the Convention. In the circumstances of the present communication, the Committee considers that this part of the communication is inadmissible under article 2(e) of the Optional Protocol.

7.4 The Committee notes that the author has invoked a violation of article 9 of the Convention (accessibility), 10 (right to life), 14 (liberty and security of the person), 20 (personal mobility), without however providing further substantiation as to how these provisions may have been violated. Therefore, the Committee considers that these claims are insufficiently substantiated, for purposes of admissibility, and are thus inadmissible under article 2(e), of the Optional Protocol.

7.5 The Committee considers that the author's remaining allegations under articles 3, 4, 5, 19, 25, 26 and 28, of the Convention, have been sufficiently substantiated, for purposes of admissibility, and proceeds to their examination on the merits.

Consideration of the merits

8.1 The Committee on the Rights of Persons with Disabilities has considered this communication in the light of all the information received, in accordance with article 5 of the Optional Protocol and rule 73, paragraph 1, of the Committee's rules of procedure.

8.2 The Committee takes note of the author's allegations of discrimination in view of the fact that the State party's competent authorities, when considering her application for permission to build a hydrotherapy pool that would meet her rehabilitation needs, failed to apply the principle of proportionality and weigh her interests in using the plot of land that she owns for the construction of the hydrotherapy pool against the general interest in preserving the area in question in strict compliance with the development plan. It further

notes the State party's argument that the Planning and Building Act is applied equally to all, whether the person has a disability or not, and that the Act contains no clauses that would indirectly lead to discrimination against persons with disabilities.

8.3 The Committee recalls, with reference to article 2, paragraph 3, of the Convention, that "'discrimination on the basis of disability' means any distinction, exclusion or restriction on the basis of disability which has the purpose or effect of impairing or nullifying the recognition, enjoyment or exercise, on an equal basis with others, of all human rights and fundamental freedoms in the political, economic, social, cultural, civil or any other field." The Committee observes that a law which is applied in a neutral manner may have a discriminatory effect when the particular circumstances of the individuals to whom it is applied are not taken into consideration. The right not to be discriminated against in the enjoyment of the rights guaranteed under the Convention can be violated when States, without objective and reasonable justification, fail to treat differently persons whose situations are significantly different.

8.4 The definition of discrimination on the basis of disability in article 2, paragraph 3, of the Convention explicitly states that "it includes all forms of discrimination, including denial of reasonable accommodation". Additionally, article 2, paragraph 4, defines reasonable accommodation as "necessary and appropriate modification and adjustments not imposing a disproportionate or undue burden, where needed in a particular case, to ensure to persons with disabilities the enjoyment or exercise on an equal basis with others of all human rights and fundamental freedoms".

8.5 In the present case, the information before the Committee shows that the author's health condition is critical and access to a hydrotherapy pool at home is essential and an effective – in this case the only effective – means to meet her health needs. Appropriate modification and adjustments would thus require a departure from the development plan, in order to allow the building of a hydrotherapy pool. The Committee notes that the State party has not indicated that this departure would impose a "disproportionate or undue burden". In this connection, the Committee notes that the Planning and Building Act allows for departure from the development plan, and that it can thus accommodate, when necessary in a particular case, an application for reasonable accommodation aimed at ensuring to persons with disabilities the enjoyment or exercise of all human rights on an equal basis with others and without any discrimination. On the basis of the information before it, the Committee therefore cannot conclude that the approval of a departure from the development plan in the author's case would impose a "disproportionate or undue burden" on the State party.

8.6 The Committee recalls that article 25 of the Convention, when referring to the right to health, stipulates that "States Parties recognize that persons with disabilities have the right to the enjoyment of the highest attainable standard of health without discrimination on the basis of disability. States Parties shall take all appropriate measures to ensure access for persons with disabilities to health services that are gender-sensitive, including health-related rehabilitation".

8.7 At the same time, the Convention refers to habilitation and rehabilitation in article 26, and states that "States Parties shall take effective and appropriate measures, including through peer support, to enable persons with disabilities to attain and maintain maximum independence, full physical, mental, social and vocational ability, and full inclusion and participation in all aspects of life", through comprehensive habilitation and rehabilitation

services and programmes, in such a way that these services and programmes "begin at the earliest possible stage, and are based on the multidisciplinary assessment of individual needs and strengths".

8.8 In this regard, the Committee notes that the State party, when rejecting the author's application for a building permit, did not address the specific circumstances of her case and her particular disability-related needs. The Committee therefore considers that the decisions of the domestic authorities to refuse a departure from the development plan in order to allow the building of the hydrotherapy pool were disproportionate and produced a discriminatory effect that adversely affected the author's access, as a person with disability, to the health care and rehabilitation required for her specific health condition. Accordingly, the Committee concludes that the author's rights under articles 5(1), 5(3), 25 and the State Party's obligations under article 26 of the Convention, read alone and in conjunction with articles 3 (b), (d), and (e), and 4(1) (d) of the Convention, have been violated.

8.9 The Committee further notes the author's claim that, in the absence of an indoor hydrotherapy pool at home, she will eventually have to enter a specialized health-care institution, and that the State party did not refute the author's allegations. In this regard, the Committee recalls the provision in article 19(b) of the Convention, which requires States parties to take effective and appropriate measures to facilitate full enjoyment by persons with disabilities of their equal right to live and participate in their communities by ensuring that persons with disabilities "have access to a range of in-home, residential and other community support services, including personal assistance necessary to support living and inclusion in the community, and to prevent isolation or segregation from the community". The rejection of the author's application for a building permit has deprived her of access to hydrotherapy, the only option that could support her living and inclusion in the community. The Committee therefore concludes that the author's rights under article 19(b) of the Convention, have been violated.

8.10 Having reached this conclusion, the Committee does not consider it necessary to address the author's claims under article 28 of the Convention.

9. Acting under article 5 of the Optional Protocol to the Convention, and in the light of all the above considerations, the Committee is of the view that the State party has failed to fulfil its obligations under articles 5(1), 5(3), 19(b), 25 and 26, read alone and in conjunction with articles 3 (b), (d) and (e), and 4(1) (d), of the Convention. The Committee therefore makes the following recommendations to the State party:

1. Concerning the author: The State party is under an obligation to remedy the violation of the author's rights under the Convention, including by reconsidering her application for a building permit for a hydrotherapy pool, taking into account the Committee's Views. The State party should also provide adequate compensation to the author for the costs incurred in filing this communication;

2. General: the State party is under an obligation to take steps to prevent similar violations in the future, including by ensuring that its legislation and the manner in which it is applied by domestic courts is consistent with the State party's obligations to ensure that legislation does not have the purpose or effect of impairing or nullifying the recognition, enjoyment or exercise of any right for persons with disabilities on an equal basis with others.

10. In accordance with article 5 of the Optional Protocol and rule 75 of the Committee's rules of procedure, the State party shall submit to the Committee, within six months, a written response, including any information on any action taken in the light of the Views and recommendations of the Committee. The State party is also requested to publish the Committee's Views, to have them translated into the official language of the State party, and circulate them widely, in accessible formats, in order to reach all sectors of the population.

Judgment

Lord Justice Maurice Kay :

1. Disability can be expensive. It can give rise to needs which do not attach to the able-bodied. Ian Burnip and the late Lucy Trengove provide stark examples. Because of their severe disabilities they were assessed as needing the presence of carers throughout the night in rented flats in which they lived. For this reason they needed two-bedroom flats. In each case they were entitled to and received housing benefit (HB) but Birmingham City Council (in Mr Burnip's case) and Walsall Metropolitan Borough Council (in Ms Trengove's case) quantified it by reference to the one-bedroom rate which would apply to able-bodied tenants. The issue in their cases is whether this amounted to unlawful discrimination pursuant to Article 14 of the European Convention on Human Rights and Fundamental Freedoms (ECHR). Richard Gorry's case is somewhat different. He, his wife and their three children live in a four-bedroom rented house. Two of the children are girls who, at the material time, were aged 10 and 8. Both are disabled – one by Down's Syndrome, the other by Spina Bifida. For this reason it is inappropriate for them to share a bedroom in the way in which able-bodied sisters of those ages would be expected to do. The house is a four-bedroomed house but HB is provided by Wiltshire County Council by reference to the three-bedroomed rate which would apply to the family if the girls were not disabled. The same issue arises under Article 14. In all three cases, the properties in question are in the private rented sector. Different criteria would have applied in the social rented sector.

2. The three cases came to this Court by way of appeals from the Upper Tribunal. Sadly, Lucy Trengove died on 28 December 2011 but her case is being pursued by her estate in relation to the quantification of HB for the period prior to her death. The three cases were heard separately in the Upper Tribunal by different judges. The Burnip case was heard by Judge Howell QC who held that there was no contravention of Article 14: [2011] UKUT 23 (AAC). His decision was followed by Judge Jacobs in the Trengove case and by Judge Turnbull in the Gorry case.

The basic statutory provisions

3. Where a claimant has a local authority landlord, HB is paid by way of a rent rebate pursuant to section 134(1A) of the Social Security Administration Act 1992. In the private sector, however, HB is paid by way of a rent allowance. Section 134(1B) provides:

> "In any other case [*ie* in private rented accommodation] housing benefit shall take the form of a rent allowance funded and administered by the local authority for the area in which the dwelling is situated … "

This form of HB is calculated by reference to the number of bedrooms which the claimant and his or her family are deemed to need. The Housing Benefit Regulations 2006 are concerned with the number of "occupiers", who are defined by regulation 13 D(12) as:

> "the persons whom the relevant authority is satisfied occupy as their home the dwelling to which the claim or award relates

> except for any joint tenant who is not a member of the claimant's household."

4. The crucial provision is regulation 13 D(3):

> "The claimant shall be entitled to one bedroom for each of the following categories of occupier (and each occupier shall come within the first category only which applies to him) –
>
> (a) a couple (within the meaning of Part 7 of the Act);
>
> (b) a person who is not a child;
>
> (c) two children of the same sex;
>
> (d) two children who are less than 10 years old;
>
> (e) a child."

It follows from these provisions that the overnight carers in the Burnip and Trengove cases did not qualify as "occupiers". The accommodation was not their "home" within the meaning of regulation 13 D(12) because they lived elsewhere and only stayed overnight when working on rota. The Gorry sisters fell within regulation 13 D (3)(c) as "two children of the same sex", for whom one bedroom was the prescribed provision.

5. Although it came too late to affect this case, the circumstances in the Burnip and Trengove cases (but not the Gorry case) are now governed by an amendment which, from 1 April 2011, provides for "one additional bedroom in any case where the claimant or the claimant's partner is a person who requires overnight care (or in any case where both of them are)."

6. As I have said, regulation 13 D does not apply where a local authority is the landlord. In such a case, persons are allocated property in the public sector on the basis of their assessed housing needs, including needs resulting from disability.

Article 14

7. Domestic disability discrimination legislation – in particular the Disability Discrimination Act 1995 – does not feature in this case. The appellants rely entirely on Article 14 of the ECHR which provides:

> "The enjoyment of the rights and freedoms set forth in the Convention shall be secured without discrimination on any ground such as sex, race, colour, language, religion, political or other opinion, national or social origin, association with a national minority, property, birth or other status."

8. There are two important matters of common ground. First, disability is within the concluding words "or other status": see *AM (Somalia) v Entry Clearance Officer* [2009] EWCA Civ 634. Secondly, HB falls within the ambit of Article 1 of the First Protocol as a "possession": *Reg (RJM) v Secretary of State for Work and Pensions*

[2009] 1 AC 311. Accordingly, entitlement is covered by the opening words of Article 14: "The enjoyment of the rights … set forth in the Convention …". In these circumstances, it is not necessary to consider the appellants' alternative submission that they are covered by Article 14 when read with Article 8 which is concerned with the right to respect for a person's "private and family life, his home and his correspondence". We received no oral submissions on this alternative basis in view of the common ground about Article 1 of the First Protocol.

9. In view of the common ground, one can therefore proceed to the real issues which concern (1) whether there was discrimination on the ground of disability; and, if so, (2) whether any such discrimination (or difference in treatment) was justified. As the Grand Chamber stated in *Stec v United Kingdom* (2006) 43 EHRR 47 (at paragraph 51):

> "A difference in treatment is, however, discriminatory if it has no objective and reasonable justification; in other words, if it does not pursue a legitimate aim or if there is not a reasonable relationship of proportionality between the means employed and the aim sought to be realised. The Contracting State enjoys a margin of appreciation in assessing whether and to what extent differences in otherwise similar situations justify a different treatment."

Discrimination

10. The case for the appellants is not that the statutory criteria amount to indirect discrimination against the disabled. It is that, in one way or another, they have a disparate adverse impact on the disabled or fail to take account of the differences between the disabled and the able-bodied. In their skeleton argument and oral submissions, counsel for the appellants describe these ways of putting their case as "complementary and overlapping" rather than mutually exclusive.

11. That Article 14 embraces a form of discrimination akin to indirect discrimination in domestic law is well-known. Thus, in *DH v Czech Republic* (2008) 47 EHRR 3, the Strasbourg Court stated (at paragraph 175):

> "… a general policy or measure that has disproportionately prejudicial effects on a particular group may be considered discriminatory notwithstanding that it is not specifically aimed at that group."

The submission here is that, whilst the statutory criteria provided for an able-bodied person to be given HB which would be an adequate contribution towards his accommodation needs, they failed to make equivalent provision in relation to the severely disabled, whose needs are more costly. Although neither group was provided with a benefit which would amount to a complete subsidy, the shortfall in relation to those such as the appellants was significantly greater because their HB was geared to one room fewer than their objective needs.

12. The answer of the Secretary of State to this analysis is that it is flawed because it does not identify correct comparators. Drawing on the domestic case of *Lewisham*

Borough Council v Malcolm [2008] 1 AC 1399, it is suggested that the appropriate comparator is an able-bodied person who is in an otherwise identical position – for example, (in relation to the Burnip and Trengove cases) someone who needs an overnight carer during an unexpected but finite period of ill-health.

13. I do not accept that *Malcolm* provides the correct approach in the present context. It turned on the construction of section 24 of the Disability Discrimination Act 1995. The narrower construction favoured by the majority (Lords Bingham, Scott, Brown and Neuberger) was reached "not without misgiving" (Lord Bingham at paragraph 16) and "not without considerable misgivings" (Lord Neuberger at paragraph 139). It was understood by their Lordships to have a very limiting effect on the scope of the domestic statutory protection: see for example, Lord Brown (at paragraph 114) and Lord Neuberger (at paragraph 142), which unwanted damage has now resulted in amending legislation: see Equality Act 2010, section 15. It would be quite wrong to resort to *Malcolm* so as to produce a restrictive approach to Article 14. Indeed, one of the attractions of Article 14 is that its relatively non-technical drafting avoids some of the legalism that has affected domestic discrimination law. This was recognised by Baroness Hale in *AL (Serbia) v Secretary of State for the Home Department* [2008] 1 WLR 1434, at paragraphs 20-25, where she particularly identified the less complicated approach to comparators in Convention law. On the same basis, I would reject the attempt on behalf of the Secretary of State to criticise the appellants' case for not being founded on statistical evidence. Whilst such evidence can be important in an Article 14 case (see, for example, *Hoogendjik v Netherlands* (2005) 40 EHRR SE 22, at page 207), it is not a prerequisite. Where, as in the present case, a group recognised as being in need of protection against discrimination – the severely disabled – is significantly disadvantaged by the application of ostensibly neutral criteria, discrimination is established, subject to justification.

14. The appellants' alternative basis derives from *Thlimmenos v Greece* (2001) 31 EHRR 15, where the Strasbourg Court stated (at paragraph 44):

> "The Court has so far considered that the right under Article 14 not to be discriminated against in the enjoyment of rights guaranteed under the Convention is violated when States treat differently persons in analogous situations without providing an objective and reasonable justification. However, the Court considers that this is not the only facet of the prohibition of discrimination in Article 14. The right not to be discriminated against in the enjoyment of the rights guaranteed under the Convention is also violated when States without an objective and reasonable justification fail to treat differently persons whose situations are significantly different." (Emphasis added)

15. This imposes a positive obligation on the State to make provision to cater for the significant difference. In *AM (Somalia)*, above, such a positive obligation was in play in relation to the disabled but, in the event, the Secretary of State was able to establish justification (the subsequent appeal to the Supreme Court was on a different issue).

16. The skeleton argument on behalf of the appellants puts this aspect of their case as follows:

> "The difference between a disabled person such as the [appellant] and a non-disabled person is that the disabled person has a level of need which is greater to enable him to live in a dignified manner in the community. The State's failure to recognise this difference by making adequate provision represents a breach of the *Thlimmenos* obligation to treat different cases in a different way."

Different treatment only arose on 1 April 2011, and then only in relation to the Burnip and Trengove cases, not the Gorry case.

17. On behalf of the Secretary of State, Mr Tim Eicke QC submits that the *Thlimmenos* principle is not as wide as is suggested. He submits that there is no example of the courts applying *Thlimmenos* so as to require a state to take positive steps to allocate a greater share of public resources to a particular person or group. The limited instances in which the principle has been invoked concern exclusionary rules (as in *Thlimmenos* itself and *AM (Somalia)*).

18. Whilst it is true that there has been a conspicuous lack of cases post- *Thlimmenos* in which a positive obligation to allocate resources has been established, I am not persuaded that it is because of a legal no-go area. I accept that it is incumbent upon a court to approach such an issue with caution and to consider with care any explanation which is proffered by the public authority for the discrimination. However, this arises more at the stage of justification than at the earlier stage of considering whether discrimination has been established. I can see no warrant for imposing a prior limitation on the *Thlimmenos* principle. To do so would be to depart from the emphasis in Article 14 cases which, as Baroness Hale demonstrated in *AL (Serbia)* (at paragraph 25), is "to concentrate on the reasons for the difference in treatment and whether they amount to an objective and reasonable justification". I would apply the same approach to a *Thlimmenos* failure to treat differently persons whose situations are significantly different.

19. It follows that, in my judgment, the appellants fall within Article 14, subject to justification. I feel able to reach this conclusion even without resort to the United Nations Convention on the Rights of Persons with Disabilities (CRPD), which is relied upon by Mr Richard Drabble QC and further expounded upon by Ms Helen Mountfield QC on behalf of the Equality and Human Rights Commission. Mr Eicke seeks to marginalise the CRPD for present purposes by relying on *Reg (NM) v London Borough of Islington* [2012] EWHC 414 (Admin), in which Sales J, *obiter*, was inclined to disregard the CRPD as an aid to ascertaining the scope of Article 14 (see paragraphs 99-108). However, in *AH v West London MHT* [2011] UKUT 74 (AAC), the Upper Tribunal, presided over by Carnwath LJ, had taken a more expansive view (at paragraphs 15 and 16):

> "The CRPD prohibits discrimination against people with disabilities and promotes the employment of fundamental rights for people with disabilities on an equal basis with others …
>
> The CRPD provides the framework for Member States to address the rights of persons with disabilities. It is a legally binding international treaty that comprehensively clarifies the

> human rights of persons with disabilities as well as corresponding obligations on state parties. By ratifying a Convention, a state undertakes that wherever possible its laws will conform to the norms and values that the Convention enshrines."

20. The CRPD was adopted by the General Assembly on 13 December 2006. It was ratified by the United Kingdom on 7 August 2009 and by the European Union on 23 December 2010. Article 4 obliges State Parties to:

> "take all appropriate measures, including legislation, to modify or abolish existing laws, regulations, customs or practices that constitute discrimination against persons with disabilities."

Article 5(3) provides that:

> "in order to promote equality and eliminate discrimination, State Parties shall take all appropriate steps to ensure that reasonable accommodation is provided."

Article 19 provides:

> "State Parties … recognise the equal right of all persons with disabilities to live in the community, with choices equal to others, and shall take effective and appropriate measures to facilitate full engagement by persons with disabilities of this right and their full inclusion and participation in the community by ensuring that
>
> (a) Persons with disabilities have the opportunity to choose their place of residence and where and with whom they live on an equal basis with others and are not obliged to live in a particular living arrangement;
>
> (b) Persons with disabilities have access to a range of in-home, residential and other community support services, including personal assistance necessary to support living and inclusion in the community and to prevent isolation or segregation from the community;
>
> (c) Community services and facilities are available on an equal basis to persons with disabilities and are responsive to their needs."

These provisions resonate in the present case, even though they do not refer specifically to the provision of a state subsidy such as HB.

21. In the recent past, the Strasbourg Court has shown an increased willingness to deploy other international instruments as aids to the construction of the ECHR. In *Demir and Baykara v Turkey* (2009) 48 EHRR 54, the Grand Chamber said (at paragraph 85) that

> "in defining the meaning of terms and notions in the text of the [ECHR], [it] can and must take into account elements of international law other than the [ECHR], the interpretation of such elements by competent organs and the practice of European States reflecting their common values."

There the Grand Chamber was construing Article 11 (freedom of association) by reference to International Labour Organisation Conventions and the European Social Charter. In the context of Article 14, in *Opuz v Turkey* (2010) 50 EHRR 28, the Court said (at paragraph 185):

> "… when considering the definition and scope of discrimination against women, in addition to the more general meaning of discrimination as determined in its case-law … the Court has to have regard to provisions of more specialised legal instruments and the decisions of international legal bodies on the question of violence against women."

These cases do not appear to have been drawn to the attention of Sales J in *NM*.

22. The response of the Secretary of State is to seek to limit this approach by drawing fine distinctions as between different international instruments and in relation to their maturity or chronology. It seems to me, however, that such rearguard action is inappropriate. If the correct legal analysis of the meaning of Article 14 discrimination in the circumstances of these appeals had been elusive or uncertain (and I have held that it is not), I would have resorted to the CRDP and it would have resolved the uncertainty in favour of the appellants. It seems to me that it has the potential to illuminate our approach to both discrimination and justification.

23. As to justification, I have read in draft and completely agree with the judgment of Henderson J.

Conclusion

24. It follows from what I have said that (1) the appellants have established a *prima facie* case of discrimination pursuant to Article 14 and (2) for the reasons set out in the judgment of Henderson J, the Secretary of State has failed to establish objective and reasonable justification for the discriminatory effect of the statutory criteria. I would therefore allow the appeals from the Upper Tribunal. I would make a declaration to that effect. The question then arises as to whether any further relief is appropriate. In so far as the Burnip and Trengove cases are concerned, the Regulations have been amended as from 1 April 2011. Mr Eicke submits that we should go no further than to grant declaratory relief, leaving it to the Secretary of State as to how to deal with the rectification of the discrimination in all three cases. Such an approach accords with the course taken in *Francis v Secretary of State for Work and Pensions* [2006] 1 WLR 3202. I consider it particularly appropriate in a case in which the Secretary of State is responsible for the Regulations but local authorities (who are respondents to these appeals but have taken no part in them) are responsible for the provision of HB to claimants.

Lord Justice Hooper:

25. I have read the judgments of Maurice Kay LJ and Henderson J in draft. I agree with them and do not wish to add anything.

Mr Justice Henderson:

26. For the reasons given by Maurice Kay LJ, I agree that the appellants have established a *prima facie* case of discrimination pursuant to Article 14. It therefore remains to consider the question of justification. The test to apply for this purpose was stated by the Grand Chamber in *Stec v United Kingdom* at paragraph 51, cited by Maurice Kay LJ in paragraph 9 above. In short, the Secretary of State must establish that there was at the material time objective and reasonable justification for the discriminatory effect of the relevant HB criteria as they applied to the particular circumstances of the appellants. It is elementary that what has to be justified is not the scheme of HB as a whole, or the general policy of calculating HB in the private sector by reference to the number of bedrooms deemed to be needed by "occupiers", but rather the difference in treatment resulting from the application of those criteria which has been held to infringe Article 14: see *A v Secretary of State for the Home Department* [2004] UKHL 56, [2005] 2 AC 68, at paragraph 68 (per Lord Bingham) and *AL (Serbia) v Home Secretary* [2008] UKHL 42, [2008] 1 WLR 1434, at paragraph 38 (per Baroness Hale).

27. As the Grand Chamber explained in *Stec* at paragraph 51, a difference of treatment lacks objective and reasonable justification "if it does not pursue a legitimate aim or if there is not a reasonable relationship of proportionality between the means employed and the aim sought to be realised". With regard to the margin of appreciation enjoyed by a Contracting State, the Court went on to say at paragraph 52:

> "The scope of this margin will vary according to the circumstances, the subject-matter and the background. As a general rule, very weighty reasons would have to be put forward before the Court could regard a difference in treatment based exclusively on the ground of sex as compatible with the Convention. On the other hand, a wide margin is usually allowed to the State under the Convention when it comes to general measures of economic or social strategy. Because of their direct knowledge of their society and its needs, the national authorities are in principle better placed than the international judge to appreciate what is in the public interest on social or economic grounds, and the Court will generally respect the legislature's policy choice unless it is "manifestly without reasonable foundation"."

28. Relying on this and other similar statements of the Strasbourg court, and on the observations of Lord Walker in *Reg (RJM) v Work & Pensions Secretary* [2008] UKHL 63, [2009] 1 AC 311, at paragraph 5, Mr Drabble QC submitted for the appellants that "very weighty reasons" would be needed to justify discrimination on grounds of congenital disability, which (like a person's sex) is

an innate and largely immutable characteristic, closely connected with an individual's personality and life chances. While I would accept that congenital disabilities of the kind suffered by Mr Burnip, Ms Trengove and Mr Gorry's daughters may in principle fall within the category of grounds for discrimination which can be justified only by very weighty reasons, I would nevertheless reject this submission for the same reasons that a similar submission was rejected by this Court in *AM (Somalia)*: see paragraphs 15 to 16 of the judgment of Maurice Kay LJ, and paragraphs 61 to 62 of the judgment of Elias LJ. Weighty reasons may well be needed in a case of positive discrimination, but there is no good reason to impose a similarly high standard in cases of indirect discrimination, or cases where the discrimination lies in the failure to make an exception from a policy or criterion of general application, especially where questions of social policy are in issue. As in *AM (Somalia)*, therefore, the proportionality review applicable in the present case must be made by reference to the usual standard, not an enhanced one.

Housing benefit in context: the social security benefits available to the appellants

(a) Mr Burnip

29. In order to evaluate the Secretary of State's case on justification, it is first necessary to have a fuller understanding of the function, operation and interaction of the various social security benefits which were available to the appellants. Mr Eicke submitted on behalf of the Secretary of State that it would be wrong to view the HB paid to each appellant in isolation, and he relied in particular on the detailed analysis of the relevant benefits background contained in the decision of the Upper Tribunal in Mr Burnip's case. I agree that this is in principle the correct approach, and because we have the benefit of Judge Howell QC's helpful analysis in that case, it is convenient to begin with Mr Burnip.

30. At the relevant time in 2008, Mr Burnip had three sources of income apart from HB: incapacity benefit, disability living allowance and his student loan. Of these, the first two were directly related to his disability, while the third, his student loan, was of the normal type and amount for his course at the University of Aston and therefore needs no further comment.

31. Incapacity benefit is a contributory benefit, which was payable at the material time pursuant to sections 30A to 30E of the Social Security Contributions and Benefits Act 1992 ("SSCBA 1992") and regulations made thereunder. Incapacity benefit is either short-term (for periods of incapacity for work of up to 364 days) or long-term (for longer periods). In view of his permanent disability, Mr Burnip was entitled to long-term incapacity benefit even though he was a student, had never been in work, and had never paid national insurance contributions. The amount of incapacity benefit which he received as at 6 June 2008 was £102.25 per week.

32. Disability living allowance is a non-contributory benefit, which was payable at the material time pursuant to sections 71 to 76 of SSCBA 1992 and associated regulations. It has two components: a care component and a mobility component. Mr Burnip was in receipt of the top rate of each component, totalling £113.75 per week as

at 6 June 2008. He was entitled to the top rate of the care component because (relevantly) he satisfied the requirements of being so severely disabled physically as to require care from another person both throughout the day and at night: see section 72(1)(b) and (c) and (4)(a). He was entitled to the higher rate of the mobility component because, put shortly, his physical disablement meant that he was unable to walk: ibid, section 73(1)(a) and (11)(a).

33. I come on now to the calculation of Mr Burnip's HB. In broad terms, HB is a weekly welfare benefit which is intended to help people on low incomes to meet the cost of their rent. Like income support and council tax benefit, it is an "income-related benefit" within Part VII of SSCBA 1992: see section 123(1)(d). The amount of HB, as explained below, depends on the relationship between a claimant's actual income on the one hand, his "applicable amount" (a statutory prescribed amount representing what the claimant is taken to need to live on) on the other hand, and the rent which he has to pay. In the private sector, HB is received as a weekly allowance. In the social rented sector, it is given effect by means of a rent rebate.

34. In the social sector, there was at the material time (and still is) no requirement to refer a claim for housing benefit paid in the form of rent allowance to the rent officer for a rent determination (regulation 14(1)(a) of the Housing Benefit Regulations 2006 (SI 2006/213)) save where the landlord is a registered housing association and the authority considers that the rent is unreasonably high (regulation 12B(6) of the 2006 Regulations). In the private sector, however, rents are generally higher, and there are restrictions on the amount that can be paid by way of HB. Before 2008, these restrictions were imposed by reference to a "local reference rent". We are concerned, however, with the local housing allowance ("LHA") rules which came into force nationally on 7 April 2008. As Maurice Kay LJ has already explained, those rules use a system of flat rate allowances payable for categories of property determined by reference to the number of bedrooms to which the claimant is entitled, in accordance with regulation 13D(3) of the 2006 Regulations. LHAs are set for each "broad rental market area" by rent officers, on the basis of the median rent for each category of property within the area. The boundaries of the broad rental market areas are also set by rent officers, taking account of a number of specified criteria (such as the availability of facilities and services for health, education, recreation, banking and shopping, and their accessibility by public and private transport). So, for example, there is a total of 14 broad rental market areas in the Greater London area. The maximum weekly HB which can be claimed by a private sector tenant is thus the LHA for the size category of property to which, by application of the bedroom test, he or she is entitled.

