WORKSHOP ON EU LAW ON INDUSTRIAL EMISSIONS

413DV121

Trier, 11-13 September 2013

Background Documentation

A. The Role of the National Judge in the European Judicial System and the Procedures of the CJEU

	EU Documents	
1	Selected articles from the consolidated versions of the Treaty on European Union and the Treaty on the functioning of the European Union, including Statute of the Court of Justice of the European Union (OJ C 83 of 30 March 2010, p.1)	
2	Rules of Procedure of the Court of Justice (consolidated version of 25 September 2012)	
3	Recommendations to national courts and tribunals in relation to the initiation of preliminary ruling procedure (OJ C 338 of 6 November 2012, p. 1)	
	Selected CJEU Case Law	
4	Case 26/62 *Van Gend & Loos* [1963] ECR 1.	
5	Case 6/64 *Costa v Enel* [1964] ECR 585.	
6	Case 41/74 *van Duyn* [1974] ECR 1337.	
7	Case 283/81 *Cilfit and Others* [1982] ECR 3415	
8	Case 314/85 *Foto-Frost* [1987] ECR 4199	
9	Case 222/86 *Heylens and others* [1987] ECR 4097	
10	Case 247/87 *Star Fruit* v *Commission* [1989] ECR 291	
11	Case C-415/93 *Bosman* [1995] ECR I-4921	
12	Case C-99/00 *Lyckeskog* [2002] ECR I-4839	
13	Joined Cases C-397/01 to C-403/01 *Pfeiffer and Others* [2004] ECR I-8835	
14	Case C-350/02 *Commission* v *Netherlands* [2004] ECR I-6213	
15	Case C-461/03 *Gaston Schul Douane-expediteur* [2005] ECR I-10513	
16	Case C-53/03 *Syfait* [2005] ECR I-4609	
17	Case C-304/02 *Commission* v *France* (small fish) [2005] ECR I-6263	
18	Case C-466/04 *Acereda Herrera* [2006] ECR I-5341	
19	Case C-344/04 *IATA and ELFAA* [2006] ECR I-403	

20	Case C-221/04 *Commission* v *Spain* [2006] ECR I-4515	
21	Case C-380/05 *Centro Europa 7* [2008] ECR I-349	
22	Case C-210/06 *Cartesio* [2008] ECR I-9641	
23	Joined Cases C-261/08 and C-348/08 *Zurita García and Choque Cabrera* [2009] ECR I-10143	
24	Case C-445/06 *Danske Slagterier* [2009] I-2119	
25	Joined Cases C-188/10 and C-189/10 *Melki and Abdeli* [2010] ECR I-5667	
26	Case C-240/09 *Lesoochranárske zoskupenie* [2011] ECR I-1255	
27	Case C-282/10 *Dominguez* [2012] ECR I-0000	
28	Case C-374/11 *Commission* v *Ireland* of 19 December 2012

A. – TREATY ON THE EUROPEAN UNION

Article 13

1. The Union shall have an institutional framework which shall aim to promote its values, advance its objectives, serve its interests, those of its citizens and those of the Member States, and ensure the consistency, effectiveness and continuity of its policies and actions.

The Union's institutions shall be:

– the European Parliament,

– the European Council,

– the Council,

– the European Commission (hereinafter referred to as 'the Commission'),

– the Court of Justice of the European Union,

– the European Central Bank,

– the Court of Auditors.

2. Each institution shall act within the limits of the powers conferred on it in the Treaties, and in conformity with the procedures, conditions and objectives set out in them. The institutions shall practice mutual sincere cooperation.

3. The provisions relating to the European Central Bank and the Court of Auditors and detailed provisions on the other institutions are set out in the Treaty on the Functioning of the European Union.

4. The European Parliament, the Council and the Commission shall be assisted by an Economic and Social Committee and a Committee of the Regions acting in an advisory capacity.

Article 19

1. The Court of Justice of the European Union shall include the Court of Justice, the General Court and specialised courts. It shall ensure that in the interpretation and application of the Treaties the law is observed.

Member States shall provide remedies sufficient to ensure effective legal protection in the fields covered by Union law.

2. The Court of Justice shall consist of one judge from each Member State. It shall be assisted by Advocates-General.

The General Court shall include at least one judge per Member State.

The Judges and the Advocates-General of the Court of Justice and the Judges of the General Court shall be chosen from persons whose independence is beyond doubt and who satisfy the

conditions set out in Articles 253 and 254 of the Treaty on the Functioning of the European Union. They shall be appointed by common accord of the governments of the Member States for six years. Retiring Judges and Advocates-General may be reappointed.

3. The Court of Justice of the European Union shall, in accordance with the Treaties:

(a) rule on actions brought by a Member State, an institution or a natural or legal person;

(b) give preliminary rulings, at the request of courts or tribunals of the Member States, on the interpretation of Union law or the validity of acts adopted by the institutions;

(c) rule in other cases provided for in the Treaties.

B. – TREATY ON THE FUNCTIONING OF THE EUROPEAN UNION

Article 108
(ex Article 88 TEC)

1. The Commission shall, in cooperation with Member States, keep under constant review all systems of aid existing in those States. It shall propose to the latter any appropriate measures required by the progressive development or by the functioning of the internal market.

2. If, after giving notice to the parties concerned to submit their comments, the Commission finds that aid granted by a State or through State resources is not compatible with the internal market having regard to Article 107, or that such aid is being misused, it shall decide that the State concerned shall abolish or alter such aid within a period of time to be determined by the Commission.

If the State concerned does not comply with this decision within the prescribed time, the Commission or any other interested State may, in derogation from the provisions of Articles 258 and 259, refer the matter to the Court of Justice of the European Union direct.

On application by a Member State, the Council may, acting unanimously, decide that aid which that State is granting or intends to grant shall be considered to be compatible with the internal market, in derogation from the provisions of Article 107 or from the regulations provided for in Article 109, if such a decision is justified by exceptional circumstances. If, as regards the aid in question, the Commission has already initiated the procedure provided for in the first subparagraph of this paragraph, the fact that the State concerned has made its application to the Council shall have the effect of suspending that procedure until the Council has made its attitude known.

If, however, the Council has not made its attitude known within three months of the said application being made, the Commission shall give its decision on the case.

3. The Commission shall be informed, in sufficient time to enable it to submit its comments, of any plans to grant or alter aid. If it considers that any such plan is not compatible with the internal market having regard to Article 107, it shall without delay initiate the procedure provided for in paragraph 2. The Member State concerned shall not put its proposed measures into effect until this procedure has resulted in a final decision.

4. The Commission may adopt regulations relating to the categories of State aid that the Council has, pursuant to Article 109, determined may be exempted from the procedure provided for by paragraph 3 of this Article.

Article 218
(ex Article 300 TEC)

1. Without prejudice to the specific provisions laid down in Article 207, agreements between the Union and third countries or international organisations shall be negotiated and concluded in accordance with the following procedure.

2. The Council shall authorise the opening of negotiations, adopt negotiating directives, authorise the signing of agreements and conclude them.

3. The Commission, or the High Representative of the Union for Foreign Affairs and Security Policy where the agreement envisaged relates exclusively or principally to the common foreign and security policy, shall submit recommendations to the Council, which shall adopt a decision authorising the opening of negotiations and, depending on the subject of the agreement envisaged, nominating the Union negotiator or the head of the Union's negotiating team.

4. The Council may address directives to the negotiator and designate a special committee in consultation with which the negotiations must be conducted.

5. The Council, on a proposal by the negotiator, shall adopt a decision authorising the signing of the agreement and, if necessary, its provisional application before entry into force.

6. The Council, on a proposal by the negotiator, shall adopt a decision concluding the agreement.

Except where agreements relate exclusively to the common foreign and security policy, the Council shall adopt the decision concluding the agreement:

(a) after obtaining the consent of the European Parliament in the following cases:

(i) association agreements;

(ii) agreement on Union accession to the European Convention for the Protection of Human Rights and Fundamental Freedoms;

(iii) agreements establishing a specific institutional framework by organising cooperation procedures;

(iv) agreements with important budgetary implications for the Union;

(v) agreements covering fields to which either the ordinary legislative procedure applies, or the special legislative procedure where consent by the European Parliament is required.

The European Parliament and the Council may, in an urgent situation, agree upon a time-limit for consent.

(b) after consulting the European Parliament in other cases. The European Parliament shall deliver its opinion within a time-limit which the Council may set depending on the urgency of the matter. In the absence of an opinion within that time-limit, the Council may act.

7. When concluding an agreement, the Council may, by way of derogation from paragraphs 5, 6 and 9, authorise the negotiator to approve on the Union's behalf modifications to the agreement where it provides for them to be adopted by a simplified procedure or by a body set up by the agreement. The Council may attach specific conditions to such authorisation.

8. The Council shall act by a qualified majority throughout the procedure.

However, it shall act unanimously when the agreement covers a field for which unanimity is required for the adoption of a Union act as well as for association agreements and the agreements referred to in Article 212 with the States which are candidates for accession. The

Council shall also act unanimously for the agreement on accession of the Union to the European Convention for the protection of Human Rights and Fundamental Freedoms; the decision concluding this agreement shall enter into force after it has been approved by the Member States in accordance with their respective constitutional requirements.

9. The Council, on a proposal from the Commission or the High Representative of the Union for Foreign Affairs and Security Policy, shall adopt a decision suspending application of an agreement and establishing the positions to be adopted on the Union's behalf in a body set up by an agreement, when that body is called upon to adopt acts having legal effects, with the exception of acts supplementing or amending the institutional framework of the agreement.

10. The European Parliament shall be immediately and fully informed at all stages of the procedure.

11. A Member State, the European Parliament, the Council or the Commission may obtain the opinion of the Court of Justice as to whether an agreement envisaged is compatible with the Treaties. Where the opinion of the Court is adverse, the agreement envisaged may not enter into force unless it is amended or the Treaties are revised.

Article 251
(ex Article 221 TEC)

The Court of Justice shall sit in chambers or in a Grand Chamber, in accordance with the rules laid down for that purpose in the Statute of the Court of Justice of the European Union.

When provided for in the Statute, the Court of Justice may also sit as a full Court.

Article 252
(ex Article 222 TEC)

The Court of Justice shall be assisted by eight Advocates-General. Should the Court of Justice so request, the Council, acting unanimously, may increase the number of Advocates-General.

It shall be the duty of the Advocate-General, acting with complete impartiality and independence, to make, in open court, reasoned submissions on cases which, in accordance with the Statute of the Court of Justice of the European Union, require his involvement.

Article 253
(ex Article 223 TEC)

The Judges and Advocates-General of the Court of Justice shall be chosen from persons whose independence is beyond doubt and who possess the qualifications required for appointment to the highest judicial offices in their respective countries or who are jurisconsults of recognised competence; they shall be appointed by common accord of the governments of the Member States for a term of six years, after consultation of the panel provided for in Article 255.

Every three years there shall be a partial replacement of the Judges and Advocates-General, in accordance with the conditions laid down in the Statute of the Court of Justice of the European Union.

The Judges shall elect the President of the Court of Justice from among their number for a term of three years. He may be re-elected.

Retiring Judges and Advocates-General may be reappointed.

The Court of Justice shall appoint its Registrar and lay down the rules governing his service.

The Court of Justice shall establish its Rules of Procedure. Those Rules shall require the approval of the Council.

Article 254
(ex Article 224 TEC)

The number of Judges of the General Court shall be determined by the Statute of the Court of Justice of the European Union. The Statute may provide for the General Court to be assisted by Advocates-General.

The members of the General Court shall be chosen from persons whose independence is beyond doubt and who possess the ability required for appointment to high judicial office. They shall be appointed by common accord of the governments of the Member States for a term of six years, after consultation of the panel provided for in Article 255. The membership shall be partially renewed every three years. Retiring members shall be eligible for reappointment.

The Judges shall elect the President of the General Court from among their number for a term of three years. He may be re-elected.

The General Court shall appoint its Registrar and lay down the rules governing his service.

The General Court shall establish its Rules of Procedure in agreement with the Court of Justice. Those Rules shall require the approval of the Council.

Unless the Statute of the Court of Justice of the European Union provides otherwise, the provisions of the Treaties relating to the Court of Justice shall apply to the General Court.

Article 255

A panel shall be set up in order to give an opinion on candidates' suitability to perform the duties of Judge and Advocate-General of the Court of Justice and the General Court before the governments of the Member States make the appointments referred to in Articles 253 and 254.

The panel shall comprise seven persons chosen from among former members of the Court of Justice and the General Court, members of national supreme courts and lawyers of recognised competence, one of whom shall be proposed by the European Parliament. The Council shall adopt a decision establishing the panel's operating rules and a decision appointing its members. It shall act on the initiative of the President of the Court of Justice.

Article 256
(ex Article 225 TEC)

1. The General Court shall have jurisdiction to hear and determine at first instance actions or proceedings referred to in Articles 263, 265, 268, 270 and 272, with the exception of those

assigned to a specialised court set up under Article 257 and those reserved in the Statute for the Court of Justice. The Statute may provide for the General Court to have jurisdiction for other classes of action or proceeding.

Decisions given by the General Court under this paragraph may be subject to a right of appeal to the Court of Justice on points of law only, under the conditions and within the limits laid down by the Statute.

2. The General Court shall have jurisdiction to hear and determine actions or proceedings brought against decisions of the specialised courts.

Decisions given by the General Court under this paragraph may exceptionally be subject to review by the Court of Justice, under the conditions and within the limits laid down by the Statute, where there is a serious risk of the unity or consistency of Union law being affected.

3. The General Court shall have jurisdiction to hear and determine questions referred for a preliminary ruling under Article 267, in specific areas laid down by the Statute.

Where the General Court considers that the case requires a decision of principle likely to affect the unity or consistency of Union law, it may refer the case to the Court of Justice for a ruling.

Decisions given by the General Court on questions referred for a preliminary ruling may exceptionally be subject to review by the Court of Justice, under the conditions and within the limits laid down by the Statute, where there is a serious risk of the unity or consistency of Union law being affected.

Article 257
(ex Article 225A TEC)

The European Parliament and the Council, acting in accordance with the ordinary legislative procedure, may establish specialised courts attached to the General Court to hear and determine at first instance certain classes of action or proceeding brought in specific areas. The European Parliament and the Council shall act by means of regulations either on a proposal from the Commission after consultation of the Court of Justice or at the request of the Court of Justice after consultation of the Commission.

The regulation establishing a specialised court shall lay down the rules on the organisation of the court and the extent of the jurisdiction conferred upon it.

Decisions given by specialised courts may be subject to a right of appeal on points of law only or, when provided for in the regulation establishing the specialised court, a right of appeal also on matters of fact, before the General Court.

The members of the specialised courts shall be chosen from persons whose independence is beyond doubt and who possess the ability required for appointment to judicial office. They shall be appointed by the Council, acting unanimously.

The specialised courts shall establish their Rules of Procedure in agreement with the Court of Justice. Those Rules shall require the approval of the Council.

Unless the regulation establishing the specialised court provides otherwise, the provisions of the Treaties relating to the Court of Justice of the European Union and the provisions of the Statute of the Court of Justice of the European Union shall apply to the specialised courts. Title I of the Statute and Article 64 thereof shall in any case apply to the specialised courts.

Article 258
(ex Article 226 TEC)

If the Commission considers that a Member State has failed to fulfil an obligation under the Treaties, it shall deliver a reasoned opinion on the matter after giving the State concerned the opportunity to submit its observations.

If the State concerned does not comply with the opinion within the period laid down by the Commission, the latter may bring the matter before the Court of Justice of the European Union.

Article 259
(ex Article 227 TEC)

A Member State which considers that another Member State has failed to fulfil an obligation under the Treaties may bring the matter before the Court of Justice of the European Union.

Before a Member State brings an action against another Member State for an alleged infringement of an obligation under the Treaties, it shall bring the matter before the Commission.

The Commission shall deliver a reasoned opinion after each of the States concerned has been given the opportunity to submit its own case and its observations on the other party's case both orally and in writing.

If the Commission has not delivered an opinion within three months of the date on which the matter was brought before it, the absence of such opinion shall not prevent the matter from being brought before the Court.

Article 260
(ex Article 228 TEC)

1. If the Court of Justice of the European Union finds that a Member State has failed to fulfil an obligation under the Treaties, the State shall be required to take the necessary measures to comply with the judgment of the Court.

2. If the Commission considers that the Member State concerned has not taken the necessary measures to comply with the judgment of the Court, it may bring the case before the Court after giving that State the opportunity to submit its observations. It shall specify the amount of the lump sum or penalty payment to be paid by the Member State concerned which it considers appropriate in the circumstances.

If the Court finds that the Member State concerned has not complied with its judgment it may impose a lump sum or penalty payment on it.

This procedure shall be without prejudice to Article 259.

3. When the Commission brings a case before the Court pursuant to Article 258 on the grounds that the Member State concerned has failed to fulfil its obligation to notify measures transposing a directive adopted under a legislative procedure, it may, when it deems appropriate, specify the amount of the lump sum or penalty payment to be paid by the Member State concerned which it considers appropriate in the circumstances.

If the Court finds that there is an infringement it may impose a lump sum or penalty payment on the Member State concerned not exceeding the amount specified by the Commission. The payment obligation shall take effect on the date set by the Court in its judgment.

Article 261
(ex Article 229 TEC)

Regulations adopted jointly by the European Parliament and the Council, and by the Council, pursuant to the provisions of the Treaties, may give the Court of Justice of the European Union unlimited jurisdiction with regard to the penalties provided for in such regulations.

Article 262
(ex Article 229 A TEC)

Without prejudice to the other provisions of the Treaties, the Council, acting unanimously in accordance with a special legislative procedure and after consulting the European Parliament, may adopt provisions to confer jurisdiction, to the extent that it shall determine, on the Court of Justice of the European Union in disputes relating to the application of acts adopted on the basis of the Treaties which create European intellectual property rights. These provisions shall enter into force after their approval by the Member States in accordance with their respective constitutional requirements.

Article 263
(ex Article 230 TEC)

The Court of Justice of the European Union shall review the legality of legislative acts, of acts of the Council, of the Commission and of the European Central Bank, other than recommendations and opinions, and of acts of the European Parliament and of the European Council intended to produce legal effects vis-à-vis third parties. It shall also review the legality of acts of bodies, offices or agencies of the Union intended to produce legal effects vis-à-vis third parties.

It shall for this purpose have jurisdiction in actions brought by a Member State, the European Parliament, the Council or the Commission on grounds of lack of competence, infringement of an essential procedural requirement, infringement of the Treaties or of any rule of law relating to their application, or misuse of powers.

The Court shall have jurisdiction under the same conditions in actions brought by the Court of Auditors, by the European Central Bank and by the Committee of the Regions for the purpose of protecting their prerogatives.

Any natural or legal person may, under the conditions laid down in the first and second paragraphs, institute proceedings against an act addressed to that person or which is of direct and individual concern to them, and against a regulatory act which is of direct concern to them and does not entail implementing measures.

Acts setting up bodies, offices and agencies of the Union may lay down specific conditions and arrangements concerning actions brought by natural or legal persons against acts of these bodies, offices or agencies intended to produce legal effects in relation to them.

The proceedings provided for in this Article shall be instituted within two months of the publication of the measure, or of its notification to the plaintiff, or, in the absence thereof, of the day on which it came to the knowledge of the latter, as the case may be.

Article 264
(ex Article 231 TEC)

If the action is well founded, the Court of Justice of the European Union shall declare the act concerned to be void.

However, the Court shall, if it considers this necessary, state which of the effects of the act which it has declared void shall be considered as definitive.

Article 265
(ex Article 232 TEC)

Should the European Parliament, the European Council, the Council, the Commission or the European Central Bank, in infringement of the Treaties, fail to act, the Member States and the other institutions of the Union may bring an action before the Court of Justice of the European Union to have the infringement established. This Article shall apply, under the same conditions, to bodies, offices and agencies of the Union which fail to act.

The action shall be admissible only if the institution, body, office or agency concerned has first been called upon to act. If, within two months of being so called upon, the institution, body, office or agency concerned has not defined its position, the action may be brought within a further period of two months.

Any natural or legal person may, under the conditions laid down in the preceding paragraphs, complain to the Court that an institution, body, office or agency of the Union has failed to address to that person any act other than a recommendation or an opinion.

Article 266
(ex Article 233 TEC)

The institution whose act has been declared void or whose failure to act has been declared contrary to the Treaties shall be required to take the necessary measures to comply with the judgment of the Court of Justice of the European Union.

This obligation shall not affect any obligation which may result from the application of the second paragraph of Article 340.

Article 267
(ex Article 234 TEC)

The Court of Justice of the European Union shall have jurisdiction to give preliminary rulings concerning:

(a) the interpretation of the Treaties;

b) the validity and interpretation of acts of the institutions, bodies, offices or agencies of the Union;

Where such a question is raised before any court or tribunal of a Member State, that court or tribunal may, if it considers that a decision on the question is necessary to enable it to give judgment, request the Court to give a ruling thereon.

Where any such question is raised in a case pending before a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law, that court or tribunal shall bring the matter before the Court.

If such a question is raised in a case pending before a court or tribunal of a Member State with regard to a person in custody, the Court of Justice of the European Union shall act with the minimum of delay.

Article 268
(ex Article 235 TEC)

The Court of Justice of the European Union shall have jurisdiction in disputes relating to compensation for damage provided for in the second and third paragraphs of Article 340.

Article 269

The Court of Justice shall have jurisdiction to decide on the legality of an act adopted by the European Council or by the Council pursuant to Article 7 of the Treaty on European Union solely at the request of the Member State concerned by a determination of the European Council or of the Council and in respect solely of the procedural stipulations contained in that Article.

Such a request must be made within one month from the date of such determination. The Court shall rule within one month from the date of the request.

Article 270
(ex Article 236 TEC)

The Court of Justice of the European Union shall have jurisdiction in any dispute between the Union and its servants within the limits and under the conditions laid down in the Staff Regulations of Officials and the Conditions of Employment of other servants of the Union.

Article 271
(ex Article 237 TEC)

The Court of Justice of the European Union shall, within the limits hereinafter laid down, have jurisdiction in disputes concerning:

(a) the fulfilment by Member States of obligations under the Statute of the European Investment Bank. In this connection, the Board of Directors of the Bank shall enjoy the powers conferred upon the Commission by Article 258;

(b) measures adopted by the Board of Governors of the European Investment Bank. In this connection, any Member State, the Commission or the Board of Directors of the Bank may institute proceedings under the conditions laid down in Article 263;

(c) measures adopted by the Board of Directors of the European Investment Bank. Proceedings against such measures may be instituted only by Member States or by the Commission, under the conditions laid down in Article 263, and solely on the grounds of non-compliance with the procedure provided for in Article 19(2), (5), (6) and (7) of the Statute of the Bank;

(d) the fulfilment by national central banks of obligations under the Treaties and the Statute of the ESCB and of the ECB. In this connection the powers of the Governing Council of the European Central Bank in respect of national central banks shall be the same as those conferred upon the Commission in respect of Member States by Article 258. If the Court finds that a national central bank has failed to fulfil an obligation under the Treaties, that bank shall be required to take the necessary measures to comply with the judgment of the Court.

Article 272
(ex Article 238 TEC)

The Court of Justice of the European Union shall have jurisdiction to give judgment pursuant to any arbitration clause contained in a contract concluded by or on behalf of the Union, whether that contract be governed by public or private law.

Article 273
(ex Article 239 TEC)

The Court of Justice shall have jurisdiction in any dispute between Member States which relates to the subject matter of the Treaties if the dispute is submitted to it under a special agreement between the parties.

Article 274
(ex Article 240 TEC)

Save where jurisdiction is conferred on the Court of Justice of the European Union by the Treaties, disputes to which the Union is a party shall not on that ground be excluded from the jurisdiction of the courts or tribunals of the Member States.

Article 275

The Court of Justice of the European Union shall not have jurisdiction with respect to the provisions relating to the common foreign and security policy nor with respect to acts adopted on the basis of those provisions.

However, the Court shall have jurisdiction to monitor compliance with Article 40 of the Treaty on European Union and to rule on proceedings, brought in accordance with the conditions laid down in the fourth paragraph of Article 263 of this Treaty, reviewing the legality of decisions providing for restrictive measures against natural or legal persons adopted by the Council on the basis of Chapter 2 of Title V of the Treaty on European Union.

Article 276

In exercising its powers regarding the provisions of Chapters 4 and 5 of Title V of Part Three relating to the area of freedom, security and justice, the Court of Justice of the European Union shall have no jurisdiction to review the validity or proportionality of operations carried out by the police or other law-enforcement services of a Member State or the exercise of the responsibilities incumbent upon Member States with regard to the maintenance of law and order and the safeguarding of internal security.

Article 277
(ex Article 241 TEC)

Notwithstanding the expiry of the period laid down in Article 263, sixth paragraph, any party may, in proceedings in which an act of general application adopted by an institution, body, office or agency of the Union is at issue, plead the grounds specified in Article 263, second paragraph, in order to invoke before the Court of Justice of the European Union the inapplicability of that act.

Article 278
(ex Article 242 TEC)

Actions brought before the Court of Justice of the European Union shall not have suspensory effect. The Court may, however, if it considers that circumstances so require, order that application of the contested act be suspended.

Article 279
(ex Article 243 TEC)

The Court of Justice of the European Union may in any cases before it prescribe any necessary interim measures.

Article 280
(ex Article 244 TEC)

The judgments of the Court of Justice of the European Union shall be enforceable under the conditions laid down in Article 299.

Article 281
(ex Article 245 TEC)

The Statute of the Court of Justice of the European Union shall be laid down in a separate Protocol.

The European Parliament and the Council, acting in accordance with the ordinary legislative procedure, may amend the provisions of the Statute, with the exception of Title I and Article 64. The European Parliament and the Council shall act either at the request of the Court of Justice and after consultation of the Commission, or on a proposal from the Commission and after consultation of the Court of Justice.

Article 299
(ex Article 256 TEC)

Acts of the Council, the Commission or the European Central Bank which impose a pecuniary obligation on persons other than States, shall be enforceable.

Enforcement shall be governed by the rules of civil procedure in force in the State in the territory of which it is carried out. The order for its enforcement shall be appended to the decision, without other formality than verification of the authenticity of the decision, by the national authority which the government of each Member State shall designate for this purpose and shall make known to the Commission and to the Court of Justice of the European Union.

When these formalities have been completed on application by the party concerned, the latter may proceed to enforcement in accordance with the national law, by bringing the matter directly before the competent authority. Enforcement may be suspended only by a decision of the Court. However, the courts of the country concerned shall have jurisdiction over complaints that enforcement is being carried out in an irregular manner.

Article 340
(ex Article 288 TEC)

The contractual liability of the Union shall be governed by the law applicable to the contract in question.

In the case of non-contractual liability, the Union shall, in accordance with the general principles common to the laws of the Member States, make good any damage caused by its institutions or by its servants in the performance of their duties.

Notwithstanding the second paragraph, the European Central Bank shall, in accordance with the general principles common to the laws of the Member States, make good any damage caused by it or by its servants in the performance of their duties.

The personal liability of its servants towards the Union shall be governed by the provisions laid down in their Staff Regulations or in the Conditions of Employment applicable to them.

C. – TREATY ESTABLISHING THE EUROPEAN ATOMIC ENERGY COMMUNITY

Article 12

Member States, persons or undertakings shall have the right, on application to the Commission, to obtain non-exclusive licences under patents, provisionally protected patent rights, utility models or patent applications owned by the Community, where they are able to make effective use of the inventions covered thereby.

Under the same conditions, the Commission shall grant sublicences under patents, provisionally protected patent rights, utility models or patent applications, where the Community holds contractual licences conferring power to do so.

The Commission shall grant such licences or sublicences on terms to be agreed with the licensees and shall furnish all the information required for their use. These terms shall relate in particular to suitable remuneration and, where appropriate, to the right of the licensee to grant sublicences to third parties and to the obligation to treat the information as a trade secret.

Failing agreement on the terms referred to in the third paragraph, the licensees may bring the matter before the Court of Justice of the European Union so that appropriate terms may be fixed.

Article 18

An Arbitration Committee is hereby established for the purposes provided for in this Section. The Council shall appoint the members and lay down the Rules of Procedure of this Committee, acting on a proposal from the Court of Justice of the European Union.

An appeal, having suspensory effect, may be brought by the parties before the Court of Justice of the European Union against a decision of the Arbitration Committee within one month of notification thereof. The Court of Justice of the European Union shall confine its examination to the formal validity of the decision and to the interpretation of the provisions of this Treaty by the Arbitration Committee.

The final decisions of the Arbitration Committee shall have the force of res judicata between the parties concerned. They shall be enforceable as provided in Article 164.

Article 21

If the proprietor does not propose that the matter be referred to the Arbitration Committee, the Commission may call upon the Member State concerned or its appropriate authorities to grant the licence or cause it to be granted.

If, having heard the proprietor's case, the Member State, or its appropriate authorities, considers that the conditions of Article 17 have not been complied with, it shall notify the Commission of its refusal to grant the licence or to cause it to be granted.

If it refuses to grant the licence or to cause it to be granted, or if, within four months of the date of the request, no information is forthcoming with regard to the granting of the licence, the Commission shall have two months in which to bring the matter before the Court of Justice of the European Union.

The proprietor must be heard in the proceedings before the Court of Justice of the European Union.

If the judgment of the Court of Justice of the European Union establishes that the conditions of Article 17 have been complied with, the Member State concerned, or its appropriate authorities, shall take such measures as enforcement of that judgment may require.

Article 81

The Commission may send inspectors into the territories of Member States. Before sending an inspector on his first assignment in the territory of a Member State, the Commission shall consult the State concerned; such consultation shall suffice to cover all future assignments of this inspector.

On presentation of a document establishing their authority, inspectors shall at all times have access to all places and data and to all persons who, by reason of their occupation, deal with materials, equipment or installations subject to the safeguards provided for in this Chapter, to the extent necessary in order to apply such safeguards to ores, source materials and special fissile materials and to ensure compliance with the provisions of Article 77. Should the State concerned so request, inspectors appointed by the Commission shall be accompanied by representatives of the authorities of that State; however, the inspectors shall not thereby be delayed or otherwise impeded in the performance of their duties.

If the carrying out of an inspection is opposed, the Commission shall apply to the President of the Court of Justice of the European Union for an order to ensure that the inspection be carried out compulsorily. The President of the Court of Justice of the European Union shall give a decision within three days.

If there is danger in delay, the Commission may itself issue a written order, in the form of a decision, to proceed with the inspection. This order shall be submitted without delay to the President of the Court of Justice of the European Union for subsequent approval.

After the order or decision has been issued, the authorities of the State concerned shall ensure that the inspectors have access to the places specified in the order or decision.

Article 82

Inspectors shall be recruited by the Commission.

They shall be responsible for obtaining and verifying the records referred to in Article 79. They shall report any infringement to the Commission.

The Commission may issue a directive calling upon the Member State concerned to take, by a time limit set by the Commission, all measures necessary to bring such infringement to an end; it shall inform the Council thereof.

If the Member State does not comply with the Commission directive by the time limit set, the Commission or any Member State concerned may, in derogation from Articles 226 and 227 of the Treaty on the Functioning of the European Union, refer the matter to the Court of Justice of the European Union direct.

Article 83

1. In the event of an infringement on the part of persons or undertakings of the obligations imposed on them by this Chapter, the Commission may impose sanctions on such persons or undertakings.

These sanctions shall be in order of severity:

(a) a warning;

(b) the withdrawal of special benefits such as financial or technical assistance;

(c) the placing of the undertaking for a period not exceeding four months under the administration of a person or board appointed by common accord of the Commission and the State having jurisdiction over the undertaking;

(d) total or partial withdrawal of source materials or special fissile materials.

2. Decisions taken by the Commission in implementation of paragraph 1 and requiring the surrender of materials shall be enforceable. They may be enforced in the territories of Member States in accordance with Article 164.

By way of derogation from Article 157, appeals brought before the Court of Justice of the European Union against decisions of the Commission which impose any of the sanctions provided for in paragraph 1 shall have suspensory effect. The Court of Justice of the European Union may, however, on application by the Commission or by any Member State concerned, order that the decision be enforced forthwith.

There shall be an appropriate legal procedure to ensure the protection of interests that have been prejudiced.

3. The Commission may make any recommendations to Member States concerning laws or regulations which are designed to ensure compliance in their territories with the obligations arising under this Chapter.

4. Member States shall ensure that sanctions are enforced and, where necessary, that the infringements are remedied by those committing them.

Article 103

Member States shall communicate to the Commission draft agreements or contracts with a third State, an international organisation or a national of a third State to the extent that such agreements or contracts concern matters within the purview of this Treaty.

If a draft agreement or contract contains clauses which impede the application of this Treaty, the Commission shall, within one month of receipt of such communication, make its comments known to the State concerned.

The State shall not conclude the proposed agreement or contract until it has satisfied the objections of the Commission or complied with a ruling by the Court of Justice of the European

Union, adjudicating urgently upon an application from the State, on the compatibility of the proposed clauses with the provisions of this Treaty. An application may be made to the Court of Justice of the European Union at any time after the State has received the comments of the Commission.

Article 104

No person or undertaking concluding or renewing an agreement or contract with a third State, an international organisation the date of their accession, may invoke that agreement or contract in order to evade the obligations imposed by this Treaty.

Each Member State shall take such measures as it considers necessary in order to communicate to the Commission, at the request of the latter, all information relating to agreements or contracts concluded after the dates referred to in the first paragraph, within the scope of this Treaty, by a person or undertaking with a third State, an international organisation or a national of a third State. The Commission may require such communication only for the purpose of verifying that such agreements or contracts do not contain clauses impeding the implementation of this Treaty.

On application by the Commission, the Court of Justice of the European Union shall give a ruling on the compatibility of such agreements or contracts with the provisions of this Treaty.

Article 105

The provisions of this Treaty shall not be invoked so as to prevent the implementation of agreements or contracts concluded before 1 January 1958 or, for acceding States, before the date of their accession, by a Member State, a person or an undertaking with a third State, an international organisation or a national of a third State where such agreements or contracts have been communicated to the Commission not later than 30 days after the aforesaid dates.

Agreements or contracts concluded between 25 March 1957 and 1 January 1958 or, for acceding States, between the signature of the instrument of accession and the date of their accession, by a person or an undertaking with a third State, an international organisation or a national of a third State shall not, however, be invoked as grounds for failure to implement this Treaty if, in the opinion of the Court of Justice of the European Union, ruling on an application from the Commission, one of the decisive reasons on the part of either of the parties in concluding the agreement or contract was an intention to evade the provisions of this Treaty.

Article 106a

1. Article 7, Articles 9 to 9F, Article 48(2) to (5), and Articles 49 and 49A of the Treaty on European Union, Article 16A, Articles 190 to 201b, Articles 204 to 211a, Article 213, Articles 215 to 236, Articles 238, 239 and 240, Articles 241 to 245, Articles 246 to 262, Articles 268 to 277, Articles 279 to 280 and Articles 283, 290 and 292 of the Treaty on the Functioning of the European Union, and the Protocol on Transitional Provisions, shall apply to this Treaty.

2. Within the framework of this Treaty, the references to the Union, to the ‘Treaty on European Union’, to the ‘Treaty on the Functioning of the European Union’ or to the ‘Treaties’ in the provisions referred to in paragraph 1 and those in the protocols annexed both to those Treaties and to this Treaty shall be taken, respectively, as references to the European Atomic Energy Community and to this Treaty.

3. The provisions of the Treaty on European Union and of the Treaty on the Functioning of the European Union shall not derogate from the provisions of this Treaty.

Article 144

The Court of Justice of the European Union shall have unlimited jurisdiction in:

(a) proceedings instituted under Article 12 to have the appropriate terms fixed for the granting by the Commission of licences or sub licences;

(b) proceedings instituted by persons or undertakings against sanctions imposed on them by the Commission under Article 83.

Article 145

If the Commission considers that a person or undertaking has committed an infringement of this Treaty to which the provisions of Article 83 do not apply, it shall call upon the Member State having jurisdiction over that person or undertaking to cause sanctions to be imposed in respect of the infringement in accordance with its national law.

If the State concerned does not comply with such a request within the period laid down by the Commission, the latter may bring an action before the Court of Justice of the European Union to have the infringement of which the person or undertaking is accused established.

Article 157

Save as otherwise provided in this Treaty, actions brought before the Court of Justice of the European Union shall not have suspensory effect. The Court of Justice of the European Union may, however, if it considers that circumstances so require, order that application of the contested act be suspended.

Article 188

The contractual liability of the Community shall be governed by the law applicable to the contract in question.

In the case of non-contractual liability, the Community shall, in accordance with the general principles common to the laws of the Member States, make good any damage caused by its institutions or by its servants in the performance of their duties.

The personal liability of its servants towards the Community shall be governed by the provisions laid down in the Staff Regulations or in the Conditions of Employment applicable to them.

STATUTE OF THE COURT OF JUSTICE OF THE EUROPEAN UNION

THE HIGH CONTRACTING PARTIES,

DESIRING to lay down the Statute of the Court of Justice of the European Union provided for in Article 281 of the Treaty on the Functioning of the European Union,

HAVE AGREED UPON the following provisions, which shall be annexed to the Treaty on European Union, the Treaty on the Functioning of the European Union and the Treaty establishing the European Atomic Energy Community:

Article 1

The Court of Justice of the European Union shall be constituted and shall function in accordance with the provisions of the Treaties, of the Treaty establishing the European Atomic Energy Community (EAEC Treaty) and of this Statute.

TITLE I

JUDGES AND ADVOCATES-GENERAL

Article 2

Before taking up his duties each Judge shall, before the Court of Justice sitting in open court, take an oath to perform his duties impartially and conscientiously and to preserve the secrecy of the deliberations of the Court.

Article 3

The Judges shall be immune from legal proceedings. After they have ceased to hold office, they shall continue to enjoy immunity in respect of acts performed by them in their official capacity, including words spoken or written.

The Court of Justice, sitting as a full Court, may waive the immunity. If the decision concerns a member of the General Court or of a specialised court, the Court shall decide after consulting the court concerned.

Where immunity has been waived and criminal proceedings are instituted against a Judge, he shall be tried, in any of the Member States, only by the court competent to judge the members of the highest national judiciary.

Articles 11 to 14 and Article 17 of the Protocol on the privileges and immunities of the European Union shall apply to the Judges, Advocates-General, Registrar and Assistant Rapporteurs of the Court of Justice of the European Union, without prejudice to the provisions relating to immunity from legal proceedings of Judges which are set out in the preceding paragraphs.

Article 4

The Judges may not hold any political or administrative office.

They may not engage in any occupation, whether gainful or not, unless exemption is exceptionally granted by the Council, acting by a simple majority.

When taking up their duties, they shall give a solemn undertaking that, both during and after their term of office, they will respect the obligations arising therefrom, in particular the duty to behave with integrity and discretion as regards the acceptance, after they have ceased to hold office, of certain appointments or benefits.

Any doubt on this point shall be settled by decision of the Court of Justice. If the decision concerns a member of the General Court or of a specialised court, the Court shall decide after consulting the court concerned.

Article 5

Apart from normal replacement, or death, the duties of a Judge shall end when he resigns.

Where a Judge resigns, his letter of resignation shall be addressed to the President of the Court of Justice for transmission to the President of the Council. Upon this notification a vacancy shall arise on the bench.

Save where Article 6 applies, a Judge shall continue to hold office until his successor takes up his duties.

Article 6

A Judge may be deprived of his office or of his right to a pension or other benefits in its stead only if, in the unanimous opinion of the Judges and Advocates-General of the Court of Justice, he no longer fulfils the requisite conditions or meets the obligations arising from his office. The Judge concerned shall not take part in any such deliberations. If the person concerned is a member of the General Court or of a specialised court, the Court shall decide after consulting the court concerned.

The Registrar of the Court shall communicate the decision of the Court to the President of the European Parliament and to the President of the Commission and shall notify it to the President of the Council.

In the case of a decision depriving a Judge of his office, a vacancy shall arise on the bench upon this latter notification.

Article 7

A Judge who is to replace a member of the Court whose term of office has not expired shall be appointed for the remainder of his predecessor's term.

Article 8

The provisions of Articles 2 to 7 shall apply to the Advocates-General.

TITLE II

ORGANISATION OF THE COURT OF JUSTICE

Article 9

When, every three years, the Judges are partially replaced, 14 and 13 Judges shall be replaced alternately.

When, every three years, the Advocates-General are partially replaced, four Advocates-General shall be replaced on each occasion.

Article 10

The Registrar shall take an oath before the Court of Justice to perform his duties impartially and conscientiously and to preserve the secrecy of the deliberations of the Court of Justice.

Article 11

The Court of Justice shall arrange for replacement of the Registrar on occasions when he is prevented from attending the Court of Justice.

Article 12

Officials and other servants shall be attached to the Court of Justice to enable it to function. They shall be responsible to the Registrar under the authority of the President.

Article 13

At the request of the Court of Justice, the European Parliament and the Council may, acting in accordance with the ordinary legislative procedure, provide for the appointment of Assistant Rapporteurs and lay down the rules governing their service. The Assistant Rapporteurs may be required, under conditions laid down in the Rules of Procedure, to participate in preparatory inquiries in cases pending before the Court and to cooperate with the Judge who acts as Rapporteur.

The Assistant Rapporteurs shall be chosen from persons whose independence is beyond doubt and who possess the necessary legal qualifications; they shall be appointed by the Council, acting by a simple majority. They shall take an oath before the Court to perform their duties impartially and conscientiously and to preserve the secrecy of the deliberations of the Court.

Article 14

The Judges, the Advocates-General and the Registrar shall be required to reside at the place where the Court of Justice has its seat.

Article 15

The Court of Justice shall remain permanently in session. The duration of the judicial vacations shall be determined by the Court with due regard to the needs of its business.

Article 16

The Court of Justice shall form chambers consisting of three and five Judges. The Judges shall elect the Presidents of the chambers from among their number. The Presidents of the chambers of five Judges shall be elected for three years. They may be re-elected once.

The Grand Chamber shall consist of 13 Judges. It shall be presided over by the President of the Court. The Presidents of the chambers of five Judges and other Judges appointed in accordance with the conditions laid down in the Rules of Procedure shall also form part of the Grand Chamber.

The Court shall sit in a Grand Chamber when a Member State or an institution of the Union that is party to the proceedings so requests.

The Court shall sit as a full Court where cases are brought before it pursuant to Article 228(2), Article 245(2), Article 247 or Article 286(6) of the Treaty on the Functioning of the European Union.

Moreover, where it considers that a case before it is of exceptional importance, the Court may decide, after hearing the Advocate-General, to refer the case to the full Court.

Article 17

Decisions of the Court of Justice shall be valid only when an uneven number of its members is sitting in the deliberations.

Decisions of the chambers consisting of either three or five Judges shall be valid only if they are taken by three Judges.

Decisions of the Grand Chamber shall be valid only if nine Judges are sitting.

Decisions of the full Court shall be valid only if 15 Judges are sitting.

In the event of one of the Judges of a chamber being prevented from attending, a Judge of another chamber may be called upon to sit in accordance with conditions laid down in the Rules of Procedure.

Article 18

No Judge or Advocate-General may take part in the disposal of any case in which he has previously taken part as agent or adviser or has acted for one of the parties, or in which he has been called upon to pronounce as a member of a court or tribunal, of a commission of inquiry or in any other capacity.

If, for some special reason, any Judge or Advocate-General considers that he should not take part in the judgment or examination of a particular case, he shall so inform the President. If, for some special reason, the President considers that any Judge or Advocate-General should not sit or make submissions in a particular case, he shall notify him accordingly.

Any difficulty arising as to the application of this Article shall be settled by decision of the Court of Justice.

A party may not apply for a change in the composition of the Court or of one of its chambers on the grounds of either the nationality of a Judge or the absence from the Court or from the chamber of a Judge of the nationality of that party.

TITLE III

PROCEDURE BEFORE THE COURT OF JUSTICE

Article 19

The Member States and the institutions of the Union shall be represented before the Court of Justice by an agent appointed for each case; the agent may be assisted by an adviser or by a lawyer.

The States, other than the Member States, which are parties to the Agreement on the European Economic Area and also the EFTA Surveillance Authority referred to in that Agreement shall be represented in same manner.

Other parties must be represented by a lawyer.

Only a lawyer authorised to practise before a court of a Member State or of another State which is a party to the Agreement on the European Economic Area may represent or assist a party before the Court.

Such agents, advisers and lawyers shall, when they appear before the Court, enjoy the rights and immunities necessary to the independent exercise of their duties, under conditions laid down in the Rules of Procedure.

As regards such advisers and lawyers who appear before it, the Court shall have the powers normally accorded to courts of law, under conditions laid down in the Rules of Procedure.

University teachers being nationals of a Member State whose law accords them a right of audience shall have the same rights before the Court as are accorded by this Article to lawyers.

Article 20

The procedure before the Court of Justice shall consist of two parts: written and oral.

The written procedure shall consist of the communication to the parties and to the institutions of the Union whose decisions are in dispute, of applications, statements of case, defences and observations, and of replies, if any, as well as of all papers and documents in support or of certified copies of them.

Communications shall be made by the Registrar in the order and within the time laid down in the Rules of Procedure.

The oral procedure shall consist of the reading of the report presented by a Judge acting as Rapporteur, the hearing by the Court of agents, advisers and lawyers and of the submissions of the Advocate-General, as well as the hearing, if any, of witnesses and experts.

Where it considers that the case raises no new point of law, the Court may decide, after hearing the Advocate-General, that the case shall be determined without a submission from the Advocate-General.

Article 21

A case shall be brought before the Court of Justice by a written application addressed to the Registrar. The application shall contain the applicant's name and permanent address and the description of the signatory, the name of the party or names of the parties against whom the application is made, the subject-matter of the dispute, the form of order sought and a brief statement of the pleas in law on which the application is based.

The application shall be accompanied, where appropriate, by the measure the annulment of which is sought or, in the circumstances referred to in Article 265 of the Treaty on the Functioning of the European Union, by documentary evidence of the date on which an institution was, in accordance with those Articles, requested to act. If the documents are not submitted with the application, the Registrar shall ask the party concerned to produce them within a reasonable period, but in that event the rights of the party shall not lapse even if such documents are produced after the time limit for bringing proceedings.

Article 22

A case governed by Article 18 of the EAEC Treaty shall be brought before the Court of Justice by an appeal addressed to the Registrar. The appeal shall contain the name and permanent address of the applicant and the description of the signatory, a reference to the decision against which the appeal is brought, the names of the respondents, the subject-matter of the dispute, the submissions and a brief statement of the grounds on which the appeal is based.

The appeal shall be accompanied by a certified copy of the decision of the Arbitration Committee which is contested.

If the Court rejects the appeal, the decision of the Arbitration Committee shall become final.

If the Court annuls the decision of the Arbitration Committee, the matter may be re-opened, where appropriate, on the initiative of one of the parties in the case, before the Arbitration Committee. The latter shall conform to any decisions on points of law given by the Court.

Article 23

In the cases governed by Article 267 of the Treaty on the Functioning of the European Union, the decision of the court or tribunal of a Member State which suspends its proceedings and refers a case to the Court of Justice shall be notified to the Court by the court or tribunal concerned. The decision shall then be notified by the Registrar of the Court to the parties, to the Member States and to the Commission, and to the institution, body, office or agency of the Union which adopted the act the validity or interpretation of which is in dispute.

Within two months of this notification, the parties, the Member States, the Commission and, where appropriate, the institution, body, office or agency which adopted the act the validity or interpretation of which is in dispute, shall be entitled to submit statements of case or written observations to the Court.

In the cases governed by Article 267 of the Treaty on the Functioning of the European Union, the decision of the national court or tribunal shall, moreover, be notified by the Registrar of the Court to the States, other than the Member States, which are parties to the Agreement on the European Economic Area and also to the EFTA Surveillance Authority referred to in that Agreement which may, within two months of notification, where one of the fields of application of that agreement is concerned, submit statements of case or written observations to the Court.

Where an agreement relating to a specific subject matter, concluded by the Council and one or more non-member States, provides that those States are to be entitled to submit statements of case or written observations where a court or tribunal of a Member State refers to the Court of Justice for a preliminary ruling a question falling within the scope of the agreement, the decision of the national court or tribunal containing that question shall also be notified to the non-member States concerned. Within two months from such notification, those States may lodge at the Court statements of case or written observations.

Article 23a (*)

The Rules of Procedure may provide for an expedited or accelerated procedure and, for references for a preliminary ruling relating to the area of freedom, security and justice, an urgent procedure.

Those procedures may provide, in respect of the submission of statements of case or written observations, for a shorter period than that provided for by Article 23, and, in derogation from the fourth paragraph of Article 20, for the case to be determined without a submission from the Advocate General.

In addition, the urgent procedure may provide for restriction of the parties and other interested persons mentioned in Article 23, authorised to submit statements of case or written observations and, in cases of extreme urgency, for the written stage of the procedure to be omitted.

Article 24

The Court of Justice may require the parties to produce all documents and to supply all information which the Court considers desirable. Formal note shall be taken of any refusal.

The Court may also require the Member States and institutions, bodies, offices and agencies not being parties to the case to supply all information which the Court considers necessary for the proceedings.

Article 25

The Court of Justice may at any time entrust any individual, body, authority, committee or other organisation it chooses with the task of giving an expert opinion.

Article 26

Witnesses may be heard under conditions laid down in the Rules of Procedure.

(*) Article inserted by Decision 2008/79/EC, Euratom (OJ L 24, 29.1.2008, p. 42).

Article 27

With respect to defaulting witnesses the Court of Justice shall have the powers generally granted to courts and tribunals and may impose pecuniary penalties under conditions laid down in the Rules of Procedure.

Article 28

Witnesses and experts may be heard on oath taken in the form laid down in the Rules of Procedure or in the manner laid down by the law of the country of the witness or expert.

Article 29

The Court of Justice may order that a witness or expert be heard by the judicial authority of his place of permanent residence.

The order shall be sent for implementation to the competent judicial authority under conditions laid down in the Rules of Procedure. The documents drawn up in compliance with the letters rogatory shall be returned to the Court under the same conditions.

The Court shall defray the expenses, without prejudice to the right to charge them, where appropriate, to the parties.

Article 30

A Member State shall treat any violation of an oath by a witness or expert in the same manner as if the offence had been committed before one of its courts with jurisdiction in civil proceedings. At the instance of the Court of Justice, the Member State concerned shall prosecute the offender before its competent court.

Article 31

The hearing in court shall be public, unless the Court of Justice, of its own motion or on application by the parties, decides otherwise for serious reasons.

Article 32

During the hearings the Court of Justice may examine the experts, the witnesses and the parties themselves. The latter, however, may address the Court of Justice only through their representatives.

Article 33

Minutes shall be made of each hearing and signed by the President and the Registrar.

Article 34

The case list shall be established by the President.

Article 35

The deliberations of the Court of Justice shall be and shall remain secret.

Article 36

Judgments shall state the reasons on which they are based. They shall contain the names of the Judges who took part in the deliberations.

Article 37

Judgments shall be signed by the President and the Registrar. They shall be read in open court.

Article 38

The Court of Justice shall adjudicate upon costs.

Article 39

The President of the Court of Justice may, by way of summary procedure, which may, in so far as necessary, differ from some of the rules contained in this Statute and which shall be laid down in the Rules of Procedure, adjudicate upon applications to suspend execution, as provided for in Article 278 of the Treaty on the Functioning of the European Union and Article 157 of the EAEC Treaty, or to prescribe interim measures pursuant to Article 279 of the Treaty on the Functioning of the European Union, or to suspend enforcement in accordance with the fourth paragraph of Article 299 of the Treaty on the Functioning of the European Union or the third paragraph of Article 164 of the EAEC Treaty.

Should the President be prevented from attending, his place shall be taken by another Judge under conditions laid down in the Rules of Procedure.

The ruling of the President or of the Judge replacing him shall be provisional and shall in no way prejudice the decision of the Court on the substance of the case.

Article 40

Member States and institutions of the Union may intervene in cases before the Court of Justice.

The same right shall be open to the bodies, offices and agencies of the Union and to any other person which can establish an interest in the result of a case submitted to the Court. Natural or legal persons shall not intervene in cases between Member States, between institutions of the Union or between Member States and institutions of the Union.

Without prejudice to the second paragraph, the States, other than the Member States, which are parties to the Agreement on the European Economic Area, and also the EFTA Surveillance Authority referred to in that Agreement, may intervene in cases before the Court where one of the fields of application of that Agreement is concerned.

An application to intervene shall be limited to supporting the form of order sought by one of the parties.

Article 41

Where the defending party, after having been duly summoned, fails to file written submissions in defence, judgment shall be given against that party by default. An objection may be lodged against the judgment within one month of it being notified. The objection shall not have the effect of staying enforcement of the judgment by default unless the Court of Justice decides otherwise.

Article 42

Member States, institutions, bodies, offices and agencies of the Union and any other natural or legal persons may, in cases and under conditions to be determined by the Rules of Procedure, institute third-party proceedings to contest a judgment rendered without their being heard, where the judgment is prejudicial to their rights.

Article 43

If the meaning or scope of a judgment is in doubt, the Court of Justice shall construe it on application by any party or any institution of the Union establishing an interest therein.

Article 44

An application for revision of a judgment may be made to the Court of Justice only on discovery of a fact which is of such a nature as to be a decisive factor, and which, when the judgment was given, was unknown to the Court and to the party claiming the revision.

The revision shall be opened by a judgment of the Court expressly recording the existence of a new fact, recognising that it is of such a character as to lay the case open to revision and declaring the application admissible on this ground.

No application for revision may be made after the lapse of 10 years from the date of the judgment.

Article 45

Periods of grace based on considerations of distance shall be determined by the Rules of Procedure.

No right shall be prejudiced in consequence of the expiry of a time limit if the party concerned proves the existence of unforeseeable circumstances or of *force majeure*.

Article 46

Proceedings against the Union in matters arising from non-contractual liability shall be barred after a period of five years from the occurrence of the event giving rise thereto. The period of limitation shall be interrupted if proceedings are instituted before the Court of Justice or if prior to such proceedings an application is made by the aggrieved party to the relevant institution of the Union. In the latter event the proceedings must be instituted within the period of two months provided for in Article 263 of the Treaty on the Functioning of the European Union; the provisions of the second paragraph of Article 265 of the Treaty on the Functioning of the European Union shall apply where appropriate.

This Article shall also apply to proceedings against the European Central Bank regarding non-contractual liability.

TITLE IV

GENERAL COURT

Article 47

The first paragraph of Article 9, Articles 14 and 15, the first, second, fourth and fifth paragraphs of Article 17 and Article 18 shall apply to the General Court and its members.

The fourth paragraph of Article 3 and Articles 10, 11 and 14 shall apply to the Registrar of the General Court *mutatis mutandis*.

Article 48

The General Court shall consist of 27 Judges.

Article 49

The Members of the General Court may be called upon to perform the task of an Advocate-General.

It shall be the duty of the Advocate-General, acting with complete impartiality and independence, to make, in open court, reasoned submissions on certain cases brought before the General Court in order to assist the General Court in the performance of its task.

The criteria for selecting such cases, as well as the procedures for designating the Advocates-General, shall be laid down in the Rules of Procedure of the General Court.

A Member called upon to perform the task of Advocate-General in a case may not take part in the judgment of the case.

Article 50

The General Court shall sit in chambers of three or five Judges. The Judges shall elect the Presidents of the chambers from among their number. The Presidents of the chambers of five Judges shall be elected for three years. They may be re-elected once.

The composition of the chambers and the assignment of cases to them shall be governed by the Rules of Procedure. In certain cases governed by the Rules of Procedure, the General Court may sit as a full court or be constituted by a single Judge.

The Rules of Procedure may also provide that the General Court may sit in a Grand Chamber in cases and under the conditions specified therein.

Article 51

By way of derogation from the rule laid down in Article 256(1) of the Treaty on the Functioning of the European Union, jurisdiction shall be reserved to the Court of Justice in the actions referred

to in Articles 263 and 265 of the Treaty on the Functioning of the European Union when they are brought by a Member State against:

(a) an act of or failure to act by the European Parliament or the Council, or by those institutions acting jointly, except for:

– decisions taken by the Council under the third subparagraph of Article 108(2) of the Treaty on the Functioning of the European Union;

– acts of the Council adopted pursuant to a Council regulation concerning measures to protect trade within the meaning of Article 207 of the Treaty on the Functioning of the European Union;

– acts of the Council by which the Council exercises implementing powers in accordance with the second paragraph of Article 291 of the Treaty on the Functioning of the European Union;

(b) against an act of or failure to act by the Commission under the first paragraph of Article 331 of the Treaty on the Functioning of the European Union.

Jurisdiction shall also be reserved to the Court of Justice in the actions referred to in the same Articles when they are brought by an institution of the Union against an act of or failure to act by the European Parliament, the Council, both those institutions acting jointly, or the Commission, or brought by an institution of the Union against an act of or failure to act by the European Central Bank.

Article 52

The President of the Court of Justice and the President of the General Court shall determine, by common accord, the conditions under which officials and other servants attached to the Court of Justice shall render their services to the General Court to enable it to function. Certain officials or other servants shall be responsible to the Registrar of the General Court under the authority of the President of the General Court.

Article 53

The procedure before the General Court shall be governed by Title III.

Such further and more detailed provisions as may be necessary shall be laid down in its Rules of Procedure. The Rules of Procedure may derogate from the fourth paragraph of Article 40 and from Article 41 in order to take account of the specific features of litigation in the field of intellectual property.

Notwithstanding the fourth paragraph of Article 20, the Advocate-General may make his reasoned submissions in writing.

Article 54

Where an application or other procedural document addressed to the General Court is lodged by mistake with the Registrar of the Court of Justice, it shall be transmitted immediately by that Registrar to the Registrar of the General Court; likewise, where an application or other

procedural document addressed to the Court of Justice is lodged by mistake with the Registrar of the General Court, it shall be transmitted immediately by that Registrar to the Registrar of the Court of Justice.

Where the General Court finds that it does not have jurisdiction to hear and determine an action in respect of which the Court of Justice has jurisdiction, it shall refer that action to the Court of Justice; likewise, where the Court of Justice finds that an action falls within the jurisdiction of the General Court, it shall refer that action to the General Court, whereupon that Court may not decline jurisdiction.

Where the Court of Justice and the General Court are seised of cases in which the same relief is sought, the same issue of interpretation is raised or the validity of the same act is called in question, the General Court may, after hearing the parties, stay the proceedings before it until such time as the Court of Justice has delivered judgment or, where the action is one brought pursuant to Article 263 of the Treaty on the Functioning of the European Union, may decline jurisdiction so as to allow the Court of Justice to rule on such actions. In the same circumstances, the Court of Justice may also decide to stay the proceedings before it; in that event, the proceedings before the General Court shall continue.

Where a Member State and an institution of the Union are challenging the same act, the General Court shall decline jurisdiction so that the Court of Justice may rule on those applications.

Article 55

Final decisions of the General Court, decisions disposing of the substantive issues in part only or disposing of a procedural issue concerning a plea of lack of competence or inadmissibility, shall be notified by the Registrar of the General Court to all parties as well as all Member States and the institutions of the Union even if they did not intervene in the case before the General Court.

Article 56

An appeal may be brought before the Court of Justice, within two months of the notification of the decision appealed against, against final decisions of the General Court and decisions of that Court disposing of the substantive issues in part only or disposing of a procedural issue concerning a plea of lack of competence or inadmissibility.

Such an appeal may be brought by any party which has been unsuccessful, in whole or in part, in its submissions. However, interveners other than the Member States and the institutions of the Union may bring such an appeal only where the decision of the General Court directly affects them.

With the exception of cases relating to disputes between the Union and its servants, an appeal may also be brought by Member States and institutions of the Union which did not intervene in the proceedings before the General Court. Such Member States and institutions shall be in the same position as Member States or institutions which intervened at first instance.

Article 57

Any person whose application to intervene has been dismissed by the General Court may appeal to the Court of Justice within two weeks from the notification of the decision dismissing the application.

The parties to the proceedings may appeal to the Court of Justice against any decision of the General Court made pursuant to Article 278 or Article 279 or the fourth paragraph of Article 299 of the Treaty on the Functioning of the European Union or Article 157 or the third paragraph of Article 164 of the EAEC Treaty within two months from their notification.

The appeal referred to in the first two paragraphs of this Article shall be heard and determined under the procedure referred to in Article 39.

Article 58

An appeal to the Court of Justice shall be limited to points of law. It shall lie on the grounds of lack of competence of the General Court, a breach of procedure before it which adversely affects the interests of the appellant as well as the infringement of Union law by the General Court.

No appeal shall lie regarding only the amount of the costs or the party ordered to pay them.

Article 59

Where an appeal is brought against a decision of the General Court, the procedure before the Court of Justice shall consist of a written part and an oral part. In accordance with conditions laid down in the Rules of Procedure, the Court of Justice, having heard the Advocate-General and the parties, may dispense with the oral procedure.

Article 60

Without prejudice to Articles 278 and 279 of the Treaty on the Functioning of the European Union or Article 157 of the EAEC Treaty, an appeal shall not have suspensory effect.

By way of derogation from Article 280 of the Treaty on the Functioning of the European Union, decisions of the General Court declaring a regulation to be void shall take effect only as from the date of expiry of the period referred to in the first paragraph of Article 56 of this Statute or, if an appeal shall have been brought within that period, as from the date of dismissal of the appeal, without prejudice, however, to the right of a party to apply to the Court of Justice, pursuant to Articles 278 and 279 of the Treaty on the Functioning of the European Union or Article 157 of the EAEC Treaty, for the suspension of the effects of the regulation which has been declared void or for the prescription of any other interim measure.

Article 61

If the appeal is well founded, the Court of Justice shall quash the decision of the General Court. It may itself give final judgment in the matter, where the state of the proceedings so permits, or refer the case back to the General Court for judgment.

Where a case is referred back to the General Court, that Court shall be bound by the decision of the Court of Justice on points of law.

When an appeal brought by a Member State or an institution of the Union, which did not intervene in the proceedings before the General Court, is well founded, the Court of Justice may,

if it considers this necessary, state which of the effects of the decision of the General Court which has been quashed shall be considered as definitive in respect of the parties to the litigation.

Article 62

In the cases provided for in Article 256(2) and (3) of the Treaty on the Functioning of the European Union, where the First Advocate-General considers that there is a serious risk of the unity or consistency of Union law being affected, he may propose that the Court of Justice review the decision of the General Court.

The proposal must be made within one month of delivery of the decision by the General Court. Within one month of receiving the proposal made by the First Advocate-General, the Court of Justice shall decide whether or not the decision should be reviewed.

Article 62a

The Court of Justice shall give a ruling on the questions which are subject to review by means of an urgent procedure on the basis of the file forwarded to it by the General Court.

Those referred to in Article 23 of this Statute and, in the cases provided for in Article 256(2) of the EC Treaty, the parties to the proceedings before the General Court shall be entitled to lodge statements or written observations with the Court of Justice relating to questions which are subject to review within a period prescribed for that purpose.

The Court of Justice may decide to open the oral procedure before giving a ruling.

Article 62b

In the cases provided for in Article 256(2) of the Treaty on the Functioning of the European Union, without prejudice to Articles 278 and 279 of the Treaty on the Functioning of the European Union, proposals for review and decisions to open the review procedure shall not have suspensory effect. If the Court of Justice finds that the decision of the General Court affects the unity or consistency of Union law, it shall refer the case back to the General Court which shall be bound by the points of law decided by the Court of Justice; the Court of Justice may state which of the effects of the decision of the General Court are to be considered as definitive in respect of the parties to the litigation. If, however, having regard to the result of the review, the outcome of the proceedings flows from the findings of fact on which the decision of the General Court was based, the Court of Justice shall give final judgment.

In the cases provided for in Article 256(3) of the Treaty on the Functioning of the European Union, in the absence of proposals for review or decisions to open the review procedure, the answer(s) given by the General Court to the questions submitted to it shall take effect upon expiry of the periods prescribed for that purpose in the second paragraph of Article 62. Should a review procedure be opened, the answer(s) subject to review shall take effect following that procedure, unless the Court of Justice decides otherwise. If the Court of Justice finds that the decision of the General Court affects the unity or consistency of Union law, the answer given by the Court of Justice to the questions subject to review shall be substituted for that given by the General Court.

TITLE IV*a*

JUDICIAL PANELS

Article 62c

The provisions relating to the jurisdiction, composition, organisation and procedure of the judicial panels established under Article 257 of the Treaty on the Functioning of the European Union are set out in an Annex to this Statute.

TITLE V

FINAL PROVISIONS

Article 63

The Rules of Procedure of the Court of Justice and of the General Court shall contain any provisions necessary for applying and, where required, supplementing this Statute.

Article 64

The rules governing the language arrangements applicable at the Court of Justice of the European Union shall be laid down by a regulation of the Council acting unanimously. This regulation shall be adopted either at the request of the Court of Justice and after consultation of the Commission and the European Parliament, or on a proposal from the Commission and after consultation of the Court of Justice and of the European Parliament.

Until those rules have been adopted, the provisions of the Rules of Procedure of the Court of Justice and of the Rules of Procedure of the General Court governing language arrangements shall continue to apply. By way of derogation from Articles 253 and 254 of the Treaty on the Functioning of the European Union, those provisions may only be amended or repealed with the unanimous consent of the Council.

ANNEX I

THE EUROPEAN UNION CIVIL SERVICE TRIBUNAL

Article 1

The European Union Civil Service Tribunal (hereafter ‘the Civil Service Tribunal’) shall exercise at first instance jurisdiction in disputes between the Union and its servants referred to in Article 270 of the Treaty on the Functioning of the European Union, including disputes between all bodies or agencies and their servants in respect of which jurisdiction is conferred on the Court of Justice of the European Union.

Article 2

The Civil Service Tribunal shall consist of seven judges. Should the Court of Justice so request, the Council, acting by a qualified majority, may increase the number of judges.

The judges shall be appointed for a period of six years. Retiring judges may be reappointed.

Any vacancy shall be filled by the appointment of a new judge for a period of six years.

Article 3

1. The judges shall be appointed by the Council, acting in accordance with the fourth paragraph of Article 257 of the Treaty on the Functioning of the European Union, after consulting the committee provided for by this Article. When appointing judges, the Council shall ensure a balanced composition of the Civil Service Tribunal on as broad a geographical basis as possible from among nationals of the Member States and with respect to the national legal systems represented.

2. Any person who is a Union citizen and fulfils the conditions laid down in the fourth paragraph of Article 257 of the Treaty on the Functioning of the European Union may submit an application. The Council, acting on a recommendation from the Court of Justice, shall determine the conditions and the arrangements governing the submission and processing of such applications.

3. A committee shall be set up comprising seven persons chosen from among former members of the Court of Justice and the General Court and lawyers of recognised competence. The committee's membership and operating rules shall be determined by the Council, acting on a recommendation by the President of the Court of Justice.

4. The committee shall give an opinion on candidates' suitability to perform the duties of judge at the Civil Service Tribunal. The committee shall append to its opinion a list of candidates having the most suitable high-level experience. Such list shall contain the names of at least twice as many candidates as there are judges to be appointed by the Council.

Article 4

1. The judges shall elect the President of the Civil Service Tribunal from among their number for a term of three years. He may be re-elected.

2. The Civil Service Tribunal shall sit in chambers of three judges. It may, in certain cases determined by its rules of procedure, sit in full court or in a chamber of five judges or of a single judge.

3. The President of the Civil Service Tribunal shall preside over the full court and the chamber of five judges. The Presidents of the chambers of three judges shall be designated as provided in paragraph 1. If the President of the Civil Service Tribunal is assigned to a chamber of three judges, he shall preside over that chamber.

4. The jurisdiction of and quorum for the full court as well as the composition of the chambers and the assignment of cases to them shall be governed by the rules of procedure.

Article 5

Articles 2 to 6, 14, 15, the first, second and fifth paragraphs of Article 17, and Article 18 of the Statute of the Court of Justice of the European Union shall apply to the Civil Service Tribunal and its members.

The oath referred to in Article 2 of the Statute shall be taken before the Court of Justice, and the decisions referred to in Articles 3, 4 and 6 thereof shall be adopted by the Court of Justice after consulting the Civil Service Tribunal.

Article 6

1. The Civil Service Tribunal shall be supported by the departments of the Court of Justice and of the General Court. The President of the Court of Justice or, in appropriate cases, the President of the General Court, shall determine by common accord with the President of the Civil Service Tribunal the conditions under which officials and other servants attached to the Court of Justice or the General Court shall render their services to the Civil Service Tribunal to enable it to function. Certain officials or other servants shall be responsible to the Registrar of the Civil Service Tribunal under the authority of the President of that Tribunal.

2. The Civil Service Tribunal shall appoint its Registrar and lay down the rules governing his service. The fourth paragraph of Article 3 and Articles 10, 11 and 14 of the Statute of the Court of Justice of the European Union shall apply to the Registrar of the Tribunal.

Article 7

1. The procedure before the Civil Service Tribunal shall be governed by Title III of the Statute of the Court of Justice of the European Union, with the exception of Articles 22 and 23. Such further and more detailed provisions as may be necessary shall be laid down in the rules of procedure.

2. The provisions concerning the General Court's language arrangements shall apply to the Civil Service Tribunal.

3. The written stage of the procedure shall comprise the presentation of the application and of the statement of defence, unless the Civil Service Tribunal decides that a second exchange of written pleadings is necessary. Where there is such second exchange, the Civil Service Tribunal may, with the agreement of the parties, decide to proceed to judgment without an oral procedure.

4. At all stages of the procedure, including the time when the application is filed, the Civil Service Tribunal may examine the possibilities of an amicable settlement of the dispute and may try to facilitate such settlement.

5. The Civil Service Tribunal shall rule on the costs of a case. Subject to the specific provisions of the Rules of Procedure, the unsuccessful party shall be ordered to pay the costs should the court so decide.

Article 8

1. Where an application or other procedural document addressed to the Civil Service Tribunal is lodged by mistake with the Registrar of the Court of Justice or General Court, it shall be transmitted immediately by that Registrar to the Registrar of the Civil Service Tribunal. Likewise, where an application or other procedural document addressed to the Court of Justice or to the General Court is lodged by mistake with the Registrar of the Civil Service Tribunal, it shall be transmitted immediately by that Registrar to the Registrar of the Court of Justice or General Court.

2. Where the Civil Service Tribunal finds that it does not have jurisdiction to hear and determine an action in respect of which the Court of Justice or the General Court has jurisdiction, it shall refer that action to the Court of Justice or to the General Court. Likewise, where the Court of Justice or the General Court finds that an action falls within the jurisdiction of the Civil Service Tribunal, the Court seised shall refer that action to the Civil Service Tribunal, whereupon that Tribunal may not decline jurisdiction.

3. Where the Civil Service Tribunal and the General Court are seised of cases in which the same issue of interpretation is raised or the validity of the same act is called in question, the Civil Service Tribunal, after hearing the parties, may stay the proceedings until the judgment of the General Court has been delivered.

Where the Civil Service Tribunal and the General Court are seised of cases in which the same relief is sought, the Civil Service Tribunal shall decline jurisdiction so that the General Court may act on those cases.

Article 9

An appeal may be brought before the General Court, within two months of notification of the decision appealed against, against final decisions of the Civil Service Tribunal and decisions of that Tribunal disposing of the substantive issues in part only or disposing of a procedural issue concerning a plea of lack of jurisdiction or inadmissibility.

Such an appeal may be brought by any party which has been unsuccessful, in whole or in part, in its submissions. However, interveners other than the Member States and the institutions of the Union may bring such an appeal only where the decision of the Civil Service Tribunal directly affects them.

Article 10

1. Any person whose application to intervene has been dismissed by the Civil Service Tribunal may appeal to the General Court within two weeks of notification of the decision dismissing the application.

2. The parties to the proceedings may appeal to the General Court against any decision of the Civil Service Tribunal made pursuant to Article 278 or Article 279 or the fourth paragraph of Article 299 of the Treaty on the Functioning of the European Union or Article 157 or the third paragraph of Article 164 of the EAEC Treaty within two months of its notification.

3. The President of the General Court may, by way of summary procedure, which may, in so far as necessary, differ from some of the rules contained in this Annex and which shall be laid down in the rules of procedure of the General Court, adjudicate upon appeals brought in accordance with paragraphs 1 and 2.

Article 11

1. An appeal to the General Court shall be limited to points of law. It shall lie on the grounds of lack of jurisdiction of the Civil Service Tribunal, a breach of procedure before it which adversely affects the interests of the appellant, as well as the infringement of Union law by the Tribunal.

2. No appeal shall lie regarding only the amount of the costs or the party ordered to pay them.

Article 12

1. Without prejudice to Articles 278 and 279 of the Treaty on the Functioning of the European Union or Article 157 of the EAEC Treaty, an appeal before the General Court shall not have suspensory effect.

2. Where an appeal is brought against a decision of the Civil Service Tribunal, the procedure before the General Court shall consist of a written part and an oral part. In accordance with conditions laid down in the rules of procedure, the General Court, having heard the parties, may dispense with the oral procedure.

Article 13

1. If the appeal is well founded, the General Court shall quash the decision of the Civil Service Tribunal and itself give judgment in the matter. It shall refer the case back to the Civil Service Tribunal for judgment where the state of the proceedings does not permit a decision by the Court.

2. Where a case is referred back to the Civil Service Tribunal, the Tribunal shall be bound by the decision of the General Court on points of law.

PROTOCOL (No 2)

ON THE APPLICATION OF THE PRINCIPLES OF SUBSIDIARITY AND PROPORTIONALITY

Article 8

The Court of Justice of the European Union shall have jurisdiction in actions on grounds of infringement of the principle of subsidiarity by a legislative act, brought in accordance with the rules laid down in Article 263 of the Treaty on the Functioning of the European Union by Member States, or notified by them in accordance with their legal order on behalf of their national Parliament or a chamber thereof.

In accordance with the rules laid down in the said Article, the Committee of the Regions may also bring such actions against legislative acts for the adoption of which the Treaty on the Functioning of the European Union provides that it be consulted.

PROTOCOL (No 7)
ON THE PRIVILEGES AND IMMUNITIES OF THE EUROPEAN UNION

Article 1

The premises and buildings of the Union shall be inviolable. They shall be exempt from search, requisition, confiscation or expropriation. The property and assets of the Union shall not be the subject of any administrative or legal measure of constraint without the authorisation of the Court of Justice.

PROTOCOL (No 36)

ON TRANSITIONAL PROVISIONS

TITLE VII

TRANSITIONAL PROVISIONS CONCERNING ACTS ADOPTED ON THE BASIS OF TITLES V AND VI OF THE TREATY ON EUROPEAN UNION PRIOR TO THE ENTRY INTO FORCE OF THE TREATY OF LISBON

Article 10

1. As a transitional measure, and with respect to acts of the Union in the field of police cooperation and judicial cooperation in criminal matters which have been adopted before the entry into force of the Treaty of Lisbon, the powers of the institutions shall be the following at the date of entry into force of that Treaty: the powers of the Commission under Article 258 of the Treaty on the Functioning of the European Union shall not be applicable and the powers of the Court of Justice of the European Union under Title VI of the Treaty on European Union, in the version in force before the entry into force of the Treaty of Lisbon, shall remain the same, including where they have been accepted under Article 35(2) of the said Treaty on European Union.

2. The amendment of an act referred to in paragraph 1 shall entail the applicability of the powers of the institutions referred to in that paragraph as set out in the Treaties with respect to the amended act for those Member States to which that amended act shall apply.

3. In any case, the transitional measure mentioned in paragraph 1 shall cease to have effect five years after the date of entry into force of the Treaty of Lisbon.

4. At the latest six months before the expiry of the transitional period referred to in paragraph 3, the United Kingdom may notify to the Council that it does not accept, with respect to the acts referred to in paragraph 1, the powers of the institutions referred to in paragraph 1 as set out in the Treaties. In case the United Kingdom has made that notification, all acts referred to in paragraph 1 shall cease to apply to it as from the date of expiry of the transitional period referred to in paragraph 3. This subparagraph shall not apply with respect to the amended acts which are applicable to the United Kingdom as referred to in paragraph 2.

The Council, acting by a qualified majority on a proposal from the Commission, shall determine the necessary consequential and transitional arrangements. The United Kingdom shall not participate in the adoption of this decision. A qualified majority of the Council shall be defined in accordance with Article 238(3)(a) of the Treaty on the Functioning of the European Union.

The Council, acting by a qualified majority on a proposal from the Commission, may also adopt a decision determining that the United Kingdom shall bear the direct financial consequences, if any, necessarily and unavoidably incurred as a result of the cessation of its participation in those acts.

[*Article 35* (text prior to the entry into force of the Treaty of Lisbon): 1. The Court of Justice of the European Communities shall have jurisdiction, subject to the conditions laid down in this Article, to give preliminary rulings on the validity and interpretation of framework decisions and

decisions, on the interpretation of conventions established under this Title and on the validity and interpretation of the measures implementing them.

2. By a declaration made at the time of signature of the Treaty of Amsterdam or at any time thereafter, any Member State shall be able to accept the jurisdiction of the Court of Justice to give preliminary rulings as specified in paragraph 1.

3. A Member State making a declaration pursuant to paragraph 2 shall specify that either:

(a) any court or tribunal of that State against whose decisions there is no judicial remedy under national law may request the Court of Justice to give a preliminary ruling on a question raised in a case pending before it and concerning the validity or interpretation of an act referred to in paragraph 1 if that court or tribunal considers that a decision on the question is necessary to enable it to give judgment, or

(b) any court or tribunal of that State may request the Court of Justice to give a preliminary ruling on a question raised in a case pending before it and concerning the validity or interpretation of an act referred to in paragraph 1 if that court or tribunal considers that a decision on the question is necessary to enable it to give judgment.

4. Any Member State, whether or not it has made a declaration pursuant to paragraph 2, shall be entitled to submit statements of case or written observations to the Court in cases which arise under paragraph 1.

5. The Court of Justice shall have no jurisdiction to review the validity or proportionality of operations carried out by the police or other law enforcement services of a Member State or the exercise of the responsibilities incumbent upon Member States with regard to the maintenance of law and order and the safeguarding of internal security.

6. The Court of Justice shall have jurisdiction to review the legality of framework decisions and decisions in actions brought by a Member State or the Commission on grounds of lack of competence, infringement of an essential procedural requirement, infringement of this Treaty or of any rule of law relating to its application, or misuse of powers. The proceedings provided for in this paragraph shall be instituted within two months of the publication of the measure.

7. The Court of Justice shall have jurisdiction to rule on any dispute between Member States regarding the interpretation or the application of acts adopted under Article 34(2) whenever such dispute cannot be settled by the Council within six months of its being referred to the Council by one of its members. The Court shall also have jurisdiction to rule on any dispute between Member States and the Commission regarding the interpretation or the application of conventions established under Article 34(2)(d).]

Jurisdiction of the Court of Justice to give preliminary rulings on police and judicial cooperation in criminal matters

Member State	Declaration under Article 35(2) EU	Option chosen (point (a) or point (b) of Article 35(3) EU)	Reservation pursuant to Declaration No 10 annexed to the Amsterdam Final Act (Declaration on Article 35 EU (formerly Article K.7))	Information published in OJ [1]	Provisions of national law adopted further to the reservation pursuant to Declaration No 10

RULES OF PROCEDURE OF THE COURT OF JUSTICE

THE COURT OF JUSTICE

Having regard to the Treaty on European Union, and in particular Article 19 thereof,

Having regard to the Treaty on the Functioning of the European Union, and in particular the sixth paragraph of Article 253 thereof,

Having regard to the Treaty establishing the European Atomic Energy Community, and in particular Article 106a(1) thereof,

Having regard to the Protocol on the Statute of the Court of Justice of the European Union, and in particular Article 63 and the second paragraph of Article 64 thereof,

Whereas:

(1) Despite having been amended on several occasions over the years, the Rules of Procedure of the Court of Justice have remained fundamentally unchanged in structure since their original adoption on 4 March 1953. The Rules of Procedure of 19 June 1991, which are currently in force, still reflect the initial preponderance of direct actions, whereas in fact the majority of such actions now fall within the jurisdiction of the General Court, and references for a preliminary ruling from the courts and tribunals of the Member States represent, quantitatively, the primary category of cases brought before the Court. That fact should be taken into account and the structure and content of the Rules of Procedure of the Court adapted, in consequence, to changes in its caseload.

(2) While references for a preliminary ruling should be given their proper place in the Rules of Procedure, it is also appropriate to draw a clearer distinction between the rules that apply to all types of action and those that are specific to each type, to be contained in separate titles. In the interests of clarification, procedural provisions common to all cases brought before the Court should, therefore, all be contained in an initial title.

(3) In the light of experience gained in the course of implementing the various procedures, it is also necessary to supplement or to clarify, for the benefit of litigants as well as of national courts and tribunals, the rules that apply to each procedure. The rules in question concern, in particular, the concepts of party to the main proceedings, intervener and party to the proceedings before the General Court, or, in preliminary rulings, the rules governing the bringing of matters before the Court and the content of the order for reference. With regard to appeals against decisions of the General Court, a clearer distinction must also be drawn between appeals and cross-appeals in consequence of the service of an appeal on the cross-appellant.

(4) Conversely, the excessive complexity of certain procedures, such as the review procedure, has come to light on their implementation. Accordingly, they should be simplified by providing, inter alia, for a Chamber of five Judges to be designated for a period of one year to be responsible for ruling both on the First Advocate General's proposal to review and on the questions to be reviewed.

(5) Similarly, the procedural arrangements for dealing with requests for Opinions should be eased by aligning them with those that apply to other cases and by providing, in consequence, for a single Advocate General to be involved in dealing with the request for an Opinion. In the interests of making the Rules easier to understand, all the particular procedures currently to be found in a number of separate titles and chapters of the Rules of Procedure should also be brought together in a single title.

(6) In order to maintain the Court's capacity, in the face of an ever-increasing caseload, to dispose within a reasonable period of time of the cases brought before it, it is also necessary to continue the efforts made to reduce the duration of proceedings before the Court, in particular by extending the opportunities for the Court to rule by reasoned order, simplifying the rules relating to the intervention of the States and institutions referred to in the first and third paragraphs of Article 40 of the Statute and providing for the Court to be able to rule without a hearing if it considers that it has sufficient information on the basis of all the written observations lodged in a case.

(7) In the interests of making the Rules applied by the Court easier to understand, lastly, certain rules which are outdated or not applied should be deleted, every paragraph of the present Rules numbered, each article given a specific heading summarising its content and the terminology harmonised.

With the Council's approval given on 24 September 2012.

HAS ADOPTED THESE RULES OF PROCEDURE:

INTRODUCTORY PROVISIONS

Article 1

Definitions

1. In these Rules:

(a) provisions of the Treaty on European Union are referred to by the number of the article concerned followed by 'TEU',

(b) provisions of the Treaty on the Functioning of the European Union are referred to by the number of the article concerned followed by 'TFEU',

(c) provisions of the Treaty establishing the European Atomic Energy Community are referred to by the number of the article concerned followed by 'TEAEC',

(d) 'Statute' means the Protocol on the Statute of the Court of Justice of the European Union,

(e) 'EEA Agreement' means the Agreement on the European Economic Area, [1]

(f) 'Council Regulation No 1' means Council Regulation No 1 of 15 April 1958 determining the languages to be used by the European Economic Community. [2]

2. For the purposes of these Rules:

(a) 'institutions' means the institutions of the European Union referred to in Article 13(1) TEU and bodies, offices and agencies established by the Treaties, or by an act adopted in implementation thereof, which may be parties before the Court,

(b) 'EFTA Surveillance Authority' means the surveillance authority referred to in the EEA Agreement,

(c) 'interested persons referred to in Article 23 of the Statute' means all the parties, States, institutions, bodies, offices and agencies authorised, pursuant to that Article, to submit statements of case or observations in the context of a reference for a preliminary ruling.

Article 2

Purport of these Rules

These Rules implement and supplement, so far as necessary, the relevant provisions of the EU, FEU and EAEC Treaties, and the Statute.

TITLE I

ORGANISATION OF THE COURT

Chapter 1

JUDGES AND ADVOCATES GENERAL

Article 3

Commencement of the term of office of Judges and Advocates General

The term of office of a Judge or Advocate General shall begin on the date fixed for that purpose in the instrument of appointment. In the absence of any provisions in that instrument regarding the date of commencement of the term of office, that term shall begin on the date of publication of the instrument in the *Official Journal of the European Union*.

Article 4

Taking of the oath

Before taking up his duties, a Judge or Advocate General shall, at the first public sitting of the Court which he attends after his appointment, take the following oath provided for in Article 2 of the Statute:

'I swear that I will perform my duties impartially and conscientiously; I swear that I will preserve the secrecy of the deliberations of the Court.'

Article 5

Solemn undertaking

Immediately after taking the oath, a Judge or Advocate General shall sign a declaration by which he gives the solemn undertaking provided for in the third paragraph of Article 4 of the Statute.

Article 6

Depriving a Judge or Advocate General of his office

1. Where the Court is called upon, pursuant to Article 6 of the Statute, to decide whether a Judge or Advocate General no longer fulfils the requisite conditions or no longer meets the obligations arising from his office, the President shall invite the Judge or Advocate General concerned to make representations.

2. The Court shall give a decision in the absence of the Registrar.

Article 7

Order of seniority

1. The seniority of Judges and Advocates General shall be calculated without distinction according to the date on which they took up their duties.

2. Where there is equal seniority on that basis, the order of seniority shall be determined by age.

3. Judges and Advocates General whose terms of office are renewed shall retain their former seniority.

Chapter 2

PRESIDENCY OF THE COURT, CONSTITUTION OF THE CHAMBERS AND DESIGNATION OF THE FIRST ADVOCATE GENERAL

Article 8

Election of the President and of the Vice-President of the Court

1. The Judges shall, immediately after the partial replacement provided for in the second paragraph of Article 253 TFEU, elect one of their number as President of the Court for a term of three years.

2. If the office of the President falls vacant before the normal date of expiry of the term thereof, the Court shall elect a successor for the remainder of the term.

3. The elections provided for in this Article shall be by secret ballot. The Judge obtaining the votes of more than half the Judges of the Court shall be elected. If no Judge obtains that majority, further ballots shall be held until that majority is attained.

[1] OJ L 1, 3.1.1994, p. 27.
[2] OJ, English Special Edition 1952-1958 (I), p. 59.

4. The Judges shall then elect one of their number as Vice-President of the Court for a term of three years, in accordance with the procedures laid down in the preceding paragraph. Paragraph 2 shall apply if the office of the Vice-President of the Court falls vacant before the normal date of expiry of the term thereof.

5. The names of the President and Vice-President elected in accordance with this Article shall be published in the *Official Journal of the European Union*.

Article 9

Responsibilities of the President of the Court

1. The President shall represent the Court.

2. The President shall direct the judicial business of the Court. He shall preside at general meetings of the Members of the Court and at hearings before and deliberations of the full Court and the Grand Chamber.

3. The President shall ensure the proper functioning of the services of the Court.

Article 10

Responsibilities of the Vice-President of the Court

1. The Vice-President shall assist the President of the Court in the performance of his duties and shall take the President's place when the latter is prevented from acting.

2. He shall take the President's place, at his request, in performing the duties referred to in Article 9(1) and (3) of these Rules.

3. The Court shall, by decision, specify the conditions under which the Vice-President shall take the place of the President of the Court in the performance of his judicial duties. That decision shall be published in the *Official Journal of the European Union*.

Article 11

Constitution of Chambers

1. The Court shall set up Chambers of five and three Judges in accordance with Article 16 of the Statute and shall decide which Judges shall be attached to them.

2. The Court shall designate the Chambers of five Judges which, for a period of one year, shall be responsible for cases of the kind referred to in Article 107 and Articles 193 and 194.

3. In respect of cases assigned to a formation of the Court in accordance with Article 60, the word 'Court' in these Rules shall mean that formation.

4. In respect of cases assigned to a Chamber of five or three Judges, the powers of the President of the Court shall be exercised by the President of the Chamber.

5. The composition of the Chambers and the designation of the Chambers responsible for cases of the kind referred to in Article 107 and Articles 193 and 194 shall be published in the *Official Journal of the European Union*.

Article 12

Election of Presidents of Chambers

1. The Judges shall, immediately after the election of the President and Vice-President of the Court, elect the Presidents of the Chambers of five Judges for a term of three years.

2. The Judges shall then elect the Presidents of the Chambers of three Judges for a term of one year.

3. The provisions of Article 8(2) and (3) shall apply.

4. The names of the Presidents of Chambers elected in accordance with this Article shall be published in the *Official Journal of the European Union*.

Article 13

Where the President and Vice-President of the Court are prevented from acting

When the President and the Vice-President of the Court are prevented from acting, the functions of President shall be exercised by one of the Presidents of the Chambers of five Judges or, failing that, by one of the Presidents of the Chambers of three Judges or, failing that, by one of the other Judges, according to the order of seniority laid down in Article 7.

Article 14

Designation of the First Advocate General

1. The Court shall, after hearing the Advocates General, designate a First Advocate General for a period of one year.

2. If the office of the First Advocate General falls vacant before the normal date of expiry of the term thereof, the Court shall designate a successor for the remainder of the term.

3. The name of the First Advocate General designated in accordance with this Article shall be published in the *Official Journal of the European Union*.

Chapter 3

ASSIGNMENT OF CASES TO JUDGE-RAPPORTEURS AND ADVOCATES GENERAL

Article 15

Designation of the Judge-Rapporteur

1. As soon as possible after the document initiating proceedings has been lodged, the President of the Court shall designate a Judge to act as Rapporteur in the case.

2. For cases of the kind referred to in Article 107 and Articles 193 and 194, the Judge-Rapporteur shall be selected from among the Judges of the Chamber designated in accordance with Article 11(2), on a proposal from the President of that Chamber. If, pursuant to Article 109, the Chamber decides that the reference is not to be dealt with under the urgent procedure, the President of the Court may reassign the case to a Judge-Rapporteur attached to another Chamber.

3. The President of the Court shall take the necessary steps if a Judge-Rapporteur is prevented from acting.

Article 16

Designation of the Advocate General

1. The First Advocate General shall assign each case to an Advocate General.

2. The First Advocate General shall take the necessary steps if an Advocate General is prevented from acting.

Chapter 4

ASSISTANT RAPPORTEURS

Article 17

Assistant Rapporteurs

1. Where the Court is of the opinion that the consideration of and preparatory inquiries in cases before it so require, it shall, pursuant to Article 13 of the Statute, propose the appointment of Assistant Rapporteurs.

2. Assistant Rapporteurs shall in particular:

(a) assist the President of the Court in interim proceedings and

(b) assist the Judge-Rapporteurs in their work.

3. In the performance of their duties the Assistant Rapporteurs shall be responsible to the President of the Court, the President of a Chamber or a Judge-Rapporteur, as the case may be.

4. Before taking up his duties, an Assistant Rapporteur shall take before the Court the oath set out in Article 4 of these Rules.

Chapter 5

REGISTRY

Article 18

Appointment of the Registrar

1. The Court shall appoint the Registrar.

2. When the post of Registrar is vacant, an advertisement shall be published in the *Official Journal of the European Union*. Interested persons shall be invited to submit their applications within a time-limit of not less than three weeks, accompanied by full details of their nationality, university degrees, knowledge of languages, present and past occupations, and experience, if any, in judicial and international fields.

3. The vote, in which the Judges and the Advocates General shall take part, shall take place in accordance with the procedure laid down in Article 8(3) of these Rules.

4. The Registrar shall be appointed for a term of six years. He may be reappointed. The Court may decide to renew the term of office of the incumbent Registrar without availing itself of the procedure laid down in paragraph 2 of this Article.

5. The Registrar shall take the oath set out in Article 4 and sign the declaration provided for in Article 5.

6. The Registrar may be deprived of his office only if he no longer fulfils the requisite conditions or no longer meets the obligations arising from his office. The Court shall take its decision after giving the Registrar an opportunity to make representations.

7. If the office of Registrar falls vacant before the normal date of expiry of the term thereof, the Court shall appoint a new Registrar for a term of six years.

8. The name of the Registrar elected in accordance with this Article shall be published in the *Official Journal of the European Union*.

Article 19

Deputy Registrar

The Court may, in accordance with the procedure laid down in respect of the Registrar, appoint a Deputy Registrar to assist the Registrar and to take his place if he is prevented from acting.

Article 20

Responsibilities of the Registrar

1. The Registrar shall be responsible, under the authority of the President of the Court, for the acceptance, transmission and custody of all documents and for effecting service as provided for by these Rules.

2. The Registrar shall assist the Members of the Court in all their official functions.

3. The Registrar shall have custody of the seals and shall be responsible for the records. He shall be in charge of the publications of the Court and, in particular, the European Court Reports.

4. The Registrar shall direct the services of the Court under the authority of the President of the Court. He shall be responsible for the management of the staff and the administration, and for the preparation and implementation of the budget.

Article 21

Keeping of the register

1. There shall be kept in the Registry, under the responsibility of the Registrar, a register in which all procedural documents and supporting items and documents lodged shall be entered in the order in which they are submitted.

2. When a document has been registered, the Registrar shall make a note to that effect on the original and, if a party so requests, on any copy submitted for the purpose.

3. Entries in the register and the notes provided for in the preceding paragraph shall be authentic.

4. A notice shall be published in the *Official Journal of the European Union* indicating the date of registration of an application initiating proceedings, the names of the parties, the form of order sought by the applicant and a summary of the pleas in law and of the main supporting arguments or, as the case may be, the date of lodging of a request for a preliminary ruling, the identity of the referring court or tribunal and the parties to the main proceedings, and the questions referred to the Court.

Article 22

Consultation of the register and of judgments and orders

1. Anyone may consult the register at the Registry and may obtain copies or extracts on payment of a charge on a scale fixed by the Court on a proposal from the Registrar.

2. The parties to a case may, on payment of the appropriate charge, obtain certified copies of procedural documents.

3. Anyone may, on payment of the appropriate charge, also obtain certified copies of judgments and orders.

Chapter 6

THE WORKING OF THE COURT

Article 23

Location of the sittings of the Court

The Court may choose to hold one or more specific sittings in a place other than that in which it has its seat.

Article 24

Calendar of the Court's judicial business

1. The judicial year shall begin on 7 October of each calendar year and end on 6 October of the following year.

2. The judicial vacations shall be determined by the Court.

3. In a case of urgency, the President may convene the Judges and the Advocates General during the judicial vacations.

4. The Court shall observe the official holidays of the place in which it has its seat.

5. The Court may, in proper circumstances, grant leave of absence to any Judge or Advocate General.

6. The dates of the judicial vacations and the list of official holidays shall be published annually in the *Official Journal of the European Union*.

Article 25

General meeting

Decisions concerning administrative issues or the action to be taken upon the proposals contained in the preliminary report referred to in Article 59 of these Rules shall be taken by the Court at the general meeting in which all the Judges and Advocates General shall take part and have a vote. The Registrar shall be present, unless the Court decides to the contrary.

Article 26

Drawing-up of minutes

Where the Court sits without the Registrar being present it shall, if necessary, instruct the most junior Judge for the purposes of Article 7 of these Rules to draw up minutes, which shall be signed by that Judge and by the President.

Chapter 7

FORMATIONS OF THE COURT

Section 1. Composition of the formations of the Court

Article 27

Composition of the Grand Chamber

1. The Grand Chamber shall, for each case, be composed of the President and the Vice-President of the Court, three Presidents of Chambers of five Judges, the Judge-Rapporteur and the number of Judges necessary to reach 15. The last-mentioned Judges and the three Presidents of Chambers of five Judges shall be designated from the lists referred to in paragraphs 3 and 4 of this Article, following the order laid down therein. The starting-point on each of those lists, in every case assigned to the Grand Chamber, shall be the name of the Judge immediately following the last Judge designated from the list concerned for the preceding case assigned to that formation of the Court.

2. After the election of the President and the Vice-President of the Court, and then of the Presidents of the Chambers of five Judges, a list of the Presidents of Chambers of five Judges and a list of the other Judges shall be drawn up for the purposes of determining the composition of the Grand Chamber.

3. The list of the Presidents of Chambers of five Judges shall be drawn up according to the order laid down in Article 7 of these Rules.

4. The list of the other Judges shall be drawn up according to the order laid down in Article 7 of these Rules, alternating with the reverse order: the first Judge on that list shall be the first according to the order laid down in that Article, the second Judge shall be the last according to that order, the third Judge shall be the second according to that order, the fourth Judge the penultimate according to that order, and so on.

5. The lists referred to in paragraphs 3 and 4 shall be published in the *Official Journal of the European Union*.

6. In cases which are assigned to the Grand Chamber between the beginning of a calendar year in which there is a partial replacement of Judges and the moment when that replacement has taken place, two substitute Judges may be designated to complete the formation of the Court for so long as the attainment of the quorum referred to in the third paragraph of Article 17 of the Statute is in doubt. Those substitute Judges shall be the two Judges appearing on the list referred to in paragraph 4 immediately after the last Judge designated for the composition of the Grand Chamber in the case.

7. The substitute Judges shall replace, in the order of the list referred to in paragraph 4, such Judges as are unable to take part in the determination of the case.

Article 28

Composition of the Chambers of five and of three Judges

1. The Chambers of five Judges and of three Judges shall, for each case, be composed of the President of the Chamber, the Judge-Rapporteur and the number of Judges required to attain the number of five and three Judges respectively. Those last-mentioned Judges shall be designated from the lists referred to in paragraphs 2 and 3, following the order laid down therein. The starting-point on those lists, in every case assigned to a Chamber, shall be the name of the Judge immediately following the last Judge designated from the list for the preceding case assigned to the Chamber concerned.

2. For the composition of the Chambers of five Judges, after the election of the Presidents of those Chambers lists shall be drawn up including all the Judges attached to the Chamber concerned, with the exception of its President. The lists shall be drawn up in the same way as the list referred to in Article 27(4).

3. For the composition of the Chambers of three Judges, after the election of the Presidents of those Chambers lists shall be drawn up including all the Judges attached to the Chamber concerned, with the exception of its President. The lists shall be drawn up according to the order laid down in Article 7.

4. The lists referred to in paragraphs 2 and 3 shall be published in the *Official Journal of the European Union*.

Article 29

Composition of Chambers where cases are related or referred back

1. Where the Court considers that a number of cases must be heard and determined together by one and the same formation of the Court, the composition of that formation shall be that fixed for the case in respect of which the preliminary report was examined first.

2. Where a Chamber to which a case has been assigned requests the Court, pursuant to Article 60(3) of these Rules, to assign the case to a formation composed of a greater number of Judges, that formation shall include the members of the Chamber which has referred the case back.

Article 30

Where a President of a Chamber is prevented from acting

1. When the President of a Chamber of five Judges is prevented from acting, the functions of President of the Chamber shall be exercised by a President of a Chamber of three Judges, where necessary according to the order laid down in Article 7 of these Rules, or, if that formation of the Court does not include a President of a Chamber of three Judges, by one of the other Judges according to the order laid down in Article 7.

2. When the President of a Chamber of three Judges is prevented from acting, the functions of President of the Chamber shall be exercised by a Judge of that formation of the Court according to the order laid down in Article 7.

Article 31

Where a member of the formation of the Court is prevented from acting

1. When a member of the Grand Chamber is prevented from acting, he shall be replaced by another Judge according to the order of the list referred to in Article 27(4).

2. When a member of a Chamber of five Judges is prevented from acting, he shall be replaced by another Judge of that Chamber, according to the order of the list referred to in Article 28(2). If it is not possible to replace the Judge prevented from acting by a Judge of the same Chamber, the President of that Chamber shall so inform the President of the Court who may designate another Judge to complete the Chamber.

3. When a member of a Chamber of three Judges is prevented from acting, he shall be replaced by another Judge of that Chamber, according to the order of the list referred to in Article 28(3). If it is not possible to replace the Judge prevented from acting by a Judge of the same Chamber, the President of that Chamber shall so inform the President of the Court who may designate another Judge to complete the Chamber.

Section 2. Deliberations

Article 32

Procedures concerning deliberations

1. The deliberations of the Court shall be and shall remain secret.

2. When a hearing has taken place, only those Judges who participated in that hearing and, where relevant, the Assistant Rapporteur responsible for the consideration of the case shall take part in the deliberations.

3. Every Judge taking part in the deliberations shall state his opinion and the reasons for it.

4. The conclusions reached by the majority of the Judges after final discussion shall determine the decision of the Court.

Article 33

Number of Judges taking part in the deliberations

Where, by reason of a Judge being prevented from acting, there is an even number of Judges, the most junior Judge for the purposes of Article 7 of these Rules shall abstain from taking part in the deliberations unless he is the Judge-Rapporteur. In that case the Judge immediately senior to him shall abstain from taking part in the deliberations.

Article 34

Quorum of the Grand Chamber

1. If, for a case assigned to the Grand Chamber, it is not possible to attain the quorum referred to in the third paragraph of Article 17 of the Statute, the President of the Court shall designate one or more other Judges according to the order of the list referred to in Article 27(4) of these Rules.

2. If a hearing has taken place before that designation, the Court shall re-hear oral argument from the parties and the Opinion of the Advocate General.

Article 35

Quorum of the Chambers of five and of three Judges

1. If, for a case assigned to a Chamber of five or of three Judges, it is not possible to attain the quorum referred to in the second paragraph of Article 17 of the Statute, the President of the Court shall designate one or more other Judges according to the order of the list referred to in Article 28(2) or (3), respectively, of these Rules. If it is not possible to replace the Judge prevented from acting by a Judge of the same Chamber, the President of that Chamber shall so inform the President of the Court forthwith who shall designate another Judge to complete the Chamber.

2. Article 34(2) shall apply, *mutatis mutandis*, to the Chambers of five and of three Judges.

Chapter 8

LANGUAGES

Article 36

Language of a case

The language of a case shall be Bulgarian, Czech, Danish, Dutch, English, Estonian, Finnish, French, German, Greek, Hungarian, Irish, Italian, Latvian, Lithuanian, Maltese, Polish, Portuguese, Romanian, Slovak, Slovene, Spanish or Swedish.

Article 37

Determination of the language of a case

1. In direct actions, the language of a case shall be chosen by the applicant, except that:

(a) where the defendant is a Member State, the language of the case shall be the official language of that State; where that State has more than one official language, the applicant may choose between them;

(b) at the joint request of the parties, the use of another of the languages mentioned in Article 36 for all or part of the proceedings may be authorised;

(c) at the request of one of the parties, and after the opposite party and the Advocate General have been heard, the use of another of the languages mentioned in Article 36 may be authorised as the language of the case for all or part of the proceedings by way of derogation from subparagraphs (a) and (b); such a request may not be submitted by one of the institutions of the European Union.

2. Without prejudice to the provisions of paragraph 1(b) and (c), and of Article 38(4) and (5) of these Rules,

(a) in appeals against decisions of the General Court as referred to in Articles 56 and 57 of the Statute, the language of the case shall be the language of the decision of the General Court against which the appeal is brought;

(b) where, in accordance with the second paragraph of Article 62 of the Statute, the Court decides to review a decision of the General Court, the language of the case shall be the language of the decision of the General Court which is the subject of review;

(c) in the case of challenges concerning the costs to be recovered, applications to set aside judgments by default, third-party proceedings and applications for interpretation or revision of a judgment or for the Court to remedy a failure to adjudicate, the language of the case shall be the language of the decision to which those applications or challenges relate.

3. In preliminary ruling proceedings, the language of the case shall be the language of the referring court or tribunal. At the duly substantiated request of one of the parties to the main proceedings, and after the other party to the main proceedings and the Advocate General have been heard, the use of another of the languages mentioned in Article 36 may be authorised for the oral part of the procedure. Where granted, such authorisation shall apply in respect of all the interested persons referred to in Article 23 of the Statute.

4. Requests as above may be decided on by the President; the latter may, and where he wishes to accede to a request without the agreement of all the parties must, refer the request to the Court.

Article 38

Use of the language of the case

1. The language of the case shall in particular be used in the written and oral pleadings of the parties, including the items and documents produced or annexed to them, and also in the minutes and decisions of the Court.

2. Any item or document produced or annexed that is expressed in another language must be accompanied by a translation into the language of the case.

3. However, in the case of substantial items or lengthy documents, translations may be confined to extracts. At any time the Court may, of its own motion or at the request of one of the parties, call for a complete or fuller translation.

4. Notwithstanding the foregoing provisions, a Member State shall be entitled to use its official language when taking part in preliminary ruling proceedings, when intervening in a case before the Court or when bringing a matter before the Court pursuant to Article 259 TFEU. This provision shall apply both to written documents and to oral statements. The Registrar shall arrange in each instance for translation into the language of the case.

5. The States, other than the Member States, which are parties to the EEA Agreement, and also the EFTA Surveillance Authority, may be authorised to use one of the languages mentioned in Article 36, other than the language of the case, when they take part in preliminary ruling proceedings or intervene in a case before the Court. This provision shall apply both to written documents and to oral statements. The Registrar shall arrange in each instance for translation into the language of the case.

6. Non-Member States taking part in preliminary ruling proceedings pursuant to the fourth paragraph of Article 23 of the Statute may be authorised to use one of the languages mentioned in Article 36 other than the language of the case. This provision shall apply both to written documents and to oral statements. The Registrar shall arrange in each instance for translation into the language of the case.

7. Where a witness or expert states that he is unable adequately to express himself in one of the languages referred to in Article 36, the Court may authorise him to give his evidence in another language. The Registrar shall arrange for translation into the language of the case.

8. The President and the Vice-President of the Court and also the Presidents of Chambers in conducting oral proceedings, Judges and Advocates General in putting questions and Advocates General in delivering their Opinions may use one of the languages referred to in Article 36 other than the language of the case. The Registrar shall arrange for translation into the language of the case.

Article 39

Responsibility of the Registrar concerning language arrangements

The Registrar shall, at the request of any Judge, of the Advocate General or of a party, arrange for anything said or written in the course of the proceedings before the Court to be translated into the languages chosen from those referred to in Article 36.

Article 40

Languages of the publications of the Court

Publications of the Court shall be issued in the languages referred to in Article 1 of Council Regulation No 1.

Article 41

Authentic texts

The texts of documents drawn up in the language of the case or, where applicable, in another language authorised pursuant to Articles 37 or 38 of these Rules shall be authentic.

Article 42

Language service of the Court

The Court shall set up a language service staffed by experts with adequate legal training and a thorough knowledge of several official languages of the European Union.

TITLE II

COMMON PROCEDURAL PROVISIONS

Chapter 1

RIGHTS AND OBLIGATIONS OF AGENTS, ADVISERS AND LAWYERS

Article 43

Privileges, immunities and facilities

1. Agents, advisers and lawyers who appear before the Court or before any judicial authority to which the Court has addressed letters rogatory shall enjoy immunity in respect of words spoken or written by them concerning the case or the parties.

2. Agents, advisers and lawyers shall also enjoy the following privileges and facilities:

(a) any papers and documents relating to the proceedings shall be exempt from both search and seizure. In the event of a dispute, the customs officials or police may seal those papers and documents; they shall then be immediately forwarded to the Court for inspection in the presence of the Registrar and of the person concerned;

(b) agents, advisers and lawyers shall be entitled to travel in the course of duty without hindrance.

Article 44

Status of the parties' representatives

1. In order to qualify for the privileges, immunities and facilities specified in Article 43, persons entitled to them shall furnish proof of their status as follows:

(a) agents shall produce an official document issued by the party for whom they act, who shall immediately serve a copy thereof on the Registrar;

(b) lawyers shall produce a certificate that they are authorised to practise before a court of a Member State or of another State which is a party to the EEA Agreement, and, where the party which they represent is a legal person governed by private law, an authority to act issued by that person;

(c) advisers shall produce an authority to act issued by the party whom they are assisting.

2. The Registrar of the Court shall issue them with a certificate, as required. The validity of this certificate shall be limited to a specified period, which may be extended or curtailed according to the duration of the proceedings.

Article 45

Waiver of immunity

1. The privileges, immunities and facilities specified in Article 43 of these Rules are granted exclusively in the interests of the proper conduct of proceedings.

2. The Court may waive immunity where it considers that the proper conduct of proceedings will not be hindered thereby.

Article 46

Exclusion from the proceedings

1. If the Court considers that the conduct of an agent, adviser or lawyer before the Court is incompatible with the dignity of the Court or with the requirements of the proper administration of justice, or that such agent, adviser or lawyer is using his rights for purposes other than those for which they were granted, it shall inform the person concerned. If the Court informs the competent authorities to whom the person concerned is answerable, a copy of the letter sent to those authorities shall be forwarded to the person concerned.

2. On the same grounds, the Court may at any time, having heard the person concerned and the Advocate General, decide to exclude an agent, adviser or lawyer from the proceedings by reasoned order. That order shall have immediate effect.

3. Where an agent, adviser or lawyer is excluded from the proceedings, the proceedings shall be suspended for a period fixed by the President in order to allow the party concerned to appoint another agent, adviser or lawyer.

4. Decisions taken under this Article may be rescinded.

Article 47

University teachers and parties to the main proceedings

1. The provisions of this Chapter shall apply to university teachers who have a right of audience before the Court in accordance with Article 19 of the Statute.

2. They shall also apply, in the context of references for a preliminary ruling, to the parties to the main proceedings where, in accordance with the national rules of procedure applicable, those parties are permitted to bring or defend court proceedings without being represented by a lawyer, and to persons authorised under those rules to represent them.