35. By virtue of SSCBA 1992 section 135(1), a claimant's "applicable amount" in relation to any income-related benefit is to be prescribed by regulations; and since Mr Burnip was a severely disabled person, it had to include an amount in respect of his disability (section 135(5)). Mr Burnip's weekly applicable amount from 9 June 2008 was £136.75, made up (as Judge Howell explained in para [21] of the Upper Tribunal's decision) of the standard allowance for a single claimant under 25 of £47.95, plus three separate and cumulative premiums for which his circumstances qualified him under Part 3 of Schedule 3 to the 2006 Regulations: the disability premium for a single person of £25.85; the enhanced disability premium of £12.60; and the severe disability premium of £50.35.

36. It is convenient at this point to note the qualification which entitled Mr Burnip, as a single claimant, to the severe disability premium of £50.35 per week. The conditions (set out in para 14(2)(a) of Schedule 3) were that he was in receipt of the care component of disability living allowance at the higher or middle rate; that (subject to irrelevant exceptions) he had no non-dependents aged 18 or over normally residing with him; and that no person was in receipt of a carer's allowance (under section 70 of SSCBA 1992) in respect of caring for him.

37. As I have already noted, Mr Burnip's actual weekly income at this date (apart from HB) had three components: his incapacity benefit of £102.25, his disability living allowance of £113.75, and his student loan, the apportioned weekly amount of which was £72.09. His total weekly income was therefore £288.09. Of this amount, however, as Judge Howell explained in para [22] of the Upper Tribunal's decision:

> "… the whole of the disability living allowance is disregarded from the means testing calculation, and after the deduction of smaller allowable amounts from the student loan for books and travel expenses, [Mr Burnip] was left with a reckonable income for housing benefit purposes of £149, exceeding his applicable amount by £12.25."

38. Where (as in Mr Burnip's case) the claimant's reckonable income exceeds his applicable amount, the weekly HB is reduced by 65% of the excess (SSCBA 1992 section 130(3)(b) and regulations made thereunder). Mr Burnip's maximum eligible rent, based on entitlement to one bedroom, was £103.85. Accordingly, the sum which he actually received as HB was £103.85 less 65% of £12.25 (i.e. £7.96), making £95.89. This was the figure shown on a corrected benefit decision notice issued to him by Birmingham City Council on 12 August 2008. It represented a shortfall of £59.88 when compared with the weekly rent of £155.77 which Mr Burnip in fact had to pay to his landlord.

39. If Mr Burnip had been entitled under the 2006 Regulations to a property with two bedrooms, his maximum eligible rent would have been £126.92 per week, or £23.07 more than the single bedroom rate of £103.85. His actual income would have remained the same, so the shortfall when compared with the rent which he actually paid would also have been correspondingly reduced, to £36.81 from £59.99. Thus, if the present appeal succeeds, the result would be only to ameliorate, not to eliminate, the amount of the shortfall.

40. Judge Howell appears to have taken the view that, if Mr Burnip's appeal were to succeed, he would lose the £50.35 severe disability premium included in the calculation of his applicable amount. In para 36 of the Upper Tribunal decision, he said this:

> "If the claimant had been treated as having another non-dependent adult living with him in his flat, his maximum allowable benefit would have increased to the two-room category (c) rate of £126.92, but the advantage from this would have been more than offset by the loss of the £50.35 severe disability premium (which is for severely disabled people living on their own without another such adult: cf. paragraph

> 14(2)(a)(ii) and (iv) of Schedule 3) and the combined effect would have reduced his weekly housing benefit to £86.23."

With respect to Judge Howell, however, I am satisfied that this is wrong, and Mr Eicke did not seek to argue the contrary. The personal circumstances which entitled Mr Burnip to the severe disability premium (see paragraph … above) would have remained precisely the same, even if he were treated as entitled to a maximum eligible rent on the two-bedroom basis. There is no process of statutory deeming which would require him to be treated for the purposes of the severe disability premium as if he did in fact have another non-dependent adult living with him.

41. The shortfall which I have identified brings me to the last benefit which needs to be considered in Mr Burnip's case, namely discretionary housing benefit. Under The Discretionary Financial Assistance Regulations 2001 (SI 2001/1167, "the 2001 Regulations") a local authority has power to make payments by way of financial assistance, called "discretionary housing payments", to persons who are entitled to HB and who "appear … to require some further financial assistance … in order to meet housing costs" (Regulation 2(1)). By virtue of Regulation 2(2), a local authority has a discretion whether or not to make discretionary housing payments in a particular case, and as to the amount of the payments and the period for which they are made. There is no definition of "further financial assistance" in the 2001 Regulations, and although discretionary housing payments must be claimed, there is no prescribed procedure for making such claims. There is an upper cash limit on the total amount of such payments that an authority may award, pursuant to Article 7 of The Discretionary Housing Payment (Grants) Order 2001 (SI 2001/2340).

42. The DWP produces a "Best Practice Guide" for the making of discretionary housing payments. The edition of this guide in force at the relevant time was promulgated in March 2008. This guidance made it clear that a discretionary housing payment could be made where the LHA did not meet the claimant's rent, and gave as an example of medical circumstances which an authority may wish to consider "Does the claimant require an extra room because of a health problem that affects them or a member of their household?" The guidance also made it clear that it was entirely up to the authority to decide how much of a shortfall to meet by way of a discretionary housing payment, provided only that the combination of HB and the payment did not exceed the weekly eligible rent on the claimant's home. Payments could be made either in advance or in arrears, and for such length of time as the authority might decide, including for an indefinite period until the claimant's circumstances changed.

43. During the period covered by his appeal, Mr Burnip was awarded discretionary housing payments as follows. From 9 June 2008 to 31 March 2009, he received payments of £40 per week. This award was confirmed in a letter to him from Birmingham City Council dated 18 August 2008, which warned him that, as funds were limited, there was no guarantee that his award would continue after 31 March 2009 and he would need to reapply. In the event, no award was made to him between March and May 2009, and between May and November 2009 he received only £15 per week (which was £8.07 less than the difference between the one and two bedroom rates of LHA). It can be seen, therefore, that not only were the awards discretionary and short term, but there was a period during which no award at all was made, and even when Mr Burnip was in receipt of an award he could not rely upon it to

eliminate the difference between the one and two bedroom rates of LHA, let alone the full amount of the shortfall from the rent which he actually had to pay.

44. Against this detailed background, can it be said that the wider benefits context provides an objective and reasonable justification for the discrimination against Mr Burnip which we have found to be established in relation to the amount of his HB? In my judgment, the following considerations strongly suggest a negative answer to this question.

45. First, I think it is necessary to draw a clear distinction between the benefits which Mr Burnip was entitled to claim for his subsistence, and those which he was entitled to claim in respect of his housing needs. His incapacity benefit and disability living allowance were intended to meet (or help to meet) his ordinary living expenses as a severely disabled person. They were not intended to help with his housing needs. This is demonstrated, in my view, not only by the availability of HB and discretionary housing payments as separate benefits with separate rules applicable to them, but also by the way in which HB is structured. As I have explained, the amount of HB is fixed by reference to an applicable amount which represents what the claimant is taken to need to live on, and if a claimant's reckonable income exceeds his applicable amount, the amount of HB is reduced by 65% of the excess. Furthermore, Mr Burnip's applicable amount included the three disability premiums which I have mentioned, while the whole of his disabled living allowance was disregarded in the calculation of his reckonable income. Thus it was only if (in broad terms) his incapacity benefit and student loan together exceeded his applicable amount that any reduction would fall to be made in the amount of his HB; and to the extent that there was such an excess, the HB rules themselves prescribed how it was to be taken into account. It would therefore be wrong in principle, in my judgment, to regard Mr Burnip's subsistence benefits as being notionally available to him to go towards meeting the shortfall between his housing- related benefits and the rent he had to pay.

46. Secondly, it is clear on the evidence that Mr Burnip's objectively verifiable need was for a flat with two bedrooms, and that the maximum LHA available to him on the one bedroom basis left a substantial shortfall from the rent which he had to pay to his landlord. Discretionary housing payments were in principle available as a possible way of bridging this gap, but they cannot in my judgment be regarded as a complete or satisfactory answer to the problem. This follows from the cumulative effect of a number of separate factors. The payments were purely discretionary in nature; their duration was unpredictable; they were payable from a capped fund; and their amount, if they were paid at all, could not be relied upon to cover even the difference between the one and two bedroom rates of LHA, and still less the full amount of the shortfall. To recognise these shortcomings is not in any way to belittle the valuable assistance that discretionary housing payments are able to provide, but is merely to make the point that, taken by themselves, they cannot come anywhere near providing an adequate justification for the discrimination in cases of the present type.

47. A further aspect of the problem is that housing, by its very nature, is likely to be a long term commitment. This is particularly so in the case of a severely disabled person, because of the difficulty in finding suitable accommodation and the probable need for substantial physical alterations to be made to the property in order to adapt it to the person's needs. Before undertaking such a commitment, therefore, a disabled person needs to have a reasonable degree of assurance that he will be able to pay the

rent for the foreseeable future, and that he will not be left at the mercy of short term fluctuations in the amount of his housing-related benefits. For the reasons which I have given, discretionary housing payments cannot in practice provide a disabled person with that kind of assurance.

(b) Ms Trengove

48. Having dealt at some length with the position of Mr Burnip, I can now deal much more briefly with that of Ms Trengove. Although there are differences of detail, I consider that in all essential respects her case was comparable with Mr Burnip's, and that the same result should therefore follow. Nor did Mr Eicke argue that any distinction should be drawn between them.

49. Having previously lived at home with her parents, in October 2008 Ms Trengove moved into a two bedroom flat. The actual rent for the property was £109.62 per week. The amount which she received as HB was £80.85 per week, calculated by reference to a one bedroom LHA of £91.15 for the relevant area. This left a shortfall of £28.77 per week. The LHA rate for two bedrooms was £114.92, so if it were applicable (as the First-tier Tribunal held in her favour that it was) she would have been entitled to receive the full amount of her weekly rent by way of HB.

50. Ms Trengove was subsequently awarded income support. Income support is a further income-related benefit (see section 123(1)(a) of SSCBA 1992), to which I have not yet referred. The basic conditions for its payment are set out in section 124 of SSCBA 1992 and supporting regulations. It includes premiums for disability, severe disability and enhanced disability similar to those which apply in calculating the applicable amount for HB purposes. In Ms Trengove's case, the effect of the award of income support was to entitle her to the full single room rate of LHA of £91.15 per week, thereby reducing her weekly shortfall from £28.77 to £18.47. From March 2009 onwards, Ms Trengove was awarded discretionary housing payments which met the full amount of the shortfall. However, she received no discretionary housing payments between October 2008 and March 2009, leaving the whole of the shortfall unrelieved for that period.

51. It is also worth noting in this context what the First-tier Tribunal said in relation to the discretionary housing payments received by Ms Trengove (at paragraph 27):

> "Although I accept that she has benefited from discretionary payments by the Local Authority which have covered the difference between the Housing Benefit allowed and the rent payable, I consider it extremely unlikely that she and her family would have taken the risk of acquiring the responsibilities of a tenant if she could only pay the rent with the help of discretionary sums payable out of a capped fund with eligibility re-assessed every 12 weeks. It seems to me very much more probable that without entitlement by right to assistance with the full rent, [Ms Trengove's] options would be limited to living with her parents or living in residential care. Neither of these options is desired either by [Ms Trengove] or her parents, and I accept that professional agencies involved with her care have

> also been very keen that she should have an opportunity to live independently."

(c) Mr Gorry

52. In the case of Mr Gorry, the information available to us is relatively scanty. The decision of the First-tier Tribunal contains no findings about the benefits available to the family, and the decision of Judge Turnbull in the Upper Tribunal does not deal with the position in detail. He records, however, that Mr Gorry was at the material time in receipt of income support and carer's allowance; that his wife was in receipt of incapacity benefit, disability living allowance, child tax credits and child benefit; and that, in addition, they both received disabled living allowance in respect of each of their two daughters. It further appears from paragraph 27 of his decision that disability premiums were added in the calculation of the amount of child tax credit for each daughter. As one would expect, therefore, the family was in receipt of substantial disability-related benefits, but as in the case of Mr Burnip I see no reason to doubt that these benefits were all essentially subsistence benefits.

53. In relation to housing, Judge Turnbull records that the house in which Mr Gorry and his family lived was privately rented, at a rent of £995 per month (equivalent to £229.61 per week). The three bedroom rate of HB paid to Mr Gorry at the relevant time was £155.77 per week, leaving a shortfall of £73.84. Between July and November 2008, no discretionary housing payments were made to Mr Gorry, so the whole amount of the shortfall remained unrelieved. For the remaining two months of the tenancy, which expired in January 2009, discretionary housing payments were awarded in the sum of £63.46 per week.

54. The family then moved to cheaper accommodation, with a weekly rent of £196.15. They remained in this accommodation until December 2010. The rate of HB paid to Mr Gorry remained unchanged at £155.77 per week, so the shortfall was now £40.38. Discretionary housing payments in that amount continued to be made until 2 April 2009, but Mr Gorry then had to make a fresh application which was refused in May 2010. Accordingly, he received no discretionary housing payments from 2 April 2009 until the end of this tenancy in December 2010.

55. For reasons similar to those which I have given in relation to Mr Burnip and Ms Trengove, I am satisfied that the housing-related benefits received by Mr Gorry should be viewed separately from the family's subsistence benefits; and I am also satisfied that the discretionary housing payments made to him, although they provided some temporary alleviation, cannot by themselves provide the necessary justification.

The wider picture

56. Apart from his submissions about the range of benefits available to the appellants, Mr Eicke also relied by way of analogy on the broader grounds which led this court to conclude in *AM (Somalia*), in a disability-related context, that the discrimination in question was justified, and on the application of those grounds in Mr Burnip's case by Judge Howell in the Upper Tribunal. In particular, Mr Eicke relied on the wide margin of appreciation accorded to the State in relation to "general measures of economic and social strategy" (*Stec* at paragraph 52, cited above); on the need for

clear rules in such areas; and on the fact that there will inevitably be some hard cases, wherever the line is drawn.

57. The appellant in *AM (Somalia)* was a male citizen of Somalia, who in 2004 had married in Ethiopia a British citizen who normally lived in London. She was disabled, and received various state benefits including disability living allowance. The appellant applied to settle in the United Kingdom as her spouse. The Immigration Judge found that the marriage was genuine, and accepted the wife's evidence about her disability, but rejected the application because the appellant failed to satisfy the condition in paragraph 281(v) of the Immigration Rules that the parties would be able to maintain themselves adequately without recourse to public funds. By the time the case reached the Court of Appeal in 2009, the sole issue had become whether paragraph 281(v) infringed Article 14 by its failure to make special provision for people with disabilities by either excusing them from the maintenance requirement, or at least allowing them to be maintained by third parties. The issue was thus one of disability discrimination.

58. The Court of Appeal held that discrimination was *prima facie* established, but that the Secretary of State succeeded on the issue of justification. The leading judgment was given by Maurice Kay LJ. He accepted in paragraph 24 of his judgment that applicant spouses of disabled sponsors represented "a relatively small subset of the totality of applicants", and that any additional recourse to public funds in such cases would be unlikely to last for more than two years if the exception contended for were to be admitted. On the other hand, counsel for the Secretary of State pointed to "the sheer variability of individual cases", to the need for "potentially burdensome administrative provisions involving periodic assessment", and to the possibility of the Home Office exercising discretion to admit entry where there were exceptional compassionate circumstances. In paragraph 28, Maurice Kay LJ said the question was "how is the balance to be struck in the present case between the rights of the individual and the interests of society in firm and fair immigration control?" He then answered this question in paragraph 29:

> "It is common ground that there is nothing disproportionate in a general rule or policy which makes self-sufficiency a requirement of entry. The first question is whether it is disproportionate not to exclude the disabled. In my judgment, it is not. Unlike the categories of "suspect" grounds to which I referred in paragraph 15, disability is a relative concept. It may be severe or moderate, permanent or temporary. It affects the affluent as well as the indigent. It may or may not affect earning capacity. To some extent, these variables are illustrated by the present case … [*he then referred to the evidence*] There will be disabled sponsors who are far more and far less disabled then the sponsor in this case. All this convinces me that it is reasonable and proportionate to have a criterion of self-sufficiency without a general exemption for the disabled. It will produce cases of hardship but that in itself does not render it disproportionate, particularly where provision is made for exceptional compassionate circumstances."

59. Elias LJ reached the same conclusion, for reasons which he expressed as follows at paragraphs 64 and following of his judgment:

> "64. Mr Fordham submits that precisely because the number of potential beneficiaries of an exemption from the rule will be relatively small, the additional cost will be limited. The Article 8 rights of the disabled demand that the state supports this group and therefore the failure to make an exception to rule 281(v) is plainly disproportionate.
>
> 65. I reject this argument, essentially for the following reasons, which are in large part interrelated. First, this is an area of social policy concerning control of who should be allowed to enter into this country and in what circumstances. As I have noted, the courts are particularly reluctant to interfere in such areas.
>
> 66. Second, as Maurice Kay LJ has pointed out, the courts have frequently recognised that "bright line" rules are generally acceptable in such cases notwithstanding that they might produce some hardship.
>
> 67. Third, the practical effect of making the exception involves public expenditure. In my judgment the courts will be particularly slow to require special treatment for a group where it affects the distribution of national resources, even if it be the case that the sums will be relatively small.
>
> 68. Fourth, and in my view importantly – and this is likely to be true of most indirect discrimination claims of this nature – it is difficult to foresee what other potential claims of a similar kind there may be … This does not merely create a difficulty in foreseeing the potential range of claimants urging special treatment, but it also makes the potential cost very difficult to predict. These uncertainties reinforce the justification for a bright line rule.
>
> 69. Fifth, … there would be additional administrative costs in having to identify whether a particular case falls within or outwith the exception – a particular difficulty given that the concept of disability itself is imprecise – and such cases would have to be periodically reviewed. Indeed, administrative burdens will almost inevitably be created once one departs from a bright line rule because of the need to draw the distinctions which a more nuanced rule will create.
>
> 70. Sixth, as I have said, this is not a case of direct or planned discrimination …
>
> 71. Finally, a factor lending some additional support to this conclusion is the fact that the Secretary of State is empowered

> in particularly compassionate cases to exercise a discretion in favour of entry …
>
> 72. For these reasons, therefore, I am satisfied that the failure to adopt a special rule for those whose spouse in this country cannot work by reason of disability is fully justified. The rule is lawful notwithstanding its discriminatory impact."

60. Mummery LJ agreed with both judgments, without adding anything.

61. In the *Burnip* case, Judge Howell quoted at length from Elias LJ's judgment in *AM (Somalia)*, and held that the same or corresponding considerations would apply equally to the present case, especially as

> "… what is sought is not simply the disapplication of a negative exclusionary rule, but the award of an additional cash benefit outside the rules altogether for which there is in fact no valid "system of reference"."

62. Judge Howell then continued:

> "48. In such a context, and against the background of what the benefits system already does provide for disabled people in this claimant's situation, the argument that an additional cash allowance has to be created by judicial intervention under Article 14 must in my view be approached with extreme caution; even more caution, if anything, than that displayed by the Court of Appeal in *AM (Somalia)*. The self-evident (and in my judgment self-evidently legitimate) aim of the rule being challenged is to control the cost of housing benefit and ensure that this form of social assistance is paid out only for its purpose of helping providing people with a home, not for accommodation to be used for other purposes. It applies the objective and in my judgment entirely rational criterion that the accommodation allowances therefore depend on the number of occupiers, as defined, that is residents living in the property as their home; not people temporarily there for other purposes however necessary or commendable.
>
> 49. The claimant's argument really comes down in my view to saying that because of his special needs as a disabled person he requires a more expensive home for himself, and should be entitled to extra housing benefit to reflect this. He has (or those acting on his behalf have) chosen to pin the claim on the extra room rate for another full-time resident but once one departs from the rules the reality, it seems to me, is that it is the same argument in principle whether quantified in that way or as extra cash towards the increased cost of renting a ground-floor flat with level access, wider doors and other features or adaptations to make it a more suitable home for him.

> 50. The benefits system is intricate and complicated, and as has been seen contains many detailed provisions that interact and interconnect with one another. Of course in such a massive and complex system there will be apparent anomalies and cases where deserving people, as I am sure this claimant is, will find themselves on the wrong side of some detailed distinction or with amounts they consider unfairly fail to reflect their special needs so that more should as a matter of social justice be done for them. But the evaluation, and if necessary correction, of such matters as the provision of the extra resources for the purposes are questions for the legislature and the executive …
>
> 51. The factors of the practical need for a single clearly-defined rule, the existence of the supplementary system of discretionary housing payments to alleviate hard cases (which even if less than perfect did in fact do exactly that for this claimant for the relevant year), and the unknown quantity of other groups who might with equal justice emerge to claim special treatment and extra cash, all support that conclusion in this case at least as much as in *AM (Somalia)*. [*Counsel for Mr Burnip*] naturally pointed to the introduction of the special extra room allowance for the severely disabled from April 2011 as a *de facto* acknowledgment that the previous rule was unjustified, but in my judgment that does not at all follow as a matter of law under Article 14. The extra allowance to alleviate the position of comparatively few claimants is of course being introduced at the same time as much more general cuts across the board in which a lot of others will suffer. In my view the effect is merely to underline the point that the making of such changes, the amounts involved and their timing, are matters for legislation, not judicial tinkering with just one setting in one individual piece of the overall machinery."

63. I acknowledge that there is force in some of the points made by Judge Howell, but I respectfully think that in paragraphs 48 and 49 he concentrated too much on the justification for the general bedroom rule (which is not in dispute) and too little on the object of Mr Burnip's claim, which is not to give him some form of preferential treatment, but merely to ensure that HB can fulfil its intended function for those who are so severely disabled that they need 24 hour care. The simple point is that, without the benefit of the extra room rate, Mr Burnip would be left in a *worse* position than an able bodied person living alone: it is only to correct such disparity of treatment that the claim is brought.

64. Furthermore, there are in my judgment important differences between the circumstances of the present appeals and the position in *AM (Somalia).* First, these are not cases of immigration control, where as Elias LJ noted the courts are particularly reluctant to interfere in matters of policy. On the contrary, we are here concerned with a benefit (HB) the purpose of which is to help people to meet their basic human need for accommodation of an acceptable standard. Secondly, there is no question of a general exception from the normal bedroom test for disabled people of all kinds.

The exception is sought for only a very limited category of claimants, namely those whose disability is so severe that an extra bedroom is needed for a carer to sleep in (or, in cases like that of Mr Gorry, where separate bedrooms are needed for children who, in the absence of disability, could reasonably be expected to share a single room). Thirdly, such cases are by their very nature likely to be relatively few in number, easy to recognise, not open to abuse, and unlikely to undergo change or need regular monitoring. The cost and human resource implications of accommodating them should therefore be modest, quite apart from the point that in some cases the effect of refusing the claim could well be to force the claimant into full-time residential care at much greater expense to the public purse. Fourth, for the reasons which I have already given, the extra assistance which can be provided by discretionary housing payments, valuable though it can be, falls far short of being an adequate solution to the problem. Finally, the fact that Parliament has now seen fit to legislate for cases like those of Mr Burnip and Ms Trengove, and to do so at a time of general economic hardship, may in my view reasonably be taken as recognising both the justice of such claims and the proportionate cost and nature of the remedy.

65. For all these reasons, I am satisfied that maintenance of the single bedroom rule is not a fair or proportionate response to the discrimination which has been established in cases of the present type, and that the defence of justification therefore fails. As to the relief which it would be appropriate to grant, I am in full agreement with the views expressed by Maurice Kay LJ.

File No.: 33657.

2011: May 17; 2012: February 10.

Present: McLachlin C.J. and Binnie, LeBel, Deschamps, Fish, Abella, Charron, Rothstein and Cromwell JJ.

ON APPEAL FROM THE COURT OF APPEAL FOR ONTARIO

Criminal law — Evidence — Testimonial competence — Adults with mental disabilities — Whether adult witnesses with mental disabilities must demonstrate understanding of nature of obligation to tell truth in order to be deemed competent to testify — Whether finding of testimonial competence without demonstration of understanding of obligation to tell truth breaches accused's right to fair trial — Canada Evidence Act, R.S.C. 1985, c. C-5, s. 16.

The Crown alleges that the complainant, a 26-year-old woman with the mental age of a three- to six-year-old, was repeatedly sexually assaulted by her mother's partner during the four years that he lived in the home. It sought to call the complainant to testify about the alleged assaults. After a *voir dire* to determine the complainant's capacity to testify, the trial judge found that she had failed to show that she understood the duty to speak the truth. In a separate *voir dire*, the trial judge also excluded out-of-court statements made by the complainant to the police and her teacher on the grounds that the statements were unreliable and would compromise the accused's right to a fair trial. While the remainder of the evidence raised some serious suspicions about the accused's conduct, the case collapsed and the accused was acquitted. The Ontario Court of Appeal affirmed this result.

Held (Binnie, LeBel and Fish JJ. dissenting): The appeal should be allowed, the acquittal set aside and a new trial ordered.

Per McLachlin C.J. and Deschamps, Abella, Charron, Rothstein and Cromwell JJ.: The question in issue is whether the trial judge correctly interpreted the requirements of s. 16 of the *Canada Evidence Act* for the testimonial competence of persons of 14 years of age or older (adults) with mental disabilities. Section 16(3) imposes two requirements for the testimonial competence of an adult with mental disabilities: (1) the ability to communicate the evidence; and (2) a promise to tell the truth. It is unnecessary and indeed undesirable to conduct abstract inquiries into whether the witness understands the difference between truth and falsity, the obligation to give true evidence in court, and what makes a promise binding. The plain words of s. 16(3) focus on the concrete acts of communicating and promising. Judges should not add other elements to the dual requirements imposed by s. 16(3). This approach does not transform the promise into an empty gesture. Adults with mental disabilities may have a practical understanding of the difference between the truth and a lie and know they should tell the truth without being able to explain what telling the truth means in abstract terms. When such a witness promises to tell the truth, the seriousness of the occasion and the need to say what really happened is reinforced.

Insofar as the authorities suggest that s. 16(3) requires an abstract understanding of the obligation to tell the truth, they should be rejected. That requirement was based on a version of s. 16 that explicitly required that the witness "understands the duty of speaking the truth". Although Parliament deleted that requirement in 1987, courts continued to require proof that child witnesses

understood the duty to tell the truth. Parliament responded by enacting s. 16.1(7), which expressly forbade such inquiries of child witnesses. However, the existence of the s. 16.1(7) ban does not require us to infer that mentally disabled adults are to be questioned on the obligation to tell the truth. First, because s. 16(3) only required a promise to tell the truth, Parliament had no need to ban such questioning of adult witnesses with mental disabilities. Second, s. 16(3) required only a promise to tell the truth, so there was no need for Parliament to enact a similar provision with respect to s. 16(3). Third, the enactment of s. 16.1(7) did not imply that the earlier judicial interpretation of s. 16(3) as it applied to children had been endorsed for adult witnesses. No inference as to the meaning of s. 16(3) flows from the mere adoption of s. 16.1(7) with respect to children, and the re-enactment of s. 16(3) does not imply that Parliament accepted the judicial interpretation that prevailed at the time of the re-enactment. Fourth, the fact that s. 16 does not have a provision equivalent to s. 16.1(7) does not mean that adult witnesses with mental disabilities must demonstrate an understanding of the nature of the duty to speak the truth — s. 16(3) sets two requirements for the competence of adults with mental disabilities, and nothing further need be imported. Fifth, there is no need to prove that, unless it can be shown that adult witnesses with mental disabilities are the same as, or like, child witnesses, they must be subjected to an inquiry into their understanding of the nature of the obligation to tell the truth before they can be held competent to testify.

The underlying policy concerns — bringing the abusers to justice, ensuring fair trials and preventing wrongful convictions — also support allowing adults with

mental disabilities to testify. With respect to the first concern, rejecting the evidence of alleged victims on the ground that they cannot explain the nature of the obligation to tell the truth in philosophical terms would exclude reliable and relevant evidence, immunize an entire category of offenders from criminal responsibility for their acts, and further marginalize the already vulnerable victims of sexual predators. With respect to the second, allowing an adult witness with mental disabilities to testify when the witness can communicate the evidence and promises to tell the truth does not render a trial unfair. Generally, the reliability threshold is met by establishing that the witness has the capacity to understand and answer the questions put to her and by bringing home the need to tell the truth by securing an oath, affirmation or promise. There is no guarantee that any witness will tell the truth — the trial process seeks a basic indication of reliability. That, along with the rules governing admissibility and weight of the evidence work to ensure that a verdict of guilty is based on accurate and credible evidence and that the accused has a fair trial.