Chapter 2

SERVICE

Article 48

Methods of service

1. Where these Rules require that a document be served on a person, the Registrar shall ensure that service is effected at that person's address for service either by the dispatch of a copy of the document by registered post with a form for acknowledgement of receipt or by personal delivery of the copy against a receipt. The Registrar shall prepare and certify the copies of documents to be served, save where the parties themselves supply the copies in accordance with Article 57(2) of these Rules.

2. Where the addressee has agreed that service is to be effected on him by telefax or any other technical means of communication, any procedural document, including a judgment or order of the Court, may be served by the transmission of a copy of the document by such means.

3. Where, for technical reasons or on account of the nature or length of the document, such transmission is impossible or impracticable, the document shall be served, if the addressee has not specified an address for service, at his address in accordance with the procedures laid down in paragraph 1 of this Article. The addressee shall be so informed by telefax or any other technical means of communication. Service shall then be deemed to have been effected on the addressee by registered post on the 10th day following the lodging of the registered letter at the post office of the place in which the Court has its seat, unless it is shown by the acknowledgement of receipt that the letter was received on a different date or the addressee informs the Registrar, within three weeks of being informed by telefax or any other technical means of communication, that the document to be served has not reached him.

4. The Court may, by decision, determine the criteria for a procedural document to be served by electronic means. That decision shall be published in the *Official Journal of the European Union*.

Chapter 3

TIME-LIMITS

Article 49

Calculation of time-limits

1. Any procedural time-limit prescribed by the Treaties, the Statute or these Rules shall be calculated as follows:

(a) where a time-limit expressed in days, weeks, months or years is to be calculated from the moment at which an event occurs or an action takes place, the day during which that event occurs or that action takes place shall not be counted as falling within the time-limit in question;

(b) a time-limit expressed in weeks, months or years shall end with the expiry of whichever day in the last week, month or year is the same day of the week, or falls on the same date, as the day during which the event or action from which the time-limit is to be calculated occurred or took place. If, in a time-limit expressed in months or years, the day on which it should expire does not occur in the last month, the time-limit shall end with the expiry of the last day of that month;

(c) where a time-limit is expressed in months and days, it shall first be calculated in whole months, then in days;

(d) time-limits shall include Saturdays, Sundays and the official holidays referred to in Article 24(6) of these Rules;

(e) time-limits shall not be suspended during the judicial vacations.

2. If the time-limit would otherwise end on a Saturday, Sunday or an official holiday, it shall be extended until the end of the first subsequent working day.

Article 50

Proceedings against a measure adopted by an institution

Where the time-limit allowed for initiating proceedings against a measure adopted by an institution runs from the publication of that measure, that time-limit shall be calculated, for the purposes of Article 49(1)(a), from the end of the 14th day after publication of the measure in the *Official Journal of the European Union*.

Article 51

Extension on account of distance

The procedural time-limits shall be extended on account of distance by a single period of 10 days.

Article 52

Setting and extension of time-limits

1. Any time-limit prescribed by the Court pursuant to these Rules may be extended.

2. The President and the Presidents of Chambers may delegate to the Registrar power of signature for the purposes of setting certain time-limits which, pursuant to these Rules, it falls to them to prescribe, or of extending such time-limits.

Chapter 4

DIFFERENT PROCEDURES FOR DEALING WITH CASES

Article 53

Procedures for dealing with cases

1. Without prejudice to the special provisions laid down in the Statute or in these Rules, the procedure before the Court shall consist of a written part and an oral part.

2. Where it is clear that the Court has no jurisdiction to hear and determine a case or where a request or an application is manifestly inadmissible, the Court may, after hearing the Advocate General, at any time decide to give a decision by reasoned order without taking further steps in the proceedings.

3. The President may in special circumstances decide that a case be given priority over others.

4. A case may be dealt with under an expedited procedure in accordance with the conditions provided by these Rules.

5. A reference for a preliminary ruling may be dealt with under an urgent procedure in accordance with the conditions provided by these Rules.

Article 54

Joinder

1. Two or more cases of the same type concerning the same subject-matter may at any time be joined, on account of the connection between them, for the purposes of the written or oral part of the procedure or of the judgment which closes the proceedings.

2. A decision on whether cases should be joined shall be taken by the President after hearing the Judge-Rapporteur and the Advocate General, if the cases concerned have already been assigned, and, save in the case of references for a preliminary ruling, after also hearing the parties. The President may refer the decision on this matter to the Court.

3. Joined cases may be disjoined, in accordance with the provisions of paragraph 2.

Article 55

Stay of proceedings

1. The proceedings may be stayed:

(a) in the circumstances specified in the third paragraph of Article 54 of the Statute, by order of the Court, made after hearing the Advocate General;

(b) in all other cases, by decision of the President adopted after hearing the Judge-Rapporteur and the Advocate General and, save in the case of references for a preliminary ruling, the parties.

2. The proceedings may be resumed by order or decision, following the same procedure.

3. The orders or decisions referred to in paragraphs 1 and 2 shall be served on the parties or interested persons referred to in Article 23 of the Statute.

4. The stay of proceedings shall take effect on the date indicated in the order or decision of stay or, in the absence of such indication, on the date of that order or decision.

5. While proceedings are stayed time shall cease to run for the parties or interested persons referred to in Article 23 of the Statute for the purposes of procedural time-limits.

6. Where the order or decision of stay does not fix the length of stay, it shall end on the date indicated in the order or decision of resumption or, in the absence of such indication, on the date of the order or decision of resumption.

7. From the date of resumption of proceedings following a stay, the suspended procedural time-limits shall be replaced by new time-limits and time shall begin to run from the date of that resumption.

Article 56

Deferment of the determination of a case

After hearing the Judge-Rapporteur, the Advocate General and the parties, the President may in special circumstances, either of his own motion or at the request of one of the parties, defer a case to be dealt with at a later date.

Chapter 5

WRITTEN PART OF THE PROCEDURE

Article 57

Lodging of procedural documents

1. The original of every procedural document must bear the handwritten signature of the party's agent or lawyer or, in the case of observations submitted in the context of preliminary ruling proceedings, that of the party to the main proceedings or his representative, if the national rules of procedure applicable to those main proceedings so permit.

2. The original, accompanied by all annexes referred to therein, shall be submitted together with five copies for the Court and, in the case of proceedings other than preliminary ruling proceedings, a copy for every other party to the proceedings. Copies shall be certified by the party lodging them.

3. The institutions shall in addition produce, within time-limits laid down by the Court, translations of any procedural document into the other languages provided for by Article 1 of Council Regulation No 1. The preceding paragraph of this Article shall apply.

4. To every procedural document there shall be annexed a file containing the items and documents relied on in support of it, together with a schedule listing them.

5. Where in view of the length of an item or document only extracts from it are annexed to the procedural document, the whole item or document or a full copy of it shall be lodged at the Registry.

6. All procedural documents shall bear a date. In the calculation of procedural time-limits, only the date and time of lodgment of the original at the Registry shall be taken into account.

7. Without prejudice to the provisions of paragraphs 1 to 6, the date on and time at which a copy of the signed original of a procedural document, including the schedule of items and documents referred to in paragraph 4, is received at the Registry by telefax or any other technical means of communication available to the Court shall be deemed to be the date and time of lodgment for the purposes of compliance with the procedural time-limits, provided that the signed original of the procedural document, accompanied by the annexes and copies referred to in paragraph 2, is lodged at the Registry no later than 10 days thereafter.

8. Without prejudice to paragraphs 3 to 6, the Court may, by decision, determine the criteria for a procedural document sent to the Registry by electronic means to be deemed to be the original of that document. That decision shall be published in the *Official Journal of the European Union*.

Article 58

Length of procedural documents

Without prejudice to any special provisions laid down in these Rules, the Court may, by decision, set the maximum length of written pleadings or observations lodged before it. That decision shall be published in the *Official Journal of the European Union*.

Chapter 6

THE PRELIMINARY REPORT AND ASSIGNMENT OF CASES TO FORMATIONS OF THE COURT

Article 59

Preliminary report

1. When the written part of the procedure is closed, the President shall fix a date on which the Judge-Rapporteur is to present a preliminary report to the general meeting of the Court.

2. The preliminary report shall contain proposals as to whether particular measures of organisation of procedure, measures of inquiry or, if appropriate, requests to the referring court or tribunal for clarification should be undertaken, and as to the formation to which the case should be

assigned. It shall also contain the Judge-Rapporteur's proposals, if any, as to whether to dispense with a hearing and as to whether to dispense with an Opinion of the Advocate General pursuant to the fifth paragraph of Article 20 of the Statute.

3. The Court shall decide, after hearing the Advocate General, what action to take on the proposals of the Judge-Rapporteur.

Article 60

Assignment of cases to formations of the Court

1. The Court shall assign to the Chambers of five and of three Judges any case brought before it in so far as the difficulty or importance of the case or particular circumstances are not such as to require that it should be assigned to the Grand Chamber, unless a Member State or an institution of the European Union participating in the proceedings has requested that the case be assigned to the Grand Chamber, pursuant to the third paragraph of Article 16 of the Statute.

2. The Court shall sit as a full Court where cases are brought before it pursuant to the provisions referred to in the fourth paragraph of Article 16 of the Statute. It may assign a case to the full Court where, in accordance with the fifth paragraph of Article 16 of the Statute, it considers that the case is of exceptional importance.

3. The formation to which a case has been assigned may, at any stage of the proceedings, request the Court to assign the case to a formation composed of a greater number of Judges.

4. Where the oral part of the procedure is opened without an inquiry, the President of the formation determining the case shall fix the opening date.

Chapter 7

MEASURES OF ORGANISATION OF PROCEDURE AND MEASURES OF INQUIRY

Section 1. Measures of organisation of procedure

Article 61

Measures of organisation prescribed by the Court

1. In addition to the measures which may be prescribed in accordance with Article 24 of the Statute, the Court may invite the parties or the interested persons referred to in Article 23 of the Statute to answer certain questions in writing, within the time-limit laid down by the Court, or at the hearing. The written replies shall be communicated to the other parties or the interested persons referred to in Article 23 of the Statute.

2. Where a hearing is organised, the Court shall, in so far as possible, invite the participants in that hearing to concentrate in their oral pleadings on one or more specified issues.

Article 62

Measures of organisation prescribed by the Judge-Rapporteur or the Advocate General

1. The Judge-Rapporteur or the Advocate General may request the parties or the interested persons referred to in Article 23 of the Statute to submit within a specified time-limit all such information relating to the facts, and all such documents or other particulars, as they may consider relevant. The replies and documents provided shall be communicated to the other parties or the interested persons referred to in Article 23 of the Statute.

2. The Judge-Rapporteur or the Advocate General may also send to the parties or the interested persons referred to in Article 23 of the Statute questions to be answered at the hearing.

Section 2. Measures of inquiry

Article 63

Decision on measures of inquiry

1. The Court shall decide in its general meeting whether a measure of inquiry is necessary.

2. Where the case has already been assigned to a formation of the Court, the decision shall be taken by that formation.

Article 64

Determination of measures of inquiry

1. The Court, after hearing the Advocate General, shall prescribe the measures of inquiry that it considers appropriate by means of an order setting out the facts to be proved.

2. Without prejudice to Articles 24 and 25 of the Statute, the following measures of inquiry may be adopted:

(a) the personal appearance of the parties;

(b) a request for information and production of documents;

(c) oral testimony;

(d) the commissioning of an expert's report;

(e) an inspection of the place or thing in question.

3. Evidence may be submitted in rebuttal and previous evidence may be amplified.

Article 65

Participation in measures of inquiry

1. Where the formation of the Court does not undertake the inquiry itself, it shall entrust the task of so doing to the Judge-Rapporteur.

2. The Advocate General shall take part in the measures of inquiry.

3. The parties shall be entitled to attend the measures of inquiry.

Article 66

Oral testimony

1. The Court may, either of its own motion or at the request of one of the parties, and after hearing the Advocate General, order that certain facts be proved by witnesses.

2. A request by a party for the examination of a witness shall state precisely about what facts and for what reasons the witness should be examined.

3. The Court shall rule by reasoned order on the request referred to in the preceding paragraph. If the request is granted, the order shall set out the facts to be established and state which witnesses are to be heard in respect of each of those facts.

4. Witnesses shall be summoned by the Court, where appropriate after lodgment of the security provided for in Article 73(1) of these Rules.

Article 67

Examination of witnesses

1. After the identity of the witness has been established, the President shall inform him that he will be required to vouch the truth of his evidence in the manner laid down in these Rules.

2. The witness shall give his evidence to the Court, the parties having been given notice to attend. After the witness has given his evidence the President may, at the request of one of the parties or of his own motion, put questions to him.

3. The other Judges and the Advocate General may do likewise.

4. Subject to the control of the President, questions may be put to witnesses by the representatives of the parties.

Article 68

Witnesses' oath

1. After giving his evidence, the witness shall take the following oath:

'I swear that I have spoken the truth, the whole truth and nothing but the truth.'

2. The Court may, after hearing the parties, exempt a witness from taking the oath.

Article 69

Pecuniary penalties

1. Witnesses who have been duly summoned shall obey the summons and attend for examination.

2. If, without good reason, a witness who has been duly summoned fails to appear before the Court, the Court may impose upon him a pecuniary penalty not exceeding EUR 5 000 and may order that a further summons be served on the witness at his own expense.

3. The same penalty may be imposed upon a witness who, without good reason, refuses to give evidence or to take the oath.

Article 70

Expert's report

1. The Court may order that an expert's report be obtained. The order appointing the expert shall define his task and set a time-limit within which he is to submit his report.

2. After the expert has submitted his report and that report has been served on the parties, the Court may order that the expert be examined, the parties having been given notice to attend. At the request of one of the parties or of his own motion, the President may put questions to the expert.

3. The other Judges and the Advocate General may do likewise.

4. Subject to the control of the President, questions may be put to the expert by the representatives of the parties.

Article 71

Expert's oath

1. After making his report, the expert shall take the following oath:

'I swear that I have conscientiously and impartially carried out my task.'

2. The Court may, after hearing the parties, exempt the expert from taking the oath.

Article 72

Objection to a witness or expert

1. If one of the parties objects to a witness or an expert on the ground that he is not a competent or proper person to act as a witness or expert or for any other reason, or if a witness or expert refuses to give evidence or to take the oath, the matter shall be resolved by the Court.

2. An objection to a witness or an expert shall be raised within two weeks after service of the order summoning the witness or appointing the expert; the statement of objection must set out the grounds of objection and indicate the nature of any evidence offered.

Article 73

Witnesses' and experts' costs

1. Where the Court orders the examination of witnesses or an expert's report, it may request the parties or one of them to lodge security for the witnesses' costs or the costs of the expert's report.

2. Witnesses and experts shall be entitled to reimbursement of their travel and subsistence expenses. The cashier of the Court may make an advance payment towards these expenses.

3. Witnesses shall be entitled to compensation for loss of earnings, and experts to fees for their services. The cashier of the Court shall pay witnesses and experts these sums after they have carried out their respective duties or tasks.

Article 74

Minutes of inquiry hearings

1. The Registrar shall draw up minutes of every inquiry hearing. The minutes shall be signed by the President and by the Registrar. They shall constitute an official record.

2. In the case of the examination of witnesses or experts, the minutes shall be signed by the President or by the Judge-Rapporteur responsible for conducting the examination of the witness or expert, and by the Registrar. Before the minutes are thus signed, the witness or expert must be given an opportunity to check the content of the minutes and to sign them.

3. The minutes shall be served on the parties.

Article 75

Opening of the oral part of the procedure after the inquiry

1. Unless the Court decides to prescribe a time-limit within which the parties may submit written observations, the President shall fix the date for the opening of the oral part of the procedure after the measures of inquiry have been completed.

2. Where a time-limit has been prescribed for the submission of written observations, the President shall fix the date for the opening of the oral part of the procedure after that time-limit has expired.

Chapter 8

ORAL PART OF THE PROCEDURE

Article 76

Hearing

1. Any reasoned requests for a hearing shall be submitted within three weeks after service on the parties or the interested persons referred to in Article 23 of the Statute of notification of the close of the written part of the procedure. That time-limit may be extended by the President.

2. On a proposal from the Judge-Rapporteur and after hearing the Advocate General, the Court may decide not to hold a hearing if it considers, on reading the written pleadings or observations lodged during the written part of the procedure, that it has sufficient information to give a ruling.

3. The preceding paragraph shall not apply where a request for a hearing, stating reasons, has been submitted by an interested person referred to in Article 23 of the Statute who did not participate in the written part of the procedure.

Article 77

Joint hearing

If the similarities between two or more cases of the same type so permit, the Court may decide to organise a joint hearing of those cases.

Article 78

Conduct of oral proceedings

Oral proceedings shall be opened and directed by the President, who shall be responsible for the proper conduct of the hearing.

Article 79

Cases heard in camera

1. For serious reasons related, in particular, to the security of the Member States or to the protection of minors, the Court may decide to hear a case *in camera*.

2. The oral proceedings in cases heard *in camera* shall not be published.

Article 80

Questions

The members of the formation of the Court and the Advocate General may in the course of the hearing put questions to the agents, advisers or lawyers of the parties and, in the circumstances referred to in Article 47(2) of these Rules, to the parties to the main proceedings or to their representatives.

Article 81

Close of the hearing

After the parties or the interested persons referred to in Article 23 of the Statute have presented oral argument, the President shall declare the hearing closed.

Article 82

Delivery of the Opinion of the Advocate General

1. Where a hearing takes place, the Opinion of the Advocate General shall be delivered after the close of that hearing.

2. The President shall declare the oral part of the procedure closed after the Advocate General has delivered his Opinion.

Article 83

Opening or reopening of the oral part of the procedure

The Court may at any time, after hearing the Advocate General, order the opening or reopening of the oral part of the procedure, in particular if it considers that it lacks sufficient information or where a party has, after the close of that part of the procedure, submitted a new fact which is of such a nature as to be a decisive factor for the decision of the Court, or where the case must be decided on the basis of an argument which has not been debated between the parties or the interested persons referred to in Article 23 of the Statute.

Article 84

Minutes of hearings

1. The Registrar shall draw up minutes of every hearing. The minutes shall be signed by the President and by the Registrar. They shall constitute an official record.

2. The parties and interested persons referred to in Article 23 of the Statute may inspect the minutes at the Registry and obtain copies.

Article 85

Recording of the hearing

The President may, on a duly substantiated request, authorise a party or an interested person referred to in Article 23 of the Statute who has participated in the written or oral part of the proceedings to listen, on the Court's premises, to the soundtrack of the hearing in the language used by the speaker during that hearing.

Chapter 9

JUDGMENTS AND ORDERS

Article 86

Date of delivery of a judgment

The parties or interested persons referred to in Article 23 of the Statute shall be informed of the date of delivery of a judgment.

Article 87

Content of a judgment

A judgment shall contain:

(a) a statement that it is the judgment of the Court,

(b) an indication as to the formation of the Court,

(c) the date of delivery,

(d) the names of the President and of the Judges who took part in the deliberations, with an indication as to the name of the Judge-Rapporteur,

(e) the name of the Advocate General,

(f) the name of the Registrar,

(g) a description of the parties or of the interested persons referred to in Article 23 of the Statute who participated in the proceedings,

(h) the names of their representatives,

(i) in the case of direct actions and appeals, a statement of the forms of order sought by the parties,

(j) where applicable, the date of the hearing,

(k) a statement that the Advocate General has been heard and, where applicable, the date of his Opinion,

(l) a summary of the facts,

(m) the grounds for the decision,

(n) the operative part of the judgment, including, where appropriate, the decision as to costs.

Article 88

Delivery and service of the judgment

1. The judgment shall be delivered in open court.

2. The original of the judgment, signed by the President, by the Judges who took part in the deliberations and by the Registrar, shall be sealed and deposited at the Registry; certified copies of the judgment shall be served on the parties and, where applicable, the referring court or tribunal, the interested persons referred to in Article 23 of the Statute and the General Court.

Article 89

Content of an order

1. An order shall contain:

(a) a statement that it is the order of the Court,

(b) an indication as to the formation of the Court,

(c) the date of its adoption,

(d) an indication as to the legal basis of the order,

(e) the names of the President and, where applicable, the Judges who took part in the deliberations, with an indication as to the name of the Judge-Rapporteur,

(f) the name of the Advocate General,

(g) the name of the Registrar,

(h) a description of the parties or of the parties to the main proceedings,

(i) the names of their representatives,

(j) a statement that the Advocate General has been heard,

(k) the operative part of the order, including, where appropriate, the decision as to costs.

2. Where, in accordance with these Rules, an order must be reasoned, it shall in addition contain:

(a) in the case of direct actions and appeals, a statement of the forms of order sought by the parties,

(b) a summary of the facts,

(c) the grounds for the decision.

Article 90

Signature and service of the order

The original of the order, signed by the President and by the Registrar, shall be sealed and deposited at the Registry; certified copies of the order shall be served on the parties and, where applicable, the referring court or tribunal, the interested persons referred to in Article 23 of the Statute and the General Court.

Article 91

Binding nature of judgments and orders

1. A judgment shall be binding from the date of its delivery.

2. An order shall be binding from the date of its service.

Article 92

Publication in the Official Journal of the European Union

A notice containing the date and the operative part of the judgment or order of the Court which closes the proceedings shall be published in the *Official Journal of the European Union*.

TITLE III

REFERENCES FOR A PRELIMINARY RULING

Chapter 1

GENERAL PROVISIONS

Article 93

Scope

The procedure shall be governed by the provisions of this Title:

(a) in the cases covered by Article 23 of the Statute,

(b) as regards references for interpretation which may be provided for by agreements to which the European Union or the Member States are parties.

Article 94

Content of the request for a preliminary ruling

In addition to the text of the questions referred to the Court for a preliminary ruling, the request for a preliminary ruling shall contain:

(a) a summary of the subject-matter of the dispute and the relevant findings of fact as determined by the referring court or tribunal, or, at least, an account of the facts on which the questions are based;

(b) the tenor of any national provisions applicable in the case and, where appropriate, the relevant national case-law;

(c) a statement of the reasons which prompted the referring court or tribunal to inquire about the interpretation or validity of certain provisions of European Union law, and the relationship between those provisions and the national legislation applicable to the main proceedings.

Article 95

Anonymity

1. Where anonymity has been granted by the referring court or tribunal, the Court shall respect that anonymity in the proceedings pending before it.

2. At the request of the referring court or tribunal, at the duly reasoned request of a party to the main proceedings or of its own motion, the Court may also, if it considers it necessary, render anonymous one or more persons or entities concerned by the case.

Article 96

Participation in preliminary ruling proceedings

1. Pursuant to Article 23 of the Statute, the following shall be authorised to submit observations to the Court:

(a) the parties to the main proceedings,

(b) the Member States,

(c) the European Commission,

(d) the institution which adopted the act the validity or interpretation of which is in dispute,

(e) the States, other than the Member States, which are parties to the EEA Agreement, and also the EFTA Surveillance Authority, where a question concerning one of the fields of application of that Agreement is referred to the Court for a preliminary ruling,

(f) non-Member States which are parties to an agreement relating to a specific subject-matter, concluded with the Council, where the agreement so provides and where a court or tribunal of a Member State refers to the Court of Justice for a preliminary ruling a question falling within the scope of that agreement.

2. Non-participation in the written part of the procedure does not preclude participation in the oral part of the procedure.

Article 97

Parties to the main proceedings

1. The parties to the main proceedings are those who are determined as such by the referring court or tribunal in accordance with national rules of procedure.

2. Where the referring court or tribunal informs the Court that a new party has been admitted to the main proceedings, when the proceedings before the Court are already pending, that party must accept the case as he finds it at the time when the Court was so informed. That party shall receive a copy of every procedural document already served on the interested persons referred to in Article 23 of the Statute.

3. As regards the representation and attendance of the parties to the main proceedings, the Court shall take account of the rules of procedure in force before the court or tribunal which made the reference. In the event of any doubt as to whether a person may under national law represent a party to the main proceedings, the Court may obtain information from the referring court or tribunal on the rules of procedure applicable.

Article 98

Translation and service of the request for a preliminary ruling

1. The requests for a preliminary ruling referred to in this Title shall be served on the Member States in the original version, accompanied by a translation into the official language of the State to which they are being addressed. Where appropriate, on account of the length of the request, such translation shall be replaced by the translation into the official language of the State to which it is addressed of a summary of that request, which will serve as a basis for the position to be adopted by that State. The summary shall include the full text of the question or questions referred for a preliminary ruling. That summary shall contain, in particular, in so far as that information appears in the request for a preliminary ruling, the subject-matter of the main proceedings, the essential arguments of the parties to those proceedings, a succinct presentation of the reasons for the reference for a preliminary ruling and the case-law and the provisions of national law and European Union law relied on.

2. In the cases covered by the third paragraph of Article 23 of the Statute, the requests for a preliminary ruling shall be served on the States, other than the Member States, which are parties to the EEA Agreement and also on the EFTA Surveillance Authority in the original version, accompanied by a translation of the request, or where appropriate of a summary, into one of the languages referred to in Article 36, to be chosen by the addressee.

3. Where a non-Member State has the right to take part in preliminary ruling proceedings pursuant to the fourth paragraph of Article 23 of the Statute, the original version of the request for a preliminary ruling shall be served on it accompanied by a translation of the request, or where appropriate of a summary, into one of the languages referred to in Article 36, to be chosen by the non-Member State concerned.

Article 99

Reply by reasoned order

Where a question referred to the Court for a preliminary ruling is identical to a question on which the Court has already ruled, where the reply to such a question may be clearly deduced from existing case-law or where the answer to the question referred for a preliminary ruling admits of no reasonable doubt, the Court may at any time, on a proposal from the Judge-Rapporteur and after hearing the Advocate General, decide to rule by reasoned order.

Article 100

Circumstances in which the Court remains seised

1. The Court shall remain seised of a request for a preliminary ruling for as long as it is not withdrawn by the court or tribunal which made that request to the Court. The withdrawal of a request may be taken into account until notice of the date of delivery of the judgment has been served on the interested persons referred to in Article 23 of the Statute.

2. However, the Court may at any time declare that the conditions of its jurisdiction are no longer fulfilled.

Article 101

Request for clarification

1. Without prejudice to the measures of organisation of procedure and measures of inquiry provided for in these Rules, the Court may, after hearing the Advocate General, request clarification from the referring court or tribunal within a time-limit prescribed by the Court.

2. The reply of the referring court or tribunal to that request shall be served on the interested persons referred to in Article 23 of the Statute.

Article 102

Costs of the preliminary ruling proceedings

It shall be for the referring court or tribunal to decide as to the costs of the preliminary ruling proceedings.

Article 103

Rectification of judgments and orders

1. Clerical mistakes, errors in calculation and obvious inaccuracies affecting judgments or orders may be rectified by the Court, of its own motion or at the request of an interested person referred to in Article 23 of the Statute made within two weeks after delivery of the judgment or service of the order.

2. The Court shall take its decision after hearing the Advocate General.

3. The original of the rectification order shall be annexed to the original of the rectified decision. A note of this order shall be made in the margin of the original of the rectified decision.

Article 104

Interpretation of preliminary rulings

1. Article 158 of these Rules relating to the interpretation of judgments and orders shall not apply to decisions given in reply to a request for a preliminary ruling.

2. It shall be for the national courts or tribunals to assess whether they consider that sufficient guidance is given by a preliminary ruling, or whether it appears to them that a further reference to the Court is required.

Chapter 2

EXPEDITED PRELIMINARY RULING PROCEDURE

Article 105

Expedited procedure

1. At the request of the referring court or tribunal or, exceptionally, of his own motion, the President of the Court may, where the nature of the case requires that it be dealt with within a short time, after hearing the Judge-Rapporteur and the Advocate General, decide that a reference for a preliminary ruling is to be determined pursuant to an expedited procedure derogating from the provisions of these Rules.

2. In that event, the President shall immediately fix the date for the hearing, which shall be communicated to the interested persons referred to in Article 23 of the Statute when the request for a preliminary ruling is served.

3. The interested persons referred to in the preceding paragraph may lodge statements of case or written observations within a time-limit prescribed by the President, which shall not be less than 15 days. The President may request those interested persons to restrict the matters addressed in their statement of case or written observations to the essential points of law raised by the request for a preliminary ruling.

4. The statements of case or written observations, if any, shall be communicated to all the interested persons referred to in Article 23 of the Statute prior to the hearing.

5. The Court shall rule after hearing the Advocate General.

Article 106

Transmission of procedural documents

1. The procedural documents referred to in the preceding Article shall be deemed to have been lodged on the transmission to the Registry, by telefax or any other technical means of communication available to the Court, of a copy of the signed original and the items and documents relied on in support of it, together with the schedule referred to in Article 57(4). The original of the document and the annexes referred to above shall be sent to the Registry immediately.

2. Where the preceding Article requires that a document be served on or communicated to a person, such service or communication may be effected by transmission of a copy of the document by telefax or any other technical means of communication available to the Court and the addressee.

Chapter 3

URGENT PRELIMINARY RULING PROCEDURE

Article 107

Scope of the urgent preliminary ruling procedure

1. A reference for a preliminary ruling which raises one or more questions in the areas covered by Title V of Part Three of the Treaty on the Functioning of the European Union may, at the request of the referring court or tribunal or, exceptionally, of the Court's own motion, be dealt with under an urgent procedure derogating from the provisions of these Rules.

2. The referring court or tribunal shall set out the matters of fact and law which establish the urgency and justify the application of that exceptional procedure and shall, in so far as possible, indicate the answer that it proposes to the questions referred.

3. If the referring court or tribunal has not submitted a request for the urgent procedure to be applied, the President of the Court may, if the application of that procedure appears, prima facie, to be required, ask the Chamber referred to in Article 108 to consider whether it is necessary to deal with the reference under that procedure.

Article 108

Decision as to urgency

1. The decision to deal with a reference for a preliminary ruling under the urgent procedure shall be taken by the designated Chamber, acting on a proposal from the Judge-Rapporteur and after hearing the Advocate General. The composition of that Chamber shall be determined in accordance with Article 28(2) on the day on which the case is assigned to the Judge-Rapporteur if the application of the urgent procedure is requested by the referring court or tribunal, or, if the application of that procedure is considered at the request of the President of the Court, on the day on which that request is made.

2. If the case is connected with a pending case assigned to a Judge-Rapporteur who is not a member of the designated Chamber, that Chamber may propose to the President of the Court that the case be assigned to that Judge-Rapporteur. Where the case is reassigned to that Judge-Rapporteur, the Chamber of five Judges which includes him shall carry out the duties of the designated Chamber in respect of that case. Article 29(1) shall apply.

Article 109

Written part of the urgent procedure

1. A request for a preliminary ruling shall, where the referring court or tribunal has requested the application of the urgent procedure or where the President has requested the designated Chamber to consider whether it is necessary to deal with the reference under that procedure, be served forthwith by the Registrar on the parties to the main proceedings, on the Member State from which the reference is made, on the European Commission and on the institution which adopted the act the validity or interpretation of which is in dispute.

2. The decision as to whether or not to deal with the reference for a preliminary ruling under the urgent procedure shall be served immediately on the referring court or tribunal and on the parties, Member State and institutions referred to in

the preceding paragraph. The decision to deal with the reference under the urgent procedure shall prescribe the time-limit within which those parties or entities may lodge statements of case or written observations. The decision may specify the matters of law to which such statements of case or written observations must relate and may specify the maximum length of those documents.

3. Where a request for a preliminary ruling refers to an administrative procedure or judicial proceedings conducted in a Member State other than that from which the reference is made, the Court may invite that first Member State to provide all relevant information in writing or at the hearing.

4. As soon as the service referred to in paragraph 1 above has been effected, the request for a preliminary ruling shall also be communicated to the interested persons referred to in Article 23 of the Statute, other than the persons served, and the decision whether or not to deal with the reference for a preliminary ruling under the urgent procedure shall be communicated to those interested persons as soon as the service referred to in paragraph 2 has been effected.

5. The interested persons referred to in Article 23 of the Statute shall be informed as soon as possible of the likely date of the hearing.

6. Where the reference is not to be dealt with under the urgent procedure, the proceedings shall continue in accordance with the provisions of Article 23 of the Statute and the applicable provisions of these Rules.

Article 110

Service and information following the close of the written part of the procedure

1. Where a reference for a preliminary ruling is to be dealt with under the urgent procedure, the request for a preliminary ruling and the statements of case or written observations which have been lodged shall be served on the interested persons referred to in Article 23 of the Statute other than the parties and entities referred to in Article 109(1). The request for a preliminary ruling shall be accompanied by a translation, where appropriate of a summary, in accordance with Article 98.

2. The statements of case or written observations which have been lodged shall also be served on the parties and other interested persons referred to in Article 109(1).

3. The date of the hearing shall be communicated to the interested persons referred to in Article 23 of the Statute at the same time as the documents referred to in the preceding paragraphs are served.

Article 111

Omission of the written part of the procedure

The designated Chamber may, in cases of extreme urgency, decide to omit the written part of the procedure referred to in Article 109(2).

Article 112

Decision on the substance

The designated Chamber shall rule after hearing the Advocate General.

Article 113

Formation of the Court

1. The designated Chamber may decide to sit in a formation of three Judges. In that event, it shall be composed of the President of the designated Chamber, the Judge-Rapporteur and the first Judge or, as the case may be, the first two Judges designated from the list referred to in Article 28(2) on the date on which the composition of the designated Chamber is determined in accordance with Article 108(1).

2. The designated Chamber may also request the Court to assign the case to a formation composed of a greater number of Judges. The urgent procedure shall continue before the new formation of the Court, where necessary after the reopening of the oral part of the procedure.

Article 114

Transmission of procedural documents

Procedural documents shall be transmitted in accordance with Article 106.

Chapter 4

LEGAL AID

Article 115

Application for legal aid

1. A party to the main proceedings who is wholly or in part unable to meet the costs of the proceedings before the Court may at any time apply for legal aid.

2. The application shall be accompanied by all information and supporting documents making it possible to assess the applicant's financial situation, such as a certificate issued by a competent national authority attesting to his financial situation.

3. If the applicant has already obtained legal aid before the referring court or tribunal, he shall produce the decision of that court or tribunal and specify what is covered by the sums already granted.

Article 116

Decision on the application for legal aid

1. As soon as the application for legal aid has been lodged it shall be assigned by the President to the Judge-Rapporteur responsible for the case in the context of which the application has been made.

2. The decision to grant legal aid, in full or in part, or to refuse it shall be taken, on a proposal from the Judge-Rapporteur and after hearing the Advocate General, by the Chamber of three Judges to which the Judge-Rapporteur is assigned. The formation of the Court shall, in that event, be composed of the President of that Chamber, the Judge-Rapporteur and the first Judge or, as the case may be, the first two Judges designated from the list referred to in Article 28(3) on the date on which the application for legal aid is brought before that Chamber by the Judge-Rapporteur.

3. If the Judge-Rapporteur is not a member of a Chamber of three Judges, the decision shall be taken, under the same conditions, by the Chamber of five Judges to which he is assigned. In addition to the Judge-Rapporteur, the formation of the Court shall be composed of four Judges designated from the list referred to in Article 28(2) on the date on which the application for legal aid is brought before that Chamber by the Judge-Rapporteur.

4. The formation of the Court shall give its decision by way of order. Where the application for legal aid is refused in whole or in part, the order shall state the reasons for that refusal.

Article 117

Sums to be advanced as legal aid

Where legal aid is granted, the cashier of the Court shall be responsible, where applicable within the limits set by the formation of the Court, for costs involved in the assistance and representation of the applicant before the Court. At the request of the applicant or his representative, an advance on those costs may be paid.

Article 118

Withdrawal of legal aid

The formation of the Court which gave a decision on the application for legal aid may at any time, either of its own motion or on request, withdraw that legal aid if the circumstances which led to its being granted alter during the proceedings.

TITLE IV

DIRECT ACTIONS

Chapter 1

REPRESENTATION OF THE PARTIES

Article 119

Obligation to be represented

1. A party may be represented only by his agent or lawyer.

2. Agents and lawyers must lodge at the Registry an official document or an authority to act issued by the party whom they represent.

3. The lawyer acting for a party must also lodge at the Registry a certificate that he is authorised to practise before a court of a Member State or of another State which is a party to the EEA Agreement.

4. If those documents are not lodged, the Registrar shall prescribe a reasonable time-limit within which the party concerned is to produce them. If the applicant fails to produce the required documents within the time-limit prescribed, the Court shall, after hearing the Judge-Rapporteur and the Advocate General, decide whether the non-compliance with that procedural requirement renders the application or written pleading formally inadmissible.

Chapter 2

WRITTEN PART OF THE PROCEDURE

Article 120

Content of the application

An application of the kind referred to in Article 21 of the Statute shall state:

(a) the name and address of the applicant;

(b) the name of the party against whom the application is made;

(c) the subject-matter of the proceedings, the pleas in law and arguments relied on and a summary of those pleas in law;

(d) the form of order sought by the applicant;

(e) where appropriate, any evidence produced or offered.

Article 121

Information relating to service

1. For the purpose of the proceedings, the application shall state an address for service. It shall indicate the name of the person who is authorised and has expressed willingness to accept service.

2. In addition to, or instead of, specifying an address for service as referred to in paragraph 1, the application may state that the lawyer or agent agrees that service is to be effected on him by telefax or any other technical means of communication.

3. If the application does not comply with the requirements referred to in paragraphs 1 or 2, all service on the party concerned for the purpose of the proceedings shall be effected, for so long as the defect has not been cured, by registered letter addressed to the agent or lawyer of that party. By way of derogation from Article 48, service shall then be deemed to be duly effected by the lodging of the registered letter at the post office of the place in which the Court has its seat.

Article 122

Annexes to the application

1. The application shall be accompanied, where appropriate, by the documents specified in the second paragraph of Article 21 of the Statute.

2. An application submitted under Article 273 TFEU shall be accompanied by a copy of the special agreement concluded between the Member States concerned.

3. If an application does not comply with the requirements set out in paragraphs 1 or 2 of this Article, the Registrar shall prescribe a reasonable time-limit within which the applicant is to produce the abovementioned documents. If the applicant fails to put the application in order, the Court shall, after hearing the Judge-Rapporteur and the Advocate General, decide whether the non-compliance with these conditions renders the application formally inadmissible.

Article 123

Service of the application

The application shall be served on the defendant. In cases where Article 119(4) or Article 122(3) applies, service shall be effected as soon as the application has been put in order or the Court has declared it admissible notwithstanding the failure to observe the requirements set out in those two Articles.

Article 124

Content of the defence

1. Within two months after service on him of the application, the defendant shall lodge a defence, stating:

(a) the name and address of the defendant;

(b) the pleas in law and arguments relied on;

(c) the form of order sought by the defendant;

(d) where appropriate, any evidence produced or offered.

2. Article 121 shall apply to the defence.

3. The time-limit laid down in paragraph 1 may exceptionally be extended by the President at the duly reasoned request of the defendant.

Article 125

Transmission of documents

Where the European Parliament, the Council or the European Commission is not a party to a case, the Court shall send to them copies of the application and of the defence, without the annexes thereto, to enable them to assess whether the inapplicability of one of their acts is being invoked under Article 277 TFEU.

Article 126

Reply and rejoinder

1. The application initiating proceedings and the defence may be supplemented by a reply from the applicant and by a rejoinder from the defendant.

2. The President shall prescribe the time-limits within which those procedural documents are to be produced. He may specify the matters to which the reply or the rejoinder should relate.

Chapter 3

PLEAS IN LAW AND EVIDENCE

Article 127

New pleas in law

1. No new plea in law may be introduced in the course of proceedings unless it is based on matters of law or of fact which come to light in the course of the procedure.

2. Without prejudice to the decision to be taken on the admissibility of the plea in law, the President may, on a proposal from the Judge-Rapporteur and after hearing the Advocate General, prescribe a time-limit within which the other party may respond to that plea.

Article 128

Evidence produced or offered

1. In reply or rejoinder a party may produce or offer further evidence in support of his arguments. The party must give reasons for the delay in submitting such evidence.

2. The parties may, exceptionally, produce or offer further evidence after the close of the written part of the procedure. They must give reasons for the delay in submitting such evidence. The President may, on a proposal from the Judge-Rapporteur and after hearing the Advocate General, prescribe a time-limit within which the other party may comment on such evidence.

Chapter 4

INTERVENTION

Article 129

Object and effects of the intervention

1. The intervention shall be limited to supporting, in whole or in part, the form of order sought by one of the parties. It shall not confer the same procedural rights as those conferred on the parties and, in particular, shall not give rise to any right to request that a hearing be held.

2. The intervention shall be ancillary to the main proceedings. It shall become devoid of purpose if the case is removed from the register of the Court as a result of a party's discontinuance or withdrawal from the proceedings or of an agreement between the parties, or where the application is declared inadmissible.

3. The intervener must accept the case as he finds it at the time of his intervention.

4. Consideration may be given to an application to intervene which is made after the expiry of the time-limit prescribed in Article 130 but before the decision to open the oral part of the procedure provided for in Article 60(4). In that event, if the President allows the intervention, the intervener may submit his observations during the hearing, if it takes place.

Article 130

Application to intervene

1. An application to intervene must be submitted within six weeks of the publication of the notice referred to in Article 21(4).

2. The application to intervene shall contain:

(a) a description of the case;

(b) a description of the main parties;

(c) the name and address of the intervener;

(d) the form of order sought, in support of which the intervener is applying for leave to intervene;

(e) a statement of the circumstances establishing the right to intervene, where the application is submitted pursuant to the second or third paragraph of Article 40 of the Statute.

3. The intervener shall be represented in accordance with Article 19 of the Statute.

4. Articles 119, 121 and 122 of these Rules shall apply.

Article 131

Decision on applications to intervene

1. The application to intervene shall be served on the parties in order to obtain any written or oral observations they may wish to make on that application.

2. Where the application is submitted pursuant to the first or third paragraph of Article 40 of the Statute, the intervention shall be allowed by decision of the President and the intervener shall receive a copy of every procedural document served on the parties, provided that those parties have not, within 10 days after the service referred to in paragraph 1 has been effected, put forward observations on the application to intervene or identified secret or confidential items or documents which, if communicated to the intervener, the parties claim would be prejudicial to them.

3. In any other case, the President shall decide on the application to intervene by order or shall refer the application to the Court.

4. If the application to intervene is granted, the intervener shall receive a copy of every procedural document served on the parties, save, where applicable, for the secret or confidential items or documents excluded from such communication pursuant to paragraph 3.

Article 132

Submission of statements

1. The intervener may submit a statement in intervention within one month after communication of the procedural documents referred to in the preceding Article. That time-limit may be extended by the President at the duly reasoned request of the intervener.

2. The statement in intervention shall contain:

(a) the form of order sought by the intervener in support, in whole or in part, of the form of order sought by one of the parties;

(b) the pleas in law and arguments relied on by the intervener;

(c) where appropriate, any evidence produced or offered.

3. After the statement in intervention has been lodged, the President shall, where necessary, prescribe a time-limit within which the parties may reply to that statement.

Chapter 5

EXPEDITED PROCEDURE

Article 133

Decision relating to the expedited procedure

1. At the request of the applicant or the defendant, the President of the Court may, where the nature of the case requires that it be dealt with within a short time, after hearing the other party, the Judge-Rapporteur and the Advocate General, decide that a case is to be determined pursuant to an expedited procedure derogating from the provisions of these Rules.

2. The request for a case to be determined pursuant to an expedited procedure must be made by a separate document submitted at the same time as the application initiating proceedings or the defence, as the case may be, is lodged.

3. Exceptionally the President may also take such a decision of his own motion, after hearing the parties, the Judge-Rapporteur and the Advocate General.

Article 134

Written part of the procedure

1. Under the expedited procedure, the application initiating proceedings and the defence may be supplemented by a reply and a rejoinder only if the President, after hearing the Judge-Rapporteur and the Advocate General, considers this to be necessary.

2. An intervener may submit a statement in intervention only if the President, after hearing the Judge-Rapporteur and the Advocate General, considers this to be necessary.

Article 135

Oral part of the procedure

1. Once the defence has been submitted or, if the decision to determine the case pursuant to an expedited procedure is not made until after that pleading has been lodged, once that decision has been taken, the President shall fix a date for the hearing, which shall be communicated forthwith to the parties. He may postpone the date of the hearing where it is necessary to undertake measures of inquiry or where measures of organisation of procedure so require.

2. Without prejudice to Articles 127 and 128, a party may supplement his arguments and produce or offer evidence during the oral part of the procedure. The party must, however, give reasons for the delay in producing such further arguments or evidence.

Article 136

Decision on the substance

The Court shall give its ruling after hearing the Advocate General.

Chapter 6

COSTS

Article 137

Decision as to costs

A decision as to costs shall be given in the judgment or order which closes the proceedings.

Article 138

General rules as to allocation of costs

1. The unsuccessful party shall be ordered to pay the costs if they have been applied for in the successful party's pleadings.

2. Where there is more than one unsuccessful party the Court shall decide how the costs are to be shared.

3. Where each party succeeds on some and fails on other heads, the parties shall bear their own costs. However, if it appears justified in the circumstances of the case, the Court may order that one party, in addition to bearing its own costs, pay a proportion of the costs of the other party.

Article 139

Unreasonable or vexatious costs

The Court may order a party, even if successful, to pay costs which the Court considers that party to have unreasonably or vexatiously caused the opposite party to incur.

Article 140

Costs of interveners

1. The Member States and institutions which have intervened in the proceedings shall bear their own costs.

2. The States, other than the Member States, which are parties to the EEA Agreement, and also the EFTA Surveillance Authority, shall similarly bear their own costs if they have intervened in the proceedings.

3. The Court may order an intervener other than those referred to in the preceding paragraphs to bear his own costs.

Article 141

Costs in the event of discontinuance or withdrawal

1. A party who discontinues or withdraws from proceedings shall be ordered to pay the costs if they have been applied for in the other party's observations on the discontinuance.

2. However, at the request of the party who discontinues or withdraws from proceedings, the costs shall be borne by the other party if this appears justified by the conduct of that party.

3. Where the parties have come to an agreement on costs, the decision as to costs shall be in accordance with that agreement.

4. If costs are not claimed, the parties shall bear their own costs.

Article 142

Costs where a case does not proceed to judgment

Where a case does not proceed to judgment the costs shall be in the discretion of the Court.

Article 143

Costs of proceedings

Proceedings before the Court shall be free of charge, except that:

(a) where a party has caused the Court to incur avoidable costs the Court may, after hearing the Advocate General, order that party to refund them;

(b) where copying or translation work is carried out at the request of a party, the cost shall, in so far as the Registrar considers it excessive, be paid for by that party on the Registry's scale of charges referred to in Article 22.

Article 144

Recoverable costs

Without prejudice to the preceding Article, the following shall be regarded as recoverable costs:

(a) sums payable to witnesses and experts under Article 73 of these Rules;

(b) expenses necessarily incurred by the parties for the purpose of the proceedings, in particular the travel and subsistence expenses and the remuneration of agents, advisers or lawyers.

Article 145

Dispute concerning the costs to be recovered

1. If there is a dispute concerning the costs to be recovered, the Chamber of three Judges to which the Judge-Rapporteur who dealt with the case is assigned shall, on application by the party concerned and after hearing the opposite party and the Advocate General, make an order. In that event, the formation of the Court shall be composed of the President of that Chamber, the Judge-Rapporteur and the first Judge or, as the case may be, the first two Judges designated from the list referred to in Article 28(3) on the date on which the dispute is brought before that Chamber by the Judge-Rapporteur.

2. If the Judge-Rapporteur is not a member of a Chamber of three Judges, the decision shall be taken, under the same conditions, by the Chamber of five Judges to which he is assigned. In addition to the Judge-Rapporteur, the formation of the Court shall be composed of four Judges designated from the list referred to in Article 28(2) on the date on which the dispute is brought before that Chamber by the Judge-Rapporteur.

3. The parties may, for the purposes of enforcement, apply for an authenticated copy of the order.

Article 146

Procedure for payment

1. Sums due from the cashier of the Court and from its debtors shall be paid in euro.

2. Where costs to be recovered have been incurred in a currency other than the euro or where the steps in respect of which payment is due were taken in a country of which the euro is not the currency, the conversion shall be effected at the European Central Bank's official rates of exchange on the day of payment.

Chapter 7

AMICABLE SETTLEMENT, DISCONTINUANCE, CASES THAT DO NOT PROCEED TO JUDGMENT AND PRELIMINARY ISSUES

Article 147

Amicable settlement

1. If, before the Court has given its decision, the parties reach a settlement of their dispute and inform the Court of the abandonment of their claims, the President shall order the case to be removed from the register and shall give a decision as to costs in accordance with Article 141, having regard to any proposals made by the parties on the matter.

2. This provision shall not apply to proceedings under Articles 263 TFEU and 265 TFEU.

Article 148

Discontinuance

If the applicant informs the Court in writing or at the hearing that he wishes to discontinue the proceedings, the President shall order the case to be removed from the register and shall give a decision as to costs in accordance with Article 141.

Article 149

Cases that do not proceed to judgment

If the Court declares that the action has become devoid of purpose and that there is no longer any need to adjudicate on it, the Court may at any time of its own motion, on a proposal from the Judge-Rapporteur and after hearing the parties and the Advocate General, decide to rule by reasoned order. It shall give a decision as to costs.

Article 150

Absolute bar to proceeding with a case

On a proposal from the Judge-Rapporteur, the Court may at any time of its own motion, after hearing the parties and the Advocate General, decide to rule by reasoned order on whether there exists any absolute bar to proceeding with a case.

Article 151

Preliminary objections and issues

1. A party applying to the Court for a decision on a preliminary objection or issue not going to the substance of the case shall submit the application by a separate document.

2. The application must state the pleas of law and arguments relied on and the form of order sought by the applicant; any supporting items and documents must be annexed to it.

3. As soon as the application has been submitted, the President shall prescribe a time-limit within which the opposite party may submit in writing his pleas in law and the form of order which he seeks.

4. Unless the Court decides otherwise, the remainder of the proceedings on the application shall be oral.

5. The Court shall, after hearing the Advocate General, decide on the application as soon as possible or, where special circumstances so justify, reserve its decision until it rules on the substance of the case.

6. If the Court refuses the application or reserves its decision, the President shall prescribe new time-limits for the further steps in the proceedings.

Chapter 8

JUDGMENTS BY DEFAULT

Article 152

Judgments by default

1. If a defendant on whom an application initiating proceedings has been duly served fails to respond to the application in the proper form and within the time-limit prescribed, the applicant may apply to the Court for judgment by default.

2. The application for judgment by default shall be served on the defendant. The Court may decide to open the oral part of the procedure on the application.

3. Before giving judgment by default the Court shall, after hearing the Advocate General, consider whether the application initiating proceedings is admissible, whether the appropriate formalities have been complied with, and whether the applicant's claims appear well founded. The Court may adopt measures of organisation of procedure or order measures of inquiry.

4. A judgment by default shall be enforceable. The Court may, however, grant a stay of execution until the Court has given its decision on any application under Article 156 to set aside the judgment, or it may make execution subject to the provision of security of an amount and nature to be fixed in the light of the circumstances; this security shall be released if no such application is made or if the application fails.

Chapter 9

REQUESTS AND APPLICATIONS RELATING TO JUDGMENTS AND ORDERS

Article 153

Competent formation of the Court

1. With the exception of applications referred to in Article 159, the requests and applications referred to in this Chapter shall be assigned to the Judge-Rapporteur who was responsible for the case to which the request or application relates, and shall be assigned to the formation of the Court which gave a decision in that case.

2. If the Judge-Rapporteur is prevented from acting, the President of the Court shall assign the request or application referred to in this Chapter to a Judge who was a member of the formation of the Court which gave a decision in the case to which that request or application relates.

3. If the quorum referred to in Article 17 of the Statute can no longer be attained, the Court shall, on a proposal from the Judge-Rapporteur and after hearing the Advocate General, assign the request or application to a new formation of the Court.

Article 154

Rectification

1. Without prejudice to the provisions relating to the interpretation of judgments and orders, clerical mistakes, errors in calculation and obvious inaccuracies may be rectified by the Court, of its own motion or at the request of a party made within two weeks after delivery of the judgment or service of the order.

2. Where the request for rectification concerns the operative part or one of the grounds constituting the necessary support for the operative part, the parties, whom the Registrar shall duly inform, may submit written observations within a time-limit prescribed by the President.

3. The Court shall take its decision after hearing the Advocate General.

4. The original of the rectification order shall be annexed to the original of the rectified decision. A note of this order shall be made in the margin of the original of the rectified decision.

Article 155

Failure to adjudicate

1. If the Court has failed to adjudicate on a specific head of claim or on costs, any party wishing to rely on that may, within a month after service of the decision, apply to the Court to supplement its decision.

2. The application shall be served on the opposite party and the President shall prescribe a time-limit within which that party may submit written observations.

3. After these observations have been submitted, the Court shall, after hearing the Advocate General, decide both on the admissibility and on the substance of the application.

Article 156

Application to set aside

1. Application may be made pursuant to Article 41 of the Statute to set aside a judgment delivered by default.

2. The application to set aside the judgment must be made within one month from the date of service of the judgment and must be submitted in the form prescribed by Articles 120 to 122 of these Rules.

3. After the application has been served, the President shall prescribe a time-limit within which the other party may submit his written observations.

4. The proceedings shall be conducted in accordance with Articles 59 to 92 of these Rules.

5. The Court shall decide by way of a judgment which may not be set aside.

6. The original of this judgment shall be annexed to the original of the judgment by default. A note of the judgment on the application to set aside shall be made in the margin of the original of the judgment by default.

Article 157

Third-party proceedings

1. Articles 120 to 122 of these Rules shall apply to an application initiating third-party proceedings made pursuant to Article 42 of the Statute. In addition such an application shall:

(a) specify the judgment or order contested;

(b) state how the contested decision is prejudicial to the rights of the third party;

(c) indicate the reasons for which the third party was unable to take part in the original case.

2. The application must be made against all the parties to the original case.

3. The application must be submitted within two months of publication of the decision in the *Official Journal of the European Union*.

4. The Court may, on application by the third party, order a stay of execution of the contested decision. The provisions of Chapter 10 of this Title shall apply.

5. The contested decision shall be varied on the points on which the submissions of the third party are upheld.

6. The original of the judgment in the third-party proceedings shall be annexed to the original of the contested decision. A note of the judgment in the third-party proceedings shall be made in the margin of the original of the contested decision.

Article 158

Interpretation

1. In accordance with Article 43 of the Statute, if the meaning or scope of a judgment or order is in doubt, the Court shall construe it on application by any party or any institution of the European Union establishing an interest therein.

2. An application for interpretation must be made within two years after the date of delivery of the judgment or service of the order.

3. An application for interpretation shall be made in accordance with Articles 120 to 122 of these Rules. In addition it shall specify:

(a) the decision in question;

(b) the passages of which interpretation is sought.

4. The application must be made against all the parties to the case in which the decision of which interpretation is sought was given.

5. The Court shall give its decision after having given the parties an opportunity to submit their observations and after hearing the Advocate General.

6. The original of the interpreting decision shall be annexed to the original of the decision interpreted. A note of the interpreting decision shall be made in the margin of the original of the decision interpreted.

Article 159

Revision

1. In accordance with Article 44 of the Statute, an application for revision of a decision of the Court may be made only on discovery of a fact which is of such a nature as to be a decisive factor and which, when the judgment was delivered or the order served, was unknown to the Court and to the party claiming the revision.

2. Without prejudice to the time-limit of 10 years prescribed in the third paragraph of Article 44 of the Statute, an application for revision shall be made within three months of the date on which the facts on which the application is founded came to the applicant's knowledge.

3. Articles 120 to 122 of these Rules shall apply to an application for revision. In addition such an application shall:

(a) specify the judgment or order contested;

(b) indicate the points on which the decision is contested;

(c) set out the facts on which the application is founded;

(d) indicate the nature of the evidence to show that there are facts justifying revision, and that the time-limits laid down in paragraph 2 have been observed.

4. The application for revision must be made against all parties to the case in which the contested decision was given.

5. Without prejudice to its decision on the substance, the Court shall, after hearing the Advocate General, give in the form of an order its decision on the admissibility of the application, having regard to the written observations of the parties.

6. If the Court declares the application admissible, it shall proceed to consider the substance of the application and shall give its decision in the form of a judgment in accordance with these Rules.

7. The original of the revising judgment shall be annexed to the original of the decision revised. A note of the revising judgment shall be made in the margin of the original of the decision revised.

Chapter 10

SUSPENSION OF OPERATION OR ENFORCEMENT AND OTHER INTERIM MEASURES

Article 160

Application for suspension or for interim measures

1. An application to suspend the operation of any measure adopted by an institution, made pursuant to Article 278 TFEU or Article 157 TEAEC, shall be admissible only if the applicant has challenged that measure in an action before the Court.

2. An application for the adoption of one of the other interim measures referred to in Article 279 TFEU shall be admissible only if it is made by a party to a case before the Court and relates to that case.

3. An application of a kind referred to in the preceding paragraphs shall state the subject-matter of the proceedings, the circumstances giving rise to urgency and the pleas of fact and law establishing a prima facie case for the interim measure applied for.

4. The application shall be made by a separate document and in accordance with the provisions of Articles 120 to 122 of these Rules.

5. The application shall be served on the opposite party, and the President shall prescribe a short time-limit within which that party may submit written or oral observations.

6. The President may order a preparatory inquiry.

7. The President may grant the application even before the observations of the opposite party have been submitted. This decision may be varied or cancelled even without any application being made by any party.

Article 161

Decision on the application

1. The President shall either decide on the application himself or refer it immediately to the Court.

2. If the President is prevented from acting, Articles 10 and 13 of these Rules shall apply.

3. Where the application is referred to it, the Court shall give a decision immediately, after hearing the Advocate General.

Article 162

Order for suspension of operation or for interim measures

1. The decision on the application shall take the form of a reasoned order, from which no appeal shall lie. The order shall be served on the parties forthwith.

2. The execution of the order may be made conditional on the lodging by the applicant of security, of an amount and nature to be fixed in the light of the circumstances.

3. Unless the order fixes the date on which the interim measure is to lapse, the measure shall lapse when the judgment which closes the proceedings is delivered.

4. The order shall have only an interim effect, and shall be without prejudice to the decision of the Court on the substance of the case.

Article 163

Change in circumstances

On application by a party, the order may at any time be varied or cancelled on account of a change in circumstances.

Article 164

New application

Rejection of an application for an interim measure shall not bar the party who made it from making a further application on the basis of new facts.

Article 165

Applications pursuant to Articles 280 TFEU and 299 TFEU and Article 164 TEAEC

1. The provisions of this Chapter shall apply to applications to suspend the enforcement of a decision of the Court or of any measure adopted by the Council, the European Commission or the European Central Bank, submitted pursuant to Articles 280 TFEU and 299 TFEU or Article 164 TEAEC.

2. The order granting the application shall fix, where appropriate, a date on which the interim measure is to lapse.

Article 166

Application pursuant to Article 81 TEAEC

1. An application of a kind referred to in the third and fourth paragraphs of Article 81 TEAEC shall contain:

(a) the names and addresses of the persons or undertakings to be inspected;

(b) an indication of what is to be inspected and of the purpose of the inspection.

2. The President shall give his decision in the form of an order. Article 162 of these Rules shall apply.

3. If the President is prevented from acting, Articles 10 and 13 of these Rules shall apply.

TITLE V

APPEALS AGAINST DECISIONS OF THE GENERAL COURT

Chapter 1

FORM AND CONTENT OF THE APPEAL, AND FORM OF ORDER SOUGHT

Article 167

Lodging of the appeal

1. An appeal shall be brought by lodging an application at the Registry of the Court of Justice or of the General Court.

2. The Registry of the General Court shall forthwith transmit to the Registry of the Court of Justice the file in the case at first instance and, where necessary, the appeal.

Article 168

Content of the appeal

1. An appeal shall contain:

(a) the name and address of the appellant;

(b) a reference to the decision of the General Court appealed against;

(c) the names of the other parties to the relevant case before the General Court;

(d) the pleas in law and legal arguments relied on, and a summary of those pleas in law;

(e) the form of order sought by the appellant.

2. Articles 119, 121 and 122(1) of these Rules shall apply to appeals.

3. The appeal shall state the date on which the decision appealed against was served on the appellant.

4. If an appeal does not comply with paragraphs 1 to 3 of this Article, the Registrar shall prescribe a reasonable time-limit within which the appellant is to put the appeal in order. If the appellant fails to put the appeal in order within the time-limit prescribed, the Court of Justice shall, after hearing the Judge-Rapporteur and the Advocate General, decide whether the non-compliance with that formal requirement renders the appeal formally inadmissible.

Article 169

Form of order sought, pleas in law and arguments of the appeal

1. An appeal shall seek to have set aside, in whole or in part, the decision of the General Court as set out in the operative part of that decision.

2. The pleas in law and legal arguments relied on shall identify precisely those points in the grounds of the decision of the General Court which are contested.

Article 170

Form of order sought in the event that the appeal is allowed

1. An appeal shall seek, in the event that it is declared well founded, the same form of order, in whole or in part, as that sought at first instance and shall not seek a different form of order. The subject-matter of the proceedings before the General Court may not be changed in the appeal.

2. Where the appellant requests that the case be referred back to the General Court if the decision appealed against is set aside, he shall set out the reasons why the state of the proceedings does not permit a decision by the Court of Justice.

Chapter 2

RESPONSES, REPLIES AND REJOINDERS

Article 171

Service of the appeal

1. The appeal shall be served on the other parties to the relevant case before the General Court.

2. In a case where Article 168(4) of these Rules applies, service shall be effected as soon as the appeal has been put in order or the Court of Justice has declared it admissible notwithstanding the failure to observe the formal requirements laid down by that Article.

Article 172

Parties authorised to lodge a response

Any party to the relevant case before the General Court having an interest in the appeal being allowed or dismissed may submit a response within two months after service on him of the appeal. The time-limit for submitting a response shall not be extended.

Article 173

Content of the response

1. A response shall contain:

(a) the name and address of the party submitting it;

(b) the date on which the appeal was served on him;

(c) the pleas in law and legal arguments relied on;

(d) the form of order sought.

2. Articles 119 and 121 of these Rules shall apply to responses.

Article 174

Form of order sought in the response

A response shall seek to have the appeal allowed or dismissed, in whole or in part.

Article 175

Reply and rejoinder

1. The appeal and the response may be supplemented by a reply and a rejoinder only where the President, on a duly reasoned application submitted by the appellant within seven days of service of the response, considers it necessary, after hearing the Judge-Rapporteur and the Advocate General, in particular to enable the appellant to present his views on a plea of inadmissibility or on new matters relied on in the response.

2. The President shall fix the date by which the reply is to be produced and, upon service of that pleading, the date by which the rejoinder is to be produced. He may limit the number of pages and the subject-matter of those pleadings.

Chapter 3

FORM AND CONTENT OF THE CROSS-APPEAL, AND FORM OF ORDER SOUGHT

Article 176

Cross-appeal

1. The parties referred to in Article 172 of these Rules may submit a cross-appeal within the same time-limit as that prescribed for the submission of a response.

2. A cross-appeal must be introduced by a document separate from the response.

Article 177

Content of the cross-appeal

1. A cross-appeal shall contain:

(a) the name and address of the party bringing the cross-appeal;

(b) the date on which the appeal was served on him;

(c) the pleas in law and legal arguments relied on;

(d) the form of order sought.

2. Articles 119, 121 and 122(1) and (3) of these Rules shall apply to cross-appeals.

Article 178

Form of order sought, pleas in law and arguments of the cross-appeal

1. A cross-appeal shall seek to have set aside, in whole or in part, the decision of the General Court.

2. It may also seek to have set aside an express or implied decision relating to the admissibility of the action before the General Court.

3. The pleas in law and legal arguments relied on shall identify precisely those points in the grounds of the decision of the General Court which are contested. The pleas in law and arguments must be separate from those relied on in the response.

Chapter 4

PLEADINGS CONSEQUENT ON THE CROSS-APPEAL

Article 179

Response to the cross-appeal

Where a cross-appeal is brought, the applicant at first instance or any other party to the relevant case before the General Court having an interest in the cross-appeal being allowed or dismissed may submit a response, which must be limited to the pleas in law relied on in that cross-appeal, within two months after its being served on him. That time-limit shall not be extended.

Article 180

Reply and rejoinder on a cross-appeal

1. The cross-appeal and the response thereto may be supplemented by a reply and a rejoinder only where the President, on a duly reasoned application submitted by the party who brought the cross-appeal within seven days of service of the response to the cross-appeal, considers it necessary, after hearing the Judge-Rapporteur and the Advocate General, in particular to enable that party to present his views on a plea of inadmissibility or on new matters relied on in the response to the cross-appeal.

2. The President shall fix the date by which that reply is to be produced and, upon service of that pleading, the date by which the rejoinder is to be produced. He may limit the number of pages and the subject-matter of those pleadings.

Chapter 5

APPEALS DETERMINED BY ORDER

Article 181

Manifestly inadmissible or manifestly unfounded appeal or cross-appeal

Where the appeal or cross-appeal is, in whole or in part, manifestly inadmissible or manifestly unfounded, the Court may at any time, acting on a proposal from the Judge-Rapporteur and after hearing the Advocate General, decide by reasoned order to dismiss that appeal or cross-appeal in whole or in part.

Article 182

Manifestly well-founded appeal or cross-appeal

Where the Court has already ruled on one or more questions of law identical to those raised by the pleas in law of the appeal or cross-appeal and considers the appeal or cross-appeal to be manifestly well founded, it may, acting on a proposal from the Judge-Rapporteur and after hearing the parties and the Advocate General, decide by reasoned order in which reference is made to the relevant case-law to declare the appeal or cross-appeal manifestly well founded.

Chapter 6

EFFECT ON A CROSS-APPEAL OF THE REMOVAL OF THE APPEAL FROM THE REGISTER

Article 183

Effect on a cross-appeal of the discontinuance or manifest inadmissibility of the appeal

A cross-appeal shall be deemed to be devoid of purpose:

(a) if the appellant discontinues his appeal;

(b) if the appeal is declared manifestly inadmissible for non-compliance with the time-limit for lodging an appeal;

(c) if the appeal is declared manifestly inadmissible on the sole ground that it is not directed against a final decision of the General Court or against a decision disposing of the substantive issues in part only or disposing of a procedural issue concerning a plea of lack of competence or inadmissibility within the meaning of the first paragraph of Article 56 of the Statute.

Chapter 7

COSTS AND LEGAL AID IN APPEALS

Article 184

Costs in appeals

1. Subject to the following provisions, Articles 137 to 146 of these Rules shall apply, *mutatis mutandis*, to the procedure before the Court of Justice on an appeal against a decision of the General Court.

2. Where the appeal is unfounded or where the appeal is well founded and the Court itself gives final judgment in the case, the Court shall make a decision as to the costs.

3. When an appeal brought by a Member State or an institution of the European Union which did not intervene in the proceedings before the General Court is well founded, the Court of Justice may order that the parties share the costs or that the successful appellant pay the costs which the appeal has caused an unsuccessful party to incur.

4. Where the appeal has not been brought by an intervener at first instance, he may not be ordered to pay costs in the appeal proceedings unless he participated in the written or oral part of the proceedings before the Court of Justice. Where an intervener at first instance takes part in the proceedings, the Court may decide that he shall bear his own costs.

Article 185

Legal aid

1. A party who is wholly or in part unable to meet the costs of the proceedings may at any time apply for legal aid.

2. The application shall be accompanied by all information and supporting documents making it possible to assess the applicant's financial situation, such as a certificate issued by a competent national authority attesting to his financial situation.

Article 186

Prior application for legal aid

1. If the application is made prior to the appeal which the applicant for legal aid intends to commence, it shall briefly state the subject of the appeal.

2. The application for legal aid need not be made through a lawyer.

3. The introduction of an application for legal aid shall, with regard to the person who made that application, suspend the time-limit prescribed for the bringing of the appeal until the date of service of the order making a decision on that application.

4. The President shall assign the application for legal aid, as soon as it is lodged, to a Judge-Rapporteur who shall put forward, promptly, a proposal as to the action to be taken on it.

Article 187

Decision on the application for legal aid

1. The decision to grant legal aid, in whole or in part, or to refuse it shall be taken, on a proposal from the Judge-Rapporteur and after hearing the Advocate General, by the Chamber of three Judges to which the Judge-Rapporteur is assigned. In that event, the formation of the Court shall be composed of the President of that Chamber, the Judge-Rapporteur and the first Judge or, as the case may be, the first two Judges designated from the list referred to in Article 28(3) on the date on which the application for legal aid is brought before that Chamber by the Judge-Rapporteur. It shall consider, if appropriate, whether the appeal is manifestly unfounded.

2. If the Judge-Rapporteur is not a member of a Chamber of three Judges, the decision shall be taken, under the same conditions, by the Chamber of five Judges to which he is assigned. In addition to the Judge-Rapporteur, the formation of the Court shall be composed of four Judges designated from the list referred to in Article 28(2) on the date on which the application for legal aid is brought before that Chamber by the Judge-Rapporteur.

3. The formation of the Court shall give its decision by way of order. Where the application for legal aid is refused in whole or in part, the order shall state the reasons for that refusal.

Article 188

Sums to be advanced as legal aid

1. Where legal aid is granted, the cashier of the Court shall be responsible, where applicable within the limits set by the formation of the Court, for costs involved in the assistance and representation of the applicant before the Court. At the request of the applicant or his representative, an advance on those costs may be paid.

2. In its decision as to costs the Court may order the payment to the cashier of the Court of sums advanced as legal aid.

3. The Registrar shall take steps to obtain the recovery of these sums from the party ordered to pay them.

Article 189

Withdrawal of legal aid

The formation of the Court which gave a decision on the application for legal aid may at any time, either of its own motion or on request, withdraw that legal aid if the circumstances which led to its being granted alter during the proceedings.

Chapter 8

OTHER PROVISIONS APPLICABLE TO APPEALS

Article 190

Other provisions applicable to appeals

1. Articles 127, 129 to 136, 147 to 150, 153 to 155 and 157 to 166 of these Rules shall apply to the procedure before the Court of Justice on an appeal against decisions of the General Court.

2. By way of derogation from Article 130(1), an application to intervene shall, however, be made within one month of the publication of the notice referred to in Article 21(4).

3. Article 95 shall apply, *mutatis mutandis*, to the procedure before the Court of Justice on an appeal against decisions of the General Court.

TITLE VI

REVIEW OF DECISIONS OF THE GENERAL COURT

Article 191

Reviewing Chamber

A Chamber of five Judges shall be designated for a period of one year for the purpose of deciding, in accordance with Articles 193 and 194 of these Rules, whether a decision of the General Court is to be reviewed in accordance with Article 62 of the Statute.

Article 192

Information and communication of decisions which may be reviewed

1. As soon as the date for the delivery or signature of a decision to be given under Article 256(2) or (3) TFEU is fixed, the Registry of the General Court shall inform the Registry of the Court of Justice.

2. The decision shall be communicated to the Registry of the Court of Justice immediately upon its delivery or signature, as shall the file in the case, which shall be made available forthwith to the First Advocate General.

Article 193

Review of decisions given on appeal

1. The proposal of the First Advocate General to review a decision of the General Court given under Article 256(2) TFEU shall be forwarded to the President of the Court of Justice and to the President of the reviewing Chamber. Notice of that transmission shall be given to the Registrar at the same time.

2. As soon as he is informed of the existence of a proposal, the Registrar shall communicate the file in the case before the General Court to the members of the reviewing Chamber.

3. As soon as the proposal to review has been received, the President of the Court shall designate the Judge-Rapporteur from among the Judges of the reviewing Chamber on a proposal from the President of that Chamber. The composition of the formation of the Court shall be determined in accordance with Article 28(2) of these Rules on the day on which the case is assigned to the Judge-Rapporteur.

4. That Chamber, acting on a proposal from the Judge-Rapporteur, shall decide whether the decision of the General Court is to be reviewed. The decision to review the decision of the General Court shall indicate only the questions which are to be reviewed.

5. The General Court, the parties to the proceedings before it and the other interested persons referred to in the second paragraph of Article 62a of the Statute shall forthwith be informed by the Registrar of the decision of the Court of Justice to review the decision of the General Court.

6. Notice of the date of the decision to review the decision of the General Court and of the questions which are to be reviewed shall be published in the *Official Journal of the European Union*.

Article 194

Review of preliminary rulings

1. The proposal of the First Advocate General to review a decision of the General Court given under Article 256(3) TFEU shall be forwarded to the President of the Court of Justice and to the President of the reviewing Chamber. Notice of that transmission shall be given to the Registrar at the same time.

2. As soon as he is informed of the existence of a proposal, the Registrar shall communicate the file in the case before the General Court to the members of the reviewing Chamber.

3. The Registrar shall also inform the General Court, the referring court or tribunal, the parties to the main proceedings and the other interested persons referred to in the second paragraph of Article 62a of the Statute of the existence of a proposal to review.

4. As soon as the proposal to review has been received, the President of the Court shall designate the Judge-Rapporteur from among the Judges of the reviewing Chamber on a proposal from the President of that Chamber. The composition of the formation of the Court shall be determined in accordance with Article 28(2) of these Rules on the day on which the case is assigned to the Judge-Rapporteur.

5. That Chamber, acting on a proposal from the Judge-Rapporteur, shall decide whether the decision of the General Court is to be reviewed. The decision to review the decision of the General Court shall indicate only the questions which are to be reviewed.

6. The General Court, the referring court or tribunal, the parties to the main proceedings and the other interested persons referred to in the second paragraph of Article 62a of the Statute shall forthwith be informed by the Registrar of the decision of the Court of Justice as to whether or not the decision of the General Court is to be reviewed.

7. Notice of the date of the decision to review the decision of the General Court and of the questions which are to be reviewed shall be published in the *Official Journal of the European Union*.

Article 195

Judgment on the substance of the case after a decision to review

1. The decision to review a decision of the General Court shall be served on the parties and other interested persons referred to in the second paragraph of Article 62a of the Statute. The decision served on the Member States, and the States, other than the Member States, which are parties to the EEA Agreement, as well as the EFTA Surveillance Authority, shall be accompanied by a translation of the decision of the Court of Justice in accordance with the provisions of Article 98 of these Rules. The decision of the Court of Justice shall also be communicated to the General Court and, if applicable, to the referring court or tribunal.

2. Within one month of the date of service referred to in paragraph 1, the parties and other interested persons on whom the decision of the Court of Justice has been served may lodge statements or written observations on the questions which are subject to review.

3. As soon as a decision to review a decision of the General Court has been taken, the First Advocate General shall assign the review to an Advocate General.

4. The reviewing Chamber shall rule on the substance of the case, after hearing the Advocate General.

5. It may, however, request the Court of Justice to assign the case to a formation of the Court composed of a greater number of Judges.

6. Where the decision of the General Court which is subject to review was given under Article 256(2) TFEU, the Court of Justice shall make a decision as to costs.

TITLE VII

OPINIONS

Article 196

Written part of the procedure

1. In accordance with Article 218(11) TFEU, a request for an Opinion may be made by a Member State, by the European Parliament, by the Council or by the European Commission.

2. A request for an Opinion may relate both to whether the envisaged agreement is compatible with the provisions of the Treaties and to whether the European Union or any institution of the European Union has the power to enter into that agreement.

3. It shall be served on the Member States and on the institutions referred to in paragraph 1, and the President shall prescribe a time-limit within which they may submit written observations.

Article 197

Designation of the Judge-Rapporteur and of the Advocate General

As soon as the request for an Opinion has been submitted, the President shall designate a Judge-Rapporteur and the First Advocate General shall assign the case to an Advocate General.

Article 198

Hearing

The Court may decide that the procedure before it shall also include a hearing.

Article 199

Time-limit for delivering the Opinion

The Court shall deliver its Opinion as soon as possible, after hearing the Advocate General.

Article 200

Delivery of the Opinion

The Opinion, signed by the President, the Judges who took part in the deliberations and the Registrar, shall be delivered in open court. It shall be served on all the Member States and on the institutions referred to in Article 196(1).

TITLE VIII

PARTICULAR FORMS OF PROCEDURE

Article 201

Appeals against decisions of the arbitration committee

1. An application initiating an appeal under the second paragraph of Article 18 TEAEC shall state:

(a) the name and permanent address of the applicant;

(b) the description of the signatory;

(c) a reference to the arbitration committee's decision against which the appeal is made;

(d) the names of the respondents;

(e) a summary of the facts;

(f) the grounds on which the appeal is based and arguments relied on, and a brief statement of those grounds;

(g) the form of order sought by the applicant.

2. Articles 119 and 121 of these Rules shall apply to the application.

3. A certified copy of the contested decision shall be annexed to the application.

4. As soon as the application has been lodged, the Registrar of the Court shall request the arbitration committee registry to transmit to the Court the file in the case.

5. Articles 123 and 124 of these Rules shall apply to this procedure. The Court may decide that the procedure before it shall also include a hearing.

6. The Court shall give its decision in the form of a judgment. Where the Court sets aside the decision of the arbitration committee it may refer the case back to the committee.

Article 202

Procedure under Article 103 TEAEC

1. Four certified copies shall be lodged of an application under the third paragraph of Article 103 TEAEC. The application shall be accompanied by the draft of the agreement or contract concerned, by the observations of the European Commission addressed to the State concerned and by all other supporting documents.

2. The application and annexes thereto shall be served on the European Commission, which shall have a time-limit of 10 days from such service to submit its written observations. This time-limit may be extended by the President after the State concerned has been heard.

3. Following the lodging of such observations, which shall be served on the State concerned, the Court shall give its decision promptly, after hearing the Advocate General and, if they so request, the State concerned and the European Commission.

Article 203

Procedures under Articles 104 TEAEC and 105 TEAEC

Applications under the third paragraph of Article 104 TEAEC and the second paragraph of Article 105 TEAEC shall be governed by the provisions of Titles II and IV of these Rules. Such applications shall also be served on the State to which the respondent person or undertaking belongs.

Article 204

Procedure provided for by Article 111(3) of the EEA Agreement

1. In the case governed by Article 111(3) of the EEA Agreement, the matter shall be brought before the Court by a request submitted by the Contracting Parties which are parties to the dispute. The request shall be served on the other Contracting Parties, on the European Commission, on the EFTA Surveillance Authority and, where appropriate, on the other interested persons on whom a request for a preliminary ruling raising the same question of interpretation of European Union legislation would be served.

2. The President shall prescribe a time-limit within which the Contracting Parties and the other interested persons on whom the request has been served may submit written observations.

3. The request shall be made in one of the languages referred to in Article 36 of these Rules. Article 38 shall apply. The provisions of Article 98 shall apply *mutatis mutandis*.

4. As soon as the request referred to in paragraph 1 of this Article has been submitted, the President shall designate a Judge-Rapporteur. The First Advocate General shall, immediately afterwards, assign the request to an Advocate General.

5. The Court shall, after hearing the Advocate General, give a reasoned decision on the request.

6. The decision of the Court, signed by the President, the Judges who took part in the deliberations and the Registrar, shall be served on the Contracting Parties and on the other interested persons referred to in paragraphs 1 and 2.

Article 205

Settlement of the disputes referred to in Article 35 TEU in the version in force before the entry into force of the Treaty of Lisbon

1. In the case of disputes between Member States as referred to in Article 35(7) TEU in the version in force before the entry into force of the Treaty of Lisbon, as maintained in force by Protocol No 36 annexed to the Treaties, the matter shall be brought before the Court by an application by a party to the dispute. The application shall be served on the other Member States and on the European Commission.

2. In the case of disputes between Member States and the European Commission as referred to in Article 35(7) TEU in the version in force before the entry into force of the Treaty of Lisbon, as maintained in force by Protocol No 36 annexed to the Treaties, the matter shall be brought before the Court by an application by a party to the dispute. The application shall be served on the other Member States, the Council and the European Commission if it was submitted by a Member State. The application shall be served on the Member States and on the Council if it was submitted by the European Commission.

3. The President shall prescribe a time-limit within which the institutions and the Member States on which the application has been served may submit written observations.

4. As soon as the application referred to in paragraphs 1 and 2 has been submitted, the President shall designate a Judge-Rapporteur. The First Advocate General shall, immediately afterwards, assign the application to an Advocate General.

5. The Court may decide that the procedure before it shall also include a hearing.

6. The Court shall, after the Advocate General has delivered his Opinion, give its ruling on the dispute by way of judgment.

7. The same procedure as that laid down in the preceding paragraphs shall apply where an agreement concluded between the Member States confers jurisdiction on the Court to rule on a dispute between Member States or between Member States and an institution.

Article 206

Requests under Article 269 TFEU

1. Four certified copies shall be submitted of a request under Article 269 TFEU. The request shall be accompanied by any relevant document and, in particular, any observations and recommendations made pursuant to Article 7 TEU.

2. The request and annexes thereto shall be served on the European Council or on the Council, as appropriate, each of which shall have a time-limit of 10 days from such service to submit its written observations. This time-limit shall not be extended.

3. The request and annexes thereto shall also be communicated to the Member States other than the State in question, to the European Parliament and to the European Commission.

4. Following the lodging of the observations referred to in paragraph 2, which shall be served on the Member State concerned and on the States and institutions referred to in paragraph 3, the Court shall give its decision within a time-limit of one month from the lodging of the request and after hearing the Advocate General. At the request of the Member State concerned, the European Council or the Council, or of its own motion, the Court may decide that the procedure before it shall also include a hearing, which all the States and institutions referred to in this Article shall be given notice to attend.

FINAL PROVISIONS

Article 207

Supplementary rules

Subject to the provisions of Article 253 TFEU and after consultation with the Governments concerned, the Court shall adopt supplementary rules concerning its practice in relation to:

(a) letters rogatory;

(b) applications for legal aid;

(c) reports by the Court of perjury by witnesses or experts, delivered pursuant to Article 30 of the Statute.

Article 208

Implementing rules

The Court may, by a separate act, adopt practice rules for the implementation of these Rules.

Article 209

Repeal

These Rules replace the Rules of Procedure of the Court of Justice of the European Communities adopted on 19 June 1991, as last amended on 24 May 2011 (*Official Journal of the European Union*, L 162 of 22 June 2011, p. 17).

Article 210

Publication and entry into force of these Rules

These Rules, which are authentic in the languages referred to in Article 36 of these Rules, shall be published in the *Official Journal of the European Union* and shall enter into force on the first day of the second month following their publication.

Done at Luxembourg, 25 September 2012.

I

(Resolutions, recommendations and opinions)

RECOMMENDATIONS

COURT OF JUSTICE OF THE EUROPEAN UNION

These recommendations follow on from the adoption on 25 September 2012 in Luxembourg of the new Rules of Procedure of the Court of Justice (OJ L 265, 29.9.2012, p. 1). They replace the information note on references from national courts for a preliminary ruling (OJ C 160, 28.5.2011, p. 1) and reflect innovations introduced by those Rules which may affect both the principle of a reference for a preliminary ruling to the Court of Justice and the procedure for making such a reference.

RECOMMENDATIONS

to national courts and tribunals in relation to the initiation of preliminary ruling proceedings

(2012/C 338/01)

I — GENERAL PROVISIONS

The Court's jurisdiction in preliminary rulings

1. The reference for a preliminary ruling is a fundamental mechanism of European Union law aimed at enabling the courts and tribunals of the Member States to ensure uniform interpretation and application of that law within the European Union.

2. Under Article 19(3)(b) of the Treaty on European Union ('TEU') and Article 267 of the Treaty on the Functioning of the European Union ('TFEU'), the Court of Justice of the European Union has jurisdiction to give preliminary rulings on the interpretation of Union law and on the validity of acts adopted by the institutions, bodies, offices or agencies of the Union.

3. Article 256(3) TFEU provides that the General Court is to have jurisdiction to hear and determine questions referred for a preliminary ruling under Article 267 TFEU, in specific areas laid down by the Statute. However, since no provisions have been introduced into the Statute in that regard, the Court of Justice alone currently has jurisdiction to give preliminary rulings.

4. While Article 267 TFEU confers on the Court of Justice a general jurisdiction in that regard, a number of primary law provisions exist which lay down exceptions to or temporary restrictions on that jurisdiction. This is true, in particular, of Articles 275 TFEU and 276 TFEU and Article 10 of Protocol (No 36) on Transitional Provisions of the Treaty of Lisbon (OJEU 2010 C 83, p. 1) ([1]).

([1]) Article 10(1) to (3) of Protocol No 36 provides that the powers of the Court of Justice in relation to acts of the Union adopted in the field of police cooperation and judicial cooperation in criminal matters before the entry into force of the Treaty of Lisbon, and which have not since been amended, are to remain the same for a maximum period of five years from the date of entry into force of the Treaty of Lisbon (1 December 2009). During that period, such acts may, therefore, form the subject-matter of a reference for a preliminary ruling only where the order for reference is made by a court or tribunal of a Member State which has accepted the jurisdiction of the Court of Justice, it being a matter for each of those States to determine whether the right to refer a question to the Court is to be available to all of its national courts and tribunals or is to be reserved to the courts or tribunals of last instance.

5. Since the preliminary ruling procedure is based on cooperation between the Court of Justice and the courts and tribunals of the Member States, it may be helpful, in order to ensure that that procedure is fully effective, to provide those courts and tribunals with the following recommendations.

6. While in no way binding, these recommendations are intended to supplement Title III of the Rules of Procedure of the Court of Justice (Articles 93 to 118) and to provide guidance to the courts and tribunals of the Member States as to whether it is appropriate to make a reference for a preliminary ruling, as well as practical information concerning the form and effect of such a reference.

The role of the Court of Justice in the preliminary ruling procedure

7. As stated above, under the preliminary ruling procedure the Court's role is to give an interpretation of European Union law or to rule on its validity, not to apply that law to the factual situation underlying the main proceedings. That is the task of the national court or tribunal and it is not, therefore, for the Court either to decide issues of fact raised in the main proceedings or to resolve any differences of opinion on the interpretation or application of rules of national law.

8. When ruling on the interpretation or validity of European Union law, the Court makes every effort to give a reply which will be of assistance in resolving the dispute in the main proceedings, but it is for the referring court or tribunal to draw specific conclusions from that reply, if necessary by disapplying the rule of national law in question.

The decision to make a reference for a preliminary ruling

The originator of the request for a preliminary ruling

9. Under Article 267 TFEU, any court or tribunal of a Member State, in so far as it is called upon to give a ruling in proceedings intended to arrive at a decision of a judicial nature, may as a rule submit a request for a preliminary ruling to the Court of Justice. Status as a court or tribunal is interpreted by the Court of Justice as a self-standing concept of European Union law, the Court taking account of a number of factors such as whether the body making the reference is established by law, whether it is permanent, whether its jurisdiction is compulsory, whether its procedure is *inter partes*, whether it applies rules of law and whether it is independent.

10. Whether or not the parties to the main proceedings have expressed the wish that it do so, it is for the national court or tribunal alone to decide whether to refer a question to the Court of Justice for a preliminary ruling.

References on interpretation

11. Article 267 TFEU provides that any court or tribunal may submit a request for a preliminary ruling to the Court of Justice on the interpretation of a rule of European Union law if it considers it necessary to do so in order to resolve the dispute brought before it.

12. However, courts or tribunals against whose decisions there is no judicial remedy under national law must bring such a request before the Court, unless the Court has already ruled on the point (and there is no new context that raises any serious doubt as to whether that case-law may be applied in that instance), or unless the correct interpretation of the rule of law in question is obvious.

13. Thus, a national court or tribunal may, in particular when it considers that sufficient guidance is given by the case-law of the Court of Justice, itself decide on the correct interpretation of European Union law and its application to the factual situation before it. However, a reference for a preliminary ruling may prove particularly useful when there is a new question of interpretation of general interest for the uniform application of European Union law, or where the existing case-law does not appear to be applicable to a new set of facts.

14. In order to enable the Court of Justice properly to identify the subject-matter of the main proceedings and the questions that arise, it is helpful if, in respect of each question referred, the national court or tribunal explains why the interpretation sought is necessary to enable it to give judgment.

References on determination of validity

15. Although the courts and tribunals of the Member States may reject pleas raised before them challenging the validity of acts of an institution, body, office or agency of the Union, the Court of Justice has exclusive jurisdiction to declare such an act invalid.

16. All national courts or tribunals **must** therefore submit a request for a preliminary ruling to the Court when they have doubts about the validity of such an act, stating the reasons for which they consider that the act may be invalid.

17. However, if a national court or tribunal has serious doubts about the validity of an act of an institution, body, office or agency of the Union on which a national measure is based, it may exceptionally suspend application of that measure temporarily or grant other interim relief with respect to it. It must then refer the question of validity to the Court of Justice, stating the reasons for which it considers the act to be invalid.

The appropriate stage at which to make a reference for a preliminary ruling

18. A national court or tribunal may submit a request for a preliminary ruling to the Court as soon as it finds that a ruling on the interpretation or validity of European Union law is necessary to enable it to give judgment. It is that court or tribunal which is in fact in the best position to decide at what stage of the proceedings such a request should be made.

19. It is, however, desirable that a decision to make a reference for a preliminary ruling should be taken when the national proceedings have reached a stage at which the referring court or tribunal is able to define the legal and factual context of the case, so that the Court of Justice has available to it all the information necessary to check, where appropriate, that European Union law applies to the main proceedings. In the interests of the proper administration of justice, it may also be desirable for the reference to be made only after both sides have been heard.

The form and content of the request for a preliminary ruling

20. The decision by which a court or tribunal of a Member State refers one or more questions to the Court of Justice for a preliminary ruling may be in any form allowed by national law as regards procedural steps. However, it must be borne in mind that it is that document which will serve as the basis of the proceedings before the Court and that it must therefore contain such information as will enable the Court to give a reply which is of assistance to the referring court or tribunal. Moreover, it is only the request for a preliminary ruling which is notified to the parties to the main proceedings and to the other interested persons referred to in Article 23 of the Statute, including the Member States, in order to obtain any written observations.

21. Owing to the need to translate it into all the official languages of the European Union, the request for a preliminary ruling should therefore be drafted simply, clearly and precisely, avoiding superfluous detail.

22. About 10 pages is often sufficient to set out in a proper manner the context of a request for a preliminary ruling. That request must be succinct but sufficiently complete and must contain all the relevant information to give the Court and the interested persons entitled to submit observations a clear understanding of the factual and legal context of the main proceedings. In accordance with Article 94 of the Rules of Procedure, the request for a preliminary ruling must contain, in addition to the text of the questions referred to the Court for a preliminary ruling:

— a summary of the subject-matter of the dispute and the relevant findings of fact as determined by the referring court or tribunal, or, at least, an account of the facts on which the questions referred are based;

— the tenor of any national provisions applicable in the case and, where appropriate, the relevant national case-law ([1]);

([1]) The referring court or tribunal is requested to provide precise references for those texts and their publication, such as a page of an official journal or a specific law report, or a reference to an internet site.

— a statement of the reasons which prompted the referring court or tribunal to inquire about the interpretation or validity of certain provisions of European Union law, and the relationship between those provisions and the national legislation applicable to the main proceedings.

23. The European Union law provisions relevant to the case should be identified as accurately as possible in the request for a preliminary ruling, which should include, if need be, a brief summary of the relevant arguments of the parties to the main proceedings.

24. If it considers itself able to do so, the referring court or tribunal may, finally, briefly state its view on the answer to be given to the questions referred for a preliminary ruling. That information may be useful to the Court, particularly where it is called upon to give a preliminary ruling in an expedited or urgent procedure.

25. In order to make the request for a preliminary ruling easier to read, it is essential that the Court receive it in typewritten form. To enable the Court to refer to the request it is also very helpful if the pages and paragraphs of the order for reference – which must be dated and signed – are numbered.

26. The questions themselves should appear in a separate and clearly identified section of the order for reference, preferably at the beginning or the end. It must be possible to understand them on their own terms, without referring to the statement of the grounds for the request, which will however provide the necessary background for a proper understanding of the implications of the case.

27. Under the preliminary ruling procedure, the Court will, as a rule, use the information contained in the order for reference, including nominative or personal data. It is therefore for the referring court or tribunal itself, if it considers it necessary, to delete certain details in its request for a preliminary ruling or to render anonymous one or more persons or entities concerned by the dispute in the main proceedings.

28. After the request for a preliminary ruling has been lodged, the Court may also render such persons or entities anonymous of its own motion, or at the request of the referring court or tribunal or of a party to the main proceedings. In order to maintain its effectiveness, such a request for anonymity must, however, be made at the earliest possible stage of the proceedings, and in any event prior to publication in the *Official Journal of the European Union* of the notice relating to the case concerned, and to service of the request for a preliminary ruling on the interested persons referred to in Article 23 of the Statute.

The effects of the reference for a preliminary ruling on the national proceedings

29. Although the national court or tribunal may still order protective measures, particularly in connection with a reference on determination of validity (see point 17 above), the lodging of a request for a preliminary ruling nevertheless calls for the national proceedings to be stayed until the Court of Justice has given its ruling.

30. In the interests of the proper conduct of the preliminary ruling proceedings before the Court and in order to maintain their effectiveness, it is incumbent on the referring court or tribunal to inform the Court of Justice of any procedural step that may affect the referral and, in particular, if any new parties are admitted to the national proceedings.

Costs and legal aid

31. Preliminary ruling proceedings before the Court of Justice are free of charge and the Court does not rule on the costs of the parties to the proceedings pending before the referring court or tribunal; it is for the referring court or tribunal to rule on those costs.

32. If a party to the main proceedings has insufficient means and where it is possible under national rules, the referring court or tribunal may grant that party legal aid to cover the costs, including those of lawyers' fees, which it incurs before the Court. The Court itself may also grant legal aid where the party in question is not already in receipt of aid under national rules or to the extent to which that aid does not cover, or covers only partly, costs incurred before the Court.

Communication between the Court of Justice and the national courts and tribunals

33. The request for a preliminary ruling and the relevant documents (including, where applicable, the case file or a copy of it) are to be sent by the national court or tribunal making the reference directly to the Court of Justice. They must be sent by registered post to the Registry of the Court of Justice (Rue du Fort Niedergrünewald, L-2925 Luxembourg).

34. Until the decision containing the Court's ruling on the referring court's or tribunal's request for a preliminary ruling is served on that court or tribunal, the Court Registry will stay in contact with the referring court or tribunal, and will send it copies of the procedural documents.

35. The Court of Justice will send its ruling to the referring court or tribunal. It would welcome information from that court or tribunal on the action taken upon its ruling in the main proceedings, and communication of the referring court's or tribunal's final decision.

II — **SPECIAL PROVISIONS IN RELATION TO URGENT REFERENCES FOR A PRELIMINARY RULING**

36. As provided in Article 23a of the Statute and Articles 105 to 114 of the Rules of Procedure, a reference for a preliminary ruling may, in certain circumstances, be determined pursuant to an expedited procedure or an urgent procedure.

Conditions for the application of the expedited and urgent procedures

37. The Court of Justice decides whether these procedures are to be applied. Such a decision is generally taken only on a reasoned request from the referring court or tribunal. Exceptionally, the Court may, however, decide of its own motion to determine a reference for a preliminary ruling under an expedited procedure or an urgent procedure where that appears to be required by the nature or the particular circumstances of the case.

38. Article 105 of the Rules of Procedure provides that a reference for a preliminary ruling may be determined pursuant to an **expedited procedure** derogating from the provisions of those Rules, where the nature of the case requires that it be dealt with within a short time. Since that procedure imposes significant constraints on all those involved in it, and, in particular, on all the Member States called upon to lodge their observations, whether written or oral, within much shorter time-limits than would ordinarily apply, its application should be sought only in particular circumstances that warrant the Court giving its ruling quickly on the questions referred. The large number of persons or legal situations potentially affected by the decision that the referring court or tribunal has to deliver after bringing a matter before the Court for a preliminary ruling does not, in itself, constitute an exceptional circumstance that would justify the use of the expedited procedure ([1]).

39. The same applies *a fortiori* to the **urgent preliminary ruling procedure**, provided for in Article 107 of the Rules of Procedure. That procedure, which applies only in the areas covered by Title V of Part Three of the TFEU, relating to the area of freedom, security and justice, imposes even greater constraints on those concerned, since it limits in particular the number of parties authorised to lodge written observations and, in cases of extreme urgency, allows the written part of the procedure before the Court to be omitted altogether. The application of the urgent procedure should therefore be requested only where it is absolutely necessary for the Court to give its ruling very quickly on the questions submitted by the referring court or tribunal.

40. Although it is not possible to provide an exhaustive list of such circumstances, particularly because of the varied and evolving nature of the rules of European Union law governing the area of freedom, security and justice, a national court or tribunal might, for example, consider submitting a request for the urgent preliminary ruling procedure to be applied in the case, referred to in the fourth paragraph of Article 267 TFEU, of a person in custody or deprived of his liberty, where the answer to the question raised is decisive as to the assessment of that person's legal situation, or in proceedings concerning parental authority or custody of children, where the identity of the court having jurisdiction under European Union law depends on the answer to the question referred for a preliminary ruling.

([1]) For an insight into circumstances that have resulted in the approval or refusal of requests for the application of the accelerated procedure, made on the basis of Article 104a of the Rules of Procedure of the Court of Justice of 19 June 1991, as amended, see the orders made by the President of the Court of Justice, available at www.curia.europa.eu (the orders can be found under 'Case-law', by selecting each of the following in turn in the search form: Documents – Documents not published in the ECR – Orders – Expedited procedure).

The request for application of the expedited procedure or the urgent procedure

41. To enable the Court to decide quickly whether the expedited procedure or the urgent preliminary ruling procedure should be applied, the request must set out precisely the matters of fact and law which establish the urgency and, in particular, the risks involved in following the ordinary procedure.

42. In so far as it is able to do so, the referring court should briefly state its view on the answer to be given to the questions referred. Such a statement makes it easier for the parties to the main proceedings and the other interested persons participating in the procedure to define their positions and facilitates the Court's decision, thereby contributing to the rapidity of the procedure.

43. The request for the application of the expedited procedure or the urgent procedure must be submitted in an unambiguous form that enables the Court Registry to establish immediately that the file has to be dealt with in a particular way. Accordingly, the referring court or tribunal is asked to specify which of the two procedures is required in that particular case, and to mention in its request the relevant article of the Rules of Procedure (Article 105 for the expedited procedure or Article 107 for the urgent procedure). That mention must be included in a clearly identifiable place in its order for reference (for example, at the head of the page or in a separate judicial document). Where appropriate, a covering letter from the referring court or tribunal can usefully refer to that request.

44. As regards the order for reference itself, it is particularly important that it should be succinct where the matter is urgent, as this will help to ensure the rapidity of the procedure.

Communication between the Court of Justice, the referring court or tribunal and the parties to the main proceedings

45. In order to expedite and facilitate communication with the referring court or tribunal and the parties before it, a court or tribunal submitting a request for the expedited procedure or the urgent procedure to be applied is asked to state the e-mail address and any fax number which may be used by the Court of Justice, together with the e-mail addresses and any fax numbers of the representatives of the parties to the proceedings.

46. A copy of the signed order for reference together with a request for the expedited procedure or the urgent procedure to be applied can initially be sent to the Court by e-mail (ECJ-Registry@curia.europa.eu) or by fax (+352 43 37 66). Processing of the reference and of the request can then begin upon receipt of the e-mailed or faxed copy. The originals of those documents must, however, be sent to the Court Registry as soon as possible.

excluded from review by the Court when hearing an application for a preliminary ruling.[1]

3. The European Economic Community constitutes a new legal order of international law for the benefit of which the states have limited their sovereign rights, albeit within limited fields, and the subjects of which comprise not only the Member States but also their nationals.
Independently of the legislation of Member States, Community law not only imposes obligations on individuals but is also intended to confer upon them rights which become part of their legal heritage. These rights arise not only where they are expressly granted by the Treaty but also by reason of obligations which the Treaty imposes in a clearly defined way upon individuals as well as upon the Member States and upon the institutions of the Community.

4. The fact that Articles 169 and 170 of the EEC Treaty enable the Commission and the Member States to bring before the Court a State which has not fulfilled its obligations does not deprive individuals of the right to plead the same obligations, should the occasion arise, before a national court.

5. According to the spirit, the general scheme and the wording of the EEC Treaty, Article 12 must be interpreted as producing direct effects and creating individual rights which national courts must protect.

6. It follows from the wording and the general scheme of Article 12 of the Treaty that, in order to ascertain whether customs duties and charges having equivalent effect have been increased contrary to the prohibition contained in the said Article, regard must be had to the customs duties and charges actually applied by Member States at the date of the entry into force of the Treaty.[2]

7. Where, after the entry into force of the Treaty, the same product is charged with a higher rate of duty, irrespective of whether this increase arises from an actual increase of the rate of customs duty or from a rearrangement of the tariff resulting in the classification of the product under a more highly taxed heading, such increase is illegal under Article 12 of the EEC Treaty.

In Case 26/62

Reference to the Court under subparagraph (a) of the first paragraph and under the third paragraph of Article 177 of the Treaty establishing the European Economic Community by the Tariefcommissie, a Netherlands administrative tribunal having final jurisdiction in revenue cases, for a preliminary ruling in the action pending before that court between

N.V. ALGEMENE TRANSPORT- EN EXPEDITIE ONDERNEMING VAN GEND & LOOS, having its registered office at Utrecht, represented by H.G. Stibbe and L.F.D. ter Kuile, both Advocates of Amsterdam, with an address for

1 — Cf. Paragraph No 4 of Summary of Judgment in Case 13/61, Rec. 1962., p. 94.

service in Luxembourg at the Consulate-General of the Kingdom of the Netherlands

and

NEDERLANDSE ADMINISTRATIE DER BELASTINGEN (NETHERLANDS INLAND REVENUE ADMINISTRATION), represented by the Inspector of Customs and Excise at Zaandam, with an address for service in Luxembourg at the Netherlands Embassy,

on the following questions:

1. Whether Article 12 of the EEC Treaty has direct application within the territory of a Member State, in other words, whether nationals of such a State can, on the basis of the Article in question, lay claim to individual rights which the courts must protect;

2. In the event of an affirmative reply, whether the application of an import duty of 8% to the import into the Netherlands by the applicant in the main action of ureaformaldehyde originating in the Federal Republic of Germany represented an unlawful increase within the meaning of Article 12 of the EEC Treaty or whether it was in this case a reasonable alteration of the duty applicable before 1 March 1960, an alteration which, although amounting to an increase from the arithmetical point of view, is nevertheless not to be regarded as prohibited under the terms of Article 12;

THE COURT

composed of: A. M. Donner, President, L. Delvaux and R. Rossi (Presidents of Chambers), O. Riese, Ch. L. Hammes (Rapporteur), A. Trabucchi and R. Lecourt, Judges,

Advocate-General: K. Roemer
Registrar: A. Van Houtte

gives the following

JUDGMENT

Issues of fact and of law

I — Facts and procedure

The facts and the procedure may be summarized as follows:

1. On 9 September 1960 the company N. V. Algemene Transport- en Expeditie Onderneming van Gend en Loos (hereinafter called 'Van Gend & Loos'), according to a customs declaration of 8 September on form D.5061, imported into the Netherlands from the Federal Republic of Germany a quantity of ureaformaldehyde, described in the import document as 'Harnstoffharz (U.F. resin) 70, aqueous emulsion of ureaformaldehyde'.

2. On the date of importation, the product in question was classified in heading 39.01-a-1 of the tariff of import duties listed in the 'Tariefbesluit' which entered into force on 1 March 1960. The nomenclature of the 'Tariefbesluit' is taken from the protocol concluded between the Kingdom of Belgium, the Grand Duchy of Luxembourg and the Kingdom of the Netherlands at Brussels on 25 July 1958, ratified in the Netherlands by the Law of 16 December 1959.

3. The wording of heading 39.01-a-1 was as follows:

'Products of condensation, poly-condensation and poly-addition, whether modified or not, polymerized, or linear (phenoplasts, aminoplasts, alkyds, allylic polyesters and other non-saturated polyesters, silicones etc. . . .):

(a) Liquid or paste products, including emulsions, dispersions and solutions:

	Duties applicable gen. %	spec. %
1. Aminoplasts in aqueous emulsions, dispersions or solutions	10%	8%'

4. On this basis, the Dutch revenue authorities applied an *ad valorem* import duty of 8% to the importation in question.

5. On 20 September 1960 Van Gend & Loos lodged an objection with the Inspector of Customs and Excise at Zaandam against the application of this duty in the present case. The company put forward in particular the following arguments:

On 1 January 1958, the date on which the EEC Treaty entered into force, aminoplasts in emulsion were classified under heading 279-a-2 of the tariff in the 'Tariefbesluit' of 1947, and charged with an *ad valorem* import duty of 3%. In the 'Tariefbesluit' which entered into force on 1 March 1960, heading 279-a-2 was replaced by heading 39.01-a.

Instead of applying, in respect of intra-Community trade, an import duty of 3% uniformly to all products under the old heading 279-a-2, a sub-division was created: 39.01-a-1, which contained only aminoplasts in aqueous emulsions, dispersions or solutions, and in respect of which import duty was fixed at 8%. For the other products in heading 39.01-a, which also had been included in the old heading 279-a-2, the import duty of 3% applied on 1 January 1958 was maintained.

By thus increasing the import duty on the product in question after the entry

into force of the EEC Treaty, the Dutch Government infringed Article 12 of that Treaty, which provides that Member States shall refrain from introducing between themselves any new customs duties on imports or exports or any charges having equivalent effect, and from increasing those which they already apply in their trade with each other.

6. The objection of Van Gend & Loos was dismissed on 6 March 1961 by the Inspector of Customs and Excise at Zaandam on the ground of inadmissibility, because it was not directed against the actual application of the tariff but against the rate.

7. Van Gend & Loos appealed against this decision to the Tariefcommissie, Amsterdam, on 4 April 1961.

8. The case was heard by the Tariefcommissie on 21 May 1962. In support of its application for the annulment of the contested decision Van Gend & Loos put forward the arguments already submitted in its objection of 20 September 1960. The Nederlandse administratie der belastingen replied in particular that when the EEC Treaty entered into force the product in question was not charged under the heading 279-a-2 with a duty of only 3% but, because of its composition and intended application, was classified under heading 332 bis ('synthetic and other adhesives, not stated or included elsewhere') and charged with a duty of 10% so that there had not in fact been any increase.

9. The Tariefcommissie, without giving a formal decision on the question whether the product in question fell within heading 332 bis or heading 279-a-2 of the 1947 'Tariefbesluit', took the view that the arguments of the parties raised a question concerning the interpretation of the EEC Treaty. It therefore suspended the proceedings and, in conformity with the third paragraph of Article 177 of the Treaty, referred to the Court of Justice on 16 August 1962, for a preliminary ruling the two questions set out above.

10. The decision of the Tariefcommissie was notified on 23 August 1962 by the Registrar of the Court to the parties to the action, to the Member States and to the Commission of the EEC.

11. Pursuant to Article 20 of the Protocol on the Statute of the Court of Justice of the EEC written observations were submitted to the Court by the parties to the main action, by the Government of the Kingdom of Belgium, the Government of the Federal Republic of Germany, the Commission of the EEC and the Government of the Kingdom of the Netherlands.

12. At the public hearing the Court on 29 November 1962, the oral submissions of the plaintiff in the main action and of the Commission of the EEC were heard. At the same hearing questions were put to them by the Court. Written replies to these were supplied within the prescribed time.

13. The Advocate-General gave his reasoned oral opinion at the hearing on 12 December 1962, in which he proposed that the Court should in its judgment only answer the first question referred to it and hold that Article 12 of the EEC Treaty imposes a duty only on Member States.

II—Arguments and observations

The arguments contained in the observations submitted in accordance with the second paragraph of Article 20 of the Protocol on the Statute of the Court of Justice of the European Economic Community by the parties to the main action, the Member States and the Commission may be summarized as follows:

A—*The first question*

Admissibility

The *Netherlands Government,* the

Belgian Government and the *Nederlandse administratie der belastingen* (which in its statement of case declared that it was in complete agreement with the observations submitted by the Netherlands Government) confirm that the main complaint of Van Gend & Loos against the Governments of the Benelux countries is that by the Brussels Protocol of 25 July 1958 they infringed Article 12 of the EEC Treaty by increasing after its entry into force a customs duty applied in their trade with other Member States of the Communities.

The *Netherlands Government* disputes whether an alleged infringement of the Treaty by a Member State can be submitted to the judgment of the Court by a procedure other than that laid down by Article 169 or 170, that is to say on the initiative of another Member State or of the Commission. It maintains in particular that the matter cannot be brought before the Court by means of the procedure of reference for a preliminary ruling under Article 177.

The Court, according to the Netherlands Government, cannot, in the context of the present proceedings, decide a problem of this nature, since it does not relate to the interpretation but to the application of the Treaty in a specific case.

The *Belgian Government* maintains that the first question is a reference to the Court of a problem of constitutional law, which falls exclusively within the jurisdiction of the Netherlands court.

That court is confronted with two international treaties both of which are part of the national law. It must decide under national law—assuming that they are in fact contradictory—which treaty prevails over the other or more exactly whether a prior national law of ratification prevails over a subsequent one.

This is a typical question of national constitutional law which has nothing to do with the interpretation of an Article of the EEC Treaty and is within the exclusive jurisdiction of the Netherlands court, because it can only be answered according to the constitutional principles and jurisprudence of the national law of the Netherlands.

The Belgian Government also points out that a decision on the first question referred to the Court is not only unnecessary to enable the Tariefcommissie to give its judgment but cannot even have any influence on the solution to the actual problem which it is asked to resolve.

In fact, whatever answer the Court may give, the Tariefcommissie has to solve the same problem: Has it the right to ignore the law of 16 December 1959 ratifying the Brussels Protocol, because it conflicts with an earlier law of 5 December 1957 ratifying the Treaty establishing the EEC?