When applying s. 16(3) in the context of the *Canada Evidence Act*, eight considerations are appropriate. First, the *voir dire* on the competence of a proposed witness is an independent inquiry: it may not be combined with a *voir dire* on other issues. Second, the *voir dire* should be brief, but not hasty. It is preferable to hear all available relevant evidence that can be reasonably considered before preventing a witness to testify. Third, the primary source of evidence for a witness's competence is the witness herself. Her examination should be permitted. Questioning an adult with mental disabilities requires consideration and accommodation for her particular

needs; questions should be phrased patiently in a clear, simple manner. Fourth, persons familiar with the proposed witness in her everyday situation understand her best. They may be called as fact witnesses to provide evidence on her development. Fifth, expert evidence may be adduced if it meets the criteria for admissibility, but preference should always be given to expert witnesses who have had personal and regular contact with the proposed witness. Sixth, the trial judge must make two inquiries during the *voir dire* on competence: (a) does the proposed witness understand the nature of an oath or affirmation, and (b) can she communicate the evidence? Seventh, the second inquiry into the witness's ability to communicate the evidence requires the trial judge to explore in a general way whether she can relate concrete events by understanding and responding to questions. It may be useful to ask if she can differentiate between true and false everyday factual statements. Finally, the witness testifies under oath or affirmation if she passes both parts of the test, and on promising to tell the truth if she passes the second part only.

In the instant case, the trial judge erred in failing to consider the second part of the test under s. 16. This error of law led him to rule the complainant incompetent. This error cannot be rectified by comments made by the trial judge at other points in the trial or by the doctrine of deference.

Per Binnie, LeBel and Fish JJ. (dissenting): The majority judgment unacceptably dilutes the protection Parliament intended to provide to accused persons by turning Parliament's direction permitting a person "whose mental capacity is

challenged" to testify only "on promising to tell the truth" into an empty formality — a mere mouthing of the words "I promise" without any inquiry as to whether the promise has any significance to the potential witness

Section 16 mandates a single inquiry which presents the trial judge dealing with a witness whose mental capacity is challenged with three options. Section 16(2) provides that, if the challenged witness is able to communicate the evidence and understands the nature of an oath or a solemn declaration in terms of ordinary, everyday social conduct, he or she shall testify under oath or solemn affirmation. If the challenged witness is able to communicate the evidence but does not understand the nature of an oath or a solemn affirmation, s. 16(3) provides that he or she may provide unsworn testimony on promising to tell the truth. If the challenged witness does not satisfy either criterion, s. 16(4) provides that the individual with a mental disability shall not testify.

There is agreement with the majority that promising is an act aimed at bringing home to the witness the seriousness of the situation and the importance of being careful and correct. The promise thus serves a practical, prophylactic purpose. It cannot be correct, however, that it is out of bounds for a trial judge to try to determine — in concrete everyday terms — whether there is in reality such a prophylactic effect in the case of a particular witness whose mental capacity has been challenged. If such a witness is so disabled as not to understand the seriousness of the situation and the importance of being careful and correct, there is no prophylactic

effect, and the fair trial interests of the accused under s. 16, as enacted in 1987, are unfairly prejudiced.

In 2005, when Parliament amended the *Canada Evidence Act* to prohibit asking child witnesses "any questions regarding their understanding of the nature of the promise to tell the truth" (s. 16.1(7)), the empirical evidence before Parliament related exclusively to children. No such empirical studies were carried out with respect to adults with mental disabilities. In their case, no "don't ask" provision was proposed, let alone adopted.

There is agreement with the majority that the words "on promising to tell the truth" in s. 16(3) must bear the same meaning as "to promise to tell the truth" in s. 16.1(6). That being the case, the majority must read the s. 16.1(7) "don't ask" rule applicable only to children into s. 16(3) applicable only to mentally challenged adults in order to read down the words "promising to tell the truth" in s. 16(3), and thus treat adults with mental disabilities as equivalent for the purposes of s. 16 to children without mental disabilities. The fact that psychiatrists speak of persons with mental disabilities in terms of mental ages does not mean that an adult with mental age of six is on the same footing as a six-year-old child with no mental disability whatsoever — a six-year-old with the mental capacity of a six-year-old does not suffer from a mental disability. No evidence was led to suggest equivalence and judicial notice cannot be taken of alleged "facts" that are neither notorious nor easily verifiable from undisputed sources.

On a competency *voir dire* where the mental capacity of an adult is challenged, and the adult is herself called as a proposed witness, the court may admit evidence from fact witnesses personally familiar with the complainant's verbal and cognitive abilities and limitations to help the court gain a better understanding of the person's capacity. These witnesses would not be in a position to express an expert opinion, but could testify about their direct personal observations of the proposed witness. Such evidence might, if the trial judge considered it helpful, better enable the judge or jury to appreciate her responses (or non-responses) in the witness box. However, ultimately, the judge must reach his or her own considered opinion about the mental capacity of the proposed witness prior to admitting the testimony.

In this case, the trial judge had serious concerns about the complainant's ability to communicate the evidence. The complainant's answers to a series of simple and concrete questions left him fully satisfied that she did not understand what a promise to tell the truth involves. Much turned on the significance of the complainant's repeated "I don't know" answers. Clearly, it was an important advantage for the trial judge to watch the questions and answers unfold and to assess whether the complainant was actually able to "compute" her responses to what she was being asked. There was no allegation of bad faith, but she may nevertheless have been mistaken in her perception or recollection of events and the crucible of cross-examination was useless because there was no secure method of testing her credibility. Her inability to deal with simple questions would mean her evidence would be effectively immune to challenge by the defence, thereby prejudicing the

interest of society as well as the accused in a fair trial. Sitting on appeal from this determination, and not having had the advantage of observing and questioning the complainant, there is no valid basis for this Court to reverse the trial judge's assessment of her mental capacity.

The trial judge's conclusion that the complainant lacked the ability to perceive, recall and communicate events and to understand the difference between truth and falsehood set up, but did not predetermine, his conclusion that her testimony lacked sufficient reliability. It was neither surprising nor an error however that the trial judge's reasoning on the threshold reliability in his hearsay ruling was quite similar to his reasoning on the s. 16 *voir dire*, and given his advantage in seeing and hearing the complainant, his exclusion of her out-of-court statements should equally be upheld by this Court.

The judgment of McLachlin C.J. and Deschamps, Abella, Charron, Rothstein and Cromwell JJ. was delivered by

[1] THE CHIEF JUSTICE — Sexual assault is an evil. Too frequently, its victims are the vulnerable in our society — children and the mentally handicapped. Yet rules of evidence and criminal procedure, based on the norm of the average witness, may make it difficult for these victims to testify in courts of law. The challenge for the law is to permit the truth to be told, while protecting the right of the accused to a fair trial and guarding against wrongful conviction.

[2] Parliament has addressed this challenge by a series of amendments to the *Canada Evidence Act*, R.S.C. 1985, c. C-5, that modify the normal rules of testimonial capacity for children and adults with mental disabilities. This Court has considered the provisions relating to children on a number of occasions. This appeal involves the provisions relating to adults with mental disabilities.

[3] At the heart of this case is a young woman, K.B., aged 26, with the mental age of a three- to six-year-old. The Crown alleges that she was repeatedly sexually assaulted by her mother's partner at the time, D.A.I. The prosecution sought to call the young woman to testify about the alleged assaults. It also sought to adduce evidence through her school teacher and a police officer of what she told them.

[4] The trial judge excluded this evidence, on the ground that K.B. was not competent to testify in a court of law (A.R., vol. I, at p. 2). As a result, the case collapsed and D.A.I. was acquitted (2008 CanLII 21725 (Ont. S.C.J.)). The Ontario Court of Appeal affirmed the acquittal (2010 ONCA 133, 260 O.A.C. 96).

[5] I respectfully disagree. In my view, the trial judge made a fundamental error of law in interpreting and applying the provisions of the *Canada Evidence Act* governing the testimonial competence of adult witnesses with mental disabilities. This error of law vitiates the trial judge's ruling that K.B. could not be allowed to testify. Subsequent evidence on other matters cannot overcome this fatal defect. I would therefore set aside the acquittal of D.A.I. and order a new trial.

I. Factual Background

[6] The complainant, K.B., was 22 at trial and 19 at the time of the alleged assault, but possessed the mental age of a three- to six-year-old. She lived with her mother and her mother's partner, D.A.I., as well as her sister. During the four years he was in the home, D.A.I. developed a close relationship with K.B.

[7] Sometime after D.A.I. separated from K.B.'s mother and left the home, K.B. told her special education teacher about a "game" that she and D.A.I. used to play together which involved D.A.I. touching her. She later repeated this statement to the police. K.B., through bodily gestures, described the game as involving touching

her breasts and vagina. In her statement to the police, she indicated that D.A.I. had touched her vagina, buttocks and breasts beneath her pajamas, and that this had happened many times.

[8] At the preliminary inquiry, K.B. was ruled competent to testify on the basis that she was able to communicate the evidence. Her videotaped statement to the police was admitted as her examination-in-chief and she was cross-examined.

[9] The issue of K.B.'s testimonial capacity was raised at trial, and the trial judge held a *voir dire* to determine whether she could be allowed to testify. K.B. and Dr. K., the defence's expert witness, were the only ones to testify during the *voir dire* on competence. The Crown's examination of K.B. demonstrated that she understood the difference between telling the truth and lying in concrete situations. However, the trial judge went beyond this to question K.B. on her understanding of the nature of truth and falsity, of moral and religious duties, and of the legal consequences of lying in court. K.B. was unable to respond adequately to these more abstract questions, to which she frequently answered "I don't know" (A.R., vol. I, at pp. 117-19). Dr. K., a psychiatrist, testified for the defence. Dr. K's opinion was formed without personal contact with K.B. It was based on school and medical records, as well as on K.B.'s behaviour in her videotaped statement and during the *voir dire*. Dr. K. expressed the view that K.B. had "serious difficulty in differentiating the concept of truth and lie", noted her low tolerance for frustration, and said, "I don't think she ha[d] the ability to think what you're asking and come up with an answer" (*ibid.*, at pp. 159 and 161).

[10] At the end of the *voir dire* on competence, the trial judge refused to hear from K.B.'s teacher of six years, Ms. W., and ruled that K.B. was incompetent to testify. K.B. was held incompetent because she had "not satisfied the prerequisite that she understands the duty to speak to the truth", which the trial judge took to be required by s. 16(3) of the *Canada Evidence Act*: "She cannot communicate what truth involves or what a lie involves, or what consequences result from truth or lies" (*ibid.*, at p. 3).

[11] A second *voir dire* was held to decide on the Crown's application for admitting K.B.'s out-of-court statements to the police and to her teacher, Ms. W. The teacher testified that K.B. would not intentionally lie, but that her ability to understand was more developed than her ability to express herself: "This causes a lot of frustration for [K.B.], she frequently responds to questions by saying 'I don't know'" (*ibid.*, at p. 176; see also pp. 184-85). Also, evidence was led corroborating K.B.'s allegations. A family friend testified that, while he was in D.A.I.'s room for another purpose, he found a Polaroid photo of K.B. with her breasts exposed and another photo of two unidentified people having sex. D.A.I.'s explanation of the first photo was that K.B. had flashed him while he was taking a photo of her. K.B.'s sister also testified that she had found such photos. However, she did not report it to her mother and the photos were not available at trial. K.B.'s sister also said she once saw D.A.I. touch K.B.'s breasts while she was lying on her bed.

[12] The *voir dire* on hearsay admissibility was concluded by the trial judge's dismissal of the Crown's application. The trial judge rejected K.B.'s out-of-court statements to Ms. W. and to the police, holding that K.B.'s hearsay evidence was inadmissible because it was "unreliable, and its admission would seriously compromise the accused's right to a fair trial" (2008 CanLII 21726 (Ont. S.C.J.), at para. 57).

[13] At trial, the judge concluded that while the remainder of the evidence raised "some serious suspicions" about D.A.I.'s conduct, it was too scant to support a conviction (para. 11). The case essentially collapsed because of the trial judge's ruling that K.B. was not competent to testify.

[14] The question we must decide is whether the trial judge correctly interpreted the requirements of the *Canada Evidence Act* for the testimonial competence of persons of 14 years of age or older (adults) with mental disabilities. If he applied too high a standard, his decision to preclude K.B. from testifying must be set aside and the case remitted for a new trial.

II. Legal Analysis

A. *Testimonial Competence: A Threshold Requirement*

[15] Before turning to s. 16(3) of the *Canada Evidence Act*, it is important to distinguish between three different concepts that are sometimes confused: (1) the witness's competence to testify; (2) the admissibility of his or her evidence; and (3) the weight of the witness's testimony. The evidentiary rules governing all three concepts share a common purpose: ensuring that convictions are based on solid evidence and that the accused has a fair trial. However, each concept plays a distinct role in achieving this goal.

[16] The first concept, and the one most relevant to this appeal, is the principle of competence to testify. Competence addresses the question of whether a proposed witness has the capacity to provide evidence in a court of law. The purpose of this principle is to exclude at the outset worthless testimony, on the ground that the witness lacks the basic capacity to communicate evidence to the court. Competence is a threshold requirement. As a matter of course, witnesses are presumed to possess the basic "capacity" to testify. However, in the case of children or adults with mental disabilities, the party challenging the competence of a witness may be called on to show that there is an issue as to the capacity of the proposed witness.

[17] The second concept is admissibility. The rules of admissibility determine what evidence given by a competent witness may be received into the record of the court. Evidence may be inadmissible for various reasons. Only evidence that is relevant to the case may be considered by the judge or jury. Evidence may also be inadmissible if it falls under an exclusionary rule, for example the confessions rule or

the rule against hearsay evidence. Among the purposes of the rules of admissibility are improving the accuracy of fact finding, respecting policy considerations, and ensuring the fairness of the trial.

[18] The third concept — the responsibility of the trier of fact to decide what evidence, if any, to accept — is based on the assumption that the witness is competent and the rules of admissibility have been properly applied. Fulfillment of these requirements does not establish that the evidence should be accepted. It is the task of the judge or jury to weigh the probative value of each witness's evidence on the basis of factors such as demeanour, internal consistency, and consistency with other evidence, and to thus determine whether the witness's evidence should be accepted in whole, in part, or not at all. Unless the trier of fact is satisfied that the prosecution has established all elements of the offence beyond a reasonable doubt, there can be no conviction.

[19] Together, the rules governing competence, admissibility and weight of the evidence work to ensure that a verdict of guilty is based on accurate and credible evidence and that the accused person has a fair trial. The point for our purposes is a simple one: the requirement of competence is only the first step in the evidentiary process. It is the initial threshold for receiving evidence. It seeks a minimal requirement — a basic ability to provide truthful evidence. A finding of competence is not a guarantee that the witness's evidence will be admissible or accepted by the trier of fact.

B. *The Requirements for Competence of Adult Witnesses With Mental Disabilities: Section 16 of the Canada Evidence Act*

[20] Against this background, I come to the provision at issue in this case, s. 16(3) of the *Canada Evidence Act*, which governs the capacity to testify of adults with mental disabilities. Section 16 provides:

> **16.** (1) [Witness whose capacity is in question] If a proposed witness is a person of fourteen years of age or older whose mental capacity is challenged, the court shall, before permitting the person to give evidence, conduct an inquiry to determine
>
> (*a*) whether the person understands the nature of an oath or a solemn affirmation; and
>
> (*b*) whether the person is able to communicate the evidence.
>
> (2) [Testimony under oath or solemn affirmation] A person referred to in subsection (1) who understands the nature of an oath or a solemn affirmation and is able to communicate the evidence shall testify under oath or solemn affirmation.
>
> (3) [Testimony on promise to tell truth] A person referred to in subsection (1) who does not understand the nature of an oath or a solemn affirmation but is able to communicate the evidence may, notwithstanding any provision of any Act requiring an oath or a solemn affirmation, testify on promising to tell the truth.
>
> (4) [Inability to testify] A person referred to in subsection (1) who neither understands the nature of an oath or a solemn affirmation nor is able to communicate the evidence shall not testify.
>
> (5) [Burden as to capacity of witness] A party who challenges the mental capacity of a proposed witness of fourteen years of age or more has the burden of satisfying the court that there is an issue as to the capacity of the proposed witness to testify under an oath or a solemn affirmation.

[21] Section 16(1) sets out what a judge must do when a challenge is raised. First, the judge must determine "whether the person understands the nature of an oath or a solemn declaration" and "whether the person is able to communicate the evidence" (s. 16(1)). If these requirements are met, the witness testifies under oath or affirmation, as other witnesses do (s. 16(2)). If these requirements are not met, the judge moves on to s. 16(3). Section 16(3) provides that "[a] person . . . who does not understand the nature of an oath or a solemn affirmation but is able to communicate the evidence may . . . testify on promising to tell the truth."

[22] In brief, s. 16(1) provides that an adult witness whose competence to testify is challenged should testify under oath or affirmation, if the witness "understands the nature of an oath or a solemn affirmation" and can "communicate the evidence". Here K.B. did not meet the first requirement. The inquiry therefore moved to s. 16(3), which states that if an adult witness cannot take the oath or affirm under s. 16(1), then she must be permitted to testify *if she is "able to communicate the evidence" and promises to tell the truth.*

[23] On its face, s. 16 says that in a case such as this where the witness cannot take the oath or affirm, the judge has only one further issue to consider — whether the witness can communicate the evidence. If the answer to that question is yes, the judge must then ask the witness whether she promises to tell the truth. If she does, she is competent to testify. It is not necessary to inquire into whether the witness understands the duty to tell the truth.

[24] The respondent argues, however, that the plain words of s. 16(3) do not suffice. They must be supplemented, he says, by the requirement that an adult witness with mental disabilities who cannot take an oath or affirm must not only be able to communicate the evidence and promise to tell the truth, but must also *understand the nature of a promise to tell the truth*.

[25] I cannot accept this submission. The words of an Act are to be interpreted in their entire context: *Rizzo & Rizzo Shoes Ltd. (Re)*, [1998] 1 S.C.R. 27, at para. 21. The wording of s. 16(3), its history, its internal logic and its statutory context all point to the conclusion that s. 16(3) should be read as it stands, without reading in a further requirement that the witness demonstrate an understanding of the nature of the obligation to tell the truth. All that is required is that the witness be able to communicate the evidence and in fact promise to tell the truth.

[26] First, as already mentioned, this interpretation goes beyond the words used by Parliament. To insist that the witness demonstrate understanding of the nature of the obligation to tell the truth is to import a requirement into the section that Parliament did not place there. The first and cardinal principle of statutory interpretation is that one must look to the plain words of the provision. Where ambiguity arises, it may be necessary to resort to external factors to resolve the ambiguity: R. Sullivan, *Sullivan on the Construction of Statutes* (5th ed. 2008), at p. 44. However, Parliament has clearly stated the requirements for finding adult witnesses with mental disabilities to be competent. Section 16 shows no ambiguity.

[27] Second, the history of s. 16 supports the view that Parliament intended to remove barriers that had prevented adults with mental disabilities from testifying prior to the 1987 amendments (S.C. 1987, c. 24). The amendments altered the common law rule, by virtue of which only witnesses under oath could testify. To take the oath or affirm, a witness must have an understanding of the duty to tell the truth: *R. v. Brasier* (1779), 1 Leach 199, 168 E.R. 202. Adults with mental disabilities might not be able to do this. To remove this barrier, Parliament provided an alternative basis for competence for this class of individuals. Section 16(1) of the 1987 provision continued to maintain the oath or affirmation as the first option for adults with mental disabilities, but s. 16(3) provided for competence based simply on the ability to communicate the evidence and a promise to tell the truth.

[28] This history suggests that Parliament intended to eliminate an understanding of the abstract nature of the oath or solemn affirmation as a prerequisite for testimonial capacity. Failure to show that the witness *could demonstrate an understanding of the obligation to tell the truth* was no longer the end of the matter. Provided the witness (1) was able to *communicate the evidence*, and (2) promised to tell the truth, she should be allowed to testify.

[29] The drafters of s. 16(3) did not intend this provision to require an abstract understanding of the duty to tell the truth (see Appendix A). The original text of Bill C-15, which adopted the 1987 amendments, was changed by the Legislative Committee on Bill C-15 precisely to avoid that interpretation. The version of s. 16(3)

first put before Parliament allowed testimony on promising to tell the truth if the witness was "sufficiently intelligent that the reception of the evidence is justified". A discussion was held on the meaning of "sufficient intelligence", after which the Committee concluded that all that was needed for a witness to be sufficiently intelligent was to understand the moral difference between telling the truth and lying. The Committee, fearing that this would open the door to abstract inquiries, ultimately replaced "sufficient intelligence" by "able to communicate the evidence". The deliberations that followed emphasized the practical ability to communicate the evidence. There was no suggestion that ability to communicate the evidence accompanied by a promise to tell the truth implicitly imposed a requirement that the witness demonstrate a more abstract understanding of the duty to tell the truth.

[30] The historic background against which s. 16(3) was enacted explains why Parliament might have wished in 1987 to lower the requirements of testimonial competence for adults with mental disabilities, who are nonetheless capable of communicating the evidence. While adults with mental disabilities received little consideration in the pre-1987 case law, the inappropriateness of questioning children on abstract understandings of the truth had been noted and criticized. In *R. v. Bannerman* (1966), 48 C.R. 110 (Man. C.A.), Dickson J. *ad hoc* (as he then was) rejected the practice of examining child witnesses on their religious beliefs and the philosophical meaning of truth. Meanwhile, awareness of the sexual abuse of children and adults with mental disabilities was growing. To rule out the evidence of children and adults with mental disabilities at the stage of competence — the effect of

the requirement of an abstract understanding of the nature of the obligation to tell the truth — meant their stories would never be told and their cases never prosecuted. These concerns explain why Parliament moved to simplify the competence test for adult witnesses with mental disabilities.

[31] Third, and flowing from this history, the internal logic of s. 16 negates the suggestion that "promising to tell the truth" in s. 16(3) must be read as implying an understanding of the obligation to tell the truth. Two procedures are provided by s. 16. The preferred option is testimony under oath or affirmation (s. 16(1)), and the alternative procedure is testimony on a promise to tell the truth (s. 16(3)). If the witness is required under s. 16(3) to demonstrate that she understands the obligation to tell the truth, s. 16(3) adds little, if anything, to s. 16(1). In both cases, the witness is required to articulate abstract concepts of the nature of truth and the nature of the obligation to tell the truth in court. The result is essentially to render s. 16(3) a dead letter and to negate the dual structure of the provision. This runs against the principle of statutory interpretation that Parliament does not speak in vain: *Attorney General of Quebec v. Carrières Ste-Thérèse Ltée*, [1985] 1 S.C.R. 831, at p. 838.

[32] Fourth, s. 16(4) indicates that ability to communicate the evidence is the only quality that an adult with mental disabilities must possess in order to testify under s. 16(3). Section 16(4) provides that the proposed witness is unable to testify if she neither understands the nature of an oath or solemn affirmation nor is able to communicate the evidence. It follows that the witness is competent to testify if she is

able to communicate the evidence; she may testify on promising to tell the truth under s. 16(3). The qualities envisaged in s. 16 as basis for testimonial competence are mentioned in s. 16(4). Imposing an additional qualitative requirement to understand the nature of a promise to tell the truth would flout the utility of s. 16(4).

[33] Fifth, the legislative context speaks against reading s. 16(3) as requiring that an adult witness with mental disabilities understand the nature of the obligation to tell the truth. If this requirement is added to s. 16(3), the result is a different standard for the competence of adults with mental disabilities under s. 16(3) and children under s. 16.1 (enacted in 2005 (S.C. 2005, c. 32) pursuant to the "Brief on Bill C-2: Recognizing the Capacities & Needs of Children as Witnesses in Canada's Criminal Justice System" (Child Witness Project, March 2005) (the "Bala Report")). As will be discussed more fully below, s. 16(3) governing the competence of adults with mental disabilities, and ss. 16.1(3), (5) and (6) governing the competence of children, set forth essentially the same requirements. Broadly speaking, both condition testimonial capacity on: (1) the ability to communicate or answer questions; and (2) a promise to tell the truth. While it was open to Parliament to enact different requirements for children and adults with the minds of children, consistency of Parliamentary intent should be assumed, absent contrary indications. No explanation has been offered as to why Parliament would consider a promise to tell the truth a meaningful procedure for children, but an empty gesture for adults with mental disabilities.

[34] The foregoing reasons make a strong case that s. 16(3) should be read as requiring only two requirements for competence of an adult with mental disabilities: (1) ability to communicate the evidence; and (2) a promise to tell the truth. However, two arguments have been raised in opposition to this interpretation: first, without a further requirement of an understanding of the obligation to tell the truth, a promise to tell the truth is an "empty gesture"; second, Parliament's failure in 2005 to extend to adults with mental disabilities the s. 16.1(7) prohibition on the questioning of children means that it intended this questioning to continue for adults. I will examine each argument in turn.

[35] The first argument is that unless an adult witness with mental disabilities is required to demonstrate that she understands the nature of the obligation to tell the truth, the promise is an "empty gesture". However, this submission's shortcoming is that it departs from the plain words of s. 16(3), on the basis of an assumption that is unsupported by any evidence and contrary to Parliament's intent. Imposing an additional qualitative condition for competence that is not provided in the text of s. 16(3) would demand compelling demonstration that a promise to tell the truth cannot amount to a meaningful procedure for adults with mental disabilities. No such demonstration has been made. On the contrary, common sense suggests that the act of promising to tell the truth may be useful, even in the absence of the witness's ability to explain what telling the truth means in abstract terms.

[36] Promising is an act aimed at bringing home to the witness the seriousness of the situation and the importance of being careful and correct. The promise thus serves a practical, prophylactic purpose. A witness who is able to communicate the evidence, as required by s. 16(3), is necessarily able to relate events. This in turn implies an understanding of what really happened — i.e. the truth — as opposed to fantasy. When such a witness promises to tell the truth, this reinforces the seriousness of the occasion and the need to do so. In dealing with the evidence of children in s. 16.1, Parliament held that a promise to tell the truth was all that is required of a child capable of responding to questions. Parliament did not think a child's promise, without more, is an empty gesture. Why should it be otherwise for an adult with the mental ability of a child?

[37] The second argument raised in support of the proposition that "promising to tell the truth" in s. 16(3) implies a requirement that the witness must show that she understands the nature of the obligation to tell the truth is that Parliament has not enacted a ban on questioning adult witnesses with mental disabilities on the nature of the obligation to tell the truth, as it did for child witnesses in 2005 in s. 16.1(7). To understand this argument, we must briefly trace the history of s. 16.1.

[38] In 2005, following the Bala Report, Parliament once more modified the *Canada Evidence Act*'s provisions on testimonial competence, but this time only with respect to children. The central focus of the 2005 legislation relating to the *Canada Evidence Act* was the competence of *child* witnesses, with the aim of altering the

restrictive gloss the case law had placed on the previous provisions relating to the capacity of children to testify. Chief among this case law was *R. v. Khan* (1988), 42 C.C.C. (3d) 197 (Ont. C.A.), which insisted that a child understand the nature of the obligation to tell the truth before the child could testify. Section 16.1, in unequivocal language, rejected this requirement. It stated:

> **16.1** (1) [Person under fourteen years of age] A person under fourteen years of age is presumed to have the capacity to testify.
>
> (2) [No oath or solemn affirmation] A proposed witness under fourteen years of age shall not take an oath or make a solemn affirmation despite a provision of any Act that requires an oath or a solemn affirmation.
>
> (3) [Evidence shall be received] The evidence of a proposed witness under fourteen years of age shall be received if they are able to understand and respond to questions.
>
> (4) [Burden as to capacity of witness] A party who challenges the capacity of a proposed witness under fourteen years of age has the burden of satisfying the court that there is an issue as to the capacity of the proposed witness to understand and respond to questions.
>
> (5) [Court inquiry] If the court is satisfied that there is an issue as to the capacity of a proposed witness under fourteen years of age to understand and respond to questions, it shall, before permitting them to give evidence, conduct an inquiry to determine whether they are able to understand and respond to questions.
>
> (6) [Promise to tell truth] The court shall, before permitting a proposed witness under fourteen years of age to give evidence, require them to promise to tell the truth.
>
> (7) [Understanding of promise] <u>No proposed witness under fourteen years of age shall be asked any questions regarding their understanding of the nature of the promise to tell the truth for the purpose of determining whether their evidence shall be received by the court.</u>
>
> (8) [Effect] For greater certainty, if the evidence of a witness under fourteen years of age is received by the court, it shall have the same effect as if it were taken under oath.

[39] Section 16.1, like s. 16(3) governing adult witnesses with mental disabilities, imposed two preconditions for the testimony of children: (1) that the child be able to understand and respond to questions (s. 16.1(5)); and (2) that the child promise to tell the truth (s. 16.1(6)). But, taking direct aim at *Khan*'s insistence that children be questioned on their understanding of the nature of the obligation to tell the truth, s. 16.1(7) went on to state explicitly that children not "*be asked any questions regarding their understanding of the nature of the promise to tell the truth for the purpose of determining whether their evidence shall be received by the court*".

[40] The argument is that if Parliament had intended adult witnesses with mental disabilities to be competent to testify simply on the basis of the ability to communicate and the making of a promise, it would have enacted a ban on questioning them on their understanding of the nature of the obligation to tell the truth, as it did for child witnesses under s. 16.1(7). The absence of such a provision, it is said, requires us to draw the inference that Parliament intended that *adult* witnesses with mental disabilities *must* be questioned on the obligation to tell the truth.

[41] First, this argument overlooks the fact that Parliament's concern in enacting the 2005 amendment to the *Canada Evidence Act* was exclusively with children. The changes arose out of the Bala Report on the problems associated with prosecuting crimes against children. The Parliamentary debates on s. 16.1 attest to the fact that the focus of the 2005 amendment was on children, and only children.