The question raised is not therefore an appropriate question for a preliminary ruling, since its answer cannot enable the court which has to adjudicate upon the merits of the main action to make a final decision in the proceedings pending before it.

The *Commission of the EEC*, on the other hand, observes that the effect of the provisions of the Treaty on the national law of Member States cannot be determined by the actual national law of each of them but by the Treaty itself. The problem is therefore without doubt one of interpretation of the Treaty.

Further the Commission calls attention to the fact that a finding of inadmissibility would have the paradoxical and shocking result that the rights of individuals would be protected in all cases of infringement of Community law except in the case of an infringement by a Member State.

On the substance

Van Gend & Loos answers in the affirmative the question whether the Article has internal effect.

It maintains in particular that:

—Article 12 is applicable without any preliminary incorporation in the national legislation of Member States, since it only imposes a negative obligation;

—it has direct effect without any further measures of implementation under Community legislation, as all the customs duties applied by Member States in their trade with each other were bound on 1 January 1957 (Article 14 of the Treaty);

—although the Article does not directly refer to the nationals of Member States but to the national authorities, infringement of it adversely affects the fundamental principles of the Community, and individuals as well as the Community must be protected against such infringements;

—it is particularly well adapted for direct application by the national court which must set aside the application of customs duties introduced or increased in breach of its provisions.

The *Commission* emphasizes the importance of the Court's answer to the first question. It will have an effect not only on the interpretation of the provision at issue in a specific case and on the effect which will be attributed to it in the legal systems of Member States but also on certain other provisions of the Treaty which are as clear and complete as Article 12.

According to the Commission an analysis of the legal structure of the Treaty and of the legal system which it establishes shows on the one hand that the Member States did not only intend to undertake mutual commitments but to establish a system of Community law, and on the other hand that they did not wish to withdraw the application of this law from the ordinary jurisdiction of the national courts of law.

However, Community law must be effectively and uniformly applied throughout the whole of the Community.

The result is first that the effect of Community law on the internal law of Member States cannot be determined by this internal law but only by Community law, further that the national courts are bound to apply directly the rules of Community law and finally that the national court is bound to ensure that the rules of Community law prevail over conflicting national laws even if they are passed later.

The Commission observes in this context that the fact that a Community rule is, as regards its form, directed to the states does not of itself take away from individuals who have an interest in it the right to require it to be applied in the national courts.

As regards more particularly the question referred to the Court, the Commission is of the opinion that Article 12 contains a rule of law capable of being effectively applied by the national court.

It is a provision which is perfectly clear in the sense that it creates for Member States a specific unambiguous obligation relating to the extension of their internal law in a matter which directly affects their nationals and it is not affected or qualified by any other provision of the Treaty.

It is also a complete and self-sufficient provision in that it does not require on a Community level any new measure to give concrete form to the obligation which it defines.

The *Netherlands Government* draws a distinction between the question of the internal effect and that of the direct effect (or direct applicability), the first, according to it, being a pre-condition of the second.

It considers that the question whether a particular provision of the Treaty has an internal effect can only be answered in the affirmative, if all the essential elements, namely the intention of the contracting parties and the material

terms of the provision under consideration, allows such a conclusion.

With regard to the intention of the parties to the Treaty the Netherlands Government maintains that an examination of the actual wording is sufficient to establish that Article 12 only places an obligation on Member States, who are free to decide how they intend to fulfil this obligation. A comparison with other provisions of the Treaty confirms this finding.

As Article 12 does not have internal effect it cannot, *a fortiori,* have direct effect.

Even if the fact that Article 12 places an obligation on Member States were to be considered as an internal effect, it cannot have direct effect in the sense that it permits the nationals of Member States to assert subjective rights which the courts must protect.

Alternatively the Netherlands Government argues that, so far as the necessary conditions for its direct application are concerned, the EEC Treaty does not differ from a standard international treaty. The conclusive factors in this respect are the intention of the parties and the provisions of the Treaty.

However the question whether under Netherlands constitutional law Article 12 is directly applicable is one concerning the interpretation of Netherlands law and does not come within the jurisdiction of the Court of Justice.

Finally the Netherlands Government indicates what the effect would be, in its view, of an affirmative answer to the first question put by the Tariefcommissie:

—it would upset the system which the authors of the Treaty intended to establish;

—it would create, with regard to the many provisions in Community regulations which expressly impose obligations on Member States, an uncertainty in the law of a kind which could call in question the readiness of these States to cooperate in the future;

—it would put in issue the responsibility of States by means of a procedure which was not designed for this purpose.

The *Belgian Government* maintains that Article 12 is not one of the provisions —which are the exception in the Treaty —having direct internal effect.

Article 12 does not constitute a rule of law of general application providing that any introduction of a new customs duty or any increase in an existing duty is automatically without effect or is absolutely void. It merely obliges Member States to refrain from taking such measures.

It does not create therefore a directly applicable right which nationals could invoke and enforce. It requires from Governments action at a later date to attain the objective fixed by the Treaty. A national court cannot be asked to enforce compliance with this obligation.

The *German Government* is also of the opinion that Article 12 of the EEC Treaty does not constitute a legal provision which is directly applicable in all Member States. It imposes on them an international obligation (in the field of customs policy) which must be implemented by national authorities endowed with legislative powers.

Customs duties applicable to a citizen of a Member State of the Community, at least during the transitional period, thus do not derive from the EEC Treaty or the legal measures taken by the institutions, but from legal measures enacted by Member States. Article 12 only lays down the provisions with which they must comply in their customs legislation.

Moreover the obligation laid down only applies to the other contracting Member States.

In German law a legal provision which laid down a customs duty contrary to the provisions of Article 12 would be perfectly valid.

Within the framework of the EEC Treaty the legal protection of nationals of Member States is secured, by provisions derogating from their national constitutional system, only in respect of those measures taken by the institutions of the Community which are of direct and individual concern to such nationals.

B—*The second question*

Admissibility

The *Netherlands* and *Belgian Governments* are of the opinion that the second as well as the first question is inadmissible.
According to them the answer to the question whether in fact the Brussels Protocol of 1958 represents a failure by those states who are signatories to fulfil the obligations laid down in Article 12 of the EEC Treaty cannot be given in the context of a preliminary ruling, because the issue is the application of the Treaty and not its interpretation. Moreover such an answer presupposes a careful study and a specific evaluation of the facts and circumstances peculiar to a given situation, and this is also inadmissible under Article 177.
The *Netherlands Government* emphasizes, furthermore, that if a failure by a state to fulfil its Community obligations could be brought before the Court by a procedure other than those under Articles 169 and 170 the legal protection of that state would be considerably diminished.
The *German Government,* without making a formal objection of inadmissibility, maintains that Article 12 only imposes an international obligation on states and that the question whether national rules enacted for its implementation do not comply with this obligation cannot depend upon a decision of the Court under Article 177 since it does not involve the interpretation of the Treaty.
Van Gend & Loos also considers that direct form of the second question would necessitate an examination of the facts for which the Court has no jurisdiction when it makes a ruling under Article 177. The real question for interpretation according to it could be worded as follows:
Is it possible for a derogation from the rules applied before 1 March 1960 (or more accurately, before 1 January 1958) not to be in the nature of an increase prohibited by Article 12 of the Treaty, even though this derogation arithmetically represents an increase?

On the substance

Van Gend & Loos repeats in detail the history of the classification of aminoplasts in the successive tariffs to show that the company was charged with a duty of 8% instead of 3% intentionally and not because of the inevitable effect of adapting the old tariff to the new. The Netherlands Government was therefore in breach of Article 12 of the EEC Treaty when it increased a customs duty applied in its trade with other Member States.
The *Netherlands* and *Belgian Governments* reply that, before the modification of the Benelux Tariff of 1958, ureaformaldehyde was not subject to an import duty of 3% laid down for heading 279-a-2 of the 'Tariefbesluit' of 1947, but to an import duty of 10% laid down for heading 332 bis (adhesives).
In fact experience showed that the goods in question were usually used as glue and that as a general rule they could be used as such. Therefore the ministries concerned decided that the product in question was always to be taxed as glue and was to be included under heading 332 bis.
Although, when the intended appli-

cation of the product in dispute was not sufficiently specified, the Tariefcommissie in certain cases classified it under heading 279-a-2, the authorities of the Benelux States charged it with an import duty of 10% from the date of the entry into force of the Brussels nomenclature, which put an end to any possible argument.

There can be no question, therefore, in this case, of an increase of a customs duty or of a derogation from the provisions of Article 12 of the Treaty.

Van Gend & Loos replies that only aqueous solutions of aminoplasts to which fillers or binders had been added and which only required the addition of a hardener to make an effective adhesive, that is to say, solutions which could be considered as raw materials, could be classified under heading 332 bis.

The *Commission of the EEC* is of the opinion first that the prohibition in Article 12 relates to all goods which are capable of being the subject matter of trade between Member States (to the extent to which such trade relates to products complying with the conditions of Article 9(2)).

Article 12 not only aims at the general maintenance of customs duties applied by the various Member States in their relations with each other but also relates to each individual product. It allows no exception even partial or provisional.

The Commission then points out that, in the context of Article 12, regard must be had to the duty actually applied when the Treaty entered into force. This duty results from the whole of the provisions and customary practice of administrative law.

However, an isolated classification under another tariff heading is in itself insufficient proof that the duty of 10% chargeable under heading 332 bis is not in fact applied to aminoplasts.

In this case it is necessary to recognize a concept of *prima facie* legality: when there is an official interpretation by the competent administration and instructions in conformity with this interpretation have been given to executive officers to fix the detailed rules for levying a duty, that is the 'duty applied' within the meaning of Article 12 of the Treaty.

The Commission, therefore, considers the duty of 10% as the duty applied on the entry into force of the Treaty. There has not therefore been in this case any increase contrary to Article 12.

Grounds of judgment

I — Procedure

No objection has been raised concerning the procedural validity of the reference to the Court under Article 177 of the EEC Treaty by the Tariefcommissie, a court or tribunal within the meaning of that Article. Further, no grounds exist for the Court to raise the matter of its own motion.

II — The first question

A — *Jurisdiction of the Court*

The Government of the Netherlands and the Belgian Government challenge the jurisdiction of the Court on the ground that the reference relates not to the interpretation but to the application of the Treaty in the context of

the constitutional law of the Netherlands, and that in particular the Court has no jurisdiction to decide, should the occasion arise, whether the provisions of the EEC Treaty prevail over Netherlands legislation or over other agreements entered into by the Netherlands and incorporated into Dutch national law. The solution of such a problem, it is claimed, falls within the exclusive jurisdiction of the national courts, subject to an application in accordance with the provisions laid down by Articles 169 and 170 of the Treaty.

However in this case the Court is not asked to adjudicate upon the application of the Treaty according to the principles of the national law of the Netherlands, which remains the concern of the national courts, but is asked, in conformity with subparagraph (a) of the first paragraph of Article 177 of the Treaty, only to interpret the scope of Article 12 of the said Treaty within the context of Community law and with reference to its effect on individuals. This argument has therefore no legal foundation.

The Belgian Government further argues that the Court has no jurisdiction on the ground that no answer which the Court could give to the first question of the Tariefcommissie would have any bearing on the result of the proceedings brought in that court.

However, in order to confer jurisdiction on the Court in the present case it is necessary only that the question raised should clearly be concerned with the interpretation of the Treaty. The considerations which may have led a national court or tribunal to its choice of questions as well as the relevance which it attributes to such questions in the context of a case before it are excluded from review by the Court of Justice.

It appears from the wording of the questions referred that they relate to the interpretation of the Treaty. The Court therefore has the jurisdiction to answer them.

This argument, too, is therefore unfounded.

B—*On the substance of the Case*

The first question of the Tariefcommissie is whether Article 12 of the Treaty has direct application in national law in the sense that nationals of Member States may on the basis of this Article lay claim to rights which the national court must protect.

To ascertain whether the provisions of an international treaty extend so far in their effects it is necessary to consider the spirit, the general scheme and the wording of those provisions.

The objective of the EEC Treaty, which is to establish a Common Market, the functioning of which is of direct concern to interested parties in the Community, implies that this Treaty is more than an agreement which merely creates mutual obligations between the contracting states. This view is confirmed by the preamble to the Treaty which refers not only to governments but to peoples. It is also confirmed more specifically by the establishment of institutions endowed with sovereign rights, the exercise of which affects Member States and also their citizens. Furthermore, it must be noted that the nationals of the states brought together in the Community are called upon to cooperate in the functioning of this Community through the intermediary of the European Parliament and the Economic and Social Committee.

In addition the task assigned to the Court of Justice under Article 177, the object of which is to secure uniform interpretation of the Treaty by national courts and tribunals, confirms that the states have acknowledged that Community law has an authority which can be invoked by their nationals before those courts and tribunals.

The conclusion to be drawn from this is that the Community constitutes a new legal order of international law for the benefit of which the states have limited their sovereign rights, albeit within limited fields, and the subjects of which comprise not only Member States but also their nationals. Independently of the legislation of Member States, Community law therefore not only imposes obligations on individuals but is also intended to confer upon them rights which become part of their legal heritage. These rights arise not only where they are expressly granted by the Treaty, but also by reason of obligations which the Treaty imposes in a clearly defined way upon individuals as well as upon the Member States and upon the institutions of the Community.

With regard to the general scheme of the Treaty as it relates to customs duties and charges having equivalent effect it must be emphasized that Article 9, which bases the Community upon a customs union, includes as an essential provision the prohibition of these customs duties and charges. This provision is found at the beginning of the part of the Treaty which defines the 'Foundations of the Community'. It is applied and explained by Article 12.

The wording of Article 12 contains a clear and unconditional prohibition which is not a positive but a negative obligation. This obligation, moreover, is not qualified by any reservation on the part of states which would make its implementation conditional upon a positive legislative measure enacted under national law. The very nature of this prohibition makes it ideally adapted to produce direct effects in the legal relationship between Member States and their subjects.

The implementation of Article 12 does not require any legislative intervention on the part of the states. The fact that under this Article it is the Member States who are made the subject of the negative obligation does not imply that their nationals cannot benefit from this obligation.

In addition the argument based on Articles 169 and 170 of the Treaty put forward by the three Governments which have submitted observations to the Court in their statements of case is misconceived. The fact that these Articles of the Treaty enable the Commission and the Member States to bring before the Court a State which has not fulfilled its obligations does not mean that individuals cannot plead these obligations, should the occasion arise, before a national court, any more than the fact that the Treaty places at the disposal of the Commission ways of ensuring that obligations imposed upon those subject to the Treaty are observed, precludes the possibility, in actions between individuals before a national court, of pleading infringements of these obligations.

A restriction of the guarantees against an infringement of Article 12 by Member States to the procedures under Article 169 and 170 would remove all direct legal protection of the individual rights of their nationals. There is the risk that recourse to the procedure under these Articles would be ineffective if it were to occur after the implementation of a national decision taken contrary to the provisions of the Treaty.

The vigilance of individuals concerned to protect their rights amounts to an effective supervision in addition to the supervision entrusted by Articles 169 and 170 to the diligence of the Commission and of the Member States.

It follows from the foregoing considerations that, according to the spirit, the general scheme and the wording of the Treaty, Article 12 must be interpreted as producing direct effects and creating individual rights which national courts must protect.

III — The second question

A—*The jurisdiction of the Court*

According to the observations of the Belgian and Netherlands Governments, the wording of this question appears to require, before it can be answered, an examination by the Court of the tariff classification of ureaformaldehyde imported into the Netherlands, a classification on which Van Gend & Loos and the Inspector of Customs and Excise at Zaandam hold different opinions with regard to the 'Tariefbesluit' of 1947. The question clearly does not call for an interpretation of the Treaty but concerns the application of Netherlands customs legislation to the classification of aminoplasts, which is outside the jurisdiction conferred upon the Court of Justice of the European Communities by subparagraph (a) of the first paragraph of Article 177.

The Court has therefore no jurisdiction to consider the reference made by the Tariefcommissie.

However, the real meaning of the question put by the Tariefcommissie is whether, in law, an effective increase in customs duties charged on a given product as a result not of an increase in the rate but of a new classification of the product arising from a change of its tariff description contravenes the prohibition in Article 12 of the Treaty.

Viewed in this way the question put is concerned with an interpretation of this provision of the Treaty and more particularly of the meaning which should be given to the concept of duties applied before the Treaty entered into force.

Therefore the Court has jurisdiction to give a ruling on this question.

B—*On the substance*

It follows from the wording and the general scheme of Article 12 of the Treaty that, in order to ascertain whether customs duties or charges having equivalent effect have been increased contrary to the prohibition contained in the said Article, regard must be had to the customs duties and charges actually applied at the date of the entry into force of the Treaty.

Further, with regard to the prohibition in Article 12 of the Treaty, such an illegal increase may arise from a re-arrangement of the tariff resulting in the

classification of the product under a more highly taxed heading and from an actual increase in the rate of customs duty.

It is of little importance how the increase in customs duties occurred when, after the Treaty entered into force, the same product in the same Member State was subjected to a higher rate of duty.

The application of Article 12, in accordance with the interpretation given above, comes within the jurisdiction of the national court which must enquire whether the dutiable product, in this case ureaformaldehyde originating in the Federal Republic of Germany, is charged under the customs measures brought into force in the Netherlands with an import duty higher than that with which it was charged on 1 January 1958.

The Court has no jurisdiction to check the validity of the conflicting views on this subject which have been submitted to it during the proceedings but must leave them to be determined by the national courts.

IV — Costs

The costs incurred by the Commission of the EEC and the Member States which have submitted their observations to the Court are not recoverable, and as these proceedings are, in so far as the parties to the main action are concerned, a step in the action pending before the Tariefcommissie, the decision as to costs is a matter for that court.

On those grounds,

Upon reading the pleadings;
Upon hearing the report of the Judge-Rapporteur;
Upon hearing the parties;
Upon hearing the opinion of the Advocate-General;
Having regard to Articles 9, 12, 14, 169, 170 and 177 of the Treaty establishing the European Economic Community;
Having regard to the Protocol on the Statute of the Court of Justice of the European Economic Community;
Having regard to the Rules of Procedure of the Court of Justice of the European Communities;

THE COURT

in answer to the questions referred to it for a preliminary ruling by the Tariefcommissie by decision of 16 August 1962, hereby rules:

1. **Article 12 of the Treaty establishing the European Economic Community produces direct effects and creates individual rights which national courts must protect.**

2. **In order to ascertain whether customs duties or charges having equivalent effect have been increased contrary to the prohibition contained in Article 12 of the Treaty, regard must be had to the duties and charges actually applied by the Member State in question at the date of the entry into force of the Treaty.**
Such an increase can arise both from a re-arrangement of the tariff resulting in the classification of the product under a more highly taxed heading and from an increase in the rate of customs duty applied.

3. **The decision as to costs in these proceedings is a matter for the Tariefcommissie.**

OPINION OF MR ADVOCATE-GENERAL KARL ROEMER DELIVERED ON 12 DECEMBER 1962[1]

Mr President,

Members of the Court,

The present proceedings originate in an action before the Tariefcommissie, a Dutch administrative court. This action is for the annulment of a decision of the Nederlandse administratie der belastingen (the Netherlands Inland Revenue Administration) of 6 March 1961 concerning the application of a particular customs duty to the import of urea-formaldehyde from the Federal Republic of Germany. The decision is based on

1 — Translated from the German.

seeing that the Member States respect those obligations which have been imposed upon them by the Treaty and which bind them as States without creating individual rights, but this obligation on the part of the Commission does not give individuals the right to allege, in Community law or under Article 177, either failure by the State concerned to fulfil any of its obligations or breach of duty on the part of the Commission.

5. Article 102 of the EEC Treaty contains no provisions which are capable of creating individual rights which national courts must protect.

6. Article 93 of the EEC Treaty contains no provisions which are capable of creating individual rights which national courts must protect.

7. A Member State's obligation under the EEC Treaty, which is neither subject to any conditions nor, as regards its execution or effect, to the adoption of any measure either by the States or by the Commission, is legally complete and consequently capable of producing direct effects on the relations between Member States and individuals. Such an obligation becomes an integral part of the legal system of the Member States, and thus forms part of their own law, and directly concerns their nationals in whose favour it has created individual rights which national courts must protect.

8. Article 53 of the EEC Treaty constitutes a Community rule capable of creating individual rights which national courts must protect.

9. Article 53 of the EEC Treaty is satisfied so long as no new measure subjects the establishment of nationals of other Member States to more severe rules than those prescribed for nationals of the country of establishment, whatever the legal system governing the undertakings.

10. Article 37 (2) of the EEC Treaty constitutes in all its provisions a rule of Community law capable of creating individual rights which national courts must protect.

11. The provisions of Article 37 (2) of the EEC Treaty have as their object the prohibition of any new measure contrary to the principles of Article 37 (1), that is any measure having as its object or effect a new discrimination between nationals of Member States regarding the conditions in which goods are procured and marketed, by means of monopolies or bodies which must, first, have as their object transactions regarding a commercial product capable of being the subject of competition and trade between Member States, and secondly must play an effective part in such trade.
It is a matter for the court dealing with the main action to assess in each case whether the economic activity under review relates to such a product which, by virtue of its nature and the technical or international conditions to which it is subject, is capable of playing such a part in imports or exports between nationals of the Member States.

In Case 6/64

Reference to the Court under Article 177 of the EEC Treaty by the Giudice Conciliatore, Milan, for a preliminary ruling in the action pending before that court between

FLAMINIO COSTA

and

ENEL (Ente Nazionale Energia Elettrica (National Electricity Board), formerly the Edison Volta undertaking)

on the interpretation of Articles 102, 93, 53 and 37 of the said Treaty

THE COURT

composed of: A. M. Donner, President, Ch. L. Hammes and A. Trabucchi, Presidents of Chambers, L. Delvaux, R. Rossi, R. Lecourt (Rapporteur) and W. Strauß, Judges,

Advocate-General: M. Lagrange
Registrar: A. Van Houtte

gives the following

JUDGMENT

Issues of fact and of law

I — Facts and procedure

By Law No 1643 of 6 December 1962 and subsequent decrees the Italian Republic nationalized the production and distribution of electric energy and created an organization, the Ente Nazionale Energia Elettrica (or ENEL) (National Electricity Board) to which the assets of the electricity undertakings were transferred.

In proceedings about the payment of an invoice for electricity between Flaminio Costa and ENEL, before the Giudice Conciliatore, Milan, Mr Costa, as a shareholder of Edison Volta, a company affected by the nationalization, and as an electricity consumer, requested the court to apply Article 177 of the EEC Treaty so as to obtain an interpretation of Articles 102, 93, 53 and 37 of the said Treaty, which Articles, he alleged, had been infringed by the Law of 6 December 1962. The Giudice Conciliatore, by order of 16 January 1964 acceding to this request, decided as follows:

> 'Having regard to Article 177 of the Treaty of 25 March 1957 establishing the EEC, incorporated into Italian law by Law No 1203 of 14 October 1957, and having regard to the allegation that Law No 1643 of 6 December 1962 and the presidential decrees issued in execution of that Law (No 1670 of 15 December 1962, No 36 of 4 February 1963, No 138 of 25 February 1963 and No 219 of 14 March 1963) infringe Articles 102, 93, 53 and 37 of the aforementioned Treaty, the Court hereby stays the proceedings and orders that a certified copy of the file be transmitted to the Court of Justice of the European Economic Community in Luxembourg.'

This application for a preliminary ruling was transmitted by the Registrar of the Giudice Conciliatore to the Court and was received in the Court Registry on

20 February 1964.
Mr Costa set out his observations in his written statement of case lodged on 15 May 1964. He asked the Court 'for an interpretation of the Treaty, in particular of Articles 102, 93, 53 and 37'.
In its statement of case lodged on 23 May 1964, the Italian Government submitted that the application for a preliminary ruling was 'absolutely inadmissible' and that there were no grounds for raising the questions referred. ENEL, in its statement of case lodged on the same day, also submitted that there were no grounds for raising these questions.
In its statement of case dated 23 May 1964, the EEC Commission made its observations both on the relevance of the questions put and on the interpretation of the abovementioned Articles.
The Court also received an 'application to intervene', filed in the Registry on 20 May 1964, which was declared inadmissible by order of 3 June 1964.

II — Observations submitted under Article 20 of the Statute of the Court

On the admissibility of the reference for a preliminary ruling

The *Italian Government* complains that the Giudice Conciliatore did not restrict itself to asking the Court to interpret the Treaty but also asked it to declare whether the Italian law in dispute was in conformity with the Treaty, and that because of this the preliminary ruling is inadmissible.
A national court, it is claimed, cannot have recourse to this procedure when, for the purposes of deciding a dispute it has only to apply a domestic law and not a provision of the Treaty. Article 177 cannot be used as a means of allowing a national court, on the initiative of a national of a Member State, to subject a law of that State to the procedure for a preliminary ruling for infringement of the obligations of the Treaty. The only procedure possible is that under Articles 169 and 170 and consequently the present proceedings before the Court of Justice are 'absolutely inadmissible'.
Mr Costa claims on the other hand that by the Treaty the jurisdiction of the Court depends on the mere existence of a request within the meaning of Article 177 and it appears from the question submitted that it involves a case of interpretation of the Treaty; it is not for the Court of Justice to judge the facts or the considerations which may have led the national court to make its choice of questions.
Finally the *Commission* raises the point that the Court's examination cannot concern itself with the reasons which led the national court to adopt its questions or with their importance for the solution of the dispute. In this case their wording seems to bear a resemblance to an action for failure to fulfil a Community obligation as envisaged under Articles 169 and 170 and as such is inadmissible. It is however for the Court to decide from the questions referred those relating solely to the subject of interpretation as permitted by Article 177.
Finally the Commission points out that in a judgment dated 7 March 1964 the Italian constitutional court failed to apply this Article in a similar case and thus took a decision involving certain repercussions on the future of Community law as a whole.

On the interpretation of Article 102

As to the interpretation of Article 102, *Mr Costa* suggests that prior consultation with the Commission should be regarded as an obligation for the Member State in question and not as a mere right. Any other interpretation of Article 102 would deprive it of its purpose. Failure to consult the Commission, when faced with the existence of a potential danger of distortion, consti-

tutes an irregularity. A Member State cannot itself appreciate the likelihood of distortion without unilaterally assuming a power which has not been conferred on it.

The *Commission* denies the existence of a distortion. It seems to state however that, if there is any doubt as to its existence, then there would be grounds for consulting the Commission and that, at the time when the disputed law concerning nationalization was adopted, the Italian Republic did not respect the rule of procedure applicable in this case.

The *Italian Government* points out that the Commission, when informed by a written question submitted by a German deputy, accepted nationalization in this case and referred to Article 222. There is no distortion within the meaning of Article 102 as long as it is a question of setting up a public service intended to achieve the objectives of public utility indicated in Article 43 of the Italian constitution and as long as the conditions of competition are not adversely affected.

ENEL puts forward similar arguments and points out that the establishment of a public service applies equally to all those coming under the scheme.

On the interpretation of Article 93

With regard to the interpretation of Article 93, *Mr Costa* considers that the nationalization of an economic activity automatically results in the creation of a system in which hidden aid is granted to the nationalized sector. The Commission must accordingly intervene in accordance with the procedure prescribed by Article 93.

The *Commission* considers that Member States which do not respect the provisions of Article 93 (3) are committing a procedural infringement which itself suffices to entitle the Commission to take action under Article 169. The Commission nevertheless retains the power to bring the matter before the Court of Justice in cases where the material incompatibility of the aid in dispute is accompanied by infringement of the procedural rule under consideration.

The Commission has studied the draft law in dispute but without coming to the conclusion that it is incompatible with the Common Market. In the Commission's opinion the only question relates to the matter of procedure and concerns the failure to notify. The Commission reserves the right to take action if the aid in question proves to be incompatible with the Treaty.

The *Italian Government* and *ENEL* point out that the facts show that there is no incompatibility between the Law on nationalization and Article 93.

The establishment of ENEL has nothing to do with Community law.

On the interpretation of Article 53

With regard to the interpretation of Article 53 which prohibits States from introducing any new restrictions on the right of establishment in their territories, *Mr Costa* claims to see in the nationalization of a sector of the economy a measure incompatible with the above Article.

Article 222 cannot justify the legality of every conceivable system of property ownership and the abolition of private property is contrary to the above Article.

No rule exempts a nationalized sector from the application of Article 53.

Nationalization constitutes a denial of a Community system and is the method best calculated to prevent the freedom of establishment enshrined by the said Article with regard to nationals both of other Member States and of the nationalizing state.

Finally, Article 55 cannot be considered as derogating from Article 53, as the former is exclusively concerned with exempting from the ambit of the latter the official powers of the State and not the power to pursue an economic activity.

The *Italian Government* objects to this interpretation on the ground that Article 53 does not apply where the Member State concerned leaves to free private enterprise (without any distinction as to nationality) that part of the economy which is not reserved to the public authorities.

In support of the same interpretation *ENEL* suggests that Article 53 should be regarded as intended to place foreigners on the same footing as nationals as regards the exercise of a productive activity.

This principle is not infringed if a law instituting a public service reserves to the State the relevant sector of the economy, by the same token excluding nationals and foreigners alike from this sector.

The *Commission* considers that, when regarded in the light of Article 222, nationailization is not inconsistent with the Treaty. Articles 5 and 90 are aimed at alleviating the consequences resulting from the operation of nationalizing sectors of the economy. Article 53 however applies to possible restrictions on the right of establishment of nationals of other States which might result from a case of nationalization, such restrictions not being justified by technical requirements in the sector in question.

On the interpretation of Article 37

In respect of the requirements of Article 37 to the effect that Member States shall progressively adjust any State monopolies of a commercial character so as to avoid all discrimination between nationals of Member States regarding the conditions under which goods are procured and marketed, *Mr Costa* asks the Court to interpret this provision very widely in such a way that it refers to every measure by which a State confers either on itself or on a body subject to it a monopoly which is by its very nature commercial.

The said Article applies, he claims, not only to actual cases of discrimination but also to potential discrimination and it would have no effect if its only purpose were to eliminate existing cases of discrimination whilst allowing the establishment of new ones. The consequences of nationalization are identical to those of a legal monopoly, in other words the sole power of management, the binding and ineluctable character of its decisions, the power in reaching those decisions to adopt criteria outside the field of economics and the exclusion of competition. Therefore, the result of such a monopoly is to render the importation of similar goods produced by foreign undertakings difficult if not impossible.

By creating a commercial monopoly, nationalization has the same restrictive effect on imports as protective duties or quantitative restrictions.

Rebutting this interpretation the *Italian Government* submits that Article 37 can have nothing to do with the operation of a public service nor with an article whose production depends on limited natural sources (themselves subject to a public concession) which can only be used by a necessarily limited number of producers. The rules of the Treaty safeguarding a free market cannot be concerned with the system of public services.

Moreover, as Article 222 in no way prejudices the rules in Member States governing the system of property ownership, it is possible for the constitutional authorities in each to prescribe the goods and services capable of being considered as public property and which, on the basis of objective decisions, remain outside any rule on competition. Consequently, the exclusion of exports and imports in such a sector must be considered not in terms of a commercial activity but rather of the exercise of a public service.

In support of this interpretation and by reference to the position of Article 37 in the Treaty, *ENEL* considers the 'commercial monopolies' specified in the said Article to be public or private

organizations aiming, as institutions, to make a concentration of exports and imports calculated to disturb the free movement of goods. That could never be the objective of a public service; moreover international trade in a particular article depends on international agreements and complex administrative procedures and is by its very nature outside the requirements of Article 37 and any provision relating to competition.

The *Commission* finally considers that Article 37 should be applied whenever a State establishes an exclusive right to import or export. To fall within the prohibitions in Article 37 the impugned measure must be intended to operate in the field of the circulation of goods or services. Although nationalization may be considered as permissible under Article 222, the creation of a new monopoly cannot.

However, a factual estimate of the trade in existence between Member States in respect of the commodity in question must be taken into consideration.

There is no need to inquire whether the creation of a monopoly of a commercial character is inconsistent with Article 37 (2), where the importation and exportation of the said commodity are not subject to the discretionary power of the administering body.

Grounds of judgment

By Order dated 16 January 1964, duly sent to the Court, the Giudice Conciliatore of Milan, 'having regard to Article 177 of the Treaty of 25 March 1957 establishing the EEC, incorporated into Italian law by Law No 1203 of 14 October 1957, and having regard to the allegation that Law No 1643 of 6 December 1962 and the presidential decrees issued in execution of that Law . . . infringe Articles 102, 93, 53 and 37 of the aforementioned Treaty', stayed the proceedings and ordered that the file be transmitted to the Court of Justice.

On the application of Article 177

On the submission regarding the working of the question

The complaint is made that the intention behind the question posed was to obtain, by means of Article 177, a ruling on the compatibility of a national law with the Treaty.

By the terms of this Article, however, national courts against whose decisions, as in the present case, there is no judicial remedy, must refer the matter to the Court of Justice so that a preliminary ruling may be given upon the 'interpretation of the Treaty' whenever a question of interpretation is raised before them. This provision gives the Court no jurisdiction either to apply the Treaty to a specific case or to decide upon the validity of a provision of

domestic law in relation to the Treaty, as it would be possible for it to do under Article 169.

Nevertheless, the Court has power to extract from a question imperfectly formulated by the national court those questions which alone pertain to the interpretation of the Treaty. Consequently a decision should be given by the Court not upon the validity of an Italian law in relation to the Treaty, but only upon the interpretation of the abovementioned Articles in the context of the points of law stated by the Giudice Conciliatore.

On the submission that an interpretation is not necessary

The complaint is made that the Milan court has requested an interpretation of the Treaty which was not necessary for the solution of the dispute before it.

Since, however, Article 177 is based upon a clear separation of functions between national courts and the Court of Justice, it cannot empower the latter either to investigate the facts of the case or to criticize the grounds and purpose of the request for interpretation.

On the submission that the court was obliged to apply the national law

The Italian Government submits that the request of the Giudice Conciliatore is 'absolutely inadmissible', inasmuch as a national court which is obliged to apply a national law cannot avail itself of Article 177.

By contrast with ordinary international treaties, the EEC Treaty has created its own legal system which, on the entry into force of the Treaty, became an integral part of the legal systems of the Member States and which their courts are bound to apply.

By creating a Community of unlimited duration, having its own institutions, its own personality, its own legal capacity and capacity of representation on the international plane and, more particularly, real powers stemming from a limitation of sovereignty or a transfer of powers from the States to the Community, the Member States have limited their sovereign rights, albeit within limited fields, and have thus created a body of law which binds both their nationals and themselves.

The integration into the laws of each Member State of provisions which derive from the Community, and more generally the terms and the spirit of the Treaty, make it impossible for the States, as a corollary, to accord

precedence to a unilateral and subsequent measure over a legal system accepted by them on a basis of reciprocity. Such a measure cannot therefore be inconsistent with that legal system. The executive force of Community law cannot vary from one State to another in deference to subsequent domestic laws, without jeopardizing the attainment of the objectives of the Treaty set out in Article 5 (2) and giving rise to the discrimination prohibited by Article 7.

The obligations undertaken under the Treaty establishing the Community would not be unconditional, but merely contingent, if they could be called in question by subsequent legislative acts of the signatories. Wherever the Treaty grants the States the right to act unilaterally, it does this by clear and precise provisions (for example Articles 15, 93 (3), 223, 224 and 225). Applications, by Member States for authority to derogate from the Treaty are subject to a special authorization procedure (for example Articles 8 (4), 17 (4), 25, 26, 73, the third subparagraph of Article 93 (2), and 226) which would lose their purpose if the Member States could renounce their obligations by means of an ordinary law.

The precedence of Community law is confirmed by Article 189, whereby a regulation 'shall be binding' and 'directly applicable in all Member States'. This provision, which is subject to no reservation, would be quite meaningless if a State could unilaterally nullify its effects by means of a legislative measure which could prevail over Community law.

It follows from all these observations that the law stemming from the Treaty, an independent source of law, could not, because of its special and original nature, be overridden by domestic legal provisions, however framed, without being deprived of its character as Community law and without the legal basis of the Community itself being called into question.

The transfer by the States from their domestic legal system to the Community legal system of the rights and obligations arising under the Treaty carries with it a permanent limitation of their sovereign rights, against which a subsequent unilateral act incompatible with the concept of the Community cannot prevail. Consequently Article 177 is to be applied regardless of any domestic law, whenever questions relating to the interpretation of the Treaty arise.

The questions put by the Giudice Conciliatore regarding Articles 102, 93, 53, and 37 are directed first to enquiring whether these provisions produce direct effects and create individual rights which national courts must protect, and, if so, what their meaning is.

On the interpretation of Article 102

Article 102 provides that, where 'there is reason to fear' that a provision laid down by law may cause 'distortion', the Member State desiring to proceed therewith shall 'consult the Commission'; the Commission has power to recommend to the Member States the adoption of suitable measures to avoid the distortion feared.

This Article, placed in the chapter devoted to the 'Approximation of Laws', is designed to prevent the differences between the legislation of the different nations with regard to the objectives of the Treaty from becoming more pronounced. By virtue of this provision, Member States have limited their freedom of initiative by agreeing to submit to an appropriate procedure of consultation. By binding themselves unambiguously to prior consultation with the Commission in all those cases where their projected legislation might create a risk, however slight, of a possible distortion, the States have undertaken an obligation to the Community which binds them as States, but which does not create individual rights which national courts must protect. For its part, the Commission is bound to ensure respect for the provisions of this Article, but this obligation does not give individuals the right to allege, within the framework of Community law and by means of Article 177 either failure by the State concerned to fulfil any of its obligations or breach of duty on the part of the Commission.

On the interpretation of Article 93

Under Article 93 (1) and (2), the Commission, in cooperation with Member States, is to 'keep under constant review all systems of aid existing in those States' with a view to the adoption of appropriate measures required by the functioning of the Common Market.

By virtue of Article 93 (3), the Commission is to be informed, in sufficient time, of any plans to grant or alter aid, the Member State concerned not being entitled to put its proposed measures into effect until the Community procedure, and, if necessary, any proceedings before the Court of Justice, have been completed.

These provisions, contained in the section of the Treaty headed 'Aids granted by States', are designed, on the one hand, to eliminate progressively existing aids and, on the other hand, to prevent the individual States in the conduct of their internal affairs from introducing new aids 'in any form whatsoever'

which are likely directly or indirectly to favour certain undertakings or products in an appreciable way, and which threaten, even potentially, to distort competition. By virtue of Article 92, the Member States have acknowledged that such aids are incompatible with the Common Market and have thus implicitly undertaken not to create any more, save as otherwise provided in the Treaty; in Article 93, on the other hand, they have merely agreed to submit themselves to appropriate procedures for the abolition of existing aids and the introduction of new ones.

By so expressly undertaking to inform the Commission 'in sufficient time' of any plans for aid, and by accepting the procedures laid down in Article 93, the States have entered into an obligation with the Community, which binds them as States but creates no individual rights except in the case of the final provision of Article 93 (3), which is not in question in the present case.

For its part, the Commission is bound to ensure respect for the provisions of this Article, and is required, in cooperation with Member States, to keep under constant review existing systems of aids. This obligation does not, however, give individuals the right to plead, within the framework of Community law and by means of Article 177, either failure by the State concerned to fulfil any of its obligations or breach of duty on the part of the Commission.

On the interpretation of Article 53

By Article 53 the Member States undertake not to introduce any new restrictions on the right of establishment in their territories of nationals of other Member States, save as otherwise provided in the Treaty. The obligation thus entered into by the States simply amounts legally to a duty not to act, which is neither subject to any conditions, nor, as regards its execution or effect, to the adoption of any measure either by the States or by the Commission. It is therefore legally complete in itself and is consequently capable of producing direct effects on the relations between Member States and individuals. Such an express prohibition which came into force with the Treaty throughout the Community, and thus became an integral part of the legal system of the Member States, forms part of the law of those States and directly concerns their nationals, in whose favour it has created individual rights which national courts must protect.

The interpretation of Article 53 which is sought requires that it be considered in the context of the Chapter relating to the right of establishment in which it occurs. After enacting in Article 52 that 'restrictions on the freedom of establishment of nationals of a Member State in the territory of another

Member State shall be abolished by progressive stages', this chapter goes on in Article 53 to provide that 'Member States shall not introduce any new restrictions on the right of establishment in their territories of nationals of other Member States'. The question is, therefore, on what conditions the nationals of other Member States have a right of establishment. This is dealt with by the second paragraph of Article 52, where it is stated that freedom of establishment shall include the right to take up and pursue activities as self-employed persons and to set up and manage undertakings 'under the conditions laid down for its own nationals by the law of the country where such establishment is effected'.

Article 53 is therefore satisfied so long as no new measure subjects the establishment of nationals of other Member States to more severe rules than those prescribed for nationals of the country of establishment, whatever the legal system governing the undertaking.

On the interpretation of Article 37

Article 37 (1) provides that Member States shall progressively adjust any 'State monopolies of a commercial character' so as to ensure that no discrimination regarding the conditions under which goods are procured and marketed exists between nationals of Member States. By Article 37 (2), the Member States are under an obligation to refrain from introducing any new measure which is contrary to the principles laid down in Article 37 (1).

Thus, Member States have undertaken a dual obligation: in the first place, an active one to adjust State monopolies, in the second place, a passive one to avoid any new measures. The interpretation requested is of the second obligation together with any aspects of the first necessary for this interpretation.

Article 37 (2) contains an absolute prohibition: not an obligation to do something but an obligation to refrain from doing something. This obligation is not accompanied by any reservation which might make its implementation subject to any positive act of national law. This prohibition is essentially one which is capable of producing direct effects on the legal relations between Member States and their nationals.

Such a clearly expressed prohibition which came into force with the Treaty throughout the Community, and so became an integral part of the legal system of the Member States, forms part of the law of those States and directly concerns their nationals, in whose favour it creates individual rights which

national courts must protect. By reason of the complexity of the wording and the fact that Articles 37 (1) and 37 (2) overlap, the interpretation requested makes it necessary to examine them as a part of the Chapter in which they occur. This Chapter deals with the 'elimination of quantitative restrictions between Member States'. The object of the reference in Article 37 (2) to 'the principles laid down in paragraph (1)' is thus to prevent the establishment of any new 'discrimination regarding the conditions under which goods are procured and marketed . . . between nationals of Member States'. Having specified the objective in this way, Article 37 (1) sets out the ways in which this objective might be thwarted in order to prohibit them.

Thus, by the reference in Article 37 (2), any new monopolies or bodies specified in Article 37 (1) are prohibited in so far as they tend to introduce new cases of discrimination regarding the conditions under which goods are procured and marketed. It is therefore a matter for the court dealing with the main action first to examine whether this objective is being hampered, that is whether any new discrimination between nationals of Member States regarding the conditions under which goods are procured and marketed results from the disputed measure itself or will be the consequence thereof.

There remain to be considered the means envisaged by Article 37 (1). It does not prohibit the creation of any State monopolies, but merely those 'of a commercial character', and then only in so far as they tend to introduce the cases of discrimination referred to. To fall under this prohibition the State monopolies and bodies in question must, first, have as their object transactions regarding a commercial product capable of being the subject of competition and trade between Member States, and secondly must play an effective part in such trade.

It is a matter for the court dealing with the main action to assess in each case whether the economic activity under review relates to such a product which, by virtue of its nature and the technical or international conditions to which it is subject, is capable of playing an effective part in imports or exports between nationals of the Member States.

Costs

The costs incurred by the Commission of the European Economic Community and the Italian Government, which have submitted observations to the Court, are not recoverable and as these proceedings are, in so far as the parties to the main action are concerned, a step in the action pending before the Giudice Conciliatore, Milan, the decision on costs is a matter for that court.

On those grounds,

Upon reading the pleadings;
Upon hearing the report of the Judge-Rapporteur;
Upon hearing the observations of the parties to the main action, the Commission of the European Economic Community and the Italian Government;
Upon hearing the opinion of the Advocate-General;
Having regard to Articles 37, 53, 93, 102 and 177 of the Treaty establishing the European Economic Community;
Having regard to the Protocol on the Statute of the Court of Justice of the European Economic Community;
Having regard to the Rules of Procedure of the Court of Justice of the European Communities;

THE COURT

Ruling upon the plea of inadmissibility based on Article 177 hereby declares:

As a subsequent unilateral measure cannot take precedence over Community law, the questions put by the Giudice Conciliatore, Milan, are admissible in so far as they relate in this case to the interpretation of provisions of the EEC Treaty;

and also rules:

1. **Article 102 contains no provisions which are capable of creating individual rights which national courts must protect;**

2. **Those individual portions of Article 93 to which the question relates equally contain no such provisions;**

3. **Article 53 constitutes a Community rule capable of creating individual rights which national courts must protect. It prohibits any new measure which subjects the establishment of nationals of other Member States to more severe rules than those prescribed for nationals of the country of establishment, whatever the legal system governing the undertakings.**

4. **Article 37 (2) is in all its provisions a rule of Community law**

capable of creating individual rights which national courts must protect. In so far as the question put to the Court is concerned, it prohibits the introduction of any new measure contrary to the principles of Article 37 (1), that is, any measure having as its object or effect a new discrimination between nationals of Member States regading the conditions in which goods are procured and marketed, by means of monopolies or bodies which must, first, have as their object transactions regarding a commercial product capable of being the subject of competition and trade between Member States, and secondly must play an effective part in such trade;

and further declares:

The decision on the costs of the present action is a matter for the Guidice Conciliatore, Milan.

A. M. Donner
President

OPINION OF MR ADVOCATE-GENERAL LAGRANGE DELIVERED ON 25 JUNE 1964[1]

Mr President,
Members of the Court,

The preliminary question upon which you have to give a ruling under Article 177 of the EEC Treaty does not, for once, come from a Netherlands court, but from an Italian one, and it is no longer a question of social security or of Regulation No 3, but rather of a certain number of provisions of the Treaty itself, in respect of which your interpretation is requested in circumstances that are such as to bring in issue the constitutional relations between the European Economic Community and its Member States. This highlights the importance of the judgment you are called upon to pronounce in this case. The facts are known to you: Mr Costa, a lawyer practising in Milan, claims that he is not under an obligation to pay an invoice amounting to 1925 lire demanded of him in respect of the supply of electricity by the 'Ente Nazionale per l'Energia Elettrica (ENEL)'. He objected to this

1—Translated from the French.

individuals were prevented from relying on it before the national courts and if the latter were prevented from taking it into consideration as an element of Community law. Article 177, which empowers national courts to refer to the Court questions concerning the validity and interpretation of all acts of the Community institutions, without distinction, implies furthermore that these acts may be invoked by individuals in the national courts.

It is necessary to examine in every case whether the nature, general scheme and wording of the provision in question are capable of having direct effects on the relations between Member States and individuals.

3. Article 3 (1) of Council Directive No 64/221 of 25 February 1964 on the coordination of special measures concerning the movement and residence of foreign nationals which are justified on grounds of public policy, public security or public health confers on individuals rights which are enforceable by them in the national courts of a Member State and which the latter must protect.

4. The concept of public policy in the context of the Community and where, in particular, it is used as a justification for derogating from a fundamental principle of Community law, must be interpreted strictly, so that its scope cannot be determined unilaterally by each Member State without being subject to control by the institutions of the Community. Nevertheless, the particular circumstances justifying recourse to the concept of public policy may vary from one country to another and from one period to another, and it is therefore necessary in this matter to allow the competent national authorities an area of discretion within the limits imposed by the Treaty.

5. Article 48 of the EEC Treaty and Article 3 (1) of Directive No 64/221 must be interpreted as meaning that a Member State, imposing restrictions justified on grounds of public policy, is entitled to take into account, as a matter of personal conduct of the individual concerned, the fact that the individual is associated with some body or organization the activities of which the Member State considers socially harmful but which are not unlawful in that State, despite the fact that no restriction is placed upon nationals of the said Member State who wish to take similar employment with the same bodies or organizations.

In Case 41/74

Reference to the Court under Article 177 of the EEC Treaty by the Chancery Division of the High Court of Justice, England, for a preliminary ruling in the action pending before that court between

YVONNE VAN DUYN

and

HOME OFFICE

on the interpretation of Article 48 of the EEC Treaty and Article 3 of Council Directive 64/221/EEC of 25 February 1964 on the coordination of special measures concerning the movement and residence of foreign nationals which are justified on grounds of public policy, public security or public health. (OJ of 4. 4. 1964, p. 850).

THE COURT

composed of: R. Lecourt, President C. Ó Dálaigh and Mackenzie Stuart, Presidents of Chambers A. M. Donner, R. Monaco, J. Mertens de Wilmars, P. Pescatore, H. Kutscher and M. Sørensen (Rapporteur), Judges.

Advocate-General: H. Mayras,
Registrar: A. Van Houtte,

gives the following

JUDGMENT

Facts

The order for reference and the written observations submitted pursuant to Article 20 of the Protocol on the Statute of the Court of Justice of the EEC may be summarized as follows:

I — Facts and procedure

1. The Church of Scientology is a body established in the United States of America, which functions in the United Kingdom through a college at East Grinstead, Sussex. The British Government regards the activities of the Church of Scientology as contrary to public policy. On 25 July 1968, the Minister of Health stated in the House of Commons that the Government was satisfied that Scientology was socially harmful. The statement included the following remarks: 'Scientology is a pseudo-philosophical cult ... The Government are satisfied having reviewed all the available evidence that Scientology is socially harmful. It alienates members of families from each other and attributes squalid and disgraceful motives to all who oppose it; its authoritarian principles and practice are a potential menace to the personality and well-being of those so deluded as to become its followers; above all its methods can be a serious danger to the health of those who submit to them. There is evidence that children are now being indoctrinated. There is no power under existing law to prohibit the practice of Scientology; but the Government have concluded that it is so objectionable that it would be right to take all steps within their power to curb its growth... Foreign nationals come here to study

Scientology and to work at the so-called College in East Grinstead. The Government can prevent this under existing law ... and have decided to do so. The following steps are being taken with immediate effect ...

.....

(e) Work permits and employment vouchers will not be issued to foreign nationals ... for work at a Scientology establishment.'

No legal restrictions are placed upon the practice of Scientology in the United Kingdom nor upon British nationals (with certain immaterial exceptions) wishing to become members of or take employment with the Church of Scientology.

2. Miss van Duyn is a Dutch national. By a letter dated 4 May 1973 she was offered employment as a secretary with the Church of Scientology at its college at East Grinstead. With the intention of taking up that offer she arrived at Gatwick Airport on 9 May 1973 where she was interviewed by an immigration officer and refused leave to enter the United Kingdom. It emerged in the course of the interview that she had worked in a Scientology establishment in Amsterdam for six months, that she had taken a course in the subject of Scientology, that she was a practising Scientologist and that she was intending to work at a Scientology establishment in the United Kingdom.

The ground of refusal of leave to enter which is stated in the document entitled 'Refusal of Leave to Enter' handed by the immigration officer to Miss van Duyn reads: 'You have asked for leave to enter the United Kingdom in order to take employment with The Church of Scientology, but the Secretary of State considers it undesirable to give anyone leave to enter the United Kingdom on the business of or in the employment of that organization'.

The power to refuse entry into the United Kingdom is vested in immigration officers by virtue of section 4 (1) of the Immigration Act 1971. Leave to enter was refused by the immigration officer acting in accordance with the policy of the Government and with Rule 65 of the relevant Immigration Rules for Control of Entry which Rules have legislative force. Rule 65 reads:

'Any passenger except the wife or child under 18 of a person settled in the United Kingdom may be refused leave to enter on the ground that the exclusion is conducive to the public good where —

(a) the Secretary of State has personally so directed, or

(b) from information available to the Immigration Officer it seems right to refuse leave to enter on that ground — if, for example, in the light of the passenger's character, conduct or associations it is undesirable to give him leave to enter.'

3. Relying on the Community rules on freedom of movement of workers and especially on Article 48 of the EEC Treaty, Regulation 1612/68 and Article 3 of Directive 64/221, [1] Miss van Duyn claims that the refusal of leave to enter was unlawful and seeks a declaration from the High Court that she is entitled to stay in the United Kingdom for the purpose of employment and to be given leave to enter the United Kingdom.

Before deciding further, the High Court has stayed the proceedings and requested the Court of Justice, pursuant to Article 177 of the EEC Treaty, to give a preliminary ruling on the following questions:

1. Whether Article 48 of the Treaty establishing the European Economic Community is directly applicable so as to confer on individuals rights enforceable by them in the Court of a Member State.

1 — Article 3 (1) of the Directive reads: 'Measures taken on grounds of public policy or of public security shall be based exclusively on the personal conduct of the individual concerned.'

2. Whether Directive 64/221 adopted on 25 February 1964 in accordance with the Treaty establishing the European Economic Community is directly applicable so as to confer on individuals rights enforceable by them in the Courts of a Member State.

3. Whether upon the proper interpretation of Article 48 of the Treaty establishing the European Economic Community and Article 3 of Directive 64/221/EEC a Member State in the performance of its duty to base a measure taken on grounds of public policy exclusively on the personal conduct of the individual concerned is entitled to take into account as matters of personal conduct

   (a) the fact that the individual is or has been associated with some body or organization the activities of which the Member State considers contrary to the public good but which are not unlawful in that State

   (b) the fact that the individual intends to take employment in the Member State with such a body or organization it being the case that no restrictions are placed upon nationals of the Member State who wish to take similar employment with such a body or organization.

4. The order of the High Court of 1 March 1974 was registered at the Court on 13 June 1974.

Written observations have been submitted on behalf of Miss van Duyn by Alan Newman, on behalf of the United Kingdom by W. H. Godwin and on behalf of the Commission by its Legal Adviser, A. McClellan.

Having heard the report of the Judge-Rapporteur and the opinion of the Advocate-General, the Court decided to open the oral procedure without any preparatory inquiry.

II — Written observations submitted to the Court

On the First Question

Miss van Duyn and the *Commission* submit that Article 48 of the EEC Treaty is directly applicable. They rely in particular on the judgments of the Court of 4 April 1974 in *Commission* v *French Republic* (Case No 167/73, [1974] ECR 359) and of 21 June 1974 in *Reyners* v *Belgian State* (Case No 2/74, not yet published).

In the light of the judgment in Case No 167/73 the *United Kingdom* makes no submission on this question.

On the Second Question

Miss van Duyn submits that Article 3 of Directive 64/221 is directly applicable. She observes that the Court has already held that, in principle, directives are susceptible of direct application. She refers to the judgments of the Court of 6 October 1970 in *Grad v Finanzamt Traunstein* (Case No 9/70, Recueil 1970, p. 825) and of 17 December 1970 in *Spa SACE* v *Italian Ministry of Finance* (Case No 33/70, Recueil 1970, p. 1213).

She submits that the criterion as to whether a directive is directly applicable is identical with the criterion adopted in the case of articles in the Treaty itself, and she observes that the Court has not felt itself constrained to hold that a given article in the Treaty is not directly applicable merely because in its formal wording it imposes an obligation on a Member State. She refers to the judgments of the Court of 19 December 1968 in *Salgoil* v *Italian Ministry* (Case No 13/68, Recueil 1968, p. 661) and of 16 June 1966 in *Lütticke GmbH* v *Hauptzollamt Sarrelouis* (Case No 57/65, Recueil 1966, p. 293).

Miss van Duyn further submits that a directive which directly affects an individual is capable of creating direct rights for that individual where its

provisions are clear and unconditional and where, as to the result to be achieved, it leaves no substantial measure of discretion to the Member State. Provided that these criteria are fulfilled it does not matter

(a) whether the provision in the directive consists of a positive obligation to act or of a negative prohibition, or

(b) that the Member State has a choice of form and methods to be adopted in order to achieve the stated result.

As to (a), it is implicit in the Court's judgments in the cases of *Lütticke* and *Salgoil* (already cited) that an article of the Treaty which imposes a positive obligation on a Member State to act is capable of direct applicability and the same reasoning is valid in relation to directives.

As to (b), she notes that Article 189 of the Treaty expressly draws a distinction in relation to directives between binding effect of the result to be achieved and the discretionary nature of the methods to be adopted.

She contends that the provisions of Article 3 fulfil the criteria for direct applicability. She refers to the preamble to the Directive which envisages a direct applicability when it states: 'whereas, in each Member State, nationals of other Member States should have adequate legal remedies available to them in respect of the administration in such matters . . .' (i.e. when a Member State invokes grounds of public policy, public security or public health in matters connected with the movement or residence of foreign nationals).

The only 'adequate legal remedy' available to an individual is the right to invoke the provisions of the Directive before the national courts. A decision to this effect would undoubtedly strengthen the legal protection of individual citizens in the national courts.

The Commission submits that a provision in a directive is directly applicable when it is clear and unambiguous. It refers to the judgments in the *Grad* and *SACE* cases (already cited).

The Commission observes that a Community Regulation has the same weight with immediate effect as national legislation whereas the effect of a directive is similar to that of those provisions of the Treaty which create obligations for the Member States. If provisions of a directive are legally clear and unambiguous, leaving only a discretion to the national authorities for their implementation, they must have an effect similar to those Treaty provisions which the Court has recognized as directly applicable.

It therefore submits that

(a) the executive of a Member State is bound to respect Community law

(b) if a provision in a directive is not covered by an identical provision in national law, but left, as to the result to be achieved, to the discretion of the national authority, the discretionary power of that authority is reduced by the Community provision

(c) in these circumstances and given that to comply with a directive it is not always indispensable to amend national legislation it is clear that the private individual must have the right to prevent the national authority concerned from exceeding its powers under Community law to the detriment of that individual.

According to the Commission, Article 3 is one of the provisions of Directive 64/221 having all the characteristics necessary to have direct effect in the Member State to which it is addressed. And it further recalls that the difficulty of applying the rules in a particular case does not derogate from their general application.

In this context the Commission examines the Judgment of 7 October 1968 of the Belgian Conseil d'État in the

Corveleyn case (CE 1968, No 13.146 arrêt 7. 10. 1968, p. 710).

As the British authorities have not adopted the wording of Article 3 of the Directive to achieve the required result, the Commission submits, by virtue of Article 189 of the Treaty and in the light of the case-law of the Court, that Article 3 is a directly applicable obligation which limits the wide discretion given to immigration officers under Rule 65 in the 'Statement of Immigration Rules'. The Commission proposes the following answer to the question: Where a provision is legally clear and unambiguous as is Article 3 of Directive 64/221, such a provision is directly applicable so as to confer on individuals rights enforceable by them in the Courts of a Member State.

The United Kingdom recalls that Article 189 of the EEC Treaty draws a clear distinction between regulations and directives, and that different effects are ascribed to each type of provision. It therefore submits that prima facie the Council in not issuing a regulation must have intended that the Directive should have an effect other than that of a regulation and accordingly should not be binding in its entirety and not be directly applicable in all Member States.

The United Kingdom submits that neither the *Grad* nor the *SACE* decision is authority for the proposition that it is immaterial whether or not a provision is contained in a regulation, directive or decision. In both cases the purpose of the directive in question was merely to fix a date for the implementation of clear and binding obligations contained in the Treaty and instruments made under it. Those cases show that in special circumstances a limited provision in a directive could be directly applicable. The provisions of the Directive in the present case are wholly different. Directive 64/221 is far broader in scope. It gives comprehensive guidance to Member States as to all measures taken by them affecting freedom of movement for workers and it was expressly contemplated in Article 10 that Member States would put into force the measures necessary to comply with the provisions of the Directive. Indeed the very terms of Article 3 (1) itself contemplate the taking of measures.

The United Kingdom examines the only four cases in which national courts to its knowledge have considered the question of the direct applicability of the Directive. It submits that little assistance can be obtained from these cases. *Inter alia* it points out that the true effect of the *Corveleyn* case (already cited) has been the subject of considerable debate among Belgian jurists and the better view appears to be that the Conseil d'État did not decide that the Directive was directly applicable but applied the Belgian concept of public order which itself required international obligations of Belgium to be taken into account.

On the Third Question

Miss van Duyn points out that the first part of the question assumes a situation where an organization engages in activities which are lawful in the State. The question does not necessarily assume that the individual concerned intends to continue this association. It is sufficient that he has in the past been associated. In this respect Miss van Duyn recalls that even if the individual had been associated with an illegal organization and, by virtue of his activities therein, had been convicted of a crime, that circumstance would not, by virtue of the provisions of Article 3, paragraph 2, of Directive 64/221, in itself be sufficient grounds for the Member State to take measures based on public policy to exclude the individual.

Merely belonging to a lawful organization, without necessarily taking part in its activities, cannot, in her submission, amount to 'conduct'. Conduct implies 'activity.' Moreover, the activities of the organization in question are not, merely because the individual is or has been a passive member, 'personal' to the individual concerned. To hold

otherwise would mean that a Member State could exclude an individual merely because, in the distant past, he had for a brief period perfectly lawfully belonged to a somewhat extreme political or religious organization in his own Member State.

In regard to the second part of the question, Miss van Duyn recalls that freedom of movement of persons is one of the fundamental principles established by the Treaty and that discrimination on grounds of nationality is prohibited in Article 7. Exemptions to these fundamental principles must be interpreted restrictively.

She points out that the question assumes discrimination on grounds of nationality and that it assumes a situation where an individual whose past activity has been blameless seeks entry into a Member State in order to work for an organization in whose employment the nationals of the Member State are prefectly free to engage. She submits that if an organization is deemed contrary to the public good the Member State is faced with a simple choice: either to ban everyone, including its own nationals, from engaging in employment with that organization, or to tolerate nationals of other Member States as it tolerates its own nationals engaging in such employment.

The Commission asserts that the concepts 'public policy' and 'personal conduct' contained in Article 48, paragraph 3 of the Treaty and Article 3 of Directive 64/221 are concepts of Community law. The must first be interpreted in the context of Community law and national criteria are only relevant to its application.

In practice, if each Member State could set limits to the interpretation of public policy the obligations deriving from the principle of freedom of movement of workers would take a variety of forms in different Member States. It is only possible for this freedom to be maintained throughout the Community on the basis of uniform application in all the Member States. It would be inconsistent with the Treaty if one Member State accepted workers from another Member State while its own workers did not receive uniform treatment as regards the application of the rules in respect of public order in that other State.

The Commission submits that the discrimination by a Member State on grounds of public policy against nationals of another Member State for being employed by an organization the activities of which it considers contrary to the public good when it does not make it unlawful for its own nationals to be employed by such organization is contrary to Article 48, paragraph 2 of the Treaty. Article 3 (1) of the Directive is precise in stating that measures taken on grounds of public policy shall be based exclusively on the personal conduct of the individual concerned. Personal conduct which is acceptable when exercised by a national of one Member State cannot be unacceptable, under Community law, when exercised by a national of another Member State.

It is for consideration that Article 3 precludes a Member State, as a general contingency against some potential harm to society, from invoking public policy as a ground for refusing entry when the personal conduct of the individual is or was not contrary to public policy in the Member States concerned. It is not denied that membership of a militant organization proscribed in the host Member State would be an element to be taken into account in assessing personal conduct for the purpose of justifying a refusal of entry on grounds of public policy or public security.

As to the first part of the question *the United Kingdom* deals with three problems.

The first problem is whether an individual's past or present association with an organization can be regarded as an aspect of his personal conduct. The United Kingdom asserts that it is of importance that a Member State in

relation to public policy should be entitled to consider a person's associations with a body or organization. The Member State should be entitled to exclude that person in appropriate cases, i.e. if the organization is considered sufficiently undesirable from the viewpoint of public policy and the association by that person with that organization is sufficiently close.

Secondly the United Kingdom submits that a measure which is taken on grounds of public policy and which provides for the exclusion from a Member State of an individual on the grounds of that individual's association with an organization is compatible with the requirement of Article 3 (1). It accepts that the intention underlying that Article must have been to exclude collective expulsions and to require the consideration by the national authorities of the personal circumstances of each individual in each case. Nevertheless it is not inconsistent with that intention for a Member State to take into account an individual's association with an organization and, in appropriate cases, to exclude the individual by reason of that association. Whether, in any given case, such exclusion is justified will depend on the view the Member State takes of the organization.

As a practical matter the processes of admitting persons to enter a Member State must be administered by a large number of officials. Such officials cannot be expected to know all that the Government may know about a particular organization and it is inevitable that such officials must act in accordance with directions given by the Government and laying down broad principles on which the officials are to act. It is inevitable also that such directions may relate to particular organizations which a Government may consider contrary to the public good.

Thirdly the United Kingdom submits that the fact that the activities of the organization are not unlawful in a Member State though considered by the Member State to be contrary to the public good does not disentitle the Member State from taking into account the individual's association with the organization. It must be a matter for each State to decide whether it should make activities of an organization, or the organization itself, illegal. Only the State is competent to make such evaluation and it will do so in the light of the particular circumstances of that State. Thus, as is common knowledge, the United Kingdom practises a considerable degree of tolerance in relation to organizations within the United Kingdom. In the case of Scientology the reasons why the United Kingdom regards the activities of the Scientologists as contrary to public policy were explained in the statement made in Parliament on 25 July 1968. The Scientologists still have their World Headquarters in the United Kingdom so that Scientology is of particular concern to the United Kingdom.

The United Kingdom notes that two problems arise in connection with the matter referred to in subparagraph (b) of the question.

The first problem is whether the fact that an individual intends to take employment with such an organization is an aspect of that individual's personal conduct. It is submitted that such an intention is a very material aspect of the individual's personal conduct.

The second problem is whether the fact that no restrictions are placed upon nationals of the Member State who wish to take similar employment with such an organization disentitles the Member State from taking this intention into account.

The United Kingdom points out that it is inevitable that in respect of the entry into a state of persons, there must be some discrimination in favour of the nationals of that state. For a national, however undesirable and potentially harmful his entry may be, cannot be refused admission into his own state. A state has a duty under international law

to receive back its own nationals. The United Kingdom refers *inter alia* to Article 5 (b) (ii) of the Universal Declaration of Human Rights which states: 'Everyone has the right to leave any country, including his own, and to return to his country'. It observes that, for example, a Member State would be justified in refusing to admit a drug addict who is a national of another State even though it would be obliged to admit a drug addict who was one of its own nationals.

Miss van Duyn, represented by Alan Newman, the United Kingdom, represented by Peter Gibson, and the Commission, represented by Anthony McClellan, submitted oral observations at the hearing on 23 October 1974.

The Advocate-General delivered his opinion at the hearing on 13 November 1974.

Law

1 By order of the Vice-Chancellor of 1 March 1974, lodged at the Court on 13 June, the Chancery Division of the High Court of Justice of England, referred to the Court, under Article 177 of the EEC Treaty, three questions relating to the interpretation of certain provisions of Community law concerning freedom of movement for workers.

2 These questions arise out of an action brought against the Home Office by a woman of Dutch nationality who was refused leave to enter the United Kingdom to take up employment as a secretary with the 'Church of Scientology'.

3 Leave to enter was refused in accordance with the policy of the Government of the United Kingdom in relation to the said organization, the activities of which it considers to be socially harmful.

First question

4 By the first question, the Court is asked to say whether Article 48 of the EEC Treaty is directly applicable so as to confer on individuals rights enforceable by them in the courts of a Member State.

5 It is provided, in Article 48 (1) and (2), that freedom of movement for workers shall be secured by the end of the transitional period and that such freedom shall entail 'tha abolition of any discrimination based on nationality between workers of Member States as regards employment, remuneration and other conditions of work and employment.'

6 These provisions impose on Member States a precise obligation which does not require the adoption of any further measure on the part either of the Community institutions or of the Member States and which leaves them, in relation to its implementation, no discretionary power.

7 Paragraph 3, which defines the rights implied by the principle of freedom of movement for workers, subjects them to limitations justified on grounds of public policy, public security or public health. The application of these limitations is, however, subject to judicial control, so that a Member State's right to invoke the limitations does not prevent the provisions of Article 48, which enshrine the principle of freedom of movement for workers, from conferring on individuals rights which are enforceable by them and which the national courts must protect.

8 The reply to the first question must therefore be in the affirmative.

Second question

9 The second question asks the Court to say whether Council Directive No 64/221 of 25 February 1964 on the co-ordination of special measures concerning the movement and residence of foreign nationals which are justified on grounds of public policy, public security or public health is directly applicable so as to confer on individuals rights enforceable by them in the courts of a Member State.

10 It emerges from the order making the reference that the only provision of the Directive which is relevant is that contained in Article 3 (1) which provides that 'measures taken on grounds of public policy or public security shall be based exclusively on the personal conduct of the individual concerned.'

11 The United Kingdom observes that, since Article 189 of the Treaty distinguishes between the effects ascribed to regulations, directives and decisions, it must therefore be presumed that the Council, in issuing a directive rather than making a regulation, must have intended that the directive should have an effect other than that of a regulation and accordingly that the former should not be directly applicable.

12 If, however, by virtue of the provisions of Article 189 regulations are directly applicable and, consequently, may by their very nature have direct effects, it does not follow from this that other categories of acts mentioned in that Article can never have similar effects. It would be incompatible with the binding effect attributed to a directive by Article 189 to exclude, in principle, the possibility that the obligation which it imposes may be invoked by those concerned. In particular, where the Community authorities have, by directive, imposed on Member States the obligation to pursue a particular course of conduct, the useful effect of such an act would be weakened if individuals were prevented from relying on it before their national courts and if the latter were prevented from taking it into consideration as an element of Community law. Article 177, which empowers national courts to refer to the Court questions concerning the validity and interpretation of all acts of the Community institutions, without distinction, implies furthermore that these acts may be invoked by individuals in the national courts. It is necessary to examine, in every case, whether the nature, general scheme and wording of the provision in question are capable of having direct effects on the relations between Member States and individuals.

13 By providing that measures taken on grounds of public policy shall be based exclusively on the personal conduct of the individual concerned, Article 3 (1) of Directive No 64/221 is intended to limit the discretionary power which national laws generally confer on the authorities responsible for the entry and expulsion of foreign nationals. First, the provision lays down an obligation which is not subject to any exception or condition and which, by its very nature, does not require the intervention of any act on the part either of the institutions of the Community or of Member States. Secondly, because Member States are thereby obliged, in implementing a clause which derogates from one of the fundamental principles of the Treaty in favour of individuals, not to take account of factors extraneous to personal conduct, legal certainty for the persons concerned requires that they should be able to rely on this obligation even though it has been laid down in a legislative act which has no automatic direct effect in its entirety.

14 If the meaning and exact scope of the provision raise questions of interpretation, these questions can be resolved by the courts, taking into account also the procedure under Article 177 of the Treaty.

15 Accordingly, in reply to the second question, Article 3 (1) of Council Directive No 64/221 of 25 February 1964 confers on individuals rights which are enforceable by them in the courts of a Member State and which the national courts must protect.

Third question

16 By the third question the Court is asked to rule whether Article 48 of the Treaty and Article 3 of Directive No 64/221 must be interpreted as meaning that

'a Member State, in the performance of its duty to base a measure taken on grounds of public policy exclusively on the personal conduct of the individual concerned is entitled to take into account as matters of personal conduct:

(a) the fact that the individual is or has been associated with some body or organization the activities of which the Member State considers contrary to the public good but which are not unlawful in that State;

(b) the fact that the individual intends to take employment in the Member State with such a body or organization it being the case that no restrictions are placed upon nationals of the Member State who wish to take similar employment with such a body or organization.'

17 It is necessary, first, to consider whether association with a body or an organization can in itself constitute personal conduct within the meaning of Article 3 of Directive No 64/221. Although a person's past association cannot in general, justify a decision refusing him the right to move freely within the Community, it is nevertheless the case that present association, which reflects participation in the activities of the body or of the organization as well as identification with its aims and its designs, may be considered a voluntary act of the person concerned and, consequently, as part of his personal conduct within the meaning of the provision cited.

18 This third question further raises the problem of what importance must be attributed to the fact that the activities of the organization in question, which are considered by the Member State as contrary to the public good are not however prohibited by national law. It should be emphasized that the concept of public policy in the context of the Community and where, in particular, it is used as a justification for derogating from the fundamental principle of freedom of movement for workers, must be interpreted strictly, so that its scope cannot be determined unilaterally by each Member State without being subject to control by the institutions of the Community. Nevertheless, the particular circumstances justifying recourse to the concept of public policy may vary from one country to another and from one period to another, and it is therefore necessary in this matter to allow the competent national authorities an area of discretion within the limits imposed by the Treaty.

19 It follows from the above that where the competent authorities of a Member State have clearly defined their standpoint as regards the activities of a particular organization and where, considering it to be socially harmful, they have taken administrative measures to counteract these activities, the Member State cannot be required, before it can rely on the concept of public policy, to make such activities unlawful, if recourse to such a measure is not thought appropriate in the circumstances.

20 The question raises finally the problem of whether a Member State is entitled, on grounds of public policy, to prevent a national of another Member State from taking gainful employment within its territory with a body or organization, it being the case that no similar restriction is placed upon its own nationals.

21 In this connexion, the Treaty, while enshrining the principle of freedom of movement for workers without any discrimination on grounds of nationality, admits, in Article 48 (3), limitations justified on grounds of public policy, public security or public health to the rights deriving from this principle. Under the terms of the provision cited above, the right to accept offers of employment actually made, the right to move freely within the territory of Member States for this purpose, and the right to stay in a Member State for the purpose of employment are, among others all subject to such limita-

tions. Consequently, the effect of such limitations, when they apply, is that leave to enter the territory of a Member State and the right to reside there may be refused to a national of another Member State.

22 Furthermore, it is a principle of international law, which the EEC Treaty cannot be assumed to disregard in the relations between Member States, that a State is precluded from refusing its own nationals the right of entry or residence.

23 It follows that a Member State, for reasons of public policy, can, where it deems, necessary, refuse a national of another Member State the benefit of the principle of freedom of movement for workers in a case where such a national proposes to take up a particular offer of employment even though the Member State does not place a similar restriction upon its own nationals.

24 Accordingly, the reply to the third question must be that Article 48 of the EEC Treaty and Article 3 (1) of Directive No 64/221 are to be interpreted as meaning that a Member State, in imposing restrictions justified on grounds of public policy, is entitled to take into account, as a matter of personal conduct of the individual concerned, the fact that the individual is associated with some body or organization the activities of which the Member State considers socially harmful but which are not unlawful in that State, despite the fact that no restriction is placed upon nationals of the said Member State who wish to take similar employment with these same bodies or organizations.

Costs

25 The costs incurred by the United Kingdom and by the Commission of the European Communities, which have submitted observations to the Court, are not recoverable, and as these proceedings are, insofar as the parties to the main action are concerned, a step in the action pending before the national court, costs are a matter for that court.

On those grounds,

THE COURT

in answer to the questions referred to it by the High Court of Justice, by order of that court, dated 1 March 1974, hereby rules:

1. **Article 48 of the EEC Treaty has a direct effect in the legal orders of the Member States and confers on individuals rights which the national courts must protect.**

2. **Article 3 (1) of Council Directive No 64/221 of 25 February 1964 on the coordination of special measures concerning the movement and residence of foreign nationals which are justified on grounds of public policy, public security or public health confers on individuals rights which are enforceable by them in the national courts of a Member State and which the national courts must protect.**

3. **Article 48 of the EEC Treaty and Article 3 (1) of Directive No 64/221 must be interpreted as meaning that a Member State, in imposing restrictions justified on grounds of public policy, is entitled to take into account as a matter of personal conduct of the individual concerned, the fact that the individual is associated with some body or organization the activities of which the Member State considers socially harmful but which are not unlawful in that State, despite the fact that no restriction is placed upon nationals of the said Member State who wish to take similar employment with the same body or organization.**

at issue are not strictly identical. However, it must not be forgotten that in all such circumstances national courts and tribunals, including those referred to in the third paragraph of Article 177, remain entirely at liberty to bring a matter before the Court of Justice if they consider it appropriate to do so.

5. The third paragraph of Article 177 of the EEC Treaty is to be interpreted as meaning that a court or tribunal against whose decisions there is no judicial remedy under national law is required, where a question of Community law is raised before it, to comply with its obligation to bring the matter before the Court of Justice, unless it has established that the correct application of Community law is so obvious as to leave no scope for any reasonable doubt. The existence of such a possibility must be assessed in the light of the specific characteristics of Community law, the particular difficulties to which its interpretation gives rise and the risk of divergences in judicial decisions within the Community.

gives the following

JUDGMENT

Facts and issues

I — Facts and procedure

By a summons served on the Italian Minister for Health on 18 September 1974, the plaintiffs in the main proceedings, which are textile firms, contended that since the adoption of Law No 30 of 30 January 1968 they had paid, by way of fixed health inspection levy, LIT 700 per quintal of imported wool, until the entry into force of Law No 1239 of 30 December 1970, which amended the levy, although they should have been required to pay only a sum of LIT 70 per quintal "according to the correct interpretation of the Law of 30 January 1968 and, in any event, according to the authentic interpretation of that law given by Law No 1239 of 1970".

After the Tribunal di Roma [District Court, Rome] had dismissed their applications by judgment of 27 October 1976, the plaintiffs in the main proceedings lodged an appeal based on the argument rejected by the Tribunale. They also contended that Law No 1968 was inapplicable as a result of the adoption of Regulation (EEC) No 827/68 of the Council of 28 June 1968 on the common organization of the market in certain products listed in Annex II to the Treaty (Official Journal, English Special Edition 1968 (I) p. 209).

By judgment of 12 December 1978, the Corte d'Appello [Court of Appeal], Rome, rejected all the submissions relied upon by the plaintiffs and accepted the Ministry of Health's argument concerning the compatibility of Law No 30 of 1968 with the aforesaid regulation.

On 4 October 1979, the plaintiff in the main proceedings appealed against that judgment. In support of its submission that the appeal should be dismissed, the Ministry of Health, sharing the view held by the Court of Appeal, argued that since wool is not included in Annex II to the EEC Treaty, it is not subject to the common organization of the markets and cannot therefore come within the scope of the regulation in question.

The Ministry of Health urged the Court of Cassation to "decide the case along the lines suggested on the ground that the factual circumstances are so obvious as to rule out the possibility of their being capable of any other interpretation and that obviates the need to refer the matter for a preliminary ruling to the Court of Justice of the European Communities".

The Court of Cassation took the view that counsel for the Ministry of Health had raised a question concerning the interpretation of Article 177 of the Treaty in so far as he contended that that provision must be understood as meaning that the Court of Cassation, against whose decisions there is no judicial remedy under national law, is not obliged to refer a matter to the Court of Justice "when the solution of a question on the interpretation of acts performed by the Community institutions is so obvious as to preclude the very possibility of their being open to another interpretation".

Therefore the Court of Cassation, by order of 27 March 1981, stayed the proceedings and submitted to the Court of Justice a reference for a preliminary ruling on the following question:

"Does the third paragraph of Article 177 of the EEC Treaty, which provides that where any question of the same kind as those listed in the first paragraph of that article is raised in a case pending before a national court or tribunal against whose decisions there is no judicial remedy under national law that court or tribunal must bring the matter before the Court of Justice, lay down an obligation so to submit the case which precludes the national court from determining whether the question raised is justified or does it, and if so within what limits, make that obligation conditional on the prior finding of a reasonable interpretative doubt?"

The order making the reference was registered at the Court on 30 October 1981.

In accordance with Article 20 of the Protocol on the Statute of the Court of Justice of the EEC, written observations were submitted by the plaintiffs in the main proceedings, represented by G. Scarpa, G. Stella Richter, G. M. Ubertazzi and F. Capelli; by the Government of the Kingdom of Denmark, represented by its Legal Adviser, Laurids Mikaelsen, acting as Agent; by the Government of the Italian Republic, represented by S. Laporta, Avvocato dello Stato, and by A. Squillante, acting as Agent; and by the Commission of the European Communities, represented by G. Olmi, Deputy Director General, and Miss Mary Minch, a member of the Commission's Legal Department, acting as Agents.

On hearing the report of the Judge-Rapporteur and the views of the Advocate General, the Court decided to open the oral procedure without any preparatory inquiry.

II — Observations submitted pursuant to Article 20 of the Protocol on the Statute of the Court of Justice

A — Observations of the plaintiffs in the main proceedings

The *plaintiffs in the main proceedings* define the problem raised in the question submitted by the national court and express the view that it is concerned solely with the following three points:

"Does the obligation to make a reference for a preliminary ruling depend on a decision of the court hearing the case which establishes that the question raised before it is concerned with the interpretation rather than the application of Community law?

Must the Court of Cassation seek a ruling on interpretation from the Court of Justice even though the matter is not in any doubt?

Irrespective of the clarity of the text, must the question of interpretation appear *prima facie* to be substantially justified, fair and plausible?"

(a) Questions concerning interpretation and questions concerning application

The plaintiffs observe that the EEC Treaty is concerned only with questions of interpretation; therefore, the courts referred to in the third paragraph of Article 177 are required to make a reference for a preliminary ruling only in respect of such questions. Thus it is for those courts to determine beforehand whether the question raised before them is concerned with interpretation or rather with application.

However, in disputes brought before them national courts must apply Community law and it is for that purpose that they may refer questions concerning its interpretation to the Court of Justice.

Thus any doubts concerning the application of Community law relate above all to its interpretation with the result that the court would have to look beyond the external appearance of the question raised by the parties regarding the application of Community law "and discover the underlying question of interpretation".

(b) Must the Court of Cassation seek a ruling on interpretation from the Court even though the matter is not in any doubt?

The plaintiffs consider, in the first place, that under national law the maxim *in claris non fit interpretatio* "does not authorize the court to confine itself to the apparent meaning of a provision, on the basis of its literal purport", but implies that "if a provision is clear and unequivocal and there is no possible scope for divergence between the letter and the spirit, then (and only then) is an interpretation other than that suggested by the wording of the provision prohibited".

Next, the plaintiffs maintain that the rules of interpretation of classical international law which enable the principle of the *acte clair* to be applied should not be followed in Community law on the ground that Community law is a legal system in evolution and should be interpreted in a sense "which transcends the wording of the various specific provisions" and is therefore teleological, thus ensuring that the system is effectively applied.

Furthermore, the expressions used in legislation are not sufficiently clear to eliminate the risk of differing interpretations, especially since in the case of Community law the national court has to

overcome numerous difficulties resulting from the technical nature thereof, from the fact that the national court does not always have access to all the sources which make up the Community legal system and from the uncertainties "due to the sometimes complex interaction of national law and Community law".

In view of those difficulties, the courts referred to in the third paragraph of Article 177 are under an obligation to make a reference "whenever the interpretation of a Community provision is necessary, even though the meaning is apparently clear".

(c) Must the question of interpretation appear *prima facie* to be substantially justified, fair and plausible?

The last paragraph of Article 177 requires courts of last instance to bring a matter before the Court of Justice "if and only if 'a question' is raised before them".

The word "question" should be understood in the broad sense, that is to say not necessarily as referring to a disagreement between the parties but as meaning that an interpretative doubt in a case constitutes a necessary and sufficient condition for creating an obligation to make a reference to the Court of Justice.

However, the purpose of the question submitted by the Court of Cassation is not so much to ascertain the meaning of the term in question as to determine whether it is "reasonable" to use it. One answer may be obtained from the wording of the third paragraph of Article 177 "which makes no distinction between questions which are reasonable and those which are not".

A comparative study of the second and third paragraphs of Article 177 lends weight to that initial answer since both those provisions lead to the adoption of an interpretation designed to widen the obligation to make a reference, in other words to deprive the national court or tribunal referred to in the third paragraph of any discretion.

That argument is also supported by the objective of Article 177, which is to ensure the uniform application of Community law in the Member States, especially since that objective is constantly growing in importance and since the task of the Court of Cassation is, *inter alia*, to ensure "that the law is uniformly applied".

Moreover, the decisions of the Court of Justice are also consistent with a broad interpretation of Article 177; in particular in its judgment of 27 March 1963 in Joined Cases 28 to 30/62 *Da Costa en Schaake* [1963] ECR 31, the Court held that "the third paragraph of Article 177 unreservedly requires courts or tribunals of a Member State against whose decisions there is no judicial remedy under national law . . . to refer to the Court every question of interpretation raised before them".

That view is endorsed by leading academic lawyers and finally, as regards judicial policy, there would be a "serious risk" in allowing national supreme courts to determine whether questions raised before them are reasonable, inasmuch as they might inhibit or distort the process of integration between Community law and national law. To allow national supreme courts such a discretion would

also involve "the risk of creating an atmosphere of tension between national courts and Community institutions" and might promote discord.

B — Observations of the Italian Government

After outlining the facts of the case, the *Italian Government* observes that it stated before the Court of Cassation that there was in the present case "a factual circumstance so clear and so important as to preclude the very possibility of there being any interpretative doubt, thus making it unnecessary to refer the matter for a preliminary ruling to the Court of Justice of the European Communities".

The Italian Government considers that, in spite of the differences in the wording of the second and third paragraphs of Article 177, the third paragraph is no different "in scope and that consequently the purpose of that provision is not to deprive the national court of last instance of the power to determine whether a preliminary ruling is necessary".

The authors of the Treaty considered it appropriate to provide for a filter for questions of interpretation which might be submitted to the Court, as is shown by the retention of the ordinary procedure for making a reference to the Court even in proceedings before the national court of last instance.

Furthermore, when the Court of Justice stated in the *Da Costa en Schaake* judgment cited above that the obligation imposed by the third paragraph of Article 177 upon national courts or tribunals of last instance may be deprived of its purpose and emptied of its substance by the authority of an interpretation given by the Court in an earlier preliminary ruling in a similar case, it recognized that a national court of last instance is empowered to define the scope of the proceedings and thus to disclaim jurisdiction over a question or problem of interpretation concerning Community law by relying on the answer given by the Court to the same question.

Since Community law forms part of the legal system of each of the Member States "it would be absurd to take the view that a national court is prohibited from interpreting a provision which it is nevertheless obliged to apply". That consideration disposes of the argument that the national court of last instance must confine itself to taking note of the existence of arguments put forward by the parties which are based on Community law and referring them to the Court of Justice for scrutiny. That court must therefore formulate a question which is capable of being referred to the Court of Justice and, to that end, it must determine whether an interpretative doubt actually exists; that is supported by the opinion of Mr Advocate General Lagrange in the *Da Costa en Schaake* case (cited above), in which he pointed out that "before the procedure of referring a question for a preliminary ruling on interpretation can be set in motion, there must clearly be a question".

Thus, according to the Italian Government, a provision may be described as "clear" not only when it has already been interpreted by the Court of Justice in connection with a related question but also "when it cannot reasonably have more than one meaning having regard to its letter and context".

In the Italian Government's opinion, it seems highly improbable that the national court of last instance has, in Community matters, been divested of

some of its conventional instruments of interpretation and must therefore restrict itself exclusively to the letter of a provision in order to determine whether or not the meaning is obscure, whilst refraining *a priori* from considering any lingering doubts merely by comparing the results of a literal interpretation with those which a logical and systematic interpretation would yield.

Therefore it must be acknowledged that the provisions of Article 177 imply the need for an effective filter for the reference of questions of interpretation to the Court. It necessarily follows that the national court of last instance must give proper consideration to the question whether or not a genuine doubt exists.

It remains to define the limits of the court's discretion in this matter. The question is more complex in theory than it is in practice, at least at the present stage of development of Community law and given the degree of "Community awareness" attained in each of the Member States. Furthermore, the objective embodied in Article 177 of achieving a uniform interpretation of Community law and "the notion that any resistance will ultimately be overcome by the force of law" raise the question of the extent to which in practice a national court of last instance may deny in good faith the existence of a genuine preliminary question.

The Italian Government therefore proposes that the answer to the question submitted should be "that the EEC Treaty requires national courts of last instance to seek a preliminary ruling from the Court of Justice in cases in which, after due consideration, they recognize that the question of interpretation raised before them is not manifestly unfounded".

C — Observations of the Danish Government

After describing the objective of Article 177 and the way in which it operates the *Danish Government* expresses the view that the third paragraph of that article "cannot be understood as meaning that a national court against whose decisions there is no judicial remedy must refer to the Court of Justice any question concerning the interpretation or validity of a provision of Community law merely because the parties wish it to do so".

Such an approach would transform that article into a remedy available to private individuals, which is by no means the purpose of that provision.

It is clear from the Court's judgment of 22 November 1978 in Case 93/78 *Matthews* ([1978] ECR 2203) that "national courts are under an obligation to determine whether it is necessary to make a reference to the Court of Justice of the European Communities". Accordingly, it is for the national court to decide whether a doubt really exists which justifies referring a question to the Court of Justice for a preliminary ruling; that view is supported by the Court's judgment of 16 December 1981 in Case 244/80 *Foglia* v *Novello* ([1981] ECR 3045).

Next, the Danish Government, like the Italian Government, maintains that the decisions of the Court, in particular the *Da Costa en Schaake* judgment cited above, reaffirm that the obligation to make a reference to the Court of Justice for a preliminary ruling, as provided for

by the third paragraph of Article 177, is not an absolute one.

The Danish Government observes that even where there are no previous decisions by the Court, the national court may none the less decide a point directly, without requesting a preliminary ruling, if the provision of Community law at issue does not give rise to any difficulties of interpretation.

With regard to the theory of the *acte clair,* the Danish Government recalls that the Commission, in reply to Written Question No 608/78 (Official Journal 1979, C 28 pp. 8 and 9) stated that the courts "may decline to make a reference and decide the matter themselves in cases where such questions are perfectly straightforward and the answer is obvious to any lawyer with a modicum of experience".

The Danish Government informs the Court that the above criterion is also applied by the Danish courts, including courts of last instance.

It observes that, in its opinion, "a theoretical interpretative doubt does not in itself justify systematic recourse to the procedure for obtaining a preliminary ruling. For that, there must be a genuine interpretative doubt".

If, however, the *acte clair* test is to be adopted it must be applied with caution and the national supreme court must take a number of factors into account, especially as the provisions of Community law are drafted in several languages and the aim of Article 177 is to ensure the uniform application of Community law. In conclusion, therefore, that national court may not, on its own authority, set aside a Community measure which it regards as unlawful; similarly, it may not discard an interpretation previously adopted by the Court of Justice.

The Danish Government therefore proposes that the Court should give the following answer to the question referred to it:

"National courts against whose decisions there is no judicial remedy are under an obligation to refer to the Court of Justice of the European Communities for a preliminary ruling questions on the validity or interpretation of Community law if they consider that a decision on the question is necessary to enable them to give judgment in a particular case. It is neither necessary nor sufficient, for the purposes of that obligation, for a party to make a request to that effect. However, a court against whose decisions there is no judicial remedy and whose authority is such that its decisions are capable of constituting precedents must, for reasons based on the need to apply Community law in a uniform manner, avoid resolving such questions itself wherever possible".

D — Observations of the Commission

As a preliminary remark, the *Commission* expresses the view that the question submitted to the Court of Justice by the Italian Supreme Court of Cassation "is fundamental".

In the first place, the Commission relies on the theory of the *acte clair* which states that "there must be a genuine difficulty, raised by the parties or perceived by the Court itself, such as to insinuate a doubt into an alert mind"; it

also refers to a similar concept which exists in Italy and in the Federal Republic of Germany regarding the obligation on the part of courts to refer to the constitutional court questions relating to the constitutionality of national legislation. The position in Italy and in the Federal Republic of Germany is that "a court is not obliged to refer a matter to the constitutional court if it considers that the grounds relied upon before it for declaring a measure unconstitutional are manifestly devoid of all substance".

Next, after examining the principal arguments for and against the view that a court of last instance has a margin of discretion in relation to Community law, the Commission considers that such a view is acceptable under Community law.

In this connection it recalls that in its reply to Written Question No 608/78 by Mr Krieg (Official Journal 1979 C 28) it has already stated that in its opinion:

"National courts are not required, under Article 177 of the EEC Treaty, to stay proceedings and systematically refer to the Court of Justice all questions concerning the interpretation of Community law which are submitted to them. They can decline to make a reference and decide the matter themselves in cases where such questions are perfectly straightforward and the answer is obvious to any lawyer with a modicum of experience."

After analysing the third paragraph of Article 177, the Commission expresses the conviction that its earlier standpoint is correct. It takes the view that before there can be an obligation to make a reference for a preliminary ruling a question must arise before the national court of last instance and that question must relate to the interpretation of a text. According to the Commission, the word "question" is synonymous with "problem" and the verb "to interpret" means to comprehend and explain the wording of a text or a speech, the meaning of which is obscure or which creates uncertainty".

If therefore a provision is quite unequivocal "no question can arise and there is no need to seek an interpretation".

Admittedly, it is true that interpretation is a continuing process, even in relation to provisions which are unequivocal and therefore immediately comprehensible, but "it is clear however that only genuine problems, intellectual difficulties which need to be overcome can form the subject-matter of the questions of interpretation referred to in the third paragraph of Article 177".

The discretion which the Commission thus attributes to the court hearing the case falls into the same category as the discretionary powers which have already been entrusted to it. National courts must therefore decide cases brought before them and apply Community law, whilst recognizing the jurisdiction of the Court of Justice to interpret Community law. The Court of Justice's recognition of the national court's margin of discretion "would bear witness to its confidence in national courts"; moreover, only in a spirit of mutual confidence can the procedures provided for by Article 177 be applied successfully.

Of course, mistakes may be made by national courts in interpreting a provision of Community law but, in the Court's opinion, the drawbacks which may result from such errors are limited and offset by the advantages, especially

for the proper administration of justice, of not compelling the courts of last instance of the Member States to refer to the Court of Justice all questions concerning provisions of Community law".

However, the Commission wishes to "emphasize categorically that, in view of the peculiarities of Community law, the national court's discretion in relation to Community law must be exercised only with the greatest caution".

The Commission recalls in this regard that Community legislation is drafted in seven languages and frequently reflects political compromises with the result that "the exercise of a discretion by a national court in relation to Community legislation calls for much greater caution than recourse to the theory of the *acte clair* in a national context". Thus, before it exercises its discretion, a national court must first and foremost acquaint itself with the decisions of the Court of Justice and, if the slightest doubt exists, the supreme court must refer the matter to the Court of Justice for a preliminary ruling.

In the Commission's opinion, the result would be that "cases in which it is legitimate to refrain from referring a matter to the Court of Justice would in practice be very few".

The Commission therefore proposes that, the question referred to the Court of Justice for a preliminary ruling should be answered as follows:

"Under the third paragraph of Article 177 of the EEC Treaty courts against whose decisions there is no judicial remedy under national law must refer to the Court of Justice any question raised before them regarding the meaning of a provision of Community law, unless they have established that that provision does not give rise to any reasonable interpretative doubt."

III — Oral procedure

At the sitting on 8 June 1982, the plaintiffs in the main action, represented by G. M. Ubertazzi and F. Capelli, the Italian Government, represented by S. Laporta, Avvocato dello Stato, and the Commission of the European Communities, represented by G. Olmi, Deputy Director General of its Legal Department, and by Miss Mary Minch, a member of its Legal Department, acting as Agents, presented oral argument and replied to the questions put to them by the Court.

The Advocate General delivered his opinion at the sitting on 13 July 1982.

Decision

1 By order of 27 March 1981, which was received at the Court on 31 October 1981, the Corte Suprema di Cassazione [Supreme Court of Cassation] referred to the Court of Justice for a preliminary ruling under Article 177 of the EEC Treaty a question on the interpretation of the third paragraph of Article 177 of the EEC Treaty.

2 That question was raised in connection with a dispute between wool importers and the Italian Ministry of Health concerning the payment of a fixed health inspection levy in respect of wool imported from outside the Community. The firms concerned relied on Regulation (EEC) No 827/68 of 28 June 1968 on the common organization of the market in certain products listed in Annex II to the Treaty (Official Journal, English Special Edition 1968 (I) p. 209). Article 2 (2) of that regulation prohibits Member States from levying any charge having an effect equivalent to a customs duty on imported "animal products", not specified or included elsewhere, classified under heading 05.15 of the Common Customs Tariff. Against that argument the Ministry for Health contended that wool is not included in Annex II to the Treaty and is therefore not subject to a common organization of agricultural markets.

3 The Ministry of Health infers from those circumstances that the answer to the question concerning the interpretation of the measure adopted by the Community institutions is so obvious as to rule out the possibility of there being any interpretative doubt and thus obviates the need to refer the matter to the Court of Justice for a preliminary ruling. However, the companies concerned maintain that since a question concerning the interpretation of a regulation has been raised before the Corte Suprema di Cassazione, against whose decisions there is no judicial remedy under national law, that court cannot, according to the terms of the third paragraph of Article 177, escape the obligation to bring the matter before the Court of Justice.

4 Faced with those conflicting arguments, the Corte Suprema di Cassazione referred to the Court the following question for a preliminary ruling:

"Does the third paragraph of Article 177 of the EEC Treaty, which provides that where any question of the same kind as those listed in the first paragraph of that article is raised in a case pending before a national court or tribunal against whose decisions there is no judicial remedy under national law that court or tribunal must bring the matter before the Court of Justice, lay down an obligation so to submit the case which precludes the national court from determining whether the question raised is justified or does it, and if so within what limits, make that obligation conditional on the prior finding of a reasonable interpretative doubt?"

5 In order to answer that question it is necessary to take account of the system established by Article 177, which confers jurisdiction on the Court of Justice to give preliminary rulings on, *inter alia,* the interpretation of the Treaty and the measures adopted by the institutions of the Community.

6 The second paragraph of that article provides that any court or tribunal of a Member State *may,* if it considers that a decision on a question of interpretation is necessary to enable it to give judgment, request the Court of Justice to give a ruling thereon. The third paragraph of that article provides that, where a question of interpretation is raised in a case pending before a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law, that court or tribunal *shall,* bring the matter before the Court of Justice.

7 That obligation to refer a matter to the Court of Justice is based on cooperation, established with a view to ensuring the proper application and uniform interpretation of Community law in all the Member States, between national courts, in their capacity as courts responsible for the application of Community law, and the Court of Justice. More particularly, the third paragraph of Article 177 seeks to prevent the occurrence within the Community of divergences in judicial decisions on questions of Community law. The scope of that obligation must therefore be assessed, in view of those objectives, by reference to the powers of the national courts, on the one hand, and those of the Court of Justice, on the other, where such a question of interpretation is raised within the meaning of Article 177.

8 In this connection, it is necessary to define the meaning for the purposes of Community law of the expression "where any such question is raised" in order to determine the circumstances in which a national court or tribunal against whose decisions there is no judicial remedy under national law is obliged to bring a matter before the Court of Justice.

9 In this regard, it must in the first place be pointed out that Article 177 does not constitute a means of redress available to the parties to a case pending before a national court or tribunal. Therefore the mere fact that a party contends that the dispute gives rise to a question concerning the interpretation of Community law does not mean that the court or tribunal concerned is compelled to consider that a question has been raised within the meaning of Article 177. On the other hand, a national court or tribunal may, in an appropriate case, refer a matter to the Court of Justice of its own motion.

10 Secondly, it follows from the relationship between the second and third paragraphs of Article 177 that the courts or tribunals referred to in the third paragraph have the same discretion as any other national court or tribunal to ascertain whether a decision on a question of Community law is necessary to enable them to give judgment. Accordingly, those courts or tribunals are not obliged to refer to the Court of Justice a question concerning the interpretation of Community law raised before them if that question is not relevant, that is to say, if the answer to that question, regardless of what it may be, can in no way affect the outcome of the case.

11 If, however, those courts or tribunals consider that recourse to Community law is necessary to enable them to decide a case, Article 177 imposes an obligation on them to refer to the Court of Justice any question of interpretation which may arise.

12 The question submitted by the Corte di Cassazione seeks to ascertain whether, in certain circumstances, the obligation laid down by the third paragraph of Article 177 might none the less be subject to certain restrictions.

13 It must be remembered in this connection that in its judgment of 27 March 1963 in Joined Cases 28 to 30/62 *(Da Costa* v *Nederlandse Belastingadministratie* [1963] ECR 31) the Court ruled that: "Although the third paragraph of Article 177 unreservedly requires courts or tribunals of a Member State against whose decisions there is no judicial remedy under national law . . . to refer to the Court every question of interpretation raised before them, the authority of an interpretation under Article 177 already given by the Court may deprive the obligation of its purpose and thus empty it of its substance. Such is the case especially when the question raised is materially identical with a question which has already been the subject of a preliminary ruling in a similar case."

14 The same effect, as regards the limits set to the obligation laid down by the third paragraph of Article 177, may be produced where previous decisions of the Court have already dealt with the point of law in question, irrespective of the nature of the proceedings which led to those decisions, even though the questions at issue are not strictly identical.

15 However, it must not be forgotten that in all such circumstances national courts and tribunals, including those referred to in the third paragraph of Article 177, remain entirely at liberty to bring a matter before the Court of Justice if they consider it appropriate to do so.

16 Finally, the correct application of Community law may be so obvious as to leave no scope for any reasonable doubt as to the manner in which the question raised is to be resolved. Before it comes to the conclusion that such is the case, the national court or tribunal must be convinced that the matter is equally obvious to the courts of the other Member States and to the Court of Justice. Only if those conditions are satisfied, may the national court or tribunal refrain from submitting the question to the Court of Justice and take upon itself the responsibility for resolving it.

17 However, the existence of such a possibility must be assessed on the basis of the characteristic features of Community law and the particular difficulties to which its interpretation gives rise.

18 To begin with, it must be borne in mind that Community legislation is drafted in several languages and that the different language versions are all equally authentic. An interpretation of a provision of Community law thus involves a comparison of the different language versions.

19 It must also be borne in mind, even where the different language versions are entirely in accord with one another, that Community law uses terminology which is peculiar to it. Furthermore, it must be emphasized that legal concepts do not necessarily have the same meaning in Community law and in the law of the various Member States.

20 Finally, every provision of Community law must be placed in its context and interpreted in the light of the provisions of Community law as a whole, regard being had to the objectives thereof and to its state of evolution at the date on which the provision in question is to be applied.

21 In the light of all those considerations, the answer to the question submitted by the Corte Suprema di Cassazione must be that the third paragraph of

Article 177 of the EEC Treaty is to be interpreted as meaning that a court or tribunal against whose decisions there is no judicial remedy under national law is required, where a question of Community law is raised before it, to comply with its obligation to bring the matter before the Court of Justice, unless it has established that the question raised is irrelevant or that the Community provision in question has already been interpreted by the Court or that the correct application of Community law is so obvious as to leave no scope for any reasonable doubt. The existence of such a possibility must be assessed in the light of the specific characteristics of Community law, the particular difficulties to which its interpretation gives rise and the risk of divergences in judicial decisions within the Community.

Costs

22 The costs incurred by the Italian Government, the Danish Government and the Commission of the European Communities, which have submitted observations to the Court, are not recoverable.

As these proceedings are, in so far as the parties to the main action are concerned, in the nature of a step in the action pending before the Corte Suprema di Cassazione, the decision on costs is a matter for that court.

On those grounds,

THE COURT,

in answer to the question submitted to it by the Corte Suprema di Cassazione by order of 27 March 1981, hereby rules:

The third paragraph of Article 177 of the EEC Treaty must be interpreted as meaning that a court or tribunal against whose decisions there is no judicial remedy under national law is required, where a question of Community law is raised before it, to comply with its obligation to bring the matter before the Court of Justice, unless it has established that the question raised is irrelevant or that the Community

provision in question has already been interpreted by the Court of Justice or that the correct application of Community law is so obvious as to leave no scope for any reasonable doubt. The existence of such a possibility must be assessed in the light of the specific characteristics of Community law, the particular difficulties to which its interpretation gives rise and the risk of divergences in judicial decisions within the Community.

OPINION OF MR ADVOCATE GENERAL CAPOTORTI DELIVERED ON 13 JULY 1982 [1]

Mr President,
Members of the Court,

The request for a preliminary ruling now before the Court concerns one of the provisions of the EEC Treaty relating to the powers of the Court, namely the third paragraph of Article 177. The Italian Corte Suprema di Cassazione [Supreme Court of Cassation] wishes to ascertain whether that provision lays down an obligation to submit a case to the Court of Justice which precludes the national court from determining whether the question raised is justified or whether, and if so within what limits, it makes that obligation conditional on the prior finding of a reasonable interpretative doubt.

I shall briefly summarize the facts of the case. In September 1974 a large number

1 — Translated from the Italian.

Judgment of the Court of Justice, Foto-Frost, Case 314/85 (22 October 1987)

Caption: According to the Foto-Frost judgment, national courts may consider the validity of a Community act. However, national courts themselves have no jurisdiction to declare that a Community act is invalid (in this case, a Commission decision). Only the Court of Justice, responsible for ensuring that Community law is applied uniformly in all the Member States, has the jurisdiction both to declare void or invalid an act of a Community institution.

Case 314/85
Foto-Frost v Hauptzollamt Lübeck-Ost

(request for a preliminary ruling from the Finanzgericht Hamburg)

(Lack of jurisdiction of national courts to declare acts of Community institutions invalid — Validity of a decision on the post-clearance recovery of import duties)

[…]

Summary of the judgment

1. Preliminary questions — Appraisal of validity — Declaration of invalidity — Lack of jurisdiction of national courts (EEC Treaty, Arts 173, 177 and 184)

2. Own resources of the European Communities — Post-clearance recovery of import or export duties — Importer fulfilling the requirements set out in Article 5 (2) of Regulation No 1697/79 — Post-clearance recovery — Precluded (Council Regulation No 1697/79, Art. 5 (2))

1. National courts against whose decisions there is a judicial remedy under national law may consider the validity of a Community act and, if they consider that the grounds put forward before them by the parties in support of invalidity are unfounded, they may reject them, concluding that the measure is completely valid. In contrast, national courts, whether or not a judicial remedy exists against their decisions under national law, themselves have no jurisdiction to declare that acts of Community institutions are invalid.

That conclusion is dictated, in the first place, by the requirement for Community law to be applied uniformly. Divergences between courts in the Member States as to the validity of Community acts would be liable to place in jeopardy the very unity of the Community legal order and detract from the fundamental requirement of legal certainty.

Secondly, it is dictated by the necessary coherence of the system of judicial protection established by the Treaty. In Articles 173 and 184, on the one hand, and in Article 177, on the other, the Treaty established a complete system of legal remedies and procedures designed to permit the Court of Justice to review the legality of measures adopted by the institutions. Since Article 173 gives the Court exclusive jurisdiction to declare void an act of a Community institution, the coherence of the system requires that where the validity of an act is challenged before a national court the power to declare the act invalid must also be reserved for the Court of Justice.

That division of jurisdiction may have to be qualified in certain circumstances where the validity of a Community act is contested before a national court in proceedings relating to an application for interim measures.

2. Article 5 (2) of Council Regulation No 1697/79 on the post-clearance recovery of import or export duties, which lays down three specific requirements which must be fulfilled before the competent authorities may waive the post-clearance recovery of duties, must be interpreted as meaning that if all those requirements are fulfilled the person liable is entitled to the waiver of the recovery of the duty in question.

REPORT FOR THE HEARING
delivered in Case 314/85 *

1 — Facts and procedure

A — Legislative context

The matter at issue in the main proceedings is the post-clearance recovery of import duties in respect of the purchase by a trader in the Federal Republic of Germany from traders in other Member States of goods manufactured in the German Democratic Republic.

The post-clearance recovery of import duties which have not been required of the person liable for payment on goods entered for a customs procedure involving the obligation to pay such duties is governed by Council Regulation No 1697/79 of 24 July 1979 (Official Journal 1979, L 197, p. 1).

Article 5 (2) of the regulation governs the situation where the duties have not been collected as a result of an error made by the competent authorities themselves. It provides as follows:

‘The competent authorities may refrain from taking action for the post-clearance recovery of import duties … which were not collected as a result of an error made by the competent authorities themselves which could not reasonably have been detected by the person liable, the latter having for his part acted in good faith and observed all the provisions laid down by the rules in force as far as his customs declaration is concerned.

The cases in which the first subparagraph can be applied shall be determined in accordance with the implementing provisions laid down in accordance with the procedure provided for in Article 10’.

The Commission adopted the relevant implementing provisions in Regulation (EEC) No 1573/80 of 20 June 1980 (Official Journal 1980, L 161, p. 1) on the basis of Article 5 (2) of Regulation No 1697/79 and after consulting the Committee on Duty-free Arrangements pursuant to Article 10 of that regulation.

Regulation No 1573/80 provides that where the amount of the duties involved is equal to or greater than 2 000 ECU the competent authority of the Member State ‘shall request the Commission to take a decision on the case, submitting to it all the necessary background information’ (Article 4). After consulting a group of experts from the Member States meeting within the framework of the Committee on Duty-free Arrangements, the Commission ‘shall decide whether the circumstances under consideration are such that no action should be taken for recovery of the duties concerned’ (Article 6). Its decision is to be addressed to the Member State whose competent authority requested the Commission to take a decision on the matter.

B — Facts

Heinz Frost, the plaintiff in the main proceedings, is an importer, exporter and wholesaler of photographic goods in the Federal Republic of Germany, where he trades under the name of Foto-Frost.

Between 23 September 1980 and 9 July 1981 Foto-Frost purchased prismatic binoculars made in the German Democratic Republic from traders in Denmark and in the United Kingdom.

The goods were dispatched under the external Community transit procedure (Article 12 *et seq.* of Council Regulation (EEC) No 222/77 of 13 December 1976 on Community transit, Official Journal 1977, L 38, p. 1) from customs warehouses in Denmark and in the Netherlands. That procedure enables goods coming from a non-member country which are not in free circulation in a Member State to be transported within the Community without renewed customs formalities when the goods cross from one Member State to another.

When Foto-Frost declared the goods for free circulation in the Federal Republic of Germany the competent customs offices, as in the case of previous similar operations, allowed the goods to enter free of duty on the ground that they had been manufactured in the German Democratic Republic.