[42] Moreover, it is apparent from the Parliamentary works on Bill C-2 that s. 16.1(7) was intended to confirm the existing formal requirement of a promise alone, and not to modify the law: see Appendix B. The record of the standing House of Commons committee which studied Bill C-2 contains a discussion between Joe Comartin and Professor Nicholas Bala, during a debate on the phrasing of s. 16.1(7), which revealed that the original intent of s. 16(3) was to allow children and adults with mental disabilities to testify by merely promising to tell the truth, once they were held to be able to communicate the evidence:

> **[Prof. Nicholas Bala:]** . . . the concern I have arises out of the fact that the present legislation has been interpreted very narrowly by judges. When you actually go back through the transcripts — I was actually a witness in 1988, when the provisions came into effect — I think it was thought by people, well, we don't have to be very explicit here, because the judges will get this right.
>
> Obviously, on many issues we do have to trust our judiciary, but on certain issues I think it's important to give them as much direction as possible. My concern is that some judge might read this — and we have quite a lot of case law about this — and say, okay, I can't ask you about your understanding of the nature of the promise, but what about asking you questions about truth-telling? Parliament specifically said in subsection 16.1(6) that you'll be required to promise to tell the truth. We can't ask about the nature of the promise, but can we ask you about "truth" and "lie"? [Emphasis added; p. 7.]
>
> (House of Commons, *Evidence of the Standing Committee on Justice, Human Rights, Public Safety and Emergency Preparedness*, No. 26, 1st Sess., 38th Parl., March 24, 2005)

[43] This view was confirmed by Ms. Catherine Kane, Director of the Policy Centre for Victim Issues of the Department of Justice Canada, during her opening statement to the Standing Senate Committee on Legal and Constitutional Affairs:

> **[Ms. Catherine Kane:]** . . . These amendments were made in 1988 with the purpose of trying to more readily permit children's evidence to be received. However, as the cases have interpreted this provision, we have not seen that ready acceptance of children's evidence.
>
> If these two criteria are met, the child gives evidence under an oath or an affirmation. However, if the child does not understand the nature of the oath or the affirmation but has the ability to communicate the evidence, the evidence is received on a promise to tell the truth. That is the current law. While it may appear quite sensible on its face, the interpretations and practise of these provisions do not reflect Parliament's intention in amending the Evidence in an effort to permit children's evidence to be admitted more readily.
>
> As interpreted by the courts, section 16 requires that before the child is permitted to testify, the child be subjected to an inquiry as to his or her understanding of the obligation to tell the truth, the concept of a promise, and an ability to communicate. [Emphasis added; pp. 105-6.]
>
> (Senate, *Proceedings of the Standing Senate Committee on Legal and Constitutional Affairs*, No. 18, 1st Sess., 38th Parl., July 7, 2005)

Therefore, it cannot be inferred that Parliament's failure to extend the express ban on questioning in s. 16.1(7) to adult witnesses shows an intent to permit such questioning of adult witnesses with mental disabilities.

[44] Second, as already mentioned, the wording of s. 16(3) governing the competence of adult witnesses had since 1987 required only a promise to tell the truth. There was no need for Parliament to add a provision on questioning an adult witness's understanding of the nature of the obligation to tell the truth in s. 16(3). The fact that Parliament did so 18 years later for children's evidence under s. 16.1(7) reflects concern with the fact that courts in children's cases, such as *Khan*, were continuing to engage in this type of questioning, instead of accepting a simple

promise to tell the truth. It does not evince an intention that Parliament intended the words "promising to tell the truth" to have different meanings in ss. 16(3) and 16.1(6).

[45] Third, the argument that the enactment of s. 16.1(7) for children but not for adults endorsed as applicable to adult witnesses the earlier judicial interpretation of the provisions relating to children does not take into account s. 45 of the federal *Interpretation Act*, R.S.C. 1985, c. I-21, which provides:

> **45.** (1) [Repeal does not imply enactment was in force] The repeal of an enactment in whole or in part shall not be deemed to be or to involve a declaration that the enactment was previously in force or was considered by Parliament or other body or person by whom the enactment was enacted to have been previously in force.
>
> (2) [Amendment does not imply change in law] The amendment of an enactment shall not be deemed to be or to involve a declaration that the law under that enactment was or was considered by Parliament or other body or person by whom the enactment was enacted to have been different from the law as it is under the enactment as amended.
>
> (3) [Repeal does not declare previous law] The repeal or amendment of an enactment in whole or in part shall not be deemed to be or to involve any declaration as to the previous state of the law.
>
> (4) [Judicial construction not adopted] A re-enactment, revision, consolidation or amendment of an enactment shall not be deemed to be or to involve an adoption of the construction that has by judicial decision or otherwise been placed on the language used in the enactment or on similar language.

[46] Section 45(3) of the *Interpretation Act* provides that the amendment of an enactment (in this case the adoption of s. 16.1(7)) shall not be deemed to involve any

declaration as to the meaning of the previous law (in this case s. 16(3)). Therefore, no inference as to the meaning of s. 16(3) flows from the mere adoption of s. 16.1(7) with respect to children.

[47] Additionally, s. 45(4) of the *Interpretation Act* states that the re-enactment of a provision (in this case, s. 16 with respect to adults with mental disabilities) is not sufficient to infer that Parliament adopted the provision's judicial interpretation which prevailed at the time of the re-enactment. It follows that the fact that s. 16 was re-enacted for adults with mental disabilities in 2005 does not, alone, imply that Parliament intended to countenance the judicial interpretation of this section which required understanding the obligation to tell the truth.

[48] Fourth, the argument that the absence of the equivalent of s. 16.1(7) in s. 16(3) means that adult witnesses with mental disabilities must demonstrate an understanding of the nature of the duty to speak the truth is logically flawed. The argument rests on the premise that s. 16(3), unless amended, requires an inquiry into the witness's understanding of the obligation to tell the truth. On this basis, it asserts that, unless the ban on questioning in s. 16.1(7) dealing with children is read into s. 16(3), such questioning must be conducted. Thus, my colleague Binnie J. states that "[t]he Crown invites us, in effect, to apply the 'don't ask' rule governing children to adults whose mental capacity is challenged" (para. 127).

[49] The fallacy in this argument is the starting assumption that s. 16(3) requires importing a "don't ask" rule. As explained earlier, it does not. Section 16(3) sets two requirements for the competence of adults with mental disabilities: the ability to communicate the evidence and a promise to tell the truth. It is self-sufficient. Nothing further need be imported.

[50] Fifth, and following from the previous point, the argument relies on the assumption that unless it can be shown that adult witnesses with mental disabilities are the same as, or like, child witnesses, adult witnesses with mental disabilities must be treated differently, and subjected to an inquiry into their understanding of the nature of the obligation to tell the truth before they can be held competent to testify. Thus Binnie J. states that before s. 16(3) can be read as importing the "don't ask" rule, it is for the Crown to establish that there is no difference between children and adults with mental disabilities on the test of what reasonable people would accept. He opines that an assertion of equivalency is "pure assertion on a key issue" (para. 130).

[51] There are several answers to this "equivalency" argument. First, like the previous argument, it rests on the mistaken assumption that the Crown asks us to import a "don't ask" rule into s. 16(3). The plain words of s. 16(3) do not require an understanding of the obligation to tell the truth, and it is for the party seeking to depart from the text of s. 16(3) to demonstrate that adults with mental disabilities should be treated differently from children. Second, the argument suffers from

inconsistency. It claims that the equivalency of the vulnerabilities of these two groups of witnesses is "pure assertion on a key issue", but at the same time claims that the previous judge-made law for children (*Khan*) should apply to adult witnesses with mental disabilities. Third, one may question how equivalency, were it needed, should be established: Is the proper approach to competence what reasonable people would conclude, or judicial opinion informed by assessment of the situation and expert opinion?

[52] The final and most compelling answer to the equivalency argument is simply this: When it comes to testimonial competence, precisely what, one may ask, is the difference between an adult with the mental capacity of a six-year-old, and a six-year-old with the mental capacity of a six-year-old? Parliament, by applying essentially the same test to both under s. 16(3) and s. 16.1(3) and (6) of the *Canada Evidence Act*, implicitly finds no difference. In my view, judges should not import one.

[53] I conclude that s. 16(3) of the *Canada Evidence Act*, properly interpreted, establishes two requirements for an adult with mental disabilities to take the stand: the ability to communicate the evidence and a promise to tell the truth. A further requirement that the witness demonstrate that she understands the nature of the obligation to tell the truth should not be read into the provision.

C. *The Jurisprudence*

[54] I have concluded that s. 16(3), on its plain words and in its context, reveals only two requirements for an adult with mental disabilities to have the capacity to testify: (1) that the witness be able to communicate the evidence, and (2) that the person promise to tell the truth. It is necessary next to consider whether the jurisprudence requires a different result. My colleague Binnie J. argues that the cases, and in particular *Khan*, require that "promising to tell the truth" in s. 16(3) must be read as impliedly importing an additional requirement — an understanding of the nature of the obligation engaged by the promise. With respect, I cannot agree.

[55] It is necessary at the outset to describe what *Khan* decided. *Khan* was concerned with the predecessor of s. 16, which was first enacted in 1893 (S.C. 1893, c. 31, s. 25) and dealt only with children. The provision required that the proposed witness "understan[d] the duty of speaking the truth". This phrase was deleted when the provision was amended in 1987. Explaining the statutory requirement that the witness must "understan[d] the duty of speaking the truth" in *Khan*, Robins J.A. stated:

> To satisfy the less stringent standards applicable to unsworn evidence, the child need only understand the duty to speak the truth in terms of ordinary everyday social conduct. This can be demonstrated through a simple line of questioning directed to whether the child understands the difference between the truth and a lie, knows that it is wrong to lie, understands the necessity to tell the truth, and promises to do so. [Emphasis added; p. 206.]

[56] This oft-cited statement of the law proved difficult to apply. The first sentence suggests that the threshold for testimonial competence is low, based on truth telling in "everyday social conduct". This suggests that the judge need only be satisfied that the witness understands the difference between truth and falsehood in relation to everyday matters and activities — not in some abstract metaphysical sense. The second sentence in this passage from *Khan*, specifically the phrases "knows that it is wrong to lie" and "understands the necessity to tell the truth" (emphases added), move beyond everyday social conduct into more abstract, philosophical realms. In *obiter*, Robins J.A. opined that the same test should be applied to the post-1987 section, on the grounds that without the requirement that the witness understand what a promise is and the importance of keeping it, the promise would be an "empty gesture".

[57] In *R. v. Farley* (1995), 23 O.R. (3d) 445, the Ontario Court of Appeal adopted this *obiter dictum* and applied it to the post-1987 version of s. 16(3), the provision applicable in this case. Other provincial courts of appeal followed suit: *R. v. P.M.F.* (1992), 115 N.S.R. (2d) 38; *R. v. McGovern* (1993), 82 C.C.C. (3d) 301 (Man.); *R. v. S.M.S.* (1995), 160 N.B.R. (2d) 182. In *R. v. Rockey*, [1996] 3 S.C.R. 829, a minority of this Court, *per* McLachlin J., held that a child was incompetent to testify on the basis of his inability to *communicate* the evidence, referring to *Farley* with approval; the question of whether s. 16(3) incorporated the *Khan* test was not at issue in that case. Appellate courts continue to require demonstration of an understanding of the duty to speak the truth under s. 16(3): *R. v. Ferguson* (1996),

112 C.C.C. (3d) 342 (B.C.); *R. v. Parrott* (1999), 175 Nfld. & P.E.I.R. 89 (Nfld.); *R. v. A. (K.)* (1999), 137 C.C.C. (3d) 554 (Ont.); *R. v. R.J.B.*, 2000 ABCA 103, 255 A.R. 301; *R. v. Brouillard*, 2006 QCCA 1263, 44 C.R. (6th) 218; *R. v. E.E.D.*, 2007 SKCA 99, 304 Sask. R. 192. In the case at bar, the Ontario Court of Appeal affirmed that view, upholding the trial judge's insistence on the understanding of the duty to speak the truth not merely in "everyday social conduct", but on an understanding of the duty *abstracted* from everyday situations.

[58] This is the first case in which this Court has been squarely called upon to interpret s. 16(3) of the *Canada Evidence Act* and confront the legacy of the *obiter dicta* in *Khan*. In my view, the test proposed in *Khan* is unhelpful and inapplicable, insofar as it is read as requiring or condoning an abstract inquiry into the nature of the obligation to tell the truth.

[59] First and foremost, *Khan* was concerned with a substantially different pre-1987 version of s. 16, which was adopted in 1893 and which explicitly required that the proposed witness "understands the duty of speaking the truth". The current provision requires only that the witness be able to communicate the evidence and promise to tell the truth. It speaks only of two practical, less abstract, requirements — the ability to communicate the evidence and a promise to tell the truth. In short, *Khan* imposed a requirement to demonstrate understanding of the nature of the obligation to tell the truth, based on the phrase "understands the duty of speaking the truth". That phrase has been removed from the current s. 16(3). It follows that *Khan*

simply does not apply to this case, and that the *obiter dictum* in *Khan* suggesting that it does should be rejected. In 1987, Parliament deleted the requirement of understanding the nature of the duty to tell the truth. Judges should not bring it back in.

[60] Second, the *Khan* test, as already noted, is ambivalent. It first suggests that all that is required is an understanding of the duty to speak the truth "in terms of ordinary everyday social conduct" (p. 206). However, it then goes on to illustrate this test in terms abstracted from everyday social conduct. In my view, the former approach is preferable.

[61] This lower threshold recognizes that witnesses of limited mental ability, whether by reason of age or disability, understand and articulate events in the concrete terms of the world around them. The capacity to abstract from the concrete and draw generalizations about conduct unrelated to concrete situations typically develops at a later, more advanced stage of mental development. A child or adult with mental disabilities may be able to distinguish between what is true and false or right and wrong in a particular situation, yet lack the ability to articulate in general language the reasons for this understanding. To insist on the articulation of the nature of the obligation to tell the truth, abstracted from particular situations, may result in the witness's evidence being excluded, even though it is reliable.

[62] Third, as discussed above, Parliament's response to *Khan*'s insistence on an understanding of the duty to speak the truth in abstract terms and the metaphysical questioning this insistence gave rise to, was to expressly forbid such inquiries in the case of children by enacting s. 16.1(7) in 2005. Why then, one may ask, should courts struggle to read a contrary purpose into the plain language of s. 16, which requires only a concrete inquiry into whether the proposed witness can communicate the evidence and a promise to tell the truth?

[63] I conclude that, insofar as the authorities suggest that "promising to tell the truth" in s. 16(3) should be read as requiring an abstract inquiry into an understanding of the obligation to tell the truth, they should be rejected. All that is required is that the witness be able to communicate the evidence and promise to tell the truth.

D. *Policy Considerations*

[64] I have concluded that s. 16(3) imposes two requirements for the testimonial competence of an adult with mental disabilities: (1) the ability to communicate the evidence; and (2) a promise to tell the truth. It is unnecessary and indeed undesirable to conduct an abstract inquiry into whether the witness generally understands the difference between truth and falsity and the obligation to give true evidence in court. Mentally limited people may well understand the difference between the truth and a lie and know they should tell the truth, without being able to

articulate in general terms the nature of truth or why and how it fastens on the conscience in a court of law. Section 16(3), in assessing the witness's capacity, focuses on the concrete acts of communicating and promising. The witness is not required to explain the difference between the truth and a lie, or what makes a promise binding. I have argued that this result follows from the plain words of s. 16 of the *Canada Evidence Act*, and that judges should not by implication add other elements to the dual requirements of an ability to communicate evidence and a promise to tell the truth imposed by s. 16(3).

[65] The discussion of the proper interpretation of s. 16(3) of the *Canada Evidence Act* would not be complete, however, without addressing the policy concerns underlying the issue. Two potentially conflicting policies are in play. The first is the social need to bring to justice those who sexually abuse people of limited mental capacity — a vulnerable group all too easily exploited. The second is to ensure a fair trial for the accused and to prevent wrongful convictions.

[66] The first policy consideration is self-evident and requires little amplification. Those with mental disabilities are easy prey for sexual abusers. In the past, mentally challenged victims of sexual offences have been frequently precluded from testifying, not on the ground that they could not relate what happened, but on the ground that they lacked the capacity to articulate in abstract terms the difference between the truth and a lie and the nature of the obligation imposed by promising to tell the truth. As discussed earlier, such witnesses may well be capable of telling the

truth and in fact understanding that when they do promise, they should tell the truth. To reject this evidence on the ground that they cannot explain the nature of the obligation to tell the truth in philosophical terms that even those possessed of normal intelligence may find challenging is to exclude reliable and relevant evidence and make it impossible to bring to justice those charged with crimes against the mentally disabled.

[67] The inability to prosecute such crimes and see justice done, whatever the outcome, may be devastating to the family of the alleged victim, and to the victim herself. But the harm does not stop there. To set the bar too high for the testimonial competence of adults with mental disabilities is to permit violators to sexually abuse them with near impunity. It is to jeopardize one of the fundamental desiderata of the rule of law: that the law be enforceable. It is also to effectively immunize an entire category of offenders from criminal responsibility for their acts and to further marginalize the already vulnerable victims of sexual predators. Without a realistic prospect of prosecution, they become fair game for those inclined to abuse.

[68] What then of the policy considerations on the other side of the equation? Here again, the starting point is clear. The *Canadian Charter of Rights and Freedoms* guarantees a fair trial to everyone charged with a crime. This right cannot be abridged; an unfair trial can never be condoned.

[69] It is neither necessary nor wise to enter on the vast subject of what constitutes a fair trial. One searches in vain for exhaustive definitions in the jurisprudence. Rather, the approach taken in the jurisprudence is to ask whether particular rules or occurrences render a trial unfair. It is from that perspective that we must approach this issue in this case.

[70] The question is this: Does allowing an adult witness with mental disabilities to testify when the witness can communicate the evidence and promises to tell the truth render a trial unfair? In my view, the answer to this question is no.

[71] The common law, upon which our current rules of evidence are founded, recognized a variety of rules governing the capacity to testify in different circumstances. The golden thread uniting these varying and different rules is the principle that the evidence must meet a minimal threshold or reliability as a condition of being heard by a judge or jury. Generally speaking, this threshold of reliability is met by establishing that the witness has the capacity to understand and answer the questions put to her, and by bringing home to the witness the need to tell the truth by securing an oath, affirmation or promise. There is no guarantee that any witness — even those of normal intelligence who can take the oath or affirm — will in fact tell the truth, all the truth, or nothing but the truth. What the trial process seeks is merely a basic indication of reliability.

[72] Many cases, including *Khan*, have warned against setting the threshold for the testimonial competence too high for adults with mental disabilities: *R. v. Caron* (1994), 72 O.A.C. 287; *Farley*; *Parrott*. This reflects the fact that such witnesses may be capable of giving useful, relevant and reliable evidence. It also reflects the fact that allowing the witness to testify is only the first step in the process. The witness's evidence will be tested by cross-examination. The trier of fact will observe the witness's demeanour and the way she answers the questions. The result may be that the trier of fact does not accept the witness's evidence, accepts only part of her evidence, or reduces the weight accorded to her evidence. This is a task that judges and juries perform routinely in a myriad of cases involving witnesses of unchallenged as well as challenged mental ability.

[73] The requirement that the witness be able to communicate the evidence and promise to tell the truth satisfies the low threshold for competence in cases such as this. Once the witness is allowed to testify, the ultimate protection of the accused's right to a fair trial lies in the rules governing admissibility of evidence and in the judge's or jury's duty to carefully assess and weigh the evidence presented. Together, these additional safeguards offer ample protection against the risk of wrongful conviction.

E. *Summary of the Section 16(3) Test*

[74] To recap, s. 16(3) of the *Canada Evidence Act* imposes two conditions for the testimonial competence of adults with mental disabilities:

(1) the witness must be able to communicate the evidence; and

(2) the witness must promise to tell the truth.

Inquiries into the witness's understanding of the nature of the obligation this promise imposes are neither necessary nor appropriate. It is appropriate to question the witness on her ability to tell the truth in concrete factual circumstances, in order to determine if she can communicate the evidence. It is also appropriate to ask the witness whether she in fact promises to tell the truth. However, s. 16(3) does not require that an adult with mental disabilities demonstrate an understanding of the nature of the truth *in abstracto*, or an appreciation of the moral and religious concepts associated with truth telling.

[75] The following observations may be useful when applying s. 16(3) in the context of s. 16 of the *Canada Evidence Act*.

[76] First, the *voir dire* on the competence of a proposed witness is an independent inquiry: it may not be combined with a *voir dire* on other issues, such as the admissibility of the proposed witness's out-of-court statements.

[77] Second, although the *voir dire* should be brief, it is preferable to hear all available relevant evidence that can be reasonably considered before preventing a witness to testify. A witness should not be found incompetent too hastily.

[78] Third, the primary source of evidence for a witness's competence is the witness herself. Her examination should be permitted. Questioning an adult with mental disabilities requires consideration and accommodation for her particular needs; questions should be phrased patiently in a clear, simple manner.

[79] Fourth, the members of the proposed witness's surrounding who are personally familiar with her are those who best understand her everyday situation. They may be called as fact witnesses to provide evidence on her development.

[80] Fifth, expert evidence may be adduced if it meets the criteria for admissibility, but preference should always be given to expert witnesses who have had personal and regular contact with the proposed witness.

[81] Sixth, the trial judge must make two inquiries during the *voir dire* on competence: (a) does the proposed witness understand the nature of an oath or affirmation, and (b) can she communicate the evidence?

[82] Seventh, the second inquiry into the witness's ability to communicate the evidence requires the trial judge to explore in a general way whether she can relate

concrete events by understanding and responding to questions. It may be useful to ask if she can differentiate between true and false everyday factual statements.

[83] Finally, the witness testifies under oath or affirmation if she passes both parts of the test, and on promising to tell the truth if she passes the second part only.

III. Application

[84] During the *voir dire* on K.B.'s testimonial capacity, the Crown posed a line of questions going to whether she could tell the difference between true and false factual statements in concrete circumstances. These were relevant to K.B.'s basic ability to communicate the evidence:

> **MR. SEMENOFF:**
>
> **Q.** How old are you now, [K.B.]?
>
> **A.** I'm 22, you know that.
>
> **Q.** 22? When's your birthday?
>
> **A.** [Birth date].
>
> **Q.** [Birth date]. Are you going to school now or are you done with school?
>
> **A.** I'm not done in school yet.
>
> **Q.** What school do you go to, [K.B.]?
>
> **A.** [Name of school].
>
> **Q.** How long -- do you know how long you've been going to [name of school]?

A. I don't know.

Q. Did you go to any school before you went to [name of school]?

A. From [name of previous school].

Q. From [name of previous school]. Okay. Did you have a teacher from that school, a Ms. [W.]?

A. Ms. [R.].

Q. Oh, [R.]. Okay. And I call her Ms. [W.], do you know what her name is, is it [R.] or is it Ms. [W.]?

A. [R.].

Q. Okay.

. . .

Q. [K.B.], if I were to tell you that the room that we're in that the walls in the room are black[,] would that be a truth or a lie, [K.B.]?

A. A lie.

Q. Why would it be a lie?

A. It's different colours in here.

Q. There are different colours in here. What colour are the walls?

A. Purple.

Q. Purple. Okay. If I were to tell you that the gown that I'm wearing that that is black, would that be a truth or a lie?

A. The truth.

Q. And why is that?

A. I don't know.

Q. You don't know. Is it a good thing or a bad thing to tell the truth?

A. Good thing.

Q. Is it a good thing or a bad thing to tell a lie?

A. Bad thing.

(A.R., vol. I, at pp. 111-13)

However, the trial judge went on to question K.B. on her understanding of the meaning of truth, religious concepts, and the consequences of lying.

[THE COURT:]

[Q.] Do you go to church, [K.B.]?

A. No.

Q. No. Have you ever been taught about God or anything like that?

A. No.

Q. No? All right. What happens if you steal something?

A. I don't know.

Q. You don't know. If you steal something and no one sees it, will anything happen to you? Nothing will happen. Why won't anything happen?

A. I don't know.

Q. You don't know. Tell me what you think about the truth.

A. I don't know.

Q. You don't know. All right. Is it important to tell the truth?

A. I don't know.

Q. You don't know. Tell me what a promise is when you make a --

A. I don't know.

Q. -- promise. What's a promise?

A. I don't know.

Q. You don't know what a promise is. Okay. Have you ever been in court before?

A. Once.

Q. Once? And do you think it's an important thing to be in court?

A. I don't know.

Q. You don't know. All right. Do you know what an oath is, to take an oath?

A. I don't know.

Q. No. Do you have any idea what it means to tell the truth?

A. I don't know.

Q. You don't know. If you tell a lie does anything happen to you? Nothing happens.

A. No.

. . .

[THE COURT:]

[Q.] Do you know why you're here today?

A. I don't know. To talk about [D.A.I.].

Q. Yes, and do you think that's really important?

A. Maybe yeah.

Q. Maybe yeah? Remember earlier I was asking you about a promise?

A. No.

Q. Have you ever made a promise to anybody?

A. I don't know.

Q. That you promised you'll be good, did you ever say that? Have you ever heard that expression "I promise to be good, mommy"?

A. Okay.

Q. All right. So do you know what a promise is, that you're going to do something the right way? Do you understand that?

A. Okay.

Q. Can you tell me whether you understand that, [K.B.]?

A. I don't know.

Q. Does anything happen if you break a promise?

A. I don't know.

Q. You told me you don't go to church, right?

A. Right.

Q. And no one has ever told you about God; is that correct? No one has ever told you about God?

A. No.

Q. Has anyone ever told you that if you tell big lies you'll go to jail?

A. Right.

Q. If you tell big lies will you go to jail?

A. No.

(*Ibid.*, at pp. 117-19 and 155-56)

[85] As these passages demonstrate, the trial judge was not satisfied with the Crown's questions on K.B.'s ability to recount events and distinguish between telling the truth and lying in concrete, real-life situations. He went on to question her on the nature of truth, religious obligations and the consequences of failing to tell the truth. Because K.B. was unable to satisfactorily answer these more abstract questions, he ruled that she could not be allowed to promise to tell the truth and refused to allow her to testify.

[86] This ruling was based on an erroneous interpretation of s. 16(3), which the trial judge read as requiring an understanding of the duty to speak the truth. Hence, K.B. was precluded from testifying on promising to tell the truth. The trial judge summed up his conclusions as follows:

> Having questioned [K.B.] at length I am fully satisfied that [K.B.] has not satisfied the prerequisite that she understands the duty to speak to the truth. She cannot communicate what truth involves or what a lie involves, or what consequences result from truth or lies, and in such circumstances, quite independent of the evidence of [Dr. K.], I am not satisfied that she can be permitted to testify under a promise to tell the truth. [Emphasis added; *ibid.*, at p. 3.]

[87] The fatal error of the trial judge is that he did not consider the second part of the test under s. 16. He failed to inquire into whether K.B. had the ability to communicate the evidence under s. 16(3), insisting instead on an understanding of the duty to speak the truth that is not prescribed by s. 16(3). This error, an error of law, led him to rule K.B. incompetent and hence to the total exclusion of her evidence from the trial. This fundamental error vitiated the trial.

[88] This fundamental flaw in the trial cannot be rectified by comments made by the trial judge at other points in the trial or by the doctrine of deference. My colleague Binnie J. suggests that the trial judge's comments during the *voir dire* and hearing on hearsay admissibility (paras. 136, 138 and 139) support his conclusion on the earlier *voir dire* that K.B. was not competent to testify under s. 16(3). However, it is difficult to see how subsequent comments in the course of dealing with other issues

could rehabilitate the trial judge's erroneous application of the requirements for competence under s. 16. The *voir dire* on competence and the *voir dire* on the admissibility of hearsay evidence were two different inquiries. The evidence of Ms. W., on which the trial judge relied in making the comments regarding hearsay, was not before the trial judge when he ruled K.B. incompetent to testify. Moreover, the threshold of reliability for hearsay evidence differs from the threshold ability to communicate the evidence for competence; a ruling on testimonial capacity cannot be subsequently justified by comments in a ruling on hearsay admissibility. Had the competence hearing been properly conducted, this might have changed the balance of the trial, including the hearing (if any) on hearsay admissibility. The trial judge's fundamental error in the s. 16 inquiry on competence cannot be corrected by speculation based on comments made in a different inquiry.

[89] Nor does the ruling that K.B. was incompetent, based as it was on a misstatement of the legal test under s. 16(3), attract deference. This amounted to an error of law, to be judged on a standard of correctness: *Housen v. Nikolaisen*, 2002 SCC 33, [2002] 2 S.C.R. 235, at paras. 26-37. The defect in the trial judge's ruling cannot, in my view, be cured.

[90] I would allow the appeal, set aside the acquittal, and direct a new trial.

The reasons of Binnie, LeBel and Fish JJ. were delivered by

[91] BINNIE J. (dissenting) — I agree with the Chief Justice that, in this case, "[t]wo potentially conflicting policies are in play", the first being to "bring to justice" those accused of sexual abuse and the second being "to ensure a fair trial for the accused and to prevent wrongful convictions" (para. 65). In my view, by turning Parliament's direction permitting a person "whose mental capacity is challenged" to testify only "on promising to tell the truth" into an empty formality — a mere mouthing of the words "I promise" without any inquiry as to whether the promise has any significance to the potential witness — the majority judgment unacceptably dilutes the protection Parliament intended to provide to accused persons.