Following a check, Hauptzollamt Lübeck-Ost took the view that under the German customs legislation the operations in question should give rise to the post-clearance recovery of import duties.

However, the Hauptzollamt considered that Foto-Frost satisfied the requirements laid down in the first subparagraph of Article 5 (2) of Regulation No 1697/79 for the waiver of the post-clearance recovery of duties. Foto-Frost had duly completed its customs declaration and was entitled to believe in good faith that the decision of the customs offices was correct, since similar previous operations had also been exempt from duty.

Since the amount of the duty involved was greater than 2 000 ECU, under Article 4 of the aforementioned implementing regulation (Regulation No 1573/80) the Hauptzollamt itself was not empowered to take the decision not to effect post-clearance recovery of the uncollected duty.

Consequently, the Hauptzollamt referred the matter to the Federal Minister for Finance. By a letter dated 4 February 1983 the Minister requested the Commission to decide under Article 6 of Regulation No 1573/80 whether the post-clearance recovery of the import duties in question could be waived.

On 6 May 1983 the Commission delivered its decision to the Federal Republic of Germany to the effect that post-clearance recovery could not be waived.

In that decision the Commission states in the first place that, in accordance with usual practice, the customs authorities had initially merely accepted Foto-Frost's statements as being correct.

The decision goes on to state as follows:

'Whereas it was found when the declarations were checked subsequently that the binoculars declared for free circulation under the conditions described above did not meet the conditions for duty-free admission under the arrangements for inter-German trade;

Whereas the importer was in a position to consider the circumstances of the import operations in question in the light of the provisions governing inter-German trade, the application of which he was claiming; whereas he could thus detect any error in implementing these provisions; whereas, moreover, it has been established that he did not comply with all the provisions laid down by the rules in force as regards the customs declarations;

Whereas consequently the conditions laid down in Article 5 (2) of Regulation (EEC) No 1697/79 are not met;

Whereas there is therefore no justification for not effecting the post-clearance recovery of import duties in this case'.

On those grounds, the Commission decided that 'the import duties of DM 64 346.53, the subject-matter of the request by the Federal Republic of Germany dated 4 February 1983, shall be the subject of post-clearance recovery'.

Following that decision, Hauptzollamt Lübeck-Ost issued an amendment notice on 22 July 1983 in respect of the import operations in question. In that notice the Hauptzollamt notified Foto-Frost that the Commission had adopted a decision on 6 May 1983 to the effect that the competent authorities in the Federal Republic of Germany could not waive the post-clearance recovery of duty in its case. However, the Hauptzollamt did not specify the grounds for the Commission's decision. Accordingly it claimed payment from Foto-Frost of DM 64 346.53 by way of customs duties on the imports. It also claimed payment of DM 12 786.10 by way of import turnover tax in respect of the same operations.

Foto-Frost did not challenge the Commission's decision before the Court of Justice. It did, however, request the Finanzgericht Hamburg to suspend the operation of the amendment notice issued by the Hauptzollamt.

In an order of 22 September 1983 the Finanzgericht took the view that the effect of the Protocol on German internal trade was to exempt operations which fell within the ambit of German internal trade from import duties. Paragraph 1 of that Protocol provided as follows: 'Since trade between the German territories subject to the Basic Law for the Federal Republic of Germany and the German territories in which the Basic Law does not apply is a part of German internal trade, the application of this Treaty in Germany requires no change in the treatment currently accorded this trade'. In the light of the case-law of both the courts of the Federal Republic of Germany and the Court of Justice the Finanzgericht considered that the operations in question appeared to fall within the ambit of German internal trade. Consequently, it considered that it was appropriate to suspend the amendment notice until it had been established definitively, if necessary after referring a preliminary question to the Court of Justice, whether post-clearance recovery of the import duties was justified in this case.

In addition, Foto-Frost instituted proceedings before the Finanzgericht Hamburg for the definitive annulment of the amendment notice.

C — The preliminary questions

In the course of those proceedings, the Finanzgericht Hamburg decided, by order of 29 August 1985, to stay the proceedings and to refer the following questions to the Court of Justice for a preliminary ruling under Article 177 of the EEC Treaty:

‘(1) Can the national court review the validity of a decision adopted by the Commission pursuant to Article 6 of Commission Regulation (EEC) No 1573/80 of 20 June 1980 (Official Journal L 161, p. 1) on whether the post-clearance recovery of import duties should be waived pursuant to Article 5 (2) of Council Regulation (EEC) No 1697/79 of 24 July 1979 (Official Journal L 197, p. 1), which decision held that there was no justification for waiving the recovery of the import duties, and can it, if appropriate, hold in proceedings challenging such a decision that recovery of the duties should be waived?

(2) If the national court cannot review the validity of the Commission’s decision, is the Commission’s decision of 6 May 1983 (ECR 3/83) valid?

(3) If the national court can review the validity of the Commission’s decision, is Article 5 (2) of Regulation (EEC) No 1697/79 to be interpreted as conferring a power to adopt a discretionary decision, which may be reviewed by the Court only as regards abuses of that discretion (and if so, which abuses?) without any possibility of substituting its own discretion, or does it confer the power to adopt a measure of equitable relief, which is fully subject to review by the court?

(4) If the assessment to customs duties cannot be waived pursuant to Article 5 (2) of Regulation (EEC) No 1697/79, do goods originating in the German Democratic Republic which have been introduced into the Federal Republic of Germany via a Member State other than Germany by way of the external Community transit procedure fall within the ambit of German internal trade within the meaning of the Protocol on German internal trade and connected problems of 25 March 1957, with the consequence that when they are imported into the Federal Republic of Germany they are liable neither to customs duties nor to import turnover tax, or are such charges to be levied as in the case of imports from non-member countries, so that Community customs duties, in accordance with the relevant customs legislation, and import turnover tax, in accordance with Article 2 (2) of the Sixth Council Directive on the harmonization of turnover taxes in the European Communities, are to be levied?’

The Finanzgericht set out the following matters in its request for a preliminary ruling by way of explanation of the questions referred to the Court.

In the first place, in its opinion, the validity of the Commission’s decision is doubtful. Foto-Frost’s position appears to satisfy the requirements laid down in the first subparagraph of Article 5 (2) of Regulation No 1697/79 (an error by the competent authorities which could not reasonably have been detected by the person liable, good faith on the latter’s part and observance of all the provisions laid down as far as the customs declaration is concerned). Since the amendment notice at issue was based on the Commission’s decision of 6 May 1983 the Finanzgericht considers that it could not annul the notice unless the decision has been declared invalid first.

The Finanzgericht therefore asks, in the first place, whether it can itself review the validity of the Commission's decision. In its opinion it is for the Court of Justice alone to rule on the validity of the Commission's decision of 6 May 1983, but it nevertheless seeks the Court's ruling on that question.

Secondly, in the event that the Court states that it alone has the power to review the validity of the Commission's decision, the Finanzgericht requests the Court of Justice to review the validity of that decision.

Thirdly, in the event that the Court nevertheless considers that the Finanzgericht itself can decide on the validity of the Commission's decision, it asks whether the application of Article 5 (2) of Regulation No 1697/79 is based upon the exercise of a discretion which the national court may review only as regards an abuse thereof ('Ermessensfehler') or whether, as the Finanzgericht itself believes, it is based upon a measure of equitable relief all aspects of which are open to review.

Fourthly, in the event that it is clear from the answers given to the foregoing questions that it was not possible in this case to waive post-clearance recovery, the Finanzgericht asks whether Foto-Frost did in fact have to pay duty on the operations in question. According to the Finanzgericht this question is concerned to establish whether the operations in question fell within the scope of German internal trade for the purposes of the Protocol on German internal trade. Contrary to the view expressed in the order of 22 September 1983, it considers that those operations did not fall within the scope of that trade. It is now of the opinion that the protocol covers only those transactions which fell within the ambit of German internal trade within the meaning of the German legislation in force at the time when the protocol was adopted. At the time when the protocol came into force, operations of the type with which this case is concerned did not fall within the ambit of German internal trade.

The Finanzgericht's order was received at the Court Registry on 18 October 1985.

In accordance with Article 20 of the Protocol on the Statute of the Court of Justice, written observations were submitted on 6 January 1986 by Hauptzollamt Lübeck-Ost, the defendant in the main proceedings, represented by its Director, Mr Koal, on 14 January 1986 by the Commission of the European Communities, represented by Jörn Sack, acting as Agent, on 16 January 1986 by the Government of the Federal Republic of Germany, represented by Martin Seidel, acting as Agent, and on 20 January 1986 by Foto-Frost, the plaintiff in the main proceedings, represented by Messrs Modest, Gündisch and Landry, Rechtsanwälte, Hamburg.

Upon hearing the report of the Judge-Rapporteur and the views of the Advocate General, the Court decided to open the oral procedure without any preparatory inquiry. Nevertheless, the Court requested Foto-Frost, the government of the Federal Republic of Germany and the Commission to reply in writing to a number of questions and to produce certain documents. Those requests were acted upon within the period laid down.

2 — Written observations submitted to the Court

The first question (competence of courts against whose decisions a judicial remedy exists under national law to declare a Community act invalid themselves without referring the matter to the Court of Justice under Article 177 of the EEC Treaty)

Foto-Frost interprets Article 177 of the EEC Treaty as meaning that the power to judge the validity of acts of the Community institutions is confined to the Court of Justice. Such a conclusion is necessary in order to ensure uniform application of the relevant provisions of Community law.

The *government of the Federal Republic of Germany* states, without giving reasons for its view, that the Court of Justice alone has the power to annul an act of a Community institution.

The *Commission* considers that the second paragraph of Article 177 of the EEC Treaty cannot be interpreted

as conferring on a court or tribunal against whose decisions a judicial remedy exists the power to declare Community acts invalid or inapplicable.

In the first place, such an interpretation would detract from the binding effect which Article 189 of the EEC Treaty attributes to acts of the Community institutions. The binding effect of a decision addressed to a Member State extends, moreover, to all the authorities of that State, including its courts, in so far as the Court of Justice has not declared the decision unlawful.

According to the Commission, this case shows that if it were accepted that a national court or tribunal against whose decisions judicial remedies lie has the power to set aside the application of Community acts, the binding effect of those acts could easily be circumvented, specifically in situations of conflict. The Commission's decision does not always correspond to the point of view of the Member State to which it is addressed. If the national court or tribunal were to declare the Community decision invalid, the Member State could refrain from lodging an appeal against the judgment and the decision would therefore be deprived of its binding effect.

Secondly, the distribution of responsibilities between the Court of Justice and national courts in any event requires the power to rule on the validity of Community acts to be confined to the Court.

For reasons relating to the effective legal protection of individuals the Commission accepts a single exception, namely the possibility of granting a suspension in urgent cases, that is to say in connection with an application for interim measures, provided that in the main proceedings a reference is made to the Court of Justice. In that regard the Commission refers to the observations submitted by it in Cases 97/85 *Union Deutsche Lebensmittelwerke GmbH* v *Commission* [1987] ECR 2265 and 249/85 *Albako Margarinefabrik* v *Bundesanstalt für landwirtschaftliche Marktordnung* [1987] ECR 2345.

The second question (validity of the Commission's decision of 6 May 1983)

Foto-Frost considers that the decision of 6 May 1983 is invalid. In order to support that view Foto-Frost attempts to show first that the Commission is under a duty to adopt a decision declaring that the situation examined by it is such as to permit the waiver of post-clearance recovery of the duty in question where the requirements laid down in the first subparagraph of Article 5 (2) of Regulation No 1697/79 are satisfied and, secondly, that those requirements were actually satisfied in this case.

Foto-Frost bases its view that the Commission was under a duty to adopt a decision permitting post-clearance recovery to be waived on two arguments.

First, it maintains that the preamble to Council Regulation No 1697/79 expresses a concern to limit post-clearance recovery in the light of the need for legal certainty. In Foto-Frost's view its interpretation of Article 5 (2) is consistent with the objective of legal certainty, since it results in uniform application of the provision in all Member States.

Secondly, Foto-Frost states that even if there is no provision expressly obliging the Commission to adopt a decision permitting post-clearance recovery to be waived where the requirements laid down in Article 5 (2) are satisfied, Article 2 of Commission Regulation No 1573/80 obliges the national authorities, when the question falls to be decided by them, not to take action for post-clearance recovery in such cases. Foto-Frost takes the view that it is possible to infer by analogy from that provision that when the question falls to be decided by the Commission it is bound to adopt a decision permitting post-clearance recovery to be waived in those circumstances.

Foto-Frost then endeavours to show that the requirements laid down in Article 5 (2) were in fact satisfied in this case, in particular that it acted in good faith. In that regard it places particular emphasis on the fact that the Finanzgericht Hamburg itself considered in its order of 22 September 1983 suspending the amendment notice that it was extremely doubtful whether import duty could be levied in respect of the goods in

question. Consequently, Foto-Frost, which had no expertise in the matter, could be excused for not having detected the alleged mistake. In addition, previous imports of a similar nature had always been exempted from duty. Finally, it maintains that it completed the customs declarations correctly.

According to Foto-Frost, it follows from the foregoing that the Commission was under a duty to adopt a decision permitting post-clearance recovery of the duty in question to be waived. Consequently, its decision of 6 May 1983 is invalid.

The *government of the Federal Republic of Germany* does not wish to submit any opinion on the second question. However, it points out that the German customs authorities at no time cast doubt on the validity of the decision and, on the contrary, ensured its execution.

The *Commission* contends, in the first place, that the duty in question was in fact payable. It goes on to maintain that the error which led the customs authorities not to claim the duty could have been detected by Foto-Frost.

In order to show that the duty in question was payable the Commission states that the system of trade between the Federal Republic of Germany and the German Democratic Republic, which is regulated by the Berlin Agreement of 20 September 1951 (the version in force at the relevant time was published in the annex to *Bundesanzeiger* No 41 of 28.2.1979), is based on two essential ideas. First, on account of the contrasting nature of the two economic systems, German internal trade is subject to significant restrictions with regard to quantities and price. Secondly, the system of trade is based on the idea that a single customs territory continues to exist despite the division of Germany, with the consequence that direct economic relations between the Federal Republic of Germany and the German Democratic Republic are exempt from import duty.

With regard more particularly to what are known as triangular operations, such as those at issue in the main proceedings, the Commission accepts that they fall within the ambit of German internal trade. They are therefore subject to certain provisions of that trade system and, in particular, to the restrictions applicable with regard to quantities and price. However, such transactions are not subject to all the rules which generally govern operations falling within the ambit of German internal trade. Thus, they are not exempt from customs duty since that exemption applies only to goods which have not left the single customs territory (Federal Republic of Germany and German Democratic Republic). Moreover, the Protocol on German internal trade does not provide that operations falling within the ambit of German internal trade are necessarily exempt from import duty.

In order to show that the error committed by the customs offices could have been detected, the Commission argues that the position in the Federal Republic of Germany has been settled as described above since a judgment of the Bundesfinanzhof (Federal Finance Court) of 3 July 1958 (*Zeitschrift für Zölle and Verbrauchssteuern*, 1958, p. 373). Since Foto-Frost specialized in trade with the German Democratic Republic it could have obtained that information without difficulty. Since it had not made the relevant inquiries it bore a substantial part of the responsibility for the error which occurred and could not therefore seek to benefit from the first subparagraph of Article 5 (2) of Regulation No 1697/79.

In its view the decision of 6 May 1983 was therefore valid.

The third question (scope of the power of review of the national court in the event that the Court of Justice considers that the national court has the power to declare such a decision invalid itself)

The *government of the Federal Republic of Germany* and the *Commission* consider that in view of the proposed reply to the first question there is no need to reply to the third question.

The fourth question (do the operations in question fall within the ambit of German internal trade for the purposes of the Protocol on German internal trade and hence are not liable to customs duty and turnover

tax?)

Foto-Frost states that customs duty was not payable in respect of the operations in question since they fell within the scope of German internal trade within the meaning of the relevant protocol.

In that regard it refers to Paragraph 16 of the Regulation of 1 March 1979 implementing the interzonal trade regulation (*Supplement to Bundesanzeiger* No 47 of 8.3.1979, p. 3) according to which German internal trade includes triangular transactions, defined as follows: 'Operations effected between a person located in the territory of the Federal Republic of Germany and a person located in a country other than the Federal Republic of Germany or the German Democratic Republic on the basis of which goods ... are to be transported from the currency area of the mark of the German Democratic Republic to the territory of the Federal Republic of Germany either directly or via some other country'.

Foto-Frost recognizes that the adoption of that rule is of a later date to the protocol. However, the legislation in force at the time of the protocol's adoption itself gave a very wide definition to operations falling within the ambit of German internal trade and did not exclude operations such as the ones at issue in this case. In its view that was the reason why the Bundesverwaltungsgericht (Federal Administrative Court) decided in its judgment of 26 June 1981 (*Zeitschrift fur Zölle and Verbrauchssteuern*, 1982, p. 55) that German internal trade within the meaning of the protocol also covered triangular transactions. Foto-Frost also refers to the judgment of the Court of Justice of 27 September 1979 in Case 23/79 (*Geflügelschlachterei Freystadt* v *Hauptzollamt Hamburg-Jonas* [1979] ECR 2789, at p. 2802) according to which the sequence of commercial transactions and their forms do not need to be taken into account in determining whether or not a transaction forms part of German internal trade.

With regard to import turnover tax, Foto-Frost refers to the German Government's declaration concerning Article 3 of the Sixth Council Directive on the harmonization of the laws of the Member States relating to turnover taxes. By that declaration the German Government reserved the right to treat the territory of the German Democratic Republic as forming part of its national territory for the purposes of turnover tax. A circular issued by the Federal Minister for Finance concerning German law on turnover tax states that the importation into the Federal Republic of Germany, within the framework of German internal trade, of goods which are in free circulation in the currency area of the mark of the German Democratic Republic is not subject to import turnover tax.

In their observations concerning the fourth question the *Hauptzollamt*, the *government of the Federal Republic of Germany* and the *Commission* deal only with the question of customs duty since the question of turnover tax does not fall within the Community rules governing post-clearance recovery of import duties.

According to the *Hauptzollamt* it does not follow from the fact that an operation falls within the ambit of German internal trade that it is exempt from import duty. It is clear from the Berlin Agreement of 20 September 1951 that only goods which are imported directly and whose cost is settled by means of a clearing system between the central banks of the two countries in question are exempt from import duty. Since triangular transactions do not give rise to such clearing there is no reason for them to be exempt from customs duty. The Hauptzollamt therefore considers that it is not necessary for the purposes of these proceedings to determine whether or not triangular transactions fall within the ambit of German internal trade.

The *government of the Federal Republic of Germany* considers that the exemption from duty provided for by the protocol applies only to operations which were exempt under the German legislation in force at the time when the protocol was adopted. At the time when the protocol was adopted import duty had to be paid in respect of goods imported into the Federal Republic of Germany by virtue of a triangular operation. The exemption from duty provided for by the protocol does not therefore extend to such operations. The Government states in that regard that since the establishment of the Community it has always levied Community customs duty in respect of triangular operations and has remitted it to the Community.

The *Commission* considers that the fourth question is irrelevant. In its view there is no need to consider whether or not operations such as those at issue in this case fall within the scope of German internal trade. Even if they did fall within the scope of that trade that would not make them exempt from import duty. The protocol refers expressly to 'the treatment currently accorded' German internal trade, that is to say the system in force at the time when the protocol was adopted. At that time import duty was payable in respect of triangular operations. Consequently, the protocol does not provide a basis for exempting the operations at issue from import duty.

3 — Answers to questions put by the Court

(1) *Foto-Frost* was asked to answer the following two questions:

'(a) Why were the goods whose importation gave rise to the customs duty at issue not imported directly from the German Democratic Republic into the Federal Republic of Germany?

(b) What *was* the final destination of the goods?'

In reply to the *first question* Foto-Frost explained that there were agreements between Firma Carl Zeiss Jena (German Democratic Republic) and Firma Carl Zeiss Oberkochen (Federal Republic of Germany) under which the goods in question had to pass through a third country.

Foto-Frost replied to the *second question* that it had exported those binoculars at issue which it had purchased during 1980 to Italy. Of those which it had acquired during 1981 some were exported to Italy and South Africa and some were sold to two other undertakings established in the Federal Republic of Germany which, to the best of its knowledge, subsequently exported them.

(2) The *Commission* was asked by the Court to state in what manner Foto-Frost had failed to observe all the requirements laid down by the rules in force with regard to customs declarations.

The Commission replied that in its decision of 6 May 1983 it had regarded the question whether or not Foto-Frost had observed all the requirements laid down by the rules in force with regard to customs declarations as being of secondary importance. However, it accepted in its reply to this question that Foto-Frost had completed its customs declaration correctly. The complaint made by the Commission against Foto-Frost in its decision was that the latter had maintained *vis-à-vis* the customs authorities that the goods were exempt from customs duty because they originated in the German Democratic Republic whereas the question was doubtful. The Commission considered that a person liable to pay duty who submits a declaration to the customs authorities cannot act as if he qualifies for some entitlement when the matter is manifestly open to doubt.

(3) The *government of the Federal Republic of Germany* was asked by the Court to explain the system of German internal trade, the application of which is protected by the Protocol of 25 March 1957, in order to enable the Court to place the fourth question in the relevant context of primary and secondary legislation.

In its answer to the question the German Government states that the system of German internal trade within the meaning of the protocol is based on the Berlin Agreement of 20 September 1951, various regulations and laws adopted in 1949 and 1950 by the respective governments and military commanders, and implementing regulations subsequently adopted by the legislature of the Federal Republic of Germany.

Under the laws and regulations adopted by the military authorities transactions for the purchase of goods between the Federal Republic of Germany and the German Democratic Republic are, in principle, prohibited.

Nevertheless, the government of the Federal Republic of Germany has the right to provide for exceptions to

that prohibition.

Operations authorized pursuant to such derogations are effected by means of a clearing system. That means that they are not paid for in freely convertible currency but are entered in clearing accounts kept on behalf of the Federal Republic of Germany by the Deutsche Bundesbank and on behalf of the German Democratic Republic by the Staatsbank.

In order that trade relations between the Federal Republic of Germany and the German Democratic Republic are conducted exclusively by means of the clearing system, measures have been adopted to prevent goods originating in the German Democratic Republic from being imported into the Federal Republic of Germany via other countries. The German Democratic Republic is able, by means of such indirect imports, to obtain freely convertible currency and thereby circumvent the clearing system.

The measures in question are contained in the laws and regulations adopted by the military authorities. They established a system of advance authorization and monitoring which is applied very strictly by the government of the Federal Republic of Germany.

The German Government also states that at the time when the protocol was adopted customs duty was payable on triangular operations. The exemption provided for by the protocol does not therefore extend to such operations.

Finally, the German Government states that since triangular operations are subject to import customs duty they are also subject to turnover tax.

JUDGMENT OF THE COURT
22 October 1987 *

In Case 314/85

REFERENCE to the Court under Article 177 of the EEC Treaty by the Finanzgericht (Finance Court) Hamburg for a preliminary ruling in the proceedings pending before that court between

Foto-Frost, Ammersbek,

and

Hauptzollamt Lübeck-Ost,

on the interpretation of Article 177 of the EEC Treaty, Article 5 (2) of Council Regulation No 1697/79 (EEC) of 24 July 1979 on the post-clearance recovery of import duties or export duties which have not been required of the person liable for payment on goods entered for a customs procedure involving the obligation to pay such duties (Official Journal 1979, L 197, p. 1), on the interpretation of the Protocol of 25 March 1957 on German internal trade and connected problems, and on the validity of a Commission decision addressed on 6 May 1983 to the Federal Republic of Germany finding that the post-clearance recovery of import duties must be effected in a particular case,

THE COURT,

composed of: Lord Mackenzie Stuart, President, G. Bosco, J. C. Moitinho de Almeida and G. C. Rodríguez Iglesias (Presidents of Chambers), T. Koopmans, U. Everling, K. Bahlmann, Y. Galmot, R. Joliet,

T. F. O'Higgins and F. Schockweiler, Judges,

Advocate General: G. F. Mancini
Registrar: J. A. Pompe, Deputy Registrar

after considering the observations submitted on behalf of

— Foto-Frost, the plaintiff in the main proceedings, by H. Heemann, Rechtsanwalt, Hamburg, assisted by H. Frost, expert,

— the Government of the Federal Republic of Germany, by M. Seidel, acting as Agent,

— the Commission of the European Communities, by J. Sack, a member of its Legal Department, acting as Agent,

having regard to the Report for the Hearing as supplemented further to the hearing on 16 December 1986,

after hearing the Opinion of the Advocate General delivered at the sitting on 19 May 1987,

gives the following

Judgment

1 By an order of 29 August 1985, which was received at the Court on 18 October 1985, the Finanzgericht (Finance Court) Hamburg referred to the Court for a preliminary ruling under Article 177 of the EEC Treaty several questions concerning the interpretation of Article 177 of the EEC Treaty, Article 5 (2) of Council Regulation No 1697/79 on 24 July 1979 on the post-clearance recovery of import duties or export duties (Official Journal 1979, L 197, p. 1) and the Protocol of 25 March 1957 on German internal trade and connected problems, and the validity of a Commission decision addressed on 6 May 1983 to the Federal Republic of Germany finding that the post-clearance recovery of import duties must be effected in a particular case.

2 Those questions were raised in proceedings brought by Firma Foto-Frost, Ammersbek (Federal Republic of Germany), an importer, exporter and wholesaler of photographic goods, for the annulment of a notice issued by the Hauptzollamt (Principal Customs Office) Lübeck-Ost for the post-clearance recovery of import duties following a Commission decision addressed to the Federal Republic of Germany on 6 May 1983 in which it was held that it was not permissible to waive the recovery of import duties in the case in question.

3 The operation to which the recovery of duties related were Foto-Frost's importation into the Federal Republic of Germany and release for free circulation there of prismatic binoculars originating in the German Democratic Republic. Foto-Frost purchased the binoculars from traders in Denmark and the United Kingdom, which dispatched them to it under the Community external transit procedure from customs warehouses in Denmark and the Netherlands.

4 The competent customs offices initially allowed the goods to enter free of duty on the ground that they originated in the German Democratic Republic. Following a check, Hauptzollamt Lübeck-Ost, the principal customs office, considered that customs duty was due under the German customs legislation. However, it took the view that it was not appropriate to effect the post-clearance recovery of the duty on the ground that Foto-Frost fulfilled the requirements set out in Article 5 (2) of Council Regulation No 1697/79, which provides that 'The competent authorities may refrain from taking action for the post-clearance recovery of import duties or export duties which were not collected as a result of an error made by the competent authorities themselves which could not reasonably have been detected by the person liable, the latter having for his part acted in good faith and observed all the provisions laid down by the rules in force as far as his customs declaration is concerned'. According to the order requesting a preliminary ruling the Hauptzollamt

took the view that Foto-Frost had completed the customs declaration correctly and could not have been expected to detect the error in so far as other customs offices had considered that previous similar operations did not give rise to the payment of duty.

5 Since the amount of the duty involved was greater than 2 000 ECU, under Commission Regulation No 1573/80 of 20 June 1980 laying down provisions for the implementation of Article 5 (2) of the aforementioned Council Regulation No 1697/79 (Official Journal 1980, L 161, p. 1) the Hauptzollamt itself was not empowered to take the decision not to effect post-clearance recovery. Consequently, at the Hauptzollamt's request, the Federal Minister for Finance requested the Commission to decide under Article 6 of the aforesaid Regulation No 1573/80 whether the post-clearance recovery of the duty in question could be waived.

6 On 6 May 1983 the Commission addressed to the Federal Republic of Germany a decision to the effect that it could not. The grounds given for the decision were that 'the customs offices concerned did not themselves make an error in the application of the provisions governing inter-German trade but merely accepted as correct, without immediate question, the information given on the declarations presented by the importer; ... this practice in no way prevents those authorities from subsequently making a correction in respect of charges, this possibility being expressly provided for in Article 10 of Council Directive 79/695/EEC of 24 July 1979 on the harmonization of procedures for the release of goods for free circulation' (Official Journal 1979, L 205, p. 19). It further considered that 'the importer was in a position to consider the circumstances of the import operations in question in the light of the provisions governing inter-German trade, the application of which he was claiming; ... he could thus detect any error in implementing these provisions; ... it has been established that he did not comply with all the provisions laid down by the rules in force as regards the customs declarations'.

7 Following that decision the Hauptzollamt issued the notice for the post-clearance recovery of duty which Foto-Frost is contesting in the main proceedings.

8 Foto-Frost applied to the Finanzgericht Hamburg for an order suspending the operation of that notice. The Finanzgericht allowed the application on the ground that the operations in question appeared to fall within the ambit of German internal trade and were therefore exempt from customs duty under the Protocol on German internal trade.

9 Foto-Frost then applied to the Finanzgericht Hamburg for the annulment of the notice for the post-clearance recovery of duty. The Finanzgericht took the view that the validity of the Commission's decision of 6 May 1983 was doubtful on the ground that all the requirements set out in Article 5 (2) of Council Regulation No 1697/79 for refraining from taking action for the post-clearance recovery of duty were fulfilled. Since the contested notice was based on the Commission's decision, the Finanzgericht considered that it could not annul it unless the Community decision was itself invalid. The Finanzgericht therefore referred the following four questions to the Court for a preliminary ruling:

'(1) Can the national court review the validity of a decision adopted by the Commission pursuant to Article 6 of Commission Regulation (EEC) No 1573/80 of 20 June 1980 (Official Journal L 161, p. 1) on whether the post-clearance recovery of import duties should be waived pursuant to Article 5 (2) of Council Regulation (EEC) No 1697/79 of 24 July 1979 (Official Journal L 197, p. 1), which decision held that there was no justification for waiving the recovery of the import duties, and can it, if appropriate, hold in proceedings challenging such a decision that recovery of the duties should be waived?

(2) If the national court cannot review the validity of the Commission's decision, is the Commission's decision of 6 May 1983 (ECR 3/83) valid?

(3) If the national court can review the validity of the Commission's decision, is Article 5 (2) of Regulation No 1697/79 to be interpreted as conferring a power to adopt a discretionary decision, which may be

reviewed by the court only as regards abuses of that discretion (and if so, which abuses?) without any possibility of substituting its own discretion, or does it confer the power to adopt a measure of equitable relief, which is fully subject to review by the court?

(4) If the assessment to customs duties cannot be waived pursuant to Article 5 (2) of Regulation No 1697/79, do goods originating in the German Democratic Republic which have been introduced into the Federal Republic of Germany via a Member State other than Germany by way of the external Community transit procedure fall within the ambit of German internal trade within the meaning of the Protocol on German internal trade and connected problems of 25 March 1957, with the consequence that when they are imported into the Federal Republic of Germany they are liable neither to customs duties nor to import turnover tax, or are such charges to be levied as in the case of imports from non-member countries, so that Community customs duties, in accordance with the relevant customs legislation, and import turnover tax, in accordance with Article 2 (2) of the Sixth Council Directive on the harmonization of turnover taxes in the European Communities, are to be levied?'

10 Reference is made to the Report for the Hearing for a fuller description of the facts and of the applicable provisions of Community law and for an account of the observations submitted by Foto-Frost, Hauptzollamt Lübeck-Ost, the Government of the Federal Republic of Germany and the Commission.

The first question

11 In its first question the Finanzgericht asks whether it itself is competent to declare invalid a Commission decision such as the decision of 6 May 1983. It casts doubt on the validity of that decision on the ground that all the requirements laid down by Article 5 (2) of Regulation No 1697/79 for taking no action for the post-clearance recovery of duty seem to be fulfilled in this case. However, it considers that in view of the division of jurisdiction between the Court of Justice and the national courts set out in Article 177 of the EEC Treaty only the Court of Justice is competent to declare invalid acts of the Community institutions.

12 Article 177 confers on the Court jurisdiction to give preliminary rulings on the interpretation of the Treaty and of acts of the Community institutions and on the validity of such acts. The second paragraph of that Article provides that national courts may refer such questions to the Court and the third paragraph of that article puts them under an obligation to do so where there is no judicial remedy under national law against their decisions.

13 In enabling national courts, against those decisions where there is a judicial remedy under national law, to refer to the Court for a preliminary ruling questions on interpretation or validity, Article 177 did not settle the question whether those courts themselves may declare that acts of Community institutions are invalid.

14 Those courts may consider the validity of a Community act and, if they consider that the grounds put forward before them by the parties in support of invalidity are unfounded, they may reject them, concluding that the measure is completely valid. By taking that action they are not calling into question the existence of the Community measure.

15 On the other hand, those courts do not have the power to declare acts of the Community institutions invalid. As the Court emphasized in the judgment of 13 May 1981 in Case 66/80 *International Chemical Corporation v Amministrazione delle Finanze* [1981] ECR 1191, the main purpose of the powers accorded to the Court by Article 177 is to ensure that Community law is applied uniformly by national courts. That requirement of uniformity is particularly imperative when the validity of a Community act is in question. Divergences between courts in the Member States as to the validity of Community acts would be liable to place in jeopardy the very unity of the Community legal order and detract from the fundamental requirement of legal certainty.

16 The same conclusion is dictated by consideration of the necessary coherence of the system of judicial protection established by the Treaty. In that regard it must be observed that requests for preliminary rulings, like actions for annulment, constitute means for reviewing the legality of acts of the Community institutions. As the Court pointed out in its judgment of 23 April 1986 in Case 294/83 *Parti écologiste 'les Verts' v European Parliament* [1986] ECR 1339), 'in Articles 173 and 184, on the one hand, and in Article 177, on the other, the Treaty established a complete system of legal remedies and procedures designed to permit the Court of Justice to review the legality of measures adopted by the institutions'.

17 Since Article 173 gives the Court exclusive jurisdiction to declare void an act of a Community institution, the coherence of the system requires that where the validity of a Community act is challenged before a national court the power to declare the act invalid must also be reserved to the Court of Justice.

18 It must also be emphasized that the Court of Justice is in the best position to decide on the validity of Community acts. Under Article 20 of the Protocol on the Statute of the Court of Justice of the EEC, Community institutions whose acts are challenged are entitled to participate in the proceedings in order to defend the validity of the acts in question. Furthermore, under the second paragraph of Article 21 of that Protocol the Court may require the Member States and institutions which are not participating in the proceedings to supply all information which it considers necessary for the purposes of the case before it.

19 It should be added that the rule that national courts may not themselves declare Community acts invalid may have to be qualified in certain circumstances in the case of proceedings relating to an application for interim measures; however, that case is not referred to in the national court's question.

20 The answer to the first question must therefore be that the national courts have no jurisdiction themselves to declare that acts of Community institutions are invalid.

The second question

21 The second and third questions assume that the operations in question are in fact liable to customs duties. In its second question the Finanzgericht is seeking to ascertain, in the event that the Court alone has jurisdiction to review the validity of the Commission decision, whether that decision is valid.

22 It must be observed that Article 5 (2) of Regulation No 1697/79 lays down three specific requirements which must be fulfilled before the competent authorities may waive the post-clearance recovery of duties. That provision must be interpreted as meaning that if all those requirements are fulfilled the person liable is entitled to the waiver of the recovery of the duty in question.

23 It now falls to be considered whether the three requirements set out in Article 5 (2) of Regulation No 1697/79 are fulfilled in this case. The Court has the power to verify the existence of the facts on which a Community act is based and the legal inferences which the Community institution has drawn therefrom where, in the context of a request for a preliminary ruling, they are alleged to be incorrect.

24 The first requirement contained in Article 5 (2) is that the failure to collect the duty must have been the result of an error made by the competent authorities themselves. In that regard, the Commission's argument to the effect that the customs authorities did not make an error themselves but merely made the initial assumption that the particulars given in Foto-Frost's declaration were correct, as they were entitled to do under Article 10 of Council Directive 79/695/EEC, must be rejected. According to the latter provision, where duty has been calculated on the basis of non-verified particulars given in the customs declaration, the declaration may be subjected to subsequent verification and the amount of duty calculated rectified. In this case, as the Commission itself acknowledged in its observations and in answering a question put to it by the Court, Foto-Frost's declaration contained all the factual particulars needed in order to apply the relevant rules, and those particulars were correct. In those circumstances, the post-clearance check carried out by the German customs authorities failed to disclose any new fact. Therefore, it was in fact as a result of an error made by the customs authorities themselves in initially applying the relevant rules that duty was not charged

when the goods were imported.

25 The second requirement is that the person liable must have acted in good faith or, in other words, that he could not have detected the error made by the competent authorities. In that connection, it is observed that the specialist judges of the Finanzgericht Hamburg expressed the view in their order of 22 September 1983 suspending the operation of the amendment notice that it was very doubtful whether duty was payable on operations of the type at issue. The Finanzgericht considered that such operations appeared to fall within the ambit of German internal trade and were therefore exempt from customs duty under the Protocol on such trade. However, it observed that the situation was uncertain as regards the case-law of both the Court of Justice and the national courts. In those circumstances, it cannot reasonably be considered that Foto-Frost, a commercial undertaking, could have detected the error made by the customs authorities. Moreover, it had even less reason to suspect that an error had been made, since previous similar operations had been granted exemption from duty.

26 The third requirement is that the person liable must have observed all the provisions laid down by the rules in force as far as his customs declaration is concerned. As to that point, it must be observed that, in answering a question put to it by the Court, the Commission itself admitted, contrary to what is stated in its decision of 6 May 1983, that Foto-Frost had completed its customs declaration correctly. Moreover, there is nothing in the documents before the Court to suggest that that was not the case.

27 It follows from the foregoing that all the requirements laid down in Article 5 (2) of Regulation No 1697/79 were fulfilled in this case and therefore Foto-Frost was entitled to the waiver of the post-clearance recovery of the duty in question.

28 Accordingly, the decision addressed to the Federal Republic of Germany on 6 May 1983 in which the Commission stated that post-clearance recovery of import duties must be carried out in a particular case is invalid.

The third question

29 The Finanzgericht asks whether, in the event that it itself is competent to declare the Commission's decision invalid, the application of Article 5 (2) of Regulation No 1697/79 depends on a discretionary decision which the national court may review only as regards abuses of that discretion ('Ermessensfehler') or on a measure of equitable relief, which is fully subject to review by that court?

30 In view of the answers given to the first and second questions, the third question does not call for a reply.

The fourth question

31 The fourth question is put to the Court in the event that it does not emerge from the answers to the first questions that Foto-Frost is entitled to the waiver of post-clearance recovery. The Finanzgericht asks whether in that case the operations in question fall within the ambit of German internal trade within the meaning of the Protocol on German internal trade, which would mean, in its view, that they are exempt from customs duty.

32 In view of the answer given to the second question, the fourth question does not call for a reply.

Costs

33 The costs incurred by the Government of the Federal Republic of Germany and the Commission of the European Communities, which have submitted observations to the Court are not recoverable. As these proceedings are, in so far as the parties to the main proceedings are concerned, in the nature of a step in the action pending before the national court, the decision on costs is a matter for that court.

on those grounds,

THE COURT,

in answer to questions submitted to it by the Finanzgericht, Hamburg, by order of 29 August 1985, hereby rules:

(1) The national courts have no jurisdiction themselves to declare that measures taken by Community institutions are invalid.

(2) The decision addressed to the Federal Republic of Germany on 6 May 1983 in which the Commission stated that post-clearance recovery of import duties must be carried out in a particular case is invalid.

Keywords

++++

1 . FREE MOVEMENT OF PERSONS - WORKERS - RECOGNITION OF DIPLOMAS - ABSENCE OF HARMONIZING DIRECTIVES - DUTY OF THE MEMBER STATES TO ENSURE THE FREE MOVEMENT OF WORKERS UNDER THEIR LEGISLATION ON THE EQUIVALENCE OF DIPLOMAS - CRITERIA FOR ASSESSING EQUIVALENCE

(EEC TREATY, ARTS 5 AND 48)

2 . FREE MOVEMENT OF PERSONS - WORKERS - FREE ACCESS TO EMPLOYMENT - FUNDAMENTAL RIGHT LAID DOWN IN THE TREATY - DECISION OF A NATIONAL AUTHORITY REFUSING THE BENEFIT OF THAT RIGHT - SUBJECT TO JUDICIAL PROCEEDINGS - REQUIREMENT STEMMING FROM A GENERAL PRINCIPLE OF COMMUNITY LAW

(EEC TREATY, ART . 48)

3 . FREE MOVEMENT OF PERSONS - WORKERS - RECOGNITION OF DIPLOMAS - ABSENCE OF HARMONIZING DIRECTIVES - DECISION OF A NATIONAL AUTHORITY REFUSING TO GRANT RECOGNITION - DUTY TO STATE REASONS - SUBJECT TO JUDICIAL PROCEEDINGS

(EEC TREATY, ART . 48)

Summary

1 . THE LAWFUL REQUIREMENT WHEREBY, IN THE VARIOUS MEMBER STATES, ADMISSION TO CERTAIN OCCUPATIONS IS SUBJECTED TO THE POSSESSION OF DIPLOMAS CONSTITUTES A RESTRICTION ON THE EFFECTIVE EXERCISE OF THE FREEDOM OF ESTABLISHMENT GUARANTEED BY THE TREATY THE ABOLITION OF WHICH IS TO BE MADE EASIER BY DIRECTIVES FOR THE MUTUAL RECOGNITION OF DIPLOMAS, CERTIFICATES AND OTHER EVIDENCE OF FORMAL QUALIFICATIONS . IN VIEW OF THE REQUIREMENTS OF ARTICLE 5 OF THE TREATY, THE FACT THAT SUCH DIRECTIVES HAVE NOT YET BEEN ADOPTED DOES NOT ENTITLE A MEMBER STATE TO DENY THE PRACTICAL BENEFIT OF THAT FREEDOM TO A PERSON SUBJECT TO COMMUNITY LAW WHEN THAT FREEDOM CAN BE ENSURED IN THAT MEMBER STATE, IN PARTICULAR BECAUSE IT IS POSSIBLE UNDER ITS LAWS AND REGULATIONS FOR EQUIVALENT

FOREIGN DIPLOMAS TO BE RECOGNIZED .

SINCE IT HAS TO RECONCILE THE REQUIREMENT AS TO THE QUALIFICATIONS NECESSARY IN ORDER TO EXERCISE A PARTICULAR OCCUPATION WITH THE REQUIREMENTS OF THE FREE MOVEMENT OF WORKERS, THE PROCEDURE FOR THE RECOGNITION OF EQUIVALENCE MUST ENABLE THE NATIONAL AUTHORITIES TO ASSURE THEMSELVES, ON AN OBJECTIVE BASIS, THAT THE FOREIGN DIPLOMA CERTIFIES THAT ITS HOLDER HAS KNOWLEDGE AND QUALIFICATIONS WHICH ARE, IF NOT IDENTICAL, AT LEAST EQUIVALENT TO THOSE CERTIFIED BY THE NATIONAL DIPLOMA . THAT ASSESSMENT OF THE EQUIVALENCE OF THE FOREIGN DIPLOMA MUST BE EFFECTED EXCLUSIVELY IN THE LIGHT OF THE LEVEL OF KNOWLEDGE AND QUALIFICATIONS WHICH ITS HOLDER CAN BE ASSUMED TO POSSESS IN THE LIGHT OF THAT DIPLOMA, HAVING REGARD TO THE NATURE AND DURATION OF THE STUDIES AND PRACTICAL TRAINING WHICH THE DIPLOMA CERTIFIES THAT HE HAS CARRIED OUT .

2 . SINCE FREE ACCESS TO EMPLOYMENT IS A FUNDAMENTAL RIGHT WHICH THE TREATY CONFERS INDIVIDUALLY ON EACH MIGRANT WORKER IN THE COMMUNITY, THE EXISTENCE OF A REMEDY OF A JUDICIAL NATURE AGAINST ANY DECISION OF A NATIONAL AUTHORITY REFUSING THE BENEFIT OF THAT RIGHT IS ESSENTIAL IN ORDER TO SECURE FOR THE INDIVIDUAL EFFECTIVE PROTECTION FOR HIS RIGHT . THAT REQUIREMENT REFLECTS A GENERAL PRINCIPLE OF COMMUNITY LAW WHICH STEMS FROM THE CONSTITUTIONAL TRADITIONS COMMON TO THE MEMBER STATES AND HAS BEEN ENSHRINED IN ARTICLES 6 AND 13 OF THE EUROPEAN CONVENTION FOR THE PROTECTION OF HUMAN RIGHTS .

3 . WHERE IN A MEMBER STATE ACCESS TO AN OCCUPATION AS AN EMPLOYED PERSON IS DEPENDENT UPON THE POSSESSION OF A NATIONAL DIPLOMA OR A FOREIGN DIPLOMA RECOGNIZED AS EQUIVALENT THERETO, THE PRINCIPLE OF THE FREE MOVEMENT OF WORKERS LAID DOWN IN ARTICLE 48 OF THE TREATY REQUIRES THAT IT MUST BE POSSIBLE FOR A DECISION REFUSING TO RECOGNIZE THE EQUIVALENCE OF A DIPLOMA GRANTED TO A WORKER WHO IS A NATIONAL OF ANOTHER MEMBER STATE BY THAT MEMBER STATE TO BE MADE THE SUBJECT OF JUDICIAL PROCEEDINGS IN WHICH ITS LEGALITY UNDER COMMUNITY LAW CAN BE REVIEWED, AND FOR THE PERSON CONCERNED TO ASCERTAIN THE REASONS FOR THE DECISION .

HAVING REGARD TO THE REPORT FOR THE HEARING AS SUPPLEMENTED FURTHER TO THE HEARING ON 31 MARCH 1987,

AFTER HEARING THE OPINION OF THE ADVOCATE GENERAL DELIVERED AT THE SITTING ON 18 JUNE 1987,

GIVES THE FOLLOWING

JUDGMENT

Grounds

1 BY JUDGMENT OF 4 JULY 1986, LODGED AT THE COURT REGISTRY ON 18 AUGUST 1986, THE TRIBUNAL DE GRANDE INSTANCE (REGIONAL COURT), LILLE, REFERRED TO THE COURT FOR A PRELIMINARY RULING PURSUANT TO ARTICLE 177 OF THE EEC TREATY A QUESTION ON THE INTERPRETATION OF ARTICLE 48 OF THE EEC TREATY .

2 THAT QUESTION WAS RAISED IN THE CRIMINAL PROCEEDINGS FOLLOWING THE PRIVATE PROSECUTION BROUGHT BY UNION NATIONALE DES ENTRAINEURS ET CADRES TECHNIQUES PROFESSIONELS DU FOOTBALL AGAINST GEORGES HEYLENS, A FOOTBALL TRAINER, AND JACQUES DEWAILLY, JACQUES AMYOT AND ROGER DESCHODT, DIRECTORS OF THE LILLE OLYMPIC SPORTING CLUB, A SOCIETE ANONYME D' ECONOMIE MIXTE, AS PRINCIPAL AND ACCESSORIES, RESPECTIVELY, FOR HAVING INFRINGED THE PROVISIONS OF FRENCH LAW NO 84-610 OF 16 JULY 1984 ON THE ORGANIZATION AND PROMOTION OF PHYSICAL AND SPORTING ACTIVITIES (JOURNAL OFFICIEL DE LA REPUBLIQUE FRANCAISE OF 17.7.1984) AND ARTICLE 259 OF THE CRIMINAL CODE WITH REGARD TO THE WRONGFUL ASSUMPTION OF A TITLE .

3 IT APPEARS FROM THE DOCUMENTS BEFORE THE COURT THAT IN ORDER TO PRACTISE THE OCCUPATION OF FOOTBALL TRAINER IN FRANCE A PERSON MUST BE THE HOLDER OF A FRENCH FOOTBALL-TRAINER' S DIPLOMA OR A FOREIGN DIPLOMA WHICH HAS BEEN RECOGNIZED AS EQUIVALENT BY DECISION OF THE COMPETENT MEMBER OF THE GOVERNMENT AFTER CONSULTING A SPECIAL COMMITTEE .

4 THE DEFENDANT IN THE MAIN PROCEEDINGS, GEORGES HEYLENS, IS A BELGIAN NATIONAL AND THE HOLDER OF A BELGIAN FOOTBALL-TRAINER' S DIPLOMA AND WAS ENGAGED BY THE LILLE OLYMPIC SPORTING CLUB AS TRAINER OF THE CLUB' S PROFESSIONAL FOOTBALL TEAM . AN APPLICATION FOR RECOGNITION OF THE EQUIVALENCE OF THE BELGIAN DIPLOMA WAS REJECTED BY DECISION OF THE COMPETENT MEMBER OF THE GOVERNMENT, WHICH REFERRED, BY WAY OF STATEMENT OF REASONS, TO AN ADVERSE OPINION OF THE SPECIAL COMMITTEE, WHICH ITSELF CONTAINED NO STATEMENT OF REASONS . SINCE MR HEYLENS CONTINUED TO PRACTISE AS A FOOTBALL TRAINER, THE FRENCH FOOTBALL-TRAINERS' TRADE UNION SUMMONED HIM AND THE DIRECTORS OF THE FOOTBALL CLUB WHICH HAD ENGAGED HIM BEFORE THE LILLE CRIMINAL COURT .

5 SINCE IT HAD DOUBTS ABOUT THE COMPATIBILITY OF THE FRENCH LEGISLATION WITH THE RULES ON THE FREE MOVEMENT OF WORKERS, THE TRIBUNAL DE GRANDE INSTANCE DE LILLE (

EIGHTH CRIMINAL CHAMBER) SUSPENDED THE PROCEEDINGS UNTIL THE COURT HAD DELIVERED A PRELIMINARY RULING ON THE FOLLOWING QUESTION :

"DOES THE REQUIREMENT THAT A PERSON WISHING TO PURSUE A GAINFUL OCCUPATION AS TRAINER OF A SPORTS TEAM (ARTICLE 43 OF THE LAW OF 16 JULY 1984) MUST HOLD A FRENCH DIPLOMA OR A FOREIGN DIPLOMA RECOGNIZED AS EQUIVALENT THERETO BY A COMMITTEE WHOSE RULINGS DO NOT STATE THE REASONS ON WHICH THEY ARE BASED AND AGAINST WHOSE DECISIONS NO SPECIFIC LEGAL REMEDY IS AVAILABLE CONSTITUTE A RESTRICTION ON FREEDOM OF MOVEMENT FOR WORKERS AS DEFINED BY ARTICLES 48 TO 51 OF THE EEC TREATY, IN THE ABSENCE OF ANY DIRECTIVE APPLICABLE TO THAT OCCUPATION?"

6 REFERENCE IS MADE TO THE REPORT FOR THE HEARING FOR A FULLER ACCOUNT OF THE FACTS OF THE CASE, THE COURSE OF THE PROCEDURE AND THE OBSERVATIONS SUBMITTED PURSUANT TO ARTICLE 20 OF THE PROTOCOL ON THE STATUTE OF THE COURT OF JUSTICE OF THE EEC, WHICH ARE MENTIONED OR DISCUSSED HEREINAFTER ONLY IN SO FAR AS IS NECESSARY FOR THE REASONING OF THE COURT .

7 THE QUESTION PUT BY THE NATIONAL COURT ESSENTIALLY SEEKS TO ESTABLISH WHETHER, WHERE IN A MEMBER STATE ACCESS TO AN OCCUPATION AS AN EMPLOYED PERSON IS DEPENDENT UPON THE POSSESSION OF A NATIONAL DIPLOMA OR A FOREIGN DIPLOMA RECOGNIZED AS EQUIVALENT THERETO, THE PRINCIPLE OF THE FREE MOVEMENT OF WORKERS LAID DOWN IN ARTICLE 48 OF THE TREATY REQUIRES THAT IT MUST BE POSSIBLE FOR A DECISION REFUSING TO RECOGNIZE THE EQUIVALENCE OF A DIPLOMA GRANTED TO A WORKER WHO IS A NATIONAL OF ANOTHER MEMBER STATE BY THAT MEMBER STATE TO BE MADE THE SUBJECT OF JUDICIAL PROCEEDINGS, AND THAT THE DECISION MUST STATE THE REASONS ON WHICH IT IS BASED .

8 IN ORDER TO ANSWER THAT QUESTION IT MUST BE BORNE IN MIND THAT ARTICLE 48 OF THE TREATY IMPLEMENTS, WITH REGARD TO WORKERS, A FUNDAMENTAL PRINCIPLE CONTAINED IN ARTICLE 3*(C) OF THE TREATY, WHICH STATES THAT, FOR THE PURPOSES SET OUT IN ARTICLE 2, THE ACTIVITIES OF THE COMMUNITY ARE TO INCLUDE THE ABOLITION, AS BETWEEN MEMBER STATES, OF OBSTACLES TO FREEDOM OF MOVEMENT FOR PERSONS AND SERVICES (SEE THE JUDGMENT OF 7 JULY 1976 IN CASE 118/75 WATSON AND BELMANN ((1976)) ECR 1185).

9 IN APPLICATION OF THE GENERAL PRINCIPLE SET OUT IN ARTICLE 7 OF THE TREATY UNDER WHICH DISCRIMINATION ON GROUNDS OF NATIONALITY IS PROHIBITED, ARTICLE 48 AIMS TO ELIMINATE IN THE LEGISLATION OF THE MEMBER STATES PROVISIONS AS REGARDS EMPLOYMENT, REMUNERATION AND OTHER CONDITIONS OF WORK AND EMPLOYMENT UNDER WHICH A WORKER WHO IS A NATIONAL OF ANOTHER MEMBER STATE IS SUBJECT TO MORE SEVERE TREATMENT OR IS PLACED IN AN UNFAVOURABLE SITUATION IN LAW OR IN FACT AS COMPARED WITH THE SITUATION OF A NATIONAL IN THE SAME CIRCUMSTANCES (SEE THE JUDGMENT OF 28 MARCH 1979 IN CASE 175/78 SAUNDERS ((1979)) ECR 1129).

10 IN THE ABSENCE OF HARMONIZATION OF THE CONDITIONS OF ACCESS TO A PARTICULAR OCCUPATION, THE MEMBER STATES ARE ENTITLED TO LAY DOWN THE KNOWLEDGE AND QUALIFICATIONS NEEDED IN ORDER TO PURSUE IT AND TO REQUIRE THE PRODUCTION OF A DIPLOMA CERTIFYING THAT THE HOLDER HAS THE RELEVANT KNOWLEDGE AND QUALIFICATIONS .

11 HOWEVER, AS THE COURT HELD IN ITS JUDGMENT OF 28 JUNE 1977 IN CASE 11/77 PATRICK V MINISTRE DES AFFAIRES CULTURELLES ((1977)) ECR 1199, THE LAWFUL REQUIREMENT, IN THE VARIOUS MEMBER STATES, RELATING TO THE POSSESSION OF DIPLOMAS FOR ADMISSION TO CERTAIN OCCUPATIONS CONSTITUTES A RESTRICTION ON THE EFFECTIVE EXERCISE OF THE FREEDOM OF ESTABLISHMENT GUARANTEED BY THE TREATY THE ABOLITION OF WHICH IS TO BE MADE EASIER BY DIRECTIVES FOR THE MUTUAL RECOGNITION OF DIPLOMAS, CERTIFICATES AND OTHER EVIDENCE OF FORMAL QUALIFICATIONS . AS THE COURT ALSO HELD IN THAT JUDGMENT, THE FACT THAT SUCH DIRECTIVES HAVE NOT YET BEEN ISSUED DOES NOT ENTITLE A MEMBER STATE TO DENY THE PRACTICAL BENEFIT OF THAT FREEDOM TO A PERSON SUBJECT TO COMMUNITY LAW WHEN THAT FREEDOM CAN BE ENSURED IN THAT MEMBER STATE, IN PARTICULAR BECAUSE IT IS POSSIBLE UNDER ITS LAWS AND REGULATIONS FOR EQUIVALENT FOREIGN DIPLOMAS TO BE RECOGNIZED .

12 SINCE FREEDOM OF MOVEMENT FOR WORKERS IS ONE OF THE FUNDAMENTAL OJECTIVES OF THE TREATY, THE REQUIREMENT TO SECURE FREE MOVEMENT UNDER EXISTING NATIONAL LAWS AND REGULATIONS STEMS, AS THE COURT HELD IN ITS JUDGMENT OF 28 APRIL 1977 IN

CASE 71/76 THIEFFRY ((1977)) ECR 765, FROM ARTICLE 5 OF THE TREATY, UNDER WHICH THE MEMBER STATES ARE BOUND TO TAKE ALL APPROPRIATE MEASURES, WHETHER GENERAL OR PARTICULAR, TO ENSURE FULFILMENT OF THE OBLIGATIONS ARISING OUT OF THE TREATY AND TO ABSTAIN FROM ANY MEASURE WHICH COULD JEOPARDIZE THE ATTAINMENT OF THE OBJECTIVES OF THE TREATY .

13 SINCE IT HAS TO RECONCILE THE REQUIREMENT AS TO THE QUALIFICATIONS NECESSARY IN ORDER TO PURSUE A PARTICULAR OCCUPATION WITH THE REQUIREMENTS OF THE FREE MOVEMENT OF WORKERS, THE PROCEDURE FOR THE RECOGNITION OF EQUIVALENCE MUST ENABLE THE NATIONAL AUTHORITIES TO ASSURE THEMSELVES, ON AN OBJECTIVE BASIS, THAT THE FOREIGN DIPLOMA CERTIFIES THAT ITS HOLDER HAS KNOWLEDGE AND QUALIFICATIONS WHICH ARE, IF NOT IDENTICAL, AT LEAST EQUIVALENT TO THOSE CERTIFIED BY THE NATIONAL DIPLOMA . THAT ASSESSMENT OF THE EQUIVALENCE OF THE FOREIGN DIPLOMA MUST BE EFFECTED EXCLUSIVELY IN THE LIGHT OF THE LEVEL OF KNOWLEDGE AND QUALIFICATIONS WHICH ITS HOLDER CAN BE ASSUMED TO POSSESS IN THE LIGHT OF THAT DIPLOMA, HAVING REGARD TO THE NATURE AND DURATION OF THE STUDIES AND PRACTICAL TRAINING WHICH THE DIPLOMA CERTIFIES THAT HE HAS CARRIED OUT .

14 SINCE FREE ACCESS TO EMPLOYMENT IS A FUNDAMENTAL RIGHT WHICH THE TREATY CONFERS INDIVIDUALLY ON EACH WORKER IN THE COMMUNITY, THE EXISTENCE OF A REMEDY OF A JUDICIAL NATURE AGAINST ANY DECISION OF A NATIONAL AUTHORITY REFUSING THE BENEFIT OF THAT RIGHT IS ESSENTIAL IN ORDER TO SECURE FOR THE INDIVIDUAL EFFECTIVE PROTECTION FOR HIS RIGHT . AS THE COURT HELD IN ITS JUDGMENT OF 15 MAY 1986 IN CASE 222/84 JOHNSTON V CHIEF CONSTABLE OF THE ROYAL ULSTER CONSTABULARY ((1986)) ECR 1651, AT P . 1663, THAT REQUIREMENT REFLECTS A GENERAL PRINCIPLE OF COMMUNITY LAW WHICH UNDERLIES THE CONSTITUTIONAL TRADITIONS COMMON TO THE MEMBER STATES AND HAS BEEN ENSHRINED IN ARTICLES 6 AND 13 OF THE EUROPEAN CONVENTION FOR THE PROTECTION OF HUMAN RIGHTS AND FUNDAMENTAL FREEDOMS .

15 EFFECTIVE JUDICIAL REVIEW, WHICH MUST BE ABLE TO COVER THE LEGALITY OF THE REASONS FOR THE CONTESTED DECISION, PRESUPPOSES IN GENERAL THAT THE COURT TO WHICH THE MATTER IS REFERRED MAY REQUIRE THE COMPETENT AUTHORITY TO NOTIFY ITS REASONS . BUT WHERE, AS IN THIS CASE, IT IS MORE PARTICULARLY A QUESTION OF SECURING THE EFFECTIVE PROTECTION OF A FUNDAMENTAL RIGHT CONFERRED BY THE TREATY ON COMMUNITY WORKERS, THE LATTER MUST ALSO BE ABLE TO DEFEND THAT RIGHT UNDER THE BEST POSSIBLE CONDITIONS AND HAVE THE POSSIBILITY OF DECIDING, WITH A FULL KNOWLEDGE OF THE RELEVANT FACTS, WHETHER THERE IS ANY POINT IN THEIR APPLYING TO THE COURTS . CONSEQUENTLY, IN SUCH CIRCUMSTANCES THE COMPETENT NATIONAL AUTHORITY IS UNDER A DUTY TO INFORM THEM OF THE REASONS ON WHICH ITS REFUSAL IS BASED, EITHER IN THE DECISION ITSELF OR IN A SUBSEQUENT COMMUNICATION MADE AT THEIR REQUEST .

16 IN VIEW OF THEIR AIMS THOSE REQUIREMENTS OF COMMUNITY LAW, THAT IS TO SAY, THE EXISTENCE OF A JUDICIAL REMEDY AND THE DUTY TO STATE REASONS, ARE HOWEVER LIMITED ONLY TO FINAL DECISIONS REFUSING TO RECOGNIZE EQUIVALENCE AND DO NOT EXTEND TO OPINIONS AND OTHER MEASURES OCCURRING IN THE PREPARATION AND INVESTIGATION STAGE .

17 CONSEQUENTLY, THE ANSWER TO THE QUESTION PUT BY THE TRIBUNAL DE GRANDE INSTANCE, LILLE, MUST BE THAT WHERE IN A MEMBER STATE ACCESS TO AN OCCUPATION AS AN EMPLOYED PERSON IS DEPENDENT UPON THE POSSESSION OF A NATIONAL DIPLOMA OR A FOREIGN DIPLOMA RECOGNIZED AS EQUIVALENT THERETO, THE PRINCIPLE OF THE FREE MOVEMENT OF WORKERS LAID DOWN IN ARTICLE 48 OF THE TREATY REQUIRES THAT IT MUST BE POSSIBLE FOR A DECISION REFUSING TO RECOGNIZE THE EQUIVALENCE OF A DIPLOMA GRANTED TO A WORKER WHO IS A NATIONAL OF ANOTHER MEMBER STATE BY THAT MEMBER STATE TO BE MADE THE SUBJECT OF JUDICIAL PROCEEDINGS IN WHICH ITS LEGALITY UNDER COMMUNITY LAW CAN BE REVIEWED, AND FOR THE PERSON CONCERNED TO ASCERTAIN THE REASONS FOR THE DECISION .

Decision on costs

COSTS

18 THE COSTS INCURRED BY THE GOVERNMENT OF THE FRENCH REPUBLIC, THE GOVERNMENT OF THE KINGDOM OF DENMARK AND THE COMMISSION OF THE EUROPEAN COMMUNITIES, WHICH HAVE SUBMITTED OBSERVATIONS TO THE COURT, ARE NOT RECOVERABLE . AS THESE PROCEEDINGS ARE, IN SO FAR AS THE PARTIES TO THE MAIN PROCEEDINGS ARE CONCERNED, IN THE NATURE OF A STEP IN THE ACTION PENDING BEFORE THE NATIONAL COURT, THE DECISION ON COSTS IS A MATTER FOR THAT COURT .

Operative part

ON THOSE GROUNDS,

THE COURT,

IN ANSWER TO THE QUESTION REFERRED TO IT BY THE TRIBUNAL DE GRANDE INSTANCE, LILLE, BY JUDGMENT OF 4 JULY 1986, HEREBY RULES :

WHERE IN A MEMBER STATE ACCESS TO AN OCCUPATION AS AN EMPLOYED PERSON IS DEPENDENT UPON THE POSSESSION OF A NATIONAL DIPLOMA OR A FOREIGN DIPLOMA RECOGNIZED AS EQUIVALENT THERETO, THE PRINCIPLE OF THE FREE MOVEMENT OF WORKERS LAID DOWN IN ARTICLE 48 OF THE TREATY REQUIRES THAT IT MUST BE POSSIBLE FOR A DECISION REFUSING TO RECOGNIZE THE EQUIVALENCE OF A DIPLOMA GRANTED TO A WORKER WHO IS A NATIONAL OF ANOTHER MEMBER STATE BY THE MEMBER STATE TO BE MADE THE SUBJECT OF JUDICIAL PROCEEDINGS IN WHICH ITS LEGALITY UNDER COMMUNITY LAW CAN BE REVIEWED, AND FOR THE PERSON CONCERNED TO ASCERTAIN THE REASONS FOR THE DECISION .

Action for failure to act - Natural or legal persons - Failures to act against which an action lies - Failure to commence proceedings for a breach of Treaty obligations - Inadmissibility

(EEC Treaty, Art . 169, second paragraph, and Art . 175, third paragraph)

Summary

An action for failure to act brought by a natural or legal person for a declaration that in not commencing against a Member State proceedings to establish its breach of obligations the Commission has, in breach of the Treaty, failed to take a decision .

First, it is clear from the scheme of Article 169 of the Treaty that the Commission is not obliged to commence proceedings under that provision but has a discretionary power in this regard which excludes the right of private individuals to require that institution to adopt a specific position .

Secondly, a natural or legal person who asks the Commission to commence proceedings pursuant to Article 169 is in fact seeking the adoption of acts which are not of direct and individual concern to him within the meaning of the second paragraph of Article 173 and which it could not therefore challenge by means of an action for annulment in any event .

Parties

intervener,

APPLICATION under Articles 173 and 175 of the EEC Treaty for a declaration that the Commission has failed to commence proceedings under Article 169 of the Treaty to establish the French Republic' s failure to fulfil its obligations,

THE COURT (Second Chamber)

composed of : T . F . O' Higgins, President of the Chamber, G . F . Mancini and F . A . Schockweiler, Judges,

Advocate General : C . O . Lenz

Registrar : D . Louterman, Administrator

having regard to the Report for the Hearing and further to the hearing on 30 November 1988,

having heard the Opinion of the Advocate General delivered at the sitting on 14 December 1988,

gives the following

Judgment

Grounds

1 By application lodged at the Court Registry on 14 August 1987, the Belgian company Star Fruit Company, which specializes in the importation and exportation of fresh bananas, brought an action under the second paragraph of Article 173 and the third paragraph of Article 175 of the EEC Treaty essentially for a declaration that the Commission of the European Communities had failed to commence proceedings against the French Republic under Article 169 of the Treaty .

2 The applicant considers that the system for supplying the banana market in France is incompatible with Article 30 et seq . of the EEC Treaty and with Article 2 of the Lomé Convention of 28 February 1975 (Official Journal 1976, L 25, p . 1). It therefore requested the Commission, by letter of 17 April 1987, to commence proceedings under Article 169 of the EEC Treaty against the French Republic in order to determine that the system in question is incompatible with the aforementioned provisions, to call upon that Member State to abolish import quotas on bananas originating in non-member States which are in free circulation in the other Member States of the Community and to pay it compensation for the damage which it has allegedly suffered as a result of the impossibility of fulfilling the orders of its French customers and the loss of goods resulting from the import bans applied by the Member State in question .

3 By a letter dated 4 May 1987 the Commission acknowledged receipt of the applicant' s letter and informed it that it would adopt the measures needed in the matter .

4 It was after receiving that communication that the applicant brought this action .

5 By a separate document received at the Court on 9 November 1987 the Commission raised an objection of inadmissibility pursuant to Article 91 of the Rules of Procedure and requested the Court to rule on its objection without considering the substance of the case .

6 In support of its objection the Commission, supported on all points by the French Republic which was granted leave to intervene in support of its conclusions, contends in substance that the application is inadmissible under the second paragraph of Article 173 because the applicant has failed to specify the act of the Commission which it seeks to have declared void . The application is also inadmissible, in the Commission' s view, under the third paragraph of Article 175, the wording of which excludes the possibility of an action for failure to act being brought by a private individual for non-application of the procedure provided for in Article 169 against a Member State .

7 The applicant leaves it to the Court to decide whether its application is admissible under the second paragraph of Article 173 . It maintains that its application is admissible under the third

paragraph of Article 175 of the Treaty .

8 Reference is made to the Report for the Hearing for a fuller account of the facts of the case, the course of the procedure and the submissions and arguments of the parties, which are mentioned or discussed hereinafter only in so far as is necessary for the reasoning of the Court .

9 It appears that the applicant has not even identified the act adopted by the Commission against which the action is directed . Consequently, the application is inadmissible in so far as it is based on the second paragraph of Article 173 of the EEC Treaty .

10 In so far as it is based on the third paragraph of Article 175 of the Treaty, the purpose of the application is to obtain a declaration that in not commencing against the French Republic proceedings to establish its breach of obligations the Commission infringed the Treaty by failing to take a decision .

11 However, it is clear from the scheme of Article 169 of the Treaty that the Commission is not bound to commence the proceedings provided for in that provision but in this regard has a discretion which excludes the right for individuals to require that institution to adopt a specific position .

12 It is only if it considers that the Member State in question has failed to fulfil one of its obligations that the Commission delivers a reasoned opinion . Furthermore, in the event that the State does not comply with the opinion within the period allowed, the institution has in any event the right, but not the duty, to apply to the Court of Justice for a declaration that the alleged breach of obligations has occurred .

13 It must also be observed that in requesting the Commission to commence proceedings pursuant to Article 169 the applicant is in fact seeking the adoption of acts which are not of direct and individual concern to it within the meaning of the second paragraph of Article 173 and which it could not therefore challenge by means of an action for annulment in any event .

14 Consequently, the applicant cannot be entitled to raise the objection that the Commission failed to commence proceedings against the French Republic pursuant to Article 169 of the Treaty .

15 It follows that the application is inadmissible in its entirety .

Decision on costs

Costs

16 Under Article 69(2) of the Rules of Procedure the unsuccessful party must be ordered to pay the costs if they have been asked in the successful party' s pleadings .

17 Since the applicant has failed in its submissions, it must be ordered to pay the costs .

18 Since only the Commission has pleaded to that effect, the order for costs must be limited to those incurred by the Commission .

Operative part

On those grounds,

THE COURT (Second Chamber)

hereby :

(1) Dismisses the action as inadmissible;

(2) Orders the applicant to pay the costs incurred by the Commission;

(3) Orders the French Republic to bear its own costs .

61993J0415

Judgment of the Court of 15 December 1995. - Union royale belge des sociétés de football association ASBL v Jean-Marc Bosman, Royal club liégeois SA v Jean-Marc Bosman and others and Union des associations européennes de football (UEFA) v Jean-Marc Bosman. - Reference for a preliminary ruling: Cour d'appel de Liège - Belgium. - Freedom of movement for workers - Competition rules applicable to undertakings - Professional footballers - Sporting rules on the transfer of players requiring the new club to pay a fee to the old club - Limitation of the number of players having the nationality of other Member States who may be fielded in a match. - Case C-415/93.

17. Preliminary rulings ° Interpretation ° Temporal effects of judgments ruling on interpretation ° Retroactive effect ° Limits ° Legal certainty ° Power of assessment of the Court

(EEC Treaty, Art. 177)

Summary

1. A request for the Court to order a measure of inquiry under Article 60 of the Rules of Procedure, made by a party after the close of the oral procedure, can be admitted only if it relates to facts which may have a decisive influence and which the party concerned could not put forward before the close of the oral procedure.

2. In the context of the cooperation between the Court of Justice and the national courts provided for by Article 177 of the Treaty, it is solely for the national court before which the dispute has been brought, and which must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court. Consequently, where the questions submitted by the national court concern the interpretation of Community law, the Court of Justice is, in principle, bound to give a ruling

Nevertheless, in order to determine whether it has jurisdiction, the Court should examine the conditions in which the case was referred to it by the national court. The spirit of cooperation which must prevail in the preliminary-ruling procedure requires the national court, for its part, to

have regard to the function entrusted to the Court of Justice, which is to assist in the administration of justice in the Member States and not to deliver advisory opinions on general or hypothetical questions.

That is why the Court has no jurisdiction to give a preliminary ruling on a question submitted by a national court where it is quite obvious that the interpretation of Community law sought by that court bears no relation to the actual facts of the main action or its purpose or where the problem is hypothetical and the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it.

Questions submitted by a national court called upon to decide on declaratory actions seeking to prevent the infringement of a right which is seriously threatened are to be regarded as meeting an objective need for the purpose of settling the dispute brought before that court, even though they are necessarily based on hypotheses which are, by their nature, uncertain, if it holds them to be admissible under its interpretation of its national law.

3. Having regard to the objectives of the Community, sport is subject to Community law in so far as it constitutes an economic activity within the meaning of Article 2 of the Treaty, as in the case of the activities of professional or semi-professional footballers, where they are in gainful employment or provide a remunerated service.

4. It is not necessary, for the purposes of the application of the Community provisions on freedom of movement for workers, for the employer to be an undertaking; all that is required is the existence of, or the intention to create, an employment relationship.

5. Rules governing business relationships between employers in a sector of activity fall within the scope of the Community provisions relating to freedom of movement for workers if their application affects the terms of employment of workers.

That is true of rules relating to the transfer of players between football clubs which, although they govern the business relationships between clubs rather than the employment relationships between clubs and players, affect, because the employing clubs must pay fees on recruiting a player from another club, players'opportunities for finding employment and the terms under which such employment is offered.

6. The Community provisions concerning freedom of movement for persons and freedom to provide services do not preclude rules or practices in sport which are justified on non-economic grounds which relate to the particular nature and context of certain competitions. Such a restriction on the scope of the provisions in question must remain limited to its proper objective and cannot, therefore, be relied upon to exclude the whole of a sporting activity from the scope of the Treaty.

7. Freedom of movement for workers, guaranteed by Article 48 of the Treaty, is a fundamental freedom in the Community system and its scope cannot be limited by the Community's obligation to respect the national and regional cultural diversity of the Member States when it uses the powers of limited extent conferred upon it by Article 128(1) of the EC Treaty in the field of culture.

8. The principle of freedom of association, enshrined in Article 11 of the European Convention for the Protection of Human Rights and Fundamental Freedoms and resulting from the constitutional traditions common to the Member States, is one of the fundamental rights which, as the Court has consistently held and as is reaffirmed in the preamble to the Single European Act and in Article F(2) of the Treaty on European Union, are protected in the Community legal order.

However, rules likely to restrict freedom of movement for professional sportsmen, laid down by sporting associations, cannot be seen as necessary to ensure enjoyment of that freedom by those associations, by the clubs or by their players, nor can they be seen as an inevitable result thereof.

9. The principle of subsidiarity, even when interpreted broadly to the effect that intervention by Community authorities in the area of organization of sporting activities must be confined to what is strictly necessary, cannot lead to a situation in which the freedom of private associations to adopt sporting rules restricts the exercise of rights conferred on individuals by the Treaty.

10. Article 48 of the Treaty not only applies to the action of public authorities but extends also to rules of any other nature aimed at regulating gainful employment in a collective manner.

The abolition as between Member States of obstacles to freedom of movement for persons would be compromised if the abolition of State barriers could be neutralized by obstacles resulting from the exercise of their legal autonomy by associations or organizations not governed by public law. Furthermore, if the scope of Article 48 were confined to acts of a public authority there would be

a risk of creating inequality in its application, inasmuch as working conditions in the different Member States are governed sometimes by provisions laid down by law or regulation and sometimes by agreements and other acts concluded or adopted by private persons.

11. There is nothing to preclude individuals from relying, to justify restrictions on freedom of movement for workers which they may be alleged to have set up, on the grounds of public policy, public security or public health permitted by Article 48 of the Treaty. Neither the scope nor the content of those grounds of justification is in any way affected by the public or private nature of the restrictive rules in support of which they are adduced.

12. Article 48 of the Treaty applies to rules laid down by sporting associations which determine the terms on which professional sportsmen can engage in gainful employment.

13. The situation of a professional footballer who is a national of a Member State and, by entering into a contract of employment with a club in another Member State with a view to exercising gainful employment in that State, has accepted an offer of employment actually made within the meaning of Article 48(3)(a) of the Treaty, cannot be classified as purely internal and therefore not covered by Community law.

14. Article 48 of the Treaty precludes the application of rules laid down by sporting associations, under which a professional footballer who is a national of one Member State may not, on the expiry of his contract with a club, be employed by a club of another Member State unless the latter club has paid to the former club a transfer, training or development fee.

Such rules, even though they do not differ from those governing transfers within the same Member State, are likely to restrict the freedom of movement of players who wish to pursue their activity in another Member State by preventing or deterring them from leaving the clubs to which they belong even after the expiry of their contracts of employment with those clubs.

Nor are they an adequate means of achieving such legitimate aims as maintaining a financial and competitive balance between clubs and supporting the search for talent and the training of young players, since

° those rules neither preclude the richest clubs from securing the services of the best players nor prevent the availability of financial resources from being a decisive factor in competitive sport, thus considerably altering the balance between clubs,

° the fees provided for in those rules are by nature contingent and uncertain and are in any event unrelated to the actual cost of training borne by clubs and

° the same aims can be achieved at least as efficiently by other means which do not impede freedom of movement for workers.

15. Article 48 of the Treaty precludes the application of rules laid down by sporting associations under which, in matches in competitions which they organize, football clubs may field only a limited number of professional players who are nationals of other Member States.

Such rules are contrary to the principle of the prohibition of discrimination based on nationality as regards employment, remuneration and conditions of work and employment and it is of no relevance that they concern not the employment of such players, on which there is no restriction, but the extent to which their clubs may field them in official matches, since, in so far as participation in such matches is the essential purpose of a professional player's activity, a rule which restricts that participation obviously also restricts the chances of employment of the player concerned.

Nor can those rules, which do not concern specific matches between teams representing their countries but apply to all official matches between clubs, be justified for reasons which are not of an economic nature and are of sporting interest only, such as: preserving the traditional link between each club and its country, since a football club's links with the Member State in which it is established cannot be regarded as inherent in its sporting activity; creating a sufficient pool of national players to provide the national teams with top players to field in all team positions, since, whilst national teams must be made up of players having the nationality of the relevant country, those players need not necessarily be registered to play for clubs in that country; or maintaining a competitive balance between clubs, since there are no rules limiting the possibility for richer clubs to recruit the best national players, thus undermining that balance to just the same extent.

16. Except where such powers are expressly conferred upon it, the Commission may not give guarantees concerning the compatibility of specific practices with the Treaty and in no circumstances does it have the power to authorize practices which are contrary to the Treaty.

17. The interpretation which the Court, in the exercise of the jurisdiction conferred upon it by Article 177 of the Treaty, gives to a rule of Community law clarifies and where necessary defines the meaning and scope of that rule as it must be, or ought to have been, understood and applied from the time of its coming into force. It follows that the rule as thus interpreted can, and must, be applied by the courts even to legal relationships arising and established before the judgment ruling on the request for interpretation, provided that in other respects the conditions for bringing before the courts having jurisdiction an action relating to the application of that rule are satisfied.

It is only exceptionally that the Court may, in application of the general principle of legal certainty inherent in the Community legal order, be moved to restrict the opportunity for any person concerned to rely upon the provision as thus interpreted with a view to calling in question legal relationships established in good faith. Such a restriction may be allowed only by the Court, in the actual judgment ruling upon the interpretation sought.

Since the specific features of the rules laid down by the sporting associations for transfers of players between clubs of different Member States, together with the fact that the same or similar rules applied to transfers both between clubs belonging to the same national association and between clubs belonging to different national associations within the same Member State, may have caused uncertainty as to whether those rules were compatible with Community law, overriding considerations of legal certainty militate against calling in question legal situations whose effects have already been exhausted.

It must therefore be held that the direct effect of Article 48 of the Treaty cannot be relied upon in support of claims relating to a fee in respect of transfer, training or development which has already been paid on, or is still payable under an obligation which arose before, the date of this judgment, except by those who have brought court proceedings or raised an equivalent claim under the applicable national law before that date.

Jean-Marc Bosman,

SA d'Économie Mixte Sportive de l'Union Sportive du Littoral de Dunkerque,

Union Royale Belge des Sociétés de Football Association ASBL,

Union des Associations Européennes de Football (UEFA),

and between

Union des Associations Européennes de Football (UEFA)

and

Jean-Marc Bosman,

on the interpretation of Articles 48, 85 and 86 of the EEC Treaty,

THE COURT,

composed of: G.C. Rodríguez Iglesias, President, C.N. Kakouris, D.A.O. Edward and G. Hirsch (Presidents of Chambers), G.F. Mancini (Rapporteur), J.C. Moitinho de Almeida, P.J.G. Kapteyn, C. Gulmann, J.L. Murray, P. Jann and H. Ragnemalm, Judges,

Advocate General: C.O. Lenz,

Registrars: R. Grass, Registrar, and D. Louterman-Hubeau, Principal Administrator,

after considering the written observations submitted on behalf of:

° Union Royale Belge des Sociétés de Football Association ASBL, by G. Vandersanden and J.-P. Hordies, of the Brussels Bar, and by R. Rasir and F. Moïses, of the Liège Bar,

° Union des Associations Européennes de Football (UEFA), by I.S. Forrester QC,

° Mr Bosman, by L. Misson, J.-L. Dupont, M.-A. Lucas and M. Franchimont, of the Liège Bar,

° the French Government, by H. Duchène, Foreign Affairs Secretary in the Legal Directorate of the Ministry of Foreign Affairs, and C. de Salins, Assistant Director in the same directorate,

° the Italian Government, by Professor L. Ferrari Bravo, Head of the Legal Service in the Ministry of Foreign Affairs, assisted by D. Del Gaizo, Avvocato dello Stato,

° the Commission of the European Communities, by F.E. González Díaz, of its Legal Service, G. de Bergues, a national official placed at the disposal of its Legal Service, and Th. Margellos, of the Athens Bar,

having regard to the Report for the Hearing,

after hearing the oral observations of Union Royale Belge des Sociétés de Football Association ASBL, represented by F. Moïses, J.-P. Hordies and G. Vandersanden; of Union des Associations Européennes de Football ° UEFA, represented by I.S. Forrester and E. Jakhian, of the Brussels Bar; of Mr Bosman, represented by L. Misson and J.-L. Dupont; of the Danish Government, represented by P. Biering, Kontorchef in the Ministry of Foreign Affairs, acting as Agent; of the German Government, represented by E. Roeder, Ministerialrat in the Federal Ministry of the Economy; of the French Government, represented by C. de Salins and P. Martinet, Foreign Affairs Secretary in the Legal Directorate of the Ministry of Foreign Affairs, acting as Agents; of the Italian Government, represented by D. Del Gaizo; and of the Commission, represented by F.E. González Díaz, G. de Bergues and M. Wolfcarius, of its Legal Service, at the hearing on 20 June 1995,

after hearing the Opinion of the Advocate General at the sitting on 20 September 1995,

gives the following

Judgment

Grounds

1 By judgment of 1 October 1993, received at the Court on 6 October 1993, the Cour d'Appel (Appeal Court), Liège, referred to the Court for a preliminary ruling under Article 177 of the EEC Treaty a set of questions on the interpretation of Articles 48, 85 and 86 of that Treaty.

2 Those questions were raised in various proceedings between (i) Union Royale Belge des Sociétés de Football Association ASBL ("URBSFA") and Mr Bosman, (ii) Royal Club Liégois SA ("RC Liège") and Mr Bosman, SA d'Économie Mixte Sportive de l'Union Sportive du Littoral de Dunkerque ("US Dunkerque"), URBSFA and Union des Associations Européennes de Football (UEFA) ("UEFA") and, (iii) UEFA and Mr Bosman.

The rules governing the organization of football

3 Association football, commonly known as "football", professional or amateur, is practised as an organized sport in clubs which belong to national associations or federations in each of the Member States. Only in the United Kingdom are there more than one (in fact, four) national associations, for England, Wales, Scotland and Northern Ireland respectively. URBSFA is the Belgian national association. Also dependent on the national associations are other secondary or subsidiary associations responsible for organizing football in certain sectors or regions. The associations hold national championships, organized in divisions depending on the sporting status of the participating clubs.

4 The national associations are members of the Fédération Internationale de Football Association ("FIFA"), an association governed by Swiss law, which organizes football at world level. FIFA is divided into confederations for each continent, whose regulations require its approval. The confederation for Europe is UEFA, also an association governed by Swiss law. Its members are the national associations of some 50 countries, including in particular those of the Member States which, under the UEFA Statutes, have undertaken to comply with those Statutes and with the regulations and decisions of UEFA.

5 Each football match organized under the auspices of a national association must be played between two clubs which are members of that association or of secondary or subsidiary associations affiliated to it. The team fielded by each club consists of players who are registered by the national association to play for that club. Every professional player must be registered as such with his national association and is entered as the present or former employee of a specific club.

Transfer rules

6 The 1983 URBSFA federal rules, applicable at the time of the events giving rise to the different actions in the main proceedings, distinguish between three types of relationship: affiliation of a player to the federation, affiliation to a club, and registration of entitlement to play for a club, which is necessary for a player to be able to participate in official competitions. A transfer is defined as the transaction by which a player affiliated to an association obtains a change of club affiliation. If the transfer is temporary, the player continues to be affiliated to his club but is registered as entitled to play for another club.

7 Under the same rules, all professional players'contracts, which have a term of between one and five years, run to 30 June. Before the expiry of the contract, and by 26 April at the latest, the club must offer the player a new contract, failing which he is considered to be an amateur for transfer purposes and thereby falls under a different section of the rules. The player is free to accept or refuse that offer.

8 If he refuses, he is placed on a list of players available, between 1 and 31 May, for "compulsory" transfer, without the agreement of the club of affiliation but subject to payment to that club by the new club of a compensation fee for "training", calculated by multiplying the player's gross annual income by a factor varying from 14 to 2 depending on the player's age.

9 1 June marks the opening of the period for "free" transfers, with the agreement of both clubs and the player, in particular as to the amount of the transfer fee which the new club must pay to the old club, subject to penalties which may include striking off the new club for debt.

10 If no transfer takes place, the player's club of affiliation must offer him a new contract for one season on the same terms as that offered prior to 26 April. If the player refuses, the club has a period until 1 August in which it may suspend him, failing which he is reclassified as an amateur. A player who persistently refuses to sign the contracts offered by his club may obtain a transfer as an amateur, without his club's agreement, after not playing for two seasons.

11 The UEFA and FIFA regulations are not directly applicable to players but are included in the rules of the national associations, which alone have the power to enforce them and to regulate relations between clubs and players.

12 UEFA, URBSFA and RC Liège stated before the national court that the provisions applicable at the material time to transfers between clubs in different Member States or clubs belonging to different national associations within the same Member State were contained in a document entitled Principles of Cooperation between Member Associations of UEFA and their Clubs , approved by the UEFA Executive Committee on 24 May 1990 and in force from 1 July 1990.

13 That document provides that at the expiry of the contract the player is free to enter into a new contract with the club of his choice. That club must immediately notify the old club which in turn is to notify the national association, which must issue an international clearance certificate. However, the former club is entitled to receive from the new club compensation for training and development, to be fixed, failing agreement, by a board of experts set up within UEFA using a scale of multiplying factors, from 12 to 1 depending on the player's age, to be applied to the player's gross income, up to a maximum of SFR 5 000 000.

14 The document stipulates that the business relationships between the two clubs in respect of the compensation fee for training and development are to exert no influence on the activity of the player, who is to be free to play for his new club. However, if the new club does not immediately pay the fee to the old club, the UEFA Control and Disciplinary Committee is to deal with the matter and notify its decision to the national association concerned, which may also impose penalties on the debtor club.

15 The national court considers that in the case with which the main proceedings are concerned URBSFA and RC Liège applied not the UEFA but the FIFA regulations.

16 At the material time, the FIFA regulations provided in particular that a professional player could not leave the national association to which he was affiliated so long as he was bound by his contract and by the rules of his club and his national association, no matter how harsh their terms

might be. An international transfer could not take place unless the former national association issued a transfer certificate acknowledging that all financial commitments, including any transfer fee, had been settled.

17 After the events which gave rise to the main proceedings, UEFA opened negotiations with the Commission of the European Communities. In April 1991, it undertook in particular to incorporate in every professional player's contract a clause permitting him, at the expiry of the contract, to enter into a new contract with the club of his choice and to play for that club immediately. Provisions to that effect were incorporated in the Principles of Cooperation between Member Associations of UEFA and their Clubs adopted in December 1991 and in force from 1 July 1992.

18 In April 1991, FIFA adopted new Regulations governing the Status and Transfer of Football Players. That document, as amended in December 1991 and December 1993, provides that a player may enter into a contract with a new club where the contract between him and his club has expired, has been rescinded or is to expire within six months.

19 Special rules are laid down for "non-amateur" players, defined as players who have received, in respect of participation in or an activity connected with football, remuneration in excess of the actual expenses incurred in the course of such participation, unless they have reacquired amateur status.

20 Where a non-amateur player, or a player who assumes non-amateur status within three years of his transfer, is transferred, his former club is entitled to a compensation fee for development or training, the amount of which is to be agreed upon between the two clubs. In the event of disagreement, the dispute is to be submitted to FIFA or the relevant confederation.

21 Those rules have been supplemented by UEFA regulations "governing the fixing of a transfer fee", adopted in June 1993 and in force since 1 August 1993, which replace the 1991 "Principles of Cooperation between Member Associations of UEFA and their Clubs". The new rules retain the principle that the business relationship between the two clubs are to exert no influence on the sporting activity of the player, who is to be free to play for the club with which he has signed the new contract. In the event of disagreement between the clubs concerned, it is for the appropriate UEFA board of experts to determine the amount of the compensation fee for training or development. For non-amateur players, the calculation of the fee is based on the player's gross income in the last 12 months or on the fixed annual income guaranteed in the new contract, increased by 20% for players who have played at least twice in the senior national representative team for their country and multiplied by a factor of between 12 and 0 depending on age.

22 It appears from documents produced to the Court by UEFA that rules in force in other Member States also contain provisions requiring the new club, when a player is transferred between two clubs within the same national association, to pay the former club, on terms laid down in the rules in question, a compensation fee for transfer, training or development.

23 In Spain and France, payment of compensation may only be required if the player transferred is under 25 years of age or if his former club is the one with which he signed his first professional contract, as the case may be. In Greece, although no compensation is explicitly payable by the new club, the contract between the club and the player may make the player's departure dependent on the payment of an amount which, according to UEFA, is in fact most commonly paid by the new club.

24 The rules applicable in that regard may derive from the national legislation, from the regulations of the national football associations or from the terms of collective agreements.

Nationality clauses

25 From the 1960s onwards, many national football associations introduced rules ("nationality clauses") restricting the extent to which foreign players could be recruited or fielded in a match. For the purposes of those clauses, nationality is defined in relation to whether the player can be qualified to play in a country's national or representative team.

26 In 1978, UEFA gave an undertaking to Mr Davignon, a Member of the Commission of the European Communities, that it would remove the limitations on the number of contracts entered into by each club with players from other Member States and would set the number of such players who may participate in any one match at two, that limit not being applicable to players established for over five years in the Member State in question.

27 In 1991, following further discussions with Mr Bangemann, a Vice-President of the Commission, UEFA adopted the "3 + 2" rule permitting each national association to limit to three the number of foreign players whom a club may field in any first division match in their national

championships, plus two players who have played in the country of the relevant national association for an uninterrupted period of five years, including three years as a junior. The same limitation also applies to UEFA matches in competitions for club teams.

Facts of the cases before the national court

28 Mr Bosman, a professional footballer of Belgian nationality, was employed from 1988 by RC Liège, a Belgian first division club, under a contract expiring on 30 June 1990, which assured him an average monthly salary of BFR 120 000, including bonuses.

29 On 21 April 1990, RC Liège offered Mr Bosman a new contract for one season, reducing his pay to BFR 30 000, the minimum permitted by the URBSFA federal rules. Mr Bosman refused to sign and was put on the transfer list. The compensation fee for training was set, in accordance with the said rules, at BFR 11 743 000.

30 Since no club showed an interest in a compulsory transfer, Mr Bosman made contact with US Dunkerque, a club in the French second division, which led to his being engaged for a monthly salary in the region of BFR 100 000 plus a signing-on bonus of some BFR 900 000.

31 On 27 July 1990, a contract was also concluded between RC Liège and US Dunkerque for the temporary transfer of Mr Bosman for one year, against payment by US Dunkerque to RC Liège of a compensation fee of BFR 1 200 000 payable on receipt by the Fédération Française de Football ("FFF") of the transfer certificate issued by URBSFA. The contract also gave US Dunkerque an irrevocable option for full transfer of the player for BFR 4 800 000.

32 Both contracts, between US Dunkerque and RC Liège and between US Dunkerque and Mr Bosman, were however subject to the suspensive condition that the transfer certificate must be sent by URBSFA to FFF in time for the first match of the season, which was to be held on 2 August 1990.

33 RC Liège, which had doubts as to US Dunkerque's solvency, did not ask URBSFA to send the said certificate to FFF. As a result, neither contract took effect. On 31 July 1990, RC Liège also suspended Mr Bosman, thereby preventing him from playing for the entire season.

34 On 8 August 1990, Mr Bosman brought an action against RC Liège before the Tribunal de Première Instance (Court of First Instance), Liège. Concurrently with that action, he applied for an interlocutory decision ordering RC Liège and URBSFA to pay him an advance of BFR 100 000 per month until he found a new employer, restraining the defendants from impeding his engagement, in particular by requiring payment of a sum of money, and referring a question to the Court of Justice for a preliminary ruling.

35 By order of 9 November 1990, the judge hearing the interlocutory application ordered RC Liège and URBSFA to pay Mr Bosman an advance of BFR 30 000 per month and to refrain from impeding Mr Bosman's engagement. He also referred to the Court for a preliminary ruling a question (in Case C-340/90) on the interpretation of Article 48 in relation to the rules governing transfers of professional players ("transfer rules").

36 In the meantime, Mr Bosman had been signed up by the French second-division club Saint-Quentin in October 1990, on condition that his interlocutory application succeeded. His contract was terminated, however, at the end of the first season. In February 1992, Mr Bosman signed a new contract with the French club Saint-Denis de la Réunion, which was also terminated. After looking for further offers in Belgium and France, Mr Bosman was finally signed up by Olympic de Charleroi, a Belgian third-division club.

37 According to the national court, there is strong circumstantial evidence to support the view that, notwithstanding the "free" status conferred on him by the interlocutory order, Mr Bosman has been boycotted by all the European clubs which might have engaged him.

38 On 28 May 1991, the Cour d'Appel, Liège, revoked the interlocutory decision of the Tribunal de Première Instance in so far as it referred a question to the Court of Justice for a preliminary ruling. But it upheld the order against RC Liège to pay monthly advances to Mr Bosman and enjoined RC Liège and URBSFA to make Mr Bosman available to any club which wished to use his services, without it being possible to require payment of any compensation fee. By order of 19 June 1991, Case C-340/90 was removed from the register of the Court of Justice.

39 On 3 June 1991, URBSFA, which, contrary to the situation in the interlocutory proceedings, had not been cited as a party in the main action before the Tribunal de Première Instance, intervened voluntarily in that action. On 20 August 1991, Mr Bosman issued a writ with a view to joining UEFA to the proceedings which he had brought against RC Liège and URBSFA and bringing proceedings directly against it on the basis of its responsibility in drafting the rules as a result of

which he had suffered damage. On 5 December 1991, US Dunkerque was joined as a third party by RC Liège, in order to be indemnified against any order which might be made against it. On 15 October and 27 December 1991 respectively, Union Nationale des Footballeurs Professionnels ("UNFP"), a French professional footballers'union, and Vereniging van Contractspelers ("VVCS"), an association governed by Netherlands law, intervened voluntarily in the proceedings.

40 In new pleadings lodged on 9 April 1992, Mr Bosman amended his initial claim against RC Liège, brought a new preventive action against URBSFA and elaborated his claim against UEFA. In those proceedings, he sought a declaration that the transfer rules and nationality clauses were not applicable to him and an order, on the basis of their wrongful conduct at the time of the failure of his transfer to US Dunkerque, against RC Liège, URBSFA and UEFA to pay him BFR 11 368 350 in respect of the damage suffered by him from 1 August 1990 until the end of his career and BFR 11 743 000 in respect of loss of earnings since the beginning of his career as a result of the application of the transfer rules. He also applied for a question to be referred to the Court of Justice for a preliminary ruling.

41 By judgment of 11 June 1992, the Tribunal de Première Instance held that it had jurisdiction to entertain the main actions. It also held admissible Mr Bosman's claims against RC Liège, URBSFA and UEFA seeking, in particular, a declaration that the transfer rules and nationality clauses were not applicable to him and orders penalizing the conduct of those three organizations. But it dismissed RC Liège's application to join US Dunkerque as a third party and indemnifier, since no evidence of fault in the latter's performance of its obligations had been adduced. Finally, finding that the examination of Mr Bosman's claims against UEFA and URBSFA involved considering the compatibility of the transfer rules with the Treaty, it made a reference to the Court of Justice for a preliminary ruling on the interpretation of Articles 48, 85 and 86 of the Treaty (Case C-269/92).

42 URBSFA, RC Liège and UEFA appealed against that decision. Since those appeals had suspensive effect, the procedure before the Court of Justice was suspended. By order of 8 December 1993, Case C-269/92 was finally removed from the register following the new judgment of the Cour d'Appel, Liège, out of which the present proceedings arise.

43 No appeal was brought against UNFP or VVCS, who did not seek to intervene again on appeal.

GROUNDS CONTINUED UNDER DOC.NUM: 693J0415.1

44 In its judgment ordering the reference, the Cour d'Appel upheld the judgment under appeal in so far as it held that the Tribunal de Première Instance had jurisdiction, that the actions were admissible and that an assessment of Mr Bosman's claims against UEFA and the URBSFA involved a review of the lawfulness of the transfer rules. It also considered that a review of the lawfulness of the nationality clauses was necessary, since Mr Bosman's claim in their regard was based on Article 18 of the Belgian Judicial Code, which permits actions "with a view to preventing the infringement of a seriously threatened right", and Mr Bosman had adduced factual evidence suggesting that the damage which he fears ° that the application of those clauses may impede his career ° will in fact occur.

45 The national court considered in particular that Article 48 of the Treaty could, like Article 30, prohibit not only discrimination but also non-discriminatory barriers to freedom of movement for workers if they could not be justified by imperative requirements.

46 With regard to Article 85 of the Treaty, it considered that the FIFA, UEFA and URBSFA regulations might constitute decisions of associations of undertakings by which the clubs restrict competition between themselves for players. Transfer fees were dissuasive and tended to depress the level of professional sportsmen's pay. In addition, the nationality clauses prohibited foreign players'services from being obtained over a certain quota. Finally, trade between Member States was affected, in particular by the restriction of players'mobility.

47 Furthermore, the Cour d'Appel thought that URBSFA, or the football clubs collectively, might be in a dominant position, within the meaning of Article 86 of the Treaty and that the restrictions on competition mentioned in connection with Article 85 might constitute abuses prohibited by Article 86.

48 The Cour d'Appel dismissed UEFA's request that it ask the Court of Justice whether the reply to the question submitted on transfers would be different if the system permitted a player to play freely for his new club even where that club had not paid the transfer fee to the old club. It noted in particular that, because of the threat of severe penalties for clubs not paying the transfer fee, a player's ability to play for his new club remained dependent on the business relationships between the clubs.

49 In view of the foregoing, the Cour d'Appel decided to stay the proceedings and refer the following questions to the Court of Justice for a preliminary ruling:

"Are Articles 48, 85 and 86 of the Treaty of Rome of 25 March 1957 to be interpreted as:

(i) prohibiting a football club from requiring and receiving payment of a sum of money upon the engagement of one of its players who has come to the end of his contract by a new employing club;

(ii) prohibiting the national and international sporting associations or federations from including in their respective regulations provisions restricting access of foreign players from the European Community to the competitions which they organize?"

50 On 3 June 1994, URBSFA applied to the Belgian Cour de Cassation (Court of Cassation) for review of the Cour d'Appel's judgment, requesting that the judgment be extended to apply jointly to RC Liège, UEFA and US Dunkerque. By letter of 6 October 1994, the Procureur Général (Principal Crown Counsel) to the Cour de Cassation informed the Court of Justice that the appeal did not have suspensive effect in this case.

51 By judgment of 30 March 1995, the Cour de Cassation dismissed the appeal and held that as a result the request for a declaration that the judgment be extended was otiose. The Cour de Cassation has forwarded a copy of that judgment to the Court of Justice.

The request for measures of inquiry

52 By letter lodged at the Court Registry on 16 November 1995, UEFA requested the Court to order a measure of inquiry under Article 60 of the Rules of Procedure, with a view to obtaining fuller information on the role played by transfer fees in the financing of small or medium-sized football clubs, the machinery governing the distribution of income within the existing football structures and the presence or absence of alternative machinery if the system of transfer fees were to disappear.

53 After hearing again the views of the Advocate General, the Court considers that that application must be dismissed. It was made at a time when, in accordance with Article 59(2) of the Rules of Procedure, the oral procedure was closed. The Court has held (see Case 77/70 Prelle v Commission [1971] ECR 561, paragraph 7) that such an application can be admitted only if it relates to facts which may have a decisive influence and which the party concerned could not put forward before the close of the oral procedure.

54 In this case, it is sufficient to hold that UEFA could have submitted its request before the close of the oral procedure. Moreover, the question whether the aim of maintaining a balance in financial and competitive terms, and in particular that of ensuring the financing of smaller clubs, can be achieved by other means such as a redistribution of a portion of football takings was raised, in particular by Mr Bosman in his written observations.

Jurisdiction of the Court to give a preliminary ruling on the questions submitted

55 The Court's jurisdiction to give a ruling on all or part of the questions submitted by the national court has been challenged, on various grounds, by URBSFA, by UEFA, by some of the governments which have submitted observations and, during the written procedure, by the Commission.

56 First, UEFA and URBSFA have claimed that the main actions are procedural devices designed to obtain a preliminary ruling from the Court on questions which meet no objective need for the purpose of settling the cases. The UEFA regulations were not applied when Mr Bosman's transfer to US Dunkerque fell through; if they had been applied, that transfer would not have been dependent on the payment of a transfer fee and could thus have taken place. The interpretation of Community law requested by the national court thus bears no relation to the actual facts of the cases in the main proceedings or their purpose and, in accordance with consistent case-law, the Court has no jurisdiction to rule on the questions submitted.

57 Secondly, URBSFA, UEFA, the Danish, French and Italian Governments and, in its written observations, the Commission have claimed that the questions relating to nationality clauses has no connection with the disputes, which concern only the application of the transfer rules. The impediments to his career which Mr Bosman claims arise out of those clauses are purely hypothetical and do not justify a preliminary ruling by the Court on the interpretation of the Treaty in that regard.

58 Thirdly, URBSFA and UEFA pointed out at the hearing that, according to the judgment of the Cour de Cassation of 30 March 1995, the Cour d'Appel did not accept as admissible Mr Bosman's

claims for a declaration that the nationality clauses in the URBSFA regulations were not applicable to him. Consequently, the issues in the main proceedings do not relate to the application of nationality clauses and the Court should not rule on the questions submitted on that point. The French Government concurred in that conclusion, subject however to verification of the scope of the judgment of the Cour de Cassation.

59 As to those submissions, it is to be remembered that, in the context of the cooperation between the Court of Justice and the national courts provided for by Article 177 of the Treaty, it is solely for the national court before which the dispute has been brought, and which must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court. Consequently, where the questions submitted by the national court concern the interpretation of Community law, the Court of Justice is, in principle, bound to give a ruling (see, inter alia, Case C-125/94 Aprile v Amministrazione delle Finanze dello Stato [1995] ECR I-0000, paragraphs 16 and 17).

60 Nevertheless, the Court has taken the view that, in order to determine whether it has jurisdiction, it should examine the conditions in which the case was referred to it by the national court. The spirit of cooperation which must prevail in the preliminary-ruling procedure requires the national court, for its part, to have regard to the function entrusted to the Court of Justice, which is to assist in the administration of justice in the Member States and not to deliver advisory opinions on general or hypothetical questions (see, inter alia, Case C-83/91 Meilicke v ADV/ORGA [1992] ECR I-4871, paragraph 25).

61 That is why the Court has held that it has no jurisdiction to give a preliminary ruling on a question submitted by a national court where it is quite obvious that the interpretation of Community law sought by that court bears no relation to the actual facts of the main action or its purpose (see, inter alia, Case C-143/94 Furlanis v ANAS [1995] ECR I-0000, paragraph 12) or where the problem is hypothetical and the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (see, inter alia, Meilicke, cited above, paragraph 32).

62 In the present case, the issues in the main proceedings, taken as a whole, are not hypothetical and the national court has provided this Court with a clear statement of the surrounding facts, the rules in question and the grounds on which it believes that a decision on the questions submitted is necessary to enable it to give judgment.

63 Furthermore, even if, as URBSFA and UEFA contend, the UEFA regulations were not applied when Mr Bosman's transfer to US Dunkerque fell through, they are still in issue in the preventive actions brought by Mr Bosman against URBSFA and UEFA (see paragraph 40 above) and the Court's interpretation as to the compatibility with Community law of the transfer system set up by the UEFA regulations may be useful to the national court.

64 With regard more particularly to the questions concerning nationality clauses, it appears that the relevant heads of claim have been held admissible in the main proceedings on the basis of a national procedural provision permitting an action to be brought, albeit for declaratory purposes only, to prevent the infringement of a right which is seriously threatened. As is clear from its judgment, the national court considered that application of the nationality clauses could indeed impede Mr Bosman's career by reducing his chances of being employed or fielded in a match by a club from another Member State. It concluded that Mr Bosman's claims for a declaration that those nationality clauses were not applicable to him met the conditions laid down by the said provision.

65 It is not for this Court, in the context of these proceedings, to call that assessment in question. Although the main actions seek a declaratory remedy and, having the aim of preventing infringement of a right under threat, must necessarily be based on hypotheses which are, by their nature, uncertain, such actions are none the less permitted under national law, as interpreted by the referring court. Consequently, the questions submitted by that court meet an objective need for the purpose of settling disputes properly brought before it.

66 Finally, the judgment of the Cour de Cassation of 30 March 1995 does not suggest that the nationality clauses are extraneous to the issues in the main proceedings. That court held only that URBSFA's appeal against the judgment of the Cour d'Appel rested on a misinterpretation of that judgment. In its appeal, URBSFA had claimed that that court had held inadmissible a claim by Mr Bosman for a declaration that the nationality clauses contained in its regulations were not applicable to him. However, it would appear from the judgment of the Cour de Cassation that,

according to the Cour d'Appel, Mr Bosman's claim sought to prevent impediments to his career likely to arise from the application not of the nationality clauses in the URBSFA regulations, which concerned players with a nationality other than Belgian, but of the similar clauses in the regulations of UEFA and the other national associations which are members of it, which could concern him as a player with Belgian nationality. Consequently, it does not appear from the judgment of the Cour de Cassation that those latter nationality clauses are extraneous to the main proceedings.

67 It follows from the foregoing that the Court has jurisdiction to rule on the questions submitted by the Cour d'Appel, Liège.

Interpretation of Article 48 of the Treaty with regard to the transfer rules

68 By its first question, the national court seeks in substance to ascertain whether Article 48 of the Treaty precludes the application of rules laid down by sporting associations, under which a professional footballer who is a national of one Member State may not, on the expiry of his contract with a club, be employed by a club of another Member State unless the latter club has paid to the former a transfer, training or development fee.

Application of Article 48 to rules laid down by sporting associations

69 It is first necessary to consider certain arguments which have been put forward on the question of the application of Article 48 to rules laid down by sporting associations.

70 URBSFA argued that only the major European clubs may be regarded as undertakings, whereas clubs such as RC Liège carry on an economic activity only to a negligible extent. Furthermore, the question submitted by the national court on the transfer rules does not concern the employment relationships between players and clubs but the business relationships between clubs and the consequences of freedom to affiliate to a sporting federation. Article 48 of the Treaty is accordingly not applicable to a case such as that in issue in the main proceedings.

71 UEFA argued, inter alia, that the Community authorities have always respected the autonomy of sport, that it is extremely difficult to distinguish between the economic and the sporting aspects of football and that a decision of the Court concerning the situation of professional players might call in question the organization of football as a whole. For that reason, even if Article 48 of the Treaty were to apply to professional players, a degree of flexibility would be essential because of the particular nature of the sport.

72 The German Government stressed, first, that in most cases a sport such as football is not an economic activity. It further submitted that sport in general has points of similarity with culture and pointed out that, under Article 128(1) of the EC Treaty, the Community must respect the national and regional diversity of the cultures of the Member States. Finally, referring to the freedom of association and autonomy enjoyed by sporting federations under national law, it concluded that, by virtue of the principle of subsidiarity, taken as a general principle, intervention by public, and particularly Community, authorities in this area must be confined to what is strictly necessary.

73 In response to those arguments, it is to be remembered that, having regard to the objectives of the Community, sport is subject to Community law only in so far as it constitutes an economic activity within the meaning of Article 2 of the Treaty (see Case 36/74 Walrave v Union Cycliste Internationale [1974] ECR 1405, paragraph 4). This applies to the activities of professional or semi-professional footballers, where they are in gainful employment or provide a remunerated service (see Case 13/76 Donà v Mantero [1976] ECR 1333, paragraph 12).

74 It is not necessary, for the purposes of the application of the Community provisions on freedom of movement for workers, for the employer to be an undertaking; all that is required is the existence of, or the intention to create, an employment relationship.

75 Application of Article 48 of the Treaty is not precluded by the fact that the transfer rules govern the business relationships between clubs rather than the employment relationships between clubs and players. The fact that the employing clubs must pay fees on recruiting a player from another club affects the players'opportunities for finding employment and the terms under which such employment is offered.

76 As regards the difficulty of severing the economic aspects from the sporting aspects of football, the Court has held (in Donà, cited above, paragraphs 14 and 15) that the provisions of Community law concerning freedom of movement of persons and of provision of services do not preclude rules or practices justified on non-economic grounds which relate to the particular nature and context of certain matches. It stressed, however, that such a restriction on the scope

of the provisions in question must remain limited to its proper objective. It cannot, therefore, be relied upon to exclude the whole of a sporting activity from the scope of the Treaty.

77 With regard to the possible consequences of this judgment on the organization of football as a whole, it has consistently been held that, although the practical consequences of any judicial decision must be weighed carefully, this cannot go so far as to diminish the objective character of the law and compromise its application on the ground of the possible repercussions of a judicial decision. At the very most, such repercussions might be taken into consideration when determining whether exceptionally to limit the temporal effect of a judgment (see, inter alia, Case C-163/90 Administration des Douanes v Legros and Others [1992] ECR I-4625, paragraph 30).

78 The argument based on points of alleged similarity between sport and culture cannot be accepted, since the question submitted by the national court does not relate to the conditions under which Community powers of limited extent, such as those based on Article 128(1), may be exercised but on the scope of the freedom of movement of workers guaranteed by Article 48, which is a fundamental freedom in the Community system (see, inter alia, Case C-19/92 Kraus v Land Baden-Wuerttemberg [1993] ECR I-1663, paragraph 16).

79 As regards the arguments based on the principle of freedom of association, it must be recognized that this principle, enshrined in Article 11 of the European Convention for the Protection of Human Rights and Fundamental Freedoms and resulting from the constitutional traditions common to the Member States, is one of the fundamental rights which, as the Court has consistently held and as is reaffirmed in the preamble to the Single European Act and in Article F(2) of the Treaty on European Union, are protected in the Community legal order.

80 However, the rules laid down by sporting associations to which the national court refers cannot be seen as necessary to ensure enjoyment of that freedom by those associations, by the clubs or by their players, nor can they be seen as an inevitable result thereof.

81 Finally, the principle of subsidiarity, as interpreted by the German Government to the effect that intervention by public authorities, and particularly Community authorities, in the area in question must be confined to what is strictly necessary, cannot lead to a situation in which the freedom of private associations to adopt sporting rules restricts the exercise of rights conferred on individuals by the Treaty.

82 Once the objections concerning the application of Article 48 of the Treaty to sporting activities such as those of professional footballers are out of the way, it is to be remembered that, as the Court held in paragraph 17 of its judgment in Walrave, cited above, Article 48 not only applies to the action of public authorities but extends also to rules of any other nature aimed at regulating gainful employment in a collective manner.

83 The Court has held that the abolition as between Member States of obstacles to freedom of movement for persons and to freedom to provide services would be compromised if the abolition of State barriers could be neutralized by obstacles resulting from the exercise of their legal autonomy by associations or organizations not governed by public law (see Walrave, cited above, paragraph 18).

84 It has further observed that working conditions in the different Member States are governed sometimes by provisions laid down by law or regulation and sometimes by agreements and other acts concluded or adopted by private persons. Accordingly, if the scope of Article 48 of the Treaty were confined to acts of a public authority there would be a risk of creating inequality in its application (see Walrave, cited above, paragraph 19). That risk is all the more obvious in a case such as that in the main proceedings in this case in that, as has been stressed in paragraph 24 above, the transfer rules have been laid down by different bodies or in different ways in each Member State.

85 UEFA objects that such an interpretation makes Article 48 of the Treaty more restrictive in relation to individuals than in relation to Member States, which are alone in being able to rely on limitations justified on grounds of public policy, public security or public health.

86 That argument is based on an false premiss. There is nothing to preclude individuals from relying on justifications on grounds of public policy, public security or public health. Neither the scope nor the content of those grounds of justification is in any way affected by the public or private nature of the rules in question.

87 Article 48 of the Treaty therefore applies to rules laid down by sporting associations such as URBSFA, FIFA or UEFA, which determine the terms on which professional sportsmen can engage in gainful employment.

Whether the situation envisaged by the national court is of a purely internal nature

88 UEFA considers that the disputes pending before the national court concern a purely internal Belgian situation which falls outside the ambit of Article 48 of the Treaty. They concern a Belgian player whose transfer fell through because of the conduct of a Belgian club and a Belgian association.

89 It is true that, according to consistent case-law (see, inter alia, Case 175/78 Regina v Saunders [1979] ECR 1129, paragraph 11; Case 180/83 Moser v Land Baden-Wuerttemberg [1984] ECR 2539, paragraph 15; Case C-332/90 Steen v Deutsche Bundespost [1992] ECR I-341, paragraph 9; and Case C-19/92 Kraus, cited above, paragraph 15), the provisions of the Treaty concerning the free movement of workers, and particularly Article 48, cannot be applied to situations which are wholly internal to a Member State, in other words where there is no factor connecting them to any of the situations envisaged by Community law.

90 However, it is clear from the findings of fact made by the national court that Mr Bosman had entered into a contract of employment with a club in another Member State with a view to exercising gainful employment in that State. By so doing, as he has rightly pointed out, he accepted an offer of employment actually made, within the meaning of Article 48(3)(a).

91 Since the situation in issue in the main proceedings cannot be classified as purely internal, the argument put forward by UEFA must be dismissed.

Existence of an obstacle to freedom of movement for workers

92 It is thus necessary to consider whether the transfer rules form an obstacle to freedom of movement for workers prohibited by Article 48 of the Treaty.

93 As the Court has repeatedly held, freedom of movement for workers is one of the fundamental principles of the Community and the Treaty provisions guaranteeing that freedom have had direct effect since the end of the transitional period.

94 The Court has also held that the provisions of the Treaty relating to freedom of movement for persons are intended to facilitate the pursuit by Community citizens of occupational activities of all kinds throughout the Community, and preclude measures which might place Community citizens at a disadvantage when they wish to pursue an economic activity in the territory of another Member State (see Case 143/87 Stanton v INASTI [1988] ECR 3877, paragraph 13, and Case C-370/90 The Queen v Immigration Appeal Tribunal and Surinder Singh [1992] ECR I-4265, paragraph 16).

95 In that context, nationals of Member States have in particular the right, which they derive directly from the Treaty, to leave their country of origin to enter the territory of another Member State and reside there in order there to pursue an economic activity (see, inter alia, Case C-363/89 Roux v Belgium [1991] ECR I-273, paragraph 9, and Singh, cited above, paragraph 17).

96 Provisions which preclude or deter a national of a Member State from leaving his country of origin in order to exercise his right to freedom of movement therefore constitute an obstacle to that freedom even if they apply without regard to the nationality of the workers concerned (see also Case C-10/90 Masgio v Bundesknappschaft [1991] ECR I-1119, paragraphs 18 and 19).

97 The Court has also stated, in Case 81/87 The Queen v H.M. Treasury and Commissioners of Inland Revenue ex parte Daily Mail and General Trust plc [1988] ECR 5483, paragraph 16, that even though the Treaty provisions relating to freedom of establishment are directed mainly to ensuring that foreign nationals and companies are treated in the host Member State in the same way as nationals of that State, they also prohibit the Member State of origin from hindering the establishment in another Member State of one of its nationals or of a company incorporated under its legislation which comes within the definition contained in Article 58. The rights guaranteed by Article 52 et seq. of the Treaty would be rendered meaningless if the Member State of origin could prohibit undertakings from leaving in order to establish themselves in another Member State. The same considerations apply, in relation to Article 48 of the Treaty, with regard to rules which impede the freedom of movement of nationals of one Member State wishing to engage in gainful employment in another Member State.

98 It is true that the transfer rules in issue in the main proceedings apply also to transfers of players between clubs belonging to different national associations within the same Member State and that similar rules govern transfers between clubs belonging to the same national association.

99 However, as has been pointed out by Mr Bosman, by the Danish Government and by the Advocate General in points 209 and 210 of his Opinion, those rules are likely to restrict the freedom of movement of players who wish to pursue their activity in another Member State by

preventing or deterring them from leaving the clubs to which they belong even after the expiry of their contracts of employment with those clubs.

100 Since they provide that a professional footballer may not pursue his activity with a new club established in another Member State unless it has paid his former club a transfer fee agreed upon between the two clubs or determined in accordance with the regulations of the sporting associations, the said rules constitute an obstacle to freedom of movement for workers.

101 As the national court has rightly pointed out, that finding is not affected by the fact that the transfer rules adopted by UEFA in 1990 stipulate that the business relationship between the two clubs is to exert no influence on the activity of the player, who is to be free to play for his new club. The new club must still pay the fee in issue, under pain of penalties which may include its being struck off for debt, which prevents it just as effectively from signing up a player from a club in another Member State without paying that fee.

102 Nor is that conclusion negated by the case-law of the Court cited by URBSFA and UEFA, to the effect that Article 30 of the Treaty does not apply to measures which restrict or prohibit certain selling arrangements so long as they apply to all relevant traders operating within the national territory and so long as they affect in the same manner, in law and in fact, the marketing of domestic products and of those from other Member States (see Joined Cases C-267/91 and C-268/91 Keck and Mithouard [1993] ECR I-6097, paragraph 16).

103 It is sufficient to note that, although the rules in issue in the main proceedings apply also to transfers between clubs belonging to different national associations within the same Member State and are similar to those governing transfers between clubs belonging to the same national association, they still directly affect players'access to the employment market in other Member States and are thus capable of impeding freedom of movement for workers. They cannot, thus, be deemed comparable to the rules on selling arrangements for goods which in Keck and Mithouard were held to fall outside the ambit of Article 30 of the Treaty (see also, with regard to freedom to provide services, Case C-384/93 Alpine Investments v Minister van Financiën [1995] ECR I-1141, paragraphs 36 to 38).

104 Consequently, the transfer rules constitute an obstacle to freedom of movement for workers prohibited in principle by Article 48 of the Treaty. It could only be otherwise if those rules pursued a legitimate aim compatible with the Treaty and were justified by pressing reasons of public interest. But even if that were so, application of those rules would still have to be such as to ensure achievement of the aim in question and not go beyond what is necessary for that purpose (see, inter alia, the judgment in Kraus, cited above, paragraph 32, and Case C-55/94 Gebhard [1995] ECR I-0000, paragraph 37).

Existence of justifications

105 First, URBSFA, UEFA and the French and Italian Governments have submitted that the transfer rules are justified by the need to maintain a financial and competitive balance between clubs and to support the search for talent and the training of young players.

106 In view of the considerable social importance of sporting activities and in particular football in the Community, the aims of maintaining a balance between clubs by preserving a certain degree of equality and uncertainty as to results and of encouraging the recruitment and training of young players must be accepted as legitimate.

107 As regards the first of those aims, Mr Bosman has rightly pointed out that the application of the transfer rules is not an adequate means of maintaining financial and competitive balance in the world of football. Those rules neither preclude the richest clubs from securing the services of the best players nor prevent the availability of financial resources from being a decisive factor in competitive sport, thus considerably altering the balance between clubs.

108 As regards the second aim, it must be accepted that the prospect of receiving transfer, development or training fees is indeed likely to encourage football clubs to seek new talent and train young players.

109 However, because it is impossible to predict the sporting future of young players with any certainty and because only a limited number of such players go on to play professionally, those fees are by nature contingent and uncertain and are in any event unrelated to the actual cost borne by clubs of training both future professional players and those who will never play professionally. The prospect of receiving such fees cannot, therefore, be either a decisive factor in encouraging recruitment and training of young players or an adequate means of financing such activities, particularly in the case of smaller clubs.

110 Furthermore, as the Advocate General has pointed out in point 226 et seq. of his Opinion, the same aims can be achieved at least as efficiently by other means which do not impede freedom of movement for workers.

111 It has also been argued that the transfer rules are necessary to safeguard the worldwide organization of football.

112 However, the present proceedings concern application of those rules within the Community and not the relations between the national associations of the Member States and those of non-member countries. In any event, application of different rules to transfers between clubs belonging to national associations within the Community and to transfers between such clubs and those affiliated to the national associations of non-member countries is unlikely to pose any particular difficulties. As is clear from paragraphs 22 and 23 above, the rules which have so far governed transfers within the national associations of certain Member States are different from those which apply at the international level.

113 Finally, the argument that the rules in question are necessary to compensate clubs for the expenses which they have had to incur in paying fees on recruiting their players cannot be accepted, since it seeks to justify the maintenance of obstacles to freedom of movement for workers simply on the ground that such obstacles were able to exist in the past.

114 The answer to the first question must therefore be that Article 48 of the Treaty precludes the application of rules laid down by sporting associations, under which a professional footballer who is a national of one Member State may not, on the expiry of his contract with a club, be employed by a club of another Member State unless the latter club has paid to the former club a transfer, training or development fee.

Interpretation of Article 48 of the Treaty with regard to the nationality clauses

115 By its second question, the national court seeks in substance to ascertain whether Article 48 of the Treaty precludes the application of rules laid down by sporting associations, under which, in matches in competitions which they organize, football clubs may field only a limited number of professional players who are nationals of other Member States.

Existence of an obstacle to freedom of movement for workers

116 As the Court has held in paragraph 87 above, Article 48 of the Treaty applies to rules laid down by sporting associations which determine the conditions under which professional sports players may engage in gainful employment. It must therefore be considered whether the nationality clauses constitute an obstacle to freedom of movement for workers, prohibited by Article 48.

117 Article 48(2) expressly provides that freedom of movement for workers entails the abolition of any discrimination based on nationality between workers of the Member States as regards employment, remuneration and conditions of work and employment.

118 That provision has been implemented, in particular, by Article 4 of Regulation (EEC) No 1612/68 of the Council of 15 October 1968 on freedom of movement for workers within the Community (OJ, English Special Edition, 1968(II), p. 475), under which provisions laid down by law, regulation or administrative action of the Member States which restrict by number or percentage the employment of foreign nationals in any undertaking, branch of activity or region, or at a national level, are not to apply to nationals of the other Member States.

119 The same principle applies to clauses contained in the regulations of sporting associations which restrict the right of nationals of other Member States to take part, as professional players, in football matches (see the judgment in Donà, cited above, paragraph 19).

120 The fact that those clauses concern not the employment of such players, on which there is no restriction, but the extent to which their clubs may field them in official matches is irrelevant. In so far as participation in such matches is the essential purpose of a professional player's activity, a rule which restricts that participation obviously also restricts the chances of employment of the player concerned.

Existence of justifications

121 The existence of an obstacle having thus been established, it must be considered whether that obstacle may be justified in the light of Article 48 of the Treaty.

122 URBSFA, UEFA and the German, French and Italian Governments argued that the nationality clauses are justified on non-economic grounds, concerning only the sport as such.

123 First, they argued, those clauses serve to maintain the traditional link between each club and

its country, a factor of great importance in enabling the public to identify with its favourite team and ensuring that clubs taking part in international competitions effectively represent their countries.

124 Secondly, those clauses are necessary to create a sufficient pool of national players to provide the national teams with top players to field in all team positions.

125 Thirdly, they help to maintain a competitive balance between clubs by preventing the richest clubs from appropriating the services of the best players.

126 Finally, UEFA points out that the "3 + 2" rule was drawn up in collaboration with the Commission and must be revised regularly to remain in line with the development of Community policy.

127 It must be recalled that in paragraphs 14 and 15 of its judgment in Donà, cited above, the Court held that the Treaty provisions concerning freedom of movement for persons do not prevent the adoption of rules or practices excluding foreign players from certain matches for reasons which are not of an economic nature, which relate to the particular nature and context of such matches and are thus of sporting interest only, such as, for example, matches between national teams from different countries. It stressed, however, that that restriction on the scope of the provisions in question must remain limited to its proper objective.

128 Here, the nationality clauses do not concern specific matches between teams representing their countries but apply to all official matches between clubs and thus to the essence of the activity of professional players.

129 In those circumstances, the nationality clauses cannot be deemed to be in accordance with Article 48 of the Treaty, otherwise that article would be deprived of its practical effect and the fundamental right of free access to employment which the Treaty confers individually on each worker in the Community rendered nugatory (on this last point, see Case 222/86 Unectef v Heylens and Others [1987] ECR 4097, paragraph 14).

130 None of the arguments put forward by the sporting associations and by the governments which have submitted observations detracts from that conclusion.

131 First, a football club's links with the Member State in which it is established cannot be regarded as any more inherent in its sporting activity than its links with its locality, town, region or, in the case of the United Kingdom, the territory covered by each of the four associations. Even though national championships are played between clubs from different regions, towns or localities, there is no rule restricting the right of clubs to field players from other regions, towns or localities in such matches.

132 In international competitions, moreover, participation is limited to clubs which have achieved certain results in competition in their respective countries, without any particular significance being attached to the nationalities of their players.

133 Secondly, whilst national teams must be made up of players having the nationality of the relevant country, those players need not necessarily be registered to play for clubs in that country. Indeed, under the rules of the sporting associations, foreign players must be allowed by their clubs to play for their country's national team in certain matches.

134 Furthermore, although freedom of movement for workers, by opening up the employment market in one Member State to nationals of the other Member States, has the effect of reducing workers'chances of finding employment within the Member State of which they are nationals, it also, by the same token, offers them new prospects of employment in other Member States. Such considerations obviously apply also to professional footballers.

135 Thirdly, although it has been argued that the nationality clauses prevent the richest clubs from engaging the best foreign players, those clauses are not sufficient to achieve the aim of maintaining a competitive balance, since there are no rules limiting the possibility for such clubs to recruit the best national players, thus undermining that balance to just the same extent.

136 Finally, as regards the argument based on the Commission's participation in the drafting of the "3 + 2" rule, it must be pointed out that, except where such powers are expressly conferred upon it, the Commission may not give guarantees concerning the compatibility of specific practices with the Treaty (see also Joined Cases 142/80 and 143/80 Amministrazione delle Finanze dello Stato v Essevi and Salengo [1981] ECR 1413, paragraph 16). In no circumstances does it have the power to authorize practices which are contrary to the Treaty.

137 It follows from the foregoing that Article 48 of the Treaty precludes the application of rules

laid down by sporting associations under which, in matches in competitions which they organize, football clubs may field only a limited number of professional players who are nationals of other Member States.

Interpretation of Articles 85 and 86 of the Treaty

138 Since both types of rule to which the national court's question refer are contrary to Article 48, it is not necessary to rule on the interpretation of Articles 85 and 86 of the Treaty.

The temporal effects of this judgment

139 In their written and oral observations, UEFA and URBSFA have drawn the Court's attention to the serious consequences which might ensue from its judgment for the organization of football as a whole if it were to consider the transfer rules and nationality clauses to be incompatible with the Treaty.

140 Mr Bosman, whilst observing that such a solution is not indispensable, has suggested that the Court could limit the temporal effects of its judgment in so far as it concerns the transfer rules.

141 It has consistently been held that the interpretation which the Court, in the exercise of the jurisdiction conferred upon it by Article 177 of the Treaty, gives to a rule of Community law clarifies and where necessary defines the meaning and scope of that rule as it must be, or ought to have been, understood and applied from the time of its coming into force. It follows that the rule as thus interpreted can, and must, be applied by the courts even to legal relationships arising and established before the judgment ruling on the request for interpretation, provided that in other respects the conditions for bringing before the courts having jurisdiction an action relating to the application of that rule are satisfied (see, inter alia, Case 24/86 Blaizot v University of Liège and Others [1988] ECR 379, paragraph 27).

142 It is only exceptionally that the Court may, in application of the general principle of legal certainty inherent in the Community legal order, be moved to restrict the opportunity for any person concerned to rely upon the provision as thus interpreted with a view to calling in question legal relationships established in good faith. Such a restriction may be allowed only by the Court, in the actual judgment ruling upon the interpretation sought (see, inter alia, the judgments in Blaizot, cited above, paragraph 28, and Legros, cited above, paragraph 30).

143 In the present case, the specific features of the rules laid down by the sporting associations for transfers of players between clubs of different Member States, together with the fact that the same or similar rules applied to transfers both between clubs belonging to the same national association and between clubs belonging to different national associations within the same Member State, may have caused uncertainty as to whether those rules were compatible with Community law.

144 In such circumstances, overriding considerations of legal certainty militate against calling in question legal situations whose effects have already been exhausted. An exception must, however, be made in favour of persons who may have taken timely steps to safeguard their rights. Finally, limitation of the effects of the said interpretation can be allowed only in respect of compensation fees for transfer, training or development which have already been paid on, or are still payable under an obligation which arose before, the date of this judgment.

145 It must therefore be held that the direct effect of Article 48 of the Treaty cannot be relied upon in support of claims relating to a fee in respect of transfer, training or development which has already been paid on, or is still payable under an obligation which arose before, the date of this judgment, except by those who have brought court proceedings or raised an equivalent claim under the applicable national law before that date.

146 With regard to nationality clauses, however, there are no grounds for a temporal limitation of the effects of this judgment. In the light of the Walrave and Donà judgments, it was not reasonable for those concerned to consider that the discrimination resulting from those clauses was compatible with Article 48 of the Treaty.

Decision on costs

Costs

147 The costs incurred by the Danish, French, German and Italian Governments and the Commission of the European Communities, which have submitted observations to the Court, are

not recoverable. Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court.

Operative part

On those grounds,

THE COURT,

in answer to the questions referred to it by the Cour d'Appel, Liège, by judgment of 1 October 1993, hereby rules:

1. Article 48 of the EEC Treaty precludes the application of rules laid down by sporting associations, under which a professional footballer who is a national of one Member State may not, on the expiry of his contract with a club, be employed by a club of another Member State unless the latter club has paid to the former club a transfer, training or development fee.

2. Article 48 of the EEC Treaty precludes the application of rules laid down by sporting associations under which, in matches in competitions which they organize, football clubs may field only a limited number of professional players who are nationals of other Member States.

3. The direct effect of Article 48 of the EEC Treaty cannot be relied upon in support of claims relating to a fee in respect of transfer, training or development which has already been paid on, or is still payable under an obligation which arose before, the date of this judgment, except by those who have brought court proceedings or raised an equivalent claim under the applicable national law before that date.

62000J0099

Judgment of the Court of 4 June 2002. - Criminal proceedings against Kenny Roland Lyckeskog. - Reference for a preliminary ruling: Hovrätten för Västra Sverige - Sweden. - Questions for a preliminary ruling - Obligation to refer - Court or tribunal against whose decisions there is no judicial remedy under national law - Interpretation of Regulation (EEC) No 918/83 - Community system of reliefs from customs duty. - Case C-99/00.

European Court reports 2002 Page I-04839

Keywords

1. Preliminary rulings - Reference to the Court - Obligation to refer - None - Conditions - Decisions of a national court or tribunal appealable to a supreme court subject to a condition of admissibility

(Art. 234 EC, third para.)

2. Common Customs Tariff - Duty-free allowances for goods contained in travellers' personal luggage - Non-commercial nature of goods imported - Assessment criteria

(Council Regulation No 918/83, Art. 45(2)(b), as amended by Regulation No 355/94)

3. Common Customs Tariff - Duty-free allowances for goods contained in travellers' personal luggage - Non-commercial nature of goods imported - National administrative instructions imposing binding quantitative limits on relief from customs duties - Not permissible

(Council Regulation No 918/83, Art. 45, as amended by Regulation No 355/94)

Summary

$$1. Where its decisions may be appealed to a supreme court, a national court or tribunal is not under the obligation referred to in the third paragraph of Article 234 EC to refer a question to the Court of Justice for a preliminary ruling even if examination of the merits by the supreme court is subject to a prior declaration of admissibility.

(see paras 16, 19, operative part 1)

2. The question whether an importation of goods is non-commercial, within the meaning of Article 45(2)(b) of Regulation No 918/83 setting up a Community system of reliefs from customs duty, as amended by Regulation No 355/94, must be examined case by case on the basis of an overall assessment of the circumstances, taking into account the nature of the importation and the quantity of goods involved, the frequency with which the same goods are imported by the traveller concerned, but also, where appropriate, taking into account that traveller's lifestyle and habits or his family environment.

(see para. 27, operative part 2)

3. Article 45 of Regulation No 918/83 setting up a Community system of reliefs from customs duty, as amended by Regulation No 355/94, precludes national administrative instructions or

practices which impose binding quantitative limits on relief from customs duties or which would have the effect of creating an irrebuttable presumption that the importation concerned is commercial by reason of the quantity of goods imported.

(see para. 33, operative part 3)

Parties

In Case C-99/00,

REFERENCE to the Court under Article 234 EC by the Hovrätt för Västra Sverige (Sweden) for a preliminary ruling in the criminal proceedings pending before that court against

Kenny Roland Lyckeskog,

on the interpretation of the third paragraph of Article 234 EC and of Article 45(1) of Council Regulation (EEC) No 918/83 of 28 March 1983 setting up a Community system of reliefs from customs duty (OJ 1983 L 105, p. 1), as amended by Council Regulation (EC) No 355/94 of 14 February 1994 (OJ 1994 L 46, p. 5),

THE COURT,

composed of: G.C. Rodríguez Iglesias, President, P. Jann, F. Macken, N. Colneric, and S. von Bahr (Presidents of Chambers), C. Gulmann, D.A.O. Edward, A. La Pergola, J.-P. Puissochet (Rapporteur), M. Wathelet, V. Skouris, J.N. Cunha Rodrigues and A. Rosas, Judges,

Advocate General: A. Tizzano,

Registrar: R. Grass,

after considering the written observations submitted on behalf of:

- the Swedish Government, by L. Nordling, acting as Agent,

- the Danish Government, by J. Molde, acting as Agent,

- the Finnish Government, by E. Bygglin, acting as Agent,

- the United Kingdom Government, by J.E. Collins, acting as Agent, and M. Hoskins, Barrister,

- the Commission of the European Communities, by L. Ström, acting as Agent,

having regard to the report of the Judge-Rapporteur,

after hearing the Opinion of the Advocate General at the sitting on 21 February 2002,

gives the following

Judgment

Grounds

1 By decision of 10 March 2000, received at the Court on 16 March 2000, the Hovrätt för Västra Sverige (Court of Appeal for Western Sweden) referred to the Court for a preliminary ruling under Article 234 EC four questions on the interpretation of the third paragraph of Article 234 EC and of Article 45(1) of Council Regulation (EEC) No 918/83 of 28 March 1983 setting up a Community system of reliefs from customs duty (OJ 1983 L 105, p. 1), as amended by Council Regulation (EC) No 355/94 of 14 February 1994 (OJ 1994 L 46, p. 5) (Regulation No 918/83).

2 Those questions have arisen in proceedings brought against Mr Lyckeskog on the ground that he had attempted to smuggle into Sweden 500 kg of rice from Norway without declaring that importation.

Community law

3 With regard to the obligations devolving on the court or tribunal making a reference, the third paragraph of Article 234 EC provides:

Where any such question is raised in a case pending before a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law, that court or tribunal shall bring the matter before the Court of Justice.

4 The provisions of Community law applicable to the dispute in the main proceedings are Articles 45 and 47 of Regulation No 918/83, which provide:

Article 45

1. Subject to Articles 46 to 49, goods contained in the personal luggage of travellers coming from a third country shall be admitted free of import duties, provided such imports are of a non-commercial nature.

2. For the purposes of paragraph 1:

...

(b) "imports of a non-commercial nature" means imports which:

- are of an occasional nature, and

- consist exclusively of goods for the personal use of the travellers or their families, or of goods intended as presents; the nature and quantity of such goods should not be such as might indicate that they are being imported for commercial reasons.

...

Article 47

The relief referred to in Article 45 shall be granted up to a total value of ECU 175 per traveller to goods other than those listed in Article 46.

However, Member States may reduce this amount to ECU 90 for travellers under 15 years of age.

National legislation

5 The Swedish hovrätter deliver judgments which may be the subject of appeal to the Högsta domstol (Supreme Court) (Sweden). Such an appeal will always be examined if it is brought by the Public Prosecutor in cases involving the exercise of public authority. In other cases, an appeal will be examined as to its substance only if the Högsta domstol has declared it admissible.

6 Paragraph 10 of Chapter 54 of the Rättegångsbalk (Code of Procedure) provides that the Högsta domstol may declare an appeal admissible only if:

1. it is important for guidance in the application of the law that the appeal be examined by the Högsta domstol, or

2. there are special grounds for examination of the appeal, such as the existence of grounds of review on a point of law, formal defect, or where the outcome of the case before the hovrätt is manifestly attributable to negligence or serious error.

The dispute in the main proceedings and the questions submitted for preliminary ruling

7 Mr Lyckeskog was found guilty of attempted smuggling by the Strömstads tingsrätt (District Court, Strömstad) on the ground that he had attempted, in 1998, to import 500 kg of rice from Norway into Sweden. The tingsrätt, basing itself on the fact that Mr Lyckeskog had exceeded the quantity of 20 kg authorised by decision of the customs administration for the duty-free importation of rice, held that the importation by Mr Lyckeskog was of a commercial nature within the meaning of Regulation No 918/83.

8 Mr Lyckeskog appealed against that decision to the Hovrätt för Västra Sverige, which, although taking the view that it could rule on the merits of the case given that there was no difficulty in interpreting the applicable provisions of Community law, expressed uncertainty as to whether it was to be regarded as a court ruling at last instance and for that reason obliged under the third paragraph of Article 234 EC to refer a question for a preliminary ruling to the Court to enable it to interpret the relevant provisions of Regulation No 918/83, as the conditions laid down in the judgment in Case 283/81 CILFIT [1982] ECR 3415 did not appear to be satisfied.

9 It was in those circumstances that the Hovrätt för Västra Sverige referred the following questions to the Court for a preliminary ruling:

1. Is a national court or tribunal which in practice is the last instance in a case, because a declaration of admissibility is needed in order for the case to be reviewed by the country's supreme court, a court or tribunal within the meaning of the third paragraph of Article 234 EC?

2. May a court or tribunal within the meaning of the third paragraph of Article 234 EC decline to request a preliminary ruling where it considers it clear how the questions of Community law in point must be decided, even if those questions are not covered by the doctrine of acte clair or acte éclairé?

In the event that the Court of Justice answers the first question in the negative, or the first

question in the affirmative and the second question in the negative - but not otherwise - the Hovrätt also wishes to have an answer to the following questions:

3. Under Article 45(1) of Council Regulation (EEC) No 918/83 of 28 March 1983 setting up a Community system of reliefs from customs duty, goods contained in the personal luggage of travellers coming from a third country are, subject to Articles 46 to 49 of that regulation, to be admitted free of import duties, provided that such imports are of a non-commercial nature. Does this mean that the nature and quantity of the goods should, on an objective view, not be such as to raise doubts about the nature of the import? Or may regard be had to the individual's lifestyle and habits?

4. What is the legal significance of a national authority's provisions which indicate the duty-free quantity of a certain product - to which Council Regulation (EEC) No 918/83 of 28 March 1983 setting up a Community system of reliefs from customs duty is applicable - normally to be admitted?

The first question

10 The essence of the first question referred by the Hovrätt för Västra Sverige is whether a national court or tribunal whose decisions will be examined by the national supreme court, before which they are challenged, only if that supreme court declares the appeal to be admissible is to be regarded as a court or tribunal against whose decisions there is no judicial remedy under national law within the meaning of the third paragraph of Article 234 EC.

11 The Danish Government submits that any court or tribunal whose decisions may be the subject of appeal only after a declaration of admissibility has been issued must be considered to be a court or tribunal of the type referred to in the third paragraph of Article 234 EC. It bases its reasoning on, first, the judgment in Case 6/64 Costa [1964] ECR 585, in which the Court pointed out that, under the actual wording of that provision, national courts against whose decisions, as in the main proceedings in that case, there was no judicial remedy, had to refer the matter to the Court so that a preliminary ruling could be given on the interpretation of Community law, and, second, the judgment in Case 107/76 Hoffmann-La Roche [1977] ECR 957, in which the Court ruled that the underlying purpose of Article 234 EC is to ensure that Community law is interpreted and applied in a uniform manner in all the Member States, the particular objective of the third paragraph being to prevent a body of national case-law not in accordance with the rules of Community law from coming into existence in any Member State. The requirement of a declaration of admissibility would thus constitute an obstacle to the uniform interpretation of Community law if the supreme court alone were covered by the obligation arising under the third paragraph of Article 234 EC.

12 The judgment in Costa, cited above, is also cited by the Swedish and Finnish Governments in their observations submitted to the Court, but in support of an analysis contrary to that of the Danish Government. Thus, they contend that the mere fact that the decisions of the hovrätter may be subject to appeal suffices to justify the conclusion that those courts are not covered by the third paragraph of Article 234 EC. The mechanism of a declaration of admissibility, they argue, does no more than limit the prospects of an applicant having his appeal examined. It does not, as the United Kingdom Government points out, remove the possibility of lodging an appeal against judgments of the hovrätter. The United Kingdom further submits that, at the stage of considering the admissibility of an appeal, a supreme court can make a reference for a preliminary ruling on a question as to the interpretation of a rule of Community law. The referring court, questioned on this point by the Court, accepts that this is so as regards the Högsta domstol. The Swedish Government points out, moreover, that, in the exceptional cases in which there is no ordinary avenue of appeal against judgments of the hovrätter and those courts therefore, from the formal point of view, rule at final instance, they come within the scope of the third paragraph of Article 234 EC.

13 The Commission takes the same position, basing its reasoning on the fact that, where a court ruling on admissibility at last instance considers that an issue of Community law has not been correctly dealt with, that court is required to refer a question to the Court for a preliminary ruling pursuant to the third paragraph of Article 234 EC, or rely on one of the limits on the obligation to refer defined in the judgment in CILFIT, cited above, or remit the case to a lower court. Thus, the possibility of referring a question for a preliminary ruling will always be preserved and the risk of interference with the uniform interpretation of Community law consequently avoided.

14 The obligation on national courts against whose decisions there is no judicial remedy to refer a question to the Court for a preliminary ruling has its basis in the cooperation established, in order

to ensure the proper application and uniform interpretation of Community law in all the Member States, between national courts, as courts responsible for applying Community law, and the Court. That obligation is in particular designed to prevent a body of national case-law that is not in accordance with the rules of Community law from coming into existence in any Member State (see, inter alia, Hoffmann-La Roche, cited above, paragraph 5, and Case C-337/95 Parfums Christian Dior [1997] ECR I-6013, paragraph 25).

15 That objective is secured when, subject to the limits accepted by the Court of Justice (CILFIT), supreme courts are bound by this obligation to refer (Parfums Christian Dior, cited above) as is any other national court or tribunal against whose decisions there is no judicial remedy under national law (Joined Cases 28/62, 29/62 and 30/62 Da Costa en Schaake [1963] ECR 31).

16 Decisions of a national appellate court which can be challenged by the parties before a supreme court are not decisions of a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law within the meaning of Article 234 EC. The fact that examination of the merits of such appeals is subject to a prior declaration of admissibility by the supreme court does not have the effect of depriving the parties of a judicial remedy.

17 That is so under the Swedish system. The parties always have the right to appeal to the Högsta domstol against the judgment of a hovrätt, which cannot therefore be classified as a court delivering a decision against which there is no judicial remedy. Under Paragraph 10 of Chapter 54 of the Rättegångsbalk, the Högsta domstol may issue a declaration of admissibility if it is important for guidance as to the application of the law that the appeal be examined by that court. Thus, uncertainty as to the interpretation of the law applicable, including Community law, may give rise to review, at last instance, by the supreme court.

18 If a question arises as to the interpretation or validity of a rule of Community law, the supreme court will be under an obligation, pursuant to the third paragraph of Article 234 EC, to refer a question to the Court of Justice for a preliminary ruling either at the stage of the examination of admissibility or at a later stage.

19 The answer to the first question must therefore be that, where the decisions of a national court or tribunal can be appealed to the supreme court under conditions such as those that apply to decisions of the referring court in the present case, that court or tribunal is not under the obligation referred to in the third paragraph of Article 234 EC.

The second question

20 The essence of the second question referred by the Hovrätt för Västra Sverige is whether, in the event that a hovrätt is to be regarded as a court or tribunal within the meaning of the third paragraph of Article 234 EC, it is obliged to refer the matter to the Court even though interpretation of the rule of Community law applicable to the dispute in the main proceedings does not present any difficulty but the conditions required by the judgment in CILFIT for application of the acte clair doctrine are not met.

21 In view of the answer to the first question and to the fact that, under Swedish legislation, the Högsta domstol may, on appeal to it against a decision by a hovrätt, refer a question to the Court for a preliminary ruling, it is unnecessary to reply to the second question.

The third question

22 The Hovrätt för Västra Sverige is asking the Court, essentially, to specify the criteria for determining whether the importation of goods contained in the personal luggage of a person travelling from a non-member country is entirely non-commercial within the meaning of Article 45(1) of Regulation No 918/83, and in particular whether that assessment must take into account the lifestyle and habits of the individual concerned.

23 According to the Finnish Government, when, by reason of their nature or the fact that they are of significant quantity, goods seized from the personal luggage of a traveller appear to have been imported for commercial purposes, the lifestyle and habits of the person concerned must be examined. If, at the conclusion of such an examination, it does not appear that the goods are intended solely for personal or family use, the customs authorities are entitled to take the view that the importation is commercial in nature and for that reason to refuse duty-free status. The Commission agrees with that approach, which requires a case-by-case consideration of whether it is appropriate to grant duty-free status.

24 The Swedish Government also maintains that, in order to determine whether the importation of goods seized from a traveller's personal luggage is commercial in nature, account must be taken of the nature and quantity of the goods, but adds that the economic and personal

circumstances of the traveller, whose wife, in the main proceedings in the present case, comes from Asia, must also be taken into account. The Swedish Government bases itself on the position taken by the Court in Case C-208/88 Commission v Denmark [1990] ECR I-4445, according to which Article 45 of Regulation No 918/83 does not allow Member States to presume, without allowing proof to the contrary, that an importation must be commercial in nature where the imported goods found in the personal luggage of a traveller exceed a certain quantity.

25 According to the relevant provisions of Regulation No 918/83, imports of a non-commercial nature are imports which consist exclusively of goods for the personal use of travellers or their families, or of goods intended as presents, where the nature or quantity of the goods is not such as to indicate that they are being imported for commercial reasons.

26 Personal use, by definition, varies from one person to another, and from one culture to another, and the designation, for reference purposes, of a typical use would for that reason be unsatisfactory. It is therefore essential, for the proper application of Regulation No 918/83, that a case-by-case assessment be made as to whether importation is commercial in character, account being taken, where appropriate, of the lifestyle and habits of each traveller. While the nature and quantity of the goods under consideration are among the indicators to be taken into account, customs authorities cannot confine themselves to those indicators in assessing whether or not the importation is commercial.

27 The answer to the third question must therefore be that the question whether an importation of goods is non-commercial, within the meaning of Article 45(2)(b) of Regulation No 918/83, must be examined case by case on the basis of an overall assessment of the circumstances, taking into account the nature of the importation and the quantity of goods involved, the frequency with which those goods are imported by the traveller concerned, but also, where appropriate, taking account of that traveller's lifestyle and habits or of his family environment.

The fourth question

28 By its fourth question, the Hovrätt för Västra Sverige is asking, essentially, whether Regulation No 918/83 is compatible with national administrative provisions fixing the quantity of goods to which that regulation applies and which may be imported free from customs duty.

29 The Finnish Government points out the purpose of Regulation No 918/83, which is to establish, throughout Community territory, a uniform system of relief from customs duties.

30 Like the Swedish Government and the Commission, the Finnish Government contends that that regulation does not entitle Member States to impose more stringent quantitative restrictions for certain products unless such restrictions are justified on moral or public-policy grounds. Nor does it enable Member States to decide whether importation is or is not commercial solely by reference to the quantity of goods imported. National provisions of that kind are incompatible with Regulation No 918/83.

31 On the other hand, the parties which have submitted observations contend that Community law does not preclude non-binding instructions drawn up by the customs authorities indicating, for a particular product, the maximum quantity below which a traveller is not required to provide other evidence that the importation is non-commercial.

32 Such an analysis of Regulation No 918/83 is in accordance with the reply given to the third question. If Member States were entitled to impose quantitative restrictions on grounds other than morality or public policy, the uniform nature of the system of relief from customs duties throughout Community territory would be jeopardised. However, instructions drawn up by the customs authorities, as long as they are not an indirect way of introducing an irrebuttable presumption that imports are commercial, but are simply a non-binding criterion designed to facilitate customs procedures, are not incompatible with the system established by Regulation No 918/83.

33 The answer to the fourth question must therefore be that Article 45 of Regulation No 918/83 precludes national administrative instructions or practices which impose binding quantitative limits on relief from customs duties or which would have the effect of creating an irrebuttable presumption that the importation concerned is commercial by reason of the quantity of goods imported.

Decision on costs

Costs

34 The costs incurred by the Swedish, Danish, Finnish and United Kingdom Governments and by the Commission, which have submitted observations to the Court, are not recoverable. Since these proceedings are, for the parties to the main proceedings, a step in the proceedings pending before the national court, the decision on costs is a matter for that court.

Operative part

On those grounds,

THE COURT,

in answer to the questions referred to it by the Hovrätt för Västra Sverige by decision of 10 March 2000, hereby rules:

1. Where the decisions of a national court or tribunal can be appealed to the supreme court under conditions such as those that apply to decisions of the referring court in the present case, that court or tribunal is not under the obligation referred to in the third paragraph of Article 234 EC.

2. The question whether an importation of goods is non-commercial, within the meaning of Article 45(2)(b) of Council Regulation (EEC) No 918/83 of 28 March 1983 setting up a Community system of reliefs from customs duty, as amended by Council Regulation (EC) No 355/94 of 14 February 1994, must be examined case by case on the basis of an overall assessment of the circumstances, taking into account the nature of the importation and the quantity of goods involved, the frequency with which those goods are imported by the traveller concerned, but also, where appropriate, taking account of that traveller's lifestyle and habits or of his family environment.

3. Article 45 of Regulation No 918/83, as amended by Regulation No 355/94, precludes national administrative instructions or practices which impose binding quantitative limits on relief from customs duties or which would have the effect of creating an irrebuttable presumption that the importation concerned is commercial by reason of the quantity of goods imported.

Joined Cases C-397/01 to C-403/01

Bernhard Pfeiffer and Others

v

Deutsches Rotes Kreuz, Kreisverband Waldshut eV

(Reference for a preliminary ruling from the Arbeitsgericht Lörrach)

(Social policy – Protection of the health and safety of workers – Directive 93/104/EC – Scope – Emergency workers in attendance in ambulances in the framework of an emergency service run by the German Red Cross – Definition of 'road transport' – Maximum weekly working time – Principle – Direct effect – Derogation – Conditions)

Summary of the Judgment

1. *Social policy – Protection of the health and safety of workers – Directive 89/391 on the introduction of measures to encourage improvements in the safety and health of workers at work – Directive 93/104 concerning certain aspects of the organisation of working time – Scope – Activity of emergency workers – Included – Activity not forming part of civil protection services or road transport excluded from such scope*

   (Council Directives 89/391, Art. 2, and 93/104, Art. 1(3))

2. *Social policy – Protection of the health and safety of workers – Directive 93/104 concerning certain aspects of the organisation of working time – Maximum weekly working time – Derogation – Worker's consent – Employment contract referring to a collective agreement permitting the extension of that time – Insufficient*

   (Council Directive 93/104, Art. 18(1)(b)(i))

3. *Social policy – Protection of the health and safety of workers – Directive 93/104 concerning certain aspects of the organisation of working time – Activity of emergency workers – National legislation permitting the extension of the maximum weekly working time by means of a collective or works agreement – Not permissible*

   (Council Directive 93/104, Art. 6(2))

4. *Social policy – Protection of the health and safety of workers – Directive 93/104 concerning certain aspects of the organisation of working time – Article 6(2) – Direct effect – Powers and duties of the national court – Non-application of national provisions permitting the extension of the maximum weekly working time set by that article*

   (Council Directive 93/104, Art. 6(2))

1. Article 2 of Directive 89/391 on the introduction of measures to encourage improvements in the safety and health of workers at work and Article 1(3) of Directive 93/104 concerning certain aspects of the organisation of working time must be construed as meaning that the activity of emergency workers, carried out in the framework of an emergency medical service, falls within the scope of those directives.

   In that regard, that activity does not come within the exclusion in the first subparagraph of Article 2(2) of Directive 89/391 relating to certain specific activities within the public service. That exclusion was adopted purely for the purpose of ensuring the proper operation of services essential for the protection of public health, safety and order in

cases the gravity and scale of which are exceptional and a characteristic of which is the fact that, by their nature, they do not lend themselves to planning as regards the working time of teams of emergency workers.

Likewise, the activity of emergency workers, even if it includes, at least in part, using a vehicle and accompanying a patient on his journey to hospital, cannot be regarded as 'road transport' and therefore must be excluded from the scope of Article 1(3) of Directive 93/104.

(see paras 55, 63, 72, 74, operative part 1)

2. The first indent of Article 18(1)(b)(i) of Directive 93/104 concerning certain aspects of the organisation of working time, which confers the right not to apply Article 6 of that directive containing the rule as to the maximum weekly working time, is to be construed as requiring consent to be expressly and freely given by each worker individually if the 48-hour maximum period of weekly working time, as laid down in Article 6 of that directive, is to be validly extended. In that connection, it is not sufficient that the relevant worker's employment contract refers to a collective agreement which permits such an extension, since it is by no means certain that, when he entered into such a contract, the worker concerned knew of the restriction of the rights conferred on him by Directive 93/104.

(see paras 85-86, operative part 2)

3. Article 6(2) of Directive 93/104 concerning certain aspects of the organisation of working time must be interpreted as precluding legislation in a Member State the effect of which, as regards periods of duty time completed by emergency workers in the framework of an emergency medical service, is to permit, including by means of a collective agreement or works agreement based on such an agreement, the 48-hour maximum period of weekly working time laid down by that provision to be exceeded.

First, it follows both from the wording of Article 6(2) of Directive 93/104 and from the purpose and scheme of that directive, that the 48-hour upper limit on weekly working time constitutes a rule of Community social law of particular importance from which every worker must benefit, since it is a minimum requirement necessary to ensure protection of his safety and health, so that national legislation which authorises weekly working time in excess of 48 hours, including periods of duty time, is not compatible with the requirements of Article 6(2) of the directive. Second, periods of duty time completed by emergency workers must be taken into account in their totality in the calculation of maximum daily and weekly working time, regardless of the fact that they necessarily include periods of inactivity of varying length between calls.

(see paras 94-95, 100-101, 120, operative part 3)

4. Article 6(2) of Directive 93/104 concerning certain aspects of the organisation of working time fulfils all the conditions necessary for it to have direct effect, since it imposes on Member States in unequivocal terms a precise obligation as to the result to be achieved, which is not coupled with any condition regarding application of the rule laid down by it, which provides for a 48-hour maximum as regards average weekly working time. The fact that the directive leaves the Member States a degree of latitude to adopt rules in order to implement Article 6, and that it permits them to derogate from it, do not alter the precise and unconditional nature of Article 6(2).

Accordingly, when hearing a case between individuals, a national court, which is required, when applying the provisions of domestic law adopted for the purpose of transposing obligations laid down by a directive, to consider the whole body of rules of national law and to interpret them, so far as possible, in the light of the wording and purpose of the directive in order to achieve an outcome consistent with the objective pursued by it, must do whatever lies within its jurisdiction to ensure that the maximum

period of weekly working time, which is set at 48 hours by the said Article 6(2), is not exceeded.

(see paras 104-106, 119-120, operative part 3)

JUDGMENT OF THE COURT (Grand Chamber)
5 October 2004(1)

(Social policy – Protection of the health and safety of workers – Directive 93/104/EC – Scope – Emergency workers in attendance in ambulances in the framework of an emergency service run by the German Red Cross – Definition of 'road transport' – Maximum weekly working time – Principle – Direct effect – Derogation – Conditions)

after hearing the Opinion of the Advocate General at the sitting on 27 April 2004,

gives the following

Judgment

1
These references for a preliminary ruling concern the interpretation of Article 2 of Council Directive 89/391/EEC of 12 June 1989 on the introduction of measures to encourage improvements in the safety and health of workers at work (OJ 1989 L 183, p. 1) and of Articles 1(3), 6 and 18(1)(b)(i) of Council Directive 93/104/EC of 23 November 1993 concerning certain aspects of the organisation of working time (OJ 1993 L 307, p. 18).

2
The references were made to the Court in various sets of proceedings between (i) Mr Pfeiffer, Mr Roith, Mr Süß, Mr Winter, Mr Nestvogel, Ms Zeller and Mr Döbele, who work or used to work as emergency workers, and (ii) Deutsches Rotes Kreuz, Kreisverband Waldshut eV (German Red Cross, Waldshut section ('Deutsches Rotes Kreuz')), a body which employs or employed the claimants in the main actions. The proceedings concern German legislation providing for weekly working time in excess of 48 hours.

Legal framework

Community legislation

3
Directives 89/391 and 93/104 were adopted on the basis of Article 118a of the EC Treaty (Articles 117 to 120 of the EC Treaty have been replaced by Articles 136 EC to 143 EC).

4
Directive 89/391 is the framework directive which lays down general principles concerning the health and safety of workers. Those principles were subsequently developed by a series of specific directives, including Directive 93/104.

5
Article 2 of Directive 89/391 defines the scope of the directive as follows:

‘1. This Directive shall apply to all sectors of activity, both public and private (industrial, agricultural, commercial, administrative, service, educational, cultural, leisure, etc.).

2. This Directive shall not be applicable where characteristics peculiar to certain specific public service activities, such as the armed forces or the police, or to certain specific activities in the civil protection services inevitably conflict with it.

In that event, the safety and health of workers must be ensured as far as possible in the light of the objectives of this Directive.’

6
Article 1 of Directive 93/104, entitled ‘Purpose and scope’, provides as follows:

‘1. This Directive lays down minimum safety and health requirements for the organisation of working time.

2. This Directive applies to:

(a) minimum periods of daily rest, weekly rest and annual leave, to breaks and maximum weekly working time; and

(b) certain aspects of night work, shift work and patterns of work.

3. This Directive shall apply to all sectors of activity, both public and private, within the meaning of Article 2 of Directive 89/391/EEC, without prejudice to Article 17 of this Directive, with the exception of air, rail, road, sea, inland waterway and lake transport, sea fishing, other work at sea and the activities of doctors in training;

4. The provisions of Directive 89/391/EEC are fully applicable to the matters referred to in paragraph 2, without prejudice to more stringent and/or specific provisions contained in this Directive.’

7
Under the heading ‘Definitions’, Article 2 of Directive 93/104 provides:

‘For the purposes of this Directive, the following definitions shall apply:

1. “working time” shall mean any period during which the worker is working, at the employer’s disposal and carrying out his activity or duties, in accordance with national laws and/or practice;

2. “rest period” shall mean any period which is not working time;

…’

8
Section II of the directive lays down the measures which the Member States must take to ensure that all workers are afforded, inter alia, daily minimum rest periods and weekly rest periods and it also regulates maximum weekly working time.

9
So far as maximum weekly working time is concerned, Article 6 of Directive 93/104 provides:

‘Member States shall take the measures necessary to ensure that, in keeping with the need to protect the safety and health of workers:

…

2. the average working time for each 7-day period, including overtime, does not exceed 48 hours.’

10
Article 15 of Directive 93/104 provides:

‘This Directive shall not affect Member States’ right to apply or introduce laws, regulations or administrative provisions more favourable to the protection of the safety and health of workers or to facilitate or permit the application of collective agreements or agreements concluded between the two sides of industry which are more favourable to the protection of the safety and health of workers.’

11
Article 16 of the directive provides:

‘Member States may lay down:

…

2. for the application of Article 6 (maximum weekly working time), a reference period not exceeding four months.

…’

12
Directive 93/104 sets out a set of exceptions to a number of its basic rules, in view of the specific features of certain activities and subject to compliance with certain conditions. In that connection, Article 17 provides:

‘1. With due regard for the general principles of the protection of the safety and health of workers, Member States may derogate from Article 3, 4, 5, 6, 8 or 16 when, on account of the specific characteristics of the activity concerned, the duration of the working time is not measured and/or predetermined or can be determined by the workers themselves, and particularly in the case of:

(a)
managing executives or other persons with autonomous decision-taking powers;

(b)
family workers; or

(c)
workers officiating at religious ceremonies in churches and religious communities.

2. Derogations may be adopted by means of laws, regulations or administrative provisions or by means of collective agreements or agreements between the two sides of industry provided that the workers concerned are afforded equivalent periods of compensatory rest or that, in exceptional cases in which it is not possible, for objective reasons, to grant such equivalent periods of compensatory rest, the workers concerned are afforded appropriate protection:

2.1 from Articles 3, 4, 5, 8 and 16:

…

(c)
in the case of activities involving the need for continuity of service or production, particularly;

(i) services relating to the reception, treatment and/or care provided by hospitals or similar establishments, residential institutions and prisons;

…

(iii) press, radio, television, cinematographic production, postal and telecommunications services, ambulance, fire and civil protection services;

…

3. Derogations may be made from Articles 3, 4, 5, 8 and 16 by means of collective agreements or agreements concluded between the two sides of industry at national or regional level or, in conformity with the rules laid down by them, by means of collective agreements or agreements concluded between the two sides of industry at a lower level.

…

The derogations provided for in the first and second subparagraphs shall be allowed on condition that equivalent compensating rest periods are granted to the workers concerned or, in exceptional cases where it is not possible for objective reasons to grant such periods, the workers concerned are afforded appropriate protection.

…

4. The option to derogate from point 2 of Article 16, provided in paragraph 2, points 2.1 and 2.2 and in paragraph 3 of this Article, may not result in the establishment of a reference period exceeding six months.

However, Member States shall have the option, subject to compliance with the general principles relating to the protection of the safety and health of workers, of allowing, for objective or technical reasons or reasons concerning the organisation of work, collective agreements or agreements concluded between the two sides of industry to set reference periods in no event exceeding 12 months.

…'

13
Article 18 of Directive 93/104 is worded as follows:

'1. (a) Member States shall adopt the laws, regulations and administrative provisions necessary to comply with this Directive by 23 November 1996, or shall ensure by that date that the two sides of industry establish the necessary measures by agreement, with Member States being obliged to take any necessary steps to enable them to guarantee at all times that the provisions laid down by this Directive are fulfilled.

(b) (i) However, a Member State shall have the option not to apply Article 6, while respecting the general principles of the protection of the safety and health of workers, and provided it takes the necessary measures to ensure that:

– no employer requires a worker to work more than 48 hours over a 7-day period, calculated as an average for the reference period referred to in point 2 of Article 16, unless he has first obtained the worker's agreement to perform such work,

– no worker is subjected to any detriment by his employer because he is not willing to give his agreement to perform such work,

– the employer keeps up-to-date records of all workers who carry out such work,

– the records are placed at the disposal of the competent authorities, which may, for reasons connected with the safety and/or health of workers, prohibit or restrict the possibility of exceeding the maximum weekly working hours,

– the employer provides the competent authorities at their request with information on cases in which agreement has been given by workers to perform work exceeding 48 hours over a period of seven days, calculated as an average for the reference period referred to in point 2 of Article 16.

…'

National legislation

14
German labour law distinguishes between duty time ('Arbeitsbereitschaft'), on-call time ('Bereitschaftsdienst') and stand-by time ('Rufbereitschaft').

15
The three concepts are not defined by national legislation but their features derive from case-

law.

16
Duty time (‘Arbeitsbereitschaft’) covers the situation in which the worker must make himself available to his employer at the place of employment and is, moreover, obliged to remain continuously attentive in order to be able to act immediately should the need arise.

17
While a worker is on call (‘Bereitschaftsdienst’), he must be present at a place determined by his employer, either on or outside the latter’s premises, and must keep himself available to take up his duties if so requested by his employer but he is authorised to rest or occupy himself as he sees fit as long as his services are not required.

18
Stand-by time (‘Rufbereitschaft’) is characterised by the fact that the worker is not obliged to remain waiting in a place designated by the employer: it is sufficient for him to be reachable at any time so that he may be called upon at short notice to perform his professional tasks.

19
Under German labour law only duty time (‘Arbeitsbereitschaft’) is, as a general rule, deemed to constitute full working time. Conversely, both on-call time (‘Bereitschaftsdienst’) and stand-by time (‘Rufbereitschaft’) are categorised as rest time, save for the part of the time during which the worker has in fact performed his professional tasks.

20
The German legislation on working time and rest periods is contained in the Arbeitszeitgesetz (Law on Working Time) of 6 June 1994 (BGBl. 1994 I, p. 1170; ‘the ArbZG’), which was enacted to transpose Directive 93/104.

21
Paragraph 2(1) of the ArbZG defines working time as the period between the beginning and end of work, with the exception of breaks.

22
Paragraph 3 of the ArbZG provides:

‘Employees’ daily working time must not exceed eight hours. It may be extended to a maximum of 10 hours but only on condition that an average 8-hour working day is not exceeded over 6 calendar months or 24 weeks.’

23
Paragraph 7 of the ArbZG is worded as follows:

‘(1) Under a collective agreement, or a works agreement based on a collective agreement, provision may be made:

1. by way of derogation from Paragraph 3,

   (a)
   to extend working time beyond 10 hours per day, even without offset, where working time regularly includes significant periods of duty time (“Arbeitsbereitschaft”),

   (b)

to determine a different period of offset,

(c)

to extend working time to 10 hours per day, without offset, for a maximum period of 60 days per year,

…'

24
Paragraph 25 of the ArbZG provides:

'Where, at the date of entry into force of this law, an existing collective agreement or one continuing to produce effects after that date contains derogating rules under Paragraph 7(1) and (2) …, which exceed the maximum limits laid down in the provisions cited, those rules shall not be affected. Works agreements based on collective agreements are deemed equivalent to collective agreements such as those mentioned in the first sentence …'

25
The Tarifvertrag über die Arbeitsbedingungen für Angestellte, Arbeiter und Auszubildende des Deutschen Roten Kreuzes (Collective agreement on working conditions for German Red Cross employees, workers and apprentices; 'the DRK-TV') includes the following provision:

'Paragraph 14 Normal working time

(1)

Normal working time, exclusive of breaks, shall be on average 39 hours (from 1 April 1990 38 and a half hours) per week. As a general rule, the average weekly working time shall be calculated on the basis of a period of 26 weeks.

In the case of workers who work in rotas or on shifts a longer period may be set.

(2) Normal working time may be extended …

(a)

to 10 hours per day (49 hours per week on average) if it regularly includes duty time ("Arbeitsbereitschaft") of at least 2 hours per day on average:

(b)

to 11 hours per day (54 hours per week on average) if it regularly includes duty time ("Arbeitsbereitschaft") of at least 3 hours per day on average,

(c)

to 12 hours per day (60 hours per week on average) if the employee must merely be present at the work-place in order to carry out his duties should the need arise.

...

(5)

The employee shall be required, if so directed by his employer, to remain outside normal working hours in a particular place selected by the employer, from where he may be called to work if the need arises (on-call time, "Bereitschaftsdienst"). The employer may require such on-call service only when some work is expected but, on the basis of experience, work-free time will predominate.

...'

26
An observation in the following terms is made in respect of Paragraph 14(2) of the DRK-TV:

'Where Annex 2 concerning staff in the emergency and ambulance services applies, regard is to be had to the notice concerning Paragraph 14(2) of the [DRK-TV].'

27
Annex 2 includes special provisions under the collective agreement for staff in the emergency and ambulance services. The relevant notice provides that the maximum weekly working time of 54 hours provided for in Paragraph 14(2)(b) of the DRK-TV is to be progressively reduced. As a consequence, with effect from 1 January 1993, provision is made for the maximum period to fall from 54 to 49 hours.

The main proceedings and the questions referred for a preliminary ruling

28
Seven cases have given rise to these references for a preliminary ruling.

29
According to the documents available to the Court, the Deutsches Rotes Kreuz operates inter alia the land-based emergency service in a part of the Landkreis of Waldshut. The Deutsches Rotes Kreuz maintains the stations at Waldshut (Germany), Dettighoffen (Germany) and Bettmaringen (Germany), which are manned round the clock, and a station at Lauchringen (Germany), which is manned for 12 hours per day. Land-based emergency rescue is carried out by means of ambulances and emergency medical vehicles. An ambulance crew consists of two paramedics, whilst an emergency medical vehicle consists of an emergency worker and a doctor. When they are alerted of an emergency, these vehicles go to the relevant place in order to provide medical assistance to the patients. Subsequently, the patients are usually taken to hospital.

30
Mr Pfeiffer and Mr Nestvogel were formally employed by the Deutsches Rotes Kreuz as emergency workers, whilst the other claimants in the main proceedings were still employed by that body at the time when their actions before the national court were commenced.

31
The parties to the main proceedings are at odds in essence over whether, in calculating the period of maximum weekly working time, account should be taken of periods of duty time ('Arbeitsbereitschaft') which the workers concerned have been required to do in the course of their employment in the service of the Deutsches Rotes Kreuz.

32
The actions brought by Mr Pfeiffer and Mr Nestvogel before the Arbeitsgericht Lörrach claim payment for hours they worked in excess of 48 hours per week. They claim that they were wrongly required to work more than 48 hours per week on average from June 2000 to March 2001. As a consequence, they asked the national court to order the Deutsches Rotes Kreuz to pay them DEM 4 335.45 gross (for 156.85 hours at the overtime rate of DEM 29.91 gross) and DEM 1 841.88 gross (for 66.35 hours at the overtime rate of DEM 27.76), together with interest for late payment.

33
As regards the actions brought by the other claimants in the proceedings before the national court, they seek to determine the maximum period which they must work per week for the Deutsches Rotes Kreuz.

34
The parties to the main proceedings agreed in their various contracts of employment that the DRK-TV should apply.

35
The Arbeitsgericht Lörrach found that, on the basis of the rules of the collective agreement, weekly working time in the emergency service operated by the Deutsches Rotes Kreuz was, on average, 49 hours. Normal working time was extended pursuant to Paragraph 14(2)(b) of the DRK-TV, given the obligation of those concerned to be available for duty ('Arbeitsbereitschaft') for at least 3 hours per day on average.

36
The claimants in the main proceedings submit that the provision made by the Deutsches Rotes Kreuz to set weekly working time at 49 hours is unlawful. They rely in that connection on Directive 93/104 and on the judgment in Case C-303/98 *Simap* [2000] ECR I-7963. In their submission, Paragraph 14(2)(b) of the DRK-TV infringes Community law by providing for working time in excess of 48 hours per week. Furthermore, the rules of the collective agreement are not permissible under the derogation provided for in Paragraph 7(1)(i)(a) of the ArbZG. Indeed, the claimants in the main proceedings argue that the ArbZG does not correctly implement the provisions of Directive 93/104 in that respect. Accordingly, they submit that the derogation in the ArbZG must be interpreted in conformity with Community law and that if it is not, it does not apply at all.

37
Conversely, the Deutsches Rotes Kreuz contends that the actions should be dismissed. It maintains inter alia that its rules on the extension of working time comply with national legislation and the collective agreements.

38
With these cases before it, the Arbeitsgericht Lörrach is in doubt, first, as to whether the activity of the claimants in the main proceedings falls within the scope of Directive 93/104.

39
In the first place, Article 1(3) of Directive 93/104, which refers, as regards the directive's scope, to Article 2 of Directive 89/391, excludes from that scope a number of areas to the extent to which characteristics peculiar to certain specific activities inevitably conflict with it. However, in the referring court's view, that exclusion is intended to cover only those activities which aim to secure public safety and order, which are indispensable to the common good or which, owing to their nature, do not lend themselves to planning. It mentions, by way of example, major catastrophies. By contrast, emergency services should not be excluded from the scope of the two directives, even though emergency workers must be ready to respond round the clock, since the duties and working time of each of them remain amenable to planning.

40
Second, it is necessary to ascertain whether work in a land-based emergency service must be regarded as 'road transport' for the purposes of Article 1(3) of Directive 93/104. If that term were to be construed as including any activity in a vehicle travelling on the public highways, a

service operated by means of ambulances and emergency medical vehicles would also have to be subsumed thereunder, since a significant part of that activity entails going to places where emergencies have occurred and conveying patients to hospital. However, the emergency service normally operates within a limited geographical area, in general within a Landkreis (provincial district), so the distances are not great and the operations are of limited duration. The work of a land-based emergency service is thus to be distinguished from the typical line of work in the road transport sector. Doubts none the less subsist on this point on account of the judgment in Case C-76/97 *Tögel* [1998] ECR I-5357, paragraph 40).

41
The referring court then asks whether the non-application of the 48-hour limit for the average working week as provided for under Article 18(1)(b)(i) of Directive 93/104 requires the express and unambiguous consent of the employee concerned or whether the employee's general consent to the application of a collective agreement as a whole is sufficient, since the latter provides inter alia for the possibility of weekly working time being extended beyond the 48-hour limit.

42
Finally, the Arbeitsgericht Lörrach asks whether Article 6 of Directive 93/104 is unconditional and sufficiently precise to be capable of being relied on by an individual before a national court in the event of a Member State having failed to implement the directive correctly. Under German law, if the provision at Paragraph 14(2)(b) of the DRK-TV, which is applicable to the employment contracts concluded by the parties to the main proceedings, were covered by the provision made by the legislature in Paragraph 7(1)(i)(a) of the ArbZG, the latter would permit the employer to extend daily working time without compensation, with the result that the restriction of weekly working time to 48 hours on average which derives from Paragraph 3 of the ArbZG and from Article 6(2) of Directive 93/104 would be negated.

43
Taking the view that in those circumstances an interpretation of Community law was necessary to enable it to reach a decision in the cases before it, the Arbeitsgericht Lörrach decided to stay the proceedings and to refer to the Court for a preliminary ruling the following questions, which are cast in identical terms in Cases C-397/01 to C-403/01:

'1. (a) Is the reference in Article 1(3) of Directive 93/104 ... to Article 2(2) of Directive 89/391 ..., under which [those] directives are not applicable where characteristics peculiar to certain specific activities in the civil protection services inevitably conflict with their application, to be construed as meaning that the claimants' activity as emergency workers is caught by this exclusion?

2. In view of the judgment of the Court in ... *Simap* (paragraphs 73 and 74), is Article 18(1)(b)(i) of Directive 93/104 to be construed as meaning that consent given individually by a worker must expressly refer to the extension of working time to more than 48 hours per week, or may such consent also reside in the worker's agreeing with the employer, in the contract of employment, that working conditions are to be governed by a collective agreement which itself allows working time to be extended to more than 48 hours on average?

3. Is Article 6 of Directive 93/104 in itself unconditional and sufficiently precise to be capable of being relied on by individuals before national courts where the State has not properly transposed the directive into national law?'

44
By order of the President of the Court of 7 November 2001, Cases C-397/01 to C-403/01 were joined for the purposes of the written and oral procedure and the judgment.

45
By decision of 14 January 2003, the Court stayed proceedings in those cases until the hearing in Case C-151/02 *Jaeger* [2003] ECR I-8389, in which judgment was delivered on 9 September 2003. That hearing took place on 25 February 2003.

46
By order of the Court of 13 January 2004, the oral procedure in Cases C-397/01 to C-403/01 was re-opened.

The questions referred for a preliminary ruling

Question 1(a)

47
By Question 1(a), the national court is essentially asking whether Article 2 of Directive 89/391 and Article 1(3) of Directive 93/104 must be interpreted as meaning that the activity of emergency workers, performed within an emergency medical service such as the service at issue in the main proceedings, falls within the scope of the directives.

48
In order to reply to that question, it must be borne in mind at the outset that Article 1(3) of Directive 93/104 defines the scope of the directive by referring expressly to Article 2 of Directive 89/391. Therefore, before determining whether an activity such as that of emergency workers in attendance in an ambulance or emergency medical vehicle in the framework of a service run by the Deutsches Rotes Kreuz falls within the scope of Directive 93/104, it is first necessary to examine whether that activity is within the scope of Directive 89/391 (see the judgment in *Simap*, paragraphs 30 and 31).

49
By virtue of Article 2(1) of Directive 89/391, the latter applies to ‘all sectors of activity, both public and private’, which include service activities as a whole.

50
However, as is clear from the first subparagraph of Article 2(2), the directive is not applicable where characteristics peculiar to certain specific activities, particularly in the civil protection services, inevitably conflict with it.

51
It must none the less be held that the activity of emergency workers in attendance in an ambulance or emergency medical vehicle in the framework of an emergency service for the injured or sick, run by a body such as the Deutsches Rotes Kreuz, is not covered by the exclusion referred to in the preceding paragraph.

52
It is clear both from the purpose of Directive 89/391 (encouraging the improvement of the health and safety of workers at work) and from the wording of Article 2(1) thereof that the directive must be taken to be broad in scope. It follows that the exclusions from its scope provided for in

the first subparagraph of Article 2(2) must be interpreted restrictively (see the judgment in *Simap*, paragraphs 34 and 35, and the order of 3 July 2001 in Case C-241/99 *CIG* [2001] ECR I-5139, paragraph 29).

53
Furthermore, the first subparagraph of Article 2(2) of Directive 89/391 excludes from the directive's scope not the civil protection services as such but solely 'certain specific activities' of those services, whose characteristics are such as inevitably to conflict with the rules laid down by the directive.

54
This exclusion from the broadly-defined field of application of Directive 89/391 must therefore be interpreted in such a way that its scope is restricted to what is strictly necessary in order to safeguard the interests which it allows the Member States to protect.

55
In that regard, the exclusion in the first subparagraph of Article 2(2) of Directive 89/391 was adopted purely for the purpose of ensuring the proper operation of services essential for the protection of public health, safety and order in cases, such as a catastrophe, the gravity and scale of which are exceptional and a characteristic of which is the fact that, by their nature, they do not lend themselves to planning as regards the working time of teams of emergency workers.

56
However, the civil protection service in the strict sense thus defined, at which the provision is aimed, can be clearly distinguished from the activities of emergency workers tending the injured and sick which are at issue in the main proceedings.

57
Even if a service such as the one with which the national court is concerned must deal with events which, by definition, are unforeseeable, the activities which it entails in normal conditions and which correspond moreover to the duties specifically assigned to a service of that kind are none the less capable of being organised in advance, including, in so far as they are concerned, the working hours of its staff.

58
The service thus exhibits no characteristic which inevitably conflicts with the application of the Community rules on the protection of the health and safety of workers and therefore is not covered by the exclusion in the first subparagraph of Article 2(2) of Directive 89/391, the directive instead applying to such a service.

59
It is apparent from the wording of Article 1(3) of Directive 93/104 that it applies to all sectors of activity, both public and private, within the meaning of Article 2 of Directive 89/391, with the exception of certain specific activities which are exhaustively listed.

60
None of those activities is relevant in relation to a service such as the one at issue in the main proceedings. In particular, it is clear that the activity of workers who, in the framework of an emergency medical service, attend on patients in an ambulance or emergency medical vehicle is not comparable to the activity of trainee doctors, to which Directive 93/104 does not apply by virtue of Article 1(3) thereof.

61
Consequently, an activity such as that with which the national court is concerned also falls within the scope of Directive 93/104.

62
As the Commission rightly pointed out, further support is lent to that finding by the fact that Article 17(2), point 2.1(c)(iii), of Directive 93/104 expressly refers to, inter alia, ambulance services. Such a reference would be redundant if the activity referred to was already excluded from the scope of Directive 93/104 in its entirety by virtue of Article 1(3). Instead, that reference shows that the Community legislature laid down the principle that the directive is applicable to activities of such a kind, whilst providing for the option, in given circumstances, to derogate from certain specific provisions of the directive.

63
In those circumstances, the answer to be given to Question 1(a) is that Article 2 of Directive 89/391 and Article 1(3) of Directive 93/104 must be construed as meaning that the activity of emergency workers, carried out in the framework of an emergency medical service such as that at issue before the national court, falls within the scope of the directives.

Question 1(b)

64
By Question 1(b), the national court is essentially asking whether, on a proper construction, the concept of 'road transport' in Article 1(3) of Directive 93/104 encompasses the activity of an emergency medical service, on account of the fact that the activity consists, at least in part, of using a vehicle and attending the patient during the journey to hospital.

65
In that regard, it must be observed that under Article 1(3) of Directive 93/104, the latter '[applies] to all sectors of activity … with the exception of air, rail, road, sea, inland waterway and lake transport …'.

66
In its judgment in Case C-133/00 *Bowden and Others* [2001] ECR I-7031, the Court ruled that on a proper construction of Article 1(3) all workers employed in the road transport sector, including office staff, are excluded from the scope of that directive.

67
Since they are exceptions to the Community system for the organisation of working time put in place by Directive 93/104, the exclusions from the scope of the directive provided for in Article 1(3) must be interpreted in such a way that their scope is limited to what is strictly necessary in order to safeguard the interests which the exclusions are intended to protect (see, by analogy, the judgment in *Jaeger*, paragraph 89).

68
The transport sector was excluded from the scope of Directive 93/104 on the grounds that a Community regulatory framework already existed in that sector, which laid down specific rules for, inter alia, the organisation of working time on account of the special nature of the activity in question. That legislation does not apply, however, to transport for emergencies or assistance.

69
Furthermore, the judgment in *Bowden* is based on the fact that the employer belonged to one of

the transport sectors specifically listed in Article 1(3) of Directive 93/104 (see paragraphs 39 to 41 of the judgment). However, it can hardly be argued that when the Deutsches Rotes Kreuz operates an emergency medical service such as that at issue in the main proceedings its activity pertains to the road transport sector.

70
The fact that that activity includes using an emergency vehicle and accompanying the patient on his journey to hospital is not decisive, since the main purpose of the activity concerned is to provide initial medical treatment to a person who is ill or injured and not to carry out an operation relating to the road transport sector.

71
Furthermore, it is necessary to bear in mind that ambulance services are specifically included in Article 17(2), point 2.1(c)(iii), of Directive 93/104. Their inclusion, which is intended to enable there to be a derogation from certain specific provisions of the directive, would be redundant if such services were already excluded from the field of application of the directive in its entirety pursuant to Article 1(3) thereof.

72
In those circumstances, the concept of 'road transport' in Article 1(3) of Directive 93/104 does not encompass an emergency medical service such as that at issue in the main proceedings.

73
That interpretation is not undermined by the judgment in *Tögel*, to which the national court refers, since the subject-matter of the judgment was not the interpretation of Directive 93/104 but rather that of Council Directive 92/50/EEC of 18 June 1992 relating to the coordination of procedures for the award of public service contracts (JO 1992 L 209, p. 1), the contents and purpose of which are wholly irrelevant for the purpose of determining the scope of Directive 93/104.

74
In the light of all of the foregoing considerations, the answer to Question 1(b) must be that, on a proper construction, the concept of 'road transport' in Article 1(3) of Directive 93/104 does not encompass the activity of an emergency medical service, even though the latter includes using a vehicle and accompanying a patient on his journey to hospital.

The second question

75
By its second question, the national court is asking in substance whether the first indent of Article 18(1)(b)(i) of Directive 93/104 is to be construed as requiring consent to be expressly and freely given by each worker individually if the 48-hour maximum period of weekly working time, as laid down in Article 6 of the directive, is to be validly extended or whether it is sufficient in that regard that the relevant person's employment contract refers to a collective agreement which permits such an extension.

76
In order to reply to the question formulated in this manner, it must be borne in mind, first, that it is apparent from Article 118a of the Treaty, the legal basis for Directive 93/104, from the first, fourth, seventh and eighth recitals in the preamble to the directive and from the actual wording of Article 1(1) of the directive that its objective is to guarantee the better protection of the safety and health of workers by affording them minimum rest periods – especially on a daily and

weekly basis –and adequate breaks and by providing for an upper limit on weekly working time.

77
Second, under the system established by Directive 93/104, only some of its provisions, which are exhaustively listed, may form the subject-matter of derogations by the Member States or the two sides of industry. Furthermore, the implementation of such derogations is subject to strict conditions intended to secure effective protection for the safety and health of workers.

78
Thus, Article 18(1)(b)(i) of Directive 93/104 provides that Member States have the right not to apply Article 6 provided that they observe the general principles of the protection of the safety and health of workers and that they satisfy a certain number of conditions set out cumulatively in Article 18(1)(b)(i).

79
In particular, the first indent of Article 18(1)(b)(i) requires that working time should not exceed 48 hours over a 7-day period, calculated as an average for the reference period referred to in point 2 of Article 16 of Directive 93/104, the worker none the less being able to agree to work more than 48 hours per week.

80
In that regard, the Court has already held, in paragraph 73 of the judgment in *Simap*, that, as is apparent from its actual wording, the first indent of Article 18(1)(b)(i) of Directive 93/104 requires the consent of the individual worker.

81
In paragraph 74 of *Simap*, the Court concluded that the consent given by trade-union representatives in the context of a collective or other agreement is not equivalent to that given by the worker himself, as provided for in the first indent of Article 18(1)(b)(i) of Directive 93/104.

82
That interpretation derives from the objective of Directive 93/104, which seeks to guarantee the effective protection of the safety and health of workers by ensuring that they actually have the benefit of, inter alia, an upper limit on weekly working time and minimum rest periods. Any derogation from those minimum requirements must therefore be accompanied by all the safeguards necessary to ensure that, if the worker concerned is encouraged to relinquish a social right which has been directly conferred on him by the directive, he must do so freely and with full knowledge of all the facts. Those requirements are all the more important given that the worker must be regarded as the weaker party to the employment contract and it is therefore necessary to prevent the employer being in a position to disregard the intentions of the other party to the contract or to impose on that party a restriction of his rights without him having expressly given his consent in that regard.

83
Those considerations are equally relevant so far as the situation described in the second question is concerned.

84
It follows that, for a derogation from the maximum period of weekly working time laid down in Article 6 of Directive 93/104 (48 hours) to be valid, the worker's consent must be given not only individually but also expressly and freely.

85
Those conditions are not met where the worker's employment contract merely refers to a collective agreement authorising an extension of maximum weekly working time. It is by no means certain that, when he entered into such a contract, the worker concerned knew of the restriction of the rights conferred on him by Directive 93/104.

86
The answer to the second question must therefore be that the first indent of Article 18(1)(b)(i) of Directive 93/104 is to be construed as requiring consent to be expressly and freely given by each worker individually if the 48-hour maximum period of weekly working time, as laid down in Article 6 of the directive, is to be validly extended. In that connection, it is not sufficient that the relevant worker's employment contract refers to a collective agreement which permits such an extension.

The third question

87
By its third question, the national court is essentially asking whether, if Directive 93/104 has been implemented incorrectly, Article 6(2) thereof may be taken to have direct effect.

88
As is clear both from its wording and from the context in which it occurs, there are two aspects to that question: the first concerns the interpretation of Article 6(2) of Directive 93/104 for the purpose of enabling the national court to decide whether the relevant rules of national law are compatible with the requirements of Community law, whilst the second concerns whether, if the Member State concerned has transposed Article 6(2) into national law incorrectly, that provision satisfies the conditions which would enable an individual to rely on it before the national courts in circumstances such as those in the main proceedings.

89
Those two issues must be examined in turn.

The import of Article 6(2) of Directive 93/104

90
As a preliminary point, it must be observed that Article 6(2) of Directive 93/104 requires the Member States to take the measures necessary to ensure, as a function of the requirement for the protection of workers' safety and health, that the average working time for each 7-day period, including overtime, does not exceed 48 hours.

91
It is apparent from Article 118a of the Treaty, which is the legal basis for Directive 93/104, from the first, fourth, seventh and eighth recitals in the preamble to the directive, from the Community Charter of the Fundamental Social Rights of Workers, adopted at the meeting of the European Council held at Strasbourg on 9 December 1989, points 8 and 19, first subparagraph, thereof, which are referred to in the fourth recital to the directive, and from the actual wording of Article 1(1) of the directive that the latter's purpose is to lay down minimum requirements intended to improve the living and working conditions of workers through approximation of national provisions concerning, in particular, the duration of working time. This Community-level harmonisation of the organisation of working time seeks to guarantee a better level of protection of the safety and health of workers by ensuring that they are entitled to minimum rest periods – particularly daily and weekly – and adequate breaks (see *Jaeger*, paragraphs 45 to

47).

92
Thus, Directive 93/104 imposes more specifically (in Article 6(2)) a 48-hour limit for the average working week, a maximum which is expressly stated to include overtime.

93
In that context, the Court has already held that on-call time ('Bereitschaftsdienst'), where the worker is required to be physically present at a place specified by his employer, must be regarded as wholly working time for the purposes of Directive 93/104, irrespective of the fact that, during periods of on-call time, the person concerned is not continuously carrying on any professional activity (see *Jaeger*, paragraphs 71, 75 and 103).

94
The same must be true of periods of duty time ('Arbeitsbereitschaft') completed by emergency workers in the framework of an emergency service, which necessarily entails periods of inactivity of varying length in between calls.

95
Such periods of duty time must accordingly be taken into account in their totality in the calculation of maximum daily and weekly working time.

96
Furthermore, it is evident that under the system established by Directive 93/104, although Article 15 allows generally for the application or introduction of national provisions more favourable to the protection of the safety and health of employees, only certain specifically mentioned provisions of the directive may form the subject-matter of derogations by the Member States or social partners (see *Jaeger*, paragraph 80).

97
However, in the first place, Article 6 of Directive 93/104 is referred to only in Article 17(1) and it is undisputed that the latter provision covers activities which bear no relation at all to those carried out by emergency workers such as the claimants in the main proceedings. By contrast, Article 17(2), point 2.1(c)(iii), refers to 'activities involving the need for continuity of service', including in particular 'ambulance services', but this provision gives scope for derogating from only Articles 3, 4, 5, 8 and 16 of the directive.

98
In the second place, Article 18(1)(b)(i) of Directive 93/104 provides that the Member States have the right not to apply Article 6 provided that they observe the general principles of protection of the safety and health of workers and that they satisfy a number of conditions set out cumulatively in Article 18(1)(b)(i), but it is not disputed that the Federal Republic of Germany has not availed itself of that option to derogate (see *Jaeger*, paragraph 85).

99
Moreover, by virtue of the Court's case-law the Member States cannot unilaterally determine the scope of the provisions of Directive 93/104 by attaching conditions or restrictions to the implementation of the workers' right under Article 6(2) of the directive not to work more than 48 hours per week (see, to that effect, *Jaeger*, paragraphs 58 and 59). Any other interpretation would misconstrue the purpose of the directive, which is intended to secure effective protection of the safety and health of workers by allowing them to enjoy minimum periods of rest (see *Jaeger*, paragraphs 70 and 92).

100
In those circumstances, it must be concluded that, in view of both the wording of Article 6(2) of Directive 93/104 and the purpose and scheme of the directive, the 48-hour upper limit on average weekly working time, including overtime, constitutes a rule of Community social law of particular importance from which every worker must benefit, since it is a minimum requirement necessary to ensure protection of his safety and health (see, by analogy, Case C-173/99 *BECTU* [2001] ECR I-4881, paragraphs 43 and 47), and therefore national legislation, such as that at issue in the main proceedings, which authorises weekly working time in excess of 48 hours, including periods of duty time ('Arbeitsbereitschaft'), is not compatible with the requirements of Article 6(2) of the directive.

101
Accordingly, the answer to the third question, as regards the first aspect, is that Article 6(2) of Directive 93/104 must be interpreted, in circumstances such as those in the main proceedings, as precluding legislation in a Member State the effect of which, as regards periods of duty time ('Arbeitsbereitschaft') completed by emergency workers in the framework of the emergency medical service of a body such as the Deutsches Rotes Kreuz, is to permit, including by means of a collective agreement or works agreement based on such an agreement, the 48-hour maximum period of weekly working time laid down by that provision to be exceeded.

The direct effect of Article 6(2) Directive 93/104 and the ensuing consequences in the cases before the national court

102
Since, in circumstances such as those in the main proceedings, the relevant national legislation is not compatible with the requirements of Directive 93/104 as regards maximum weekly working time, it remains to be considered whether Article 6(2) of the directive fulfils the conditions for it to have direct effect.

103
In that regard, it is clear from the settled case-law of the Court that, whenever the provisions of a directive appear, so far as their subject-matter is concerned, to be unconditional and sufficiently precise, they may be relied upon before the national courts by individuals against the State where the latter has failed to implement the directive in domestic law by the end of the period prescribed or where it has failed to implement the directive correctly (see, inter alia, Joined Cases C-6/90 and C-9/90 *Francovich and Others* [1991] ECR I-5357, paragraph 11, and Case C-62/00 *Marks & Spencer* [2002] ECR I-6325, paragraph 25).

104
Article 6(2) of Directive 93/104 satisfies those criteria, since it imposes on Member States in unequivocal terms a precise obligation as to the result to be achieved, which is not coupled with any condition regarding application of the rule laid down by it, which provides for a 48-hour maximum, including overtime, as regards average weekly working time.

105
Even though Directive 93/104 leaves the Member States a degree of latitude when they adopt rules in order to implement it, particularly as regards the reference period to be fixed for the purposes of applying Article 6 of that directive, and even though it also permits them to derogate from Article 6, those factors do not alter the precise and unconditional nature of Article 6(2). First, it is clear from the wording of Article 17(4) of the directive that the reference period can never exceed 12 months and, second, the Member States' right not to apply Article 6 is subject to compliance with all the conditions set out in Article 18(1)(b)(i) of the directive. It is

therefore possible to determine the minimum protection which must be provided in any event (see, to that effect, *Simap*, paragraphs 68 and 69).

106
As a consequence, Article 6(2) of Directive 93/104 fulfils all the conditions necessary for it to produce direct effect.

107
It still remains to determine the legal consequences which a national court must derive from that interpretation in circumstances such as those in the main proceedings, which involve individuals.

108
In that regard, the Court has consistently held that a directive cannot of itself impose obligations on an individual and cannot therefore be relied upon as such against an individual (see, inter alia, Case 152/84 *Marshall* [1986] ECR 723, paragraph 48; Case C-91/92 *Faccini Dori* [1994] ECR I-3325, paragraph 20; and Case C-201/02 *Wells* [2004] ECR I-0000, paragraph 56).

109
It follows that even a clear, precise and unconditional provision of a directive seeking to confer rights or impose obligations on individuals cannot of itself apply in proceedings exclusively between private parties.

110
However, it is apparent from case-law which has also been settled since the judgment of 10 April 1984 in Case 14/83 *Von Colson and Kamann* [1984] ECR 1891, paragraph 26, that the Member States' obligation arising from a directive to achieve the result envisaged by the directive and their duty under Article 10 EC to take all appropriate measures, whether general or particular, to ensure the fulfilment of that obligation is binding on all the authorities of Member States including, for matters within their jurisdiction, the courts (see, inter alia, Case C-106/89 *Marleasing* [1990] ECR I-4135, paragraph 8; *Faccini Dori*, paragraph 26; Case C-126/96 *Inter-Environnement Wallonie* [1997] ECR I-7411, paragraph 40; and Case C-131/97 *Carbonari and Others* [1999] ECR I-1103, paragraph 48).

111
It is the responsibility of the national courts in particular to provide the legal protection which individuals derive from the rules of Community law and to ensure that those rules are fully effective.

112
That is *a fortiori* the case when the national court is seised of a dispute concerning the application of domestic provisions which, as here, have been specifically enacted for the purpose of transposing a directive intended to confer rights on individuals. The national court must, in the light of the third paragraph of Article 249 EC, presume that the Member State, following its exercise of the discretion afforded it under that provision, had the intention of fulfilling entirely the obligations arising from the directive concerned (see Case C-334/92 *Wagner Miret* [1993] ECR I-6911, paragraph 20).

113
Thus, when it applies domestic law, and in particular legislative provisions specifically adopted for the purpose of implementing the requirements of a directive, the national court is bound to interpret national law, so far as possible, in the light of the wording and the purpose of the

directive concerned in order to achieve the result sought by the directive and consequently comply with the third paragraph of Article 249 EC (see to that effect, inter alia, the judgments cited above in *Von Colson and Kamann*, paragraph 26; *Marleasing*, paragraph 8, and *Faccini Dori*, paragraph 26; see also Case C-63/97 *BMW* [1999] ECR I-905, paragraph 22; Joined Cases C-240/98 to C-244/98 *Océano Grupo Editorial and Salvat Editores* [2000] ECR I-4941, paragraph 30; and Case C-408/01 *Adidas-Salomon and Adidas Benelux* [2003] ECR I-0000, paragraph 21).

114
The requirement for national law to be interpreted in conformity with Community law is inherent in the system of the Treaty, since it permits the national court, for the matters within its jurisdiction, to ensure the full effectiveness of Community law when it determines the dispute before it (see, to that effect, Case C-160/01 *Mau* [2003] ECR I-4791, paragraph 34).

115
Although the principle that national law must be interpreted in conformity with Community law concerns chiefly domestic provisions enacted in order to implement the directive in question, it does not entail an interpretation merely of those provisions but requires the national court to consider national law as a whole in order to assess to what extent it may be applied so as not to produce a result contrary to that sought by the directive (see, to that effect, *Carbonari*, paragraphs 49 and 50).

116
In that context, if the application of interpretative methods recognised by national law enables, in certain circumstances, a provision of domestic law to be construed in such a way as to avoid conflict with another rule of domestic law or the scope of that provision to be restricted to that end by applying it only in so far as it is compatible with the rule concerned, the national court is bound to use those methods in order to achieve the result sought by the directive.

117
In such circumstances, the national court, when hearing cases which, like the present proceedings, fall within the scope of Directive 93/104 and derive from facts postdating expiry of the period for implementing the directive, must, when applying the provisions of national law specifically intended to implement the directive, interpret those provisions so far as possible in such a way that they are applied in conformity with the objectives of the directive (see, to that effect, the judgment in Case C-456/98 *Centrosteel* [2000] ECR I-6007, paragraphs 16 and 17).

118
In this instance, the principle of interpretation in conformity with Community law thus requires the referring court to do whatever lies within its jurisdiction, having regard to the whole body of rules of national law, to ensure that Directive 93/104 is fully effective, in order to prevent the maximum weekly working time laid down in Article 6(2) of the directive from being exceeded (see, to that effect, *Marleasing*, paragraphs 7 and 13).

119
Accordingly, it must be concluded that, when hearing a case between individuals, a national court is required, when applying the provisions of domestic law adopted for the purpose of transposing obligations laid down by a directive, to consider the whole body of rules of national law and to interpret them, so far as possible, in the light of the wording and purpose of the directive in order to achieve an outcome consistent with the objective pursued by the directive. In the main proceedings, the national court must thus do whatever lies within its jurisdiction to ensure that the maximum period of weekly working time, which is set at 48 hours by Article 6(2)

of Directive 93/104, is not exceeded.

120
In view of all the foregoing reasoning, the answer to the third question must be that:

– Article 6(2) of Directive 93/104 must be interpreted, in circumstances such as those in the main proceedings, as precluding legislation in a Member State the effect of which, as regards periods of duty time ('Arbeitsbereitschaft') completed by emergency workers in the framework of the emergency medical service of a body such as the Deutsches Rotes Kreuz, is to permit, including by means of a collective agreement or works agreement based on such an agreement, the 48-hour maximum period of weekly working time laid down by that provision to be exceeded;

– the provision fulfils all the conditions necessary for it to have direct effect;

– when hearing a case between individuals, the national court is required, when applying the provisions of domestic law adopted for the purpose of transposing obligations laid down by a directive, to consider the whole body of rules of national law and to interpret them, so far as possible, in the light of the wording and purpose of the directive in order to achieve an outcome consistent with the objective pursued by the directive. In the main proceedings, the national court must thus do whatever lies within its jurisdiction to ensure that the maximum period of weekly working time, which is set at 48 hours by Article 6(2) of Directive 93/104, is not exceeded.

Costs

121
Since these proceedings are, for the parties to the main proceedings, a step in the actions pending before the national court, the decision on costs is a matter for that court. The costs incurred by parties other than those to the main proceedings in submitting observations to the Court are not recoverable.

On those grounds, the Court (Grand Chamber) rules:

1. (a) Article 2 of Council Directive 89/391/EEC of 12 June 1989 on the introduction of measures to encourage improvements in the safety and health of workers at work and Article 1(3) of Council Directive 93/104/EC of 23 November 1993 concerning certain aspects of the organisation of working time must be construed as meaning that the activity of emergency workers, carried out in the framework of an emergency medical service, such as that at issue before the national court, falls within the scope of the directives.

b) On a proper construction, the concept of 'road transport' in Article 1(3) of Directive 93/104 does not encompass the activity of an emergency medical service, even though the latter includes using a vehicle and accompanying a patient on the journey to hospital.

2. – The first indent of Article 18(1)(b)(i) of Directive 93/104 is to be construed as

requiring consent to be expressly and freely given by each worker individually if the 48-hour maximum period of weekly working time, as laid down in Article 6 of the directive, is to be validly extended. In that connection, it is not sufficient that the relevant worker's employment contract refers to a collective agreement which permits such an extension.

3. − **Article 6, point 2, of Directive 93/104 must be interpreted, in circumstances such as those in the main proceedings, as precluding legislation in a Member State the effect of which, as regards periods of duty time ('Arbeitsbereitschaft') completed by emergency workers in the framework of the emergency medical service of a body such as the Deutsches Rotes Kreuz, is to permit, including by means of a collective agreement or works agreement based on such an agreement, the 48-hour maximum period of weekly working time laid down by that provision to be exceeded;**

Signatures.

JUDGMENT OF THE COURT (First Chamber)

24 June 2004 *

In Case C-350/02,

Commission of the European Communities, represented by M. Shotter and W. Wils, acting as Agents, with an address for service in Luxembourg,

applicant,

v

Kingdom of the Netherlands, represented by S. Terstal, acting as Agent,

defendant,

APPLICATION for a declaration that, by failing to adopt all the laws, regulations and administrative provisions necessary to transpose into national law Articles 6 and 9 of Directive 97/66/EC of the European Parliament and of the Council of 15

* Language of the case: Dutch.

December 1997 concerning the processing of personal data and the protection of privacy in the telecommunications sector (OJ 1998 L 24, p. 1) or, at least, by not communicating those provisions to the Commission, the Kingdom of the Netherlands has failed to fulfil its obligations under the EC Treaty,

THE COURT (First Chamber),

composed of: P. Jann, President of the Chamber, A. La Pergola, S. von Bahr, R. Silva de Lapuerta and K. Lenaerts (Rapporteur), Judges,

Advocate General: J. Kokott,
Registrar: M.-F. Contet, Principal Administrator,

having regard to the Report for the Hearing,

after hearing oral argument from the parties at the hearing on 13 November 2003 at which the Commission was represented by W. Wils, assisted by P. Gerard, expert, and the Kingdom of the Netherlands, by C. Wissels, acting as Agent, assisted by R.J. I. Dielemans, expert,

after hearing the Opinion of the Advocate General at the sitting on 29 January 2004,

gives the following

Judgment

1 By application lodged at the Court Registry on 1 October 2002, the Commission of the European Communities brought an action under Article 226 EC for a declaration that, by failing to adopt all the laws, regulations and administrative provisions necessary to transpose into national law Articles 6 and 9 of Directive 97/66/EC of the European Parliament and of the Council of 15 December 1997 concerning the processing of personal data and the protection of privacy in the telecommunications sector (OJ 1998 L 24, p. 1) or, at least, by not communicating those provisions to the Commission, the Kingdom of the Netherlands has failed to fulfil its obligations under the EC Treaty.

Legal framework

Community provisions

2 Under Article 1(1) thereof, Directive 97/66, which was in force at the material time, provided for 'the harmonisation of the provisions of the Member States required to

ensure an equivalent level of protection of fundamental rights and freedoms, and in particular the right to privacy, with respect to the processing of personal data in the telecommunications sector and to ensure the free movement of such data and of telecommunications equipment and services in the Community'.

3 Article 6 of Directive 97/66 provided:

'1. Traffic data relating to subscribers and users processed to establish calls and stored by the provider of a public telecommunications network and/or publicly available telecommunications service must be erased or made anonymous upon termination of the call without prejudice to the provisions of paragraphs 2, 3 and 4.

2. For the purpose of subscriber billing and interconnection payments, data indicated in the Annex may be processed. Such processing is permissible only up to the end of the period during which the bill may lawfully be challenged or payment may be pursued.

3. For the purpose of marketing its own telecommunications services, the provider of a publicly available telecommunications service may process the data referred to in paragraph 2, if the subscriber has given his consent.

4. Processing of traffic and billing data must be restricted to persons acting under the authority of providers of the public telecommunications networks and/or publicly available telecommunications services handling billing or traffic management, customer enquiries, fraud detection and marketing the provider's own telecommunications services and it must be restricted to what is necessary for the purposes of such activities.

5. Paragraphs 1, 2, 3 and 4 shall apply without prejudice to the possibility for competent authorities to be informed of billing or traffic data in conformity with applicable legislation in view of settling disputes, in particular interconnection or billing disputes.'

4 Article 9 of Directive 97/66 was worded as follows:

'Member States shall ensure that there are transparent procedures governing the way in which a provider of a public telecommunications network and/or a publicly available telecommunications service may override the elimination of the presentation of calling line identification:

(a) on a temporary basis, upon application of a subscriber requesting the tracing of malicious or nuisance calls; in this case, in accordance with national law, the

data containing the identification of the calling subscriber will be stored and be made available by the provider of a public telecommunications network and/or publicly available telecommunications service;

(b) on a per-line basis for organisations dealing with emergency calls and recognised as such by a Member State, including law enforcement agencies, ambulance services and fire brigades, for the purpose of answering such calls.'

5 The annex to Directive 97/66 stated:

'For the purpose referred to in Article 6(2) the following data may be processed:

Data containing the:

— number or identification of the subscriber station,

— address of the subscriber and the type of station,

— total number of units to be charged for the accounting period,

— called subscriber number,

— type, starting time and duration of the calls made and/or the data volume transmitted,

— date of the call/service,

— other information concerning payments such as advance payment, payments by instalments, disconnection and reminders.'

6 Under the first subparagraph of Article 15(1) of Directive 97/66 the Member States were to bring into force the laws, regulations and administrative provisions necessary for them to comply with this directive not later than 24 October 1998. Under Article 15(4) thereof, the Member States were to communicate to the Commission the text of the provisions of national law adopted by them in the field governed by the directive.

National provisions

7 The Wet houdende regels inzake de telecommunicatie (law governing the telecommunications sector, hereinafter the 'Telecommunicatiewet'), promulgated on 19 October 1998 (*Staatsblad* 1998, p. 610), contains a Chapter 11 seeking to transpose Directive 97/66.

8 Article 11(5) of the Telecommunicatiewet, which concerns the transposition of Article 6 of Directive 97/66, is worded as follows:

'1. In order to safeguard personal and private data, providers of a public telecommunications network and providers of a public telecommunications network shall ensure that, upon termination of a communication, traffic data processed concerning subscribers and users, as may be determined by general administrative measure, are to be subject to erasure or anonymity.

2. By way of exception to paragraph 1 above, traffic data may be processed only if and in so far as is necessary:

(a) to calculate the bill of a subscriber or of the person who has undertaken in law to the provider to pay that bill, or for the purpose of payments for interconnection or other forms of access;

(b) to enable the provider to undertake market research or to market its own telecommunications services, if the subscriber has given his consent thereto;

(c) to examine disputes or determine them under Article 12(1) or to define the rules under Article 6(3),

(d) to manage traffic,

(e) to provide customers with traffic data provided such data relates to such customers,

(f) to detect fraud; or

(g) it is lawful by or under a law.

3. Measures implementing this article shall be adopted by general administrative measure. Such provisions may relate only to data which may be processed in conjunction with traffic data, to the purposes for which processing may take place, to the period within which processing is lawful, and to the persons who may be entrusted with processing.'

Pre-litigation procedure

9 By letter of 7 January 1999 the Kingdom of the Netherlands communicated to the Commission the text of the Telecommunicatiewet, stating that it should be regarded as constituting the transposition into national law of Directive 97/66.

10 In accordance with Article 226 EC, the Commission, taking the view that the Telecommunicatiewet did not correctly transpose Articles 6, 9, 11 and 12 of Directive 97/66, put the Kingdom of the Netherlands on formal notice to submit its observations.

11 By letter of 8 January 2001 the Netherlands Government replied to that letter of formal notice, stating in particular that legislative measures were being drawn up which would fully satisfy its obligations under Directive 97/66.

12 On 18 July 2001 the Commission sent the Kingdom of the Netherlands a reasoned opinion in which it submitted that, upon examination of the national provisions at issue and the legislative measures being drawn up, it was of the view that the Netherlands had failed to fulfil its obligations under Articles 6 and 9 of Directive 97/66. The Kingdom of the Netherlands was requested to comply with that reasoned opinion within a period of two months of its notification.

13 The Kingdom of the Netherlands replied to the reasoned opinion by letter of 29 October 2001. Since it was not satisfied by that reply, the Commission decided to bring this action.

The action

Admissibility

14 In support of its application, the Commission raised four grounds of complaint concerning the Netherlands legislation transposing directive 97/66. Three of them relate to Article 6 of the directive and the fourth to Article 9 thereof.

15 One of the grounds of complaint relating to Article 6 of Directive 97/66 alleges the incorrect transposition in Article 11(5)(2) of the Telecommunicatiewet of Article 6 (2) to (5) of the directive. The Commission maintains that the provision of Netherlands law is not in conformity with Directive 97/66 inasmuch as it provides for a greater number of derogations from the principle laid down in Article 6(1) of the directive than are permitted under the terms thereof.

16 The Kingdom of the Netherlands argues that that ground of complaint was not mentioned in the reasoned opinion and is therefore inadmissible.

17 At the hearing the Commission submitted that the reasoned opinion had to be read in the light of the letter of formal notice which expressly mentioned the ground of complaint at issue.

18 In that regard it should be pointed out that in an action for failure to fulfil obligations the purpose of the pre-litigation procedure is to give the Member State

concerned an opportunity, on the one hand, to comply with its obligations under Community law and, on the other, to avail itself of its right to defend itself against the charges formulated by the Commission (see, in particular, Case 293/85 *Commission* v *Belgium* [1988] ECR 305, paragraph 13; Case C-96/95 *Commission* v *Germany* [1997] ECR I-1653, paragraph 22; and Case C-439/99 *Commission* v *Italy* [2002] ECR I-305, paragraph 10).

19 The proper conduct of that procedure constitutes an essential guarantee required by the Treaty not only in order to protect the rights of the Member State concerned, but also so as to ensure that any contentious procedure will have a clearly defined dispute as its subject-matter (see Case C-1/00 *Commission* v *France* [2001] ECR I-9989, paragraph 53, and Case C-287/00 *Commission* v *Germany* [2002] ECR I-5811, paragraph 17).

20 It follows that the subject-matter of proceedings under Article 226 EC is delimited by the pre-litigation procedure governed by that provision. The Commission's reasoned opinion and the application must be based on the same grounds and pleas, with the result that the Court cannot examine a ground of complaint which was not formulated in the reasoned opinion (Case 76/86 *Commission* v *Germany* [1989] ECR 1021, paragraph 8), which for its part must contain a cogent and detailed exposition of the reasons which led the Commission to the conclusion that the Member State concerned had failed to fulfil one of its obligations under the Treaty (see, in particular, *Commission* v *Italy*, paragraph 12, and Case C-287/00 *Commission* v *Germany*, paragraph 19).

21 It should also be emphasised that, whilst the formal letter of notice which comprises an initial succinct résumé of the alleged infringement, may be useful in construing the reasoned opinion, the Commission is none the less obliged to specify precisely in that opinion the grounds of complaint which it already raised more generally in the

letter of formal notice and alleges against the Member State concerned, after taking cognizance of any observations submitted by it under the first paragraph of Article 226 EC. That requirement is essential in order to delimit the subject-matter of the dispute prior to any initiation of the contentious procedure provided for in the second paragraph of Article 226 and in order to ensure that the Member State in question is accurately apprised of the grounds of complaint maintained against it by the Commission and can thus bring an end to the alleged infringements or put forward its arguments in defence prior to any application to the Court by the Commission.

22 In the present case it must be stated that in the letter of formal notice of 6 November 2000 the Commission set out three specific grounds of complaint concerning the transposition into Netherlands law of Article 6 of Directive 97/66. The first ground of complaint concerns the transposition of Article 6(1) of Directive 97/66 by Article 11(5)(1) of the Telecommunicatiewet. The second ground of complaint relates to the non-conformity of Article 11(5)(2) of the Telecommunicatiewet with Article 6(2) to (5) of Directive 97/66 and alleges that the Netherlands provision includes more derogations than those permitted by those paragraphs of Article 6. The third ground of complaint alleges a failure to notify the implementing provisions mentioned at Article 11(5)(3) of the Telecommunicatiewet.

23 In its reply of 8 January 2001 to the letter of formal notice, the Netherlands Government acknowledged that the grounds of complaint concerning transposition of Article 6(1) of Directive 97/66 and the failure to notify the implementing provisions mentioned in Article 11(5)(3) of the Telecommunicatiewet were well founded, at the same time pointing out that legislative measures were being drawn up in order to correct those deficiencies. Conversely, the Netherlands Government denied that Article 11(5)(2) of the Telecommunicatiewet provides for more derogations than those permitted by Article 6(2) to (5) of that directive.

24 It cannot but be noted that the Commission did not reproduce in its reasoned opinion of 18 July 2001 the ground of complaint based on the incorrect transposition of Article 6(2) to (5) of Directive 97/66 by Article 11(5)(2) of the Telecommunicatiewet. Furthermore, that reasoned opinion does not include any assessment concerning the objections formulated concerning that ground of complaint by the Netherlands authorities in their reply to the letter of formal notice.

25 In the reasoned opinion the Commission relies solely on the incompleteness of the transposition of Article 6 of Directive 97/66 owing to the fact the legislative measures mentioned in the reply by the Netherlands Government to the letter of formal notice were not communicated to it. Unlike the letter of formal notice, the reasoned opinion gives no indication such as to convey that Article 11(5)(2) of the Telecommunicatiewet is not in conformity with the provisions of Article 6(2) to (5) of that directive. Although the reasoned opinion refers to Article 6(1) thereof, and to the implementing provisions mentioned in Article 11(5)(3) of the Telecommunicatiewet, conversely it refers neither to paragraphs 2 to 5 of that article nor to paragraph 2 of Article 11(5).

26 In its reasoned opinion, the Commission accordingly clearly gave the impression that, unlike the two other grounds of complaint concerning Article 6 of Directive 97/66 mentioned in the letter of formal notice, the ground of complaint based on the incorrect transposition of paragraphs 2 to 5 of that provision by Article 11(5)(2) of the Telecommunicatiewet had been abandoned, in the same way as the grounds of complaint concerning transposition of Articles 11 and 12 of that directive. Thus, in their reply of 29 October 2001 to that reasoned opinion, the Netherlands authorities merely gave an account of progress in the enactment of the legislation mentioned in their letter of 8 January 2001 without expressing a view on the ground of complaint at issue.

27 The general reference to the letter of formal notice in the reasoned opinion in regard to Article 6 of Directive 97/66 cannot in that context be regarded as a sufficient indication enabling the Kingdom of the Netherlands to understand that the Commission had maintained against it the ground of complaint alleging incorrect transposition of Article 6(2) to (5) of that directive.

28 Under those circumstances the ground of complaint alleged in the Commission's application concerning the incorrect transposition of Article 6(2) to (5) of Directive 97/66 by Article 11(5)(2) of the Telecommunicatiewet must be regarded as irregular inasmuch as, on the one hand, it constitutes an extension of the subject-matter of the dispute as opposed to its extent as specified in the reasoned opinion and inasmuch as, on the other, the Kingdom of the Netherlands was deprived, owing to the failure to mention that ground of complaint in that opinion, of the opportunity of bringing an end to the infringement of which it was accused or of explaining itself in that regard prior to an application to the Court by the Commission.

29 Accordingly, the action must be declared inadmissible in so far as it concerns the ground of complaint alleging incorrect transposition of Article 6(2) to (5) of Directive 97/66 by Article 11(5)(2) of the Telecommunicatiewet.

Substance

30 The three other grounds of complaint formulated in the application are based, in the case of the first two, on the incomplete transposition of Article 6 of Directive 97/66 and, in the case of the third, on the incomplete transposition of Article 9 of that directive.

31 Before those complaints are examined, it should be recalled at the outset that, as the Court has repeatedly held, the question whether a Member State has failed to fulfil its obligations must be determined as at the end of the period laid down in the reasoned opinion (see, inter alia, Case C-384/97 *Commission* v *Greece* [2000] ECR I-3823, paragraph 35, and Case C-152/98 *Commission* v *Netherlands* [2001] ECR I-3463, paragraph 21).

32 Accordingly, the matters relied on by the Netherlands in its pleadings concerning, on the one hand, repeal of Directive 97/66 by Article 19 of Directive 2002/58/EC of the European Parliament and of the Council of 12 July 2002 concerning the processing of personal data and the protection of privacy in the electronic communications sector (Directive on privacy and electronic communications) (OJ 2002 L 201, p. 37) with effect from 31 October 2003 and, on the other, the existence of a bill to transpose the latter directive into Netherlands law, cannot affect the assessment to be made of the obligations of the Kingdom of the Netherlands as at expiry of the period of two months laid down in the reasoned opinion.

Grounds of complaint concerning incomplete transposition of Article 6 of Directive 97/66

33 In the first place, the Commission maintains that Article 11(5)(1) of the Telecommunicatiewet derogates from the general principle set out in Article 6(1) of Directive 97/66. It stresses that for that national provision to be in conformity with that directive the general administrative measure envisaged should include an exhaustive list of information. Since no measure containing such a list was communicated to it, the Commission considers that Article 6 of Directive 97/66 was not completely transposed.

34 Since the Netherlands Government acknowledges that not all the provisions necessary for the transposition of Article 6(1) of Directive 97/66 have been adopted, the ground of complaint raised by the Commission must be regarded as well founded.