[92] I prefer the contrary interpretation of s. 16(3) of the *Canada Evidence Act*, R.S.C. 1985, c. C-5, expressed by our Chief Justice herself in her concurring judgment in *R. v. Rockey*, [1996] 3 S.C.R. 829, where, as McLachlin J., drawing a distinction between "the ability to communicate the evidence and the ability to promise to tell the truth" (para. 25), wrote:

> The only inference that can be drawn from this evidence is that while [the potential witness] Ryan understood the difference between what is "so" and "not so", he had no conception of any moral obligation to say what is "right" or "so" in giving evidence or otherwise. In these circumstances, no judge could reasonably have concluded that Ryan was able to promise to tell the truth. [Emphasis added; para. 27.]

McLachlin J.'s views on the requirements of s. 16(3) were not disagreed with by the majority, and indeed on this point she simply reflected the Court's earlier unanimous opinion in *R. v. Khan*, [1990] 2 S.C.R. 531, at pp. 537-38.

[93] The majority judgment in the present case repudiates the earlier jurisprudence and the balanced approach it achieved. It entirely eliminates any inquiry into whether the potential witness has any "conception of any moral obligation to say what is 'right'".

[94] I agree with the Chief Justice that "allowing the witness to testify is only the first step in the process" (para. 72). More particularly, my colleague continues:

> The witness's evidence will be tested by cross-examination. The trier of fact will observe the witness's demeanour and the way she answers the questions. [*Ibid*.]

In this case, the exchanges between the challenged witness, K.B., and the trial judge, demonstrated the futility of any such cross-examination. The trial judge noted that K.B. "did not 'compute' questions before giving answers, that she was not processing the information being communicated to her, and that she had serious problems relating to her ability to communicate and to recollect" (2008 CanLII 21726 (Ont. S.C.J.) (the "hearsay decision"), at para. 7). As a practical matter, it is not possible to cross-examine such a witness meaningfully. The trial judge concluded correctly on this point that "there is no secure method of testing K.B.'s credibility" (para. 56). The result of the majority judgment in this case is to create unfair prejudice to the accused.

[95] What is fundamental, as was emphasized here by the Ontario Court of Appeal, is that the trial judge had the opportunity to observe the witness's demeanour and the way she answers the questions (McLachlin C.J., at para. 72). We do not have that advantage. The trial judge concluded, based on his direct observation, that, in light of the severity of her mental disability, K.B.'s evidence could not be relied upon for the truth-seeking purposes of a criminal trial and it ought to be altogether excluded. In a judge-alone trial, it goes without saying, where the trial judge found that K.B.'s testimony did not meet even a threshold of admissibility, he would not — had the evidence been admitted — have accepted it as the basis for a proper conviction. An acquittal was inevitable.

[96] In the result, despite all the talk in our cases of the need to "defer" to trial judges on their assessment of mental capacity, a deference which, in my opinion, is manifestly appropriate, the majority judgment shows no deference to the views of the trial judge whatsoever and orders a new trial. I am unable to agree. I therefore dissent.

I. Judicial History

A. *Ontario Superior Court of Justice, 2008 CanLII 21726 (the "Hearsay Decision")*

[97] The Chief Justice has set out the substance of the trial judge's ruling. I should add that he found numerous contradictions in K.B.'s testimony. For example,

K.B. testified that she had told her mother about D.A.I. touching her, but her mother contradicted this (para. 38). With respect to the out-of-court statements, the trial judge expressed serious concerns about the truth of the statements based on K.B.'s "serious problems in communicating her evidence, her incapacity to answer relatively simple questions surrounding the allegations, her confusion with respect to whether or not she spoke to her mother" (para. 53 (emphasis added)). He also noted the testimony of K.B.'s teacher that K.B.'s mother had told her that she viewed K.B.'s story with "disbelief" (para. 54). Given the close relationship between K.B. and the respondent D.A.I., the trial judge found that "[w]hat may have been innocent in intent has the potential to be misinterpreted" (para. 55).

[98] The trial judge concluded:

> I am convinced that to admit K.B.'s statement for its truth would effectively deprive the court of any reliable method of testing its truth. It is clear from the short cross-examination undertaken . . . at the preliminary inquiry, there is no secure method of testing K.B.'s credibility. . . . What the Crown purports to be confirmatory evidence is either ambiguous or itself unreliable. [Emphasis added; para. 56.]

B. *Ontario Court of Appeal, 2010 ONCA 133, 260 O.A.C. 96 (Doherty, MacPherson and Armstrong JJ.A.)*

[99] Doherty and MacPherson JJ.A. applied a "very deferential" standard of review to the trial judge's assessment under s. 16, noting that the trial judge heard not only what the proposed witness said, but also how it was said (paras. 20-21). In their

view, Parliament chose to create a new testimonial competence test for children but to limit it so as only to apply to children under 14 (para. 41). For whatever reason, Parliament intended to treat children and adults with a mental disability differently when it comes to testimonial competence (para. 43).

[100] The Court of Appeal also held that the trial judge had correctly rejected the confirmatory evidence tendered by the Crown, namely K.B.'s sister's evidence and the photograph found in the respondent's bedroom (para. 50). He had carefully considered the sister's testimony, but decided that it was unreliable. The trial judge had also found that the respondent's explanation that K.B. flashed him when he took the photograph could have been true. Doherty and MacPherson JJ.A., speaking for a unanimous Court of Appeal, held that both of these conclusions were open to the trial judge (*ibid.*). The appeal was accordingly dismissed.

II. Analysis

[101] The substantial issue in this appeal concerns the correctness of the trial judge's approach to assessment of the testimonial capacity of the complainant, K.B. The admissibility of her evidence turns on the interpretation of the rules established by Parliament in s. 16 of the *Canada Evidence Act*, which delineates the circumstances in which a proposed witness "of fourteen years of age or older whose mental capacity is challenged" may or may not testify.

[102] A trial judge is faced with three options. If the challenged witness is "able to communicate the evidence" and "understands the nature of an oath or a solemn affirmation", the person "shall testify under oath or solemn affirmation" (s. 16(2)). A person who satisfies the first criterion ("able to communicate the evidence") but not the second (i.e. does not understand "the nature of an oath or a solemn affirmation") may provide unsworn testimony "on promising to tell the truth" (s. 16(3)). A person who does not satisfy either criterion "shall not testify" (s. 16(4)).

[103] The few questions posed by the trial judge touching on religion in this case were relevant to the first option of having K.B. testify under oath or affirmation which, as the Chief Justice recognizes, is the "preferred option" (para. 31). If the trial judge had found that K.B. understood the nature of the oath, he would have been obliged to have her testimony given under oath. It was proper for the trial judge to test K.B.'s ability to satisfy this standard rather than assuming, on account of her mental disability, that she would fail the s. 16(1) test.

[104] As to the second option (unsworn evidence), it is clear that Parliament did not consider an ability to communicate the evidence to be the sole and sufficient condition of admissibility. A person giving unsworn testimony must nevertheless promise to tell the truth, and this additional requirement is not, in my view, an empty formality but is intended to bolster the court's effort to establish the true facts and to protect the legitimate interest of the accused to a fair trial.

[105] I agree with the Chief Justice that "[p]romising is an act aimed at bringing home to the witness the seriousness of the situation and the importance of being careful and correct. The promise thus serves a practical, prophylactic purpose" (para. 36). I do not agree with my colleague, however, that it is out of bounds for a trial judge to try to determine — in concrete everyday terms — whether there is in reality such a "prophylactic" effect in the case of a particular witness whose mental capacity has been challenged. If such a witness is so disabled as not to understand "the seriousness of the situation and the importance of being careful and correct", there is no prophylactic effect, and the fair trial interests of the accused are unfairly prejudiced.

A. *The Khan Test*

[106] It is, of course, true that an inability to deal with concepts ("oaths", "solemn affirmations" and "promises") does not mean that a person suffering from a mental disability is by that fact unable to relate the factual events that he or she encountered. Many individuals whose mental capacity is not open to challenge may have difficulty giving a correct explanation of these concepts.

[107] In an effort to solve this dilemma, this Court in *Khan* adopted the approach formulated by Robins J.A. in *Khan* when it was before the Ontario Court of Appeal ((1988), 42 C.C.C. (3d) 197, at p. 206):

> To satisfy the less stringent standards applicable to unsworn evidence, the child need only understand the duty to speak the truth in terms of ordinary everyday social conduct. This can be demonstrated through a simple line of questioning directed to whether the child understands the difference between the truth and a lie, knows that it is wrong to lie, understands the necessity to tell the truth, and promises to do so. [Emphasis added.]

This approach (adopted at a time before the *Canada Evidence Act* introduced its present distinction between children and adults with challenged mental capacity) gives meaningful content to the statutory language while recognizing that the "simple line of questioning" is to be factual, not metaphysical.

[108] It is true, as the Chief Justice points out, that *Khan* was decided under an earlier version of s. 16 which referred expressly to "the duty of speaking the truth". However, as both *Khan* and McLachlin J. in *Rockey* were at pains to point out, those words were not interpreted as contemplating an abstract inquiry. In *Rockey*, decided at a time when s. 16(3) read the same as it does now, McLachlin J. insisted on a determination of "the ability to promise to tell the truth" (para. 25 (emphasis added)), but not as the mere physical ability of a potential witness to say the words. In that case, the child witness was not called to testify and the issue was whether his out-of-court statements could nevertheless be admitted against the accused under the principled hearsay exception. To do so required a demonstration of necessity and reliability. McLachlin J. held that "necessity" was established. In her view, the child was incompetent to testify under s. 16(3) because, not only was it "unrealistic to conclude that Ryan could have communicated his evidence in any useful sense either

in the courtroom or in a smaller room via closed circuit television", but, as stated, because "no judge could reasonably have concluded that Ryan was able to promise to tell the truth" (paras. 26-27). Although Parliament had by that time eliminated the words "duty of speaking the truth" from s. 16(3), McLachlin J. nevertheless concluded that the words "on promising to tell the truth" incorporated the understanding in practical terms of a "moral obligation to say what is 'right'" (para. 27).

[109] In the result, the child was held under s. 16(3) to be incompetent to testify. The necessity for the hearsay evidence was therefore established. His out-of-court evidence was admitted and the accused was convicted.

[110] There is nothing in McLachlin J.'s reasons in *Rockey* to suggest that the "ability to promise to tell the truth" is to be ascertained on a "don't ask" basis, i.e. not to endeavour to determine whether the potential witness has any sense of what it means in simple concrete terms to promise to tell the truth. On the contrary, McLachlin J. rested her conclusion on the evidence heard by the trial judge concerning the ability of the potential witness to explain events and to understand the difference in practical terms between telling the truth and lying.

[111] Nor was it suggested in *Rockey* that, by insisting on "the ability" to make the promise, McLachlin J. was reading extraneous words into the statute, which is now the cornerstone of the majority judgment in this case. The making of a promise

is not just a physical act. The question is whether the potential witness recognizes a sense of obligation, however articulated or unarticulated, to stick to the truth. This interpretation was consistent with the Parliamentary record which, as we will see, demonstrates a legislative intention under s. 16(3) that a trial judge be satisfied that a witness — as a condition precedent to testimonial capacity — understands the difference in practical everyday terms between telling the truth and not telling the truth.

[112] Of course, there are witnesses who suffer no mental disability and who recognize perfectly well that they are undertaking an obligation to tell the truth but nevertheless do not do so. That is a different problem. Their mental capacity is not in issue. In their case, the courts rely on cross-examination and other techniques to ferret out the truth. In the case of K.B., there was no allegation whatsoever of bad faith, but she may nevertheless have been mistaken in her perception or recollection of events, and the crucible of cross-examination was considered by the trial judge to be useless because, as stated, he found that "there is no secure method of testing K.B.'s credibility" (hearsay decision, at para. 56).

[113] The *Khan* test specifically framed the inquiry as being into "ordinary everyday social conduct" (C.A., at p. 206). At no point did this Court in *Khan* or McLachlin J. in *Rockey* require that the potential witness be able to *articulate* or even understand in the abstract concepts such as oaths, affirmations or promises. Leaving aside McLachlin J.'s reference to a "moral obligation" in *Rockey* — which, if

anything, proposed a more strict test for admissibility than the Court's judgment in *Khan* — if it appears to the trial judge that the potential witness whose mental capacity is challenged has demonstrated an understanding of a promise to tell the truth in terms of ordinary, everyday social conduct, the witness has met the test for giving unsworn testimony. The same would be true in my view of a witness who understands the seriousness of the situation and "the importance of being careful and correct", to use the Chief Justice's words in this case (para. 36). However, even this approach could not be satisfied by K.B. according to the trial judge who was uniquely placed to observe her demeanour.

[114] I respectfully disagree with the Chief Justice's characterization of *Khan* as insisting "on an understanding of the duty to speak the truth in abstract terms and the metaphysical questioning this insistence gave rise to" (para. 62). The *Khan* test, in my view, did just the opposite. In that case, Robins J.A. found that the trial judge had erroneously applied the standards applicable to a child giving sworn testimony to a situation in which only the unsworn testimony of a child was sought and to which less onerous standards were applicable. Robins J.A. underscored the difference between the two standards in no uncertain terms:

> An appreciation of the assumption of "a moral obligation" or "getting a hold on the conscience of the witness" or . . . an "appreciation of the solemnity of the occasion" or an awareness of an added duty to tell the truth over and above the ordinary duty to do so are <u>all matters involving abstract concepts which are not material to a determination of whether a child's unsworn evidence may be received</u>. A child need not comprehend "what it is to tell the truth in court" or to appreciate "what happens when

> you tell a lie in the courtroom" before he or she can give unsworn evidence. [Emphasis added; emphasis in original deleted; pp. 205-6.]

Therefore, I have no disagreement with the Chief Justice insofar as she affirms the existing law that the judge's inquiry should not ask the potential witness to "articulate abstract concepts" (para. 31) or tell what "the truth means in abstract terms" (para. 35) or venture into "abstract, philosophical realms" (para. 56) or conduct "an abstract inquiry into the nature of the obligation to tell the truth" (para. 58). Nor did *Khan*, or McLachlin J. in *Rockey*, in my view, "insist on the articulation of the nature of the obligation to tell the truth, abstracted from particular situations" (para. 61). On the contrary, it seems to me that *Khan* affirms — not denies — that "[i]t is unnecessary and indeed undesirable to conduct an abstract inquiry" (para. 64). At no point does *Khan* require an explanation of "the nature of the obligation to tell the truth in philosophical terms" (para. 66). The reasons of McLachlin J. in the later case of *Rockey* expressed no disagreement with the *Khan* approach. It is the present majority opinion that effects a marked departure from the existing jurisprudence.

B. *An Issue of Statutory Interpretation*

[115] The bottom line of the majority judgment in this case is that s. 16(3) precludes a court from conducting an inquiry into whether (as McLachlin J. in *Rockey* put it) the proposed witness has "the ability to promise to tell the truth" (para. 25). This is based, it is said, on "[t]he first and cardinal principle of statutory interpretation [which] is that one must look to the plain words of the provision. Where ambiguity

arises, it may be necessary to resort to external factors to resolve the ambiguity . . . . Section 16 shows no ambiguity" (McLachlin C.J., at para. 26).

[116] A more contextual approach to statutory interpretation has been emphasized by our Court on numerous occasions in recent years, as set out in *Rizzo & Rizzo Shoes Ltd. (Re)*, [1998] 1 S.C.R. 27, at para. 21, quoting Professor Driedger:

> Today there is only one principle or approach, namely, the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament.
>
> (E. A. Driedger, *Construction of Statutes* (2nd ed. 1983), at p. 87)

[117] Leaving aside for the moment the amendments relating to children in s. 16.1 added by the 2005 amendments, the relevant "three options" for persons with mental disability are set out in s. 16(1) to (4) as follows:

> **16.** (1) [Witness whose capacity is in question] If a proposed witness is a person of fourteen years of age or older whose mental capacity is challenged, the court shall, before permitting the person to give evidence, conduct an inquiry to determine
>
> (*a*) whether the person understands the nature of an oath or a solemn affirmation; and
>
> (*b*) whether the person is able to communicate the evidence.
>
> (2) [Testimony under oath or solemn affirmation] A person referred to in subsection (1) who understands the nature of an oath or a solemn affirmation and is able to communicate the evidence shall testify under oath or solemn affirmation.

> (3) [Testimony on promise to tell truth] A person referred to in subsection (1) who does not understand the nature of an oath or a solemn affirmation but is able to communicate the evidence may, notwithstanding any provision of any Act requiring an oath or a solemn affirmation, testify on promising to tell the truth.
>
> (4) [Inability to testify] A person referred to in subsection (1) who neither understands the nature of an oath or a solemn affirmation nor is able to communicate the evidence shall not testify.
>
> (5) [Burden as to capacity of witness] A party who challenges the mental capacity of a proposed witness of fourteen years of age or more has the burden of satisfying the court that there is an issue as to the capacity of the proposed witness to testify under an oath or a solemn affirmation.

[118] Section 16 mandates only one "inquiry" by the trial judge in dealing with a witness "whose mental capacity is challenged". Section 16(3) is simply part of a single evaluation in which the trial judge considers the gamut from permitting the challenged witness to testify under oath to not being able to testify at all.

[119] As to whether the expression "promising to tell the truth" means more than the mere verbal ability to mouth the words I refer to what McLachlin J. herself said in *R. v. Marquard*, [1993] 4 S.C.R. 223, at p. 236: "The phrase 'communicate the evidence' indicates more than mere verbal ability." Equally, it seems to me, the requirement that a witness promise to tell the truth requires more than "mere verbal ability" to say the words. The trial judge is required to ascertain whether the witness possesses not only the "mere verbal ability" but understands "in ordinary, everyday terms" the difference between truth and fiction and the importance of sticking to the former in his or her testimony.

[120] In the initial version of s. 16 proposed by the government, there appeared a requirement that a child be "of sufficient intelligence" to testify. This was deleted. The Chief Justice suggests that the record of the Legislative Committee on Bill C-15 shows that "sufficient intelligence" was essentially understood as the ability to appreciate the moral difference between telling the truth and lying (para. 29). I disagree. As I read the legislative record, the term "sufficient intelligence" was dropped from the draft bill because in the Committee's view it potentially risked being interpreted as requiring judges to evaluate a child witness's IQ rather than his or her capacity to communicate and understand the difference between truth and lies. The Parliamentarians were assured that s. 16(3), without the words "sufficient intelligence", still required that "the child understands the difference between telling the truth and lying", as demonstrated in the following exchange:

> **[The Hon. Mary] Collins:** Yes. However, if we leave in the "sufficient intelligence", and with the interpretation that has been given, I still feel that is going to be a potential barrier.
>
> **Mr. Pink:** It may be that the committee is going to have to decide on words other than "sufficient intelligence". What is the purpose of the query in the first place? Does it not really boil down to determining truth or falsehood? Is that not what it is all about?
>
> **[The Hon. Mary] Collins:** I would think so. Yes. So <u>if the child understands the difference between telling the truth and lying, that would seem to me to be all you would really need to find out</u>.
>
> **Mr. Pink:** I agree.
>
> **[The Hon. Mary] Collins:** Thank you. [Emphasis added; p. 27.]
>
> (House of Commons, *Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-15*, No. 2, 2nd Sess., 33rd Parl., December 4, 1986)

[121] This seems as clear a demonstration as one could ask for from the Parliamentary record that it was intended under s. 16(3) that the trial judge be satisfied that the witness "understands the difference between telling the truth and lying" (emphasis added). Nothing in the legislative record of the 1987 amendments suggests that the mere verbal ability to mouth the words of a promise would be sufficient.

[122] As to the "object of the Act", it seems clear that Parliament, in making the amendments to s. 16 in 1987 (S.C. 1987, c. 24), was attempting to strike a balance between access to justice and the rights of an accused in enacting s. 16 (*ibid.*, No. 1, November 27, 1986, at pp. 21, 24 and 33). A promise to tell the truth affords some protection to an accused, but not if "the promise" is reduced to an empty formality (or, to use McLachlin J.'s phrase in *Marquard*, to a "mere verbal ability" (p. 236)), which is the unfortunate result of the majority judgment in this case.

C. *The Proper Interpretation of Section 16(3) Was Not Altered by the 2005 Amendments Related to the Evidence of Children Under 14 Years Old*

[123] In 2005, Parliament amended the *Canada Evidence Act* with respect to the unsworn evidence of children based in part on the report of the Child Witness Project at Queen's University. I agree with the Chief Justice that "Parliament's concern in enacting the 2005 amendment to the *Canada Evidence Act* was exclusively with children. The changes arose out of the Bala Report on the problems associated with prosecuting crimes against children. The Parliamentary debates on s. 16.1 attest

to the fact that the focus of the 2005 amendment was on children, and only children" (para. 41 (emphasis added)).

[124] The 2005 amendments provide as follows (S.C. 2005, c. 32):

> **16.1** (1) [Person under fourteen years of age] A person under fourteen years of age is presumed to have the capacity to testify.
>
> (2) [No oath or solemn affirmation] A proposed witness under fourteen years of age shall not take an oath or make a solemn affirmation despite a provision of any Act that requires an oath or a solemn affirmation.
>
> (3) [Evidence shall be received] The evidence of a proposed witness under fourteen years of age shall be received if they are able to understand and respond to questions.
>
> (4) [Burden as to capacity of witness] A party who challenges the capacity of a proposed witness under fourteen years of age has the burden of satisfying the court that there is an issue as to the capacity of the proposed witness to understand and respond to questions.
>
> (5) [Court inquiry] If the court is satisfied that there is an issue as to the capacity of a proposed witness under fourteen years of age to understand and respond to questions, it shall, before permitting them to give evidence, conduct an inquiry to determine whether they are able to understand and respond to questions.
>
> (6) [Promise to tell truth] The court shall, before permitting a proposed witness under fourteen years of age to give evidence, require them to promise to tell the truth.
>
> (7) [Understanding of promise] No proposed witness under fourteen years of age shall be asked any questions regarding their understanding of the nature of the promise to tell the truth for the purpose of determining whether their evidence shall be received by the court.
>
> (8) [Effect] For greater certainty, if the evidence of a witness under fourteen years of age is received by the court, it shall have the same effect as if it were taken under oath.

[125] The Crown acknowledges that there are "obvious distinctions" between Parliament's test for adults with limited mental capacity under s. 16 and children under 14 years of age under s. 16.1 (A.F., at para. 57). For adults, s. 16(3) retains the more expansive test developed in the jurisprudence regarding the ability to communicate the evidence: see *Marquard*. A child need only be able "to understand and respond to questions" (s. 16.1(5)). Section 16(1) retains the potential for a challenged adult to testify under oath, whereas s. 16.1(2) provides that a child witness shall *not* take an oath or make a solemn affirmation. The child, as in the case of the challenged adult, must promise to tell the truth (s. 16.1(6)), but s. 16.1(7) specifically prohibits asking children "any questions regarding their understanding of the nature of the promise to tell the truth". The Crown contends that research shows "that regardless of an inability to define these abstract concepts, the making of a promise to tell the truth by a child makes it more likely that a child will tell the truth" (A.F., at para. 79 (emphasis added)).

[126] I agree with the Chief Justice that the words "on promising to tell the truth" in s. 16(3) and s. 16.1(6) should receive the same interpretation. It is for that very reason that, in my view, Parliament felt it necessary in 2005 to introduce the s. 16.1(7) "don't ask" rule. Otherwise, the "simple line of questioning" to determine whether the potential witness understands "the seriousness of the situation and the importance of being careful and correct" would continue to apply to children under the 2005 amendments as well as to adults whose mental capacity is challenged. The point, however, is that s. 16.1(6), unlike s. 16(3), must be read together with s. 16.1(7)

(the "don't ask" rule), and s. 16.1(7) was limited to children because the empirical research related to "children, and only children". Thus, the witness from the Department of Justice told the Parliamentary Committee:

> Professor Bala's research seems to highlight that there's significance in giving that promise because children understand what a promise is all about. [Emphasis added; 17:20.]
>
> (House of Commons, *Evidence of the Standing Committee on Justice and Human Rights*, No. 77, 2nd Sess., 37th Parl., October 29, 2003)

Senator Landon Pearson emphasized the empirical foundation of the "don't ask" rule:

> I want to put on the record the degree to which this provision of the bill is based on a considerable body of research on the capacity of children to understand that when they say "I promise to tell the truth," that they know what they are doing. [Emphasis added; p. 19.]
>
> (Senate, *Proceedings of the Standing Senate Committee on Legal and Constitutional Affairs*, No. 17, 1st Sess., 38th Parl., June 23, 2005)

No such empirical studies were carried out with respect to adults with mental disabilities. In their case, there was no "don't ask" equivalent to s. 16.1(7) even proposed, let alone adopted. As the Chief Justice emphasizes, the 2005 amendments deal with "children, and only children" (para. 41).

[127] The Crown invites us, in effect, to apply the "don't ask" rule governing children to adults whose mental capacity is challenged, despite evidence of legislative intent to the contrary. It does so on the basis that both are members of a "vulnerable

group" (A.F., at para. 58) and should be treated as equivalent. That is a policy argument for Parliament, not a change to be brought about by judicial amendment.

[128] The Chief Justice endorses a version of this equivalence argument in posing a rhetorical question:

> When it comes to testimonial competence, precisely what, one may ask, is the difference between an adult with the mental capacity of a six-year-old, and a six-year-old with the mental capacity of a six-year-old? [para. 52]

In my view, the difference is that a six-year-old with the mental capacity of a six-year-old does not suffer from a mental disability. The fact that psychiatrists speak of persons with mental disabilities calibrated in terms of mental ages is a useful way of describing the relative extent and severity of a person's disability, but it does not mean that a 22-year-old woman with a severe mental disability is on the same footing as a six-year-old child with no mental disability whatsoever, and of course the empirical evidence before Parliament in 2005 did not suggest otherwise.

[129] The rhetorical question posed by the Chief Justice seeks to reverse the onus of proof. It *presumes* without proof the fact of equivalence and demands a rebuttal, but it was for the government to persuade Parliament, if it could, that there is no relevant difference between an adult with a severe mental disability and a child with no mental disability. It made no effort to do so because there was no evidence on which such an argument *could* have been made.

[130] No evidence was led in these proceedings to suggest equivalence and we cannot take judicial notice of alleged "facts" that are neither notorious nor easily verifiable from undisputed sources: *R. v. Find*, 2001 SCC 32, [2001] 1 S.C.R. 863, at para. 48; *R. v. Spence*, 2005 SCC 71, [2005] 3 S.C.R. 458, at para. 53. While greater latitude is allowed in the judicial notice of legislative facts (as opposed to adjudicative facts), it would still be necessary for the Crown to show that its assertion of equivalence of children and adults with a mental disability in this respect "would be accepted by reasonable people who have taken the trouble to inform themselves on the topic as not being the subject of reasonable dispute for the particular purpose for which it is to be used, keeping in mind that the need for reliability and trustworthiness increases directly with the centrality of the 'fact' to the disposition of the controversy" (*ibid.*, at para. 65 (emphasis deleted)). The Crown's assertion of equivalence is pure assertion on a key issue, and mere assertion does not meet the *Spence* standard.

[131] Section 16(3) *does not* require an inquiry into the proposed witness's understanding of the abstract "nature of the obligation to tell the truth". The argument about abstract concepts was rejected in *Khan* and by McLachlin J. in *Rockey*, and there is no need for the majority to resurrect it at this point for the sole purpose of rejecting it yet again. That is not a point of disagreement between us and should not be portrayed as such. Section 16(3) requires only the "ability to promise to tell the truth" (quoting *Rockey*) in terms of ordinary, everyday social conduct.

[132] It is the majority, not the minority here, that must resort to extraneous language not found in s. 16(3) to achieve the result it seeks. As stated, I agree with the Chief Justice that the words "on promising to tell the truth" in s. 16(3) must bear the same meaning as "to promise to tell the truth" in s. 16.1(6). That being the case, the majority must read the s. 16.1(7) "don't ask" rule applicable only to children into s. 16(3) applicable only to mentally challenged adults in order to read down the words "promising to tell the truth" in s. 16(3), and thus rob the words of s. 16(3) of their ordinary meaning, in my opinion.

[133] The Chief Justice refers to s. 45 of the federal *Interpretation Act*, R.S.C. 1985, c. I-21, for the proposition that no inference as to the meaning of s. 16(3) flows from the adoption of s. 16.1(7) with respect to children (para. 46). Professor P.-A. Côté puts the point somewhat differently:

> The provisions [s. 45] do not, for example, prevent interpreting the act of amendment as an expression of the legislature's opinion; they simply eliminate an *a priori* presumption ("shall not be deemed"). The context, or even the formulation (in the form of a preamble, for example), of an amendment is quite capable of marking a clear desire to change the state of the law.
>
> (P.-A. Côté, in collaboration with S. Beaulac and M. Devinat, *The Interpretation of Legislation in Canada* (4th ed. 2011), at p. 569)

In any event, this is not the foundation of the respondent's argument. He relies on s. 16(3) as it was enacted in 1987. He does not rely, nor does he need to rely, on the 2005 amendments which, as the majority concedes, apply only to children.

D. *Was the Section 16(3) Test Misapplied in This Case?*

[134] The Crown contends that, even if the *Khan* test is affirmed, it was not applied properly in this case. Firstly, the trial judge should have sought assistance from individuals apart from Dr. K., a forensic psychiatrist called by the defence, whose evidence was, in any event, put aside by the trial judge as unnecessary. The trial judge did not hear from K.B.'s teacher or other support workers who were familiar with K.B.'s strengths and weaknesses for purposes of the s. 16 inquiry. The Crown argues that they could have assisted the court to pose questions in a way that K.B. was capable of dealing with. To do so could have disclosed K.B.'s true capacity to deal with concrete facts without the distraction of conceptual issues, which, as the *voir dire* confirmed, K.B. could not handle. Secondly, the Crown says that the trial judge, having chosen to proceed without such assistance, misdirected his questions to metaphysical issues which could not and did not provide the basis for a fair determination of K.B.'s mental capacity.