35 Secondly, the Commission submits that, although Article 11(5)(3) of the Telecommunicatiewet refers to implementing provisions, none of them have been communicated to it. Consequently, it is of the view that Article 6 of Directive 97/66 was not fully transposed.

36 The Netherlands authorities retort that, since those implementing provisions have not been adopted, they could not be communicated to the Commission.

37 None the less, it should be pointed out that the Netherlands Government does not dispute that, in light of the wording in force at that time of Article 11(5) of the Telecommunicatiewet, the adoption of the implementing provisions mentioned in paragraph 3 of that article was necessary in order to support a finding that Article 6 of Directive 97/66 had been fully transposed.

38 Given that, first, the Netherlands Government has acknowledged that, as at the expiry of the period laid down in the reasoned opinion, the implementing provisions at issue had not been communicated to the Commission and that, second, failure to

adopt those provisions by that date cannot reasonably be relied on to justify that infringement, it must be concluded that the ground of complaint raised by the Commission is well founded.

39 It follows from the foregoing that the Commission is legally entitled to take the view that Article 6 of Directive 97/66 has not been fully transposed into Netherlands law on the ground that, on the one hand, Article 11(5)(1) of the Telecommunicatiewet refers to a list of information to be determined by a general administrative measure which was not communicated to it and that, second, the implementing provisions mentioned in paragraph 3 of Article 11(5) aforesaid were not communicated to it.

Ground of complaint based on the incomplete transposition of Article 9 of Directive 97/66

40 The Commission alleges that Article 9(a) of Directive 97/66 has not been transposed into Netherlands law with the result that that article has not been fully transposed.

41 Since there have in fact been no Netherlands provisions transposing Article 9(a) of Directive 97/66, as the Netherlands Government has moreover acknowledged, the

Commission's ground of complaint alleging incomplete transposition of Article 9 aforesaid must be regarded as well founded.

42 It must therefore be held that, by incompletely transposing Article 6 of Directive 97/66, in that, first, Article 11(5)(1) of the Telecommunicatiewet refers to a general administrative measure which was not communicated to the Commission and in that, second, the implementing provisions mentioned in Article 11(5)(3) of the Telecommunicatiewet were not communicated to the Commission, and by incompletely transposing Article 9 of that directive, the Kingdom of the Netherlands has failed to fulfil its obligations under that directive.

Costs

43 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been asked for in the successful party's pleadings. Under Article 69(3) thereof, the Court may order that costs be shared or that the parties are to bear their own costs if each party succeeds on some and fails on other heads. Since the Kingdom of the Netherlands has been unsuccessful in respect of three of the four grounds of complaint raised by the Commission, it must, in accordance with the form of order sought by the Commission, be ordered to bear three quarters of the Commission's costs. Since the Kingdom of the Netherlands made no request concerning costs, as to the remainder the parties are to bear their own costs.

On those grounds,

THE COURT (First Chamber)

hereby:

1. **Declares that, by incompletely transposing Article 6 of Directive 97/66/EC of the European Parliament and of the Council of 15 December 1997 concerning the processing of personal data and the protection of privacy in the telecommunications sector, in that, first, Article 11(5)(1) of the Wet houdende regels inzake de telecommunicatie (Telecommunicatiewet) refers to a general administrative measure which was not communicated to the Commission of the European Communities and in that, second, the implementing provisions mentioned in Article 11(5)(3) of the Telecommunicatiewet were not communicated to the Commission, and by incompletely transposing Article 9 of that directive, the Kingdom of the Netherlands has failed to fulfil its obligations under that directive;**

2. **Dismisses the remainder of the action;**

3. **Orders the Kingdom of the Netherlands to bear, in addition to its own costs, three quarters of the Commission's costs;**

4. **As to the remainder of the action orders the Commission to bear its own costs.**

Jann La Pergola von Bahr

Silva de Lapuerta Lenaerts

Delivered in open court in Luxembourg on 24 June 2004.

Registrar President of the Chamber

Case C-461/03

Gaston Schul Douane-expediteur BV

v

Minister van Landbouw, Natuur en Voedselkwaliteit

(Reference for a preliminary ruling from the College van Beroep voor het bedrijfsleven)

(Article 234 EC – Obligation on a national court to seek a preliminary ruling – Invalidity of a provision of Community law – Sugar – Additional import duty – Regulation (EC) No 1423/95 – Article 4)

Summary of the Judgment

1. *Preliminary rulings – Assessment of validity – Finding of invalidity of Community provisions comparable to those already declared invalid by the Court – Lack of jurisdiction of national courts – Duty to refer*

   (Art. 230 EC, Art. 234 EC, third para., and Art. 241 EC)

2. *Agriculture – Common organisation of the markets – Sugar – Trade with non-member countries – Additional import duties – Determination on the basis of the cif import price – Obligation on the importer to make an application – Determination on the basis of the representative price – Not valid*

   (Commission Regulation No 1423/95, Arts 1(2) and 4(1) and (2))

1. The third paragraph of Article 234 EC requires a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law to seek a ruling from the Court of Justice on a question relating to the validity of the provisions of a regulation even where the Court has already declared invalid analogous provisions of another comparable regulation. National courts have no jurisdiction themselves to determine that acts of Community institutions are invalid.

   Although the rule that national courts may not themselves determine that Community acts are invalid may have to be qualified in certain circumstances in the case of proceedings relating to an application for interim measures, the interpretation adopted in *Cilfit and Others*, referring to questions of interpretation, cannot be extended to questions relating to the validity of Community acts.

   That solution is imposed, first, by the requirement of uniformity in the application of Community law. That requirement is particularly vital where the validity of a Community act is in question. Differences between courts of the Member States as to the validity of Community acts would be liable to jeopardise the essential unity of the Community legal order and undermine the fundamental requirement of legal certainty.

   It is imposed, secondly, by the necessary coherence of the system of judicial protection instituted by the EC Treaty. References for a preliminary ruling on validity constitute, on the same basis as actions for annulment, a means of reviewing the legality of Community acts. By Articles 230 EC and 241 EC, on the one hand, and Article 234 EC, on the other, the Treaty established a complete system of legal remedies and procedures designed to ensure review of the legality of acts of the institutions and has entrusted such review to the Community Courts.

(see paras 17-19, 21-22, 25, operative part 1)

2. Paragraphs (1) and (2) of Article 4 of Regulation No 1423/95 laying down detailed implementing rules for the import of products in the sugar sector other than molasses are invalid inasmuch as they provide that the additional duty referred to therein is, as a general rule, established on the basis of the representative price referred to in Article 1(2) of that regulation and that that duty is established on the basis of the cif import price of the shipment concerned only if the importer so requests.

(see para. 32, operative part 2)

JUDGMENT OF THE COURT (Grand Chamber)

6 December 2005 (*)

(Article 234 EC – Obligation on a national court to seek a preliminary ruling – Invalidity of a provision of Community law – Sugar – Additional import duty – Regulation (EC) No 1423/95 – Article 4)

In Case C-461/03,

REFERENCE for a preliminary ruling under Article 234 EC from the College van Beroep voor het bedrijfsleven (Netherlands), made by decision of 24 October 2003, received at the Court on 4 November 2003, in the proceedings

Gaston Schul Douane-expediteur BV

v

Minister van Landbouw, Natuur en Voedselkwaliteit,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann, C.W.A. Timmermans, A. Rosas and J. Malenovský, Presidents of Chambers, N. Colneric (Rapporteur), S. von Bahr, J.N. Cunha Rodrigues, R. Silva de Lapuerta, K. Lenaerts, G. Arestis, A. Borg Barthet and M. Ilešič, Judges,

Advocate General: D. Ruiz-Jarabo Colomer,

Registrar: R. Grass,

having regard to the written procedure,

after considering the observations submitted on behalf of:

– the Netherlands Government, by H.G. Sevenster and N.A.J. Bel, acting as Agents,

– the Commission of the European Communities, by T. van Rijn and M. van Beek, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 30 June 2005,

gives the following

Judgment

1 The reference for a preliminary ruling concerns the interpretation of Article 234 EC and the validity of Article 4(1) and (2) of Commission Regulation (EC) No 1423/95 of 23 June 1995 laying down detailed implementing rules for the import of products in the sugar sector other than molasses (OJ 1995 L 141, p. 16).

2 The reference was made in proceedings between Gaston Schul Douane-expediteur BV ('Gaston Schul') and the Minister van Landbouw, Natuur en Voedselkwaliteit ('the Minister for Agriculture') regarding the import of cane sugar.

Legal context

3 Pursuant to Article 234 EC:

'The Court of Justice shall have jurisdiction to give preliminary rulings concerning:

(a) the interpretation of this Treaty;

(b) the validity and interpretation of acts of the institutions of the Community and of the ECB;

(c) the interpretation of the statutes of bodies established by an act of the Council, where those statutes so provide.

Where such a question is raised before any court or tribunal of a Member State, that court or tribunal may, if it considers that a decision on the question is necessary to enable it to give judgment, request the Court of Justice to give a ruling thereon.

Where any such question is raised in a case pending before a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law, that court or tribunal shall bring the matter before the Court of Justice.'

4 The Agreement on Agriculture in Annex 1A to the Agreement establishing the World Trade Organisation ('the WTO') was approved on behalf of the Community by virtue of the first indent of Article 1(1) of Council Decision 94/800/EC of 22 December 1994 concerning the conclusion on behalf of the European Community, as regards matters within its competence, of the agreements reached in the Uruguay Round multilateral negotiations (1986-1994) (OJ 1994 L 336, p. 1). Article 5 of the Agreement on Agriculture provides as follows:

'1. Notwithstanding the provisions of paragraph 1(b) of Article II of GATT 1994, any Member may take recourse to the provisions of paragraphs 4 and 5 below ... if:

(a) …

(b) the price at which imports of that product may enter the customs territory of the Member [of the WTO] granting the concession, as determined on the basis of the cif import price of the shipment concerned expressed in terms of its domestic currency, falls below a trigger price equal to the average 1986 to 1988 reference price for the product concerned.

…

5. The additional duty imposed under subparagraph 1(b) shall be set according to the following schedule:

…'

5 Article 15(3) of Council Regulation (EEC) No 1785/81 of 30 June 1981 on the common organisation of the markets in the sugar sector (OJ 1981 L 177, p. 4), as amended by Council Regulation (EC) No 3290/94 of 22 December 1994 on the adjustments and transitional arrangements required in the agriculture sector in order to implement the agreements concluded during the Uruguay Round of multilateral trade negotiations (OJ 1994 L 349, p. 105) ('the basic regulation') provides that 'the import prices to be taken into consideration for imposing an additional import duty shall be determined on the basis of the cif import prices of the consignment under consideration' and that 'cif import prices shall be checked to that end against the representative prices for the product on the world market or on the Community import market for that product'.

6 The Commission of the European Communities adopted Regulation (EC) No 1423/95 laying down detailed implementing rules for the basic regulation. Article 4 of Regulation No 1423/95 provides:

'1. In the absence of a request as referred to in paragraph 2 or where the cif import price of the consignment in question as referred to in paragraph 2 is less than the relevant representative price fixed by the Commission, the cif import price of the consignment in question to be taken into account for the imposition of an additional duty shall be the representative price referred to in Article 1(2) or (3).

2. When the cif price of the consignment in question is higher than the relevant representative price as referred to in Article 1(2) or (3), the importer may, on request made to the competent authority of the importing Member State at the time of acceptance of the import declaration, have applied for the purposes of establishing the additional duty either the cif import price of the consignment in question of white sugar or raw sugar converted into the standard quality as defined, respectively, in Article 1 of Regulation (EEC) No 793/72 and Article 1 of Regulation (EEC) No 431/68, or the equivalent price for the product falling within CN code 1702 90 99, as the case may be.

The cif import price of the consignment in question shall be converted into the price of sugar of the standard quality by adjustment pursuant to the relevant provisions of Article 5 of Regulation (EEC) No 784/68.

In such cases the cif import price of the consignment in question shall apply for the purposes of establishing the additional duty, provided that the interested party submits to the competent authorities of the importing Member State at least the following evidence:

– the contract of purchase or equivalent proof,

– the insurance contract,

– the invoice,

– the transport contract (where applicable),

– the certificate of origin,

– in the case of maritime transport, the bill of lading,

within thirty days of the date on which the import declaration was accepted.

The Member State in question may require any other information and documents in support of the request. As soon as the request has been lodged, the additional duty in question as fixed by the Commission shall apply.

However, the difference between the additional duty in question fixed by the Commission and the additional duty established on the basis of the cif import price of the consignment in question

shall give rise, at the request of the interested party, to the lodging by the latter of a security pursuant to Article 248 of Commission Regulation (EEC) No 2454/93.

The security shall be released as soon as the competent authority of the importing Member State accepts the request on the basis of the evidence supplied by the interested party.

The competent authority of the Member State shall refuse the request if it judges that the evidence supplied does not justify it.

If the authority does not accept the request, the security shall be forfeit.

…'

The main proceedings and the questions referred for a preliminary ruling

7 On 6 May 1998 Gaston Schul declared the import of 20 000 kg of raw cane sugar from Brazil at a cif price of NLG 31 916. According to the information sent by the customs authorities on 13 May 1998 with the comment 'check concluded without adjustments', the amount of the import duty due was NLG 20 983.70. On 4 August 1998 the inspector of the Tax Department of Roosendaal Customs District, on behalf of the Minister for Agriculture, requested payment from Gaston Schul of NLG 4 968.30 in respect of an 'agricultural levy'. This levy was calculated as follows: 20 000 kg multiplied by NLG 24.841182 (ECU 11.11) in respect of additional import duty per 100 kg. After making an unsuccessful claim against that notice of duty, Gaston Schul brought an action before the national court.

8 That court has noted, first, that Article 15 of the basic regulation, laying down the system for additional duty in the sugar sector, is identical to Article 5 of Regulation (EEC) No 2777/75 of the Council of 29 October 1975 on the common organisation of the market in poultrymeat (OJ 1975 L 282, p. 77), as amended by Regulation No 3290/94, those two provisions, in their current versions, having been adopted on the same date.

9 In the poultrymeat and egg sector, the Court, in its judgment in Case C-317/99 *Kloosterboer Rotterdam* [2001] ECR I-9863, declared invalid paragraphs (1) and (3) of Article 3 of Commission Regulation (EC) No 1484/95 of 28 June 1995 laying down detailed rules for implementing the system of additional import duties and fixing additional import duties in the poultrymeat and egg sectors and for egg albumin, and repealing Regulation No 163/67/EEC (OJ 1995 L 145, p. 47), inasmuch as they provide that the additional duty referred to therein is, as a general rule, established on the basis of the representative price laid down in Article 2(1) of that regulation and that the duty is established on the basis of the cif import price of the consignment concerned only if the importer so requests. According to that judgment, the Commission exceeded its executory powers.

10 The national court takes the view that paragraphs (1) and (3) of Article 3 of Regulation No 1484/95, which have been declared invalid by the Court of Justice as a result of these considerations, are identical in the respects considered by the Court of Justice to the provisions of Article 4(1) and (2) of Regulation No 1423/95. In both instances there is a basic regulation specifying, in accordance with Article 5 of the Agreement on Agriculture in Annex 1A to the Agreement establishing the WTO, that the additional import duty is calculated on the basis of the cif price, whereas in a Commission implementing regulation calculation of the additional duty on the basis of the representative price is made the general rule.

11 Paragraphs (1) and (2) of Article 4 of Regulation No 1423/95 are thus incompatible with Article 15 of the basic regulation.

12 On the basis of the Court's judgment in Case 314/85 *Foto-Frost* [1987] ECR 4199, the national court observes that it is for the Court of Justice alone to rule on the invalidity of acts of the Community institutions.

13 It considers, nevertheless, that the question whether the situation could be different in a national dispute such as that in the main proceedings, where the question posed concerns the validity of provisions corresponding to other provisions of Community law which the Court has already declared to be invalid in a preliminary ruling, such as the *Kloosterboer Rotterdam* judgment, requires an interpretation of the third paragraph of Article 234 EC.

14 Under those circumstances, the College van Beroep voor het bedrijfsleven decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

‘1. Is a court or tribunal as referred to in the third paragraph of Article 234 EC also required under that provision to submit to the Court of Justice a question such as that set out below concerning the validity of provisions of a regulation where the Court of Justice has ruled that analogous provisions of another, comparable regulation are invalid, or may it refrain from applying the first-mentioned provisions in view of the clear analogies between them and the provisions declared invalid?

2. Are paragraphs (1) and (2) of Article 4 of Regulation … No 1423/95 … invalid inasmuch as they provide that the additional duty referred to therein is, as a general rule, established on the basis of the representative price referred to in Article 1(2) of Regulation … No 1423/95 and that that duty is established on the basis of the cif import price of the shipment concerned only if the importer so requests?’

The questions

The first question

15 By the first question, the national court essentially asks whether the third paragraph of Article 234 EC requires a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law to seek a ruling from the Court of Justice on a question relating to the validity of the provisions of a regulation even where the Court has already declared invalid analogous provisions of another comparable regulation.

16 With regard to questions of interpretation, it is clear from the judgment in Case 283/81 *Cilfit and Others* [1982] ECR 3415, paragraph 21, that a court or tribunal against whose decisions there is no judicial remedy under national law is required, where a question of Community law is raised before it, to comply with its obligation to bring the matter before the Court of Justice, unless it has established that the question raised is irrelevant or that the Community provision in question has already been interpreted by the Court or that the correct application of Community law is so obvious as to leave no scope for any reasonable doubt (see also Case C-495/03 *Intermodal Transports* [2005] ECR I-0000, paragraph 33).

17 However, it is clear from paragraph 20 of the *Foto-Frost* judgment that national courts have no jurisdiction themselves to determine that acts of Community institutions are invalid.

18 The rule that national courts may not themselves determine that Community acts are invalid may have to be qualified in certain circumstances in the case of proceedings relating to an application for interim measures (*Foto-Frost*, paragraph 19; see also, to that effect, Case 107/76 *Hoffmann-La Roche* [1977] ECR 957, paragraph 6; Joined Cases 35/82 and 36/82 *Morson and Jhanjan* [1982] ECR 3723, paragraph 8; Joined Cases C-143/88 and C-92/89 *Zuckerfabrik Süderdithmarschen and Zuckerfabrik Soest* [1991] ECR I-415, paragraphs 21 and 33; and Case C-465/93 *Atlanta Fruchthandelsgesellschaft and Others (I)* [1995] ECR I-3761, paragraphs 30, 33 and 51).

19 Nevertheless, the interpretation adopted in the *Cilfit* judgment, referring to questions of interpretation, cannot be extended to questions relating to the validity of Community acts.

20 Firstly, even in cases which at first sight are similar, careful examination may show that a

provision whose validity is in question is not comparable to a provision which has already been declared invalid because, for instance, it has a different legal or factual context, as the case may be.

21 The main purpose of the jurisdiction conferred on the Court by Article 234 EC is to ensure that Community law is applied uniformly by national courts. That requirement of uniformity is particularly vital where the validity of a Community act is in question. Differences between courts of the Member States as to the validity of Community acts would be liable to jeopardise the essential unity of the Community legal order and undermine the fundamental requirement of legal certainty (*Foto-Frost*, paragraph 15).

22 The possibility of a national court ruling on the invalidity of a Community act is likewise incompatible with the necessary coherence of the system of judicial protection instituted by the EC Treaty. It is important to note in that regard that references for a preliminary ruling on validity constitute, on the same basis as actions for annulment, a means of reviewing the legality of Community acts. By Articles 230 EC and 241 EC, on the one hand, and Article 234 EC, on the other, the Treaty established a complete system of legal remedies and procedures designed to ensure review of the legality of acts of the institutions and has entrusted such review to the Community Courts (see Case 294/83 *Parti écologiste 'Les Verts'* v *Parliament* [1986] ECR 1339, paragraph 23; *Foto-Frost*, paragraph 16; and Case C-50/00 P *Unión de Pequeños Agricultores* [2002] ECR I-6677, paragraph 40).

23 Reducing the length of the proceedings cannot serve as justification for undermining the sole jurisdiction of the Community Courts to rule on the validity of Community law.

24 It must also be emphasised that the Community Courts are in the best position to rule on the validity of Community acts. Under Article 23 of the Statute of the Court of Justice, Community institutions whose acts are challenged are entitled to participate in the proceedings in order to defend the validity of the acts in question. Furthermore, under the second paragraph of Article 24 of that Statute, the Court may require Community institutions which are not participating in the proceedings to supply any information which it considers necessary for the purposes of the case before it (see *Foto-Frost*, paragraph 18).

25 It follows from all the foregoing considerations that the answer to the first question must be that the third paragraph of Article 234 EC requires a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law to seek a ruling from the Court of Justice on a question relating to the validity of the provisions of a regulation even where the Court has already declared invalid analogous provisions of another comparable regulation.

The second question

26 By the second question, the national court asks whether paragraphs (1) and (2) of Article 4 of Regulation No 1423/95 are invalid inasmuch as they provide that the additional duty referred to therein is, as a general rule, established on the basis of the representative price referred to in Article 1(2) of Regulation No 1423/95 and, moreover, that that duty is established on the basis of the cif import price of the shipment concerned only if the importer so requests.

27 It is clear from the wording of the first subparagraph of Article 15(3) of the basic regulation that only the cif import price of the consignment may serve as a basis for determining any additional duty.

28 No conditions or exceptions are attached to application of that rule.

29 The second subparagraph of Article 15(3) of the basic regulation provides unambiguously that the representative price for the product concerned is taken into account only for the purposes of checking the accuracy of the cif import price.

30 However, under Article 4(1) and (2) of Regulation No 1423/95, the cif import price may be taken

into consideration in establishing the additional duty on condition that the importer submits a formal request to that effect accompanied by certain supporting documents, and in all other cases the price taken into consideration must be the representative price, which is thus to be the general rule.

31 Inasmuch as Article 15(3) of the basic regulation makes no provision for an exception to the rule that additional duty is established on the basis of the cif import price, paragraphs (1) and (2) of Article 4 are contrary to that provision.

32 The answer to the second question must therefore be that paragraphs (1) and (2) of Article 4 of Regulation No 1423/95 are invalid inasmuch as they provide that the additional duty referred to therein is, as a general rule, established on the basis of the representative price referred to in Article 1(2) of Regulation No 1423/95 and that that duty is established on the basis of the cif import price of the shipment concerned only if the importer so requests.

Costs

33 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

1. **The third paragraph of Article 234 EC requires a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law to seek a ruling from the Court of Justice on a question relating to the validity of the provisions of a regulation even where the Court has already declared invalid analogous provisions of another comparable regulation;**

2. **Paragraphs (1) and (2) of Article 4 of Commission Regulation (EC) No 1423/95 of 23 June 1995 laying down detailed implementing rules for the import of products in the sugar sector other than molasses are invalid inasmuch as they provide that the additional duty referred to therein is, as a general rule, established on the basis of the representative price referred to in Article 1(2) of that regulation and that that duty is established on the basis of the cif import price of the shipment concerned only if the importer so requests.**

Case C-53/03

Synetairismos Farmakopoion Aitolias & Akarnanias (Syfait) and Others

v

GlaxoSmithKline plc

and

GlaxoSmithKline AEVE, formerly GlaxoWellcome AEVE

(Reference for a preliminary ruling from the Epitropi Antagonismou)

(Admissibility — Meaning of court or tribunal of a Member State — Abuse of a dominant position — Refusal to supply pharmaceutical products to wholesalers — Parallel trade)

Opinion of Advocate General Jacobs delivered on 28 October 2004

Judgment of the Court (Grand Chamber), 31 May 2005

Summary of the Judgment

Questions referred for a preliminary ruling — Reference to the Court — National court or tribunal for the purposes of Article 234 EC — Meaning — 'Epitropi Antagonismou' (Greek Competition Commission) — Excluded
(Art. 234 EC)

In order to determine whether a body making a reference is a court or tribunal for the purposes of Article 234 EC, which is a question governed by Community law alone, the Court takes account of a number of factors, such as whether the body is established by law, whether it is permanent, whether its jurisdiction is compulsory, whether its procedure is inter partes, whether it applies rules of law and whether it is independent. In addition, a body may refer a question to the Court only if there is a case pending before it and if it is called upon to give judgment in proceedings intended to lead to a decision of a judicial nature.

The Epitropi Antagonismou (Greek Competition Commission) does not satisfy those criteria. First of all, it is subject to the supervision of the Minister for Development, which implies that that minister is empowered, within certain limits, to review the lawfulness of its decisions. Next, even though its members enjoy personal and operational independence, there are no particular safeguards in respect of their dismissal or the termination of their appointment, which does not appear to constitute an effective safeguard against undue intervention or pressure from the executive on those members. In addition, its President is responsible for the coordination and general policy of its secretariat and is the supervisor of the personnel of that secretariat, with the result that, by virtue of the operational link between the Epitropi Antagonismou, a decision-making body, and its secretariat, a fact-finding body on the basis of whose proposal it adopts decisions, the Epitropi Antagonismou is not a clearly distinct third party in relation to the State body which, by virtue of its role, may be akin to a party in the course of competition proceedings. Finally, a competition authority such as the Epitropi Antagonismou is required to work in close cooperation with the Commission and may, pursuant to Article 11(6) of Regulation No 1/2003 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty, be relieved of its competence by a decision of the Commission, with the consequence that the proceedings initiated before it will not lead to a decision of a judicial nature.

(see paras 29-37)

JUDGMENT OF THE COURT (Grand Chamber)

31 May 2005 (*)

(Admissibility – Meaning of court or tribunal of a Member State – Abuse of a dominant position – Refusal to supply pharmaceutical products to wholesalers – Parallel trade)

In Case C-53/03,

REFERENCE under Article 234 EC for a preliminary ruling, by the Epitropi Antagonismou (Greece), by decision of 22 January 2003, received at the Court on 5 February 2003, in the proceedings

Synetairismos Farmakopoion Aitolias & Akarnanias (Syfait) and Others,

Panellinios syllogos farmakapothikarion,

Interfarm – A. Agelakos & Sia OE and Others,

K.P. Marinopoulos Anonymos Etairia emporias kai dianomis farmakeftikon proïonton and Others,

v

GlaxoSmithKline plc,

GlaxoSmithKline AEVE, formerly Glaxowellcome AEVE,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann, C.W.A. Timmermans, A. Rosas and R. Silva de Lapuerta, Presidents of Chambers, C. Gulmann (Rapporteur), R. Schintgen, N. Colneric and S. von Bahr, Judges

Advocate General: F.G. Jacobs,

Registrar: L. Hewlett, Principal Administrator,

having regard to the written procedure and further to the hearing on 18 May 2004,

after considering the observations submitted on behalf of:

– Synetairismos Farmakopoion Aitolias & Akarnanias (Syfait) and Others, by P. Kaponis and S. Orfanoudakis, dikigoroi,

– Panellinios syllogos farmakapothikarion and K.P. Marinopoulos Anonymos Etairia emporias kai dianomis farmakeftikon proïonton and Others, by L. Roumanias and G. Papaïoannou, dikigoroi, and W. Rehmann, Rechtsanwalt,

– Farmakeftikos Syndesmos Anonymi Emporiki Etairia, by D. Chatzinikolis, dikigoros,

– Interfarm A. Agelakos & Sia OE and Others, by G. Mastorakos, dikigoros,

– GlaxoSmithKline plc and GlaxoSmithKline AEVE, by D. Kyriakis, dikigoros, I. Forrester QC and A. Schulz, Rechtsanwalt,

– the Swedish Government, by A. Kruse, acting as Agent,

– the Commission of the European Communities, by T. Christoforou and F. Castillo de la Torre, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 28 October 2004,

gives the following

Judgment

1 This request for a preliminary ruling concerns the interpretation of Article 82 EC.

2 The request was made in proceedings before the Epitropi Antagonismou (the Greek Competition Commission), between the complainants, Synetairismos Farmakopoion Aitolias & Akarnanias (Syfait) and Others ('Syfait and Others'), Panellinios syllogos farmakapothikarion ('PSF'), Interfarm – A. Agelakos & Sia OE and Others ('Interfarm and Others') and K.P. Marinopoulos Anonymos Etairia emporias kai dianomis farmakeftikon proïonton and Others ('Marinopoulos and Others'), and GlaxoSmithKline plc ('GSK plc'), a United Kingdom company, and its subsidiary incorporated under Greek law, GlaxoSmithKline AEVE, formerly Glaxowellcome AEVE ('GSK AEVE'), concerning the latter two companies' refusal to meet orders for certain pharmaceutical products on the Greek market.

Law

Community law

3 Article 82 EC provides:

'Any abuse by one or more undertakings of a dominant position within the common market or in a substantial part of it shall be prohibited as incompatible with the common market in so far as it may affect trade between Member States.

Such abuse may, in particular, consist in:

(a) directly or indirectly imposing unfair purchase or selling prices or other unfair trading conditions;

(b) limiting production, markets or technical development to the prejudice of consumers;

(c) applying dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage;

(d) making the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.'

National law

4 Article 2 of Law No 703/1977 on the control of monopolies and oligopolies and the protection of free competition (FEK (Official Gazette) A' 278), as amended by Law No 2941/2001 (FEK A' 201, hereafter 'Law No 703/1977'), essentially corresponds to Article 82 EC.

The dispute in the main proceedings and the questions referred for a preliminary ruling

5 Syfait and Others are associations of pharmacists established in Greece whose main activity is the operation of a joint wholesale repository for pharmaceutical products, which they purchase from various pharmaceutical companies in order to ensure the supply of their members.

6 PSF is an association of wholesalers of pharmaceutical products established in Greece, which defends the interests of its members.

7 Interfarm and Others are wholesalers of pharmaceutical products established in Greece. Marinopoulos and Others are distributors of pharmaceutical products operating in Greece.

8 GSK AEVE is established in Greece and is wholly owned by GSK plc, a manufacturer of pharmaceutical products established in the United Kingdom resulting from the merger in 2000 of Glaxowellcome plc and SmithKline Beecham.

9 GSK AEVE imports and distributes numerous proprietary medicinal products including Imigran, Lamictal and Serevent. Those are newly created medicines resulting from research and technology and are classified as prescription medicines.

10 The members of Syfait and Others, and of PSF, and Interfarm and Others and Marinopoulos and Others buy those medicines, amongst others, in all forms from GSK AEVE and then distribute them on the national market and abroad.

11 Until November 2000, GSK AEVE met all orders which it received. A large proportion of the supplies corresponding to those orders was re-exported to other Member States, especially to the United Kingdom because of the much lower price of Imigran, Lamictal and Serevent in Greece.

12 From early November 2000, invoking significant shortages on the Greek market, which it attributed to re-exports by third parties, GSK AEVE changed its system of distribution in Greece and stopped meeting the orders of the complainants in the main proceedings and of third parties, stating that it would supply hospitals and pharmacies directly.

13 In February 2001, considering that the supply of medicinal products had to some extent been normalised, and that the stocks of hospitals and pharmacies had been rebuilt, GSK AEVE replaced the previous sales system with another system of distribution.

14 The complainants in the main proceedings brought before the Epitropi Antagonismou the question of GSK AEVE's marketing of Imigran, Lamictal and Serevent on the Greek market under successive systems of distribution since November 2000. They alleged that that company had not met in full the orders it had received and that such conduct is an abuse of a dominant position within the meaning of Article 2 of Law No 703/1977 and Article 82 EC.

15 By Decision No 193/111 of 3 August 2001 ordering interim measures, the Epitropi Antagonismou temporarily required GSK AEVE, pending adoption of the decision in the main proceedings, to meet the orders for the three medicinal products in question. GSK AEVE applied to the Diikitiko Efetio Athinon (Administrative Appeal Court, Athens) for an order suspending that decision, but it was confirmed on 10 January 2002 and was still in force at the date of the referring decision.

16 The Epitropi Antagonismou states that GSK AEVE complied with the interim measures prescribed by Decision No 193/111 at least to the extent that that company was supplied by GSK plc. That supply exceeded the consumption needs of the domestic market. The evidence provided to the Epitropi Antagonismou by GSK AEVE shows, however, that orders were considerably higher than that level, in particular in September 2001, so that not all orders could be met.

17 In the referring decision, the Epitropi Antagonismou states that GSK AEVE and GSK plc comply with the circular adopted on 27 November 2001 by the Ethnikos Organismos Farmakon (National Organisation for Medicines), which provides that all participants in the distribution of prescribed medicines 'must supply to the domestic market quantities at least equal to current prescription levels … plus an amount (25%) to cover any emergencies and changes of circumstance'.

18 Furthermore, on 5 December 2001, GSK AEVE applied to the Epitropi Antagonismou for negative clearance under Article 11 of Law No 703/1977 in respect of its refusal to cover more than 125% of Greek demand.

19 Faced simultaneously with that application by GSK AEVE for negative clearance and the complaints from Syfait and Others, PSF, Interfarm and Others and Marinopoulos and Others against GSK AEVE and GSK plc, the Epitropi Antagonismou asks to what extent the refusal by the latter two companies to meet in full the orders placed by the complainants constitutes an abuse of a dominant position within the meaning of Article 82 EC. If it is not an abuse, the Epitropi Antagonismou states that it will be in a position to consider whether the conditions for the grant of the negative clearance sought by GSK AEVE are satisfied.

20 In those circumstances, the Epitropi Antagonismou decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

'1. Where the refusal of an undertaking holding a dominant position to meet fully the orders sent to it by pharmaceutical wholesalers is due to its intention to limit their export activity and, thereby, the harm caused to it by parallel trade, does the refusal constitute per se an abuse within the meaning of Article 82 EC? Is the answer to that question affected by the fact that the parallel trade is particularly profitable for the wholesalers because of the different prices, resulting from State intervention, in the Member States of the European Union, that is to say by the fact that pure conditions of competition do not prevail in the pharmaceuticals market, but a regime which is governed to a large extent by State intervention? Is it ultimately the duty of a national competition authority to apply Community competition rules in the same way to markets which function competitively and those in which competition is distorted by State intervention?

2. If the Court holds that limitation of parallel trade, for the reasons set out above, does not constitute an abusive practice in every case where it is engaged in by an undertaking holding a dominant position, how is possible abuse to be assessed?

In particular:

(a) Do the percentage by which normal domestic consumption is exceeded and/or the loss suffered by an undertaking holding a dominant position compared with its total turnover and total profits constitute appropriate criteria? If so, how are the level of that percentage and the level of that loss determined (the latter as a percentage of turnover and total profits), above which the conduct in question may be abusive?

(b) Is an approach entailing the balancing of interests appropriate, and, if so, what are the interests to be compared?

In particular:

(i) is the answer affected by the fact that the ultimate consumer/patient derives limited financial advantage from the parallel trade? and

(ii) is account to be taken, and to what extent, of the interests of social insurance bodies in cheaper medicinal products?

(c) What other criteria and approaches are considered appropriate in the present

case?'

The jurisdiction of the Court

21 As a preliminary point, it is necessary to ascertain whether the Epitropi Antagonismou is a court or tribunal within the meaning of Article 234 EC and whether the Court therefore has jurisdiction to make a ruling on the questions referred to it.

The national law governing the Epitropi Antagonismou

22 Article 8(1) of Law No 703/1977 provides:

'An Epitropi Antagonismou shall be established which shall operate as an independent authority. Its members shall enjoy personal and operational independence and shall be bound in the exercise of their duties only by the law and their conscience. The Epitropi Antagonismou shall be administratively and economically autonomous subject to the supervision of the Ministry for … [Development].'

23 The Epitropi Antagonismou has nine members appointed pursuant to Article 8(3) of Law No 703/1977. Four members and their deputies are chosen by the minister from lists of three persons which are submitted by each of four professional bodies. The other members include a member of the government legal service or a judge of the highest rank, two academics, one a lawyer and the other an economist, and two persons of acknowledged repute with experience of economic law and competition policy. According to Article 8(5) of Law No 703/1977, the members of the Epitropi Antagonismou and their deputies are appointed by the Minister for Development for a term of three years.

24 Article 8(6) of the same law provides:

'The president of the Epitropi Antagonismou and his deputy shall be appointed by the Minister [for Development] from amongst the members of the [Epitropi Antagonismou]… The president of the Epitropi Antagonismou shall be a member of the national civil service and shall exclusively perform that task for the duration of his term of office …'

25 Article 8(7) of Law No 703/1977 provides:

'During their term of office, the President and the members shall not carry on, whether for remuneration or otherwise, any other public function or professional activity, whether or not in-house, which is incompatible with the role and duties of a member of the Epitropi Antagonismou.'

26 As regards relations between the Epitropi Antagonismou and its secretariat, Article 8C(1)(b) of the same law provides:

'The President shall coordinate and direct the secretariat of the [Epitropi Antagonismou].'

27 Article 8C(1)(d) of the same law provides:

'The President is the immediate superior of the personnel of the secretariat of the Epitropi Antagonismou and shall exercise disciplinary power over them.'

28 According to Article 8C(3), the President of the Epitropi Antagonismou may authorise the Director General or the directors of the secretariat of the Epitropi Antagonismou to exercise some of his powers. The Director General is to be appointed for three years, and the appointment is renewable by decision of the Minister for Development subject to the assent of the Epitropi Antagonismou, as laid down by the second sentence of Article 8D(1) of Law No 703/1977.

Findings of the Court

29 According to settled case-law, in order to determine whether a body making a reference is a court or tribunal for the purposes of Article 234 EC, which is a question governed by Community law alone, the Court takes account of a number of factors, such as whether the body is established by law, whether it is permanent, whether its jurisdiction is compulsory, whether its procedure is inter partes, whether it applies rules of law and whether it is independent (see, in particular, Case C-54/96 *Dorsch Consult* [1997] ECR I-4961, paragraph 23, Joined Cases C-110/98 to C-147/98 *Gabalfrisa and Others* [2000] ECR I-1577, paragraph 33, Case C-195/98 *Österreichischer Gewerkschaftsbund* [2000] ECR I-10497, paragraph 24, and Case C-516/99 *Schmid* [2002] ECR I-4573, paragraph 34). Moreover, a national court may refer a question to the Court only if there is a case pending before it and if it is called upon to give judgment in proceedings intended to lead to a decision of a judicial nature (see, in particular, Case C-134/97 *Victoria Film* [1998] ECR I-7023, paragraph 14, and *Österreichischer Gewerkschaftsbund*, paragraph 25).

30 It should be noted, first of all, in this regard that the Epitropi Antagonismou is subject to the supervision of the Minister for Development. Such supervision implies that that minister is empowered, within certain limits, to review the lawfulness of the decisions adopted by the Epitropi Antagonismou.

31 Next, whilst it is true that the members of the Epitropi Antagonismou enjoy personal and operational independence and are bound in the exercise of their duties only by the law and their conscience within the meaning of Law No 703/1977, it nevertheless remains that there are no particular safeguards in respect of their dismissal or the termination of their appointment. That system does not appear to constitute an effective safeguard against undue intervention or pressure from the executive on the members of the Epitropi Antagonismou (see, to that effect, Case C-103/97 *Köllensperger and Atzwanger* [1999] ECR I-551, paragraph 21).

32 It should also be noted that under Article 8C(1)(b) and (d) of Law No 703/1977, the President of the Epitropi Antagonismou is responsible for the coordination and general policy of the secretariat, is the immediate superior of the personnel of that secretariat and exercises disciplinary power over them.

33 It should be noted in this regard that the Tribunales Económico-Administrativos (Economic and Administrative Courts) (Spain) were found by the Court, in paragraphs 39 and 40 of the *Gabalfrisa* judgment, to be third parties in relation to the departments of the tax authority responsible for the management, clearance and recovery of VAT, particularly given the separation of functions between them. However, in so far as there is an operational link between the Epitropi Antagonismou, a decision-making body, and its secretariat, a fact-finding body on the basis of whose proposal it adopts decisions, the Epitropi Antagonismou is not a clearly distinct third party in relation to the State body which, by virtue of its role, may be akin to a party in the course of competition proceedings.

34 Lastly, it should be noted that a competition authority such as the Epitropi Antagonismou is required to work in close cooperation with the Commission of the European Communities and may, pursuant to Article 11(6) of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty (OJ 2003 L 1, p. 1), be relieved of its competence by a decision of the Commission. It should moreover be noted in this context that Article 11(6) of Regulation No 1/2003 essentially maintains the rule in Article 9(3) of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition, 1959-1962 p. 87), that the competition authorities of the Member States are automatically relieved of their competence where the Commission initiates its own proceedings (see in that connection the 17th recital in the preamble to Regulation No 1/2003).

35 A body may refer a question to the Court only if there is a case pending before it and if it is called upon to give judgment in proceedings intended to lead to a decision of a judicial nature

(see *Victoria Film*, paragraph 14, and *Österreichischer Gewerkschaftsbund*, paragraph 25).

36 Whenever the Commission relieves a national competition authority such as the Epitropi Antagonismou of its competence, the proceedings initiated before that authority will not lead to a decision of a judicial nature.

37 It follows from the factors examined, considered as a whole, that the Epitropi Antagonismou is not a court or tribunal within the meaning of Article 234 EC.

38 Accordingly, the Court has no jurisdiction to answer the questions referred by the Epitropi Antagonismou.

Costs

39 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the Epitropi Antagonismou, the decision on costs is a matter for that body. The costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

The Court of Justice of the European Communities has no jurisdiction to answer the questions referred by the Epitropi Antagonismou by decision of 22 January 2003.

JUDGMENT OF THE COURT (Grand Chamber)

12 July 2005 (*)

(Failure of a Member State to fulfil obligations – Fisheries – Control obligations placed on the Member States – Judgment of the Court establishing a breach of obligations – Non-compliance – Article 228 EC – Payment of a lump sum – Imposition of a penalty payment)

In Case C-304/02,

ACTION under Article 228 EC for failure to fulfil obligations, brought on 27 August 2002,

Commission of the European Communities, represented by M. Nolin, H. van Lier and T. van Rijn, acting as Agents, with an address for service in Luxembourg,

applicant,

v

French Republic, represented by G. de Bergues and A. Colomb, acting as Agents,

defendant,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann (Rapporteur) and C.W.A. Timmermans, Presidents of Chambers, C. Gulmann, J.-P. Puissochet, R. Schintgen, N. Colneric, S. von Bahr and J.N. Cunha Rodrigues, Judges,

Advocate General: L.A. Geelhoed,

Registrar: M. Múgica Arzamendi, Principal Administrator, subsequently M.-F. Contet, Principal Administrator, and H. von Holstein, Deputy Registrar,

having regard to the written procedure and further to the hearing on 3 March 2004,

after hearing the Opinion of the Advocate General at the sitting on 29 April 2004,

having regard to the order of 16 June 2004 reopening the oral procedure and further to the hearing on 5 October 2004,

after hearing the oral observations of:

– the Commission, represented by G. Marenco, C. Ladenburger and T. van Rijn, acting as Agents,

– the French Republic, represented by R. Abraham, G. de Bergues and A. Colomb, acting as Agents,

– the Kingdom of Belgium, represented by J. Devadder, acting as Agent,

– the Czech Republic, represented by T. Boček, acting as Agent,

– the Kingdom of Denmark, represented by A.R. Jacobsen and J. Molde, acting as Agents,

– the Federal Republic of Germany, represented by W.D. Plessing, acting as Agent,

– the Hellenic Republic, represented by A. Samoni and E.M. Mamouna, acting as Agents,

– the Kingdom of Spain, represented by N. Diaz Abad, acting as Agent,

– Ireland, represented by D. O'Donnell and P. Mc Cann, acting as Agents,

– the Italian Republic, represented by I.M. Braguglia, acting as Agent,

– the Republic of Cyprus, represented by D. Lissandrou and E. Papageorgiou, acting as Agents,

– the Republic of Hungary, represented by R. Somssich and A. Muller, acting as Agents,

– the Kingdom of the Netherlands, represented by J. van Bakel, acting as Agent,

– the Republic of Austria, represented by E. Riedl, Rechtsanwalt,

– the Republic of Poland, represented by T. Nowakowski, acting as Agent,

– the Portuguese Republic, represented by L. Fernandes, acting as Agent,

– the Republic of Finland, represented by T. Pynnä, acting as Agent,

– the United Kingdom of Great Britain and Northern Ireland, represented by D. Anderson QC,

after hearing the Opinion of the Advocate General at the sitting on 18 November 2004,

gives the following

Judgment

1 By its application, the Commission of the European Communities requests the Court to:

– declare that, by failing to take the necessary measures to comply with the judgment of 11 June 1991 in Case C-64/88 *Commission* v *France* [1991] ECR I-2727, the French Republic has failed to fulfil its obligations under Article 228 EC;

– order the French Republic to pay to the Commission, into the account 'European Community own resources', a penalty payment in the sum of EUR 316 500 for each day of delay in implementing the measures necessary to comply with the judgment in Case C-64/88 *Commission* v *France*, cited above, from delivery of the present judgment until the judgment in Case C-64/88 *Commission* v *France* has been complied with;

– order the French Republic to pay the costs.

Community legislation

Rules regarding controls

2 The Council has established certain control measures for fishing activities by vessels of the Member States. Those measures have been successively set out in Council Regulation (EEC) No 2057/82 of 29 June 1982 establishing certain control measures for fishing activities by vessels of the Member States (OJ 1982 L 220, p. 1), in Council Regulation (EEC) No 2241/87 of

23 July 1987 establishing certain control measures for fishing activities (OJ 1987 L 207, p. 1) which repealed and replaced Regulation No 2057/82, and in Council Regulation (EEC) No 2847/93 of 12 October 1993 establishing a control system applicable to the common fisheries policy (OJ 1993 L 261, p. 1) which repealed and replaced Regulation No 2241/87 on 1 January 1994.

3 The control measures set out in those regulations are essentially identical.

4 Article 1(1) and (2) of Regulation No 2847/93 provides:

‘1. In order to ensure compliance with the rules of the common fisheries policy, a Community system is hereby established including in particular provisions for the technical monitoring of:

– conservation and resource management measures,

– structural measures,

– [measures] concerning the common organisation of the market,

as well as certain provisions relating to the effectiveness of sanctions to be applied in cases where the abovementioned measures are not observed.

2. To this end, each Member State shall adopt, in accordance with Community rules, appropriate measures to ensure the effectiveness of the system. It shall place sufficient means at the disposal of its competent authorities to enable them to perform their tasks of inspection and control as laid down in this Regulation.’

5 Article 2(1) of Regulation No 2847/93 states:

‘In order to ensure compliance with all the rules in force concerning conservation and control measures, each Member State shall, within its territory and within maritime waters subject to its sovereignty or jurisdiction, monitor fishing activity and related activities. It shall inspect fishing vessels and investigate all activities thus enabling verification of the implementation of this Regulation, including the activities of landing, selling, transporting and storing fish and recording landings and sales.’

6 Article 31(1) and (2) of Regulation No 2847/93 provides:

‘1. Member States shall ensure that the appropriate measures be taken, including of administrative action or criminal proceedings in conformity with their national law, against the natural or legal persons responsible where common fisheries policy have [sic] not been respected, in particular following a monitoring or inspection carried out pursuant to this Regulation.

2. The proceedings initiated pursuant to paragraph 1 shall be capable, in accordance with the relevant provisions of national law, of effectively depriving those responsible of the economic benefit of the infringements or of producing results proportionate to the seriousness of such infringements, effectively discouraging further offences of the same kind.’

Technical rules

7 The technical measures for the conservation of fishery resources which are envisaged by the rules regarding controls have been set out inter alia in Council Regulation (EEC) No 171/83 of 25 January 1983 (OJ 1983 L 24, p. 14), repealed and replaced by Council Regulation (EEC) No 3094/86 of 7 October 1986 (OJ 1986 L 288, p. 1), itself repealed and replaced with effect from 1 July 1997 by Council Regulation (EC) No 894/97 of 29 April 1997 (OJ 1997 L 132, p. 1), in turn partially repealed and replaced with effect from 1 January 2000 by Council Regulation (EC) No 850/98 of 30 March 1998 for the conservation of fishery resources through technical measures

for the protection of juveniles of marine organisms (OJ 1998 L 125, p. 1).

8 The technical measures laid down by those regulations are essentially identical.

9 The measures concern, inter alia, the minimum mesh size for nets, the prohibition on attaching to nets certain devices by means of which the mesh is obstructed or diminished, and the prohibition on offering for sale fish of less than the minimum size ('undersized fish') except for catches representing only a limited percentage of the overall catch ('by-catches').

The judgment in Case C-64/88 *Commission* v *France*

10 In the judgment in Case C-64/88 *Commission* v *France*, the Court declared:

'by failing to carry out between 1984 and 1987 controls ensuring compliance with technical Community measures for the conservation of fishery resources, laid down by [Regulation No 171/83] and by [Regulation No 3094/86], the French Republic has failed to fulfil its obligations under Article 1 of [Regulation No 2057/82] and under Article 1 of [Regulation No 2241/87]'.

11 In that judgment, the Court upheld five complaints against the French Republic:

– inadequate controls in relation to the minimum mesh size for nets (paragraphs 12 to 15 of the judgment);

– inadequate controls in relation to the attachment to nets of devices prohibited by the Community rules (paragraphs 16 and 17 of the judgment);

– failure to fulfil control obligations in relation to by-catches (paragraphs 18 and 19 of the judgment);

– failure to fulfil control obligations so far as concerns compliance with the technical measures of conservation prohibiting the sale of undersized fish (paragraphs 20 to 23 of the judgment);

– failure to fulfil the obligation to take action in respect of infringements (paragraph 24 of the judgment).

Pre-litigation procedure

12 By letter of 8 November 1991, the Commission requested the French authorities to inform it of the measures taken to comply with the judgment in Case C-64/88 *Commission* v *France*. On 22 January 1992 the French authorities replied that they '[intended] to do their utmost to comply with the [Community] provisions'.

13 In the course of a number of visits to French ports the Commission inspectors found that the situation had improved, but noted that the French authorities' controls were inadequate in several respects.

14 After requesting the French Republic to submit its observations, on 17 April 1996 the Commission issued a reasoned opinion in which it stated that the judgment in Case C-64/88 *Commission* v *France* had not been complied with in the following respects:

– failure to comply with the Community rules in the measuring of the minimum mesh size of nets;

– inadequate controls, enabling undersized fish to be offered for sale;

– laxness on the part of the French authorities in taking action in respect of infringements.

15 Pointing out that financial penalties could be imposed for failure to comply with a judgment of the Court, the Commission set a time-limit of two months for the French Republic to take all the measures necessary in order to comply with the judgment in Case C-64/88 *Commission* v *France*.

16 In the course of an exchange of correspondence between the French authorities and Commission staff, the former kept the Commission informed of the measures that it had taken and was continuing to implement to strengthen controls.

17 At the same time, inspection visits were made to French ports. On the basis of reports drawn up after visiting Lorient, Guilvinec and Concarneau from 24 to 28 August 1996, Guilvinec, Concarneau and Lorient from 22 to 26 September 1997, Marennes-Oléron, Arcachon and Bayonne from 13 to 17 October 1997, south Brittany and Aquitaine from 30 March to 4 April 1998, Douarnenez and Lorient from 15 to 19 March 1999 and Lorient, Bénodet, Loctudy, Guilvinec, Lesconil and Saint-Guénolé from 13 to 23 July 1999, the Commission staff reached the conclusion that two problems remained, namely inadequate controls enabling undersized fish to be offered for sale and the laxness on the part of the French authorities in taking action in respect of infringements.

18 The inspectors' reports prompted the Commission to issue a supplementary reasoned opinion on 6 June 2000, in which it stated that the judgment in Case C-64/88 *Commission* v *France* had not been complied with as regards the two matters mentioned above. The Commission indicated that, in this context, it regarded as 'particularly serious the fact that public documents relating to sales by auction officially use the code "00" in clear breach of Council Regulation (EC) No 2406/96 of 26 November 1996 laying down common marketing standards for certain fishery products' (OJ 1996 L 334, p. 1). It pointed out that financial penalties could be imposed.

19 In their response of 1 August 2000, the French authorities essentially contended that since the last inspection report national fisheries control had undergone significant change. An internal reorganisation had taken place, with the establishment of a fisheries control 'unit', which subsequently became a fisheries control 'task force', and the means of control had been strengthened, including the provision of patrol boats and of a system for the on-screen surveillance of vessels' positions and the circulation of instructions for the use of control staff.

20 On an inspection visit from 18 to 28 June 2001 to the communes Guilvinec, Lesconil, Saint-Guénolé and Loctudy, the Commission's inspectors recorded poor controls, the presence of undersized fish and the offering for sale of those fish under the code '00'.

21 By letter of 16 October 2001, the French authorities sent to the Commission a copy of an instruction addressed to the regional and departmental maritime directorates, enjoining them to put an end to use of the code '00' by 31 December 2001 and to apply from that date the statutory penalties to economic operators not complying with the instruction. The French authorities referred to an increase since 1998 in the number of proceedings for infringement of the rules on minimum sizes and to the deterrent effect of the penalties imposed. They also informed the Commission of the adoption in 2001 of a general fisheries control plan, which laid down priorities, including implementation of a hake recovery plan and strict control of compliance with minimum sizes.

22 Taking the view that the French Republic still had not complied with the judgment in Case C-64/88 *Commission* v *France*, the Commission brought the present action.

Procedure before the Court

23 In answer to a question asked by the Court with a view to the hearing on 3 March 2004, the Commission informed the Court that, since the present action was brought, its staff had made

three further inspection visits (from 11 to 16 May 2003 to Sète and Port-Vendres, from 19 to 20 June 2003 to Loctudy, Lesconil, Saint-Guénolé and Guilvinec, and from 14 to 22 July 2003 to Port-la-Nouvelle, Sète, Le Grau-du-Roi, Carro, Sanary-sur-Mer and Toulon). According to the Commission, it is apparent from the mission reports on those visits that the number of cases of undersized fish being offered for sale had decreased in Brittany but problems remained on the Mediterranean coast with regard to bluefin tuna, and that inspections on landing were infrequent.

24 The Commission explained that, in order to assess the effectiveness of the measures taken by the French authorities, it would need to have the reports and sets of statistics relating to implementation of the various measures for the general organisation of fisheries control to which the French Government had referred.

25 After being requested by the Court to indicate the number of inspections at sea and on land which the French authorities had carried out since the bringing of the present action with a view to ensuring compliance with the rules relating to the minimum size of fish, the number of infringements recorded and the action taken by the courts in respect of those infringements, on 30 January 2004 the French Government lodged fresh statistics. They show that the number of inspections, findings of infringement and convictions was lower in 2003 than in 2002.

26 The French Government stated that the decrease in inspections at sea was due to the mobilisation of French vessels to fight the pollution caused by the shipwrecking of the oil tanker *Prestige* and that inspections on land had decreased because the discipline of fishermen had improved. It explained that the decrease in the number of convictions was due to the effects of Law No 2002-1062 of 6 August 2002 granting an amnesty (JORF No 185 of 9 August 2002, p. 13647), while pointing out that the average amount of the fines imposed had increased.

The breach of obligations alleged

The geographical area at issue

27 It should be noted as a preliminary point that the declaration made in the operative part of the judgment in Case C-64/88 *Commission* v *France* that the French Republic had failed to carry out controls ensuring compliance with technical Community measures for the conservation of fishery resources, laid down by Regulations Nos 171/83 and 3094/86, only concerned, as is apparent from the delimitation set out in Article 1(1) of those regulations, the taking and landing of fishery resources occurring in certain areas of the north-east Atlantic.

28 As submitted by the French Government and explained by the Commission at the hearing on 3 March 2004, the present action thus relates only to the situation in those areas.

The reference date

29 The Commission sent the first reasoned opinion to the French Republic on 14 April 1996 and, subsequently, a supplementary reasoned opinion on 6 June 2000.

30 It follows that the reference date for assessing the alleged breach of obligations is the date upon which the period laid down in the supplementary reasoned opinion of 6 June 2000 expired, that is to say two months after notification of that opinion (Case C-474/99 *Commission* v *Spain* [2002] ECR I-5293, paragraph 27, and Case C-33/01 *Commission* v *Greece* [2002] ECR I-5447, paragraph 13).

31 Since the Commission has claimed that the Court should impose a penalty payment on the French Republic, it should also be ascertained whether the alleged breach of obligations has continued up to the Court's examination of the facts.

The extent of the obligations on the Member States under the common fisheries policy

32 Article 1 of Regulation No 2847/93, which constitutes a specific embodiment, in the field of fisheries, of the obligations imposed on the Member States by Article 10 EC, provides that the Member States are to adopt appropriate measures to ensure the effectiveness of the Community system for conservation and management of fishery resources.

33 Regulation No 2847/93 imposes in this regard a joint responsibility on Member States (see, in relation to Regulation No 2241/87, Case C-9/89 *Commission* v *Spain* [1990] ECR I-1383, paragraph 10). This joint responsibility means that when a Member State fails to fulfil its obligations, it prejudices the interests of the other Member States and of their economic operators.

34 It is imperative that the Member States fulfil the obligations incumbent on them under the Community rules in order to ensure the protection of fishing grounds, the conservation of the biological resources of the sea and their exploitation on a sustainable basis in appropriate economic and social conditions (see, in relation to failure to comply with the quota system for the fishing years 1991 to 1996, Joined Cases C-418/00 and C-419/00 *Commission* v *France* [2002] ECR I-3969, paragraph 57).

35 To this end, Article 2 of Regulation No 2847/93, which repeats the obligations laid down by Article 1(1) of Regulation No 2241/87, obliges the Member States to monitor fishing activity and related activities. It requires them to inspect fishing vessels and investigate all activities, including the activities of landing, selling, transporting and storing fish and recording landings and sales.

36 Article 31 of Regulation No 2847/93, which takes up the obligations laid down in Article 1(2) of Regulations Nos 2057/82 and 2241/87, requires the Member States to take action in respect of recorded infringements. It states that the proceedings initiated must be capable of effectively depriving those responsible of the economic benefit of the infringements or of producing results proportionate to the seriousness of such infringements, effectively discouraging further offences of the same kind.

37 Regulation No 2847/93 thus provides specific indications as to the content of the measures which must be taken by the Member States and which must seek to ensure that fishery operations are conducted properly with the objective of both preventing any breaches and punishing such breaches. That objective means that the measures implemented must be effective, proportionate and a deterrent. As the Advocate General has observed in point 39 of his Opinion of 29 April 2004, there must be a serious risk, for persons engaging in fishing activity and related activities, that in the event of infringement of the rules of the common fisheries policy, they will be detected and have sufficiently severe penalties imposed on them.

38 It is in light of those considerations that the question whether the French Republic has taken all the necessary measures to comply with the judgment in Case C-64/88 *Commission* v *France* should be examined.

The first complaint: inadequate controls

Arguments of the parties

39 The Commission maintains that it is clear from the findings made by its inspectors that the French authorities' controls regarding compliance with the Community provisions on the minimum size of fish are still deficient.

40 The increase in the number of inspections to which the French Government refers cannot modify those findings since only inspections at sea are involved. The control plans adopted by the French Government in 2001 and 2002 are not, in themselves, capable of bringing the alleged breach of obligations to an end. Implementation of those plans involves the prior setting of objectives, which are necessary in order to be able to assess the effectiveness and operability of the plans. Moreover, the plans must actually be implemented, which the visits

made to French ports since the plans were established have not demonstrated.

41 The French Government observes, first of all, that the inspection reports upon which the Commission relies were never made known to the French authorities, which were not in a position to respond to the statements that they contain. Furthermore, those reports are founded on mere suppositions.

42 It also submits that since delivery of the judgment in Case C-64/88 *Commission* v *France* it has been constantly strengthening its control mechanisms. This strengthening has taken the form of an increase in the number of inspections at sea and the adoption, in 2001, of a general control plan, supplemented, in 2002, by a 'minimum catch sizes' control plan. With regard to the effectiveness of those measures, it points out that it has been possible to record no marketing of undersized fish on several inspection visits made by Commission inspectors.

43 Finally, in the French Government's submission, the Commission merely asserts that the measures taken by it are inappropriate without indicating the measures capable of bringing the alleged breach of obligations to an end.

Findings of the Court

44 Like the procedure laid down in Article 226 EC (see, in relation to failure to comply with the quota system for the fishing years 1988 and 1990, Case C-333/99 *Commission* v *France* [2001] ECR I-1025, paragraph 33), the procedure laid down in Article 228 EC is based on the objective finding that a Member State has failed to fulfil its obligations.

45 In the present instance, the Commission has adduced in support of its complaint mission reports drawn up by its inspectors.

46 The French Government's line of argument, put forward at the stage of its rejoinder, that the reports to which the Commission referred in its application cannot be used as evidence that the breach of obligations has persisted on the ground that they were never made known to the French authorities, cannot be upheld.

47 It can be seen from the reports adduced by the Commission that all the reports subsequent to 1998, which have been put in evidence in their entirety or in the form of extensive extracts, refer to accounts of meetings in the course of which the competent national authorities were informed of the results of the inspection visits and were therefore able to present their observations on the findings of the Commission's inspectors. While this reference is not found in the earlier reports, put in evidence in the form of extracts limited to the findings of fact made by the inspectors, it is sufficient to point out that in its letter of 1 August 2000, sent to the Commission in response to the supplementary reasoned opinion of 6 June 2000, the French Government set out its observations on the content of those reports without putting in issue the circumstances of their disclosure to the French authorities.

48 That being so, it should be examined whether the information contained in the mission reports adduced by the Commission is such as to establish an objective finding that a breach by the French Republic of its control obligations has persisted.

49 As regards the situation on expiry of the period laid down in the supplementary reasoned opinion of 6 June 2000, it is apparent from the reports to which the Commission referred in that opinion (see paragraph 17 of this judgment) that the inspectors were able to record the presence of undersized fish, on each of the six visits that they made. They were able to record, in particular, that there was a market for undersized hake, offered for sale under the name 'merluchons' or 'friture de merluchons' (small hake) and, in breach of the marketing standards laid down by Regulation No 2406/96, under the code '00'.

50 On five of those six visits, the landing and offering for sale of the undersized fish took place without monitoring by the competent national authorities. As the French Government

acknowledged in its response of 1 August 2000 to the supplementary reasoned opinion of 6 June 2000, the persons whom the inspectors were able to meet 'did not fall within the classes of officers empowered to find infringements of the fishery rules and were not attached to the maritime authorities'. On the sixth visit, the inspectors recorded that undersized fish had been landed and offered for sale in the presence of national authorities empowered to find infringements of the fishery rules. However, those authorities refrained from taking action against the offenders.

51 This evidence enables it to be found that, in the absence of effective action by the competent national authorities, a practice of offering undersized fish for sale persisted which was sufficiently constant and widespread to prejudice seriously, by reason of its cumulative effect, the objectives of the Community system for conservation and management of fishery resources.

52 Moreover, the similarity and recurrence of the situations recorded in all the reports enable it to be held that those instances can only have resulted from structural inadequacy of the measures implemented by the French authorities and, consequently, from a failure on their part to fulfil the obligation imposed on them by the Community rules to carry out controls that are effective, proportionate and a deterrent (see, to this effect, Case C-333/99 *Commission* v *France*, cited above, paragraph 35).

53 It must therefore be found that, on expiry of the period laid down in the supplementary reasoned opinion of 6 June 2000, the French Republic, by failing to carry out controls of fishing activities in accordance with the requirements laid down by the Community provisions, had not taken all the necessary measures to comply with the judgment in Case C-64/88 *Commission* v *France* and was accordingly failing to fulfil its obligations under Article 228 EC.

54 As regards the situation on the date of examination of the facts by the Court, the information available shows that significant deficiencies persisted.

55 On the visit made to Brittany in June 2001 (see paragraph 20 of this judgment), the Commission inspectors were once again able to record the presence of undersized fish. A decrease in the number of cases of such fish being offered for sale was recorded on a subsequent visit to the same area in June 2003 (see paragraph 23 of the present judgment). However, that fact is not decisive in light of the concurring findings, set out in the reports drawn up at the time of those two visits, concerning the ineffectiveness of the controls on land.

56 Where the Commission has adduced sufficient evidence to show that the breach of obligations has persisted, it is for the Member State concerned to challenge in substance and in detail the information produced and its consequences (see, to this effect, Case 272/86 *Commission* v *Greece* [1988] ECR 4875, paragraph 21, and Case C-365/97 *Commission* v *Italy* [1999] ECR I-7773, paragraphs 84 to 87).

57 In this connection, it is to be noted that the information concerning the increase in inspections in pursuance of the plans adopted in 2001 and 2002, on which the French Government relied in its defence, conflicts with the information supplied by it in answer to the Court's questions (see paragraph 26 of this judgment), according to which the number of inspections at sea and on land was lower in 2003 than in 2002.

58 Even if divergent information of that kind can, as the French Government contends, be regarded as showing an improvement in the situation, the fact remains that the efforts made cannot excuse the failures that occurred (Case C-333/99 *Commission* v *France*, paragraph 36).

59 In this connection, the French Government's argument that the decrease in inspections is justified by the improved discipline of fishermen cannot be upheld either.

60 As the French Government has itself pointed out in its defence, actions designed to change behaviour and mentality involve a long process. It must therefore be considered that the

structural deficiency, extending over a period of more than 10 years, of the controls designed to ensure compliance with the rules relating to the minimum size of fish resulted in behaviour on the part of the economic operators concerned that it will be possible to correct only after action over a lengthy period.

61 Accordingly, in light of the detailed evidence submitted by the Commission, the information adduced by the French Government is not sufficiently substantial to demonstrate that the measures which it has implemented regarding the control of fishing activities display the efficacy necessary to meet its obligation to ensure the effectiveness of the Community system for conservation and management of fishery resources (see paragraphs 37 and 38 of the present judgment).

62 It must therefore be found that, on the date upon which the Court examined the facts which were presented to it, the French Republic, by failing to carry out controls of fishing activities in accordance with the requirements laid down by the Community provisions, had not taken all the necessary measures to comply with the judgment in Case C-64/88 *Commission* v *France* and was accordingly failing to fulfil its obligations under Article 228 EC.

The second complaint: inadequacy of action taken

Arguments of the parties

63 The Commission contends that the proceedings brought by the French authorities for infringement of the Community provisions concerning the minimum size of fish are insufficient. Generally, the inadequacy of the controls is reflected in the number of proceedings. Furthermore, it is apparent from the information provided by the French Government that, even when infringements are recorded, action is not systematically taken.

64 The Commission observes that the statistics submitted by the French Government before the period laid down in the supplementary reasoned opinion of 6 June 2000 expired are too general in that they concern the whole of France and do not specify the nature of the infringements in respect of which proceedings were brought.

65 The information provided subsequently cannot be taken as showing that the French authorities apply a policy of deterrent penalties so far as concerns infringements of the rules relating to the minimum size of fish. The Commission points out that, for 2001, the French Government notified, pursuant to Council Regulation (EC) No 1447/1999 of 24 June 1999 establishing a list of types of behaviour which seriously infringe the rules of the common fisheries policy (OJ 1999 L 167, p. 5) and Commission Regulation (EC) No 2740/1999 of 21 December 1999 laying down detailed rules for the application of Regulation No 1447/1999 (OJ 1999 L 328, p. 62), 73 cases of infringement of the rules relating to the minimum size of fish. However, only eight cases, that is to say 11%, resulted in imposition of a fine.

66 While the Commission acknowledges that the circular of the Minister for Justice of 16 October 2002, to which the French Government refers, constitutes an appropriate measure, it considers nevertheless that the way in which the circular will be applied should be checked. In this connection, it observes that the latest figures notified by the French Government for 2003 show a reduction in the number of convictions.

67 The French Government contends that since 1991 the number of infringements in respect of which proceedings have been brought, and the sentences, have been constantly increasing. It stresses, however, that a purely statistical examination of the number of infringements in respect of which proceedings are brought cannot, by itself, give an account of the effectiveness of a control system since it rests on the entirely unproven presupposition that the number of infringements is stable.

68 The French Government refers to a circular which the Minister for Justice addressed on 16 October 2002 to the Principal State Prosecutors at the cours d'appel (Courts of Appeal) of

Rennes, Poitiers, Bordeaux and Pau, recommending that proceedings be systematically brought in respect of infringements and that deterrent penalties be demanded. It acknowledges, however, that the circular could not have full effect in 2002 or 2003 because of Law No 2002-1062, which granted an amnesty in respect of infringements committed before 17 May 2002 in so far as the fine did not exceed EUR 750.

Findings of the Court

69 The obligation on the Member States to make sure that penalties which are effective, proportionate and a deterrent are imposed for infringements of Community rules is of fundamental importance in the field of fisheries. If the competent authorities of a Member State were systematically to refrain from taking action against the persons responsible for such infringements, both the conservation and management of fishery resources and the uniform application of the common fisheries policy would be jeopardised (see, in relation to failure to comply with the quota system for the fishing years 1991 and 1992, Case C-52/95 *Commission* v *France* [1995] ECR I-4443, paragraph 35).

70 So far as concerns, in this instance, the situation on expiry of the period laid down in the supplementary reasoned opinion of 6 June 2000, it is sufficient to recall the findings made in paragraphs 49 to 52 of the present judgment. Since it has been established that infringements which the national authorities could have found to exist were not recorded and since reports were not drawn up in respect of offenders, it is clear that those authorities failed to fulfil the obligation to take action, which the Community rules impose on them (see, to this effect, Case C-64/88 *Commission* v *France*, paragraph 24).

71 As regards the situation on the date upon which the Court examined the facts, reference should be made to the findings in paragraphs 54 to 61 of the present judgment, according to which significant deficiencies in the controls persisted. In light of those findings, the increase in the number of infringements in respect of which proceedings were brought, to which the French Government has referred, cannot be considered sufficient. As the French Government has observed, a purely statistical examination of the number of infringements in respect of which proceedings are brought cannot, by itself, give an account of the effectiveness of a control system.

72 Furthermore, as the Commission has pointed out, it is clear from the information provided by the French Government that proceedings are not brought in respect of all the infringements that are recorded. It is also apparent that deterrent penalties are not imposed in respect of all the infringements in respect of which proceedings are brought. The fact that numerous fisheries infringements were eligible to benefit from Law No 2002-1062 attests that, in all those cases, fines of less than EUR 750 were imposed.

73 Accordingly, in light of the detailed evidence submitted by the Commission, the information adduced by the French Government is not sufficiently substantial to demonstrate that the measures which it has implemented so far as concerns the taking of action in respect of infringements of the fisheries rules display the efficacy, proportionality and deterrence necessary to meet its obligation to ensure the effectiveness of the Community system for conservation and management of fishery resources (see paragraphs 37 and 38 of the present judgment).

74 It must therefore be found that, both on expiry of the period laid down in the supplementary reasoned opinion of 6 June 2000 and on the date upon which the Court examined the facts which were presented to it, the French Republic, by failing to ensure that action was taken in respect of infringements of the rules governing fishing activities in accordance with the requirements laid down by the Community provisions, had not taken all the necessary measures to comply with the judgment in Case C-64/88 *Commission* v *France* and was accordingly failing to fulfil its obligations under Article 228 EC.

Financial penalties for the breach of obligations

75 To punish the failure to comply with the judgment in Case C-64/88 *Commission* v *France*, the Commission suggested that the Court should impose a daily penalty payment on the French Republic from delivery of the present judgment until the day on which the breach of obligations is brought to an end. In light of the particular features of the breach that has been established, the Court considers that it should examine in addition whether imposition of a lump sum could constitute an appropriate measure.

The possibility of imposing both a penalty payment and a lump sum

Arguments of the parties and submissions made to the Court

76 When invited to give their views on whether, in proceedings brought under Article 228(2) EC, the Court may, where it finds that the Member State concerned has not complied with the Court's judgment, impose both a lump sum and a penalty payment on it, the Commission and the Danish, Netherlands, Finnish and United Kingdom Governments answered in the affirmative.

77 Their reasoning is based, essentially, on the fact that those two measures are complementary, in that each of them respectively seeks to achieve a deterrent effect. A combination of those measures should be regarded as one and the same means of achieving the objective laid down by Article 228 EC, that is to say not only to induce the Member State concerned to comply with the initial judgment but also, from a wider viewpoint, to reduce the possibility of similar infringements being committed again.

78 The French, Belgian, Czech, German, Greek, Spanish, Irish, Italian, Cypriot, Hungarian, Austrian, Polish and Portuguese Governments have put forward a contrary view.

79 They rely on the wording of Article 228(2) EC and on the use of the conjunction 'or', to which they accord a disjunctive sense, and on the objective of this provision. The provision is not punitive in nature, since Article 228(2) EC does not seek to punish the defaulting Member State, but only to induce it to comply with a judgment establishing a breach of obligations. It is not possible to distinguish several periods of a breach of obligations; only its entire duration is to be taken into consideration. The imposition of more than one financial penalty is contrary to the principle prohibiting the same conduct from being punished twice. Furthermore, in the absence of Commission guidelines concerning the applicable criteria for calculating a lump sum, imposition of such a sum by the Court would conflict with the principles of legal certainty and transparency. It would also compromise equal treatment between Member States, since such a measure was not envisaged in the judgments in Case C-387/97 *Commission* v *Greece* [2000] ECR I-5047 and Case C-278/01 *Commission* v *Spain* [2003] ECR I-14141.

Findings of the Court

80 The procedure laid down in Article 228(2) EC has the objective of inducing a defaulting Member State to comply with a judgment establishing a breach of obligations and thereby of ensuring that Community law is in fact applied. The measures provided for by that provision, namely a lump sum and a penalty payment, are both intended to achieve this objective.

81 Application of each of those measures depends on their respective ability to meet the objective pursued according to the circumstances of the case. While the imposition of a penalty payment seems particularly suited to inducing a Member State to put an end as soon as possible to a breach of obligations which, in the absence of such a measure, would tend to persist, the imposition of a lump sum is based more on assessment of the effects on public and private interests of the failure of the Member State concerned to comply with its obligations, in particular where the breach has persisted for a long period since the judgment which initially established it.

82 That being so, recourse to both types of penalty provided for in Article 228(2) EC is not

precluded, in particular where the breach of obligations both has continued for a long period and is inclined to persist.

83 This interpretation cannot be countered by reference to the use in Article 228(2) EC of the conjunction 'or' to link the financial penalties capable of being imposed. As the Commission and the Danish, Netherlands, Finnish and United Kingdom Governments have submitted, that conjunction may, linguistically, have an alternative or a cumulative sense and must therefore be read in the context in which it is used. In light of the objective pursued by Article 228 EC, the conjunction 'or' in Article 228(2) EC must be understood as being used in a cumulative sense.

84 The objection raised, in particular by the German, Greek, Hungarian, Austrian and Polish Governments, that imposition of both a penalty payment and a lump sum, taking into consideration the same period of breach twice, would infringe the principle *non bis in idem* must also be rejected. Since each penalty has its own function, it is to be determined in such a way as to fulfil that function. It follows that, where the Court imposes a penalty payment and a lump sum simultaneously, the duration of the breach is taken into consideration as one of a number of criteria, in order to determine the appropriate level of coercion and deterrence.

85 The argument, relied on by the Belgian Government in particular, that, in the absence of guidelines adopted by the Commission for calculating a lump sum, imposition of a lump sum would conflict with the principles of legal certainty and transparency cannot be upheld either. While such guidelines do help to ensure that the Commission acts in a manner which is transparent, foreseeable and consistent with legal certainty (see, in relation to the guidelines concerning calculation of penalty payments, Case C-387/97 *Commission* v *Greece*, cited above, paragraph 87), the fact remains that exercise of the power conferred on the Court by Article 228(2) EC is not subject to the condition that the Commission adopts such rules, which, in any event, cannot bind the Court (Case C-387/97 *Commission* v *Greece*, paragraph 89, and Case C-278/01 *Commission* v *Spain*, cited above, paragraph 41).

86 As to the objection, raised by the French Government, that imposition of both a penalty payment and a lump sum in the present case would compromise equal treatment since it was not envisaged in the judgments in Case C-387/97 *Commission* v *Greece* and Case C-278/01 *Commission* v *Spain*, it is for the Court, in each case, to assess in light of its circumstances the financial penalties to be imposed. Accordingly, the fact that both measures were not imposed in the cases decided previously cannot in itself constitute an obstacle to the imposition of both in a subsequent case, if, having regard to the nature, seriousness and persistence of the breach of obligations established, that appears appropriate.

The Court's discretion as to the financial penalties that can be imposed

Arguments of the parties and submissions made to the Court

87 The Commission and the Czech, Hungarian and Finnish Governments have answered in the affirmative the question whether the Court may, where appropriate, depart from the Commission's suggestions and impose a lump sum on a Member State although the Commission did not suggest this. In their submission, the Court has a discretion in the matter, which extends to determining the penalty considered to be the most appropriate, irrespective of the Commission's suggestions in this regard.

88 The French, Belgian, Danish, German, Greek, Spanish, Irish, Italian, Netherlands, Austrian, Polish and Portuguese Governments take an opposing view. They put forward substantive and procedural arguments. With regard to substance, they submit that exercise by the Court of such a discretion would infringe the principles of legal certainty, predictability, transparency and equal treatment. The German Government adds that the Court in any event lacks the political legitimacy necessary to exercise such a power in a field where assessments of political expediency play a considerable role. At the procedural level, the aforementioned governments stress that so extensive a power is incompatible with the general principle of civil procedure common to all the Member States that courts cannot go beyond the parties' claims, and dwell

upon the need for an *interpartes* procedure enabling the Member State concerned to exercise its rights of defence.

Findings of the Court

89 With regard to the arguments derived from the principles of legal certainty, predictability, transparency and equal treatment, reference should be made to the findings made in paragraphs 85 and 86 of this judgment.

90 So far as concerns the German Government's argument as to the Court's lack of political legitimacy to impose a financial penalty not suggested by the Commission, the various stages involved in the procedure laid down in Article 228(2) EC should be distinguished. Once the Commission has exercised its discretion as to the initiation of infringement proceedings (see, inter alia, in relation to Article 226 EC, the judgment in Case C-74/02 *Commission* v *Germany* [2003] ECR I-9877, paragraph 17, and the judgment of 21 October 2004 in Case C-477/03 *Commission* v *Germany*, not published in the ECR, paragraph 11), the question of whether or not the Member State concerned has complied with a previous judgment of the Court is subjected to a judicial procedure in which political considerations are irrelevant. It is in performance of its judicial function that the Court assesses the extent to which the situation prevailing in the Member State in question complies with the initial judgment and, where appropriate, assesses the seriousness of a persisting breach of obligations. It follows that, as the Advocate General has observed in point 24 of his Opinion of 18 November 2004, the appropriateness of imposing a financial penalty and the choice of the penalty most suited to the circumstances of the case can be appraised only in the light of the findings made by the Court in the judgment to be delivered under Article 228(2) EC and therefore fall outside the political sphere.

91 The argument that, in departing from or going beyond the Commission's suggestions, the Court infringes a general principle of procedural law which prohibits courts from going beyond the parties' claims is not well founded either. The procedure provided for in Article 228(2) EC is a special judicial procedure, peculiar to Community law, which cannot be equated with a civil procedure. The order imposing a penalty payment and/or a lump sum is not intended to compensate for damage caused by the Member State concerned, but to place it under economic pressure which induces it to put an end to the breach established. The financial penalties imposed must therefore be decided upon according to the degree of persuasion needed in order for the Member State in question to alter its conduct.

92 As regards the rights of defence that the Member State concerned must be able to exercise, which have been dwelt upon by the French, Belgian, Netherlands, Austrian and Finnish Governments, the procedure laid down in Article 228(2) EC must, as the Advocate General has observed in point 11 of his Opinion of 18 November 2004, be regarded as a special judicial procedure for the enforcement of judgments, in other words as a method of enforcement. It is in this context, therefore, that the procedural guarantees which must be available to the Member State in question are to be assessed.

93 It follows that, once it has been found in *interpartes* proceedings that a breach of Community law persists, the rights of defence which are to be accorded to the defaulting Member State so far as concerns the financial penalties envisaged must take account of the objective pursued, namely securing and guaranteeing that the law is again complied with.

94 In the present case, so far as concerns the truth with regard to the conduct liable to give rise to the imposition of financial penalties, the French Republic had the opportunity to defend itself throughout a pre-litigation procedure which lasted nearly nine years and gave rise to two reasoned opinions, and, in the present proceedings, in the course of the written procedure and at the hearing of 3 March 2004. That examination of the facts led the Court to find that a breach by the French Republic of its obligations persisted (see paragraph 74 of the present judgment).

95 The Commission which, in the two reasoned opinions, had drawn the risk of financial penalties

to the attention of the French Republic (see paragraphs 15 and 18 of the present judgment), indicated to the Court the criteria (see paragraph 98 of the present judgment) capable of being taken into consideration when determining the financial penalties intended to exert sufficient economic pressure on the French Republic to prompt it to put an end to its breach of obligations as rapidly as possible, and the respective weightings to be given to those criteria. The French Republic set out its views on the criteria in the written procedure and at the hearing on 3 March 2004.

96 By order of 16 June 2004, the Court requested the parties to give their views on whether, where the Court finds that a Member State has not taken the necessary measures to comply with a previous judgment and the Commission has requested the Court to impose a penalty payment on that State, the Court may impose on the Member State a lump sum or, as the case may be, a lump sum and a penalty payment. The parties stated their views at the hearing on 5 October 2004.

97 It follows that the French Republic has been able to make its submissions on all the matters of law and of fact necessary for establishing that the breach of obligations alleged against it has persisted and for deciding upon the seriousness of the breach and the measures which may be adopted in order to bring it to an end. On the basis of those matters, which have been the subject of *inter partes* proceedings, it is for the Court to determine, according to the degree of persuasion and deterrence which appears to it to be required, the financial penalties appropriate for making sure that the judgment in Case C-64/88 *Commission* v *France* is complied with as rapidly as possible and preventing similar infringements of Community law from recurring.

The financial penalties appropriate in the present case

Imposition of a penalty payment

98 On the basis of the method of calculation which it has set out in its communication 97/C 63/02 of 28 February 1997 on the method of calculating the penalty payments provided for pursuant to Article [228] of the EC Treaty (OJ 1997 C 63, p. 2), the Commission suggested that the Court should impose on the French Republic a penalty payment of EUR 316 500 for each day of delay by way of penalty for non-compliance with the judgment in Case C-64/88 *Commission* v *France*, from the date of delivery of the judgment in the present case until the day on which the judgment in Case C-64/88 *Commission* v *France* has been complied with.

99 The Commission considers that an order imposing a penalty payment is the most appropriate instrument for putting an end as soon as possible to the infringement which has been established and that, in the present case, a penalty payment of EUR 316 500 for each day of delay fits the seriousness and duration of the infringement, due regard being had to the need to make the penalty effective. That sum is calculated by multiplying a uniform basic amount of EUR 500 by a coefficient of 10 (on a scale of 1 to 20) for the seriousness of the infringement, by a coefficient of 3 (on a scale of 1 to 3) for the duration of the infringement and by a coefficient of 21.1 (based on the gross domestic product of the Member State in question and the weighting of votes in the Council of the European Union), which is deemed to reflect the ability to pay of the Member State concerned.

100 The French Government submits that there is no reason to impose a penalty payment because it has brought the breach of obligations to an end and, in the alternative, that the amount of the penalty payment requested is disproportionate.

101 It points out that, so far as the seriousness of the infringement is concerned, in Case C-387/97 *Commission* v *Greece* the Commission suggested a coefficient of 6, although the breach of obligations compromised public health and no measure had been taken with a view to complying with the previous judgment, two factors which are absent here. Accordingly, the coefficient of 10 suggested by the Commission in the present case is not acceptable.

102 The French Government also maintains that the measures required to comply with the

judgment in Case C-64/88 *Commission* v *France* were unable to produce immediate effects. Given the inevitable time-lag between the adoption of the measures and their impact becoming perceptible, the Court cannot take into account the whole of the period passing between delivery of the first judgment and that of the forthcoming judgment.

103 As to those submissions, while it is clear that a penalty payment is likely to encourage the defaulting Member State to put an end as soon as possible to the breach that has been established (Case C-278/01 *Commission* v *Spain*, paragraph 42), it should be remembered that the Commission's suggestions cannot bind the Court and are only a useful point of reference (Case C-387/97 *Commission* v *Greece*, paragraph 89). In exercising its discretion, it is for the Court to set the penalty payment so that it is appropriate to the circumstances and proportionate both to the breach that has been established and to the ability to pay of the Member State concerned (see, to this effect, Case C-387/97 *Commission* v *Greece*, paragraph 90, and Case C-278/01 *Commission* v *Spain*, paragraph 41).

104 In that light, and as the Commission has suggested in its communication of 28 February 1997, the basic criteria which must be taken into account in order to ensure that penalty payments have coercive force and Community law is applied uniformly and effectively are, in principle, the duration of the infringement, its degree of seriousness and the ability of the Member State to pay. In applying those criteria, regard should be had in particular to the effects of failure to comply on private and public interests and to the urgency of getting the Member State concerned to fulfil its obligations (Case C-387/97 *Commission* v *Greece*, paragraph 92).

105 As regards the seriousness of the infringement and, in particular, the effects of failure to comply on private and public interests, it is to be remembered that one of the key elements of the common fisheries policy consists in rational and responsible exploitation of aquatic resources on a sustainable basis, in appropriate economic and social conditions. In this context, the protection of juvenile fish proves decisive for reestablishing stocks. Failure to comply with the technical measures of conservation prescribed by the common policy, in particular the requirements regarding the minimum size of fish, therefore constitutes a serious threat to the maintenance of certain species and certain fishing grounds and jeopardises pursuit of the fundamental objective of the common fisheries policy.

106 Since the administrative measures adopted by the French authorities have not been implemented in an effective manner, they cannot reduce the seriousness of the breach established.

107 Having regard to those factors, the coefficient of 10 (on a scale of 1 to 20) is therefore an appropriate reflection of the degree of seriousness of the infringement.

108 As regards the duration of the infringement, suffice it to state that it is considerable, even if the starting date be that on which the Treaty on European Union entered into force and not the date on which the judgment in Case C-64/88 *Commission* v *France* was delivered (see, to this effect, Case C-387/97 *Commission* v *Greece*, paragraph 98). Accordingly, the coefficient of 3 (on a scale of 1 to 3) suggested by the Commission appears appropriate.

109 The Commission's suggestion of multiplying a basic amount by a coefficient of 21.1 based on the gross domestic product of the French Republic and on the number of votes which it has in the Council is an appropriate way of reflecting that Member State's ability to pay, while keeping the variation between Member States within a reasonable range (see Case C-387/97 *Commission* v *Greece*, paragraph 88, and Case C-278/01 *Commission* v *Spain*, paragraph 59).

110 Multiplying the basic amount of EUR 500 by the coefficients of 21.1 (for ability to pay), 10 (for the seriousness of the infringement) and 3 (for the duration of the infringement) gives a sum of EUR 316 500 per day.

111 As regards the frequency of the penalty payment, account should, however, be taken of the fact that the French authorities have adopted administrative measures which could serve as a

framework for implementation of the measures required to comply with the judgment in Case C-64/88 *Commission* v *France*. Nevertheless, it is not possible for the necessary adjustments to previous practices to be instantaneous or their impact to be perceived immediately. It follows that any finding that the infringement has come to an end could be made only after a period allowing an overall assessment to be made of the results obtained.

112 Having regard to those considerations, the penalty payment must be imposed not on a daily basis, but on a half-yearly basis.

113 In light of all of the foregoing, the French Republic should be ordered to pay to the Commission, into the account 'European Community own resources', a penalty payment of 182.5 x EUR 316 500, that is to say of EUR 57 761 250, for each period of six months from delivery of the present judgment at the end of which the judgment in Case C-64/88 *Commission* v *France* has not yet been fully complied with.

Imposition of a lump sum

114 In a situation such as that which is the subject of the present judgment, in light of the fact that the breach of obligations has persisted for a long period since the judgment which initially established it and of the public and private interests at issue, it is essential to order payment of a lump sum (see paragraph 81 of the present judgment).

115 The specific circumstances of the case are fairly assessed by setting the amount of the lump sum which the French Republic will have to pay at EUR 20 000 000.

116 The French Republic should therefore be ordered to pay to the Commission, into the account 'European Community own resources', a lump sum of EUR 20 000 000.

Costs

117 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Commission has applied for costs and the French Republic has been unsuccessful, the latter must be ordered to pay the costs.

On those grounds, the Court (Grand Chamber) hereby:

1. Declares that:

– by failing to carry out controls of fishing activities in accordance with the requirements laid down by the Community provisions, and

– by failing to ensure that action is taken in respect of infringements of the rules governing fishing activities in accordance with the requirements laid down by the Community provisions,

the French Republic has not implemented all the necessary measures to comply with the judgment of 11 June 1991 in Case C-64/88 *Commission* v *France* and has accordingly failed to fulfil its obligations under Article 228 EC;

2. Orders the French Republic to pay to the Commission of the European Communities, into the account 'European Community own resources', a penalty payment of EUR 57 761 250 for each period of six months from delivery of the present judgment at the end of which the judgment in Case C-64/88 *Commission* v *France* has not yet been fully complied with;

3. Orders the French Republic to pay to the Commission of the European Communities, into the account 'European Community own resources', a lump sum of EUR 20 000 000;

4. Orders the French Republic to pay the costs.

Case C-466/04

Manuel Acereda Herrera

v

Servicio Cántabro de Salud

(Reference for a preliminary ruling from the
Tribunal Superior de Justicia de Cantabria)

(Social security — Hospital costs incurred in another Member State — Travel, accommodation and subsistence costs — Article 22 of Regulation (EEC) No 1408/71)

Summary of the Judgment

1. *Social security for migrant workers — Sickness insurance — Benefits provided in another Member State — Articles 22(1)(c) and 36 of Regulation No 1408/71*

(Art. 49 EC; Council Regulation No 1408/71, Arts 22(1)(c) and (2) and 36)

2. *Social security for migrant workers — Sickness insurance — Benefits provided in another Member State*

(Art. 10 EC; Council Regulation No 1408/71, Art. 22(1)(a) and (c))

3. *Preliminary rulings — Jurisdiction of the Court — Limits*

(Art. 234 EC)

1. Article 22(1)(c) and (2) and Article 36 of Regulation No 1408/71, as amended and updated by Regulation No 118/97, must be interpreted as meaning that authorisation by the competent institution for an insured person to go to another Member State in order there to receive hospital treatment appropriate to his medical condition does not confer on such a person the right to be reimbursed by the competent institution for the costs of travel, accommodation and subsistence which that person and any person accompanying him incurred in the territory of that latter Member State, with the exception of the costs of accommodation and meals in hospital for the insured person himself.

First, the obligation imposed on the competent institution by Article 22(1)(c)(i) of Regulation No 1408/71, so far as benefits in kind are concerned, relates exclusively to the expenditure connected with the healthcare received by the insured person in the host Member State, namely, in the case of hospital treatment, the cost of medical services strictly defined and the inextricably linked costs relating to the stay and meals in the hospital. Likewise, the concept of 'cash benefits' within the meaning of that article does not refer to the reimbursement of expenditure already incurred, such as ancillary costs like travel, accommodation and subsistence costs incurred in the territory of that Member State by the insured person and the person accompanying him.

Secondly, Article 36 of Regulation No 1408/71 is exclusively concerned with the issue of reimbursements between institutions and does not confer any entitlement on persons insured.

That interpretation is without prejudice to the outcome which would result were Article 49 EC found to be applicable. That article precludes national legislation which excludes reimbursement of the ancillary costs incurred by a patient authorised to go to another Member State in order there to receive hospital treatment whilst providing for the reim-

bursement of those costs where the treatment is provided in a hospital covered by the national system.

(see paras 28, 33, 36, 38-39, operative part 1)

2. National legislation in which provision is made for entitlement to benefits additional to those provided for in Article 22(1) of Regulation No 1408/71, as amended and updated by Regulation No 118/97, in the situation covered by paragraph (1)(a) of that article, but not in that covered by paragraph (1)(c) thereof, does not obstruct the direct effect of that provision or infringe the principle of cooperation in good faith stemming from Article 10 EC.

(see para. 45, operative part 2)

3. It is solely for the national court before which the dispute has been brought, and which must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court.

Nevertheless, the Court cannot give a preliminary ruling on a question submitted by a national court where it is quite obvious that the ruling sought by that court on the interpretation or validity of Community law bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical. The justification for a reference for a preliminary ruling is not that it enables advisory opinions on general or hypothetical questions to be delivered but rather that it is necessary for the effective resolution of a dispute.

(see paras 47-49)

Case C-344/04

The Queen on the application of:

International Air Transport Association

and

European Low Fares Airline Association

v

Department for Transport

(Reference for a preliminary ruling from the High Court of Justice of England and Wales, Queen's Bench Division (Administrative Court))

(Carriage by air – Regulation (EC) No 261/2004 – Articles 5, 6 and 7 – Compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights – Validity – Interpretation of Article 234 EC)

Summary of the Judgment

1. *Preliminary rulings – Reference to the Court – Challenge to the validity of a Community act before a national court*

   (Art. 234, para. 2, EC)

2. *Transport – Carriage by air – Regulation No 261/2004 – Measures to assist and take care of passengers in the event of a long delay to a flight*

   (European Parliament and Council Regulation No 261/2004, Art. 6; Montreal Convention 1999)

3. *Acts of the institutions – Statement of reasons – Obligation – Scope*

   (Art. 253 EC; European Parliament and Council Regulation No 261/2004, Arts 5, 6 and 7)

4. *Transport – Carriage by air – Regulation No 261/2004 – Measures to assist, take care of and compensate passengers in the event of cancellation of, or a long delay to, a flight*

   (European Parliament and Council Regulation No 261/2004, Arts 5, 6 and 7)

5. *Transport – Carriage by air – Regulation No 261/2004 – Measures to assist, take care of and compensate passengers in the event of cancellation of, or a long delay to, a flight*

   (European Parliament and Council Regulation No 261/2004, Arts 5, 6 and 7)

1. The fact that the validity of a Community act is contested before a national court is not in itself sufficient to warrant referral of a question to the Court of Justice for a preliminary ruling.

   Courts against whose decisions there is a judicial remedy under national law may examine the validity of a Community act and, if they consider that the arguments put forward before them by the parties in support of invalidity are unfounded, they may reject them, concluding that the act is completely valid, given that, in so doing, they are not

calling into question the existence of the Community act.

On the other hand, where such a court considers that one or more arguments for invalidity of a Community act which have been put forward by the parties or, as the case may be, raised by it of its own motion are well founded, it must stay proceedings and make a reference to the Court for a preliminary ruling on the act's validity.

(see paras 28-30, 32, operative part 1)

2. The measures to assist and take care of passengers in the event of a long delay to a flight which are prescribed in Article 6 of Regulation No 261/2004 establishing common rules on compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights constitute standardised and immediate measures to redress the damage which is linked to the inconvenience that delay in the carriage of passengers by air causes.

These measures are not among those the institution of which is regulated by the Montreal Convention for the Unification of Certain Rules for International Carriage by Air and cannot therefore be considered inconsistent with the Convention.

That Convention governs the conditions under which, after a flight has been delayed, the passengers concerned may bring actions for damages by way of redress on an individual basis from the carriers liable for damage resulting from that delay, but does not shield those carriers from any other form of intervention.

The standardised and immediate measures prescribed in Article 6 of Regulation No 261/2004 do not prevent the passengers concerned, should the same delay also cause them damage conferring entitlement to compensation, from being able to bring in addition actions to redress that damage under the conditions laid down by the Montreal Convention.

(see paras 44-48)

3. Articles 5, 6 and 7 of Regulation No 261/2004 establishing common rules on compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights are not invalid by reason of breach of the obligation to state reasons.

Regulation No 261/2004 clearly discloses the essential objective pursued by the institutions and thus cannot be required to contain a specific statement of reasons for each of the technical choices made. Since the objective of protecting passengers required acceptance of standardised and effective compensatory measures which could not give rise to discussion at the very moment when they were to be applied, a situation which the defence of extraordinary circumstances would not have failed to bring about, the Community legislature was able, without breaching its obligation to state reasons, to refrain from setting out the reasons why it considered that operating air carriers could not rely on such a defence in order to be exempted from their obligations to assist and take care of passengers laid down in Articles 5 and 6 of the regulation. Likewise, the Community legislature was able, without rendering the act in question unlawful, to lay down in Article 7 the principle that fixed compensation was payable in the event of cancellation of a flight and the amount of the compensation without setting out the reasons why it had chosen that measure and that amount.

(see paras 69-70, 72, 77)

4. Given that the Community legislature is allowed a broad discretion in the field of the common transport policy, the legality, from the point of view of observance of the principle of proportionality, of a measure adopted in that field can be affected only if the

measure is manifestly inappropriate having regard to the objective which the competent institution is seeking to pursue.

The measures to assist, care for and compensate passengers that are prescribed in Articles 5, 6 and 7 of Regulation No 261/2004 establishing common rules on compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights do not appear manifestly inappropriate to the objective pursued by the Community legislature, which relates to strengthening protection for passengers who suffer cancellation of, or long delays to, flights. On the contrary, the measures prescribed by Articles 5 and 6 of the regulation are in themselves capable of immediately redressing some of the damage suffered by those passengers and therefore enable a high level of passenger protection to be ensured. Furthermore, the criteria adopted for determining the passengers' entitlement to those measures, namely the length of the delay and the wait for the next flight or the time taken to inform them of the flight's cancellation, do not appear in any way unrelated to the requirement for proportionality. Also, given that the standardised and immediate compensatory measures at issue vary according to the significance of the damage suffered by the passengers, they likewise do not appear to be manifestly inappropriate merely because carriers cannot rely on the defence of extraordinary circumstances.

Next, it has not been established that if passengers were to take out voluntary insurance to cover the risks inherent in flight delays and cancellations, that would in any event make it possible to remedy the damage suffered by passengers on the spot. Such a measure cannot, therefore, be regarded as being more appropriate to the objective pursued than those chosen by the Community legislature.

Also, since the harmful consequences to which a delay gives rise are in no way related to the price paid for a ticket, the argument that the measures chosen to alleviate those consequences should have been determined in proportion to the cost of the ticket cannot be upheld.

Finally, the compensation prescribed in Article 7 of the regulation, which passengers may claim when they have been informed of a flight cancellation too late, does not appear manifestly inappropriate to the objective pursued, given the existence of the extraordinary circumstances defence enabling air carriers to be exempted from paying that compensation and of the conditions restricting the application of this obligation. Furthermore, the amount of the compensation, set on the basis of the distance of the flights concerned, likewise does not appear excessive.

(see paras 80, 82, 84-88, 91)

5. Articles 5, 6 and 7 of Regulation No 261/2004 establishing common rules on compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights, which impose the same obligations on all air carriers, are not invalid by reason of a breach of the principle of equal treatment, even though such obligations are not placed on other means of transport.

First, the situations of undertakings operating in different transport sectors are not comparable since modes of transport are not interchangeable as regards the conditions of their use.

Second, with regard to air transport, passengers whose flights are cancelled or subject to a long delay are in an objectively different situation from that experienced by passengers on other means of transport in the event of incidents of the same nature.

Furthermore, the damage suffered by passengers of air carriers in the event of cancellation of, or a long delay to, a flight is similar whatever the airline with which they have a contract and is unrelated to the pricing policies operated by the airline.

Accordingly, if the Community legislature is not to infringe the principle of equality, having regard to the aim pursued by the regulation of increasing protection for all passengers of air carriers, it is incumbent upon it to treat all airlines identically.

(see paras 96-99)

JUDGMENT OF THE COURT (Grand Chamber)

10 January 2006 (*)

(Carriage by air – Regulation (EC) No 261/2004 – Articles 5, 6 and 7 –Compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights – Validity – Interpretation of Article 234 EC)

In Case C-344/04,

REFERENCE for a preliminary ruling under Article 234 EC from the High Court of Justice of England and Wales, Queen's Bench Division (Administrative Court), made by decision of 14 July 2004, received at the Court on 12 August 2004, in the proceedings

The Queen on the application of:

International Air Transport Association,

European Low Fares Airline Association

v

Department for Transport,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann, C.W.A. Timmermans, A. Rosas, K. Schiemann and J. Malenovský (Rapporteur), Presidents of Chambers, C. Gulmann, R. Silva de Lapuerta, K. Lenaerts, P. Kūris, E. Juhász, G. Arestis and A. Borg Barthet, Judges**,**

Advocate General: L.A. Geelhoed,

Registrar: L. Hewlett, Principal Administrator,

having regard to the written procedure and further to the hearing on 7 June 2005,

after considering the observations submitted on behalf of:

– the International Air Transport Association, by M. Brealey QC and M. Demetriou, Barrister, instructed by J. Balfour, Solicitor,

– the European Low Fares Airline Association, by G. Berrisch, Rechtsanwalt, and C. Garcia Molyneux, abogado,

– the United Kingdom Government, by M. Bethell, acting as Agent, and C. Lewis, Barrister,

– the European Parliament, by K. Bradley and M. Gómez Leal, acting as Agents,

– the Council of the European Union, by E. Karlsson, K. Michoel and R. Szostak, acting as Agents,

– the Commission of the European Communities, by F. Benyon and M. Huttunen, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 8 September 2005,

gives the following

Judgment

1 This reference for a preliminary ruling concerns, first, the validity of Articles 5, 6 and 7 of Regulation (EC) No 261/2004 of the European Parliament and of the Council of 11 February 2004 establishing common rules on compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights, and repealing Regulation (EEC) No 295/91 (OJ 2004 L 46, p. 1). It concerns, secondly, the interpretation of the second paragraph of Article 234 EC.

2 The reference was made in proceedings brought by the International Air Transport Association ('IATA') and the European Low Fares Airline Association ('ELFAA') against the Department for Transport concerning the implementation of Regulation No 261/2004.

Legal context

International rules

3 The Convention for the Unification of Certain Rules for International Carriage by Air ('the Montreal Convention') was approved by decision of the Council of 5 April 2001 (OJ 2001 L 194, p. 38).

4 Chapter III of the Montreal Convention, headed 'Liability of the carrier and extent of compensation for damage', is comprised by Articles 17 to 37.

5 Article 19 of the Convention, headed 'Delay', provides:

'The carrier is liable for damage occasioned by delay in the carriage by air of passengers, baggage or cargo. Nevertheless, the carrier shall not be liable for damage occasioned by delay if it proves that it and its servants and agents took all measures that could reasonably be required to avoid the damage or that it was impossible for it or them to take such measures.'

6 Article 22(1) of the Convention limits the liability of the carrier for delay to 4 150 Special Drawing Rights (SDRs) for each passenger. Article 22(5) essentially provides that this limit is not to apply if the damage results from an act or omission of the carrier, done with intent to cause damage or recklessly and with knowledge that damage would probably result.

7 Article 29 of the Convention, headed 'Basis of claims', reads as follows:

'In the carriage of passengers, baggage and cargo, any action for damages, however founded, whether under this Convention or in contract or in tort or otherwise, can only be brought subject to the conditions and such limits of liability as are set out in this Convention without prejudice to the question as to who are the persons who have the right to bring suit and what are their respective rights. In any such action, punitive, exemplary or any other non-compensatory

damages shall not be recoverable.'

Community rules

Regulation (EC) No 2027/97

8 Council Regulation (EC) No 2027/97 of 9 October 1997 on air carrier liability in the event of accidents (OJ 1997 L 285, p. 1) was amended by Regulation (EC) No 889/2002 of the European Parliament and of the Council of 13 May 2002 (OJ 2002 L 140, p. 2) ('Regulation No 2027/97').

9 Article 3(1) of Regulation No 2027/97 provides:

'The liability of a Community air carrier in respect of passengers and their baggage shall be governed by all provisions of the Montreal Convention relevant to such liability.'

10 The annex to Regulation No 2027/97 contains inter alia the following provisions, under the heading 'Passenger delays':

'In case of passenger delay, the air carrier is liable for damage unless it took all reasonable measures to avoid the damage or it was impossible to take such measures. The liability for passenger delay is limited to 4 150 SDRs (approximate amount in local currency).'

Regulation No 261/2004

11 The first and second recitals in the preamble to Regulation No 261/2004 are worded as follows:

'(1) Action by the Community in the field of air transport should aim, among other things, at ensuring a high level of protection for passengers. Moreover, full account should be taken of the requirements of consumer protection in general.

(2) Denied boarding and cancellation or long delay of flights cause serious trouble and inconvenience to passengers.'

12 The 12th recital in the preamble states:

'The trouble and inconvenience to passengers caused by cancellation of flights should also be reduced. This should be achieved by inducing carriers to inform passengers of cancellations before the scheduled time of departure and in addition to offer them reasonable re-routing, so that the passengers can make other arrangements. Air carriers should compensate passengers if they fail to do this, except when the cancellation occurs in extraordinary circumstances which could not have been avoided even if all reasonable measures had been taken.'

13 The 14th recital states:

'As under the Montreal Convention, obligations on operating air carriers should be limited or excluded in cases where an event has been caused by extraordinary circumstances which could not have been avoided even if all reasonable measures had been taken. Such circumstances may, in particular, occur in cases of political instability, meteorological conditions incompatible with the operation of the flight concerned, security risks, unexpected flight safety shortcomings and strikes that affect the operation of an operating air carrier.'

14 Article 5 of Regulation No 261/2004, headed 'Cancellation', states:

'1. In case of cancellation of a flight, the passengers concerned shall:

(a) be offered assistance by the operating air carrier in accordance with Article 8; and

(b) be offered assistance by the operating air carrier in accordance with Article 9(1)(a) and 9(2), as well as, in event of re-routing when the reasonably expected time of departure of the new flight is at least the day after the departure as it was planned for the cancelled flight, the assistance specified in Article 9(1)(b) and 9(1)(c); and

(c) have the right to compensation by the operating air carrier in accordance with Article 7, unless:

(i) they are informed of the cancellation at least two weeks before the scheduled time of departure; or

(ii) they are informed of the cancellation between two weeks and seven days before the scheduled time of departure and are offered re-routing, allowing them to depart no more than two hours before the scheduled time of departure and to reach their final destination less than four hours after the scheduled time of arrival; or

(iii) they are informed of the cancellation less than seven days before the scheduled time of departure and are offered re-routing, allowing them to depart no more than one hour before the scheduled time of departure and to reach their final destination less than two hours after the scheduled time of arrival.

2. When passengers are informed of the cancellation, an explanation shall be given concerning possible alternative transport.

3. An operating air carrier shall not be obliged to pay compensation in accordance with Article 7, if it can prove that the cancellation is caused by extraordinary circumstances which could not have been avoided even if all reasonable measures had been taken.

4. The burden of proof concerning the questions as to whether and when the passenger has been informed of the cancellation of the flight shall rest with the operating air carrier.'

15 Article 6 of Regulation No 261/2004, headed 'Delay', is worded as follows:

'1. When an operating air carrier reasonably expects a flight to be delayed beyond its scheduled time of departure:

(a) for two hours or more in the case of flights of 1 500 kilometres or less; or

(b) for three hours or more in the case of all intra-Community flights of more than 1 500 kilometres and of all other flights between 1 500 and 3 500 kilometres; or

(c) for four hours or more in the case of all flights not falling under (a) or (b),

passengers shall be offered by the operating air carrier:

(i) the assistance specified in Article 9(1)(a) and 9(2); and

(ii) when the reasonably expected time of departure is at least the day after the time of departure previously announced, the assistance specified in Article 9(1)(b) and 9(1)(c); and

(iii) when the delay is at least five hours, the assistance specified in Article 8(1)(a).

2. In any event, the assistance shall be offered within the time-limits set out above with respect to each distance bracket.'

16 Article 7 of Regulation No 261/2004, headed 'Right to compensation', provides:

‘1. Where reference is made to this Article, passengers shall receive compensation amounting to:

(a) EUR 250 for all flights of 1 500 kilometres or less;

(b) EUR 400 for all intra-Community flights of more than 1 500 kilometres, and for all other flights between 1 500 and 3 500 kilometres;

(c) EUR 600 for all flights not falling under (a) or (b).

In determining the distance, the basis shall be the last destination at which the denial of boarding or cancellation will delay the passenger’s arrival after the scheduled time.

2. When passengers are offered re-routing to their final destination on an alternative flight pursuant to Article 8, the arrival time of which does not exceed the scheduled arrival time of the flight originally booked

(a) by two hours, in respect of all flights of 1 500 kilometres or less; or

(b) by three hours, in respect of all intra-Community flights of more than 1 500 kilometres and for all other flights between 1 500 and 3 500 kilometres; or

(c) by four hours, in respect of all flights not falling under (a) or (b),

the operating air carrier may reduce the compensation provided for in paragraph 1 by 50%.

3. The compensation referred to in paragraph 1 shall be paid in cash, by electronic bank transfer, bank orders or bank cheques or, with the signed agreement of the passenger, in travel vouchers and/or other services.

4. The distances given in paragraphs 1 and 2 shall be measured by the great circle route method.’

17 Article 8 of Regulation No 261/2004, headed ‘Right to reimbursement or re-routing’, states:

‘1. Where reference is made to this Article, passengers shall be offered the choice between:

(a) – reimbursement within seven days, by the means provided for in Article 7(3), of the full cost of the ticket at the price at which it was bought, for the part or parts of the journey not made, and for the part or parts already made if the flight is no longer serving any purpose in relation to the passenger’s original travel plan, together with, when relevant,

– a return flight to the first point of departure, at the earliest opportunity;

(b) re-routing, under comparable transport conditions, to their final destination at the earliest opportunity; or

(c) re-routing, under comparable transport conditions, to their final destination at a later date at the passenger’s convenience, subject to availability of seats.

2. Paragraph 1(a) shall also apply to passengers whose flights form part of a package, except for the right to reimbursement where such right arises under Directive 90/314/EEC.

3. When, in the case where a town, city or region is served by several airports, an operating air carrier offers a passenger a flight to an airport alternative to that for which the booking was made, the operating air carrier shall bear the cost of transferring the passenger from that alternative airport either to that for which the booking was made, or to another close-by

destination agreed with the passenger.'

18 Article 9 of Regulation No 261/2004, headed 'Right to care', provides:

'1. Where reference is made to this Article, passengers shall be offered free of charge:

(a) meals and refreshments in a reasonable relation to the waiting time;

(b) hotel accommodation in cases

– where a stay of one or more nights becomes necessary, or

– where a stay additional to that intended by the passenger becomes necessary;

(c) transport between the airport and place of accommodation (hotel or other).

2. In addition, passengers shall be offered free of charge two telephone calls, telex or fax messages, or e-mails.

3. In applying this Article, the operating air carrier shall pay particular attention to the needs of persons with reduced mobility and any persons accompanying them, as well as to the needs of unaccompanied children.'

The main proceedings and the questions referred for a preliminary ruling

19 IATA is an association comprising 270 airlines from 130 countries, which carry 98% of scheduled international air passengers worldwide. ELFAA was established as an unincorporated association in January 2004 and represents the interests of 10 low-fare airlines from 9 European countries. These two associations each brought before the High Court of Justice of England and Wales, Queen's Bench Division (Administrative Court), judicial review proceedings against the Department for Transport relating to the implementation of Regulation No 261/2004.

20 The High Court of Justice, satisfied that the claimants' arguments were not without substance, decided to refer to the Court of Justice the seven questions put forward by them contesting the validity of Regulation No 261/2004. Since the Department for Transport doubted that a reference on six of those questions was necessary as they did not, in its view, raise any real doubt as to the validity of the regulation, the High Court of Justice wished to ascertain what test had to be satisfied, or what threshold passed, before a question concerning the validity of a Community instrument had to be referred to the Court of Justice on the basis of the second paragraph of Article 234 EC. In those circumstances, the High Court of Justice of England and Wales, Queen's Bench Division (Administrative Court), decided to stay proceedings and to refer the following questions to the Court of Justice for a preliminary ruling:

'(1) Whether Article 6 of Regulation No 261/2004 is invalid on grounds that it is inconsistent with the … Montreal Convention …, and in particular Articles 19, 22 and 29 [thereof], and whether this (in conjunction with any other relevant factors) affects the validity of the Regulation as a whole?

(2) Whether the amendment of Article 5 of the Regulation during consideration of the draft text by the Conciliation Committee was done in a manner that is inconsistent with the procedural requirements provided for in Article 251 EC and, if so, whether Article 5 of the Regulation is invalid and, if so, whether this (in conjunction with any other relevant factors) affects the validity of the Regulation as a whole?

(3) Whether Articles 5 and 6 of Regulation No 261/2004 (or part thereof) are invalid on grounds that they are inconsistent with the principle of legal certainty, and if so whether

this invalidity (in conjunction with any other relevant factors) affects the validity of the Regulation as a whole?

(4) Whether Articles 5 and 6 of Regulation No 261/2004 (or part thereof) are invalid on grounds that they are not supported by any or any adequate reasoning, and if so whether this invalidity (in conjunction with any other relevant factors) affects the validity of the Regulation as a whole?

(5) Whether Articles 5 and 6 of Regulation No 261/2004 (or part thereof) are invalid on grounds that they are inconsistent with the principle of proportionality required of any Community measure, and if so whether this invalidity (in conjunction with any other relevant factors) affects the validity of the Regulation as a whole?

(6) Whether Articles 5 and 6 of Regulation No 261/2004 (or part thereof) are invalid on grounds that they discriminate, in particular, against the members of the second Claimant organisation in a manner that is arbitrary or not objectively justified, and if so whether this invalidity (in conjunction with any other relevant factors) affects the validity of the Regulation as a whole?

(7) Is Article 7 of the Regulation (or part thereof) void or invalid on grounds that the imposition of a fixed liability in the event of flight cancellation for reasons that are not covered by the extraordinary circumstances defence is discriminatory, fails to meet the standards of proportionality required of any Community measure, or is not based on any adequate reasoning, and if so whether this invalidity (in conjunction with any other relevant factors) affects the validity of the Regulation as a whole?

(8) In circumstances where a national court has granted permission to bring a claim in that national court, which raises questions as to the validity of provisions of a Community instrument and which it considers is arguable and not unfounded, are there any principles of Community law in connection with any test or threshold which the national court should apply when deciding under [the second paragraph of Article 234] EC whether to refer those questions of validity to the [Court of Justice of the European Communities]?'

21 By order of the President of the Court of 24 September 2004, the referring court's request that the accelerated procedure provided for in the first paragraph of Article 104a of the Rules of Procedure be applied to the present case was rejected.

The questions

Question 8

22 By its eighth question, which it is appropriate to examine first, the referring court asks, in essence, whether the second paragraph of Article 234 EC is to be interpreted as requiring a national court to refer a question as to the validity of a Community act to the Court of Justice for a preliminary ruling only if there is more than a certain degree of doubt concerning its validity.

Admissibility

23 The European Parliament contends that the question is inadmissible since no answer which the Court might provide to the question would be of any assistance for the decision in the case before the referring court, which relates to the validity of Regulation No 261/2004.

24 It is settled case-law that a reference from a national court may be refused only if it is quite obvious that the interpretation of Community law sought bears no relation to the actual facts of the main action or to its purpose, or where the problem is hypothetical or the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (see, inter alia, Case C-415/93 *Bosman* [1995] ECR I-4921, paragraph 61; Case

C-105/94 *Celestini* [1997] ECR I-2971, paragraph 22; and Case C-355/97 *Beckand Bergdorf* [1999] ECR I-4977, paragraph 22). Save for such cases, the Court is, in principle, bound to give a preliminary ruling on questions concerning the interpretation of Community law (see *Bosman*, paragraph 59).

25 In the main proceedings, when the claimants contested the validity of Regulation No 261/2004 before the referring court the question arose for the latter as to whether that challenge to the regulation's validity warranted a reference to the Court for a preliminary ruling as provided in Article 234 EC. Accordingly, the interpretation of that article which the referring court seeks by means of the present question cannot be considered to bear no relation to the purpose of the main action. The fact that the referring court has at the same time also referred to the Court questions concerning the validity of Regulation No 261/2004 and that the answers which will be provided to them may dispose of the main proceedings cannot call into question the relevance which the question on the interpretation of Article 234 EC possesses in itself.

26 The question asked should therefore be answered.

Substance

27 It is settled case-law that national courts do not have the power to declare acts of the Community institutions invalid. The main purpose of the jurisdiction conferred on the Court by Article 234 EC is to ensure that Community law is applied uniformly by national courts. That requirement of uniformity is particularly vital where the validity of a Community act is in question. Differences between courts of the Member States as to the validity of Community acts would be liable to jeopardise the very unity of the Community legal order and undermine the fundamental requirement of legal certainty (Case 314/85 *Foto-Frost* [1987] ECR 4199, paragraph 15; Case C-27/95 *Bakers of Nailsea* [1997] ECR I-1847, paragraph 20; and Case C-461/03 *Gaston Schul Douane-expediteur* [2005] ECR I-0000, paragraph 21). The Court of Justice alone therefore has jurisdiction to declare a Community act invalid (Joined Cases C-143/88 and C-92/89 *Zuckerfabrik Süderdithmarschen and Zuckerfabrik Soest* [1991] ECR I-415, paragraph 17, and Case C-6/99 *Greenpeace France and Others* [2000] ECR I-1651, paragraph 54).

28 Article 234 EC does not constitute a means of redress available to the parties to a case pending before a national court and therefore the mere fact that a party contends that the dispute gives rise to a question concerning the validity of Community law does not mean that the court concerned is compelled to consider that a question has been raised within the meaning of Article 234 EC (see, to this effect, Case 283/81 *Cilfit* [1982] ECR 3415, paragraph 9). Accordingly, the fact that the validity of a Community act is contested before a national court is not in itself sufficient to warrant referral of a question to the Court for a preliminary ruling.

29 The Court has held that courts against whose decisions there is a judicial remedy under national law may examine the validity of a Community act and, if they consider that the arguments put forward before them by the parties in support of invalidity are unfounded, they may reject them, concluding that the act is completely valid. In so doing, they are not calling into question the existence of the Community act (*Foto-Frost*, paragraph 14).

30 On the other hand, where such a court considers that one or more arguments for invalidity, put forward by the parties or, as the case may be, raised by it of its own motion (see, to this effect, Case 126/80 *Salonia* [1981] ECR 1563, paragraph 7), are well founded, it is incumbent upon it to stay proceedings and to make a reference to the Court for a preliminary ruling on the act's validity.

31 In addition, the spirit of cooperation which must prevail in the operation of the preliminary reference procedure means that the national court is to set out in its order for reference the reasons why it considers such a reference to be necessary.

32 Consequently, the answer to the eighth question must be that, where a court against whose decisions there is a judicial remedy under national law considers that one or more arguments

for invalidity of a Community act which have been put forward by the parties or, as the case may be, raised by it of its own motion are well founded, it must stay proceedings and make a reference to the Court for a preliminary ruling on the act's validity .

The other questions

33 By its first seven questions, the referring court asks, in essence, whether Articles 5, 6 and 7 of Regulation No 261/2004 are invalid and, if relevant, whether their invalidity is liable to result in invalidity of that regulation as a whole.

The consistency of Article 6 of Regulation No 261/2004 with the Montreal Convention

34 By its first question, the referring court essentially asks whether Article 6 of Regulation No 261/2004 is inconsistent with Articles 19, 22 and 29 of the Montreal Convention.

35 Article 300(7) EC provides that 'agreements concluded under the conditions set out in this Article shall be binding on the institutions of the Community and on Member States'. In accordance with the Court's case-law, those agreements prevail over provisions of secondary Community legislation (Case C-61/94 *Commission* v *Germany* [1996] ECR I-3989, paragraph 52, and Case C-286/02 *Bellio F.lli* [2004] ECR I-3465, paragraph 33).

36 The Montreal Convention, signed by the Community on 9 December 1999 on the basis of Article 300(2) EC, was approved by Council decision of 5 April 2001 and entered into force, so far as concerns the Community, on 28 June 2004. Therefore from that last date the provisions of that Convention have, in accordance with settled case-law, been an integral part of the Community legal order (Case 181/73 *Haegeman* [1974] ECR 449, paragraph 5, and Case 12/86 *Demirel* [1987] ECR 3719, paragraph 7). It was after that date that, by decision of 14 July 2004, the High Court of Justice made the present order for reference in the judicial review proceedings before it.

37 Article 6 of Regulation No 261/2004 provides that, in the event of a long delay to a flight, the operating air carrier must offer to assist and take care of the passengers concerned. It does not provide that the carrier may escape such obligations in the event of extraordinary circumstances which could not have been avoided even if all reasonable measures had been taken.

38 IATA and ELFAA submitted in their applications to the referring court and submit before this Court that Article 6 of Regulation No 261/2004 is accordingly incompatible with the Montreal Convention which contains, in Articles 19 and 22(1), clauses excluding and limiting the air carrier's liability in the event of delay in the carriage of passengers and which provides, in Article 29, that any action for damages, however founded, can only be brought subject to the conditions and limits set out in the Convention.

39 As to those submissions, Articles 19, 22 and 29 of the Montreal Convention are among the rules in the light of which the Court reviews the legality of acts of the Community institutions since, first, neither the nature nor the broad logic of the Convention precludes this and, second, those three articles appear, as regards their content, to be unconditional and sufficiently precise.

40 It is to be noted with regard to the interpretation of those articles that, in accordance with settled case-law, an international treaty must be interpreted by reference to the terms in which it is worded and in the light of its objectives. Article 31 of the Vienna Convention of 23 May 1969 on the Law of Treaties and Article 31 of the Vienna Convention of 21 March 1986 on the Law of Treaties between States and International Organisations or between International Organisations, which express, to this effect, general customary international law, state that a treaty is to be interpreted in good faith in accordance with the ordinary meaning to be given to its terms in their context and in the light of its object and purpose (see, to this effect, Case C-268/99 *Jany and Others* [2001] ECR I-8615, paragraph 35).

41 It is clear from the preamble to the Montreal Convention that the States party thereto recognised 'the importance of ensuring protection of the interests of consumers in international carriage by air and the need for equitable compensation based on the principle of restitution'. It is therefore in the light of this objective that the scope which the authors of the Convention intended to give to Articles 19, 22 and 29 is to be assessed.

42 It is apparent from those provisions of the Montreal Convention, which are contained in Chapter III headed 'Liability of the carrier and extent of compensation for damage', that they lay down the conditions under which any actions for damages against air carriers may be brought by passengers who invoke damage sustained because of delay. They limit the carrier's liability to 4 150 SDRs for each passenger.

43 Any delay in the carriage of passengers by air, and in particular a long delay, may, generally speaking, cause two types of damage. First, excessive delay will cause damage that is almost identical for every passenger, redress for which may take the form of standardised and immediate assistance or care for everybody concerned, through the provision, for example, of refreshments, meals and accommodation and of the opportunity to make telephone calls. Second, passengers are liable to suffer individual damage, inherent in the reason for travelling, redress for which requires a case-by-case assessment of the extent of the damage caused and can consequently only be the subject of compensation granted subsequently on an individual basis.

44 It is clear from Articles 19, 22 and 29 of the Montreal Convention that they merely govern the conditions under which, after a flight has been delayed, the passengers concerned may bring actions for damages by way of redress on an individual basis, that is to say for compensation, from the carriers liable for damage resulting from that delay.

45 It does not follow from these provisions, or from any other provision of the Montreal Convention, that the authors of the Convention intended to shield those carriers from any other form of intervention, in particular action which could be envisaged by the public authorities to redress, in a standardised and immediate manner, the damage that is constituted by the inconvenience that delay in the carriage of passengers by air causes, without the passengers having to suffer the inconvenience inherent in the bringing of actions for damages before the courts.

46 The Montreal Convention could not therefore prevent the action taken by the Community legislature to lay down, in exercise of the powers conferred on the Community in the fields of transport and consumer protection, the conditions under which damage linked to the abovementioned inconvenience should be redressed. Since the assistance and taking care of passengers envisaged by Article 6 of Regulation No 261/2004 in the event of a long delay to a flight constitute such standardised and immediate compensatory measures, they are not among those whose institution is regulated by the Convention. The system prescribed in Article 6 simply operates at an earlier stage than the system which results from the Montreal Convention.

47 The standardised and immediate assistance and care measures do not themselves prevent the passengers concerned, should the same delay also cause them damage conferring entitlement to compensation, from being able to bring in addition actions to redress that damage under the conditions laid down by the Montreal Convention.

48 Those measures, which enhance the protection afforded to passengers' interests and improve the conditions under which the principle of restitution is applicable to passengers, cannot therefore be considered inconsistent with the Montreal Convention.

The validity of Article 5 of Regulation No 261/2004 in the light of Article 251 EC

49 By its second question, the referring court essentially asks whether, in amending Article 5 of the draft at the origin of Regulation No 261/2004, as resulting from Common Position (EC) No 27/2003 of 18 March 2003 (OJ 2003 C 125 E, p. 63) ('the draft regulation'), the Conciliation

Committee provided for in Article 251 EC complied with the procedural requirements which that article entails.

50 It is necessary, first of all, to set out the context in which the Conciliation Committee acted in the procedure for adoption of Regulation No 261/2004, having regard in particular to the concerns of the Community legislature relating to whether or not account was to be taken of circumstances allowing air carriers to be exempted from their obligations to take care of and assist passengers in the event of cancellation of, or a long delay to, a flight.

51 In Common Position No 27/2003, the Council decided that air carriers could be exempted from their compensation and care obligations imposed, in the event of cancellation of flights, by Article 5 of the draft regulation and from their care obligations imposed, in the event of a long delay, by Article 6 of that draft, if they could prove that the cancellation or delay was caused by extraordinary circumstances which could not have been avoided even if all reasonable measures had been taken.

52 When the Parliament considered that common position on 3 July 2003, at second reading, it did not propose any amendment to Article 5 of the draft regulation. On the other hand, it adopted, inter alia, Amendment 11 on Article 6 of the draft, in particular removing all reference to the exemption clause relating to extraordinary circumstances ('the extraordinary circumstances defence').

53 By letter of 22 September 2003 the Council gave notice that it was unable to approve all the Parliament's amendments, and the President of the Council, in agreement with the President of the Parliament, convened a meeting of the Conciliation Committee.

54 At its meeting of 14 October 2003, the Conciliation Committee reached agreement on a joint text, approved on 1 December 2003, under which, in particular, all reference in Article 5 of the draft regulation to the extraordinary circumstances defence allowing air carriers to be exempted from their care obligations in the event of flight cancellations was removed. The regulation was adopted, in accordance with the joint text of the Conciliation Committee, by the Parliament at third reading, on 18 December 2003, and by the Council, on 26 January 2004.

55 The claimants in the main proceedings contend that, in amending Article 5 of the draft regulation when no amendment had been made to that article by the Parliament at second reading, the Conciliation Committee exceeded the powers conferred upon it by Article 251 EC.

56 In the co-decision procedure, the Conciliation Committee is convened if the Council does not agree to the amendments proposed by the Parliament at second reading. It is common ground that there was such a disagreement in the procedure for adoption of Regulation No 261/2004, justifying the convening of the Conciliation Committee.

57 Contrary to IATA's submissions, once the Conciliation Committee has been convened, it has the task not of coming to an agreement on the amendments proposed by the Parliament but, as is clear from the very wording of Article 251 EC, 'of reaching agreement on a joint text', by addressing, on the basis of the amendments proposed by the Parliament, the common position adopted by the Council. The wording of Article 251 EC does not therefore itself include any restriction as to the content of the measures chosen that enable agreement to be reached on a joint text.

58 In using the term 'conciliation', the authors of the Treaty intended to make the procedure adopted effective and to confer a wide discretion on the Conciliation Committee. In adopting such a method for resolving disagreements, their very aim was that the points of view of the Parliament and the Council should be reconciled on the basis of examination of all the aspects of the disagreement, and with the active participation in the Conciliation Committee's proceedings of the Commission of the European Communities, which has the task of taking 'all the necessary initiatives with a view to reconciling the positions of the … Parliament and the Council'.

59 In this light, taking account of the power to mediate thus conferred on the Commission and of the freedom which the Parliament and the Council finally have as to whether or not to accept the joint text approved by the Conciliation Committee, Article 251 EC cannot be read as limiting on principle the power of that committee. The mere fact that, in the present case, Article 5 of the draft regulation was not amended by the Parliament at second reading does not show that the committee exceeded the powers conferred upon it by Article 251 EC.

60 The claimants in the main proceedings further contend that, since meetings of the Conciliation Committee are not public in nature, the principles of representative democracy are undermined.

61 It is true that genuine participation of the Parliament in the legislative process of the Community, in accordance with the procedures laid down by the Treaty, represents an essential factor in the institutional balance intended by the Treaty. However, it is not in dispute that the Parliament is itself represented on the Conciliation Committee and that this representation is indeed made up in accordance with the relative size of each political group in the Parliament. Furthermore, under Article 251(5) EC the joint text adopted by the Conciliation Committee must still be examined by the Parliament itself with a view to its approval. This examination, which necessarily takes place in the conditions of transparency normal for the proceedings of that assembly, thus ensures in any event the genuine participation of the Parliament in the legislative process in compliance with the principles of representative democracy.

62 It should be noted, having regard to the documents before the Court, that in the present case the disagreement brought before the Conciliation Committee related in particular to whether or not air carriers could rely on the extraordinary circumstances defence in order to be exempted from their obligations to assist and take care of passengers, imposed by Article 6 of the draft regulation, in the event of a long delay to a flight. The Conciliation Committee reached an agreement under which all reference to the extraordinary circumstances defence was removed from Article 6 of the draft, in order to ensure that passengers were taken care of and assisted immediately whatever the cause of the flight delay. The committee then also agreed, in order to ensure a coherent and symmetrical approach, to remove from Article 5 of the draft the same reference, with regard to obligations to take care of passengers in the event of cancellation of a flight.

63 Accordingly, the Conciliation Committee did not exceed the limits of its powers in amending Article 5 of the draft regulation.

The obligation to state reasons and observance of the principle of legal certainty

64 By its third and fourth questions, the referring court essentially asks whether Articles 5 and 6 of Regulation No 261/2004 are invalid in that they are inconsistent with the principle of legal certainty or do not satisfy the obligation to state reasons. By its seventh question, it also enquires whether Article 7 of the regulation complies with that obligation.

65 The claimants in the main proceedings plead that the contested regulation contains ambiguities, gaps and contradictions which affect its legality having regard to both the obligation to state reasons and observance of the principle of legal certainty.

66 It is to be remembered that, while the statement of reasons required by Article 253 EC must show clearly and unequivocally the reasoning of the Community authority which adopted the contested measure, so as to enable the persons concerned to ascertain the reasons for the measure and to enable the Court to exercise its powers of review, it is not required to go into every relevant point of fact and law (see, inter alia, Case C-122/94 *Commission* v *Council* [1996] ECR I-881, paragraph 29; Case C-210/03 *Swedish Match* [2004] ECR I-11893, paragraph 63; and Joined Cases C-154/04 and C-155/04 *Alliance for Natural Health and Others* [2005] ECR I-0000, paragraph 133).

67 In addition, the question whether a statement of reasons satisfies the requirements must be

assessed with reference not only to the wording of the measure but also to its context and to the whole body of legal rules governing the matter in question. In the case of a measure intended to have general application, as in the main proceedings, the preamble may be limited to indicating the general situation which led to its adoption, on the one hand, and the general objectives which it is intended to achieve, on the other (see, inter alia, Case C-342/03 *Spain* v *Council* [2005] ECR I-1975, paragraph 55). If the contested measure clearly discloses the essential objective pursued by the institutions, it would be excessive to require a specific statement of reasons for each of the technical choices made by them (see, inter alia, Case C-100/99 *Italy* v *Council andCommission* [2001] ECR I-5217, paragraph 64, and *Alliance for Natural Health*, paragraph 134).

68 The principle of legal certainty is a fundamental principle of Community law which requires, in particular, that rules should be clear and precise, so that individuals may ascertain unequivocally what their rights and obligations are and may take steps accordingly (see Case 169/80 *Gondrand Frèresand Garancini* [1981] ECR 1931; Case C-143/93 *Van Es Douane Agenten* [1996] ECR I-431, paragraph 27; and Case C-110/03 *Belgium* v *Commission* [2005] ECR I-2801, paragraph 30).

69 In light of the case-law cited above, it must be stated, first, that Articles 5 and 6 of Regulation No 261/2004 lay down precisely and clearly the obligations owed by an operating air carrier in the event of cancellation of, or a long delay to, a flight. The objective of those provisions is apparent, with equal clarity, from the first and second recitals in the preamble to the regulation, according to which action by the Community in the field of air transport should aim, among other things, at ensuring a high level of protection for passengers and take account of the requirements of consumer protection in general, inasmuch as cancellation of, or long delay to, flights causes serious inconvenience to passengers.

70 Furthermore, the 12th and 13th recitals in the preamble to the regulation state that passengers whose flights are cancelled should be able to obtain compensation if they are not informed in good time of the cancellation, be able either to obtain reimbursement of their tickets or to obtain re-routing under satisfactory conditions, and be adequately cared for while awaiting a later flight. The 17th recital states that passengers whose flights are delayed for a specified time should be adequately cared for and should be able to cancel their flights with reimbursement of their tickets or to continue them under satisfactory conditions. These details thus clearly disclose the essential objective pursued.

71 It is also not in dispute that the various kinds of damage suffered by passengers in the event of cancellation of, or a long delay to, a flight exist. It has not been established, nor indeed has it been asserted, that incidents of this nature amount to no more than an insignificant phenomenon. Neither Article 253 EC nor any other provision indicates that, in order for the Community measure at issue to be valid, it would have to contain precise figures justifying the need for action on the part of the Community legislature.

72 Nor can Regulation No 261/2004 be required to contain a specific statement of reasons for each of the technical choices made. Since the objective of protecting passengers required acceptance of standardised and effective compensatory measures which could not give rise to discussion at the very moment when they were to be applied, a situation which, quite evidently, the extraordinary circumstances defence would not have failed to bring about, the Community legislature was able, without breaching its obligation to state reasons, to refrain from setting out the reasons why it considered that operating air carriers could not rely on such a defence in order to be exempted from their obligations laid down in Articles 5 and 6 of the regulation. Likewise, contrary to ELFAA's submissions, the Community legislature was able, without rendering the act in question unlawful, to lay down in Article 7 the principle that fixed compensation was payable in the event of cancellation of a flight and the amount of the compensation without setting out the reasons why it had chosen that measure and that amount.

73 Second, the standardised and immediate measures laid down in Article 6 of Regulation No 261/2004 are not among those whose institution is regulated by the Montreal Convention, and

are not inconsistent with that Convention. It follows that the provisions of Regulation No 261/2004 governing in this way certain rights of passengers in the event of long delays to flights were capable of being made subject to conditions different from those laid down by the Convention with regard to other rights. Accordingly, they are not in any way contrary to the provisions which are contained in Regulation No 2027/97 and were adopted, in accordance with Article 1 thereof, in order to implement the relevant provisions of the Montreal Convention.

74 In those circumstances, the claimants in the main proceedings cannot maintain that, by not referring to Regulation No 2027/97, Regulation No 261/2004 was adopted in breach of the obligation to state reasons. Nor can Article 6 of Regulation No 261/2004 be read as having, in breach of the principle of legal certainty, denied the undertakings represented by the claimants in the main proceedings the ability to ascertain unequivocally the obligations owed by them as a consequence of the system resulting from Regulation No 2027/97.

75 Third, the claimants in the main proceedings submit that Regulation No 261/2004 envisages, in an inconsistent manner in the 14th and 15th recitals in its preamble, that extraordinary circumstances may limit or exclude an operating air carrier's liability in the event of cancellation of, or long delays to, flights whereas Articles 5 and 6 of the regulation, which govern its obligations in such a case, do not accept such a defence to liability except with regard to the obligation to pay compensation.

76 However, it must be stated with regard to those submissions, first, that while the preamble to a Community measure may explain the latter's content (see *Alliance for Natural Health*, paragraph 91), it cannot be relied upon as a ground for derogating from the actual provisions of the measure in question (Case C-162/97 *Nilsson andOthers* [1998] ECR I-7477, paragraph 54, and Case C-136/04 *DeutschesMilch-Kontor* [2005] ECR I-0000, paragraph 32). Second, the wording of those recitals indeed gives the impression that, generally, operating air carriers should be released from all their obligations in the event of extraordinary circumstances, and it accordingly gives rise to a certain ambiguity between the intention thus expressed by the Community legislature and the actual content of Articles 5 and 6 of Regulation No 261/2004 which do not make this defence to liability so general in character. However, such an ambiguity does not extend so far as to render incoherent the system set up by those two articles, which are themselves entirely unambiguous.

77 It follows from the foregoing considerations that Articles 5, 6 and 7 of Regulation No 261/2004 are not invalid by reason of breach of the principle of legal certainty or of the obligation to state reasons.

Observance of the principle of proportionality

78 By its fifth and seventh questions, the referring court asks, in essence, whether Articles 5, 6 and 7 of Regulation No 261/2004 are invalid by reason of an infringement of the principle of proportionality.

79 The principle of proportionality, which is one of the general principles of Community law, requires that measures implemented through Community provisions should be appropriate for attaining the objective pursued and must not go beyond what is necessary to achieve it (see, inter alia, Case C-210/00 *KäsereiChampignon Hofmeister* [2002] ECR I-6453, paragraph 59; Case C-491/01 *British American Tobacco (Investments) and Imperial Tobacco* [2002] ECR I-11453, paragraph 122; and *SwedishMatch*, paragraph 47).

80 With regard to judicial review of the conditions referred to in the previous paragraph, the Community legislature must be allowed a broad discretion in areas which involve political, economic and social choices on its part, and in which it is called upon to undertake complex assessments. Consequently, the legality of a measure adopted in those fields can be affected only if the measure is manifestly inappropriate having regard to the objective which the competent institution is seeking to pursue (see, to this effect, Case C-84/94 *United Kingdom* v *Council* [1996] ECR I-5755, paragraph 58; Case C-233/94 *Germany* v *Parliament and Council*

[1997] ECR I-2405, paragraphs 55 and 56; Case C-157/96 *National Farmers' Union and Others* [1998] ECR I-2211, paragraph 61; and *British American Tobacco (Investments) and Imperial Tobacco*, paragraph 123). That is so, in particular, in the field of the common transport policy (see, to this effect, in particular, Joined Cases C-248/95 and C-249/95 *SAM Schiffahrt and Stapf* [1997] ECR I-4475, paragraph 23, and Joined Cases C-27/00 and C-122/00 *Omega Air and Others* [2002] ECR I-2569, paragraph 63).

81 The claimants in the main proceedings submit that the measures to assist, care for and compensate passengers that are prescribed by Articles 5, 6 and 7 of Regulation No 261/2004 in the event of cancellation of, or a long delay to, a flight do not enable the objective of reducing such instances of cancellation or delay to be achieved and are in any event, by reason of the considerable financial charges which they will impose on Community air carriers, totally disproportionate to the objective pursued.

82 In assessing whether the measures in question are necessary, it should be noted that the immediate objective pursued by the Community legislature, as apparent from the first four recitals in the preamble to Regulation No 261/2004, is to strengthen protection for passengers who suffer cancellation of, or long delays to, flights, by redressing, in an immediate and standardised manner, certain damage caused to passengers placed in such circumstances.

83 Admittedly, in addition to this direct objective explicitly set out by the Community legislature, the regulation, like any other generally applicable legislation, may implicitly involve other, secondary, objectives such as, as the claimants in the main proceedings submit, that of reducing, through preventive action, the number of flights that are cancelled or subject to a long delay. The Court has the task of assessing first of all whether the measures adopted are manifestly inappropriate in the light of the regulation's explicit objective, that relating to strengthening protection for passengers, the legitimacy of which is not in itself contested.

84 It must be stated, first, that the measures prescribed by Articles 5 and 6 of Regulation No 261/2004 are in themselves capable of immediately redressing some of the damage suffered by passengers in the event of cancellation of, or a long delay to, a flight and therefore enable a high level of passenger protection, sought by the regulation, to be ensured.

85 Second, it is not in dispute that the extent of the various measures chosen by the Community legislature varies according to the significance of the damage suffered by the passengers, its significance being assessed by reference either to the length of the delay and the wait for the next flight or to the time taken to inform them of the flight's cancellation. The criteria thus adopted for determining the passengers' entitlement to those measures do not therefore appear in any way unrelated to the requirement for proportionality.

86 Third, the standardised and immediate compensatory measures such as the re-routing of passengers, the supply of refreshments, meals or accommodation or the making available of means of communication with third parties are designed to cater for passengers' immediate needs on the spot, whatever the cause of the flight's cancellation or delay. Given that these measures vary, as stated in the previous paragraph of this judgment, according to the significance of the damage suffered by the passengers, they likewise do not appear to be manifestly inappropriate merely because carriers cannot rely on the extraordinary circumstances defence.

87 Fourth, it has not been established that if, as advocated by ELFAA, passengers were to take out voluntary insurance to cover the risks inherent in flight delays and cancellations, that would in any event make it possible to remedy the damage suffered by passengers on the spot. Such a measure cannot, therefore, be regarded as being more appropriate to the objective pursued than those chosen by the Community legislature.

88 Fifth, the harmful consequences to which a delay gives rise and which Regulation No 261/2004 seeks to remedy are in no way related to the price paid for a ticket. Therefore, the argument that the measures chosen to alleviate those consequences should have been determined in

proportion to the cost of the ticket cannot be upheld.

89 Sixth, while IATA and ELFAA contend that the abovementioned measures could well have significant consequences for carriers' financial burdens and are not appropriate to the regulation's secondary objective of reducing the number of flights that are cancelled or subject to a long delay, it must be stated that figures on the frequency of those delays and cancellations have not been given in the proceedings before the Court. Accordingly, the theoretical costs which those measures involve for airlines, as put forward by the parties concerned, do not in any event enable it to be regarded as established that those effects would be out of proportion to the interest in the measures.

90 Moreover, the discharge of obligations pursuant to Regulation No 261/2004 is without prejudice to air carrier's rights to seek compensation from any person, including third parties, in accordance with national law, as Article 13 of the regulation provides. Such compensation accordingly may reduce or even remove the financial burden borne by the carriers in consequence of those obligations. Nor does it appear unreasonable for those obligations initially to be borne, subject to the abovementioned right to compensation, by the air carriers with which the passengers concerned have a contract of carriage that entitles them to a flight that should be neither cancelled nor delayed.

91 Seventh, so far as concerns the compensation prescribed in Article 7 of Regulation No 261/2004, which passengers may claim by virtue of Article 5 when they have been informed of a flight cancellation too late, air carriers can be exempted from payment of that compensation if they prove that the cancellation was caused by extraordinary circumstances which could not have been avoided even if all reasonable measures had been taken. Given the existence of such a ground for exemption and of the conditions restricting the application of this obligation to which air carriers are not subject if the information is provided sufficiently early or accompanied by offers of re-routing, the obligation does not appear manifestly inappropriate to the objective pursued. Furthermore, the amount of the compensation, set at EUR 250, 400 or 600 depending on the distance of the flights concerned, likewise does not appear excessive and indeed, as maintained by the Commission in its observations without being contradicted, essentially amounts to an update of the level of compensation laid down by Council Regulation (EEC) No 295/91 of 4 February 1991 establishing common rules for a denied-boarding compensation system in scheduled air transport (OJ 1991 L 36, p. 5), taking account of inflation since its entry into force.

92 It follows from the foregoing considerations that Articles 5, 6 and 7 of Regulation No 261/2004 are not invalid by reason of infringement of the principle of proportionality.

Observance of the principle of equal treatment

93 By its sixth and seventh questions, the referring court asks, in essence, whether Articles 5, 6 and 7 of Regulation No 261/2004 are invalid by reason of an infringement of the principle of equal treatment.

94 ELFAA submits that the low-fare airlines which it represents suffer discriminatory treatment since the measures prescribed in those articles impose the same obligations on all air carriers without distinction on the basis of their pricing policies and the services that they offer. Furthermore, Community law does not impose the same obligations on other means of transport.

95 It is settled case-law that the principle of equal treatment or non-discrimination requires that comparable situations must not be treated differently and that different situations must not be treated in the same way unless such treatment is objectively justified (*Swedish Match*, paragraph 70).

96 First, having regard in particular to the manner in which they operate, the conditions governing their accessibility and the distribution of their networks, different modes of transport are not

interchangeable as regards the conditions of their use (see, to this effect, *SAM Schiffahrt and Stapf*, paragraph 34). The situation of undertakings operating in each of those different transport sectors is accordingly not comparable.

97 Second, with regard to air transport, passengers whose flights are cancelled or subject to a long delay are in an objectively different situation from that experienced by passengers on other means of transport in the event of incidents of the same nature. Because, in particular, of the location of airports, which are generally outside urban centres, and of the particular procedures for checking-in and reclaiming baggage, the inconvenience suffered by passengers when such incidents occur is not comparable.

98 Finally, the damage suffered by passengers of air carriers in the event of cancellation of, or a long delay to, a flight is similar whatever the airline with which they have a contract and is unrelated to the pricing policies operated by the airline. Accordingly, if the Community legislature was not to infringe the principle of equality, having regard to the aim pursued by Regulation No 261/2004 of increasing protection for all passengers of air carriers, it was incumbent upon it to treat all airlines identically.

99 It follows that Articles 5, 6 and 7 of Regulation No 261/2004 are not invalid by reason of a breach of the principle of equal treatment.

100 In view of all the foregoing considerations, the answer to the first seven questions referred to the Court must be that examination thereof has revealed no factor of such a kind as to affect the validity of Articles 5, 6 and 7 of Regulation No 261/2004.

Costs

101 Since these proceedings are, for the parties to the main proceedings, a step in the proceedings pending before the referring court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

1. **Where a court against whose decisions there is a judicial remedy under national law considers that one or more arguments for invalidity of a Community act which have been put forward by the parties or, as the case may be, raised by it of its own motion are well founded, it must stay proceedings and make a reference to the Court of Justice for a preliminary ruling on the act's validity.**

2. **Examination of the questions referred to the Court has revealed no factor of such a kind as to affect the validity of Articles 5, 6 and 7 of Regulation (EC) No 261/2004 of the European Parliament and of the Council of 11 February 2004 establishing common rules on compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights, and repealing Regulation (EEC) No 295/91.**

Case C-221/04

Commission of the European Communities

v

Kingdom of Spain

(Failure by a Member State to fulfil obligations – Directive 92/43/EEC – Conservation of natural habitats and of wild fauna and flora – Protection of species – Hunting using stopped snares in private hunting areas – Castilla y León)

Summary of the Judgment

1. *Actions for failure to fulfil obligations – Examination of merits by the Court – Situation to be taken into consideration – Situation on expiry of the period laid down in the reasoned opinion*

   (Art. 226, second para. EC)

2. *Actions for failure to fulfil obligations – Subject-matter of the dispute – Determination during the procedure prior to the action*

   (Art. 226 EC)

3. *Actions for failure to fulfil obligations – Proof of failure – Burden of proof on Commission*

   (Art. 226 EC; Council Directive 92/43)

4. *Environment – Conservation of natural habitats and of wild fauna and flora – Directive 92/43*

   (Council Directive 92/43, Art. 12(1))

1. Under the second paragraph of Article 226 EC, an action for failure to fulfil obligations can be brought before the Court only if the Member State concerned has failed to comply with the reasoned opinion within the period laid down by the Commission for that purpose.

   Furthermore, the question whether a Member State has failed to fulfil its obligations must be determined by reference to the situation prevailing in the Member State at the end of the period laid down in the reasoned opinion.

   (see paras 22-23)

2. In an action for failure to fulfil obligations, the purpose of the pre-litigation procedure is to give the State concerned the opportunity, on the one hand, to comply with its obligations under Community law and, on the other hand, to avail itself of its right to defend itself against the complaints formulated by the Commission.

   Therefore, in its action for failure to fulfil obligations, the Commission is permitted to limit the subject-matter of the proceedings. Even though the aim of letter of formal notice is to delimit the subject-matter of the dispute and the Commission is obliged to specify precisely in the reasoned opinion the grounds of complaint which it has already raised more generally in the letter of formal notice, that does not, however, prevent it, at the stage of the proceedings before the Court, from restricting the subject-matter of the

dispute or expanding it to cover subsequent measures that are essentially the same as the measures challenged in the formal notice.

(see paras 33, 36-37)

3. In an action for failure to fulfil obligations brought under Article 226 EC it is for the Commission to prove that the obligation has not been fulfilled without being able to rely on any presumption.

Thus, it is for the Commission, in the context of a failure to fulfil obligations relating to Directive 92/43 on the conservation of natural habitats and of wild fauna and flora, to adduce proof of the presence of the protected animal species in the area concerned and not only evidence which proves at the very most that there is a possibility that they are to be found in that area.

(see paras 59, 63)

4. A Member State fails to fulfil its obligations under Article 12(1)(b) and (d) of Directive 92/43 on the conservation of natural habitats and of wild fauna and flora where it does not take all the requisite specific measures to prevent the deliberate disturbance of the animal species concerned during its breeding period or the deterioration or destruction of its breeding sites.

The condition as to 'deliberate' action in Article 12(1)(a) of Directive 92/43 is met where it is proven that the author of the act intended the capture or killing of a specimen belonging to a protected animal species or, at the very least, accepted the possibility of such capture or killing.

It follows that a Member State does not fail to fulfil those obligations if it permits the hunting of an animal species which is different from those protected by the directive.

(see paras 70-72)

JUDGMENT OF THE COURT (Second Chamber)

18 May 2006 (*)

(Failure by a Member State to fulfil obligations – Directive 92/43/EEC – Conservation of natural habitats and of wild fauna and flora – Protection of species – Hunting using stopped snares in private hunting areas – Castilla y León)

In Case C-221/04,

ACTION under Article 226 EC for failure to fulfil obligations, brought on 27 May 2004,

Commission of the European Communities, represented by G. Valero Jordana and M. van Beek, acting as Agents, with an address for service in Luxembourg,

applicant,

v

Kingdom of Spain, represented by F. Díez Moreno, acting as Agent, with an address for service in Luxembourg,

defendant,

THE COURT (Second Chamber),

composed of C.W.A. Timmermans, President of the Chamber, J. Makarczyk, R. Schintgen, P. Kūris (Rapporteur) and G. Arestis, Judges,

Advocate General: J. Kokott,

Registrar: M. Ferreira, Principal Administrator,

having regard to the written procedure and further to the hearing on 1 December 2005,

after hearing the Opinion of the Advocate General at the sitting on 15 December 2005,

gives the following

Judgment

1 By its application, the Commission of the European Communities asks the Court for a declaration that, owing to the authorisation by the authorities in Castilla y Léon of the setting of stopped snares in several private hunting areas, the Kingdom of Spain has failed to fulfil its obligations under Article 12(1) of and Annex VI to Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora (OJ 1992 L 206, p. 7) ('the directive').

Legal context

2 The aim of the directive, according to Article 2(1) thereof, is 'to contribute towards ensuring biodiversity through the conservation of natural habitats and of wild fauna and flora in the European territory of the Member States to which the Treaty applies'.

3 Article 12(1) of the directive provides that:

'Member States shall take the requisite measures to establish a system of strict protection for the animal species listed in Annex IV(a) in their natural range, prohibiting:

(a) all forms of deliberate capture or killing of specimens of these species in the wild;

…'

4 Annex IV to the directive, entitled 'Animal and plant species of Community interest in need of strict protection', cites *Lutra lutra* ('the otter') under (a), 'Animals'.

5 Annex VI to the directive, entitled 'Prohibited methods and means of capture and killing and modes of transport', mentions, as regards mammals, '[t]raps which are non-selective according to their principle or their conditions of use' under (a), 'Non-selective means'.

6 Article 15 of the directive provides that:

'In respect of the capture or killing of species of wild fauna listed in Annex V(a) and in cases where, in accordance with Article 16, derogations are applied to the taking, capture or killing of species listed in Annex IV(a), Member States shall prohibit the use of all indiscriminate means capable of causing local disappearance of, or serious disturbance to, populations of such species, and in particular:

(a) use of the means of capture and killing listed in Annex VI(a);

…'

7 Article 16 of the directive provides that:

'1. Provided that there is no satisfactory alternative and the derogation is not detrimental to the maintenance of the populations of the species concerned at a favourable conservation status in their natural range, Member States may derogate from the provisions of Articles 12, 13, 14 and 15(a) and (b):

…

(b) to prevent serious damage, in particular to crops, livestock, forests, fisheries and water and other types of property;

…'

Facts and pre-litigation procedure

8 On 19 April 2001, following a complaint registered in 2000, the Commission sent the Kingdom of Spain a letter of formal notice in which it maintained that that Member State had failed to fulfil its obligations under Article 12(1) of and Annex VI to the directive by authorising the setting of stopped snares in a hunting area in which some of the animal species referred to in Annexes II and IV to that directive are to be found. The Spanish authorities replied by means of a detailed letter of 29 June 2001.

9 Having received two new complaints concerning permits for setting stopped snares in the course of 2001, the Commission, on 21 December 2001, sent a supplementary letter of formal notice to the Spanish authorities, who replied by letter of 25 February 2002.

10 As it considered that the infringements of the directive were persisting, the Commission sent the Kingdom of Spain a reasoned opinion on 3 April 2003 concerning the grant by the Spanish authorities of permits to set stopped snares, which do not constitute a selective hunting method, on various hunting grounds. It requested that that Member State take the measures necessary to comply with that opinion within two months of its notification.

11 In its letter of reply of 15 July 2003, the Spanish Government stated that the Commission had contravened the provisions of Article 226 EC by mentioning in the reasoned opinion a permit of 13 December 2002 which had not been cited either in the initial letter of formal notice or in the supplementary letter of formal notice. Moreover, that government again contested the grounds of complaint put forward by the Commission.

12 As it took the view that the Kingdom of Spain was still failing to fulfil some of the obligations stemming from the directive, the Commission brought this action.

13 The action relates to three permits for the use of stopped snares for fox hunting issued by the authorities of Castilla y Léon on 10 January 2000, 24 May 2001 and 13 December 2002 ('the contested permits'). The contested permits relate to two hunting areas ('the areas concerned'), namely the AV-10.198 area situated in the territory of the municipality of Mediana de la Voltoya in the province of Ávila which is referred to in the permit of 24 May 2001 and the SA-10.328 area

situated in the territory of the municipality of Aldeanueva de la Sierra in the province of Salamanca which is referred to in the permits of 10 January 2000 and 13 December 2002.

Admissibility of the action

14 The Spanish Government raises two pleas of inadmissibility. The first concerns alteration of the subject-matter of the application and in the alternative its lack of precision and the second relates to the insufficient statement of grounds in the application.

The plea of inadmissibility concerning alteration of the subject-matter of the application

15 The Spanish Government submits principally that the Commission altered the subject-matter of the application following its submission by alleging that the directive was incorrectly transposed although in earlier correspondence it had restricted itself to alleging that the Kingdom of Spain had infringed the directive by issuing the contested permits.

16 According to the Commission that claim is incorrect as the action for failure to fulfil obligations has the sole aim of challenging the permits.

17 It is clear from the documents in the file that the debate regarding the incorrect transposition of the directive has its origin in the position taken by the Spanish Government in its defence which consisted of justifying the contested permits with regard to the derogations provided for in the directive.

18 The subject-matter of this action is clearly not the possible incorrect transposition into Spanish law of that directive, but the alleged infringement thereof by the grant of the contested permits. Accordingly, that plea of inadmissibility, as set out in the principal argument, must be rejected.

19 In the alternative, the Spanish Government submits that the Commission did not define the subject-matter of the action sufficiently. In that regard, the Spanish Government puts forward five arguments.

20 By its first argument, the Spanish Government objects to the expansion of the subject-matter of the application to include the permits of 24 May 2001 and 13 December 2002. On the one hand, the permit of 24 May 2001 was revoked by the competent authorities on 29 May 2001 and consequently has no legal force or status. On the other hand, the permit of 13 December 2002 was mentioned for the first time in the reasoned opinion so that that government did not have an opportunity to make observations.

21 The Commission contends first of all that the Spanish Government has not proved that the permit of 24 May 2001 was revoked. According to the Commission that permit shows the continuing existence of the administrative practice of issuing permits for hunting using stopped snares in hunting areas in which otters are to be found and should, on that basis, be taken into account in spite of the fact that it was granted only for a very brief period. As regards the permit of 13 December 2002, it was applied for and granted as an extension to the permit of 10 January 2000.

22 It must be borne in mind that it follows from the express terms of the second paragraph of Article 226 EC that the Commission may bring an action for failure to fulfil obligations before the Court only if the Member State concerned has failed to comply with the reasoned opinion within the period laid down by the Commission for that purpose (see, inter alia, Case C-362/90 *Commission* v *Italy* [1992] ECR I-2353, paragraph 9, and Case C-525/03 *Commission* v *Italy* [2005] I-9405, paragraph 13).

23 It is, furthermore, settled case-law that the question whether a Member State has failed to fulfil its obligations must be determined by reference to the situation prevailing in the Member State at the end of the period laid down in the reasoned opinion (see, inter alia, Case C-362/90

Commission v *Italy*, paragraph 10; Case C-173/01 *Commission* v *Greece* [2002] ECR I-6129, paragraph 7; Case C-114/02 *Commission* v *France* [2003] ECR I-3783, paragraph 9; and Case C-525/03 *Commission* v *Italy*, paragraph 14).

24 In the present case, it appears that the permit of 24 May 2001 was granted for a limited period ending on 15 June 2001, that is to say well before the reasoned opinion was sent.

25 It has not been shown that that permit continued to produce legal effects after the expiry of the period laid down in the reasoned opinion.

26 It follows that the action is inadmissible in so far as it relates to the permit issued on 24 May 2001.

27 As regards the permit of 13 December 2002, it must be noted that it was granted as an extension to the permit of 10 January 2000.

28 In that regard, it must be borne in mind that, according to the settled case-law of the Court, the subject-matter of a dispute may be extended to events which took place after the reasoned opinion was delivered in so far as they are of the same kind and constitute the same conduct as the events to which the opinion referred (see to that effect Case 42/82 *Commission* v *France* [1983] ECR 1013, paragraph 20, and Case 113/86 *Commission* v *Italy* [1988] ECR 607, paragraph 11).

29 In the present case, it must be noted that the permit of 13 December 2002 is of the same kind as the permit of 10 January 2000, as it states the conditions applicable under the latter for using and setting stopped snares without altering the meaning and scope thereof, and that the grant of those two permits constitutes the same conduct. Consequently, the fact that the permit of 13 December 2002 was cited as an example by the Commission in the reasoned opinion and is referred to again in this application did not deprive the Kingdom of Spain of the rights conferred by Article 226 EC. Therefore, that permit can be incorporated lawfully into the subject-matter of the action.

30 By its second argument, the Spanish Government submits that the Commission did not specify the obligations which the Kingdom of Spain failed to fulfil.

31 However, it is absolutely clear from the Commission's application that it alleges that the Kingdom of Spain failed to fulfil specific obligations stemming from Article 12(1)(a) of and Annex VI to the directive, namely the obligation to establish a system of strict protection for the animal species listed in Annex IV(a) to the directive (among which is to be found the otter) prohibiting all forms of deliberate capture or killing and the obligation to prohibit means of capture and killing which are non-selective according to their principle or their conditions of use. Accordingly, the Kingdom of Spain was aware of the obligations which it is alleged that it failed to fulfil.

32 By its third and fourth arguments, the Spanish Government alleges that the Commission restricted the subject-matter of the application for failure to fulfil obligations. During the pre-litigation procedure the Commission referred, on the one hand, to the protection of five other animal species apart from the otter and, on the other hand, to a variety of hunting methods and not only the use of stopped snares.

33 It must be borne in mind that, as the Commission rightly observes, the Court has already found that it is possible to limit the subject-matter of the proceedings at the stage of the proceedings before the Court (see to that effect Case C-279/94 *Commission* v *Italy* [1997] ECR I-4743, paragraphs 24 and 25; Case C-52/00 *Commission* v *France* [2002] ECR I-3827, paragraph 44; Case C-139/00 *Commission* v *Spain* [2002] ECR I-6407, paragraphs 18 and 19; and Case C-433/03 *Commission* v *Germany* [2005] ECR I-6985, paragraph 28). Accordingly, the Commission could limit the subject-matter of the failure to fulfil obligations alleged in its application to one of the species and one of the hunting methods mentioned during the pre-litigation procedure.

34 By its fifth argument, the Spanish Government submits that the Commission used the pre-litigation procedure as a means of progressively establishing the grounds for the failure to fulfil obligations. The consequence of such conduct is a breach of the principles of legal certainty and of respect for the fundamental rights of the defence.

35 The Commission considers that that argument alleges, on the one hand, the limitation of the subject-matter of the action, and, on the other hand, the absence, in the letter of formal notice, of sufficient evidence to warrant the initiation of infringement proceedings.

36 In this connection, such factors do not however appear capable of affecting the admissibility of the action. First, the Commission was permitted to limit the subject-matter of the proceedings at the stage of the proceedings before the Court, as observed in paragraph 33 of this judgment. Secondly, according to the case-law of the Court the purpose of the pre-litigation procedure is to give the State concerned the opportunity, on the one hand, to comply with its obligations under Community law and, on the other hand, to avail itself of its right to defend itself against the complaints formulated by the Commission (Case C-117/02 *Commission* v *Portugal* [2004] ECR I-5517, paragraph 53). Furthermore, the formal notice cannot be subject to such strict requirements of precision as is the reasoned opinion, since the formal notice cannot, of necessity, contain anything more than an initial brief summary of the complaints (see to that effect Case C-279/94 *Commission* v *Italy*, paragraph 15).

37 As the Advocate General observed at point 24 of her Opinion, whilst it is true that the aim of the letter of formal notice is to delimit the subject-matter of the dispute, the Commission is obliged to specify precisely in the reasoned opinion the grounds of complaint which it has already raised more generally in the letter of formal notice. However, that does not prevent it from restricting the subject-matter of the dispute or expanding it to cover subsequent measures that are essentially the same as the measures challenged in the formal notice.

The plea of inadmissibility alleging an insufficient statement of grounds in the application

38 The second plea of inadmissibility raised by the Spanish Government alleges infringement of Article 38(1)(c) of the Rules of Procedure of the Court of Justice on the one hand and on the other hand an insufficient statement of grounds in the application and failure to prove the alleged failures to fulfil obligations.

39 As regards the first point, it must be stated that the application meets the requirements set out in Article 38(1)(c) of the Rules of Procedure of the Court of Justice as regards the subject-matter of the proceedings and a summary of the pleas in law.

40 With regard to the second point, it must be noted that, as the Commission states, the ground of complaint set out therein falls to be examined in the context of the substance of the case. Therefore, that plea of inadmissibility cannot be upheld.

41 In the light of the foregoing, it must be held that the action is inadmissible to the extent that it is founded on the permit of 24 May 2001 concerning the AV-10.198 hunting area situated in the territory of the municipality of Mediana de la Voltoya in the province of Ávila and is admissible as to the remainder.

The merits of the action

42 It must therefore be considered whether the permit of 13 December 2002 (‘the contested permit’) which relates to the SA-10.328 hunting area situated in the territory of the municipality of Aldeanueva de la Sierra in the province of Salamanca (‘the area concerned’) was issued by the Spanish authorities in breach of the directive.

43 The Commission puts forward two complaints in support of its action. First, the permit to use stopped snares in the area concerned entails the deliberate capture or killing of otters, in breach

of Article 12(1)(a) of the directive. Secondly, the Commission submits that the Kingdom of Spain also infringed the provisions in Annex VI(a) to the directive as that permit relates to a means of hunting which is non-selective according to its principle and its conditions of use.

The complaint concerning infringement of Annex VI(a) to the directive

44 By its second complaint, which it is appropriate to examine first, the Commission submits that the permit to use stopped snares infringes Annex VI(a) to the directive since it involves a means of hunting which is non-selective according to its principle and its conditions of use.

45 Under the directive the methods and means of capture and killing listed in Annex VI(a) are prohibited only as regards the cases referred to in Article 15 of the directive, which is the only article referring to that annex.

46 It is clear from that provision that it is prohibited to use non-selective means, in particular those listed in Annex VI(a) to the directive, to capture or kill species of wild fauna listed in Annex V(a) to the directive and, where in accordance with Article 16, derogations are applied, to take, capture or kill species listed in Annex IV(a) to the directive.

47 It must be borne in mind that the contested permit was issued for fox hunting and that the fox is an animal species which is not referred to in either Annex IV(a) or Annex V(a) to the directive. It follows that the prohibition with regard to non-selective means of hunting is not binding on the Spanish authorities in the present case. Therefore, the complaint concerning infringement of Annex VI(a) to the directive must be rejected.

The complaint concerning infringement of Article 12(1)(a) of the directive

48 It must be borne in mind that under Article 12(1)(a) of the directive Member States are required to take the requisite measures to establish a system of strict protection for the animal species listed in Annex IV(a) to the directive in their natural range. That system must, according to that provision, prohibit all forms of deliberate capture or killing of the species referred to.

49 In order to assess the validity of the complaint put forward by the Commission, the presence of the otter in the area concerned must be ascertained, and the circumstances under which the capture or killing of that species is deliberate must be established.

The presence of the otter in the area concerned

– Arguments of the parties

50 First, the Commission submits that, in its reply to the reasoned opinion, the Spanish Government acknowledged the presence of the otter in the area concerned as in that response it stated that the otter may be found throughout virtually the whole of the territory of Castilla y Léon.

51 Secondly, the presence of the otter is borne out by the scientific information sheets ‘Natura 2000’ which the Kingdom of Spain submitted to the Commission concerning the sites of Quilamas (Salamanca) and Encinares de los ríos Adaja y Voltoya (Ávila), the site of Quilamas being adjacent to the area concerned.

52 Thirdly, waterways, which are a necessary component of the habitat of otters, cross that area.

53 Lastly, monographs on the position of otters in Spain also confirm that that species is to be found in the area concerned.

54 In view of all those factors, the Commission submits that if the Spanish Government considers that the otter is not to be found in that area, it must prove it by submitting a technical study carried out on site.

55 The Spanish Government submits that there are no otters in the area concerned. In reply to the first argument put forward by the Commission, it observes that acknowledging that a particular animal species is present in a territory does not imply that that species occupies all the habitats in that territory.

56 The Spanish Government also states that waterways are a necessary component of the habitat of otters whereas the area concerned is neither a coastal area nor an area adjoining a river. It adds that the rivers and streams which cross that area are of a seasonal nature as they dry up during the summer months.

57 Furthermore, monographs produced by the Commission prove that there are no otters in the area concerned.

58 Lastly, the Spanish Government considers that there is in that area merely a likelihood that otters are to be found and that the Commission has not established their presence in so far as it does not have either direct evidence, such as the capture of specimens of that species, or indirect evidence, such as the existence of otter tracks.

– Findings of the Court

59 It must be borne in mind that, according to the settled case-law of the Court, in an action for failure to fulfil obligations brought under Article 226 EC it is for the Commission to prove that the obligation has not been fulfilled without being able to rely on any presumption (see to that effect, inter alia, Case 96/81 *Commission* v *Netherlands* [1982] ECR 1791, paragraph 6; Case C-194/01 *Commission* v *Austria* [2004] ECR I-4579, paragraph 34; and Case C-6/04 *Commission* v *United Kingdom* [2005] ECR I-9017, paragraph 75).

60 As regards the scientific information sheets ‘Natura 2000’, it must be stated that, as the Advocate General observed in point 71 of her Opinion, they cover the Quilamas site, which has a surface area of over 10 000 hectares. Admittedly, the area concerned is situated in the immediate vicinity of that site, to the north-west. However, it is common ground that the largest waterways on that site, including the Arroyo de las Quilamas, flow to the south-east and are separated from the area concerned by a range of hills with a height of several hundred metres. Therefore, it is unlikely that otters from the populations living in the network of waterways on the Quilamas site would move into the area concerned.

61 Furthermore, as the Spanish Government, which has not been contradicted on that point by the Commission, has stated, although waterways are a necessary component of the habitat of otters those which cross the area concerned or flow near it are of a seasonal nature.

62 Lastly, as regards the monographs produced by the Commission, it must be stated that they contain contradictory information so that no certainty regarding the presence of the otter in the area concerned is apparent from them.

63 It is clear from the foregoing that the Commission has not furnished evidence to the requisite legal standard as to the presence of otters in the area concerned as the evidence produced proves at the very most that there is a possibility that they are to be found in that area.

Whether the capture of otters is deliberate

– Arguments of the parties

64 The Commission submits that the capture of otters cannot be regarded as accidental and therefore that the condition as to intention which is provided for in Article 12(1)(a) of the directive is met if the Spanish authorities, although they know that otters are present in an area, nevertheless authorise for the purposes of fox hunting the use of a non-selective method of capture there which may adversely affect otters.

65 Thus, by issuing the contested permit, the Kingdom of Spain failed to fulfil the obligation arising out of Article 12(1)(a) of the directive to forestall adverse consequences for otters and created a risk of specimens of that species being deliberately captured.

66 The Spanish Government contends that the contested permit was issued for fox hunting, not otter hunting. It acknowledges the possibility of an indirect effect on otters provided that that animal species is to be found in the area concerned – a circumstance which has not, however, been established.

67 Furthermore, the Spanish Government considers that the stopped snare is a selective means of hunting both according to its principle, as the stop serves to prevent the captured animal's death, and as regards the conditions of use imposed by the contested permit such as the daily inspection of snares, the requirement that any animal which is not covered by that permit be immediately freed or the specific manner in which those snares are set.

– Findings of the Court

68 Under Article 12(1)(a) of the directive, Member States are to take the requisite measures to establish a system of strict protection for the animal species listed in Annex IV(a) to that directive in their natural range, prohibiting all forms of deliberate capture or killing.

69 With respect to the condition as to 'deliberate' action provided for in that provision, it is clear from a reading of the different language versions thereof that 'deliberate' refers to both the capture and the killing of protected animal species.

70 It must also be borne in mind that the Court has categorised as deliberate disturbance within the meaning of Article 12(1)(b) of the directive matters such as the use of mopeds on a beach notwithstanding warnings as to the presence of protected sea turtles' nests and the presence of pedalos and small boats in the sea area of the beaches concerned, and has held that a Member State fails to fulfil its obligations under Article 12(1)(b) and (d) of the directive where it does not take all the requisite specific measures to prevent the deliberate disturbance of the animal species concerned during its breeding period or the deterioration or destruction of its breeding sites (see Case C-103/00 *Commission* v *Greece* [2002] ECR I-1147, paragraphs 36 and 39, and the Opinion of Advocate General Léger in that case, at point 57).

71 For the condition as to 'deliberate' action in Article 12(1)(a) of the directive to be met, it must be proven that the author of the act intended the capture or killing of a specimen belonging to a protected animal species or, at the very least, accepted the possibility of such capture or killing.

72 It is common ground, however, that the contested permit related to fox hunting. Accordingly, the permit in itself is not intended to allow the capture of otters.

73 Furthermore, it must be borne in mind that the presence of otters in the area concerned has not been formally proven, so that it has also not been established that by issuing the contested permit for fox hunting the Spanish authorities knew that they risked endangering otters.

74 It must therefore be held that the requisite criteria, as set out in paragraph 71 of this judgment, for fulfilling the condition relating that the capture or killing of a specimen belonging to a protected animal species is deliberate have not been met in the present case.

75 The Commission's action must therefore be dismissed.

Costs

76 Under Article 69(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Kingdom of Spain has applied for costs and the Commission has been unsuccessful, the Commission

must be ordered to pay the costs.

On those grounds, the Court (Second Chamber) hereby:

1. **Dismisses the action;**

2. **Orders the Commission of the European Communities to pay the costs.**

JUDGMENT OF THE COURT (Fourth Chamber)

31 January 2008 (*)

(Freedom to provide services – Electronic communications – Television broadcasting activities – New common regulatory framework – Allocation of radio frequencies)

In Case C-380/05,

REFERENCE for a preliminary ruling under Article 234 EC, from the Consiglio di Stato (Italy), made by decision of 19 April 2005, received at the Court on 18 October 2005, in the proceedings

Centro Europa 7 Srl

v

Ministero delle Comunicazioni e Autorità per le garanzie nelle comunicazioni,

Direzione generale per le concessioni e le autorizzazioni del Ministero delle Comunicazioni,

THE COURT (Fourth Chamber),

composed of K. Lenaerts (Rapporteur), President of the Chamber, G. Arestis, R. Silva de Lapuerta, J. Malenovský and T. von Danwitz, Judges,

Advocate General: M. Poiares Maduro,

Registrar: B. Fülöp, Administrator,

having regard to the written procedure and further to the hearing on 30 November 2006,

after considering the observations submitted on behalf of:

– Centro Europa 7 Srl, by A. Pace, R. Mastroianni and O. Grandinetti, avvocati,

– the Italian Government, by I.M. Braguglia, acting as Agent, assisted by P. Gentili, avvocato dello Stato,

– the Commission of the European Communities, by F. Benyon, E. Traversa, M. Shotter and F. Amato, acting as Agents, assisted by L.G. Radicati di Brozolo, avvocato,

after hearing the Opinion of the Advocate General at the sitting on 12 September 2007,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation, in the national terrestrial television

broadcasting sector, of the provisions of the EC Treaty on freedom to provide services and competition, Directive 2002/21/EC of the European Parliament and of the Council of 7 March 2002 on a common regulatory framework for electronic communications networks and services (Framework Directive) (OJ 2002 L 108, p. 33) ('the Framework Directive'), Directive 2002/20/EC of the European Parliament and of the Council of 7 March 2002 on the authorisation of electronic communications networks and services (Authorisation Directive) (OJ 2002 L 108, p. 21) ('the Authorisation Directive'), Commission Directive 2002/77/EC of 16 September 2002 on competition in the markets for electronic communications networks and services (OJ 2002 L 249, p. 21) ('the Competition Directive'), and Article 10 of the European Convention for the Protection of Human Rights and Fundamental Freedoms, signed in Rome on 4 November 1950 ('the ECHR'), in so far as Article 6 EU refers thereto.

2 The reference has been made in proceedings between Centro Europa 7 Srl ('Centro Europa 7') and the Ministero delle Comunicazioni, the Autorità per le garanzie nelle comunicazioni and the Direzione generale per le concessioni e le autorizzazioni del Ministero delle Comunicazioni (collectively, 'the defendants in the main proceedings').

Relevant provisions

Community legislation

3 The new common regulatory framework for electronic communications services, electronic communications networks, associated facilities and associated services ('the NCRF') consists of the Framework Directive and four specific directives, including the Authorisation Directive, which are supplemented by the Competition Directive.

The Framework Directive

4 Article 1(1) of the Framework Directive provides as follows:

'This Directive establishes a harmonised framework for the regulation of electronic communications services, electronic communications networks, associated facilities and associated services. It lays down tasks of national regulatory authorities and establishes a set of procedures to ensure the harmonised application of the regulatory framework throughout the Community.'

5 Article 1(3) of the Framework Directive provides:

'This Directive as well as the Specific Directives are without prejudice to measures taken at Community or national level, in compliance with Community law, to pursue general interest objectives, in particular relating to content regulation and audio-visual policy.'

6 Article 2 of the Framework Directive provides:

'For the purposes of this Directive:

(a) "electronic communications network" means transmission systems … which permit the conveyance of signals by wire, by radio, by optical or by other electromagnetic means, including satellite networks, fixed … and mobile terrestrial networks, … networks used for radio and television broadcasting, and cable television networks, irrespective of the type of information conveyed;

…

(c) “electronic communications service” means a service normally provided for remuneration which consists wholly or mainly in the conveyance of signals on electronic communications networks, including telecommunications services and transmission services in networks used for broadcasting …

…’

7 Article 8 of the Framework Directive, entitled ‘Policy objectives and regulatory principles’, provides:

‘1. Member States shall ensure that in carrying out the regulatory tasks specified in this Directive and the Specific Directives, the national regulatory authorities take all reasonable measures which are aimed at achieving the objectives set out in paragraphs 2, 3 and 4. Such measures shall be proportionate to those objectives.

…

2. The national regulatory authorities shall promote competition in the provision of electronic communications networks, electronic communications services and associated facilities and services by inter alia:

…

(b) ensuring that there is no distortion or restriction of competition in the electronic communications sector;

…

(d) encouraging efficient use and ensuring the effective management of radio frequencies and numbering resources.

3. The national regulatory authorities shall contribute to the development of the internal market by inter alia:

(a) removing remaining obstacles to the provision of electronic communications networks, associated facilities and services and electronic communications services at European level;

…’

8 Article 9(1) of the Framework Directive provides that ‘Member States shall ensure the effective management of radio frequencies for electronic communication services in their territory’ and ‘that the allocation and assignment of such radio frequencies by national regulatory authorities are based on objective, transparent, non-discriminatory and proportionate criteria’.

9 Article 28(1) of the Framework Directive states that ‘Member States shall adopt and publish the laws, regulations and administrative provisions necessary to comply with this Directive not later than 24 July 2003’ and ‘shall apply those measures from 25 July 2003.’

The Authorisation Directive

10 Article 1 of the Authorisation Directive provides:

‘1. The aim of this Directive is to implement an internal market in electronic communications networks and services through the harmonisation and simplification of authorisation rules and conditions in order to facilitate their provision throughout the Community.

2. This Directive shall apply to authorisations for the provision of electronic communications networks and services.’

11 Article 2(1) of the Authorisation Directive provides:

‘For the purposes of this Authorisation Directive, the definitions set out in Article 2 of … [the Framework Directive] shall apply.’

12 Article 2(2)(a) of the Authorisation Directive provides that ‘general authorisation’ means ‘a legal framework established by the Member State ensuring rights for the provision of electronic communications networks or services and laying down sector specific obligations that may apply to all or to specific types of electronic communications networks and services, in accordance with this Directive’.

13 Article 3 of the Authorisation Directive, entitled ‘General authorisation of electronic communications networks and services’, provides:

‘1. Member States shall ensure the freedom to provide electronic communications networks and services, subject to the conditions set out in this Directive. To this end, Member States shall not prevent an undertaking from providing electronic communications networks or services, except where this is necessary for the reasons set out in Article 46(1) of the Treaty.

2. The provision of electronic communications networks or the provision of electronic communications services may, without prejudice to the specific obligations referred to in Article 6(2) or rights of use referred to in Article 5, only be subject to a general authorisation. The undertaking concerned may be required to submit a notification but may not be required to obtain an explicit decision or any other administrative act by the national regulatory authority before exercising the rights stemming from the authorisation. Upon notification, when required, an undertaking may begin activity, where necessary subject to the provisions on rights of use in Articles 5, 6 and 7.

…’

14 Article 5 of the Authorisation Directive, entitled ‘Rights of use for radio frequencies and numbers’, reads as follows:

‘1. Member States shall, where possible, in particular where the risk of harmful interference is negligible, not make the use of radio frequencies subject to the grant of individual rights of use but shall include the conditions for usage of such radio frequencies in the general authorisation.

2. Where it is necessary to grant individual rights of use for radio frequencies and numbers, Member States shall grant such rights, upon request, to any undertaking providing or using networks or services under the general authorisation, subject to the provisions of Articles 6, 7 and 11(1)(c) of this Directive and any other rules ensuring the efficient use of those resources in accordance with … [the Framework Directive].

Without prejudice to specific criteria and procedures adopted by Member States to grant rights of use of radio frequencies to providers of radio or television broadcast content services with a view to

pursuing general interest objectives in conformity with Community law, such rights of use shall be granted through open, transparent and non-discriminatory procedures …

…

5. Member States shall not limit the number of rights of use to be granted except where this is necessary to ensure the efficient use of radio frequencies in accordance with Article 7.'

15 Article 7 of the Authorisation Directive, entitled 'Procedure for limiting the number of rights of use to be granted for radio frequencies', provides:

'1. Where a Member State is considering whether to limit the number of rights of use to be granted for radio frequencies, it shall inter alia:

(a) give due weight to the need to maximise benefits for users and to facilitate the development of competition;

…

(c) publish any decision to limit the granting of rights of use, stating the reasons therefore;

(d) after having determined the procedure, invite applications for rights of use; and

(e) review the limitation at reasonable intervals or at the reasonable request of affected undertakings.

…

3. Where the granting of rights of use for radio frequencies needs to be limited, Member States shall grant such rights on the basis of selection criteria which must be objective, transparent, non-discriminatory and proportionate. Any such selection criteria must give due weight to the achievement of the objectives of Article 8 of … [the Framework Directive].

…'

16 Article 17 of the Authorisation Directive, entitled 'Existing authorisations', reads as follows:

'1. Member States shall bring authorisations already in existence on the date of entry into force of this Directive into line with the provisions of this Directive by at the latest the date of application referred to in Article 18(1), second subparagraph.

…'

17 Article 18(1) of the Authorisation Directive states that the 'Member States shall adopt and publish the laws, regulations and administrative provisions necessary to comply with this Directive by 24 July 2003 at the latest' and 'shall apply those measures from 25 July 2003.'

The Competition Directive

18 According to points 1 and 3 of Article 1 of the Competition Directive, that directive is to apply to electronic communications networks and electronic communications services, as defined in Article 2(a) and (c) of the Framework Directive.

19 Article 2 of the Competition Directive, entitled ‘Exclusive and special rights for electronic communications networks and electronic communications services’, provides:

‘1. Member States shall not grant or maintain in force exclusive or special rights for the establishment and/or the provision of electronic communications networks, or for the provision of publicly available electronic communications services.

2. Member States shall take all measures necessary to ensure that any undertaking is entitled to provide electronic communications services or to establish, extend or provide electronic communications networks.

…

4. Member States shall ensure that a general authorisation granted to an undertaking to provide electronic communications services or to establish and/or provide electronic communications networks, as well as the conditions attached thereto, shall be based on objective, non-discriminatory, proportionate and transparent criteria.

…’

20 Article 4 of the Competition Directive, entitled ‘Rights of use of frequencies’, states:

‘Without prejudice to specific criteria and procedures adopted by Member States to grant rights of use of radio frequencies to providers of radio or television broadcast content services with a view to pursuing general interest objectives in conformity with Community law:

1. Member States shall not grant exclusive or special rights of use of radio frequencies for the provision of electronic communications services.

2. The assignment of radio frequencies for electronic communication services shall be based on objective, transparent, non-discriminatory and proportionate criteria.’

21 Article 9 of the Competition Directive provides:

‘Member States shall supply to the Commission not later than 24 July 2003 such information as will allow the Commission to confirm that the provisions of this Directive have been complied with.’

National legislation

Law No 249 of 31 July 1997

22 Law No 249 of 31 July 1997 (Ordinary Supplement to GURI No 177 of 31 July 1997) (‘Law No 249/1997’), which came into force on 1 August 1998, set up the Autorità per le garanzie nelle comunicazioni (Communications Regulatory Authority; ‘the Autorità’).

23 Article 2(6) of Law No 249/1997 imposed restrictions on concentrations in the television broadcasting sector, prohibiting the same operator from holding rights permitting it to broadcast at national level on more than 20% of the television channels operating on terrestrial frequencies.

24 Article 3(1) of Law No 249/1997 provided that operators authorised to broadcast under the previous legal framework could continue to broadcast at national and local level until new rights were granted or applications for new rights were rejected but, in any event, not after 30 April 1998.

25 Article 3(2) of Law No 249/1997 provided for the adoption by the Autorità of a national plan for the allocation of radio frequencies for broadcast television ('the national allocation plan for radio frequencies') by 31 January 1998 at the latest and, on the basis of that plan, the allocation of new rights by 30 April 1998 at the latest.

26 According to the information in the decision making the reference, borne out by the observations of the Italian Government and the Commission of the European Communities, the national allocation plan for radio frequencies was adopted on 30 October 1998 by Decision No 68/98 of the Autorità, and that authority adopted, by Decision No 78/98 of 1 December 1998, the regulation concerning the conditions and detailed rules governing the grant of television broadcasting rights on analogue terrestrial frequencies.

27 Article 3(6) of Law No 249/1997 provided for transitional arrangements for the existing national television channels exceeding the limits for concentration imposed in Article 2(6) of that Law ('the channels in breach of the threshold') by allowing those channels to continue to broadcast on terrestrial radio frequencies on a transitional basis after 30 April 1998, in compliance with the obligations imposed on the channels holding rights, provided that the programmes were broadcast on satellite or cable at the same time.

28 Under Article 3(7) of Law No 249/1997, the Autorità was entrusted with determining the period within which, having regard to the real and significant increase in users watching programmes by cable or satellite, the channels in breach of the threshold were to broadcast their programmes only by satellite or cable, thus relinquishing terrestrial radio frequencies.

29 According to the information in the decision making the reference and supported by the observations of the Italian Government and the Commission, by judgment No 466 of the Corte costituzionale (Constitutional Court) (Italy) of 20 November 2002 (GURI of 27 November 2002), that deadline was fixed at 31 December 2003.

Law No 66 of 20 March 2001

30 According to the case-file, under Decree-Law No 5 of 23 January 2001 (GURI No 19 of 24 January 2001, p. 5), converted into law and amended by Law No 66 of 20 March 2001 (GURI No 70 of 24 March 2001, p. 3), the operators lawfully engaged in television broadcasting activities on terrestrial frequencies were authorised to continue to broadcast until the national allocation plan for radio frequencies for digital television was implemented.

Law No 43 of 24 February 2004 and Law No 112 of 3 May 2004

31 Article 1 of Decree-Law No 352 of 24 December 2003 (GURI No 300 of 29 December 2003, p. 4; 'Decree-Law No 352/2003'), converted into law and amended by Law No 43 of 24 February 2004 (GURI No 47 of 26 February 2004, p. 4), authorised the channels in breach of the threshold to continue their broadcasts on the televised analogue and digital networks pending the completion of an inquiry into the development of digital television channels.

32 Law No 112 of 3 May 2004 (Ordinary Supplement to GURI No 82 of 5 May 2004) ('Law No 112/2004') specified the different stages for the launch of the phase of digital broadcasting on terrestrial radio frequencies.

33 Article 23 of Law No 112/2004 provides:

1. ‘Until the national allocation plan for radio frequencies for digital television has been implemented, the operators exercising, on any basis, television broadcasting activities at national or local level who fulfil the conditions necessary to obtain authorisation for experimental digital broadcasting on terrestrial frequencies, under … Decree-Law No 5 [of 23 January 2001], now, after amendment, Law No 66 [of 20 March 2001], may carry out, including by simultaneous repeats of programmes already broadcast using analogue technology, the experimentation in question, until the conversion of the networks has been completed, and apply, from the date of entry into force of this Law, … for the licences and authorisations necessary to broadcast using digital technology on terrestrial frequencies.

2. Experimental digital broadcasting may be carried out by means of installations lawfully exercising analogue activities on the date of the entry into force of this Law.

3. In order to allow digital networks to be set up, transfers of installations or branches of undertakings between operators lawfully televising at national or local level shall be authorised, on condition that acquisitions are intended for digital broadcasting.

…

5. With effect from the date of entry into force of this Law, the licence to operate a television network shall be issued, upon request, to persons lawfully engaged in television broadcasting pursuant to a grant of rights or under the general consent provided for in subparagraph 1, where they show that they have attained a coverage of not less than 50% of the population or of the local catchment area.

…

9. In order to facilitate the conversion of the analogue system to the digital system, the broadcasting of television programmes shall be carried on through installations lawfully operating on the date of the entry into force of this Law …’

The dispute in the main proceedings and the questions referred for a preliminary ruling

34 The dispute in the main proceedings relates to compensation for the harm which Centro Europa 7 claims to have suffered as a result of the fact that the defendants in the main proceedings did not allocate to it radio frequencies for terrestrial analogue television broadcasting.

35 On 28 July 1999, Centro Europa 7 was granted by the competent Italian authorities, pursuant to Law No 249/1997, rights for terrestrial television broadcasting at national level authorising the installation and use of a television network using analogue technology. For the allocation of radio frequencies, the rights referred to the national allocation plan for radio frequencies, which was adopted on 30 October 1998. According to the national court, however, that plan has not been implemented, with the result that, although it has rights, Centro Europa 7 has never been in a position to broadcast for lack of radio frequencies.

36 Centro Europa 7 brought an action before the Tribunale amministrativo regionale (Regional Administrative Court) del Lazio (Italy) seeking, inter alia, a declaration that it was entitled to the allocation of frequencies and to compensation for the damage suffered.

37 That court dismissed that application by judgment of 16 September 2004.

38 According to the decision making the reference, in the appeal brought by Centro Europa 7 against that

judgment before the Consiglio di Stato (Council of State) (Italy), the defendants in the main proceedings invoke against it, inter alia, Law No 112/2004.

39 While stating, in that decision, that it restricted its examination to Centro Europa 7's application for damages and did not intend to rule at that stage on the application for the grant of radio frequencies, the Consiglio di Stato observes that the failure to allocate radio frequencies to Centro Europa 7 was caused by essentially legislative factors.

40 It notes that Article 3(2) of Law No 249/1997 enabled the 'de facto users' of radio frequencies, authorised to carry on their activity under the earlier system, to continue broadcasting until new rights were granted or applications for new rights were rejected and, in any event, not after 30 April 1998.

41 It notes, also, that Article 3(7) of Law No 249/1997 authorised the continuation of those broadcasts by referring back to the Autorità to fix a deadline, on the sole condition that the programmes are broadcast simultaneously on terrestrial radio frequencies and by satellite or cable. In the absence of a date fixed by the Autorità, the Corte costituzionale set 31 December 2003 as the date by which the programmes broadcast by the channels in breach of the threshold would have to be broadcast only by satellite or cable, so that, according to the national court, the radio frequencies to be allocated to Centro Europa 7 would be freed up.

42 According to the national court, that deadline was, however, not complied with following the intervention of the national legislature, as Article 1 of Decree-Law No 352/2003, now Law No 43 of 24 February 2004, extended the activities of the channels in breach of the threshold pending the completion of an inquiry by the Autorità into the development of digital channels, then by virtue of Law No 112/2004, in the light of, inter alia, Article 23(5) thereof.

43 Law No 112/2004 extended, by a general authorisation mechanism, the possibility for the channels in breach of the threshold to continue to broadcast on the terrestrial radio frequencies until the national allocation plan for radio frequencies for digital television was implemented, with the result that those channels were not required to free up the radio frequencies intended for allocation to the rights holders.

44 According to the national court, that Law therefore had the effect of blocking the radio frequencies intended for allocation to the rights holders and of preventing operators other than those de facto broadcasting on terrestrial frequencies from participating in the digital television experimentation.

45 Since Centro Europa 7 disputed the compatibility of Decree-Law No 352/2003 and Law No 112/2004 with Community law, the Consiglio di Stato asks whether the Italian legislation, starting from Law No 249/1997, is compatible with the Treaty provisions on freedom to provide services and on competition, Articles 8 and 9(1) of the Framework Directive, Articles 5, 7 and 17 of the Authorisation Directive and the principle of pluralism of information sources, part of Article 10 of the ECHR, as a general principle of Community law.

46 In those circumstances, the Consiglio di Stato decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

'1. Does Article 10 of the ECHR, as referred to in Article 6 of the [EU] Treaty, guarantee pluralism in the broadcasting sector, thus requiring the Member States to secure pluralism and competition in the sector based on an antitrust system which, in step with technological development, secures network access and a multiplicity of operators and renders duopolistic market behaviour unlawful?

2. Do the provisions of the … Treaty which secure freedom to provide services and competition, on

the interpretation provided by the Commission in the interpretative communication of 29 April 2000 on grants of rights under Community law, require the principles governing that matter to be capable of ensuring equal non-discriminatory treatment, as well as transparency, proportionality and respect for the rights of individuals; and are those provisions and principles of the Treaty infringed by Article 3(7) of Italian Law No 249/1997, and by Article 1 of Decree-Law [No 352/2003], inasmuch as those provisions enabled individuals operating networks in breach of the limits laid down by competition law to continue to operate, thereby excluding operators, such as the appellant undertaking, which, though in possession of the relevant rights granted following a regular competitive procedure, were unable to carry on the activity in respect of which such rights were granted because of a failure to allocate frequencies owing to their insufficient number or scarcity as a result of the continued exercise of rights by the owners of networks in breach of the limits on concentrations under antitrust law?

3. With effect from 25 July 2003, does Article 17 of [the Authorisation Directive] render that directive directly effective in the internal legal order and oblige a Member State which has granted broadcasting rights (right to install networks or provide electronic communication services or the right to use frequencies) to bring them into line with Community rules; and does that entail the need actually to allocate the frequencies necessary for carrying on the activity in question?

4. Do Article 9 of [the Framework Directive] and Article 5 of the Authorisation Directive providing for transparent and non-discriminatory public procedures (Article 5) conducted on the basis of objective, transparent, non-discriminatory and proportionate criteria (Article 9) preclude a system providing for general authorisation under national law (Article 23(5) of Law No 112/2004); by permitting the continued operation, under that system of networks in breach of limits and not selected under a competitive procedure, do those provisions ultimately impinge on the Community-law rights under (Article 17(2) of the … Authorisation Directive) of other undertakings which are prevented from operating even though they have been successful in competitive procedures?

5. Do Article 9 of the [Framework Directive], the second subparagraph of Article 5(2) and Article 7(3) of the Authorisation Directive, and Article 4 of the [Competition Directive], require the Member States to arrange for the cessation, at least as from 25 July 2003 (see Article 17 of the Authorisation Directive), of a situation of de facto use of frequencies (use of facilities without grant of rights or authorisations issued following a selection procedure), on the basis of the broadcasting system already in place, so that broadcasting cannot be undertaken where there is no proper planning in regard to matters concerning the airwaves and no logical increase in pluralism, in contravention of rights awarded by the Member State following a public procedure?

6. Is the derogation in the second subparagraph of Article 5(2) of the … Authorisation Directive, and in Article 4 of the [Competition Directive], available to be relied on by the Member State solely in order to protect pluralism of information and to guarantee the protection of cultural or linguistic diversity and not in favour of operators of networks in breach of the antitrust limits laid down in national competition legislation?

7. In order to benefit from the derogation under Article 5 of [the Authorisation Directive], does the Member State have to indicate the objectives actually pursued by the national derogatory rules?

8. May that derogation be applied, in addition to the case of the concessionary of the public broadcasting service (RAI in Italy), in favour also of private operators who have been unsuccessful in competitive procedures and to the detriment of undertakings who may have duly been granted rights following a competitive procedure?

9. Under Community rules (primary and secondary legislation) on workable competition in the broadcasting sector, ought the national legislature to have avoided extending the old transitory analogue system on the advent of the terrestrial digital system (and the attendant generalised transition to digital)? Only if analogue broadcasting is ended and replaced by the switch to digital will it be possible to reallocate frequencies freed for various uses. If terrestrial digital is merely operated alongside analogue, there will be an attendant accentuating of the scarcity of available frequencies owing to the existence of analogue and digital transmission in parallel (simulcast)?

10. Lastly, is the pluralism of sources of information and of competition in the broadcasting sector, which is guaranteed by European law, secured by national rules, such as Law No 112/2004 providing for a new limit of 20 per cent of resources linked to a new very wide criterion (the ICS – integrated communications system – Article 2(g) and Article 15 of Law No 112/2004)? This criterion also brings in activities which do not affect media pluralism, whereas under antitrust law the "relevant market" is constructed normally by differentiating the markets in the broadcasting sector by drawing a distinction between pay TV and non-pay TV operating via the airwaves (reference is made inter alia to [Commission Decision of 21 March 2000 declaring a concentration to be compatible with the common market (Case No COMP/JV. 37 – BSKYB/Kirch Pay TV], based on [Council Regulation (EEC) No 4064/89 of 21 December 1989 on the control of concentrations between undertakings] Merger Procedure 21/03/2000 and [Commission Decision of 2 April 2003 declaring a concentration to be compatible with the common market and the EEA Agreement (Case No COMP/M. 2876 – Newscorp/Telepiù), based on [Regulation No 4064/89].'

The questions

47 By its questions, the national court asks the Court, essentially, to rule on the interpretation of the provisions of the Treaty on freedom to provide services and competition, the Framework Directive, the Authorisation Directive, the Competition Directive and Article 10 of the ECHR, in so far as Article 6 EU refers thereto.

The jurisdiction of the Court and the admissibility of the questions

48 As a preliminary point, it must be stated, first, that by some of its questions the national court is inviting the Court to give a ruling on the compatibility with Community law of certain provisions of the Italian legislation relevant in this case.

49 It is not the task of the Court, in preliminary ruling proceedings, to rule upon the compatibility of provisions of national law with Community law or to interpret national legislation or regulations (see Case C-151/02 *Jaeger* [2003] ECR I-8389, paragraph 43, and Case C-237/04 *Enirisorse* [2006] ECR I-2843, paragraph 24 and the case-law cited).

50 The Court has, however, repeatedly held that it is competent to give the national court full guidance on the interpretation of Community law in order to enable it to determine the issue of compatibility for the purposes of the case before it (see, inter alia, Case C-292/92 *Hünermundand Others* [1993] ECR I-6787, paragraph 8, and *Enirisorse*, paragraph 24).

51 It is therefore appropriate for the Court, in the present case, to restrict its analysis to the provisions of Community law by providing an interpretation of them which will be of use to the national court, which has the task of determining the compatibility of the provisions of national law with Community law, for the purposes of deciding the dispute before it.

52 Secondly, it must be recalled that, according to settled case-law, it is solely for the national court before which the dispute has been brought, and which must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court (Case C-415/93 *Bosman* [1995] ECR I-4921, paragraph 59, and Case C-466/04 *Acereda Herrera* [2006] ECR I-5341, paragraph 47).

53 None the less, the Court has no jurisdiction to give a preliminary ruling on a question submitted by a national court where it is quite obvious that the ruling sought by that court on the interpretation of a Community rule bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (*Bosman*, paragraph 61; *Acereda Herrera*, paragraph 48; and Joined Cases C-94/04 and C-202/04 *Cipolla and Others* [2006] ECR I-11421, paragraph 25).

54 In that regard, the decision making the reference must set out the precise reasons why the national court was unsure as to the interpretation of Community law and why it considered it necessary to refer questions to the Court for a preliminary ruling. Against that background, it is essential that the national court provide at the very least some explanation of the reasons for the choice of the Community provisions which it requires to be interpreted and of the link it establishes between those provisions and the national legislation applicable to the dispute in the main proceedings (order in Case C-167/94 *Grau Gomis and Others* [1995] ECR I-1023, paragraph 9; Joined Cases C-453/03, C-11/04, C-12/04 and C-194/04 *ABNA and Others* [2005] ECR I-10423, paragraph 46; Joined Cases C-338/04, C-359/04 and C-360/04 *Placanica and Others* [2007] ECR I-1891, paragraph 34; and Case C-295/05 *Asemfo* [2007] ECR I-2999, paragraph 33).

55 It must be stated, however, that as regards its tenth question, the national court does not give any indication as to the Community provisions which it requires to be interpreted or any explanation of the link it establishes between those provisions and the dispute in the main proceedings or the subject-matter of that dispute.

56 The tenth question is for that reason inadmissible.

57 Thirdly, the need to provide an interpretation of Community law which will be of use to the national court makes it necessary that the referring court should define the factual and legislative context of the questions it is asking or, at the very least, explain the factual circumstances on which those questions are based (see Joined Cases C-320/90 to C-322/90 *Telemarsicabruzzo and Others* [1993] ECR I-393, paragraph 6; Case C-341/95 *Bettati* [1998] ECR I-4355, paragraph 67; Case C-67/96 *Albany International* [1999] ECR I-5751, paragraph 39; and *Cipolla and Others*, paragraph 25).

58 Those requirements are of particular importance in the area of competition, which is characterised by complex factual and legal situations (see *Telemarsicabruzzo and Others*, paragraph 7; *Bettati*, paragraph 68; and *Albany International*, paragraph 39).

59 In this case, as the Advocate General notes in point 27 of his Opinion, it seems that, by asking for an interpretation of the provisions of the Treaty on competition in its second question, the referring court has in mind, essentially, Article 86(1) EC, read in conjunction with Article 82 EC.

60 In accordance with the Court's case-law, a Member State infringes the prohibitions laid down by those two provisions where the undertaking in question, merely by exercising the special or exclusive

rights conferred on it, is led to abuse its dominant position or where such rights are liable to create a situation in which that undertaking is led to commit such abuses (Joined Cases C-180/98 to C-184/98 *Pavlov and Others* [2000] ECR I-6451, paragraph 127; Case C-475/99 *Ambulanz Glöckner* [2001] ECR I-8089, paragraph 39; and Case C-451/03 *Servizi Ausiliari Dottori Commercialisti* [2006] ECR I-2941, paragraph 23).

61 However, the decision making the reference does not contain any indication regarding, inter alia, the definition of the relevant market, the calculation of the market shares held by the various undertakings operating on that market, and the supposed abuse of a dominant position.

62 Consequently, it must be held that, in so far as it relates to the Treaty provisions on competition, the second question is inadmissible (see, to that effect, Case C-134/03 *Viacom Outdoor* [2005] ECR I-1167, paragraphs 25 to 29).

63 The ninth question must be regarded as being inadmissible on the same grounds.

64 Fourthly, it is necessary to determine whether the Court has jurisdiction in the present case to give a ruling on Article 49 EC, since it is common ground that all aspects of the main proceedings are confined within only one Member State.

65 National legislation such as that at issue in the main proceedings, which applies without distinction to Italian nationals and to nationals of other Member States, is generally likely to fall within the scope of the provisions on freedom to provide services established by the Treaty only to the extent to which it applies to situations related to intra-Community trade (see, to that effect, Case 286/81 *Oosthoek's Uitgeversmaatschappij* [1982] ECR 4575, paragraph 9, and Case C-6/01 *Anomar and Others* [2003] ECR I-8621, paragraph 39).

66 It is possible, in the main proceedings, that undertakings established in Member States other than the Italian Republic have been or would be interested in providing the services concerned (see, to that effect, Case C-87/94 *Commission* v *Belgium* [1996] ECR I-2043, paragraph 33, and Case C-458/03 *Parking Brixen* [2005] ECR I-8585, paragraph 55).

67 The finding of a link with intra-Community trade will be presumed if the market in question has a certain cross-border interest (Case C-507/03 *Commission* v *Ireland* [2007] ECR I-0000, paragraph 29), which it is for the national court to determine.

68 In any event, it is necessary to answer the second question referred to the Court in this case since it relates to Article 49 EC.

69 Such a reply might be useful to the national court if its national law were to require that an Italian national must be allowed to enjoy the same rights as those which a national of another Member State would derive from Community law in the same situation (Case C-448/98 *Guimont* [2000] ECR I-10663, paragraph 23; Joined Cases C-515/99, C-519/99 to C-524/99 and C-526/99 to C-540/99 *Reisch and Others* [2002] ECR I-2157, paragraph 26; *Anomar and Others*, paragraph 41; *Servizi Ausiliari Dottori Commercialisti*, paragraph 29; and *Cipolla and Others*, paragraph 30).

70 Consequently, the Court has jurisdiction to give a ruling on the interpretation of Article 49 EC.

71 The second question is therefore admissible in so far as it relates to Article 49 EC.

The second, fourth and fifth questions

72 The second, fourth and fifth questions all relate, essentially, to whether the provisions of Article 49 EC or the NCRF preclude, in television broadcasting matters, national legislation the application of which means that it is impossible for an operator holding rights to broadcast without the allocation of broadcasting radio frequencies.

73 It is true that, in respect of the second question, the Court can answer from the point of view of Article 49 EC only in so far as that question relates to Italian legislation, namely Article 3(7) of Law No 249/1997, which pre-dates the application of the NCRF, as is clear from Article 28(1) of the Framework Directive, Article 18(1) of the Authorisation Directive and Article 9 of the Competition Directive.

74 Likewise, the fourth and fifth questions refer only to the NCRF, since they concern national legislation subsequent to the date of application of the NCRF, namely the provisions of Law No 112/2004.

75 First, however, the second question also relates to Italian legislation subsequent to the applicability of the NCRF, namely Article 1 of Decree-Law No 352/2003.

76 Secondly, as pointed out by the Commission in its observations to the Court, the NCRF implemented provisions of the Treaty, in particular those on freedom to provide services, in the area of electronic communications networks and services, as defined in Articles 2(a) and (c) of the Framework Directive, Article 2(1) of the Authorisation Directive and points 1 and 3 of Article 1 of the Competition Directive.

77 The second, fourth and fifth questions must therefore be dealt with together, since the answers relating to the NCRF are relevant only from its date of application, as set out in Article 28(1) of the Framework Directive, Article 18(1) of the Authorisation Directive and Article 9 of the Competition Directive.

78 In order to provide an answer which is of use to the national court, it should be recalled that the Treaty does not require national monopolies having a commercial character to be abolished completely, but requires them to be adjusted in such a way as to ensure that no discrimination regarding the conditions under which goods are procured and marketed exists between nationals of Member States (Case C-189/95 *Franzén* [1997] ECR I-5909, paragraph 38 and the case-law cited).

79 However, Article 49 EC precludes the application of any national rules which have the effect of making the provision of services between Member States more difficult than the provision of services purely within one Member State (Joined Cases C-544/03 and C-545/03 *Mobistar and Belgacom Mobile* [2005] ECR I-7723, paragraph 30).

80 In the area of electronic communications networks and services, those principles were implemented by the NCRF.

81 Article 8 of the Framework Directive places on the Member States the obligation to ensure that the national regulatory authorities take all reasonable measures aimed at promoting competition in the provision of electronic communications services, ensuring that there is no distortion or restriction of competition in the electronic communications sector and removing remaining obstacles to the provision of those services at European level.

82 Likewise, Article 2(2) of the Competition Directive requires the Member States to take all measures necessary to ensure that any undertaking is entitled to provide electronic communications services or to establish, extend or provide electronic communications networks.

83 Article 3(1) of the Authorisation Directive also enjoins the Member States to ensure the freedom to provide electronic communications networks and services and prohibits them from preventing an undertaking from providing those networks or services, except where this is necessary for the reasons set out in Article 46(1) EC.

84 For that purpose, Article 3(2) of the Authorisation Directive states that the provision of electronic communications networks or electronic communications services may be subject only to a general authorisation.

85 On that point, it must be stated that, in the area of television broadcasting, freedom to provide services, as enshrined in Article 49 EC and implemented in this area by the NCRF, requires not only the grant of broadcasting authorisations, but also the grant of broadcasting radio frequencies.

86 An operator cannot exercise effectively the rights which it derives from Community law in terms of access to the television broadcasting market without broadcasting radio frequencies.

87 To that end, Article 9(1) of the Framework Directive provides that the 'Member States shall ensure the effective management of radio frequencies for electronic communication services in their territory'.

88 Similarly, Article 5(1) of the Authorisation Directive states that, where possible, Member States may not, in particular where the risk of harmful interference is negligible, make the use of radio frequencies subject to the grant of individual rights of use but are to include the conditions for usage of such radio frequencies in the general authorisation.

89 Moreover, point 1 of Article 4 of the Competition Directive prohibits the Member States from granting exclusive or special rights of use of radio frequencies for the provision of electronic communications services.

90 In the present case, the national court questions the Court on the criteria applied for the grant of radio frequencies for the purpose of operating on the analogue television broadcasting market.

91 The national court is not questioning the Court on the criteria which have been applied, pursuant to Law No 249/1997, for the grant of rights to operate on the analogue television broadcasting market. Nor are those criteria disputed by Centro Europa 7, either before the national court or in the observations it has submitted to the Court, since Centro Europa 7 was granted rights in accordance with those criteria.

92 There is therefore no need for the Court to give a ruling on those criteria.

93 The national court has doubts as to the compatibility of Law No 249/1997 with Community law only in so far as Article 3(7) of that Law set up transitional arrangements in favour of the incumbent networks, which had the effect of preventing operators without radio frequencies, such as Centro Europa 7, from accessing the market in question.

94 The national court is also questioning the Court on the criteria applied, pursuant to Law No 112/2004, for granting rights to operate on the digital and analogue television broadcasting market, only in so far as those criteria consolidated the transitional arrangements structured in favour of the existing networks in Article 1 of Decree-Law No 352/2003, which had the effect of precluding the grant to operators of radio frequencies for the purpose of operating on the analogue television broadcasting market, even though they had been granted rights under Law No 249/1997.

95 In that regard, the successive application of the transitional arrangements structured in favour of the incumbent networks in Article 3(7) of Law No 249/1997 and Article 1 of Decree-Law No 352/2003 had the effect of preventing operators without broadcasting radio frequencies from accessing the market in question.

96 The view must also be taken that, by issuing a general authorisation to operate on the broadcasting services market only to the incumbent networks, Article 23(5) of Law No 112/2004 consolidated the restrictive effect confirmed in the preceding paragraph.

97 First, by limiting de facto the number of operators able to broadcast on the market in question, those measures are and/or were likely to hinder the provision of services in the area of television broadcasting.

98 Secondly, those measures have and/or have had the effect of freezing the structures on the national market and protecting the position of the operators already active on that market.

99 Consequently, Article 49 EC and, from the date on which they became applicable, Article 9(1) of the Framework Directive, Article 5(1) of the Authorisation Directive and point 1 of Article 4 of the Competition Directive preclude such measures unless they are justified.

100 In that respect, it is clear from the case-law of the Court that a licensing system which restricts the number of operators in the national territory is capable of being justified by general-interest objectives (see, to that effect, *Placanica and Others*, paragraph 53), on condition that the restrictions resulting from them are appropriate and do not go beyond what is necessary to attain those objectives.

101 Thus, the NCRF expressly allows the Member States, under Article 1(3) of the Framework Directive, to adopt or maintain, in compliance with Community law, provisions pursuing general-interest objectives, in particular relating to audio-visual policy.

102 Likewise, the first subparagraph of Article 5(2) of the Authorisation Directive allows the Member States to grant rights to the use of radio frequencies on an individual basis with a view to complying with the objective of the efficient use of radio frequencies, as referred to by the Framework Directive.

103 However, as the Advocate General stated in points 34 and 37 of his Opinion, in order for such arrangements, which generally adversely affect Article 49 EC and the NCRF, to be justified they must not only comply with general-interest objectives but also be structured on the basis of objective, transparent, non-discriminatory and proportionate criteria (see, to that effect, *Placanica and Others*, paragraph 49 and the case-law cited).

104 Accordingly, Article 9(1) of the Framework Directive provides that the Member States are to ensure that the allocation and assignment of radio frequencies by the national regulatory authorities are based on objective, transparent, non-discriminatory and proportionate criteria.

105 Furthermore, where it is necessary to grant individual rights to the use of radio frequencies, those rights must be granted, under the second subparagraph of Article 5(2) of the Authorisation Directive, ‘through open, transparent and non-discriminatory procedures’.

106 Likewise, pursuant to Article 7(3) of the Authorisation Directive, ‘[w]here the granting of rights of use for radio frequencies needs to be limited, Member States shall grant such rights on the basis of selection criteria which must be objective, transparent, non-discriminatory and proportionate’.

107 That requirement is backed up by point 2 of Article 4 of the Competition Directive, under which 'the assignment of radio frequencies for electronic communication services shall be based on objective, transparent, non-discriminatory and proportionate criteria'.

108 In the main proceedings, according to the information supplied by the national court, under Law No 249/1997 the allocation of radio frequencies to a limited number of operators was not carried out in accordance with such criteria.

109 First, those radio frequencies were allocated de facto to the incumbent networks under the transitional arrangements adjusted in Article 3(7) of Law No 249/1997, even though some of those networks had not been granted rights under that Law.

110 Secondly, operators such as Centro Europa 7 were not allocated radio frequencies even though they had been granted rights under that Law.

111 Consequently, irrespective of the objectives pursued by Law No 249/1997 with regard to the system for the grant of radio frequencies to a limited number of operators, the view must be taken that Article 49 EC precluded such a system.

112 The same conclusion must be drawn as regards the system for the grant of radio frequencies to a limited number of operators under Law No 112/2004, in the sense that that scheme was not implemented on the basis of objective, transparent, non-discriminatory and proportionate criteria, in breach of Article 49 EC and, from the date on which they became applicable, Article 9(1) of the Framework Directive, the second subparagraph of Article 5(2) and Article 7(3) of the Authorisation Directive and point 2 of Article 4 of the Competition Directive.

113 Under Law No 112/2004, radio frequencies were granted to the incumbent operators and the latter were authorised to broadcast under the transitional arrangements adjusted in Article 1 of Decree-Law No 352/2003, which merely extended the transitional arrangements set up by Law No 249/1997.

114 In any event, the restrictions established above cannot be justified by the need to ensure a swift transformation to digital television broadcasting.

115 Irrespective of whether such an objective may constitute a general-interest objective capable of justifying such restrictions, it is clear, as the Commission rightly pointed out in the observations which it submitted to the Court, that the Italian legislation, in particular Law No 112/2004, does not merely allocate to the incumbent operators a priority right to obtain radio frequencies, but reserves them that right exclusively, without restricting in time the privileged position assigned to those operators and without providing for any obligation to relinquish the radio frequencies in breach of the threshold after the transfer to digital television broadcasting.

116 Having regard to all of the foregoing considerations, the answer to the second, fourth and fifth questions, taken together, must be that Article 49 EC and, from the date on which they became applicable, Article 9(1) of the Framework Directive, Article 5(1), the second subparagraph of Article 5(2) and Article 7(3) of the Authorisation Directive and Article 4 of the Competition Directive must be interpreted as precluding, in television broadcasting matters, national legislation the application of which makes it impossible for an operator holding rights to broadcast in the absence of broadcasting radio frequencies granted on the basis of objective, transparent, non-discriminatory and proportionate criteria.

The first and third questions

117 By its first question, the national court asks the Court, essentially, to state whether the provisions of Article 10 of the ECHR, in so far as Article 6 EU refers thereto, preclude, in television broadcasting matters, national legislation the application of which makes it impossible for an operator holding rights, such as Centro Europa 7, to broadcast without the grant of broadcasting radio frequencies.

118 By its third question, the national court questions the Court in regard to the obligation, arising from the possible direct effect of Article 17 of the Authorisation Directive from the date on which it became applicable, on the Member State which has granted rights for television broadcasting activity, to bring those rights into line with Community law and, therefore, to allocate to Centro Europa 7 the broadcasting radio frequencies necessary for it to carry on that activity.

119 By those questions, the national court is thus seeking to determine whether there are infringements of Community law for the purpose of ruling on an application for compensation for the losses flowing from such infringements.

120 It follows from the answer to the second, fourth and fifth questions that Article 49 EC and, from the date on which they became applicable, Article 9(1) of the Framework Directive, Article 5(1), the second subparagraph of Article 5(2) and Article 7(3) of the Authorisation Directive and Article 4 of the Competition Directive must be interpreted as precluding, in television broadcasting matters, national legislation the application of which makes it impossible for an operator holding rights to broadcast in the absence of broadcasting radio frequencies granted on the basis of objective, transparent, non-discriminatory and proportionate criteria.

121 That answer, by itself, thus enables the national court to rule on the application made by Centro Europa 7 for compensation for the losses suffered.

122 Consequently, regard being had to the Court's answer to the second, fourth and fifth questions, it is not necessary to rule on the first and third questions.

The sixth, seventh and eighth questions

123 By its sixth, seventh and eighth questions, the national court questions the Court, essentially, in regard to the conditions for the application by the Member States of the derogation laid down in the second subparagraph of Article 5(2) of the Authorisation Directive and Article 4 of the Competition Directive.

124 It follows from the answer to the fourth and fifth questions that, from the date on which they became applicable, the second subparagraph of Article 5(2) of the Authorisation Directive and Article 4 of the Competition Directive must be interpreted as precluding, in television broadcasting matters, national legislation the application of which makes it impossible for an operator holding rights to broadcast in the absence of broadcasting radio frequencies granted on the basis of objective, transparent, non-discriminatory and proportionate criteria.

125 Accordingly, it follows from that reply that compliance with objective, transparent, non-discriminatory and proportionate criteria constitutes a necessary condition for the application of the derogation laid down in the second subparagraph of Article 5(2) of the Authorisation Directive and Article 4 of the Competition Directive.

126 There is therefore no need to rule on any other potential conditions for the application of that derogation, such as those referred to in the sixth, seventh and eighth questions.

127 Consequently, having regard to the Court's answer to the fourth and fifth questions, taken together with the second question, there is no need to give a ruling on the sixth, seventh and eighth questions.

Costs

128 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Fourth Chamber) hereby rules:

Article 49 EC and, from the date on which they became applicable, Article 9(1) of Directive 2002/21/EC of the European Parliament and of the Council of 7 March 2002 on a common regulatory framework for electronic communications networks and services (Framework Directive), Article 5(1), the second subparagraph of Article 5(2) and Article 7(3) of Directive 2002/20/EC of the European Parliament and of the Council of 7 March 2002 on the authorisation of electronic communications networks and services (Authorisation Directive), and Article 4 of Commission Directive 2002/77/EC of 16 September 2002 on competition in the markets for electronic communications networks and services must be interpreted as precluding, in television broadcasting matters, national legislation the application of which makes it impossible for an operator holding rights to broadcast in the absence of broadcasting radio frequencies granted on the basis of objective, transparent, non-discriminatory and proportionate criteria.

Case C-210/06

Cartesio Oktató és Szolgáltató bt

(Reference for a preliminary ruling from the Szegedi Ítélőtábla)

(Transfer of a company seat to a Member State other than the Member State of incorporation − Application for amendment of the entry regarding the company seat in the commercial register − Refusal − Appeal against a decision of a court entrusted with maintaining the commercial register − Article 234 EC − Reference for a preliminary ruling − Admissibility – Definition of 'court or tribunal' − Definition of 'a court or tribunal against whose decisions there is no judicial remedy under national law' − Appeal against a decision making a reference for a preliminary ruling – Jurisdiction of appellate courts to order revocation of such a decision – Freedom of establishment − Articles 43 EC and 48 EC)

Summary of the Judgment

1. *Preliminary rulings – Reference to the Court – National court or tribunal for the purposes of Article 234 EC – Definition*

   (Art. 234 EC)

2. *Preliminary rulings – Admissibility – Limits*

   (Art. 234 EC)

3. *Preliminary rulings – Reference to the Court – Obligation to refer*

   (Art. 234, third para., EC)

4. *Preliminary rulings – Reference to the Court – Jurisdiction of the national courts*

   (Art. 234 EC)

5. *Freedom of movement for persons – Freedom of establishment*

   (Arts 43 EC and 48 EC)

1. A court hearing an appeal against a decision of a lower court, responsible for maintaining the commercial register, rejecting an application for amendment of information entered in that register, must be classified as a court or tribunal which is entitled to make a reference for a preliminary ruling under Article 234 EC, regardless of the fact that neither the decision of the lower court nor the consideration of the appeal by the referring court takes place in the context of *inter partes* proceedings.

   Where a court responsible for maintaining a register makes an administrative decision without being required to resolve a legal dispute, it cannot be regarded as exercising a judicial function. In contrast, a court hearing an appeal which has been brought against a decision of a lower court responsible for maintaining a register, rejecting such an application, and which seeks the setting aside of that decision, which allegedly adversely affects the rights of the applicant, is called upon to give judgment in a dispute and is exercising a judicial function. Accordingly, in such a case, the appellate court must, in principle, be regarded as a court or tribunal within the meaning of Article 234 EC, with jurisdiction to refer a question to the Court for a preliminary ruling

   (see paras 57-59, 63, operative part 1)

2. There is a presumption of relevance in favour of questions on the interpretation of Community law referred by a national court, and it is a matter for the national court to define, and not for the Court to verify, in which factual and legislative context they operate. The Court declines to rule on a reference for a preliminary ruling from a national court only where it is quite obvious that the interpretation of Community law that is sought is unrelated to the actual facts of the main action or to its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it.