[135] I approach the trial judge's assessment of K.B. on the basis of "the ability to communicate the evidence and the ability to promise to tell the truth" (*Rockey*, at para. 25).

(1) <u>The Ability to Communicate the Evidence</u>

[136] The trial judge clearly had serious concerns about this first branch of the test. He reminded K.B.'s teacher, Ms. W., of testimony she had given at the preliminary inquiry, in which Ms. W. had said the following:

> If the purpose of her testifying is to determine the truth of what happened, her capacity to express her recollections could be severely limited. So the court may be asking her to do something that she can't do, and her failure to do that may skew her knowledge of what happened. In other words, the outcome — there's a potential for the outcome to not get at the truth, because of . . . her incapacity to express that. [Emphasis added; hearsay decision, at para. 4.]

This evidence, given earlier at the preliminary inquiry, was properly considered by the trial judge at the subsequent competency hearing.

[137] Moreover, during the competency *voir dire* itself, Dr. K., observing K.B.'s low tolerance for frustration, testified, "I don't think she has the ability to think what you're asking and come up with an answer" (A.R., vol. I, at p. 161). The expert also stated, as noted by the trial judge, and echoing the words in *Rockey*, that K.B. "had serious problems relating to her ability to communicate and to recollect" (hearsay decision, at para. 7 (emphasis added)). She could not adequately communicate evidence because, by reason of her mental disability, she was simply unable to "compute" what she was being asked.

[138] The accuracy of the trial judge's assessment of the extent of K.B.'s mental disability was corroborated and confirmed at subsequent stages of the trial. In

the course of her testimony at the hearsay *voir dire*, for example, Ms. W., K.B.'s teacher, referred to a statement K.B. had made to an educational assistant, claiming that she, K.B., had spent the weekend at the respondent's house (which was not true). Ms. W. said that if K.B. were asked what she had done that weekend, and replied "[D.A.I.]'s place", this might have meant that she had been *thinking about* D.A.I. and *wanted* to go to his place, not that she had gone there at all (A.R., vol. II, at pp. 25 and 27; see also p. 7). Communication of wishful thinking is not communication of evidence.

[139] Further, the trial judge, in rejecting K.B.'s out-of-court statements, adverted to the earlier observations that K.B. had "serious problems in communicating her evidence, her incapacity to answer relatively simple questions surrounding the allegations, her confusion with respect to whether or not she spoke to her mother" (hearsay decision, at para. 53 (emphasis added)).

[140] While it is true that the trial judge emphasized the second branch of the test (the ability to promise to tell the truth), his concerns about K.B.'s ability to communicate the evidence are plain and obvious and were in themselves sufficient to conclude that she lacked the capacity to testify by reason of her severe mental disability.

(2) The Ability to Promise to Tell the Truth

[141] As noted by the Chief Justice, this was the principal ground for the rejection of K.B.'s evidence. However, I believe, as did Doherty and MacPherson JJ.A., for a unanimous Court of Appeal, that this conclusion was certainly open to the trial judge on the evidence.

[142] At the competency hearing, Dr. K. counselled the trial judge that "when you ask about truth, honesty, lie, these are difficult concepts for anybody" (A.R., vol. I, at p. 137). The inquiry, he said, could better be pursued by asking K.B. what she had for breakfast or "other areas in her life, day to day events, and see whether she can understand what is true and what is lie" (p. 140). Such questions would yield an answer that could be verified one way or another (p. 145) and, according to Dr. K., could assist to "see whether she has any ability to discriminate between what is real or just come up with an answer kind of thing" (p. 137).

[143] Armed with this guidance, the trial judge embarked on a second round of questions to ascertain K.B.'s capacity. He asked K.B. a series of simple and concrete questions about her family, school, breakfast routine, and so on. He then posed the following questions to K.B. and received the following responses (*ibid.*, at pp. 155-56):

> **[THE COURT:]**
>
> **Q.** You don't know. Do you know why you're here today?
>
> **A.** I don't know. To talk about [D.A.I.].

Q. Yes, and do you think that's really important?

A. Maybe yeah.

Q. Maybe yeah? Remember earlier I was asking you about a promise?

A. No.

Q. Have you ever made a promise to anybody?

A. I don't know.

Q. That you promised you'll be good, did you ever say that? Have you ever heard that expression "I promise to be good, mommy"?

A. Okay.

Q. All right. So do you know what a promise is, that you're going to do something the right way? Do you understand that?

A. Okay.

Q. Can you tell me whether you understand that, [K.B.]?

A. I don't know.

Q. Does anything happen if you break a promise?

A. I don't know.

Q. You told me you don't go to church, right?

A. Right.

Q. And no one has ever told you about God; is that correct? No one has ever told you about God?

A. No.

Q. Has anyone ever told you that if you tell big lies you'll go to jail?

A. Right.

Q. If you tell big lies will you go to jail?

A. No.

Q. No?

THE COURT: Those are all the questions I'm going to pursue at this point.

The Crown also posed a second set of questions (*ibid.*, at pp. 156-58):

Q. We asked you the last time if you knew the difference between a truth and a lie, do you remember that, [K.B.]?

A. Yeah.

Q. Okay. We talked about the room and the colour of the room?

A. Sometimes.

Q. Okay.

Do you think it's important to tell the truth or do you think it matter (*sic*)?

A. Does it matter?

Q. It matters?

A. Does it matter?

Q. Does it matter. Do you understand when I say "matter", do you understand what that means?

A. I don't know.

. . .

Q. Okay. We talked about the room. If I were to say to you that you had eggs for breakfast would that be a truth or a lie?

A. I don't know.

Q. You don't know? How about lunch, if I said you had eggs for lunch, ---

A. Yuk.

Q. --- would that be a truth or a lie?

A. I don't know.

Q. You don't know? Okay.

A. It's getting hard.

Q. It's getting hard?

A. Yeah.

Q. Why is it getting hard?

A. I don't know why.

Q. You don't know. Okay.

MR. SEMENOFF: Thank you.

At the conclusion of K.B.'s testimony, the trial judge ruled her unsworn testimony to be inadmissible. He explained:

> What I'm saying is I wouldn't have to hear from [Dr. K.]. I've heard from him but it doesn't in any way add or detract or anything from the opinion I've come to, having watched and questioned this witness, which is my obligation.
>
> In other words, I suppose what I'm saying to you is I'm fully satisfied that this witness does not understand what a promise to tell the truth involves, has no concept of that. None. Zero. Then that's what this inquiry is about. [*Ibid.*, at p. 165]

Contrary to the majority opinion, I do not read the trial judge's assessment as based on K.B.'s inability to articulate concepts. It was based on her inability — by virtue of her mental disability — to "understand what a promise to tell the truth involves". The trial judge made the sort of practical inquiry in everyday terms that *Khan* required.

[144] This was a borderline case. The Crown complains that some of the questions were too abstract, while the question about going to church was beside the point once it became clear that K.B. would give testimony unsworn or not at all. The trial judge could certainly have proceeded further with pointed and concrete factual questions to get at the degree of K.B.'s disability but he saw and heard K.B. and clearly he believed that he had heard enough. Sitting on appeal with nothing but a bare transcript in front of us, in my opinion, we are not in a position to say that his appreciation of K.B.'s capacity was wrong.

(3) Conclusion on the Competency Issue

[145] Much of the dispute in this case turned on the significance of K.B.'s "I don't know" answers. Clearly, it was an important advantage for the trial judge to watch the questions and answers unfold and to assess whether K.B. was actually able to "compute" her responses to what she was being asked — a condition precedent, surely, to any ability to test her evidence by cross-examination. The trial judge observed K.B.'s demeanour as she struggled with the attempted dialogue. The trial judge was responsible for protecting the fair trial interests of the accused, as well as society's interest in the prosecution of crimes. The inability of K.B. to deal with simple questions would mean that her evidence — however erroneous it might be, and however much (to pick up on her teacher's observation) it might be the product of K.B.'s wishful thinking — would be effectively immune to challenge by the

defence, thereby prejudicing the interest of society as well as the accused in a fair trial.

[146] The teacher, Ms. W., thought that a skilled questioner who possessed direct personal knowledge of K.B. might be able to help K.B. overcome these limitations. On this view, a judge would need to rely on the teacher's guidance not only to formulate the questions, but also to interpret K.B.'s responses. Generally speaking, of course, only an expert witness can put opinions before the court and, even then, only when the trial judge would be unable to determine the issue in question properly without expert assistance: *R. v. Mohan*, [1994] 2 S.C.R. 9; *R. v. Parrott*, 2001 SCC 3, [2001] 1 S.C.R. 178. At the end of the day, it has to be the judge or jury — not the lay witness — to assess the witness's testimony.

[147] In *Parrott*, the complainant was a mature woman who was said to possess the mental development equivalent in some respects to that of a three- or four-year-old child. The Crown declined to call the complainant herself on the basis that a court appearance might cause her trauma or other adverse effects, and instead called expert witnesses to lay the foundation for the admission of her earlier out-of-court statements. In this context, we held that the experts could not be substituted for calling the complainant herself, but that

> [i]f she had been called and it became evident that the trial judge required expert assistance to draw appropriate inferences from what he had heard her say (or not say), or if either the defence or the Crown had wished to pursue the issue of requiring an oath or solemn affirmation, expert

> evidence might then have become admissible to assist the judge. [para. 52]

[148] I think we should go further in this case and hold that on a competency *voir dire* where the mental capacity of an adult is challenged and the adult is herself called as a proposed witness, the court may also admit evidence from *fact* witnesses personally familiar with the proposed witness's verbal and cognitive abilities and limitations to help the court gain a better understanding of the person's capacity. These witnesses, unlike Dr. K., would not be in a position to express an opinion, but could testify about their direct personal observations of the proposed witness. Such evidence might, if the trial judge considered it helpful, better enable the judge or jury to appreciate her responses (or non-responses) in the witness box.

[149] Ultimately, however, it is the judge who must reach his or her own considered opinion about the level of mental capacity of the proposed witness. Where, as in this case, the judge, after hearing from the proposed witness, considers the calling of additional fact witnesses to be unnecessary, I do not think we are in a position to second-guess that procedural conclusion.

[150] Accordingly, I would reject the Crown's appeal with respect to the trial judge's ruling that the unsworn evidence of K.B. is inadmissible. In his view, the quality of the proposed evidence did not meet the s. 16(3) threshold. Sitting on appeal from this determination, and not having had the advantage of observing and questioning K.B., I see no valid basis for reversing that evidentiary ruling.

E. *Admissibility of Out-of-Court Statements*

[151] The Crown contends that the trial judge erred by effectively deciding that K.B.'s testimonial incompetence predetermined the unreliability of her hearsay statements. The admissibility analysis in a hearsay *voir dire* is to be focused on whether the hearsay dangers have been overcome: *R. v. Khelawon*, 2006 SCC 57, [2006] 2 S.C.R. 787, at para. 71. These hearsay dangers include the inability to inquire into the declarant's perception, memory and credibility. The trial judge's conclusion in the competency hearing that K.B. lacked the ability to perceive, recall and communicate events and to understand the difference between truth and falsehood set up, but did not predetermine, the trial judge's conclusion that K.B.'s testimony lacked sufficient reliability. I agree with Doherty and MacPherson JJ.A., that "it is not surprising, and it is not an error, that the trial judge's reasoning on the issue of the threshold reliability in his hearsay ruling was quite similar to his reasoning on the *CEA* s. 16 voir dire" (para. 48). I would therefore not give effect to this ground of appeal.

III. Disposition

[152] I would dismiss the appeal.

APPENDIX A

Until 1987, s. 16 of the *Canada Evidence Act* provided:

> **16.** (1) In any legal proceeding where a child of tender years is offered as a witness, and such child does not, in the opinion of the judge, justice or other presiding officer, understand the nature of an oath, the evidence of such child may be received, though not given upon oath, if, in the opinion of the judge, justice or other presiding officer, as the case may be, the child is possessed of sufficient intelligence to justify the reception of the evidence, and understands the duty of speaking the truth.
>
> (2) No case shall be decided upon such evidence alone, and it must be corroborated by some other material evidence.

The origin of this provision, at stake in *Khan*, can be traced back to s. 25 of the *Canada Evidence Act*, *1893*, S.C. 1893, c. 31. This was the first instance in Canadian history that Parliament legislated on the testimonial competence of children. At the time however, and until 1987, no statutory provision addressed the capacity to testify of adults with mental disabilities. Section 25 of the 1893 *Canada Evidence Act* provided:

> **25.** In any legal proceeding where a child of tender years is tendered as a witness, and such child does not, in the opinion of the judge, justice or other presiding officer, understand the nature of an oath, the evidence of such child may be received, though not given upon oath, if, in the opinion of the judge, justice or other presiding officer, as the case may be, such child is possessed of sufficient intelligence to justify the reception of the evidence and understands the duty of speaking the truth.
>
> 2. But no case shall be decided upon such evidence alone, and such evidence must be corroborated by some other material evidence.

On October 29, 1986, Minister of Justice Ramon Hnatyshyn presented the House of Commons with Bill C-15, *An Act to amend the Criminal Code and the Canada Evidence Act*. During the first reading of Bill C-15, cl. 17 proposed to repeal s. 16 of the *Canada Evidence Act* and to replace it with a new provision:

> **17.** Section 16 of the said Act is repealed and the following substituted therefor:
>
> "**16.** (1) Where a proposed witness is a person under fourteen years of age or a person whose mental capacity is challenged, the court shall, before permitting the person to give evidence, conduct an inquiry to determine
>
> (*a*) whether the person understands the nature of an oath or a solemn affirmation; and
>
> (*b*) whether the person is sufficiently intelligent that the reception of the evidence is justified.
>
> (2) A person referred to in subsection (1) who understands the nature of an oath or a solemn affirmation and is sufficiently intelligent that the reception of the evidence is justified shall testify under oath or solemn affirmation.
>
> (3) A person referred to in subsection (1) who does not understand the nature of an oath or a solemn affirmation but is sufficiently intelligent that the reception of the evidence is justified may testify on promising to tell the truth.
>
> (4) A person referred to in subsection (1) who neither understands the nature of an oath or a solemn affirmation nor is sufficiently intelligent that the reception of the evidence is justified shall not testify.
>
> (5) A party who challenges the mental capacity of a proposed witness of fourteen years of age or more has the burden of satisfying the court that there is an issue as to the capacity of the proposed witness to testify under an oath or a solemn affirmation."

A crucial amendment, for present purposes, was made to the original text of Bill C-15 by the *ad hoc* Legislative Committee on Bill C-15. This amendment replaced the requirement to be "sufficiently intelligent" initially provided in Mr. Hnatyshyn's proposal with the criterion that the proposed witness be "able to communicate the evidence".

What is striking from the lengthy works of the Legislative Committee on Bill C-15 is the focus on the "ability to communicate the evidence" as the sole qualitative requirement for the competence of children or adults with mental disabilities who do not understand the nature of an oath. There is nothing in the record of the Committee which suggests that a "promise to tell the truth" also imposed an understanding of the nature of such a promise.

In fact, the requirement to be "sufficiently intelligent" in the original draft was understood by the Committee as requiring an understanding of the moral difference between telling the truth and lying. On December 4, 1986, the Committee held a discussion on the meaning of "sufficient intelligence". It came to the conclusion that all that was needed for a witness to be sufficiently intelligent was to understand the moral difference between telling the truth and lying:

> **Mr. Nicholson:** Well, that is the first test. I think the section Mrs. Collins referred to, proposed subsection 16(3) of our proposed section 16, says that if the person does not understand the nature of an oath, well it is fine, because it often happens that the children may not know the concept of God and hell and all that sort of thing. I have seen it happen in a trial, but if the person testifies on the promise of telling the truth then let the

judge after that just decide how much weight he or she will place on that evidence without making the other determination of "sufficient intelligence".

Mr. Pink: Under section 16 of the Canada Evidence Act it says:

. . .

Now, it has been my experience in determining the so-called "sufficient intelligence" — that is, when the judge goes through the series of questions he normally does about how far is he in school, how is he doing in school, and things of that sort, and he knows where he lives, he knows the difference between speaking the truth and speaking a falsity and things of that sort, then the judge concludes he is of sufficient intelligence, we will accept his evidence, but because he does not understand the nature of an oath, it will be unsworn evidence, that is all.

Mr. Nicholson: Do you think that is still a necessary element?

Mr. Pink: Absolutely.

Mr. Nicholson: Do you think it is important to have this, that we cannot just eliminate it and have the judge decide the weight that he gives to the evidence, which is basically what we do with adults?

Mr. Pink: I personally feel that before a child's evidence is received, he must understand the difference between telling the truth and a falsity; he has to know that before his evidence can be received.

. . .

Mrs. Collins: How do you deal with the problem of a mentally retarded child? We know that sometimes those children are the victims or are easily the victims of sexual abuse. Also, how do you deal then with children of very, very tender years, who we also know can be victimized by sexual abuse, three-year-olds?

Mr. Pink: First of all, I do not think you will ever see a three-year-old giving evidence. I have seen cases where mentally retarded children have in fact given evidence, because the judge was satisfied, after querying him, that he knew the difference between telling the truth or a falsehood. He knew it was right to tell the truth, he knew it was wrong to tell a lie. He did not understand the nature of an oath and all that, so his evidence was not sworn.

> **Mrs. Collins:** Yes. However, if we leave in the "sufficient intelligence", and with the interpretation that has been given, I still feel that is going to be a potential barrier.
>
> **Mr. Pink:** It may be that the committee is going to have to decide on words other than "sufficient intelligence". What is the purpose of the query in the first place? Does it not really boil down to determining truth or falsehood? Is that not what it is all about?
>
> **Mrs. Collins:** I would think so. Yes. So if the child understands the difference between telling the truth and lying, that would seem to me to be all you would really need to find out.
>
> **Mr. Pink:** I agree. [Emphasis added; pp. 26-27.]
>
> (House of Commons, *Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-15*, No. 2, 2nd Sess., 33rd Parl., December 4, 1986)

One week later, on December 11, 1986, the Legislative Committee on Bill C-15 heard evidence from Professor Nicholas Bala, then Director of the Canadian Council on Children and Youth. Professor Bala expressed his fears about the "sufficient intelligence" requirement for testimonial capacity as understood by the Committee, and he proposed replacing it with the ability to communicate criterion:

> **Dr. Nick Bala** . . .
>
> Our concern is that standard of sufficient intelligence. A layperson or indeed even a lawyer not familiar with the case law might think well, of course, you are not going to want to hear from a child not sufficiently intelligent enough to testify. But when one starts looking at the case law and when one realizes that the concept of "sufficient intelligence" is one which appears in the present section 16 of the Canada Evidence Act, one realizes it therefore will be brought to the courts with all the precedents decided and all the traditions decided. That will make it very difficult for children to testify; in particular children under 10 may well be considered, for example, to be of average intelligence, but not of sufficient intelligence to testify.

> Therefore we would submit that there should be another test, and the test we have suggested in our brief is a test of ability to communicate; that is to say the judge should be satisfied the child is able to communicate, and if the child seems able to communicate the case should be left to the trier of the fact, the jury or the judge. Obviously a prosecutor who is calling a child as a witness is not going to do that unless the prosecutor is satisfied the child has something to say of value and some recollection of the events, and is not going to be wasting everybody's time.
>
> (*Ibid.*, No. 3, 2nd Sess., 33rd Parl., December 11, 1986, p. 7)

The debates that followed in the Committee supported the view that it was not prudent to condition testimonial capacity on sufficiency of intelligence, which was conceived as including an understanding of the difference between truth and falsity. As a result, the Committee modified the proposed amendment to s. 16 of the *Canada Evidence Act* in order to replace the requirement of sufficient intelligence for ability to communicate the evidence, as was originally suggested by Professor Bala.

As such, s. 18 of the *Act to amend the Criminal Code and the Canada Evidence Act*, S.C. 1987, c. 24, provided the following:

> **18.** Section 16 of the said Act is repealed and the following substituted therefor:
>
> "**16.** (1) Where a proposed witness is a person under fourteen years of age or a person whose mental capacity is challenged, the court shall, before permitting the person to give evidence, conduct an inquiry to determine
>
> (*a*) whether the person understands the nature of an oath or a solemn affirmation; and

(*b*) whether the person is able to communicate the evidence.

(2) A person referred to in subsection (1) who understands the nature of an oath or a solemn affirmation and is able to communicate the evidence shall testify under oath or solemn affirmation.

(3) A person referred to in subsection (1) who does not understand the nature of an oath or a solemn affirmation but is able to communicate the evidence may testify on promising to tell the truth.

(4) A person referred to in subsection (1) who neither understands the nature of an oath or a solemn affirmation nor is able to communicate the evidence shall not testify.

(5) A party who challenges the mental capacity of a proposed witness of fourteen years of age or more has the burden of satisfying the court that there is an issue as to the capacity of the proposed witness to testify under an oath or a solemn affirmation."

The amendment to Bill C-15 shows that Parliament did not intend children and adults with mental disabilities to be questioned on their understanding of the difference between truth and falsehood in order to testify.

Additionally, the fact that the legislative debates emphasized that ability to communicate was the qualitative condition for testimonial capacity under s. 16(3), and that no mention was made that promising to tell the truth required understanding of a promise to tell the truth, demonstrate the intent of Parliament that a mere promise would suffice.

APPENDIX B

The second important amendment to s. 16 of the *Canada Evidence Act* began in 2004, when Minister of Justice Irwin Cotler presented the House of Commons with Bill C-2. In 2005, Parliament adopted the *Act to amend the Criminal Code (protection of children and other vulnerable persons) and the Canada Evidence Act*, S.C. 2005, c. 32. Sections 26 and 27 provided:

> **26. The portion of subsection 16(1) of the *Canada Evidence Act* before paragraph (*a*) is replaced by the following:**
>
> **16.** (1) If a proposed witness is a person of fourteen years of age or older whose mental capacity is challenged, the court shall, before permitting the person to give evidence, conduct an inquiry to determine
>
> **27. The Act is amended by adding the following after section 16:**
>
> **16.1** (1) A person under fourteen years of age is presumed to have the capacity to testify.
>
> (2) A proposed witness under fourteen years of age shall not take an oath or make a solemn affirmation despite a provision of any Act that requires an oath or a solemn affirmation.
>
> (3) The evidence of a proposed witness under fourteen years of age shall be received if they are able to understand and respond to questions.
>
> (4) A party who challenges the capacity of a proposed witness under fourteen years of age has the burden of satisfying the court that there is an issue as to the capacity of the proposed witness to understand and respond to questions.
>
> (5) If the court is satisfied that there is an issue as to the capacity of a proposed witness under fourteen years of age to understand and respond to questions, it shall, before permitting them to give evidence, conduct an inquiry to determine whether they are able to understand and respond to questions.
>
> (6) The court shall, before permitting a proposed witness under fourteen years of age to give evidence, require them to promise to tell the truth.

> (7) No proposed witness under fourteen years of age shall be asked any questions regarding their understanding of the nature of the promise to tell the truth for the purpose of determining whether their evidence shall be received by the court.
>
> (8) For greater certainty, if the evidence of a witness under fourteen years of age is received by the court, it shall have the same effect as if it were taken under oath.

A reading of the works of the two standing committees which studied Bill C-2 shows that Parliament did not intend the prohibition of questions to children on whether they understand the duty to tell the truth under s. 16.1(7) to change the law. On the contrary, s. 16.1(7) was seen as reaffirming the requirement of s. 16(3) that the ability to communicate the evidence was the sole qualitative condition for capacity and that a mere promise to tell the truth would suffice.

During a debate on the phrasing of s. 16.1(7), held in the House of Commons Standing Committee on Justice, Human Rights, Public Safety and Emergency Preparedness, a discussion between Joe Comartin and Professor Nicholas Bala revealed the perception that s. 16(3) had been misinterpreted by courts. The original intent of the provision was to allow challenged witnesses to testify by merely promising to tell the truth, once they were held to be able to communicate the evidence. This discussion, which occurred on March 24, 2005, shows that s. 16.1(7) was aimed at clarifying the state of the law:

> **Mr. Joe Comartin (Windsor—Tecumseh, NDP):** Professor Bala, to start, I read your material in the paper around the changes you want to proposed subsection 16.1(7), but I don't understand, quite frankly, how

you would change it. Proposed subsection 16.1(6) provides, as you're promoting strongly, that no oath be issued, that they simply be required to promise to tell the truth.

So I don't know exactly how you want (7) amended, from its current proposal.

Prof. Nicholas Bala: The concern I have about proposed subsection 16.1(7) is that it says no child shall be asked any questions regarding their understanding of the nature "of the promise" for the purpose of determining whether their evidence shall be received by the court, and I would submit to you that it should be "of the promise to tell the truth".

It's a relatively small change, but again, the concern I have arises out of the fact that the present legislation has been interpreted very narrowly by judges. When you actually go back through the transcripts — I was actually a witness in 1988, when the provisions came into effect — I think it was thought by people, well, we don't have to be very explicit here, because the judges will get this right.

Obviously, on many issues we do have to trust our judiciary, but on certain issues I think it's important to give them as much direction as possible. My concern is that some judge might read this — and we have quite a lot of case law about this — and say, okay, I can't ask you about your understanding of the nature of the promise, but what about asking you questions about truth-telling? Parliament specifically said in subsection 16.1(6) that you'll be required to promise to tell the truth. We can't ask about the nature of the promise, but can we ask you about "truth" and "lie"?

Some judges will continue to interpret it that way. In some ways, it's a very small amendment, but I assume it's consistent with your actual intent. My concern, as I say, has been based on how some of these previous provisions have been interpreted. [Emphasis added; p. 7.]

(House of Commons, *Evidence of the Standing Committee on Justice, Human Rights, Public Safety and Emergency Preparedness*, No. 26, 1st Sess., 38th Parl., March 24, 2005)

This perception was also shared, at the time, by the Department of Justice. Ms. Catherine Kane, Director of the Policy Centre for Victim Issues of Justice Canada, testified that s. 16 was originally intended by Parliament to allow

witnesses to give evidence without inquiring into their comprehension of the duty to tell the truth. During her opening statement before the Standing Senate Committee on Legal and Constitutional Affairs, on July 7, 2005, Ms. Kane explained how the initial purpose of s. 16 had been misinterpreted by courts:

> **Ms. Catherine Kane** . . .
>
> The other part concerns the amendments to the Canada Evidence Act with respect to children. Under the current law, the Canada Evidence Act treats children under 14 in the same way as it treats other people whose mental capacity is challenged. There is a current section 16 that requires the judge to conduct a two-part inquiry whether they are dealing with a person who has some mental disabilities or whether they are dealing with a child under 14. The two-part inquiry requires the judge to first determine, in the case of a child, whether the child understands the nature of an oath or the nature of a solemn affirmation and, second, to determine if the child is able to communicate the evidence. These amendments were made in 1988 with the purpose of trying to more readily permit children's evidence to be received. However, as the cases have interpreted this provision, we have not seen that ready acceptance of children's evidence.
>
> If these two criteria are met, the child gives evidence under an oath or an affirmation. However, if the child does not understand the nature of the oath or the affirmation but has the ability to communicate the evidence, the evidence is received on a promise to tell the truth. That is the current law. While it may appear quite sensible on its face, the interpretations and practise of these provisions do not reflect Parliament's intention in amending the [e]vidence in an effort to permit children's evidence to be admitted more readily.
>
> As interpreted by the courts, section 16 requires that before the child is permitted to testify, the child be subjected to an inquiry as to his or her understanding of the obligation to tell the truth, the concept of a promise, and an ability to communicate. [Emphasis added; pp. 105-6.]

EUROPEAN COMMITTEE OF SOCIAL RIGHTS
COMITE EUROPEEN DES DROITS SOCIAUX

COUNCIL OF EUROPE CONSEIL DE L'EUROPE

DECISION ON THE MERITS

3 June 2008

Mental Disability Advocacy Center (MDAC) v. Bulgaria

Complaint No. 41/2007

The European Committee of Social Rights, committee of independent experts established under Article 25 of the European Social Charter ("the Committee"), during its 230th session attended by:

Mrs	Polonca KONČAR, President
Mssrs	Andrzej SWIATKOWSKI, First Vice-President
	Tekin AKILLIOGLU, Second Vice-President
	Jean-Michel BELORGEY, General Rapporteur
	Alfredo BRUTO DA COSTA
	Nikitas ALIPRANTIS
	Stein EVJU
Mrs	Csilla KOLLONAY LEHOCZKY
Mssrs	Lucien FRANCOIS
	Lauri LEPPIK
	Colm O'CINNEIDE
Mrs	Monika SCHLACHTER
	Lyudmila HARUTYUNYAN

Assisted by Mr Régis BRILLAT, Executive Secretary,

Having deliberated on 1 April 2008 and 3 June 2008,

On the basis of the report presented by Mrs Polonca Končar,

Delivers the following decision adopted on this last date:

PROCEDURE

1. The complaint dated 15 February 2007 was registered on 20 February 2007. The Mental Disability Advocacy Centre (MDAC) alleges that the situation in Bulgaria is not in conformity with Article 17§2 alone and in conjunction with Article E of the Revised European Social Charter (the "Revised Charter") because children living in homes for intellectually disabled children in Bulgaria receive no education.

2. On 26 June 2007, the Committee declared the complaint admissible.

3. In accordance with Article 7§1 and §2 of the Protocol providing for a system of collective complaints ("the Protocol") and with the Committee's decision on the admissibility of the complaint, on 2 July 2007 the Executive Secretary communicated the text of the admissibility decision to the Bulgarian Government ("the Government"), the MDAC, the Contracting Parties to the Protocol and the states that have made a declaration in accordance with Article D§2 of the Revised Charter, and on 6 July 2007 to the international employers' organisations and trade unions referred to in Article 27§2 of the 1961 European Social Charter, i.e. the European Trade Union Confederation (ETUC), Businesseurope (former UNICE) and the International Organisation of Employers (IOE).

4. In accordance with Article 31§1 of the Committee's Rules, the Committee set a deadline of 28 September 2007 for presentation of the Government's submissions on the merits. It also set 28 September 2007 as the deadline for the Contracting Parties to the Protocol, the states that have made a declaration in accordance with Article D§2 of the Revised Charter and the international employers' organisations and trade unions referred to in paragraph 2 of Article 27 of the 1961 European Social Charter to submit any observations on the merits.

5. The Government's submissions on the merits of the complaint were registered on 1 October 2007.

6. In accordance with Article 31§2 of the Rules, the President of the Committee invited the MDAC to reply to these submissions by 30 November 2007. The MDAC's reply was registered on 30 November 2007 and forwarded to the Government on 6 December 2007.

SUBMISSIONS OF THE PARTIES

a. The complainant organisation

7. The MDAC asks the Committee to find that the Government's failure to provide education for children with moderate, severe or profound intellectual disabilities living in homes for mentally disabled children in Bulgaria violates Article 17§2 of the Revised Charter, alone and in conjunction with Article E.

b. The Government

8. The Government invites the Committee:

i. to recognise its efforts to secure equal access to education;

ii. to note the legal and practical steps that have been taken to overcome the problems of offering children living in homes for mentally disabled children access to schooling, and its political commitment to ensuring that these continue to be implemented and put into practice, in accordance with the objectives of the Revised Charter and subject to available resources;

iii. to reject the MDAC's application as unfounded.

RELEVANT DOMESTIC LAW

9. The relevant provisions of Bulgarian law concerning access to education for mentally disabled children are as follows:

10. The Constitution of the Republic of Bulgaria of 13 July 1991;

Articles 6 and 53 of the Constitution read:

Article 6

"1. All persons are born free and equal in dignity and rights.

2. All persons shall be equal before the law. There shall be no privileges or restriction of rights on grounds of race, national or social origin, ethnic affiliation, sex, origin, religion, education, opinion, political affiliation, personal or social status or wealth."

Article 53

"1. Everyone shall have the right to education.

2. School attendance up to the age of 16 shall be compulsory.

3. Primary and secondary education in state and municipal schools shall be free. In circumstances established by law, higher educational establishments shall provide education free of charge.

4. Higher educational establishments shall enjoy academic autonomy.

5. Citizens and organisations shall be free to found schools in accordance with conditions and procedures established by law. The education they provide shall comply with the requirements of the state.

6. The state shall promote education by opening and financing schools, by supporting capable school and university students, and by providing opportunities for occupational training and retraining. It shall exercise control over all kinds and levels of schooling.

11. National Education Act 1991, as amended by the Act of 2002

Article 4:

"(1) All citizens shall have the right to education. They shall be entitled to constantly heighten their education and qualifications.
(2) Restrictions or privileges based on race, nationality, sex, ethnic and social origin, religion and social status shall be inadmissible."

Article 7:

"(1) Schooling up to the age of 16 shall be compulsory.
(2) (Amended Official Journal (OJ) No. 36/1998) Schooling shall start at the age of 7, where such age shall have been attained in the year of enrolment in the first (1st) grade. Children who have turned 6 shall also be entitled to enrolment in the first (1st) grade provided their physical and mental development, at their parents' or guardians' discretion, so allows."

Article 9:

"(1) Every citizen shall exercise his right to education in the school and type of education of his choice in keeping with his personal preferences and potential.
(2) The right pursuant to Paragraph (1) for minors shall be used by their parents or guardians."

Article 14:

"Schools and kindergartens shall create conditions for the normal physical and mental development of children and pupils."

Article 16:

"State educational requirements shall be applicable to: (…)
8. (Amended, OJ No. 90/2002) teaching of children and pupils with special educational needs and/or chronic conditions"

Article 21:

(Amended, OJ No. 90/2002)
"(1) Children with special educational needs and/or chronic conditions shall be enrolled at kindergartens pursuant to Article 18.
(2) Kindergartens under Paragraph (1) shall be obligated to accept children with special educational needs and/or chronic conditions.
(3) Special kindergartens and auxiliary units may also be established for children with special educational needs and/or chronic conditions.
(4) Children with special educational needs and/or chronic conditions shall be enrolled in the kindergartens and auxiliary units under Paragraph (3) only where all other opportunities for education at state-owned or municipal kindergartens and auxiliary units have been exhausted and where the parents or guardians have expressed such a wish in writing."

Article 27:

(Amended, OJ No. 90/2002)

"(1) Children with special educational needs and/or chronic conditions shall be offered integrated education at the schools under Article 26, Paragraph (1), Items 1 through 10.

(2) Schools under Paragraph (1) shall be obligated to accept children with special educational needs and/or chronic conditions.

(3) Special schools and auxiliary units may also be established for children with special educational needs and/or chronic conditions.

(4) Children with special educational needs and/or chronic conditions shall be enrolled in the schools and auxiliary units under Paragraph (3) only where all other opportunities for education at state-owned or municipal schools have been exhausted and where the parents or guardians have expressed such a wish in writing."

Article 43:

"(1) (Previous Article 43, OJ 36/1998, amended, OJ No. 90/2002) The Ministry of Education and Science shall ensure favourable conditions for identifying and training particularly gifted children. It shall establish furtherance funds to award scholarships to gifted children, as well as scholarship funds for children with chronic ailments and for children with special educational needs.

(2) (New, OJ No. 36/1998) The Ministry of Education and Science shall ensure additional educational opportunities for potential drop-out students."

12. Integration of Disabled Persons Act

Act of 14 September 2006 amending and extending the Integration of Disabled Persons Act of 17 September 2004.

Chapter II - Education and vocational training

Article 16

"(1) Teams for the comprehensive educational assessment and integrated education of children with disabilities shall be set up at the regional inspectorates of the Ministry of Education and Science.

(2) Special integrated education centres, under the authority of the Ministry of Education and Science, shall be opened with a view to facilitating the integrated education of children with disabilities."

Article 17

"The Ministry of Education and Science shall provide:

(1) Education for children with disabilities at pre-school and school age in the schools and kindergartens referred to in Article 26, paragraph (1)3, and Article 18 of the National Education Act;

(2) An environment conducive to integrated education for children with disabilities;

(3) Appropriate remedial speech and hearing therapy and corrective treatment for children suffering from partial or total loss of visual acuity;

(4) Modern schoolbooks, teaching materials, technologies and technical tools for the education of children with disabilities up to the age of 18 or until the end of their secondary education;

(5) Vocational training for children with disabilities."

Article 18

"The Ministry of Education and Science shall make provision for the education of children with special educational needs who are not integrated into the mainstream education environment."

13. Implementing regulation of the National Education Act (revised)
(published on 30 July 1999 and amended on several occasions, the last on 8 November 2005)

Article 6a

(new Article, adopted in 2003)
"The team in charge of assessing difficult cases in terms of educational needs may:
…
(4) single out up to two pupils with special educational needs per class; these pupils shall be transferred to the least crowded classes.
…
(8) … (b) facilitate the integrated education of children with special educational needs by co-ordinating, supervising and providing methodological assistance to teams in kindergartens and schools into which children with special educational needs and/or chronic conditions have been integrated."

Article 7

(text amended in 2003)
"Kindergartens, schools and auxiliary units shall work with funding authorities to provide an environment conducive to the integrated education of children with special educational needs and/or chronic conditions."

Article 26

"(1) Kindergartens are preparatory institutions forming part of the national education system, in which children are educated and taught from the age of three up to their entry into the first year of primary school.
(2) (text amended in 2003) Children with special educational needs and/or chronic conditions shall be integrated into the kindergartens described in paragraph (1) above, which are legally required to accept them.

Article 27

"(1) Kindergartens may be:
1. full-time, part-time or organised on a weekly basis;
2. (text amended in 2003)special schools for children with special educational needs and/or chronic conditions."

Article 28

(text amended in 2003)
"(2) The kindergartens referred to in Article 27, paragraph (1)2, shall admit children with special educational needs and/or chronic conditions, subject to the written consent of parents or guardians, where all other possibilities of attending the kindergartens referred to in Article 27 (1)1 have been exhausted.
(3) The kindergartens referred to in Article 27 (1)1 shall cater for up to two children with special educational needs per group."

Article 50

"(6) (text amended in 2001) State and municipal schools shall cater for up to five pupils with chronic physical or sensory conditions per class. Vocational schools shall also cater for children placed in orphanages.
(7) (text amended in 2003) In cases other than those provided for in paragraph (6) above, state and municipal schools may also provide integrated education for two pupils per class with special educational needs on a proposal by the team in charge of comprehensive educational assessment."

14. Order no 6 on children with special educational needs and/or chronic conditions (published in August 2002)

Article 2

(1) Children with special educational needs and/or chronic conditions shall be given an integrated education in mainstream kindergartens, schools and auxiliary units.
(2) Children with special educational needs and/or chronic conditions may be educated in special kindergartens, schools and auxiliary units.
(3) Children shall attend special schools only where all other possibilities of attending mainstream kindergartens and schools have been exhausted, subject to the explicit consent of parents or tutors."

15. Case-law

Case no 13789/06, Sofia court of first instance, decision of 18 May 2007

"The court finds that the requirement for the Ministry of Education to create a conducive environment is a prerequisite to integrated schooling. Therefore, the equal right to education of children with disabilities is only effective if such an environment is created in every school … and the failure to create such an environment amounts in itself to unequal treatment of children with disabilities in that they do not then have the same opportunities as children without disabilities" (pages 7-8).

THE LAW

THE ALLEGED VIOLATION OF ARTICLES 17§2 AND E OF THE REVISED SOCIAL CHARTER

16. Article 17§2 of the Revised Charter reads:

Article 17 – The right of children and young persons to social, legal and economic protection

Part I: "*Children and young persons have the right to appropriate social, legal and economic protection*."

Part II: "*With a view to ensuring the effective exercise of the right of children and young persons to grow up in an environment which encourages the full development of their personality and of their physical and mental capacities, the Parties undertake, either directly or in co-operation with public and private organisations, to take all appropriate and necessary measures designed*:

(…)

2 to provide to children and young persons a free primary and secondary education as well as to encourage regular attendance at schools."

17. Article E of the Revised Charter reads:

Article E – Non-discrimination

"*The enjoyment of the rights set forth in this Charter shall be secured without discrimination on any ground such as race, colour, sex, language, religion, political or other opinion, national extraction or social origin, health, association with a national minority, birth or other status*."

A. Submissions of the parties

a. The complainant organisation

18. The MDAC maintains that Bulgaria's failure to provide education for the children falling within the subject matter of the scope of the complaint violates its obligations under Article 17§2 of the Revised Charter, alone and in conjunction with Article E. It argues that Article 17§2 of the Revised Charter requires the Government to provide primary education for all children, including children with intellectual disabilities.

19. The MDAC restricts the scope of its complaint to the situation of children with moderate, severe or profound intellectual disabilities living in homes for mentally disabled children (hereafter "HMDCs"), thus excluding children with mild intellectual disabilities and those not living in HMDCs.

20. The MDAC states that HMDCs come under the authority of the Ministry of Labour and Social Policy. They admit children aged over 2. Most of these children have been diagnosed as having moderate, severe or profound intellectual disabilities and have been either abandoned by their parents or orphaned. The HMDCs are residential establishments open throughout the year, in which the children spend all their time. There are other kinds of centres for intellectually disabled children in Bulgaria but they are not the subject of the complaint. The complaint concerns the 28 HMDCs throughout the country. According to the MDAC no education is provided in HMDCs and the Government has made little effort to educate children in these homes.

21. According to the MDAC, in order to meet certain quality standards education systems must satisfy the criteria of availability, accessibility, acceptability and adaptability, as laid down by the UN Committee on Economic, Social and Cultural Rights in its general comment no. 13 on the right to education (E/C.12/1999/10 of 8 December 1999, §6).

22. The MDAC states that until a reform in 2002, children with moderate, severe or profound intellectual disabilities were considered to be uneducable and hence given no access to education. Under the National Education Act 2002, the Bulgarian state has undertaken to provide these children with education.

23. The complaint is based on various sources, in particular the 2005 report of the Bulgarian child protection agency. This included figures on the situation in 18 HMDCs. According to the data in this report, only 32 children (i.e. 2.8%) living in the HMDCs which were visited were being taught in mainstream primary schools while 39 children (i.e. 3.4%) were in special schools, meaning that a total of only 71 children were attending any kind of school. In certain establishments, as in Sofia, none of the children attended schools, whereas in others, such as the one in Turnava, all the children were in school, though this was solely attributable to the personal initiative of the director. The MDAC claims that certain children are refused admission even though they want to go to school and are apt, in that they are able to write

their full names and ages despite never having attended school. It concludes that the existing education system in Bulgaria is clearly depriving these children of access to education, which is a direct infringement of their right to education without discrimination.

24. The complainant also alleges that ordinary schools are not equipped to the abilities and needs of children from HMDCs. Teacher training is inadequate and teaching materials for intellectually disabled children are either totally unavailable or unsuited to their needs. According to the MDAC, this means that Bulgaria is in direct violation of the right to education and directly discriminates against these children on account of their disability.

25. In respect of the children who do not attend an outside educational structure, the complainant highlights that HMDCs are not educational institutions and therefore the children are ineligible for a diploma attesting completion of primary school education. They are therefore legally prevented from entering secondary education. The MDAC concludes that the treatment of children in HMDCs does not satisfy the criterion of the acceptability of the education provided and cannot be considered to be a form of education.

26. Finally, the MDAC maintains that the Government cannot rely on lack of resources or argue that it is implementing these rights gradually to show that it is not discriminating against disabled children with regard to their access to education. It notes firstly that certain measures are not expensive, such as informing directors of HMDCs of the contents of the 2002 legislation so that they know that from now on the children in their charge are not only “educable” but also entitled to be educated in ordinary or special schools. The same applies where it comes to informing the municipal officials to whom HMDCs are accountable as well as local schools. The MDAC states that, in practice, HMDC directors and municipal officials know little or nothing about the changes created by the 2002 legislation. The MDAC also states that the Government has chosen to use the resources that are available for educating disabled children to improve access to schools for children with physical disabilities while spending very little on the education of intellectually disabled children. According to the MDAC, the Government's failure to provide education for children with moderate, severe or profound intellectual disabilities is the result of serious and unreasonable policy failures and not of the alleged resource shortages.

b. The Government

27. The Government describes its efforts to implement the right of intellectually disabled children to equal access to education.

28. In particular, it argues that Bulgarian legislation offers sufficient safeguards. Article 6 of the Constitution embodies the principle of equality before the law and prohibits all discrimination. Article 53 establishes the right to education. The Government also refers to the legislative and practical steps it has taken to overcome the problems of access to education of children living in HMDCs. In particular, the National Education Act 1991, as amended by the

Act of 10 September 2002, requires schools to admit disabled children and create the conditions for their integration. The Government has also adopted several action plans. It refers specifically to the national plan for integrating children with special educational needs and/or chronic conditions into the national education system, approved by the government in December 2003, which implements Regulation No. 6 and lays down a timetable for integration from 1 January 2004 to 1 January 2007. It also cites the action plans on Bulgarian mental health policy (2004-2012) and on equal opportunities for disabled persons (2006-2007 and 2008-2015).

29. The Government also refers to its political commitment to these measures and to ensuring that they are implemented, in accordance with the Revised Charter and subject to available resources.

30. The Government says that the trend is towards integrating most children with disabilities into mainstream schools. Its education policy is to reduce the number of special schools and increase the number of children with special educational needs in mainstream schools. This calls for the adaptation of premises to these children's specific needs, appropriate school textbooks and other written material and equipment, and specialist staff qualified to work with children with disabilities. Teams to assess the needs of disabled children are gradually being introduced. Training has been organised for regional education inspectorates, nursery school heads, teachers and representatives of local government.

31. The Government acknowledges that a high number of children do not attend school or leave school very early. However this does not just concern intellectually disabled children and so, according to the Government, the MDAC's contention that such children are being systematically discriminated against is unfounded.

32. The Government reiterates that it has a consistent and clearly defined policy on the integration of children living in special institutions, which extends to its education policy. This is an ongoing process, the visible results of which will become evident in the long term and which will require considerable financial input. The Government hopes to achieve the Revised Charter's objectives "within a reasonable period of time", with measurable progress and with the fullest possible use of available resources.

B – Assessment of the Committee

i – The alleged violation of Article 17§2 of the Revised Charter

Preliminary remarks

33. Referring to its admissibility decision and the issue of the delimitation of the material scope of Articles 15 and 17, the Committee considers that the fact that the right to education of persons with disabilities is guaranteed by

Article 15§1 of the Revised Charter does not exclude that relevant issues relating to the right of children and young persons with disabilities to education may not be examined in the framework of Article 17§2, *inter alia*.

34. The Committee begins by pointing out that both the first and the second paragraphs of Article 17 of the Revised Charter guarantee children's right to education. The Committee considers that Article 17§2 applies fully in this case as it covers all children and hence concerns children with intellectual disabilities. The Committee recalls in this respect that:

"Therefore Article 17 as a whole requires states to establish and maintain an education system that is both accessible and effective. In assessing whether the system is effective the Committee will examine under Article 17: … whether, considering that equal access to education should be guaranteed for all children, particular attention is paid to vulnerable groups such as children from minorities, children seeking asylum, refugee children, children in hospital, children in care, pregnant teenagers, teenage mothers, children deprived of their liberty etc. and whether necessary special measures have been taken to ensure equal access to education for these children" *(Conclusions 2003, Bulgaria, Article 17§2).*

"States need to ensure a high quality of teaching and to ensure that there is equal access to education for all children, in particular vulnerable groups" *(Conclusions 2005, Bulgaria, Article 17§2).*

35. Firstly, as regards taking special account of children with disabilities, the Committee points out that, while it is acceptable for a distinction to be made between children with and without disabilities in the application of Article 17§2, the integration of children with disabilities into mainstream schools in which arrangements are made to cater for their special needs should be the norm and teaching in specialised schools must be the exception (Autism-Europe v. France, Complaint No.13/2000, decision on the merits of 4 November 2003, §49).

36. In addition, for any special education that is set up to be in conformity with Article 17§2, the children concerned must be given sufficient instruction and training and complete their schooling in equivalent proportions to those of children in mainstream schools (Conclusions 2005, Bulgaria, Article 17§2).

37. The Committee considers that all education provided by states must fulfil the criteria of availability, accessibility, acceptability and adaptability. It notes in this respect General Comment No. 13 of the Committee on Economic, Social and Cultural Rights of the United Nations International Covenant on Economic, Social and Cultural Rights on the right to education (document E/C.12/1999/10 of 8 December 1999, §6). In the present case, the criteria of accessibility and adaptability are at stake, i.e. educational institutions and curricula have to be accessible to everyone, without discrimination and teaching has to be designed to respond to children with special needs.

38. As regards the respect for the right to education of intellectually disabled children residing in HMDCs, the Committee takes note of the efforts made by the Government, particularly through the adoption of legislation and the setting up of action plans. It considers this to be a necessary first step but

one that is insufficient to bring a situation into conformity with the Revised Charter. It reiterates that "the aim and purpose of the Charter, being a human rights protection instrument, is to protect rights not merely theoretically, but also in fact" (International Commission of Jurists v. Portugal, Complaint No. 1/1998, decision on the merits of 10 September 1999, §32). Consequently, the manner in which this legislation and these action plans are implemented is decisive.

39. The Committee points out that when it is exceptionally complex and expensive to secure one of the rights protected by the Revised Charter, the measures taken by the state to achieve the Revised Charter's aims must fulfil the following three criteria: "(i) a reasonable timeframe, (ii) a measurable progress and (iii) a financing consistent with the maximum use of available resources" (European Roma Rights Centre v. Bulgaria, Complaint No. 31/2005, decision on the merits of 18 October 2006, §37; Autism-Europe v. France, Complaint No.13/2000, decision on the merits of 4 November 2003, §53). It also recalls that "States Parties must be particularly mindful of the impact that their choices will have for groups with heightened vulnerabilities" and that they must also take "practical action to give full effect to the rights recognised in the Charter" (Autism-Europe v. France, Complaint No.13/2000, decision on the merits of 4 November 2003, §53). Similarly, "States enjoy a margin of appreciation in determining the steps to be taken to ensure compliance with the Charter, in particular as regards to the balance to be struck between the general interest and the interest of a specific group and the choices which must be made in terms of priorities and resources" (European Roma Rights Centre v. Bulgaria, Complaint No. 31/2005, decision on the merits of 18 October 2006, §35).

40. The Committee points out that where precise facts are used to support allegations that a state has infringed the Revised Charter, it is for the Government to answer the allegations using specific evidence such as measures introduced, statistics or examples of relevant case-law (see European Roma Rights Centre v. Greece, Complaint No. 15/2003, decision on the merits of 8 December 2004, §50). The MDAC has submitted precise elements to the Committee with a view to demonstrate that the manner in which Bulgaria's legislation and action plans are implemented is highly inadequate. The Committee notes that the Government, however, has failed to provide evidence to refute these.

41. In addition, the Committee notes that the Government describes the situation of children with disabilities in general and not the specific case of children with moderate, severe or profound intellectual disabilities residing in HMDCs, who are the subjects of this complaint.

42. To be able to assess the situation of these children, the Committee must therefore rely on the data referred to in the 2005 report prepared by the Bulgarian national child protection agency, which is mentioned by the MDAC in its complaint and not disputed by the Government.

43. The Committee refers to Order No. 6 on children with special educational needs and/or chronic conditions, 2002, which entitles children with any type of intellectual disability to be educated in special schools or mainstream schools of their parent's or tutor's choice. The Committee notes that only 2.8% of the children with intellectual disabilities residing in HMDCs are integrated in mainstream primary schools, which is extremely low whereas integration should be the norm. Mainstream educational institutions and curricula are not accessible in practice to these children. There also appears to be insufficient evidence to show real attempts to integrate these children into mainstream education. The Committee considers therefore that the criterion of accessibility is not fulfilled.

44. For the very few children integrated into mainstream primary schools, the way in which they are dealt with should be suited to their special needs. The Committee finds on this point in particular that teachers have not been trained sufficiently to teach intellectually disabled children and teaching materials are inadequate in mainstream schools. These schools are therefore not suited to meet the needs of children with intellectual disabilities and hence to provide their education. The Committee concludes that neither therefore is the criterion of adaptability met.

45. The Committee notes that only 3.4% of children with intellectual disabilities residing in HMDCs attend the special classes set up for them. Despite the fact that special classes should not be the norm but only an exception to mainstream education, the figure is very low and demonstrates that special education is not accessible to children with intellectual disabilities residing in HMDCs.

46. As to the educational activities that intellectually disabled children follow within the HMDCs, the Committee takes note that the HMDCs are not themselves be regarded as educational institutions, that, consequently, the children are ineligible for a diploma attesting completion of primary school education and that they are therefore prevented from entering secondary education. The Committee notes, in addition, that the programmes of activity implemented at HMDCs were drawn up by the Ministry of Labour and Social Policy before the 2002 reform, at a time when intellectually disabled children were still officially regarded as being uneducable. The Committee also notes that it has been confirmed by various eye-witness reports and studies that the children do not receive any education in the HMDCs. The Committee concludes that the activities pursued by intellectually disabled children living in HMDCs who attend neither a mainstream school nor a special class cannot be considered to be a form of education.

47. As to the Government's argument that the right of children with intellectual disabilities residing in HMDCs to education is being implemented progressively, the Committee is aware of Bulgaria's financial constraints. It notes that any progress that has been made has been very slow and mainly concerns the adoption of legislation and policies (or action plans), with little or no implementation. It would have been possible to take some specific steps at no excessive additional cost (for example HMDC directors and the municipal

officials to whom HMDCs and primary schools are accountable could have been informed about and given training on the new legislation and action plans). The choices made by the Government resulted in the situation described above (see in particular §§ 43 et 45). Progress is therefore patently insufficient at the current rate and there is no prospect that the situation will be in conformity with article 17§2 within a reasonable time. Consequently, the Committee considers that the measures taken do not fulfil the three criteria referred to above, i.e. a reasonable timeframe, measurable progress and financing consistent with the maximum use of available resources. In view of this situation, the Committee considers that Bulgaria's financial constraints cannot be used to justify the fact that children with intellectual disabilities in HMDCs cannot enjoy their right to an education.

48. Consequently, the Committee holds that the situation in Bulgaria constitutes a violation of Article 17§2 of the Revised Charter because children with moderate, severe or profound intellectual disabilities residing in HMDCs do not have the effective right to an education.

ii – The alleged violation of Article 17§2 of the Revised Charter read in conjunction with Article E

49. Article E prohibits any discrimination in the enjoyment of the rights set forth in the Revised Charter. Although disability is not explicitly included in the list of grounds of discrimination prohibited by Article E, the Committee has found previously that it is "adequately covered by the reference to 'other status'" (Autism-Europe v. France, Complaint No.13/2000, decision on the merits of 4 November 2003, §51).

50. The Committee has previously observed that:

"The wording of Article E is almost identical to the wording of Article 14 of the European Convention on Human Rights. As the European Court of Human Rights has repeatedly stressed in interpreting Article 14 and most recently in the Thlimmenos case [*Thlimmenos v. Greece* [GC], no 34369/97, ECHR 2000-IV, §44)], the principle of equality that is reflected therein means treating equals equally and unequals unequally. In particular it is said in the above mentioned case:

> 'The right not to be discriminated against in the enjoyment of the rights guaranteed under the Convention is also violated when States without an objective and reasonable justification fail to treat differently persons whose situations are significantly different'.

In other words, human difference in a democratic society should not only be viewed positively but should be responded to with discernment in order to ensure real and effective equality." (Autism-Europe v. France, Collective Complaint No. 13/2002, decision on the merits of 4 November 2003, §52).

51. Therefore, the Committee notes that failure to take appropriate measures to take account of existing differences may amount to discrimination.

52. The Committee recalls its case law regarding disputes about discrimination in matters covered by the Revised Charter, adopted in the framework of reporting procedure, that the burden of proof should not rest entirely on the complainant, but should be the subject of an appropriate adjustment. It also applies to the collective complaints procedure. The Committee therefore relies on the specific data sent to it by the complainant organisation, such as its statistics which show unexplained differences. It is then for the Government to demonstrate that there is no ground for this allegation of discrimination.

53. The Committee refers to the data cited above, according to which only 6.2% of the intellectually disabled children living in HMDCs are educated in mainstream primary schools or in special schools. It notes that, in reply, the Government states that a high percentage of children in Bulgaria do not go to school and that this does not just apply to children with intellectual disabilities. However, the Government fails to support this assertion with statistical data or to specify whether this is already a problem at primary school level or affects only secondary schools. The Committee underlines that it has already noted that, for the period 1997-2000, primary school attendance rates were 93% for girls and 95% for boys, despite a regrettable, excessively high drop-out rate (Conclusions 2005, Article 17§2, Bulgaria). The disparity between these figures is so great that it demonstrates that there is discrimination against children with intellectual disabilities residing in HMDCs in comparison with all other children with regard to access to education in Bulgaria.

54. Consequently, the Committee holds that the situation in Bulgaria constitutes a violation of Article 17§2 of the Revised Charter read in conjunction with Article E because of the discrimination against children with moderate, severe or profound intellectual disabilities residing in HMDCs as a result of the low number of such children receiving any type of education when compared to other children.

CONCLUSION

55. For these reasons the Committee concludes

- unanimously that there is a violation of Article 17§2 of the Revised Charter because children with moderate, severe or profound intellectual disabilities residing in HMDCs do not have an effective right to education;
- by 12 votes to 1 that there is a violation of Article 17§2 of the Revised Charter taken in conjunction with Article E because there is discrimination against children with moderate, severe or profound intellectual disabilities residing in HMDCs as a result of the low number of such children receiving any type of education when compared to other children.

Régis BRILLAT
Executive secretary

EUROPEAN COMMITTEE OF SOCIAL RIGHTS
COMITE EUROPEEN DES DROITS SOCIAUX

COUNCIL OF EUROPE CONSEIL DE L'EUROPE

DECISION ON THE MERITS

COMPLAINT No. 13/2002

By Autism - Europe
against France

The European Committee of Social Rights, committee of independent experts established under Article 25 of the European Social Charter (hereafter referred to as "the Committee"), during its 197th session attended by:

Messrs	Jean-Michel BELORGEY, President
	Nikitas ALIPRANTIS, Vice-President
Ms	Polonca KONCAR, Vice-President
Messrs	Stein EVJU, General Rapporteur
	Rolf BIRK
	Matti MIKKOLA
	Konrad GRILLBERGER
	Tekin AKILLIOĞLU
	Alfredo BRUTO DA COSTA
Ms	Csilla KOLLONAY LEHOCZKY
Messrs	Gerard QUINN
	Lucien FRANCOIS
	Andrzej SWIATKOWSKI

Assisted by Mr Régis BRILLAT, Executive Secretary of the European Social Charter

After having deliberated on the 3 and 4 November 2003,

On the basis of the report presented by Mr Gerard QUINN,

Delivers the following decision adopted on this last date:

PROCEDURE

1. On 12 December 2002, the Committee declared the complaint admissible.

2. In accordance with Article 7§1 and §2 of the Protocol providing for a system of collective complaints and with the Committee's decision on the admissibility of the complaint, the Executive Secretary communicated, on 13 December 2002, the text of the admissibility decision to the French Government, to Autism-Europe, to the Contracting Parties to the Protocol, to the states that have made a declaration in accordance with Article D§2 of the revised European Social Charter, as well as to the European Trade Union Confederation (ETUC), the Union of the Confederations of Industry and Employers of Europe (UNICE) and the International Organisation of Employers (IOE), inviting them to submit their observations on the merits of the complaint. In accordance with Article 25§2 of the Committee's Rules of Procedure, the President fixed a deadline of 15 February 2003 for the presentation of observations.

3. On 11 February 2003, the French Government presented its observations on the merits of the complaint.

4. The President set 11 April 2003 as the deadline for Autism-Europe to present its observations in response to the Government. The observations were registered on 10 April 2003.

5. During its 193rd session (31 March – 4 April 2003), the European Committee of Social Rights decided, in accordance with Article 7§4 of the Protocol providing for a system of collective complaints and Article 29§1 of the Committee's Rules of Procedure, to organise a public hearing.

6. The hearing took place in public at the Human Rights Building in Strasbourg on 29 September 2003. Autism-Europe was represented by E. FRIEDEL, Lawyer, and by Ms D. PAGETTI-VIVANTI, President of Autism-Europe. The Government was represented by Mr A. BUCHET, Deputy Director of Human Rights, Legal Affairs Department at the Ministry of Foreign Affairs, Mr P. DIDIER-COURBIN, Deputy Director for Persons with Disabilities, General Directorate of Social Action at the Ministry for Health, the Family and Disabled Persons, Ms M-C. COURTEIX, Head of the task force: School adaptation and integration, Directorate for school education at the Ministry for National Education, and Ms J. VILLIGER, Office for Disabled Adults, General Directorate of Social Action at the Ministry for Health, the Family and Disabled Persons.

According to Article 29§2 of its Rules of Procedure, the Committee invited the ETUC to participate in the hearing. ETUC was represented by Mr G. FONTENEAU, Social Adviser, and by Mr K. LÖRCHER, Legal Adviser.

The Committee heard addresses by E. FRIEDEL, Mr. A. BUCHET, and Mr. G. FONTENEAU and replies to questions put by members of the Committee.

SUBMISSIONS OF THE PARTICIPANTS IN THE PROCEDURE

a) The Complainant Organisation

7. Autism-Europe asked the Committee:

- to rule that France is failing to satisfactorily apply its obligations under Articles 15§1 and 17§1 of Part II of the Revised European Social Charter because children and adults with autism do not and are not likely to effectively exercise, in sufficient numbers and to an adequate standard, their right to education in mainstream schooling or through adequately supported placements in specialised institutions that offer education and related services;

  and

- to rule that France is in violation of the non-discrimination principle embodied in Article E of Part V of the Revised European Social Charter since persons with autism do not benefit from the right to education recognized to persons with disabilities by Article 15§1 and generally set out in Article 17§1 of Part II of the Charter.

The complainant alleged that France is not taking enough action as required under the revised European Social Charter to secure children and adults with autism a right to education as effective as that of all the other children.

b) The French Government

8. The French Government (hereafter "the Government") asked the Committee to reject the complaint as unfounded in each respect. It considers that the relevant legislation and the practice concerning the provision of education for persons with autism did not infringe Articles 15, 17 and E of the Revised European Social Charter (hereinafter Revised Charter).

c) The European Trade Union Confederation (ETUC)

9. The ETUC argues that France does not comply with Articles 15, 17 and E of the Revised Charter.

RELEVANT DOMESTIC LAW

10. On the basis of the submissions by the parties, the relevant domestic law on the provision of education for persons with autism may be summarised as follows:

The right to education of persons with disabilities is enshrined in two Acts:

- Act no. 75/534 of 30 June 1975, People with disabilities (policy) act,

- and Act no. 75/535 of 30 June 1975 on social and medico-social institutions,

Part of Act no. 75/534 has been enshrined in Act no. 89/486 of 10 July 1989 laying down framework provisions on education. Another piece of legislation makes more detailed

provision for persons with autism (Act no. 96/1076 of 11 December 1996 on social and medico-social institutions and making adapted provision for persons with autism). All the above legislation has now been codified in the Code of Social Action and the Education Code respectively.

11. The relevant provisions of the Education Code are Articles L.111-1, L.112-1 to L.112-3, and L.351-1.

Article L.111-1 provides that:

> "the right to education is secured to all".

More particularly, and dealing with children and young persons with disabilities, Article L.112-1 states that:

> "Schooling is compulsory for children and young persons with disabilities. They shall meet the compulsory-education requirement either through integration in the ordinary education system or, failing that, through special education, as decided by the *départemen*t special education board in accordance with the individual's particular needs".

Article L.112-2 continues:

> "Educational integration of young people with disabilities shall be facilitated".

The scope of special education is defined by Article L.112-3, which provides:

> "Special education shall combine educational, psychological, social, medical and paramedical action; it shall be delivered either at establishments within the general system or by specialist establishments or services….".

With respect to the delivery of special education Article L.351-1 provides that:

> "… The state shall pay for the education and initial vocational training of children and adolescents with disabilities:
>
> 1. preferably, by integrating into ordinary classes … all children capable of being integrated despite their disabilities;
> 2. or by making qualified staff for whom the education minister is responsible available to establishments and services set up and maintained by other ministries, by public law entities or by authorised non-profit groups or bodies …
> 3. or by entering into contracts or partnerships with private education establishments …"

That is, Article L.112-1 and Article L.351-1 establish a statutory preference in favour of the education of children with disabilities in the mainstream.

12. The relevant provisions of the Code of Social Action are Articles L.114-1, L.114-2, L.116-1, L.116-2, L.242-4 and 10, and L.246-1.

According to Article L.114-1, the State is obliged to guarantee the right of persons with disabilities to have access to fundamental rights, including the right to education.

The right to the enjoyment of these rights in a mainstream environment is acknowledged by Article L.114-2 insofar as it provides that:

"The action taken shall, whenever the aptitudes of the person with disability and the capabilities of the family so allow, ensure access for the minor or adult with disability to those institutions open to the whole population…".

The overall goals of social and medical action are set out under Article L.116-1 and 2 as follows:

"Social and medico-social action shall promote, within an inter-ministerial framework, the autonomy and protection of persons … prevent exclusion and correct its effects. It shall be based on continuous evaluation of needs and of expectations … in particular those of people with disabilities … and on making facilities and allowances available to them. It shall be performed by the state, the local authorities and the public establishments run by them, social-security agencies, the voluntary sector and social and medico-social institutions…

Social and medico-social action shall be so conducted as to respect the equal dignity of all human beings, with the aim of making adapted provision to meet the needs of each individual and affording them equitable access throughout the country."

Early intervention is mandated by Article L.242-4, which provides that:

"The earliest possible provision is necessary. It shall be possible for it to continue for as long as the condition of the person with the disability warrants it and without any limit of age or duration ….".

With respect to the financing of these measures, Article L.242-10 reads:

"Expenses for accommodation and care in special education establishments and vocational establishments, together with the cost of outside care in connection with such education, with the exception of expenses falling to be met by the state under Article L.242-1[1], shall be wholly met by the sickness insurance schemes, subject to the rates which are the basis for calculation of benefit. Where such costs are not covered by the sickness-insurance schemes, they shall be covered by social assistance[2]…."

Article L.246-1 makes more particular provision for persons with autism:

"Any person with a disability resulting from autism syndrome or related disorders shall receive, regardless of age, multidisciplinary provision catering for his or her specific needs and difficulties. Such provision shall be adapted to the condition and age of the individual and have regard to the resources available. It may be educational, therapeutic or social."

13. To summarise, persons with autism may attend mainstreaming education, either in their own right (individual mainstreaming) in ordinary classes with the assistance of special auxiliary staff, or as part of a group (collective mainstreaming) through school integration classes (CLIS) at primary level and educational integration units (UPI) at secondary level. Persons who, by reason of the severity of their autism, cannot integrate the ordinary educational system may receive special education in a specialised institution or through medico-social services (SESSAD – special education and domiciliary care services). Specialised institutions include: IME – medical-educational institutes; IMP – medical-teaching institutes; IMPRO – medical-occupational institutes; MAS – Special residential establishments and FDT – double-charging establishment for the most severely disabled.

14. The individual mainstreaming into regular schooling is financed through the general education budget. However, the mainstreaming of individuals through collective mainstreaming is financed through the sickness-insurance budget. Also all the above

[1] This article expressly refers to the aforementioned Article L.351-1 of the Education Code.

[2] These provisions also appear in Article L.321-1 of the Social Security Code.

forms of special education are financed mainly through the sickness-insurance budget and, in the case of autism, by the special appropriations system addressed to it. Teachers in special education and special auxiliary staff in these specialised institutions are paid out of the national education budget.

15. According to the prevalence rate used, the number of persons with autism varies largely. The complainant assumed that, on the basis of the most recent scientific knowledge, the appropriate prevalence rate is 16 per 10 000 persons. As a consequence, it is claimed that there are approximately 100 000 persons with autism in France, of whom 25 000 children and young people. The Government opted for a prevalence rate of 4-5.6 per 10 000 persons: accordingly, there are approximately 7,000 children and 20,000 adults with autism in France. The complaint alleges that a certain number of French children with autism attend institutions in Belgium.

AS TO THE LAW

I. ARGUMENTS OF THE PARTIES

16. Autism-Europe initially argued, but did not pursue at the hearing, that the relevant parts of French law are as such, in violation of Articles 15§1 and 17§1 of the Revised Charter. Having abandoned that line of argumentation the complainant argued instead that the implementation of the law, or the *de facto,* situation, is in violation of the said Articles. More specifically, the complainant finally argued that, in practice, insufficient provision is made for the education of children and adults with autism due to identifiable shortfalls – both quantitative and qualitative - in the provision of both mainstream education as well as in the so-called special education sector.

17. The Committee therefore finds it unnecessary to proceed further with respect to the original argument. Accordingly, its analysis will be confined to the question whether the relevant French practice constitutes, as alleged by the complainant, a violation of Articles 15§1, 17§1 and E of the Revised Charter.

18. Articles 15§1, 17§1 and E of the Revised Charter read as follows:

"Article 15 - The right of persons with disabilities to independence, social integration and participation in the life of the community

> With a view to ensuring to persons with disabilities, irrespective of age and the nature and origin of their disabilities, the effective exercise of the right to independence, social integration and participation in the life of the community, the Parties undertake, in particular:
> 1. to take the necessary measures to provide persons with disabilities with guidance, education and vocational training in the framework of general schemes wherever possible or, where this is not possible, through specialised bodies, public or private;
> ……

Article 17 - The right of children and young persons to social, legal and economic protection

> With a view to ensuring the effective exercise of the right of children and young persons to grow up in an environment which encourages the full development of their personality and of their physical and mental capacities, the Parties undertake, either directly or in co-operation with public and private organisations, to take all appropriate and necessary measures designed:
> 1. a to ensure that children and young persons, taking account of the rights and duties of their parents, have the care, the assistance, the education and the training they need, in particular by providing for the establishment or maintenance of institutions and services sufficient and adequate for this purpose;
> ……

Article E – Non-discrimination

> The enjoyment of the rights set forth in this Charter shall be secured without discrimination on any ground such as race, colour, sex, language, religion, political or other opinion, national extraction or social origin, health, association with a national minority, birth or other status. "

A. The alleged unavailability of special education institutions and services

19. Autism-Europe argued that the special education institutions and socio-medical services allocated for the education of children and adults with autism have been historically inadequate. The 1995-2000 catch-up plan for persons with autism failed to overcome the backlog; likewise, the 2001-2003 multi-annual plan on disabled children, young persons and adults, which addressed also persons with autism, is alleged to be far from filling the gap. It also asserted that 75 000 persons with autism (of whom 19 000 are children) are in need of special education, but that only 10% of them have a place (about 8,000 places in all are currently available).

20. According to Autism-Europe, the current situation as regards placements in special education stands as follows:

Situation as compiled by Autism-Europe: Number of places per 75 000 persons with autism in France

Number in 1995	Actually established 1995-2000	To be opened 2001-2003	Total	Remaining needs	Rate of satisfaction
5400	1400	1053	7853	67147	11.6%

Official figures[3]: number of places per 48 000 persons with autism in France

Number in 1995	Officially established 1995-2000	To be opened 2001-2003	Total	Remaining needs	Rate of satisfaction
5400	2033	1053	8486	39514	21.4%

[3] As from DGAS, Report to the Parliament on the implementation of Act no.96/1076, "Autism: evaluation of action 1995-2000", December 2000. The difference as regards the estimate of the number of persons with autism is due to the retained incidence rate of the disability.

21. The complainant alleges that even if the official French rate of prevalence is accepted (which it asserts is lower that the one retained by the Health World Organisation), the finances dedicated to the 1995-2000 catch-up plan could only envisage the creation of 1 400 wholly new places, and not the 2033 places officially claimed to be opened. It further alleges that the 2001-2003 multi-annual plan would not really help to change the situation since it would only enable the creation of 1053 additional places for a budget of € 22.87 million.

22. According to the complainant, on average, 300 places have been created annually since 1995, which represents an annual increasing rate of 0.7% in comparison with the official needs. At this pace, it will take one hundred years to resorb the deficit of places, and this without taking into account the natural increase of the autistic population, which, on the basis of the official figures, it is estimates will grow by 160 persons per year.

23. In reply the Government acknowledged that the catch-up plan of 1995-2000 had fallen short of real needs. In its written memorials, the Government indicated that, within the framework of the 2001-2003 multi-annual plan or other exceptional plans, these special appropriations amounting in total to about €30 million enabled, or will enable, the creation of 1053 places reserved specifically for persons with autism. It further asserted that 1756 SESSAD (special education and domiciliary care) places for the educational integration of children with disabilities, including autistic children, and young people had been created (on a budget of € 36.95 million), and 507 were planned in 2003. In total 3228 SESSAD places have been created between 2001 and 2003. It asserted that there were 5500 places in specialist residential establishments (MAS), residential establishments with medical facilities (FAM) and special employment centers (CAT) for severely disabled adults, some of whom would include autistic persons. Finally, it asserted that the 2003 Social Security Finance Act set aside € 70 million for severely disabled adults and € 9 million for improving facilities in establishments and other services and on the educational integration of disabled children through the establishment of additional places in residential and non-residential centers with educational and medical facilities and in SESSAD (special education and domiciliary care services).

24. At the hearing, the Government indicated that 94 000 children and young persons with disabilities (0-20 years of age) are taken care of in special education institutions, socio-medical services, or health institutions. More precisely, as regards autism, it reaffirmed that, through the catch-up plan of 1995-2000, a total of about 2033 places (820 for children and 1213 for adults) have been created. In addition, the multi-annual plan 2001-2003 and special appropriations has finally permitted, as of September 2003, the creation of some other 1306 places for children, young people and adults with autism.

25. The Government acknowledged that part of figures provided did not concern directly persons with autism, but in general disabled or seriously disabled persons. However, it argued that, on the one hand, the approach chosen by France is not the provision of specialised services for any category of disabled persons, but their reception in multipurpose establishments and services; and, on the other hand, that statistic programmes aiming at disaggregating data concerning specifically persons with autism (which currently do not exist) have been recently launched.

26. In any event, the Government considered that, even if the creation of places, and thereby the allocation of resources, were insufficient to cover all needs, the catch-up for educational provision of autistic persons did not only lie in allocating additional funding, but also in diversifying the offer of services at *département* level by implementing Act no. 2002/2 containing reforms of social and medico-social provision.

B. Separation and limitation of budgetary resources

27. Autism-Europe advanced a structural reason why there is inadequate funding for the education of children and young adults with autism and argued that this violates Article 15§1 in combination with Article 17§1. Special education, it is alleged, is at an automatic disadvantage because it does not fall under the finance Act and is not therefore considered to be a public service that the State is obliged to provide. Hence, unlike ordinary education, its financing is not calculated according to the number of children in the system and those forecast for the future.

28. Autism-Europe observed that the financing of special education comes mainly under the sickness-insurance budget approved through the social security finance Act, to the exception of teachers provided by the national system to the special education sector who are paid by the State budget. This implies for the complainant that the expenditure is not determined according to the real needs of the number of people with disabilities who need adapted educational provision. Thus, it argued that, because of the budgeting mechanism chosen, persons with disabilities do not in practice (despite the legislation) benefit from the right to education because they cannot do so for as long as the funding of special education placements remains outside the national education system and is treated as “social assistance” or “care” to which health or social-action expenditure limits apply.

29. As far as persons with autism are concerned, the complainant specifically argued that, unless France alters its budgetary and financial policy, the shortfall on educational provision for autistic persons will never be made up and the quantitative needs will never be met.

30. The Government contested the complainant’s argument and considered that, on the basis of Article L.112-1 of the Education Code, children with disabilities are fully covered by the educational public service requirement, either through ordinary or special education. According to Article L.112-3, special education is much more than just a form of care, since it combines educational, psychological, social, medical and paramedical inputs. Moreover, the Government recalled that special education is not financed solely by the sickness insurance scheme since the state pays for its educational component (Article L.242-1 of the Social Action Code). Accordingly, 5 400 teachers are assigned to medical-social establishments and services and health establishments to assist 94,000 children and young persons with disabilities.

31. Finally, the Government contested that the financing of the part of special education met by the sickness insurance system through the ONDAM - the national objective for sickness insurance expenditure - is less generous than what would be a state financing within the education budget. On the contrary, it held that such a system is more flexible because the growth rate applied to the expenditure objective for services and establishments, depending on the social security system, is determined by public health needs and national priorities.

C. The alleged inadequacy of early intervention

32. Autism-Europe argued that early intervention to assist children with autism is virtually non-existent.

33. The Government considered that early medical-social action centers (CAMSPs) make specific provision for the early detection of disability, or risk of disability, and outpatient treatment by multidisciplinary teams for children under six with sensory, motor or mental disabilities. From 1996, the number of these centers has sharply increased: they are now 260 in all but one of the *departments,* and the 2001-2003 three-year plan for disabled children, young persons and adults has set aside € 3 million a year to finance their establishment and extension. The recently established four autism resource centers in Brest, Reims, Montpellier and Tours are responsible for carrying out diagnoses in particularly complex or sensitive cases. The complainant sustained that this information concerned disabled children as a whole rather than children with autism.

D. The alleged inadequacy of mainstream education

34. Notwithstanding the regulations in force, the complainant argued that the mainstreaming of autistic children and young people is still the exception rather than the rule and, even when it occurs, it is confined to an average of just a few hours per week. The complainant asserted that structures charged with integration – school integration classes (CLIS), educational integration units (UPI) and the domiciliary care and special education services (SESSAD), are generally and even officially acknowledged as insufficient in number[4]. The complainant cited official figures concerning mainstreaming. According to the report of the Senate, only 7% of children with disabilities (about 60,000 as a whole) are integrated into ordinary schools[5]. According to the Ministry of Education, mainstreamed disabled children and young people represent 1.3% of the total school population in each department, while the Court of Auditors rates their integration to less than 1%[6]. At the hearing, the complainant asserted that out of 6,000 children with autism who could be mainstreamed only 250 are individually integrated, that is about 5%. Another 400 are collectively integrated, making a total of 650 on a total school population of 15 million children, teenagers and students.

---

[4] Ministry of Employment and Solidarity (General Inspectorate of Social Affairs), Ministry of Education (General Inspectorate of Education), Report on access to education for children and young people with disabilities, March 1999; M. Fardeau , DGAS Report to the Ministry of Employment and Solidarity, Disability: a comparative and forward analysis of provision.

[5] Senate, P. Blanc, Report of the Social Affairs Commission on the policy for compensating disability.

[6] Court of Auditors, Life with a disability, Public report, June 2003.

35. The Government contested this argument and affirmed that for the State mainstreaming is a priority, both in legislation (Articles L.114-1 of the Social Action and Family Code in general terms and Articles L.112-1 and L.112-3 of the Education Code, Education Act, No. 89-486) and in relevant regulations (*Handiscol* circular), and also through the provision of the necessary resources.

36. The Government asserted that full-time or part-time integration may occur individually or collectively through the creation of special classes (CLIS and UPIS) within ordinary schools. In its written memorials, it indicated that, at the start of the 2001-2002 academic year there were 3381 CLIS (compared with 3170 the previous year) and 303 UPIS (compared with 202). At the hearing, the Government contested the complainant's figures about mainstreaming of persons with autism, but it was unable to offer precise data concerning them. It only affirmed that, in 2002-2003, the total number of disabled persons integrated into ordinary school amounted to 89 000 (67 000 at primary level and 22 000 at secondary level).

37. The Government pointed out that the *Handiscol* project assists in the integration process by providing information, assistance in improving access to school establishments, training of teachers, and the supply of support staff to accompany children who need it.

38. Finally, the Government indicated a new range of measures decided on 21 January 2003 for further improving the integration of pupils with disabilities by developing special classes in secondary schools and increasing the number of special auxiliary staff to 6,000 (Decree no. 40/2003 on auxiliary staff).

E. The alleged deficiencies in special education: administrative unwieldiness and teacher training

39. Autism-Europe alleged that persons with autism find it hard to receive adapted education in specialised institutions because administrative unwieldiness gets in the way of providing new specialised facilities. The long and time-consuming administrative process is also held to be at the origin of French persons with autism integrating Belgian special education institutions.

40. The complainant affirmed that there are no binding rules requiring the teaching staff of specialised education facilities to be specifically trained to cater for autistic persons[7] and the training for staff is in fact non-existent or ill-adapted. This appears to be confirmed by official sources[8].

41. The Government contested the allegation and indicated all measures implemented so far to train professionals working with autistic persons:

- for seven years the National training and study centre for maladjusted children (CNEIFEI) organises an autism module as part of its training for teachers studying for a specialised teaching certificate in educational adjustment and integration (CAPSAIS, option D). In 2002-2003, 12 specialist teacher trainees and 97 other persons (national education personnel and parents) took part in this module;

[7] There is only Circular no. 98/232 on training for staff working with persons with autism.

[8] Ministry of Employment and Solidarity (General Inspectorate of Social Affairs), Ministry of Education (General Inspectorate of Education), Report on access to education for children and young people with disabilities, March 1999.

- since 1998, seventy continuing training sessions have been held each year, attended by an average of 500 trainees, to form professional working with persons with autism;
- new measures announced by the Government include training for all staff and the development of specialist teacher training in university teacher training institutions (IUFM).

42. In addition, the Government held that Act No. 2002/2 on social and medical-social action should help reducing the number of steps and time required to set-up specialist establishments.

F. The alleged deficiencies in the educational placements of adults with autism

43. As a consequence of the lack of legal rules, Autism-Europe argued that educational provision for autistic adults is non-existent.

44. The Government contested the allegation and described all the different medical and medical-social establishments and services catering for adults with disabilities, thereby including adults with autism.

G. Reliance on Hospitalisation of Children and Adults with Autism

45. Autism-Europe alleged that, as a consequence of the lack of places, persons with autism seek care abroad, mainly in Belgium, and that hospitals cannot be considered "sufficient and adequate" institutions and services for educational provision of autistic persons. This latter aspect, the complainant added, is confirmed by official sources[9].

46. The Government contested the allegation and indicated that the newly planned places already referred to are particularly concerned with offering autistic persons local accommodation so that they are not cut off from their families. Moreover, placement in psychiatric hospital occurs when specialist care, which like all medical care is prescribed by doctors, is necessary for persons with autism, as for anyone else.

II. ASSESSMENT OF THE COMMITTEE

47. The Committee considers that the arguments of the complainant alleging the violation of Articles 15§1and 17§1 and of Article E are so intertwined as to be inseparable. Its assessment, therefore, will deal with the question whether the situation in France is in conformity with Articles 15§1 and 17§1 whether alone or when read in combination with Article E of the Revised Charter.

48. As emphasised in the General Introduction to its Conclusions of 2003 (p. 10), the Committee views Article 15 of the Revised Charter as both reflecting and advancing a profound shift of values in all European countries over the past decade away from treating them as objects of pity and towards respecting them as equal citizens – an approach that the Council of Europe contributed to promote, with the adoption by the Committee of Ministers of Recommendation (92) 6 of 1992 on a coherent policy for people with disabilities. The underlying vision of Article 15 is one of equal citizenship for persons with

[9] Ministry of Employment and Solidarity (General Inspectorate of Social Affairs), Ministry of Education (General Inspectorate of Education), Report on access to education for children and young people with disabilities, March 1999.

disabilities and, fittingly, the primary rights are those of "independence, social integration and participation in the life of the community". Securing a right to education for children and others with disabilities plays an obviously important role in advancing these citizenship rights. This explains why education is now specifically mentioned in the revised Article 15 and why such an emphasis is placed on achieving that education "in the framework of general schemes, wherever possible". It should be noted that Article 15 applies to all persons with disabilities regardless of the nature and origin of their disability and irrespective of their age. It thus clearly covers both children and adults with autism.

49. Article 17 is predicated on the need to ensure that children and young persons grow up in an environment which encourages the "full development of their personality and of their physical and mental capacities". This approach is just as important for children with disabilities as it is for others and arguably more in circumstances where the effects of ineffective or untimely intervention are ever likely to be undone. The Committee views Article 17, which deals more generally, *inter alia,* with the right to education for all, as also embodying the modern approach of mainstreaming. Article 17§1, in particular, requires the establishment and maintenance of sufficient and adequate institutions and services for the purpose of education. Since Article 17§1 deals only with children and young persons it is important to read it in conjunction with Article 15§1 as far as adults are concerned.

50. Autism-Europe also argued that Article E of the Revised Charter is violated since the net result of alleged shortfalls is that persons with autism do not benefit, as effectively as other citizens, from a right to education as embodied both in Articles 15§1 and 17§1.

51. The Committee considers that the insertion of Article E into a separate Article in the Revised Charter indicates the heightened importance the drafters paid to the principle of non-discrimination with respect to the achievement of the various substantive rights contained therein. It further considers that its function is to help secure the equal effective enjoyment of all the rights concerned regardless of difference. Therefore, it does not constitute an autonomous right which could in itself provide independent grounds for a complaint. It follows that the Committee understands the arguments of the complainant as implying that the situation as alleged violates Articles 15§1 and 17§1 when read in combination with Article E of the Revised Charter.

Although disability is not explicitly listed as a prohibited ground of discrimination under Article E, the Committee considers that it is adequately covered by the reference to "other status". Such an interpretative approach, which is justified in its own rights, is fully consistent with both the letter and the spirit of the Political Declaration adopted by the 2nd European conference of ministers responsible for integration policies for people with disabilities (Malaga, April, 2003), which reaffirmed the anti-discriminatory and human rights framework as the appropriate one for development of European policy in this field.

52. The Committee observes further that the wording of Article E is almost identical to the wording of Article 14 of the European Convention on Human Rights. As the European Court of Human Rights has repeatedly stressed in interpreting Article 14 and most recently in the Thlimmenos case [*Thlimmenos c. Grèce* [GC], n° 34369/97, CEDH 2000-IV, § 44)], the principle of equality that is reflected therein means treating equals equally and unequals unequally. In particular it is said in the above mentioned case:

> "The right not to be discriminated against in the enjoyment of the rights guaranteed under the Convention is also violated when States without an objective and reasonable justification fail to treat differently persons whose situations are significantly different."

In other words, human difference in a democratic society should not only be viewed positively but should be responded to with discernment in order to ensure real and effective equality.

In this regard, the Committee considers that Article E not only prohibits direct discrimination but also all forms of indirect discrimination. Such indirect discrimination may arise by failing to take due and positive account of all relevant differences or by failing to take adequate steps to ensure that the rights and collective advantages that are open to all are genuinely accessible by and to all.

53. The Committee recalls, as stated in its decision relative to Complaint No.1/1998 (International Commission of Jurist v. Portugal, § 32), that the implementation of the Charter requires the State Parties to take not merely legal action but also practical action to give full effect to the rights recognised in the Charter. When the achievement of one of the rights in question is exceptionally complex and particularly expensive to resolve, a State Party must take measures that allows it to achieve the objectives of the Charter within a reasonable time, with measurable progress and to an extent consistent with the maximum use of available resources. States Parties must be particularly mindful of the impact that their choices will have for groups with heightened vulnerabilities as well as for others persons affected including, especially, their families on whom falls the heaviest burden in the event of institutional shortcomings.

54. In the light of the afore-mentioned, the Committee notes that in the case of autistic children and adults, notwithstanding a national debate going back more than twenty years about the number of persons concerned and the relevant strategies required, and even after the enactment of the Disabled Persons Policy Act of 30 June 1975, France has failed to achieve sufficient progress in advancing the provision of education for persons with autism. It specifically notes that most of the French official documents, in particular those submitted during the procedure, still use a more restrictive definition of autism than that adopted by the World Heath Organisation and that there are still insufficient official statistics with which to rationally measure progress through time. The Committee considers that the fact that the establishments specialising in the education and care of disabled children (particularly those with autism) are not in general financed from the same budget as normal schools, does not in itself amount to discrimination, since it is primarily for States themselves to decide on the modalities of funding.

Nevertheless, it considers, as the authorities themselves acknowledge, and whether a broad or narrow definition of autism is adopted, that the proportion of children with autism being educated in either general or specialist schools is much lower than in the case of other children, whether or not disabled. It is also established, and not contested by the authorities, that there is a chronic shortage of care and support facilities for autistic adults.

CONCLUSION

For these reasons, the Committee concludes by 11 votes to 2 that the situation constitutes a violation of Articles 15§1 and 17§1 whether alone or read in combination with Article E of the revised European Social Charter.