The presumption of relevance is not rebutted by the fact that, in the case of a reference for a preliminary ruling on the question whether a court is to be classified as a court or tribunal against whose decisions there is no judicial remedy under national law, within the meaning of the third paragraph of Article 234 EC, the court has already submitted its reference to the Court. It would be contrary to the spirit of cooperation which must guide all relations between national courts and the Court of Justice, and contrary also to the requirements of procedural economy, to require a national court first to seek a preliminary ruling on the sole question whether that court is one of those referred to in the third paragraph of Article 234 EC, before, where appropriate, having to formulate – not until then and by a second reference for a preliminary ruling – questions concerning the provisions of Community law relating to the substance of the dispute before it.

Nor is that presumption of relevance rebutted where uncertainty exists as to whether the dispute is hypothetical. Such uncertainty exists where the evidence at the Court's disposal for the purpose of ruling on the possible incompatibility with Article 234 EC of a national rule governing appeals against a decision making a reference to the Court does not permit it to be found that that decision was not and can no longer be appealed against and now accordingly has the authority of res judicata, in which case the question of that incompatibility would in fact be hypothetical.

(see paras 67, 70, 73, 83-86)

3. A court whose decisions in disputes may be appealed on points of law, cannot be classified as a court or tribunal against whose decisions there is no judicial remedy under national law, within the meaning of the third paragraph of Article 234 EC, even though the procedural system under which the dispute is to be decided imposes restrictions with regard to the nature of the pleas which may be raised before such a court which must allege a breach of law.

Such restrictions, just as the lack of suspensory effect of the appeal on a point of law, do not have the effect of depriving the parties in a case before a court whose decisions are amenable to such an appeal on a point of law of the possibility of exercising effectively their right to appeal the decision handed down by that court in a dispute. Those restrictions or that lack of suspensory effect do not mean therefore that that court must be classified as a court handing down a decision against which there is no judicial remedy.

(see paras 77-79, operative part 2)

4. Where rules of national law apply relating to the right of appeal against an order for reference, and under those rules the main proceedings remain pending before the referring court in their entirety, the order for reference alone being the subject of a limited appeal, the second paragraph of Article 234 EC is to be interpreted as meaning that the jurisdiction conferred on any national court or tribunal by that provision of the Treaty to make a reference to the Court for a preliminary ruling cannot be called into question by the application of those rules where they permit the appellate court to vary the order for reference, to set aside the reference and to order the referring court to resume the domestic law proceedings.

Although Article 234 EC does not preclude a decision of a court making a reference to the Court from remaining subject to the remedies normally available under national law, nevertheless the outcome of such an appeal cannot limit the jurisdiction conferred by Article 234 EC on that court to make a reference to the Court if it considers that a case pending before it raises questions on the interpretation of provisions of Community law necessitating a ruling by the Court.

In a situation where a case is pending, for the second time, before a court sitting at the first instance after a judgment originally delivered by that court has been quashed by a supreme court, the court at first instance remains free to refer questions to the Court pursuant to Article 234 EC, regardless of the existence of a rule of national law whereby a court is bound on points of law by the rulings of a superior court.

Where rules of national law apply which relate to the right of appeal against a decision making a reference for a preliminary ruling, and under those rules the main proceedings remain pending before the referring court in their entirety, the order for reference alone being the subject of a limited appeal, the autonomous jurisdiction which Article 234 EC confers on the referring court to make a reference to the Court would be called into question, if – by varying the order for reference, by setting it aside and by ordering the referring court to resume the proceedings – the appellate court could prevent the referring court from exercising the right, conferred on it by the EC Treaty, to make a reference to the Court.

In accordance with Article 234 EC, the assessment of the relevance and necessity of the question referred for a preliminary ruling is, in principle, the responsibility of the referring court alone, subject to the limited verification made by the Court. Thus, it is for the referring court to draw the proper inferences from a judgment delivered on an appeal against its decision to refer and, in particular, to come to a conclusion as to whether it is appropriate to maintain the reference for a preliminary ruling, or to amend it or to withdraw it.

It follows that, in a situation where an appeal may be brought against the decision by the referring court to make an order for reference, the Court must – also in the interests of clarity and legal certainty – abide by the decision to make a reference for a preliminary ruling, which must have its full effect so long as it has not been revoked or amended by the referring court, such revocation or amendment being matters on which that court alone is able to take a decision.

(see paras 93-98, operative part 3)

5. As Community law now stands, Articles 43 EC and 48 EC are to be interpreted as not precluding legislation of a Member State under which a company incorporated under the law of that Member State may not transfer its seat to another Member State whilst retaining its status as a company governed by the law of the Member State of incorporation.

In accordance with Article 48 EC, in the absence of a uniform Community law definition of the companies which may enjoy the right of establishment on the basis of a single connecting factor determining the national law applicable to a company, the question whether Article 43 EC applies to a company which seeks to rely on the fundamental freedom enshrined in that article – like the question whether a natural person is a national of a Member State, and hence entitled to enjoy that freedom – is a preliminary matter which, as Community law now stands, can only be resolved by the applicable national law. In consequence, the question whether the company is faced with a restriction on the freedom of establishment, within the meaning of Article 43 EC, can arise only if it has been established, in the light of the conditions laid down in Article 48 EC, that the company actually has a right to that freedom.

Thus a Member State has the power to define both the connecting factor required of a company if it is to be regarded as incorporated under the law of that Member State and, as such, capable of enjoying the right of establishment, and that required if the company is to be able subsequently to maintain that status. That power includes the possibility for that Member State not to permit a company governed by its law to retain that status if the company intends to reorganise itself in another Member State by moving its seat to the territory of the latter, thereby breaking the connecting factor required under the national law of the Member State of incorporation.

Moreover, the legislation and agreements in the field of company law envisaged in Articles 44(2)(g) EC and 293 EC have not as yet addressed the differences between the legislation of the various Member States concerning the place of connection of the companies and thus have not yet brought an end to them. Although certain regulations, such as Regulation No 2137/85 on the European Economic Interest Grouping, Regulation No 2157/2001 on the Statute for a European company and Regulation No 1435/2003 on the Statute for a European Cooperative Society, adopted on the basis of Article 308 EC, in fact lay down a set of rules under which it is possible for the new legal entities which they establish to transfer their registered office (*siège statutaire*) and, accordingly, also their real seat (*siège réel*) – both of which must, in effect, be situated in the same Member State – to another Member State without it being compulsory to wind up the original legal person or to create a new legal person, such a transfer nevertheless necessarily entails a change as regards the national law applicable to the entity making such a transfer.

Where the company merely wishes to transfer its real seat from one Member State to another, while remaining a company governed by national law, hence without any change as to the national law applicable, the application mutatis mutandis of those regulations cannot in any event lead to the predicted result in such circumstances.

(see paras 109-110, 114-115, 117, 119, operative part 4)

JUDGMENT OF THE COURT (Grand Chamber)

16 December 2008 (*)

(Transfer of a company seat to a Member State other than the Member State of incorporation − Application for amendment of the entry regarding the company seat in the commercial register − Refusal − Appeal against a decision of a court entrusted with maintaining the commercial register − Article 234 EC − Reference for a preliminary ruling − Admissibility – Definition of ‘court or tribunal’ − Definition of ‘a court or tribunal against whose decisions there is no judicial remedy under national law’ − Appeal against a decision making a reference for a preliminary ruling – Jurisdiction of appellate courts to order revocation of such a decision – Freedom of establishment − Articles 43 EC and 48 EC)

In Case C-210/06,

REFERENCE for a preliminary ruling under Article 234 EC from the Szegedi Ítélőtábla (Hungary), made by decision of 20 April 2006, received at the Court on 5 May 2006, in the proceedings in the case of

Cartesio Oktató és Szolgáltató bt,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann, C.W.A. Timmermans (Rapporteur), A. Rosas, K. Lenaerts, A. Ó Caoimh and J.-C. Bonichot, Presidents of Chambers, K. Schiemann, J. Makarczyk, P. Kūris, E. Juhász, L. Bay Larsen and P. Lindh, Judges,

Advocate General: M. Poiares Maduro,

Registrar: B. Fülöp, Administrator,

having regard to the written procedure and further to the hearing on 10 July 2007,

after considering the observations submitted on behalf of:

– CARTESIO Oktató és Szolgáltató bt, by G. Zettwitz and P. Metzinger, ügyvédek,

– the Hungarian Government, by J. Fazekas and P. Szabó, acting as Agents,

– the Czech Government, by T. Boček, acting as Agent,

– Ireland, by D. O'Hagan, acting as Agent, A. Collins SC and N. Travers BL,

– the Netherlands Government, by H.G. Sevenster and M. de Grave, acting as Agents,

– the Polish Government, by E. Ośniecka-Tamecka, acting as Agent,

– the Slovenian Government, by M. Remic, acting as Agent,

– the United Kingdom Government, by T. Harris, acting as Agent, and J. Stratford, Barrister,

– the Commission of the European Communities, by G. Braun and V. Kreuschitz, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 22 May 2008,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Articles 43 EC, 48 EC and 234 EC.

2 The reference was made in the context of proceedings brought by CARTESIO Oktató és Szolgáltató bt ('Cartesio'), a limited partnership established in Baja (Hungary), against the decision rejecting its application for registration in the commercial register of the transfer of its company seat to Italy.

National legal context

The law relating to civil procedure

3 Article 10(2) of Law No III of 1952 on civil procedure (a Polgári perrendtartásról szóló 1952. évi III. törvény: 'the Law on civil procedure') states:

‘At second instance:

…

(b) appeals arising from cases dealt with by regional courts or courts of Budapest shall be heard by appeal courts.’

4 Article 155/A of the Law on civil procedure provides that:

‘(1) The court may ask the Court of Justice of the European Communities for a preliminary ruling in accordance with the rules laid down in the Treaty establishing the European Community.

(2) The court shall make the reference for a preliminary ruling by order and shall stay the proceedings …

(3) An appeal may be brought against a decision to make a reference for a preliminary ruling. An appeal cannot be brought against a decision dismissing a request for a reference for a preliminary ruling.

…’

5 Under Article 233(1) of the Law on civil procedure:

‘Save as otherwise provided, appeal proceedings may be brought against the decisions of courts of first instance …’

6 Article 233/A of that law provides that:

‘An appeal may be brought against orders made at second instance in respect of which a right of appeal exists under the rules applicable to proceedings at first instance …’

7 Article 249/A of the Law on civil procedure states that:

‘Appeal proceedings may also be brought against a decision made at second instance dismissing a request for a reference for a preliminary ruling (Article 155/A).’

8 Article 270 of the Law on civil procedure is worded as follows:

‘(1) Save as otherwise provided, the Legfelsőbb Bíróság [Supreme Court] shall hear appeals on points of law. The general rules shall apply mutatis mutandis.

(2) The parties, interveners and persons affected by the decision may, in respect of the part of that decision which refers to them, bring an appeal on a point of law before the Legfelsőbb Bíróság against final judgments and orders which bring proceedings an end, pleading infringement of the law.

…’

9 Article 271(1) of the Law on civil procedure provides that:

‘No appeal shall lie:

(a) against decisions which have become final at first instance, except in cases which are permitted by law;

(b) where one party has failed to exercise the right to bring an appeal and the court of second instance, hearing the appeal brought by the other party, confirms the decision at first

instance;

…’

10 Under Article 273(3) of that law:

‘The institution of appeal proceedings shall not have suspensory effect but, where a party so requests, the Legfelsőbb Bíróság may exceptionally suspend enforcement of the judgment …’

Company law

11 Article 1(1) of Law No CXLIV of 1997 on commercial companies (a gazdasági társaságokról szóló 1997. évi CXLIV. törvény) provides that:

‘This Law shall govern the incorporation, organisation and functioning of commercial companies which have their seat in Hungary; the rights, duties and responsibilities of the founders and members (shareholders) of those companies; and the conversion, merger and demerger of commercial companies … and their liquidation.’

12 Under Article 11 of that law:

‘The articles of association (the instrument of incorporation, the statutes of the company) shall specify:

(a) the name and seat of the commercial company

…’

13 Article 1(1) of Law No CXLV of 1997 on the commercial register, company advertising and legal procedures in commercial registration matters (a cégnyilvántartásról, a cégnyilvánosságról és a bírósági cégeljárásról szóló 1997. évi CXLV. Törvény; ‘the Law on the commercial register’) provides that:

‘A company is a commercial organisation … or other legal entity of a commercial nature … which, save where a law or government order provides otherwise, is incorporated through its registration in the commercial register for the purpose of carrying on a commercial activity for financial gain …’

14 Under Article 2(1) of that law:

‘The legal entities referred to in Article 1 may be entered in the commercial register only if their registration is possible or compulsory under [Hungarian] law.’

15 Article 11 of the Law on the commercial register provides that:

‘(1) The regional courts or the courts of Budapest, acting as commercial courts, shall register companies in the commercial registers which they are responsible for maintaining …

(2) … the courts within the jurisdiction of which a company has its seat shall have jurisdiction to register that company and to deal with any proceedings concerning such companies provided for by statute.

…’

16 Article 12(1) of that law provides that:

‘The information on companies referred to in this Law shall be entered in the commercial register. For all companies, the register shall specify:

...

(d) the company seat …'

17 Under Article 16(1) of the Law on the commercial register:

'The seat … shall be the place where [the company's] central administration is situated …'

18 Article 29(1) of that law provides that:

'Save as otherwise provided, any application for registration of amendments to information registered in relation to companies must be presented to the commercial court within 30 days of the event giving rise to the amendment.'

19 Article 34(1) of the Law provides that:

'Every transfer of a company seat to the jurisdiction of another court responsible for maintaining the commercial register must, by reason of the change entailed, be submitted to the court with jurisdiction in respect of the former seat. After examining the applications for amendment of the information in the register prior to the change of company seat, the latter court shall endorse the transfer.'

Private international law

20 Article 18 of Decree-Law No 13 of 1979 on private international law rules (a nemzetközi magánjogról szóló 1979. évi 13. törvényerejű rendelet) provides that:

'(1) The legal capacity of a legal person, its commercial status, the rights derived from its personality and the legal relationships between its members shall be determined in accordance with its personal law.

(2) The personal law of a legal person shall be the law of the State in the territory of which it is registered.

(3) If a legal person has been lawfully registered in accordance with the laws of several States or if, under the rules applicable in the place where the seat designated in its articles of association is situated, registration is not required, its personal law shall be that applicable in the State of the seat.

(4) If a legal person has no seat designated in its articles of association or has seats in several States, and, in accordance with the law of one of those States, registration is not required, its personal law shall be the law of the State in which its central administration is situated.'

The dispute in the main proceedings and the questions referred for a preliminary ruling

21 Cartesio was formed on 20 May 2004 as a 'betéti társaság' (limited partnership) under Hungarian law. Its seat was established in Baja (Hungary). Cartesio was registered in the commercial register on 11 June 2004.

22 Cartesio has two partners both of whom are natural persons resident in Hungary and holding Hungarian nationality: a limited partner, whose only commitment is to invest capital, and an unlimited partner, with unlimited liability for the company's debts. Cartesio is active, inter alia, in the field of human resources, secretarial activities, translation, teaching and training.

23 On 11 November 2005, Cartesio filed an application with the Bács-Kiskun Megyei Bíróság

(Regional Court, Bács-Kiskun), sitting as a cégbíróság (commercial court), for registration of the transfer of its seat to Gallarate (Italy) and, in consequence, for amendment of the entry regarding Cartesio's company seat in the commercial register.

24 By decision of 24 January 2006, that application was rejected on the ground that the Hungarian law in force did not allow a company incorporated in Hungary to transfer its seat abroad while continuing to be subject to Hungarian law as its personal law.

25 Cartesio lodged an appeal against that decision with the Szegedi Ítélőtábla (Regional Court of Appeal, Szeged).

26 Relying on the judgment in Case C-411/03 *SEVIC Systems* [2005] ECR I-10805, Cartesio claimed before the Szegedi Ítélőtábla that, to the extent that Hungarian law draws a distinction between commercial companies according to the Member State in which they have their seat, that law is contrary to Articles 43 EC and 48 EC. It follows from those articles that Hungarian law cannot require Hungarian companies to choose to establish their seat in Hungary.

27 Cartesio also maintained that the Szegedi Ítélőtábla was required to refer that question for a preliminary ruling, since it constitutes a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law.

28 The Szegedi Ítélőtábla points out that, under Hungarian law, proceedings before the courts responsible for maintaining the commercial register and before courts hearing appeals against decisions of the commercial register courts are not *inter partes*. It therefore wishes to know whether it may be classified as a 'court or tribunal' within the meaning of Article 234 EC.

29 Moreover, if the answer to this question is in the affirmative, the Szegedi Ítélőtábla is of the view that it is still unclear whether, for the purposes of the third paragraph of Article 234 EC, it should be classified as a court or tribunal against whose decisions there is no judicial remedy under national law.

30 It states in that regard that although, according to Hungarian law, its decisions on appeal are final and enforceable, they may nevertheless be the subject of an extraordinary appeal – an appeal on a point of law – before the Legfelsőbb Bíróság.

31 However, as the purpose of an appeal on a point of law is to ensure the consistency of case-law, the possibility of bringing such an appeal is limited, in particular by the condition governing the admissibility of pleas, which is linked to the obligation to allege a breach of law.

32 The Szegedi Ítélőtábla further notes that, in Hungarian academic legal writing and case-law, questions have been raised as to the compatibility with Article 234 EC of the provisions laid down in Articles 155/A and 249/A of the Law on civil procedure concerning appeals against decisions by which a question is referred to the Court of Justice for a preliminary ruling.

33 In that regard, the Szegedi Ítélőtábla points out that those provisions might result in an appellate court preventing a court which has decided to make a reference to the Court from doing so, even though an interpretation by the Court of a provision of Community law is needed to resolve the dispute in the main proceedings.

34 As regards the merits of the case before it, the Szegedi Ítélőtábla, referring to the judgment in Case 81/87 *Daily Mail and General Trust* [1988] ECR 5483, notes that the freedom of establishment laid down in Articles 43 EC and 48 EC does not include the right, for a company incorporated under the legislation of a Member State and registered therein, to transfer its central administration, and thus its principal place of business, to another Member State whilst retaining its legal personality and nationality of origin, should the competent authorities object to this.

35 However, according to the Szegedi Ítélőtábla, this principle may have been further refined in the

later case-law of the Court.

36 In that regard, the Szegedi Ítélőtábla points out that, according to the case-law of the Court, all measures which prohibit, impede or render less attractive the exercise of the freedom of establishment constitute a restriction on that freedom, and it refers in that regard, inter alia, to Case C-442/02 *CaixaBank France* [2004] ECR I-8961, paragraphs 11 and 12).

37 The Szegedi Ítélőtábla moreover points out that, in *SEVIC Systems*, the Court ruled that Articles 43 EC and 48 EC preclude registration in the national commercial register of the merger by dissolution without liquidation of one company and transfer of the whole of its assets to another company from being refused in general in a Member State where one of the two companies is established in another Member State, whereas such registration is possible, on compliance with certain conditions, where the two companies participating in the merger are both established in the territory of the first Member State.

38 Moreover, it is settled case-law of the Court that national laws cannot differentiate between companies according to the nationality of the person seeking their registration in the commercial register.

39 Lastly, the Szegedi Ítélőtábla states that Council Regulation (EEC) No 2137/85 of 25 July 1985 on the European Economic Interest Grouping (EEIG) (OJ 1985 L 199, p. 1) and Council Regulation (EC) No 2157/2001 of 8 October 2001 on the Statute for a European company (SE) (OJ 2001 L 294, p. 1) lay down, for the forms of Community undertaking which they introduce, more flexible and less costly provisions which enable those undertakings to transfer their seat or establishment from one Member State to another without first going into liquidation.

40 In those circumstances, on the view that resolution of the dispute before it depended on the interpretation of Community law, the Szegedi Ítélőtábla decided to stay proceedings and to refer the following questions to the Court for a preliminary ruling:

‘(1) Is a court of second instance which has to give a decision on an appeal against a decision of a commercial court (cégbíróság) in proceedings to amend a registration [of a company] entitled to make a reference for a preliminary ruling under Article 234 [EC], where neither the action before the commercial court nor the appeal procedure is *inter partes*?

(2) In so far as an appeal court is included in the concept of a “court or tribunal which is entitled to make a reference for a preliminary ruling” under Article 234 [EC], must that court be regarded as a court against whose decisions there is no judicial remedy, which has an obligation, under Article 234 [EC], to submit questions on the interpretation of Community law to the Court of Justice of the European Communities?

(3) Does a national measure which, in accordance with domestic law, confers a right to bring an appeal against an order making a reference for a preliminary ruling limit the power of the Hungarian courts to refer questions for a preliminary ruling or could it limit that power – derived directly from Article 234 [EC] – if, in appeal proceedings, the national superior court may amend the order, render the request for a preliminary ruling inoperative and order the court which issued the order for reference to resume the national proceedings which had been suspended?

(4) (a) If a company, [incorporated] in Hungary under Hungarian company law and entered in the Hungarian commercial register, wishes to transfer its seat to another Member State of the European Union, is the regulation of this field within the scope of Community law or, in the absence of the harmonisation of laws, is national law exclusively applicable?

(b) May a Hungarian company request transfer of its seat to another Member State of the European Union relying directly on Community law (Articles 43 [EC] and 48

[EC])? If the answer is affirmative, may the transfer of the seat be made subject to any kind of condition or authorisation by the Member State of origin or the host Member State?

(c) May Articles 43 [EC] and 48 [EC] be interpreted as meaning that national rules or national practices which differentiate between commercial companies with respect to the exercise of their rights, according to the Member State in which their seat is situated, are incompatible with Community law?

[(d)] May Articles 43 [EC] and 48 [EC] be interpreted as meaning that, in accordance with those articles, national rules or practices which prevent a Hungarian company from transferring its seat to another Member State of the European Union are incompatible with Community law?'

The application to have the oral procedure reopened

41 By document lodged at the Registry of the Court of Justice on 9 September 2008, Ireland requested the Court to order that the oral procedure be reopened, pursuant to Article 61 of the Rules of Procedure, with regard to the fourth question referred for a preliminary ruling.

42 In support of its request, Ireland states that, contrary to the view adopted by the Advocate General in his Opinion, the fourth question in the order for reference should not be understood as relating to the transfer of the seat, defined by Hungarian law as the place where the company has its central administration, and thus the real seat (*siège réel*) of the company.

43 According to Ireland, it follows from the English translation of the order for reference that that question concerns the transfer of the registered office (*siège statutaire*).

44 Thus, Ireland claims essentially that one of the factual premisses on which the Advocate General's analysis is based is incorrect.

45 Ireland is, moreover, of the view that, if the Court relies on the same premiss, it should reopen the oral procedure in order to give the interested parties an opportunity to submit observations on the basis of that premiss.

46 It is clear from the case-law that the Court may of its own motion, or on a proposal from the Advocate General, or at the request of the parties, order the reopening of the oral procedure in accordance with Article 61 of the Rules of Procedure if it considers that it lacks sufficient information or that the case must be dealt with on the basis of an argument which has not been debated between the parties (see, inter alia, Case C-284/06 *Burda* [2008] ECR I-0000, paragraph 37 and the case-law cited).

47 In that regard, it should be pointed out, first, that it is apparent from the order for reference as a whole that the fourth question relates not to the transfer of the registered office of the company concerned in the main proceedings but to the transfer of its 'real seat'.

48 As stated in the order for reference, it follows from the Hungarian legislation on company registration that, for the purposes of applying that legislation, a company's seat is defined as the place where it has its central administration.

49 Moreover, the referring court placed the case before it in the context of the situation at issue in *Daily Mail and General Trust*, which it describes as relating to a company, incorporated in accordance with the legislation of a Member State and registered therein, wishing to transfer its central administration, and thus its principal place of business, to another Member State whilst retaining its legal personality and nationality of origin, where the competent authorities object to this. More specifically, the referring court asks whether the principle laid down in that judgment – that Articles 43 EC and 48 EC do not confer on companies the right to transfer their central

administration in such a way, whilst retaining their legal personality as conferred on them in the State under whose laws they were incorporated – has been further refined in the later case-law of the Court.

50 Secondly, the interested parties, including Ireland, were expressly requested by the Court to focus their pleadings on the premiss that the issue raised in the main proceedings related to the transfer to another Member State of the real seat of the company concerned, in other words, of the place where it has its administrative seat.

51 Although Ireland nevertheless focused in its pleadings on the premiss that the issue in the case before the referring court concerned the transfer of a company's registered office, it also set out its position – albeit briefly – on the basis that that issue concerned the transfer of the company's real seat, a position which, moreover, it set out again in its request that the oral procedure be reopened.

52 Against that background, the Court, having heard the Advocate General, considers that it has all the evidence necessary to enable it to reply to the questions referred and that the present case does not thereby fall to be decided on the basis of an argument which has not been debated between the parties.

53 Accordingly, it is not necessary to order that the oral procedure be reopened.

The questions referred for a preliminary ruling

The first question

54 By this question, the Court is essentially asked whether a court such as the referring court, hearing an appeal against a decision of a lower court, responsible for maintaining the commercial register, rejecting an application for amendment of information entered in that register, must be classified as a court or tribunal which is entitled to make a reference for a preliminary ruling under Article 234 EC, regardless of the fact that neither the decision of the lower court nor the consideration by the referring court of the appeal against that decision takes place in the context of *inter partes* proceedings.

55 In that regard, it should be borne in mind that, according to settled case-law, in order to determine whether the body making a reference is a 'court or tribunal' for the purposes of Article 234 EC, which is a question governed by Community law alone, the Court takes account of a number of factors, such as whether the body is established by law, whether it is permanent, whether its jurisdiction is compulsory, whether its procedure is *inter partes*, whether it applies rules of law and whether it is independent (see, inter alia, Case C-96/04 *Standesamt Stadt Niebüll* [2006] ECR I-3561, paragraph 12 and the case-law cited).

56 With regard to the *inter partes* nature of the proceedings before the national court, Article 234 EC does not make reference to the Court subject to those proceedings being *inter partes*. None the less, it follows from that article that a national court may make a reference to the Court only if there is a case pending before it and if it is called upon to give judgment in proceedings intended to lead to a decision of a judicial nature (see to that effect, inter alia, Case C-182/00 *Lutz and Others* [2002] ECR I-547, paragraph 13 and the case-law cited).

57 Thus, where a court responsible for maintaining a register makes an administrative decision without being required to resolve a legal dispute, it cannot be regarded as exercising a judicial function. Such is the case, for example, where it decides an application for registration of a company in proceedings which do not have as their object the annulment of a measure which allegedly adversely affects the applicant (see to that effect, inter alia, *Lutz and Others*, paragraph 14 and the case-law cited).

58 In contrast, a court hearing an appeal which has been brought against a decision of a lower

court responsible for maintaining a register, rejecting such an application, and which seeks the setting-aside of that decision, which allegedly adversely affects the rights of the applicant, is called upon to give judgment in a dispute and is exercising a judicial function.

59 Accordingly, in such a case, the appellate court must, in principle, be regarded as a court or tribunal within the meaning of Article 234 EC, with jurisdiction to refer a question to the Court for a preliminary ruling (see for similar situations, inter alia, Case C-300/01 *Salzmann* [2003] ECR I-4899; *SEVIC Systems*; and Case C-117/06 *Möllendorf and Others* [2007] ECR I-8361).

60 It is apparent from the court file that, in the main proceedings, the referring court is sitting in an appellate capacity in an action for the setting-aside of a decision by which a lower court, responsible for maintaining the commercial register, rejected an application by a company for registration of the transfer of its seat, requiring the amendment of an entry in that register.

61 Accordingly, in the main proceedings, the referring court is hearing a dispute and is exercising a judicial function, regardless of the fact that the proceedings before that court are not *inter partes*.

62 Consequently, in the light of the case-law cited in paragraphs 55 and 56 above, the referring court must be regarded as a court or tribunal for the purposes of Article 234 EC.

63 In the light of the foregoing, the answer to the first question must be that a court such as the referring court, hearing an appeal against a decision of a lower court, responsible for maintaining the commercial register, rejecting an application for amendment of information entered in that register, must be classified as a court or tribunal which is entitled to make a reference for a preliminary ruling under Article 234 EC, regardless of the fact that neither the decision of the lower court nor the consideration of the appeal by the referring court takes place in the context of *interpartes* proceedings.

The second question

64 By this question, the Court is essentially being asked whether a court such as the referring court, whose decisions in disputes such as that in the main proceedings may be appealed on points of law, falls to be classified as a court or tribunal against whose decisions there is no judicial remedy under national law, within the meaning of the third paragraph of Article 234 EC.

Admissibility

65 The Commission of the European Communities contends that this question is inadmissible as it is manifestly irrelevant to the resolution of the dispute in the main proceedings, since the order for reference has already been submitted to the Court, rendering any examination of whether there is an obligation to make a reference devoid of interest.

66 That objection must be rejected.

67 According to settled case-law, there is a presumption of relevance in favour of questions on the interpretation of Community law referred by a national court, and it is a matter for the national court to define, and not for the Court to verify, in which factual and legislative context they operate. The Court declines to rule on a reference for a preliminary ruling from a national court only where it is quite obvious that the interpretation of Community law that is sought is unrelated to the actual facts of the main action or to its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (see, to that effect, Joined Cases C-222/05 to C-225/05 *van der Weerd and Others* [2007] ECR I-4233, paragraph 22 and the case-law cited).

68 As stated in paragraph 27 above, Cartesio claimed before the referring court that that court was required to make a reference to the Court for a preliminary ruling, since it fell to be classified as a court or tribunal against whose decisions there is no judicial remedy under national law, within

the meaning of the third paragraph of Article 234 EC.

69 As the referring court had doubts concerning that plea, it decided to refer a question on that issue to the Court for a preliminary ruling.

70 It would be contrary to the spirit of cooperation which must guide all relations between national courts and the Court of Justice, and contrary also to the requirements of procedural economy, to require a national court first to seek a preliminary ruling on the sole question whether that court is one of those referred to in the third paragraph of Article 234 EC, before, where appropriate, having to formulate – subsequently and by a second reference for a preliminary ruling – the questions concerning the provisions of Community law relating to the substance of the dispute before it.

71 Moreover, the Court has already replied to a question relating to the characteristics of national courts in the light of the third paragraph of Article 234 EC in a context offering certain similarities with that of the present reference for a preliminary ruling, without the admissibility of that question being disputed (Case C-99/00 *Lyckeskog* [2002] ECR I-4839).

72 In those circumstances, it does not appear – at least not prima facie – that the interpretation of Community law sought is unrelated to the actual facts of the main action or to its purpose.

73 Accordingly, the presumption of relevance in favour of references for a preliminary ruling is not, as regards the present question, rebutted by the objection put forward by the Commission (see, inter alia, *van der Weerd and Others*, paragraphs 22 and 23).

74 It follows that the second question is admissible.

Substance

75 The issue raised by this question is thus whether the referring court falls to be classified as ‘a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law’, within the meaning of the third paragraph of Article 234 EC. It is clear from the order for reference that this question is raised in view of the fact, referred to in paragraphs 30 and 31 above, that, although Hungarian law provides that decisions delivered on appeal by the referring court may be the subject of an extraordinary appeal – in other words, an appeal on a point of law before the Legfelsőbb Bíróság, the purpose of which is to ensure the consistency of the case-law – the possibilities of bringing such an appeal are limited, in particular, by the condition governing the admissibility of pleas, which is linked to the obligation to allege a breach of law, and in view of the fact, also pointed out in the order for reference, that under Hungarian law an appeal on a point of law does not, in principle, have the effect of suspending enforcement of the decision delivered on appeal.

76 The Court has already held that decisions of a national appellate court which can be challenged by the parties before a supreme court are not decisions of ‘a court or tribunal of a Member State against whose decisions there is no judicial remedy under national law’ within the meaning of the third paragraph of Article 234 EC. The fact that the examination of the merits of such challenges is conditional upon a preliminary declaration of admissibility by the supreme court does not have the effect of depriving the parties of a judicial remedy (*Lyckeskog*, paragraph 16).

77 That is true a fortiori in the case of a procedural system such as that under which the case before the referring court must be decided, since that system makes no provision for a preliminary declaration by the supreme court that the appeal is admissible and, instead, merely imposes restrictions with regard, in particular, to the nature of the pleas which may be raised before such a court, which must allege a breach of law.

78 In common with the lack of suspensory effect of appeals on a point of law before the Legfelsőbb Bíróság, such restrictions do not have the effect of depriving the parties in a case before a court whose decisions are amenable to an appeal on a point of law of the possibility of

exercising effectively their right to appeal the decision handed down by that court in a dispute such as that in the main proceedings. It does not follow, therefore, from those restrictions or from the lack of suspensory effect that that court falls to be classified as a court handing down a decision against which there is no judicial remedy.

79 In the light of the foregoing, the answer to the second question must be that a court such as the referring court, whose decisions in disputes such as that in the main proceedings may be appealed on points of law, cannot be classified as a court or tribunal against whose decisions there is no judicial remedy under national law, within the meaning of the third paragraph of Article 234 EC.

The third question

Admissibility

80 Ireland argues that this question is hypothetical, hence inadmissible, since no appeal on a point of law has been brought against the order for reference and, in consequence, an answer to that question would be of no use to the referring court.

81 The Commission also asks the Court to declare that it is not appropriate to give a reply to the third question because, given that the order for reference has the authority of *res judicata* and has reached the Court, that question is hypothetical.

82 Those objections cannot be upheld.

83 As was pointed out in paragraph 67 above, the presumption of relevance enjoyed by references for a preliminary ruling may, in certain circumstances, be rebutted, in particular where the Court holds that the problem is hypothetical.

84 Ireland and the Commission maintain that the problem raised by this question – the possible incompatibility with the second paragraph of Article 234 EC of national rules governing appeals against a decision making a reference to the Court – is hypothetical, since, in fact, the order for reference has not been appealed against and now has the authority of *res judicata*.

85 However, neither that decision nor the file sent to the Court permits the inference that there has been no appeal against that decision or that there can no longer be any appeal against it.

86 In the light of the settled case-law cited in paragraph 67 above, since, in such a situation of uncertainty, responsibility for defining and verifying the factual and legislative context in which the question referred arises lies with the national court, the presumption of relevance which this question enjoys has not been rebutted.

87 It follows that the third question is admissible.

Substance

88 Article 234 EC gives national courts the right – and, where appropriate, imposes on them the obligation – to make a reference for a preliminary ruling, as soon as the national court perceives either of its own motion or at the request of the parties that the substance of the dispute raises one of the points referred to in the first paragraph of Article 234 EC. It follows that national courts have the widest discretion in referring matters to the Court if they consider that a case pending before them raises questions involving interpretation of provisions of Community law, or consideration of their validity, necessitating a decision on their part (Case 166/73 *Rheinmühlen-Düsseldorf* [1974] ECR 33, paragraph 3).

89 It is also clear from the case-law of the Court that, in the case of a court or tribunal against whose decisions there is a judicial remedy under national law, Article 234 EC does not preclude decisions of such a court by which questions are referred to the Court for a preliminary ruling

from remaining subject to the remedies normally available under national law. Nevertheless, in the interests of clarity and legal certainty, the Court must abide by the decision to refer, which must have its full effect so long as it has not been revoked (Case 146/73 *Rheinmühlen-Düsseldorf* [1974] ECR 139, paragraph 3).

90 Moreover, the Court has already held that the system established by Article 234 EC with a view to ensuring that Community law is interpreted uniformly throughout the Member States instituted direct cooperation between the Court of Justice and the national courts by means of a procedure which is completely independent of any initiative by the parties (Case C-2/06 *Kempter* [2008] ECR I-411, paragraph 41).

91 The system of references for a preliminary ruling is based on a dialogue between one court and another, the initiation of which depends entirely on the national court's assessment as to whether a reference is appropriate and necessary (*Kempter*, paragraph 42).

92 It is clear from the order for reference that, under Hungarian law, a separate appeal may be brought against a decision making a reference to the Court for a preliminary ruling, although the main proceedings remain pending in their entirety before the referring court, proceedings being stayed until the Court gives a ruling. The appellate court thus seised has, under Hungarian law, power to vary that decision, to set aside the reference for a preliminary ruling and to order the first court to resume the domestic law proceedings.

93 As is clear from the case-law cited in paragraphs 88 and 89 above, concerning a national court or tribunal against whose decisions there is a judicial remedy under national law, Article 234 EC does not preclude a decision of such a court, making a reference to the Court, from remaining subject to the remedies normally available under national law. Nevertheless, the outcome of such an appeal cannot limit the jurisdiction conferred by Article 234 EC on that court to make a reference to the Court if it considers that a case pending before it raises questions on the interpretation of provisions of Community law necessitating a ruling by the Court.

94 It should be pointed out, moreover, that the Court has already held that, in a situation where a case is pending, for the second time, before a court sitting at first instance after a judgment originally delivered by that court has been quashed by a supreme court, the court at first instance remains free to refer questions to the Court pursuant to Article 234 EC, regardless of the existence of a rule of national law whereby a court is bound on points of law by the rulings of a superior court (Case 146/73 *Rheinmühlen-Düsseldorf*).

95 Where rules of national law apply which relate to the right of appeal against a decision making a reference for a preliminary ruling, and under those rules the main proceedings remain pending before the referring court in their entirety, the order for reference alone being the subject of a limited appeal, the autonomous jurisdiction which Article 234 EC confers on the referring court to make a reference to the Court would be called into question, if – by varying the order for reference, by setting it aside and by ordering the referring court to resume the proceedings – the appellate court could prevent the referring court from exercising the right, conferred on it by the EC Treaty, to make a reference to the Court.

96 In accordance with Article 234 EC, the assessment of the relevance and necessity of the question referred for a preliminary ruling is, in principle, the responsibility of the referring court alone, subject to the limited verification made by the Court in accordance with the case-law cited in paragraph 67 above. Thus, it is for the referring court to draw the proper inferences from a judgment delivered on an appeal against its decision to refer and, in particular, to come to a conclusion as to whether it is appropriate to maintain the reference for a preliminary ruling, or to amend it or to withdraw it.

97 It follows that, in a situation such as that in the case before the referring court, the Court must – also in the interests of clarity and legal certainty – abide by the decision to make a reference for a preliminary ruling, which must have its full effect so long as it has not been revoked or amended by the referring court, such revocation or amendment being matters on which that

court alone is able to take a decision.

98 In the light of the foregoing, the answer to the third question must be that, where rules of national law apply which relate to the right of appeal against a decision making a reference for a preliminary ruling, and under those rules the main proceedings remain pending before the referring court in their entirety, the order for reference alone being the subject of a limited appeal, the second paragraph of Article 234 EC is to be interpreted as meaning that the jurisdiction conferred by that provision of the Treaty on any national court or tribunal to make a reference to the Court for a preliminary ruling cannot be called into question by the application of those rules, where they permit the appellate court to vary the order for reference, to set aside the reference and to order the referring court to resume the domestic law proceedings.

The fourth question

99 By its fourth question, the referring court essentially asks whether Articles 43 EC and 48 EC are to be interpreted as precluding legislation of a Member State under which a company incorporated under the law of that Member State may not transfer its seat to another Member State whilst retaining its status as a company governed by the law of the Member State of incorporation.

100 It is clear from the order for reference that Cartesio – a company which was incorporated in accordance with Hungarian legislation and which, at the time of its incorporation, established its seat in Hungary – transferred its seat to Italy but wished to retain its status as a company governed by Hungarian law.

101 Under the Hungarian Law on the commercial register, the seat of a company governed by Hungarian law is to be the place where its central administration is situated.

102 The referring court states that the application filed by Cartesio for amendment of the entry in the commercial register regarding its company seat was rejected by the court responsible for maintaining that register on the ground that, under Hungarian law, a company incorporated in Hungary may not transfer its seat, as defined by the Law on the commercial register, abroad while continuing to be subject to Hungarian law as the law governing its articles of association.

103 Such a transfer would require, first, that the company cease to exist and, then, that the company reincorporate itself in compliance with the law of the country where it wishes to establish its new seat.

104 In that regard, the Court observed in paragraph 19 of *Daily Mail and General Trust* that companies are creatures of national law and exist only by virtue of the national legislation which determines its incorporation and functioning.

105 In paragraph 20 of *Daily Mail and General Trust*, the Court stated that the legislation of the Member States varies widely in regard to both the factor providing a connection to the national territory required for the incorporation of a company and the question whether a company incorporated under the legislation of a Member State may subsequently modify that connecting factor. Certain States require that not merely the registered office but also the real seat (*siège réel*) – that is to say, the central administration of the company – should be situated in their territory, and the removal of the central administration from that territory thus presupposes the winding-up of the company with all the consequences that winding-up entails under company law. The legislation of other States permits companies to transfer their central administration to a foreign country but certain of them make that right subject to certain restrictions, and the legal consequences of a transfer vary from one Member State to another.

106 The Court added, in paragraph 21 of *Daily Mail and General Trust*, that the EEC Treaty had taken account of that variety in national legislation. In defining, in Article 58 of that Treaty (later Article 58 of the EC Treaty, now Article 48 EC), the companies which enjoy the right of establishment, the EEC Treaty placed on the same footing, as connecting factors, the

registered office, central administration and principal place of business of a company.

107 In Case C-208/00 *Überseering* [2002] ECR I-9919, paragraph 70, the Court, whilst confirming those dicta, inferred from them that the question whether a company formed in accordance with the legislation of one Member State can transfer its registered office or its actual centre of administration to another Member State without losing its legal personality under the law of the Member State of incorporation, and, in certain circumstances, the rules relating to that transfer, are determined by the national law in accordance with which the company was incorporated. The Court concluded that a Member State is able, in the case of a company incorporated under its law, to make the company's right to retain its legal personality under the law of that Member State subject to restrictions on the transfer to a foreign country of the company's actual centre of administration.

108 It should be pointed out, moreover, that the Court also reached that conclusion on the basis of the wording of Article 58 of the EEC Treaty. In defining, in that article, the companies which enjoy the right of establishment, the EEC Treaty regarded the differences in the legislation of the various Member States both as regards the required connecting factor for companies subject to that legislation and as regards the question whether — and, if so, how — the registered office (*siège statutaire*) or real seat (*siège réel*) of a company incorporated under national law may be transferred from one Member State to another as problems which are not resolved by the rules concerning the right of establishment, but which must be dealt with by future legislation or conventions (see, to that effect, *Daily Mail and General Trust*, paragraphs 21 to 23, and *Überseering*, paragraph 69).

109 Consequently, in accordance with Article 48 EC, in the absence of a uniform Community law definition of the companies which may enjoy the right of establishment on the basis of a single connecting factor determining the national law applicable to a company, the question whether Article 43 EC applies to a company which seeks to rely on the fundamental freedom enshrined in that article – like the question whether a natural person is a national of a Member State, hence entitled to enjoy that freedom – is a preliminary matter which, as Community law now stands, can only be resolved by the applicable national law. In consequence, the question whether the company is faced with a restriction on the freedom of establishment, within the meaning of Article 43 EC, can arise only if it has been established, in the light of the conditions laid down in Article 48 EC, that the company actually has a right to that freedom.

110 Thus a Member State has the power to define both the connecting factor required of a company if it is to be regarded as incorporated under the law of that Member State and, as such, capable of enjoying the right of establishment, and that required if the company is to be able subsequently to maintain that status. That power includes the possibility for that Member State not to permit a company governed by its law to retain that status if the company intends to reorganise itself in another Member State by moving its seat to the territory of the latter, thereby breaking the connecting factor required under the national law of the Member State of incorporation.

111 Nevertheless, the situation where the seat of a company incorporated under the law of one Member State is transferred to another Member State with no change as regards the law which governs that company falls to be distinguished from the situation where a company governed by the law of one Member State moves to another Member State with an attendant change as regards the national law applicable, since in the latter situation the company is converted into a form of company which is governed by the law of the Member State to which it has moved.

112 In fact, in that latter case, the power referred to in paragraph 110 above, far from implying that national legislation on the incorporation and winding-up of companies enjoys any form of immunity from the rules of the EC Treaty on freedom of establishment, cannot, in particular, justify the Member State of incorporation, by requiring the winding-up or liquidation of the company, in preventing that company from converting itself into a company governed by the law of the other Member State, to the extent that it is permitted under that law to do so.

113 Such a barrier to the actual conversion of such a company, without prior winding-up or liquidation, into a company governed by the law of the Member State to which it wishes to relocate constitutes a restriction on the freedom of establishment of the company concerned which, unless it serves overriding requirements in the public interest, is prohibited under Article 43 EC (see to that effect, inter alia, *CaixaBank France*, paragraphs 11 and 17).

114 It should also be noted that, following the judgments in *Daily Mail and General Trust* and *Überseering*, the developments in the field of company law envisaged in Articles 44(2)(g) EC and 293 EC, respectively, as pursued by means of legislation and agreements, have not as yet addressed the differences, referred to in those judgments, between the legislation of the various Member States and, accordingly, have not yet eradicated those differences.

115 The Commission maintains, however, that the absence of Community legislation in this field – noted by the Court in paragraph 23 of *Daily Mail and General Trust* – was remedied by the Community rules, governing the transfer of the company seat to another Member State, laid down in regulations such as Regulation No 2137/85 on the EEIG and Regulation No 2157/2001 on the SE or, moreover, Council Regulation (EC) No 1435/2003 of 22 July 2003 on the Statute for a European cooperative society (SCE) (OJ 2003 L 207, p. 1), as well as by the Hungarian legislation adopted subsequent to those regulations.

116 The Commission argues that those rules may – and should – be applied mutatis mutandis to the cross-border transfer of the real seat of a company incorporated under the law of a Member State.

117 In that regard, it should be noted that although those regulations, adopted on the basis of Article 308 EC, in fact lay down a set of rules under which it is possible for the new legal entities which they establish to transfer their registered office (*siège statutaire*) and, accordingly, also their real seat (*siège réel*) – both of which must, in effect, be situated in the same Member State – to another Member State without it being compulsory to wind up the original legal person or to create a new legal person, such a transfer nevertheless necessarily entails a change as regards the national law applicable to the entity making such a transfer.

118 That is clear, for example, in the case of a European company, from Articles 7 to 9(1)(c)(ii) of Regulation No 2157/2001.

119 As it is, in the case before the referring court, Cartesio merely wishes to transfer its real seat from Hungary to Italy, while remaining a company governed by Hungarian law, hence without any change as to the national law applicable.

120 Accordingly, the application mutatis mutandis of the Community legislation to which the Commission refers – even if it were to govern the cross-border transfer of the seat of a company governed by the law of a Member State – cannot in any event lead to the predicted result in circumstances such as those of the case before the referring court.

121 Further, as regards the implications of *SEVIC Systems* for the principle established in *Daily Mail and General Trust* and *Überseering*, it should be pointed out that those judgments do not relate to the same problem and that, consequently, *SEVIC Systems* cannot be said to have qualified the scope of *Daily Mail and General Trust* or *Überseering*.

122 The case which gave rise to the judgment in *SEVIC Systems* concerned the recognition, in the Member State of incorporation of a company, of an establishment operation carried out by that company in another Member State by means of a cross-border merger, which is a situation fundamentally different from the circumstances at issue in the case which gave rise to the judgment in *Daily Mail and General Trust*, but similar to the situations considered in other judgments of the Court (see Case C-212/97 *Centros* [1999] ECR I-1459; *Überseering*; and Case C-167/01 *InspireArt* [2003] ECR I-10155).

123 In such situations, the issue which must first be decided is not the question, referred to in

paragraph 109 above, whether the company concerned may be regarded as a company which possesses the nationality of the Member State under whose legislation it was incorporated but, rather, the question whether or not that company – which, it is common ground, is a company governed by the law of a Member State – is faced with a restriction in the exercise of its right of establishment in another Member State.

124 In the light of all the foregoing, the answer to the fourth question must be that, as Community law now stands, Articles 43 EC and 48 EC are to be interpreted as not precluding legislation of a Member State under which a company incorporated under the law of that Member State may not transfer its seat to another Member State whilst retaining its status as a company governed by the law of the Member State of incorporation.

Costs

125 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

1. **A court such as the referring court, hearing an appeal against a decision of a lower court, responsible for maintaining the commercial register, rejecting an application for amendment of information entered in that register, must be classified as a court or tribunal which is entitled to make a reference for a preliminary ruling under Article 234 EC, regardless of the fact that neither the decision of the lower court nor the consideration of the appeal by the referring court takes place in the context of *inter partes* proceedings.**

2. **A court such as the referring court, whose decisions in disputes such as that in the main proceedings may be appealed on points of law, cannot be classified as a court or tribunal against whose decisions there is no judicial remedy under national law, within the meaning of the third paragraph of Article 234 EC.**

3. **Where rules of national law apply which relate to the right of appeal against a decision making a reference for a preliminary ruling, and under those rules the main proceedings remain pending before the referring court in their entirety, the order for reference alone being the subject of a limited appeal, the second paragraph of Article 234 EC is to be interpreted as meaning that the jurisdiction conferred on any national court or tribunal by that provision of the Treaty to make a reference to the Court for a preliminary ruling cannot be called into question by the application of those rules, where they permit the appellate court to vary the order for reference, to set aside the reference and to order the referring court to resume the domestic law proceedings.**

4. **As Community law now stands, Articles 43 EC and 48 EC are to be interpreted as not precluding legislation of a Member State under which a company incorporated under the law of that Member State may not transfer its seat to another Member State whilst retaining its status as a company governed by the law of the Member State of incorporation.**

JUDGMENT OF THE COURT (Third Chamber)

22 October 2009 (*)

(Visas, asylum and immigration – Measures concerning the crossing of external borders – Article 62(1) and (2)(a) EC – Convention implementing the Schengen Agreement – Articles 6b and 23 – Regulation (EC) No 562/2006 – Articles 5, 11 and 13 – Presumption concerning the duration of the stay – Unlawful presence of third-country nationals on the territory of a Member State – National legislation allowing for either a fine or expulsion, depending on the circumstances)

In Joined Cases C-261/08 and C-348/08,

REFERENCES for preliminary rulings under Articles 68 EC and 234 EC from the Tribunal Superior de Justicia de Murcia (Spain), made by decisions of 12 June and 22 July 2008, received at the Court on 19 June and 30 July 2008 respectively, in the proceedings

María Julia Zurita García (C-261/08),

Aurelio Choque Cabrera (C-348/08)

v

Delegado del Gobierno en la Región de Murcia,

THE COURT (Third Chamber),

composed of P. Lindh, President of the Sixth Chamber, acting as President of the Third Chamber, A. Rosas, U. Lõhmus (Rapporteur), A. Ó Caoimh and A. Arabadjiev, Judges,

Advocate General: J. Kokott,

Registrar: R. Grass,

having regard to the written procedure,

having regard to the request of the national court of 13 June 2008, received at the Court on 19 June 2008, that the urgent procedure be applied to the order for reference in Case C-261/08 *Zurita García* under Article 104b of the Rules of Procedure,

having regard to the decision of the Third Chamber of the Court of 25 June 2008 not to apply the urgent procedure to that order for reference,

after considering the observations submitted on behalf of:

– Mr Choque Cabrera, by E. Bermejo Garrés, procuradora, and A. Corbalán Maiquez, abogado,

– the Spanish Government, by N. Díaz Abad, acting as Agent,

– the Italian Government, by I. Bruni, acting as Agent, and by G. Fiengo and W. Ferrante, avvocati dello Stato,

– the Austrian Government, by E. Riedl, acting as Agent,

– the Commission of the European Communities, by M. Wilderspin and E. Adsera Ribera, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 19 May 2009,

gives the following

Judgment

1 The present references for preliminary rulings concern the interpretation of Article 62(1) and (2)(a) EC, and Articles 5, 11 and 13 of Regulation (EC) No 562/2006 of the European Parliament and of the Council of 15 March 2006 establishing a Community Code on the rules governing the movement of persons across borders (Schengen Borders Code) (OJ 2006 L 105, p. 1).

2 The references have been made in the course of two actions brought by Bolivian nationals, namely Ms Zurita García (Case C-261/08) and Mr Choque Cabrera (Case C-348/08), against the Delegado del Gobierno en la Región de Murcia (government representative for the region of Murcia; 'the Delgado del Gobierno') relating to orders for expulsion from Spanish territory, with a prohibition on entry into the Schengen area for five years, adopted against Ms Zurita García and Mr Choque Cabrera.

Legal context

Community legislation

The Schengen Protocol

3 Under Article 1 of the Protocol integrating the Schengen *acquis* into the framework of the European Union, annexed to the Treaty on European Union and the Treaty establishing the European Community by the Treaty of Amsterdam ('the Protocol'), 13 Member States of the European Union are authorised to establish closer cooperation among themselves within the scope of the Schengen *acquis*, as defined in the annex to that protocol. That cooperation is conducted within the institutional and legal framework of the European Union and with respect for the relevant provisions of the Treaty on European Union and of the Treaty establishing the European Community.

4 Under the first subparagraph of Article 2(1) of the Protocol, from the date of entry into force of the Treaty of Amsterdam, that is to say, from 1 May 1999, the Schengen *acquis* was to apply immediately to the 13 Member States referred to in Article 1 of the Protocol.

5 Both the Agreement between the Governments of the States of the Benelux Economic Union, the Federal Republic of Germany and the French Republic on the gradual abolition of checks at their common borders, signed at Schengen on 14 June 1985 (OJ 2000 L 239, p. 13), and the Convention implementing the Schengen Agreement, signed at Schengen on 19 June 1990 (OJ 2000 L 239, p. 19), as amended by Council Regulation (EC) No 2133/2004 of 13 December 2004 on the requirement for the competent authorities of the Member States to stamp systematically the travel documents of third-country nationals when they cross the external borders of the Member States and amending the provisions of the Convention implementing the Schengen Agreement and the common manual to this

end (OJ 2004 L 369, p. 5) ('the CISA'), form part of that *acquis*.

6 Pursuant to the second sentence of the second subparagraph of Article 2(1) of the Protocol, the Council of the European Union adopted, on 20 May 1999, Decision 1999/436/EC determining, in conformity with the relevant provisions of the Treaty establishing the European Community and the Treaty on European Union, the legal basis for each of the provisions or decisions which constitute the Schengen *acquis* (OJ 1999 L 176, p. 17). It follows from Article 2 of Decision 1999/436, in conjunction with Annex A thereto, that the Council selected Articles 62 EC and 63 EC, which form part of Title IV of the EC Treaty, entitled 'Visas, asylum, immigration and other policies related to free movement of persons', as the legal bases for Article 23 of the CISA.

The CISA

7 Article 6b of the CISA provides:

'1. If the travel document of a third-country national does not bear an entry stamp, the competent national authorities may presume that the holder does not fulfil, or no longer fulfils, the conditions of duration of stay applicable within the Member State concerned.

2. This presumption may be rebutted where the third-country national provides, by any means, credible evidence such as transport tickets or proof of his or her presence outside the territory of the Member States, which shows that he or she has respected the conditions relating to the duration of a short stay.

...

3. Should the presumption referred to in paragraph 1 not be rebutted, the third-country national may be expelled by the competent authorities from the territory of the Member States concerned.'

8 Article 23 of the CISA states:

'1. Aliens who do not fulfil or who no longer fulfil the short-stay conditions applicable within the territory of a Contracting Party shall normally be required to leave the territories of the Contracting Parties immediately.

...

3. Where such aliens have not left voluntarily or where it may be assumed that they will not do so or where their immediate departure is required for reasons of national security or public policy, they must be expelled from the territory of the Contracting Party in which they were apprehended, in accordance with the national law of that Contracting Party. If under that law expulsion is not authorised, the Contracting Party concerned may allow the persons concerned to remain within its territory.

...

5. Paragraph 4 shall not preclude the application of national provisions on the right of asylum, the Geneva Convention relating to the Status of Refugees of 28 July 1951, as amended by the New York Protocol of 31 January 1967, paragraph 2 of this Article or Article 33(1) of this Convention.'

Regulation No 562/2006

9 Regulation No 562/2006 codifies the existing texts on border controls and seeks to consolidate and

develop the legislative aspect of the policy of integrated management of borders by detailing rules on the crossing of external borders.

10 Under Article 5 of that regulation, relating to entry conditions for third-country nationals:

‘1. For stays not exceeding three months per six-month period, the entry conditions for third-country nationals shall be the following:

(a) they are in possession of a valid travel document or documents authorising them to cross the border;

(b) they are in possession of a valid visa, if required pursuant to Council Regulation (EC) No 539/2001 of 15 March 2001 listing the third countries whose nationals must be in possession of visas when crossing the external borders and those whose nationals are exempt from that requirement [OJ 2001 L 81, p. 1], except where they hold a valid residence permit;

(c) they justify the purpose and conditions of the intended stay, and they have sufficient means of subsistence, both for the duration of the intended stay and for the return to their country of origin or transit to a third country into which they are certain to be admitted, or are in a position to acquire such means lawfully;

(d) they are not persons for whom an alert has been issued in the [Schengen Information System] for the purposes of refusing entry;

(e) they are not considered to be a threat to public policy, internal security, public health or the international relations of any of the Member States, in particular where no alert has been issued in Member States’ national databases for the purposes of refusing entry on the same grounds.

…’

11 The wording of Article 11(1) and (3) of Regulation No 562/2006, concerning the presumption as regards fulfilment of conditions of duration of stay, adopted that of Article 6b(1) and (3) of the CISA, except in the Spanish-language version, which provides as follows in Article 11(3) of the regulation:

‘Should the presumption referred to in paragraph 1 not be rebutted, the competent authorities shall expel the third-country national from the territories of the Member States concerned.’

12 Article 13 of Regulation No 562/2006, concerning the refusal of entry, states:

‘1. A third-country national who does not fulfil all the entry conditions laid down in Article 5(1) and does not belong to the categories of persons referred to in Article 5(4) shall be refused entry to the territories of the Member States. This shall be without prejudice to the application of special provisions concerning the right of asylum and to international protection or the issue of long-stay visas.

…’

13 Under Article 39(1) of that regulation, Articles 2 to 8 of the CISA were repealed with effect from 13 October 2006.

14 Pursuant to its Article 40, Regulation No 562/2006 entered into force on 13 October 2006.

National legislation

15 Framework Law 4/2000 on the rights and freedoms of aliens in Spain and their social integration (Ley Orgánica sobre derechos y libertades de los extranjeros en España y su integración social) of 11 January 2000 (BOE No 10 of 12 January 2000, p. 1139) was amended by Framework Law 8/2000 of 22 December 2000 (BOE No 307 of 23 December 2000, p. 45508), and by Framework Law 14/2003 of 20 November 2003 (BOE No 279 of 21 November 2003, p. 41193) ('the Law on Aliens').

16 Article 28(3) of the Law on Aliens, which governs the departure of aliens from Spain, provides:

'Departure [from Spanish territory] is obligatory in the following situations:

...

(c) in the event of administrative refusal of applications to remain on Spanish territory submitted by an alien, or in the absence of authorisation to be in Spain.'

17 Pursuant to Article 51 of the Law on Aliens, offences under the provisions relating to the entry and stay of aliens are classified according to their gravity as 'less serious', 'serious' and 'very serious'.

18 Article 53(a) of that law defines a serious offence as:

'Being unlawfully present on Spanish territory, on the ground that the person concerned has not obtained an extension of permission to stay or a residence permit, or on the ground that these have expired more than three months previously, and that person has not applied for renewal of that permission to stay or residence permit within the period laid down by law.'

19 Under Article 55 of the Law on Aliens, the penalty for a serious offence is a maximum fine of EUR 6 000. When imposing the penalty, the competent authority must apply criteria of proportionality, taking into account the degree of culpability, the damage caused, and the risk arising from the offence and its repercussions.

20 Article 57 of the Law on Aliens, concerning expulsion from the territory, provides:

'1. If the offender is a foreign national and behaves in a manner defined by law as very serious, or serious, within the meaning of Article 53(a), (b), (c), (d) and (f) of this Framework Law, it is possible, instead of imposing a fine, to expel that person from Spanish territory, at the conclusion of the corresponding administrative procedure.

2. Where the alien has been found guilty, in Spain or abroad, of intentional conduct which constitutes a criminal offence in Spain punishable by a prison sentence of longer than one year, that shall constitute a further legal basis for expulsion at the end of the corresponding administrative procedure, save where the previous conviction has been removed from the criminal record.

3. Under no circumstances may the penalties of expulsion and a fine be imposed together.

...'

21 Article 158 of Royal Decree 2393/2004, which adopted rules for the implementation of the Law on Aliens (Reglamento de la Ley de Extranjería) of 30 December 2004 (BOE No 6 of 7 January 2005, p. 485), provides:

'1. In the absence of authorisation to be in Spain, inter alia, because the conditions for entry or

residence are not met, or are no longer met, or in the event of an administrative refusal of an application for permission to stay, a residence permit or any other documentation necessary so that the alien may remain on Spanish territory … the administrative decision shall inform the person concerned of the obligation on him to leave the country, without prejudice to the possibility of that warning also being indicated on his passport or similar document, or even being indicated on a separate document if the person concerned is present in Spain on the basis of an identification document which does not allow for a suitable statement to be inserted.

...

2. The compulsory departure must take place within the period prescribed by the decision refusing the request or, if appropriate and at the latest, within 15 days of the notification of the decision of refusal, save for exceptional circumstances and where the person concerned is able to prove that he has sufficient means of subsistence; in such a situation, the period may be extended by 90 days at most. If the period expires and the departure has not taken place, the provisions laid down in the present rules for the cases referred to in Article 53(a) of the Law [on Aliens] shall be applied.

3. If the aliens to whom the present article refers in fact leave Spanish territory in accordance with the provisions of the foregoing paragraphs, they shall not be prohibited from entering the country and they may return to Spain, on condition that they comply with the rules governing access to Spanish territory.

...'

22 It is apparent from the orders for reference that the abovementioned national provisions are interpreted by the Tribunal Supremo (Supreme Court) as meaning that, since expulsion is a criminal penalty, the decision which imposes it must be specifically reasoned and must comply with the principle of proportionality.

23 It is apparent from the files before the Court that, in practice, where a third-country national does not have the right to enter or remain in Spain and his conduct has not given rise to aggravating circumstances, the penalty imposed is to be restricted to a fine, except where there is an additional factor which would justify replacing the fine with expulsion.

The disputes in the main proceedings and the question referred for preliminary ruling

24 In Case C-261/08, on 26 September 2006, the competent authorities initiated an administrative procedure for infringement of Article 53(a) of the Law on Aliens against Ms Zurita García, a Bolivian national who was unlawfully present in Spain, either on the ground that she had not obtained an extension of her permission to stay or residence permit, or on the ground that the validity of those documents had expired more than three months previously and she had not sought to have them renewed.

25 That procedure led, on 15 November 2006, to the adoption of a decision by the Delgado del Gobierno announcing that Ms Zurita García was to be expelled from Spanish territory. That penalty was accompanied by a prohibition on entry to the Schengen area for a period of five years.

26 Ms Zurita García challenged that decision before the Juzgado de lo Contencioso-Administrativo nº 6 de Murcia (Court for Contentious Administrative Proceedings No 6 of Murcia), which rejected the action at first instance. On appeal, Ms Zurita García claimed that that decision should be quashed

because the administration had not correctly applied the principle of proportionality when assessing the circumstances of the case, which in no way justified the replacement of a fine by expulsion.

27 In Case C-348/08, by decision of 30 July 2007, the Delgado del Gobierno ordered the expulsion from Spanish territory of Mr Choque Cabrera, a Bolivian national who was unlawfully in Spain, within the meaning of Article 53(a) of the Law on Aliens, either on the ground that he had not obtained an extension of his permission to stay or residence permit, or on the ground that the validity of those documents had expired more than three months previously and he had not sought to have them renewed. That penalty was accompanied with a prohibition on entry to the Schengen area for a period of five years.

28 Mr Choque Cabrera challenged that decision before the Juzgado de lo Contencioso-Administrativo nº 4 de Murcia (Court for Contentious Administrative Proceedings No 4 of Murcia), which rejected the action at first instance. On appeal, Mr Choque Cabrera claimed that that decision should be quashed because the administration had not applied the principle of proportionality when assessing the circumstances of the case, and did not give reasons for replacing a fine with expulsion.

29 In those circumstances, the Tribunal Superior de Justicia de Murcia (High Court of Justice of Murcia) decided to stay both actions before it and to refer the following question, worded identically in each case, to the Court for a preliminary ruling:

‘Should Article 62(1) and (2)(a) of the Treaty establishing the European Community and Articles 5, 11 and 13 of Regulation (EC) No 562/2006 … be interpreted as precluding national legislation, and the case-law which interprets it, which permits the substitution of the expulsion of any “third-country national” who does not have documentation authorising him to enter and remain in the territory of the European Union by imposition of a fine?’

30 By order of the President of the Third Chamber of 27 March 2009, Cases C-261/08 and C-348/08 were joined for the purposes of the oral procedure and of judgment.

The question referred for a preliminary ruling

Admissibility of the question referred in Case C-261/08

31 The Spanish Government submits that the question referred in Case C-261/08 is inadmissible on the ground that it is purely hypothetical.

32 It claims that the principle of non-retroactivity in criminal law precludes the application *ratione temporis* of the obligation, which may be laid down in Article 11(3) of Regulation No 562/2006, to penalise the facts of the case in the main proceedings by expulsion, inasmuch as that regulation entered into force only on 13 October 2006, whereas the appellant in the main proceedings had already been accused of being unlawfully present on Spanish territory on 26 September 2006.

33 In the Spanish Government’s view, as the case in the main proceedings concerns an administrative penalty, to which the same principles apply as those which apply to criminal proceedings, in particular the principle of legality and that of incrimination, the applicable legislation should be that which was in force on the date of the facts alleged, and not that which was applicable on the date on which the expulsion decision was taken by the national authorities, namely 15 November 2006, a position which the referring court appears to share.

34 In that regard, it should be recalled that, in proceedings under Article 234 EC, which are based on a clear separation of functions between the national courts and the Court of Justice, any assessment of the facts in the case is a matter for the national court. Similarly, it is solely for the national court, before which the dispute has been brought and which must assume responsibility for the ultimate judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court. Consequently, where the questions submitted concern the interpretation of Community law, the Court is in principle bound to give a ruling (see, inter alia, Case C-326/00 *IKA* [2003] ECR I-1703, paragraph 27; Case C-145/03 *Keller* [2005] ECR I-2529, paragraph 33; Case C-419/04 *Conseil général de la Vienne* [2006] ECR I-5645, paragraph 19; and Case C-537/07 *Gómez-Limón* [2009] ECR I-0000, paragraph 24).

35 The Court may refuse to rule on a question referred for a preliminary ruling by a national court only where it is quite obvious that the interpretation of Community law that is sought bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (see, inter alia, Case C-379/98 *PreussenElektra* [2001] ECR I-2099, paragraph 39; Case C-390/99 *Canal Satélite Digital* [2002] ECR I-607, paragraph 19; and *Gómez-Limón*, paragraph 25).

36 However, the Court has also held that, in exceptional circumstances, it can examine the conditions in which the case was referred to it by the national court, in order to assess whether it has jurisdiction (see, to that effect, Case 244/80 *Foglia* [1981] ECR 3045, paragraph 21). The spirit of cooperation which must prevail in the preliminary ruling procedure requires the national court, for its part, to have regard to the function entrusted to the Court of Justice, which is to assist in the administration of justice in the Member States and not to deliver advisory opinions on general or hypothetical questions (*Foglia*, paragraphs 18 and 20; Case 149/82 *Robards* [1983] ECR 171, paragraph 19; and Case C-83/91 *Meilicke* [1992] ECR I-4871, paragraph 25).

37 In the present context, it must be held that, on the date on which the appellant in the main proceedings in Case C-261/08 was officially accused of being unlawfully present on Spanish territory, namely 26 September 2006, Regulation No 562/2006 had not yet entered into force, with the result that the issue as to whether that regulation needs to be interpreted may arise in relation to the facts giving rise to that case.

38 It is Article 6b of the CISA, and not Article 11(3) of Regulation No 562/2006, which will be applicable if the date of the facts were to be the criterion for determining the law applicable *ratione temporis* in Case C-261/08. Article 6b of the CISA is among those provisions which were repealed under Article 39 of Regulation No 562/2006 with effect from 13 October 2006.

39 In any event, however, as the Advocate General notes in point 27 of her Opinion, Article 11(3) of Regulation No 562/2006 merely repeats the wording of Article 6b(3) of the CISA, which was in force when the appellant in the main proceedings was officially accused of being unlawfully present on Spanish territory.

40 Moreover, it should be pointed out that the referring court has submitted a question for a preliminary ruling to the Court with the same wording, in the course of the proceedings giving rise to the case which is joined to Case C-261/08, that is to say, Case C-348/08, the facts of which occurred when Regulation No 562/2006 was already in force.

41 Therefore, the question referred in each of the two joined cases must be held to be admissible.

Substance

42 At the outset, it should be pointed out that the request for interpretation concerns Article 62(1) and (2)(a) EC, and Articles 5, 11 and 13 of Regulation No 562/2006.

43 It must be specified, firstly, that Article 62(1) and (2)(a) EC constitutes the legal basis for the Council's action with a view to the adoption of measures ensuring the absence of any checks on persons when crossing internal borders, and measures on the crossing of the external borders of the Member States, and does not have the objective, in and of itself, of granting rights to third-country nationals, or of imposing obligations on Member States.

44 Next, Article 5 of Regulation No 562/2006 establishes the entry conditions for third-country nationals when they cross an external border for stays not exceeding three months per six-month period, while Article 13 of that regulation concerns the refusal of entry, to the territory of the Member States, to third-country nationals who do not fulfil all of those conditions.

45 Consequently, Articles 5 and 13 of Regulation No 562/2006 likewise do not govern the situation of third-country nationals, such as Ms Zurita García and Mr Choque Cabrera, who were already on Spanish territory, since an unspecified date, when the expulsion order was made against them on grounds of their unlawful stay.

46 Lastly, having regard to the fact that it cannot be ruled out that Articles 6b and 23 of the CISA may be applicable, *ratione temporis*, in Case C-261/08 (see paragraphs 37 and 38 of this judgment), as the Austrian Government and the Commission of the European Communities suggest, it is appropriate to take those articles of the CISA into account when examining the question referred for a preliminary ruling in order to provide the referring court with an answer which will be of use to it (see, by analogy, Case C-275/06 *Promusicae* [2008] ECR I-271, paragraph 46, and Case C-346/06 *Rüffert* [2008] ECR I-1989, paragraph 18).

47 As is clear from its wording, Article 23 of the CISA applies to all those who are not nationals of a Member State and who do not fulfil, or no longer fulfil, the short-stay conditions applicable within the territory of one of the Member States, which, according to the factual account given in the orders for reference, would appear to be the situation of both Ms Zurita García and Mr Choque Cabrera.

48 It follows that, by its question, the referring court is asking, in essence, whether Articles 6b and 23 of the CISA and Article 11 of Regulation No 562/2006 must be interpreted as meaning that, where a third-country national is unlawfully present on the territory of a Member State because he or she does not fulfil, or no longer fulfils, the short-stay conditions applicable in that Member State, that Member State is obliged to adopt a decision to expel that person.

49 Both Article 6b(1) of the CISA and Article 11(1) of Regulation No 562/2006 establish a rebuttable presumption under which, if the travel document of a third-country national does not bear an entry stamp, the competent national authorities may presume that the holder does not fulfil, or no longer fulfils, the conditions of duration of stay applicable within the Member State concerned.

50 Article 6b(2) of the CISA, like Article 11(2) of Regulation No 562/2006, allows for that presumption to be rebutted where the third-country national provides, by any means, credible evidence, such as transport tickets or proof of his or her presence outside the territory of the Member States, that he or she has respected the conditions relating to the duration of a short stay.

51 Pursuant to Article 6b(3) of the CISA and Article 11(3) of Regulation No 562/2006, should the presumption referred to in paragraph 1 of both of those articles not be rebutted, the third-country national may be expelled by the competent authorities from the territory of the Member States concerned.

52 The Commission points out, correctly, that there is a discrepancy between the wording of the Spanish-language version of Article 11(3) of Regulation No 562/2006 and that of the other language versions.

53 In the Spanish-language version, that provision imposes an obligation, inasmuch as it provides that the competent authorities of the Member State 'shall expel', from the territory of that Member State, a third-country national if the presumption is not rebutted. By contrast, in all the other language versions, expulsion appears as an option for those authorities.

54 It must be borne in mind in this regard that, according to settled case-law, the necessity for uniform application and accordingly for uniform interpretation of a Community measure makes it impossible to consider one version of the text in isolation, but requires that it be interpreted on the basis of both the real intention of its author and the aim he seeks to achieve, in the light, in particular, of the versions in all languages (see, inter alia, Case 29/69 *Stauder* [1969] ECR 419, paragraph 3; Case 55/87 *Moksel Import und Export* [1988] ECR 3845, paragraph 15; Case C-268/99 *Jany and Others* [2001] ECR I-8615, paragraph 47; and Case C-188/03 *Junk* [2005] ECR I-885, paragraph 33).

55 It also follows from settled case-law that the wording used in one language version of a Community provision cannot serve as the sole basis for the interpretation of that provision, or be made to override the other language versions in that regard. Such an approach would be incompatible with the requirement of the uniform application of Community law (see Case C-149/97 *Institute of the Motor Industry* [1998] ECR I-7053, paragraph 16; Case C-187/07 *Endendijk* [2008] ECR I-2115, paragraph 23; and Case C-239/07 *Sabatauskas and Others* [2008] ECR I-7523, paragraph 38).

56 In the present cases, as the Spanish-language version of Article 11(3) of Regulation No 562/2006 is the only one which diverges from the wording of the other language versions, it must be concluded that the real intention of the legislature was not to impose an obligation on the Member States concerned to expel, from their territory, third-country nationals in the event that they have not succeeded in rebutting the presumption referred to in Article 11(1), but to grant those Member States the option of so doing.

57 That interpretation is confirmed, as the Advocate General states in point 43 of her Opinion, by the fact that the Spanish-language version of Article 6b of the CISA, the wording of which was repeated in Article 11 of Regulation No 562/2006, accords with the other language versions as regards the discretionary nature of the power, for the Member States concerned, to expel a third-country national who does not succeed in rebutting the abovementioned presumption.

58 It remains to be examined whether, as the Austrian Government claims, it follows from Article 23 of the CISA that the Member States must expel from their territory any third-country national who is unlawfully present there, unless there is a reason to grant that person asylum or international protection. That provision would then preclude the option for a Member State to replace an expulsion order with the imposition of a fine.

59 That interpretation of Article 23 of the CISA cannot be upheld.

60 It should be pointed out, in that regard, that the wording of Article 23 of the CISA does not mention an obligation to expel in such strict terms, in the light of the exceptions therein.

61 First, Article 23(1), which forms part of Chapter 4, concerning the conditions governing the movement of aliens, under Title II on the abolition of checks at internal borders and movement of persons, favours the voluntary departure of a third-country national who does not fulfil, or no longer fulfils, the short-stay conditions applicable within the territory of the Member State concerned.

62 The same applies for Article 23(2), according to which a third-country national who holds a valid residence permit or provisional residence permit issued by another Member State is required to go to the territory of that Member State immediately.

63 Second, to the extent to which Article 23(3) of the CISA provides that, in certain circumstances, a third-country national must be expelled from a Member State on the territory of which he was apprehended, that consequence is subordinate to the conditions laid down in the national law of the Member State concerned. In the event that the application of that national law does not permit expulsion, that Member State may allow the person concerned to remain on its territory.

64 It is thus for the national law of each Member State to adopt, particularly with regard to the conditions under which expulsion may take place, the means for applying the basic rules established in Article 23 of the CISA relating to third-country nationals who do not fulfil, or no longer fulfil, the short-stay conditions for its territory.

65 In the cases in the main proceedings, it is apparent from the information provided to the Court in the course of the written procedure that, under national law, a decision imposing a fine is not a permit for a third-country national who is unlawfully present in Spain to remain legally on Spanish territory. It is also apparent that, irrespective of whether that fine is paid or not, that decision is notified to the person concerned with a warning that he should leave the territory within 15 days and, that, should he fail to comply, he may be prosecuted under Article 53(a) of the Law on Aliens and risks being expelled with immediate effect.

66 Consequently, the reply to the question referred is that Articles 6b and 23 of the CISA and Article 11 of Regulation No 562/2006 must be interpreted as meaning that, where a third-country national is unlawfully present on the territory of a Member State because he or she does not fulfil, or no longer fulfils, the conditions of duration of stay applicable there, that Member State is not obliged to adopt a decision to expel that person.

Costs

67 Since these proceedings are, for the parties to the main proceedings, a step in the actions pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Third Chamber) hereby rules:

Articles 6b and 23 of the Convention implementing the Schengen Agreement of 14 June 1985 between the Governments of the States of the Benelux Economic Union, the Federal Republic of Germany and the French Republic on the gradual abolition of checks at their common borders, signed at Schengen on 19 June 1990, as amended by Council Regulation (EC) No 2133/2004 of 13 December 2004 on the requirement for the competent authorities of the Member States to stamp systematically the travel documents of third-country nationals

when they cross the external borders of the Member States and amending the provisions of the Convention implementing the Schengen Agreement and the common manual to this end, and Article 11 of Regulation (EC) No 562/2006 of the European Parliament and of the Council of 15 March 2006 establishing a Community Code on the rules governing the movement of persons across borders (Schengen Borders Code) must be interpreted as meaning that, where a third-country national is unlawfully present on the territory of a Member State because he or she does not fulfil, or no longer fulfils, the conditions of duration of stay applicable there, that Member State is not obliged to adopt a decision to expel that person.

Case C-445/06

Danske Slagterier

v

Bundesrepublik Deutschland

(Reference for a preliminary ruling from the Bundesgerichtshof)

(Measures having equivalent effect – Animal health – Intra-Community trade – Fresh meat – Veterinary checks – Non-contractual liability of a Member State – Limitation period – Determination of the loss or damage)

Summary of the Judgment

1. *Agriculture – Approximation of laws on animal health – Intra-Community trade in fresh meat – Veterinary checks – Directives 64/433 and 89/662 – Incorrect transposition and application – Obligation on the Member State to make good damage caused to individuals*

   (Art. 28 EC; Council Directive 64/433, as amended by Directive 91/497, and Council Directive 89/662)

2. *Community law – Rights conferred on individuals – Breach by a Member State – Obligation to make good damage caused to individuals*

3. *Community law – Rights conferred on individuals – Breach by a Member State – Obligation to make good damage caused to individuals*

   (Art. 226 EC)

4. *Community law – Rights conferred on individuals – Breach by a Member State of the obligation to transpose a directive – Obligation to make good damage caused to individuals*

5. *Community law – Rights conferred on individuals – Breach by a Member State – Obligation to make good damage caused to individuals*

   (Arts 226 EC and 234 EC)

1. The principle of State liability for loss and damage caused to individuals as a result of breaches of Community law for which the State can be held responsible is inherent in the system of the Treaty. Individuals harmed have a right to reparation where three conditions are met: the rule of Community law infringed must be intended to confer rights on them; the breach of that rule must be sufficiently serious; and there must be a direct causal link between the breach and the loss or damage sustained by the individuals.

   With regard to the first condition, Article 28 EC has direct effect in the sense that it confers on individuals rights upon which they are entitled to rely directly before the national courts and breach of that provision may give rise to reparation.

   The right conferred by Article 28 EC is defined and given concrete expression by Directive 64/433 on health conditions for the production and marketing of fresh meat, as amended by Directive 91/497, and Directive 89/662 concerning veterinary checks in intra-Community trade with a view to the completion of the internal market. The free

movement of goods is one of the objectives of those directives, which, through the elimination of the differences existing between the Member States with regard to health requirements for fresh meat, are designed to encourage intra-Community trade. In particular, the prohibition on the Member States' preventing imports of fresh meat except where the goods do not meet the conditions laid down by Community directives or in certain very specific circumstances such as in the event of epidemics gives individuals the right to market in another Member State fresh meat that complies with the Community requirements.

It follows that individuals who have been harmed by the incorrect transposition and application of Directives 64/433 and 89/662 may rely on the right to the free movement of goods in order to be able to render the State liable for the breach of Community law.

(see paras 19-20, 22-24, 26, operative part 1)

2. In the absence of Community legislation, it is for the internal legal order of each Member State to designate the competent courts and lay down the detailed procedural rules for legal proceedings intended fully to safeguard the rights which individuals derive from Community law. It is thus on the basis of the rules of national law on liability that the State must make reparation for the consequences of loss or damage caused to individuals by the breach of Community law, provided that the conditions, including time-limits, for reparation of loss or damage laid down by national law comply with the principles of equivalence and effectiveness.

As regards the latter principle, it is compatible with Community law to lay down reasonable time-limits for bringing proceedings in the interests of legal certainty. Such time-limits are not liable to make it in practice impossible or excessively difficult to exercise the rights conferred by Community law. In that regard, a national limitation period of three years appears to be reasonable.

However, in order to serve their purpose of ensuring legal certainty, limitation periods must be fixed in advance. A situation marked by significant legal uncertainty may involve a breach of the principle of effectiveness, because reparation of the loss or damage caused to individuals by breaches of Community law for which a Member State can be held responsible could be rendered excessively difficult in practice if the individuals were unable to determine the applicable limitation period with a reasonable degree of certainty. It is for the national court, taking account of all the features of the legal and factual situation at the material time, to determine, in light of the principle of effectiveness, whether the application by analogy of a time-limit laid down by a national rule to claims for reparation of loss or damage caused as a result of the breach of Community law by the Member State concerned was sufficiently foreseeable for individuals.

So far as concerns whether the application by analogy of such a time-limit is compatible with the principle of equivalence, it is likewise for the national court to determine whether, as a result of its application, the conditions for reparation of loss or damage caused to individuals by the breach of Community law by that Member State would have been less favourable than those applicable to the reparation of similar domestic loss or damage.

(see paras 31-35)

3. Where the Commission of the European Communities has brought infringement proceedings under Article 226 EC, Community law does not require the limitation period laid down by national legislation for a claim seeking reparation on account of State liability for breach of Community law to be interrupted or suspended during those proceedings.

The fact that institution of infringement proceedings does not have the effect of interrupting or suspending the limitation period does not make it impossible or excessively difficult for individuals to exercise the rights which they derive from

Community law, given that an individual may bring an action seeking reparation under the detailed rules laid down for that purpose by national law without having to wait until a judgment finding that the Member State has infringed Community law has been delivered.

Furthermore, having regard to the specific features of proceedings under Article 226 EC compared with national procedural rules, national legislation which does not provide that the limitation period is interrupted or suspended when such proceedings have been brought by the Commission observes the principle of equivalence.

(see paras 39, 42, 45-46, operative part 2)

4. Community law does not preclude the limitation period applicable to an action for damages against the State for incorrect transposition of a directive from beginning to run on the date on which the first injurious effects of the incorrect transposition have been produced and the further injurious effects thereof are foreseeable, even if that date is prior to the correct transposition of the directive.

The fact that the limitation period laid down by national law begins to run on that date is not liable to make it in practice impossible or excessively difficult to exercise the rights conferred by Community law.

(see paras 49, 56, operative part 3)

5. Community law does not preclude the application of national legislation which lays down that an individual cannot obtain reparation for loss or damage which he has wilfully or negligently failed to avert by utilising a legal remedy, provided that utilisation of that remedy can reasonably be required of the injured party, a matter which is for the referring court to determine in light of all the circumstances of the main proceedings.

The likelihood that a national court will make a reference for a preliminary ruling under Article 234 EC or the existence of infringement proceedings pending before the Court of Justice cannot, in itself, constitute a sufficient reason for concluding that it is not reasonable to have recourse to a legal remedy.

First, the guidance obtained by a national court following a reference for a preliminary ruling facilitates its application of Community law, so that utilisation of that instrument of cooperation between the Court of Justice and the national courts does not in any way contribute to making it excessively difficult for individuals to exercise the rights which they derive from Community law. Accordingly, it would not be reasonable not to utilise a legal remedy solely because that remedy would be likely to give rise to a reference for a preliminary ruling.

Second, the procedure under Article 226 EC is entirely independent of national procedures and does not replace them. Infringement proceedings amount in fact to an objective review of legality in the general interest. Although the result of such proceedings may serve an individual's interests, it none the less remains reasonable for him to avert the loss or damage by applying all the means available to him, that is to say utilising the available legal remedies.

(see paras 65, 67, 69, operative part 4)

JUDGMENT OF THE COURT (Grand Chamber)

24 March 2009 (*)

(Measures having equivalent effect – Animal health – Intra-Community trade – Fresh meat – Veterinary checks – Non-contractual liability of a Member State – Limitation period – Determination of the loss or damage)

In Case C-445/06,

REFERENCE for a preliminary ruling under Article 234 EC from the Bundesgerichtshof (Germany), made by decision of 12 October 2006, received at the Court on 6 November 2006, in the proceedings

Danske Slagterier

v

Bundesrepublik Deutschland,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann, C.W.A. Timmermans, A. Rosas, K. Lenaerts, M. Ilešič and A. Ó Caoimh, Presidents of Chambers, G. Arestis, A. Borg Barthet (Rapporteur), J. Malenovský, J. Klučka, U. Lõhmus and E. Levits, Judges,

Advocate General: V. Trstenjak,

Registrar: K. Sztranc-Sławiczek, Administrator,

having regard to the written procedure and further to the hearing on 21 May 2008,

after considering the observations submitted on behalf of:

– Danske Slagterier, by R. Karpenstein, Rechtsanwalt,

– the German Government, by M. Lumma and C. Blaschke, acting as Agents, assisted by L. Giesberts, Rechtsanwalt,

– the Czech Government, by T. Boček, acting as Agent,

– the Greek Government, by V. Kontolaimos, S. Kharitaki and S. Papaioannou, acting as Agents,

– the French Government, by G. de Bergues and A.-L. During, acting as Agents,

– the Italian Government, by I.M. Braguglia, acting as Agent, assisted by W. Ferrante, avvocato dello Stato,

– the Polish Government, by E. Ośniecka-Tamecka and P. Kucharski, acting as Agents,

– the United Kingdom Government, by S. Lee, barrister,

– the Commission of the European Communities, by F. Erlbacher and H. Krämer, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 4 September 2008,

gives the following

Judgment

1 This reference for a preliminary ruling relates to the interpretation of Articles 5(1)(o) and 6(1)(b)(iii) of Council Directive 64/433/EEC of 26 June 1964 on health conditions for the production and marketing of fresh meat (OJ, English Special Edition 1963-64, p. 185), as amended by Council Directive 91/497/EEC of 29 July 1991 (OJ 1991 L 268, p. 69) ('Directive 64/433'), of Articles 5(1), 7 and 8 of Council Directive 89/662/EEC of 11 December 1989 concerning veterinary checks in intra-Community trade with a view to the completion of the internal market (OJ 1989 L 395, p. 13) and of Article 28 EC.

2 The reference was made in proceedings between Danske Slagterier and the Bundesrepublik Deutschland concerning a claim for compensation in respect of loss.

Legal context

Community legislation

3 Article 5(1) of Directive 64/433 provides:

'Member States shall ensure that the official veterinarian declares unfit for human consumption:

...

(o) meat which gives off a pronounced sexual odour.'

4 Article 6(1) of that directive provides:

'Member States shall ensure that:

...

(b) meat from:

...

(iii) without prejudice to the cases provided for in Article 5(1)(o) uncastrated male pigs with a carcase weight in excess of 80 kilograms, except where the establishment is able to guarantee by means of a method recognised by the procedure laid down in Article 16, or in the absence of such a method by a method recognised by the competent authority concerned, that carcases giving off a pronounced boar taint may be detected,

bears the special mark provided for by [Commission] Decision 84/371/EEC [of 3 July 1984 establishing the characteristics of the special mark for fresh meat referred to in Article 5(a) of Directive 64/433/EEC (OJ 1984 L 196, p. 46)] and undergoes one of the treatments provided for in [Council] Directive 77/99/EEC [of 21 December 1976 on health problems affecting intra-Community trade in meat products (OJ 1977, L 26, p. 85)];

...

(g) the treatment provided for in the preceding points is carried out in the establishment of

origin or in any other establishment designated by the official veterinarian;

...'

5 The provisions of Directive 64/433 had to be transposed into national law by 1 January 1993.

6 Article 5(1) of Directive 89/662 provides:

'Member States of destination shall implement the following measures:

(a) The competent authority may, at the places of destination of goods, check by means of non-discriminatory veterinary spot-checks that the requirements of Article 3 have been complied with; it may take samples at the same time.

Furthermore, where the competent authority of the Member State of transit or of the Member State of destination has information leading it to suspect an infringement, checks may also be carried out during the transport of goods in its territory, including checks on compliance as regards the means of transport;

...'

7 Article 7(1) of Directive 89/662 states:

'If, during a check carried out at the place of destination of a consignment or during transport, the competent authorities of a Member State establish:

...

(b) that the goods do not meet the conditions laid down by Community directives, or, in the absence of decisions on the Community standards provided for by the directives, by national standards, they may, provided that health and animal-health considerations so permit, give the consignor or his representative the choice of:

– destroying the goods, or

– using the goods for other purposes, including returning them with the authorisation of the competent authority of the country of the establishment of origin.

...'

8 Finally, Article 8 of Directive 89/662 provides:

'1. In the cases provided for in Article 7, the competent authority of the Member State of destination shall contact the competent authorities of the Member State of dispatch without delay. The latter authorities shall take all necessary measures and notify the competent authority of the first Member State of the nature of the checks carried out, the decisions taken and the reasons for such decisions.

...

2. …

Decisions taken by the competent authority of the State of destination and the reasons for such decisions shall be notified to the consignor or his representative and to the competent authority of the Member State of dispatch.

If the consignor or his representative so requests, the said decisions and reasons shall be forwarded to him in writing with details of the rights of appeal which are available to him under

the law in force in the Member State of destination and of the procedure and time-limits applicable.

...'

National legislation

9 Paragraph 839 of the German Civil Code (Bürgerliches Gesetzbuch), in the version in force until 31 December 2001 ('the BGB'), stated:

'(1) If an official wilfully or negligently breaches the official duty incumbent upon him as against a third party, he shall compensate the third party for the damage arising therefrom. If the official is only negligent, a claim can be made against him only if the injured party is unable to obtain compensation in another way.

(2) If an official commits a breach of official duty in giving judgment in legal proceedings, he shall be liable for the damage arising therefrom only if that breach of duty constitutes a criminal offence. This provision shall not apply to a wrongful refusal to exercise official duties or to a wrongful delay in exercising them.

(3) The obligation to compensate shall not arise if the injured party has wilfully or negligently failed to avert the damage by utilising a legal remedy.'

10 Paragraph 852 of the BGB provided:

'(1) The limitation period in respect of a claim for compensation for damage that has arisen from an unlawful act shall expire three years from the date on which the injured party became aware of the damage and of the identity of the person liable to pay compensation and, irrespective of any such awareness, 30 years from the date on which the unlawful act was committed.

(2) If negotiations on the amount of compensation payable have commenced between the person liable to pay the compensation and the person entitled to it, the limitation period shall be suspended until one or other of the parties refuses to continue the negotiations.

(3) If through his unlawful act the person liable to pay compensation has acquired anything to the injured party's detriment, he shall be required even after the expiry of the limitation period to make restitution in accordance with the provisions on restitution in the case of unjust enrichment.'

The dispute in the main proceedings and the questions referred for a preliminary ruling

11 Danske Slagterier, an industry association of Danish slaughterhouse companies organised in the form of cooperatives and pig farmers, which is acting pursuant to a right assigned to it by its members, claims from the Bundesrepublik Deutschland compensation for loss due to an infringement of Community law. It alleges that, in breach of Community law, the Bundesrepublik Deutschland imposed an import ban on meat from uncastrated male pigs from 1993 to 1999. In its view, the ban led to a loss of at least DEM 280 000 000 for the pig farmers and slaughterhouse companies over the period concerned.

12 At the beginning of the 1990s, a project called the 'Male-Pig-Projekt', whose objective was the farming of uncastrated male pigs, was launched in Denmark. This type of farming, which is financially attractive, entails the risk of the meat, when heated, giving off a pronounced sexual odour. According to Danish researchers, the presence of this taint can already be determined in the course of slaughter, by measuring the skatol content. Accordingly, in Denmark all slaughter lines were fitted with skatol measuring equipment to enable meat affected by the taint in

question to be identified and rejected. At the time, the Federal Republic of Germany considered, however, this taint to be attributable to the hormone androstenone, the formation of which can be avoided by castration at an earlier stage, and that the skatol content considered in isolation cannot in itself constitute a reliable method of detecting the sexual odour.

13 In January 1993, the Federal Republic of Germany informed the highest veterinary authorities of the Member States that the rule laid down in Article 6(1)(b) of Directive 64/433 had been transposed into national law in such a way that, irrespective of the weight limit, a threshold of 0.5 µg/g was fixed for androstenone; if that threshold were exceeded, the meat would give off a pronounced boar taint and would thus be unfit for human consumption. The Federal Republic of Germany also stated then that only Professor Claus's modified enzyme immunoassay was recognised as a specific method for identifying androstenone and that meat from uncastrated male pigs exceeding that threshold could not be transported as fresh meat into Germany.

14 Thus, numerous consignments of pigmeat from Denmark were subsequently checked by the German authorities and rejected because they exceeded the threshold for androstenone. Also, the pig farmers and slaughterhouse companies which had almost ceased production of castrated male pigs had to resume such production in order not to put exports to Germany at risk. Danske Slagterier submits that if the pigmeat exported had come from uncastrated pigs as envisaged by the Male-Pig-Projekt, costs savings of at least DEM 280 000 000 could have been achieved.

15 On 6 December 1999, Danske Slagterier brought an action for damages against the Bundesrepublik Deutschland before the Landgericht (Regional Court) Bonn. The Landgericht held that the action was well founded in respect of the period commencing on 7 December 1996 and dismissed the action as time-barred in so far as it claimed compensation for losses which had arisen before that date. The Oberlandesgericht (Higher Regional Court) Cologne, before which an appeal was brought, upheld the entire claim on the merits. By its appeal on a point of law to the Bundesgerichtshof (Federal Court of Justice), the Bundesrepublik Deutschland seeks the dismissal of the claim in its entirety.

16 Also, by judgment of 12 November 1998 in Case C-102/96 *Commission* v *Germany* [1998] ECR I-6871, the Court held that the Federal Republic of Germany had failed to fulfil its obligations under Articles 5(1)(o) and 6(1)(b) of Directive 64/433 and under Articles 5(1), 7 and 8 of Directive 89/662 by imposing the obligation of marking the carcases of uncastrated male pigs and subjecting them to heat treatment whenever the meat, regardless of carcase weight, had an androstenone content of more than 0.5 µg/g, as shown by Professor Claus's modified enzyme immunoassay, and by regarding the meat as giving off a pronounced sexual odour and consequently unfit for human consumption if the threshold of 0.5 µg/g of androstenone was exceeded.

17 In that context, the Bundesgerichtshof decided to stay the proceedings and to refer the following questions to the Court of Justice for a preliminary ruling:

'(1) Do Article 5(1)(o) and Article 6(1)(b)(iii) of … Directive 64/433 … in conjunction with Article 5(1), Article 7 and Article 8 of Directive 89/662 … place producers and distributors of pigmeat in a legal position which can give rise to a claim seeking to establish State liability under Community law in the event of errors of transposition or application?

(2) May the producers and distributors of pigmeat – irrespective of the answer to the first question – rely on an infringement of Article 30 of the EC Treaty (Article 28 EC) in order to substantiate a claim seeking to establish State liability under Community law where the transposition and application of the abovementioned directives are contrary to Community law?

(3) Does Community law require the limitation period for a claim seeking to establish State liability under Community law to be interrupted in the light of Treaty infringement proceedings under Article 226 EC or at any rate to be suspended pending the end of

those proceedings where there is no effective domestic legal remedy to compel the Member State to transpose a directive?

(4) Does the limitation period for a claim which seeks to establish State liability under Community law and is based on the inadequate transposition of a directive and an accompanying (de facto) import ban commence, irrespective of the applicable national law, only with the full transposition of the directive, or can the limitation period begin to run, in accordance with national law, when the first injurious effects have already been produced and further injurious effects are foreseeable? If full transposition has a bearing on the commencement of the limitation period, is this true in general or only if the directive confers a right on individuals?

(5) Given that the Member States may not frame the conditions for reparation of loss and damage in respect of claims seeking to establish State liability under Community law less favourably than those relating to similar domestic actions and it may not be made in practice impossible or excessively difficult to obtain reparation, are there, generally, objections to a national rule under which an obligation to pay compensation does not arise if the injured party has wilfully or negligently failed to avert the damage by utilising a legal remedy? Are there also objections to this "primacy of primary legal protection" where it is subject to the proviso that it must be reasonable for the party concerned? Is the fact that the relevant court is likely to be unable to answer the questions of Community law at issue without making a reference to the Court of Justice … or that Treaty infringement proceedings under Article 226 EC are already pending sufficient to make it unreasonable under European Community law?'

Consideration of the questions

Questions 1 and 2

18 By the first two questions, which it is appropriate to deal with together, the referring court essentially asks whether Articles 5(1)(o) and 6(1)(b)(iii) of Directive 64/433 in conjunction with Articles 5(1), 7 and 8 of Directive 89/662 place producers and distributors of pigmeat, in the event of incorrect transposition or application of those directives, in a legal position which can give rise to a claim seeking reparation on account of State liability for the breach of Community law and whether, in those circumstances, they can rely on a breach of Article 28 EC in order to substantiate a claim seeking reparation on account of such State liability.

19 It is to be recalled first of all that, in accordance with settled case-law, the principle of State liability for loss and damage caused to individuals as a result of breaches of Community law for which the State can be held responsible is inherent in the system of the EC Treaty (Joined Cases C-6/90 and C-9/90 *Francovich and Others* [1991] ECR I-5357, paragraph 35; Joined Cases C-46/93 and C-48/93 *Brasserie du Pêcheur and Factortame* [1996] ECR I-1029, paragraph 31; Case C-5/94 *Hedley Lomas* [1996] ECR I-2553, paragraph 24; and Joined Cases C-178/94, C-179/94 and C-188/94 to C-190/94 *Dillenkofer and Others* [1996] ECR I-4845, paragraph 20).

20 The Court has held that individuals harmed have a right to reparation where three conditions are met: the rule of Community law infringed must be intended to confer rights on them; the breach of that rule must be sufficiently serious; and there must be a direct causal link between the breach and the loss or damage sustained by the individuals (see *Brasserie du pêcheur and Factortame*, paragraph 51; *Hedley Lomas*, paragraph 25; and *Dillenkofer and Others*, paragraph 21).

21 With regard to the first condition, the Court has had the opportunity to examine Member State liability for breach of Community law in the case of failure to transpose directives designed to complete the internal market (see, in particular, *Francovich and Others* and *Dillenkofer and Others*). However, unlike the cases giving rise to those two judgments, where only secondary

law had created a legal framework according rights to individuals, the main proceedings concern an instance in which one of the parties thereto, namely Danske Slagterier, submits that Article 28 EC already confers upon it the rights which it invokes.

22 It should be recalled that it is undisputed that Article 28 EC has direct effect in the sense that it confers on individuals rights upon which they are entitled to rely directly before the national courts and that breach of that provision may give rise to reparation (*Brasserie du pêcheur and Factortame*, paragraph 23).

23 Danske Slagterier also relies on the provisions of Directives 64/433 and 89/662. As is apparent from the wording of the title of Directive 89/662 and of the first recital in its preamble, that directive was adopted with a view to the completion of the internal market, and so was Directive 91/497 amending Directive 64/433, as made clear by the third recital in the preamble to Directive 91/497. The free movement of goods is thus one of the objectives of those directives, which, through the elimination of the differences existing between the Member States with regard to health requirements for fresh meat, are designed to encourage intra-Community trade. The right conferred by Article 28 EC is thus defined and given concrete expression by those directives.

24 Regarding the content of Directives 64/433 and 89/662, it should be noted that they govern, amongst other matters, health controls for, and certification of, fresh meat produced in one Member State and delivered to another. As is apparent in particular from Article 7(1)(b) of Directive 89/662, the Member States can prevent imports of fresh meat only where the goods do not meet the conditions laid down by Community directives or in certain very specific circumstances such as in the event of epidemics. The prohibition on the Member States' preventing importation gives individuals the right to market in another Member State fresh meat that complies with the Community requirements.

25 It is, moreover, apparent from Directive 64/433 in conjunction with Directive 89/662 that measures for the detection of a pronounced sexual odour from uncastrated male pigs have been harmonised at Community level (Case C-102/96 *Commission* v *Germany*, paragraph 29). This harmonisation consequently prevents the Member States, in the field harmonised exhaustively, from justifying an obstacle to the free movement of goods on grounds other than those envisaged by Directives 64/433 and 89/662.

26 Accordingly, the answer to the first two questions is that individuals who have been harmed by the incorrect transposition and application of Directives 64/433 and 89/662 may rely on the right to the free movement of goods in order to be able to render the State liable for the breach of Community law.

Question 3

27 By its third question, the referring court essentially asks whether, where the Commission of the European Communities has brought infringement proceedings under Article 226 EC, Community law requires the limitation period laid down by national legislation for a claim seeking reparation on account of State liability for breach of Community law to be interrupted or suspended during those proceedings, if there is no effective legal remedy in the State in question to compel it to transpose a directive.

28 Light can be shed on this question by setting out the chronology of the facts in the main proceedings. It is apparent from the order for reference that the infringement proceedings against the Federal Republic of Germany which gave rise to the judgment in Case C-102/96 *Commission* v *Germany* were brought on 27 March 1996. The first harmful effects were sustained by the injured parties in 1993, but it was not until December 1999 that they brought an action for damages against that State. If, as the referring court envisages, the three-year limitation period laid down in Paragraph 852(1) of the BGB is applied, that period would begin to run in the middle of 1996, when, according to the referring court, the injured parties became aware of the damage and the identity of the person liable to pay compensation. Consequently, in

the main proceedings, the action against the State for damages is liable to be time-barred. For that reason, it is relevant for deciding the main proceedings to know whether the institution of infringement proceedings by the Commission had effects on that limitation period.

29 However, in order to give an answer that is helpful for the referring court, it is appropriate to examine first of all the question implicitly raised by it, namely whether Community law precludes the application by analogy of the three-year limitation period laid down by Paragraph 852(1) of the BGB in the main proceedings.

30 Regarding the application of Paragraph 852(1) of the BGB, Danske Slagterier has bemoaned the lack of clarity in the legal position in Germany as to the national limitation rule applicable to claims seeking reparation on account of State liability for breach of Community law, stating that this question has not yet been dealt with by any legislative measure or any decision of the highest court, while academic legal writers are also divided on the issue as several legal bases are possible. In its view, application, for the first time and by analogy, of the time-limit laid down in Paragraph 852 of the BGB to actions for damages against a State for breach of Community law would infringe the principles of legal certainty and legal clarity as well as the principles of effectiveness and equivalence.

31 In that regard, it is settled case-law that, in the absence of Community legislation, it is for the internal legal order of each Member State to designate the competent courts and lay down the detailed procedural rules for legal proceedings intended fully to safeguard the rights which individuals derive from Community law. It is thus on the basis of the rules of national law on liability that the State must make reparation for the consequences of the loss or damage caused, provided that the conditions, including time-limits, for reparation of loss or damage laid down by national law are not less favourable than those relating to similar domestic claims (principle of equivalence) and are not so framed as to make it in practice impossible or excessively difficult to obtain reparation (principle of effectiveness) (see, inter alia, *Francovich and Others*, paragraphs 42 and 43, and Case C-261/95 *Palmisani* [1997] ECR I-4025, paragraph 27).

32 As regards the latter principle, the Court has stated that it is compatible with Community law to lay down reasonable time-limits for bringing proceedings in the interests of legal certainty which protects both the taxpayer and the authorities concerned (Case C-228/96 *Aprile* [1998] ECR I-7141, paragraph 19 and the case-law cited). Such time-limits are not liable to make it in practice impossible or excessively difficult to exercise the rights conferred by Community law. In that regard, a national limitation period of three years appears to be reasonable (see, in particular, *Aprile*, paragraph 19, and Case C-62/00 *Marks & Spencer* [2002] ECR I-6325, paragraph 35).

33 However, it is also apparent from *Marks & Spencer*, paragraph 39, that in order to serve their purpose of ensuring legal certainty, limitation periods must be fixed in advance. A situation marked by significant legal uncertainty may involve a breach of the principle of effectiveness, because reparation of the loss or damage caused to individuals by breaches of Community law for which a Member State can be held responsible could be rendered excessively difficult in practice if the individuals were unable to determine the applicable limitation period with a reasonable degree of certainty.

34 It is for the national court, taking account of all the features of the legal and factual situation at the time material to the main proceedings, to determine, in light of the principle of effectiveness, whether the application by analogy of the time-limit laid down in Paragraph 852(1) of the BGB to claims for reparation of loss or damage caused as a result of the breach of Community law by the Member State concerned was sufficiently foreseeable for individuals.

35 In addition, so far as concerns whether the application by analogy of that time-limit is compatible with the principle of equivalence, it is likewise for the national court to determine whether, as a result of its application, the conditions for reparation of loss or damage caused to individuals by the breach of Community law by that Member State would have been less favourable than those applicable to the reparation of similar domestic loss or damage.

36 As regards interruption or suspension of the limitation period when infringement proceedings are brought, it follows from the foregoing considerations that it is for the Member States to determine detailed procedural matters of this type in so far as the principles of equivalence and effectiveness are observed.

37 It should be observed that reparation of loss or damage cannot be made conditional upon the requirement that there must have been a prior finding by the Court of an infringement of Community law attributable to the State (see *Brasserie du pêcheur and Factortame*, paragraphs 94 to 96, and *Dillenkofer and Others*, paragraph 28).

38 The finding of an infringement is admittedly an important factor, but is not indispensable when verifying that the condition that the breach of Community law must be sufficiently serious is met. Nor can rights for individuals depend on the Commission's assessment of the expediency of taking action against a Member State pursuant to Article 226 EC or on the delivery by the Court of any judgment finding an infringement (see *Brasserie du pêcheur and Factortame*, paragraphs 93 and 95).

39 An individual may therefore bring an action seeking reparation under the detailed rules laid down for that purpose by national law without having to wait until a judgment finding that the Member State has infringed Community law has been delivered. Consequently, the fact that institution of infringement proceedings does not have the effect of interrupting or suspending the limitation period does not make it impossible or excessively difficult for individuals to exercise the rights which they derive from Community law.

40 In addition, Danske Slagterier pleads a breach of the principle of equivalence since German law provides for interruption of the limitation period when a domestic action under Paragraph 839 of the BGB is brought in parallel and proceedings under Article 226 EC must be treated in the same way as such an action.

41 As to those submissions, in order to decide whether procedural rules are equivalent, it is necessary to verify objectively, in the abstract, whether the rules at issue are similar taking into account the role played by them in the procedure as a whole, as well as the operation of that procedure and any special features of the rules (see, to this effect, Case C-78/98 *Preston and Others* [2000] ECR I-3201, paragraph 63).

42 When assessing whether the rules at issue here are similar, account must be taken of the specific features of proceedings under Article 226 EC.

43 In exercising its powers under Article 226 EC the Commission does not have to show that there is a specific interest in bringing an action (see Case 167/73 *Commission* v *France* [1974] ECR 359, paragraph 15, and Joined Cases C-20/01 and C-28/01 *Commission* v *Germany* [2003] ECR I-3609, paragraph 29). The Commission's function is to ensure, of its own motion and in the general interest, that the Member States give effect to Community law and to obtain a declaration of any failure to fulfil the obligations deriving therefrom with a view to bringing it to an end (see *Commission* v *France*, paragraph 15, and Joined Cases C-20/01 and C-28/01 *Commission* v *Germany*, paragraph 29).

44 Article 226 EC is not therefore intended to protect the Commission's own rights. It is for the Commission alone to decide whether or not it is appropriate to bring proceedings against a Member State for a declaration that it has failed to fulfil its obligations and, as the case may be, because of what conduct or omission those proceedings should be brought (Case C-394/02 *Commission* v *Greece* [2005] ECR I-4713, paragraph 16 and the case-law cited). The Commission consequently has a discretion in this regard which excludes the right for individuals to require it to adopt a specific position (see Case 247/87 *Star Fruit* v *Commission* [1989] ECR 291, paragraph 11).

45 It must accordingly be concluded that the principle of equivalence is observed by national legislation which does not provide that the limitation period for a claim seeking reparation on

account of State liability for breach of Community law is interrupted or suspended when proceedings under Article 226 EC have been brought by the Commission.

46 In view of all the foregoing considerations, the answer to the third question is that, where the Commission has brought infringement proceedings under Article 226 EC, Community law does not require the limitation period laid down by national legislation for a claim seeking reparation on account of State liability for breach of Community law to be interrupted or suspended during those proceedings.

Question 4

47 By its fourth question, the referring court essentially asks whether the limitation period applicable to an action for damages against the State for incorrect transposition of a directive begins to run, irrespective of the applicable national law, only when the directive has been fully transposed, or whether that period begins to run, in accordance with national law, on the date on which the first injurious effects of the incorrect transposition have been produced and further injurious effects thereof are foreseeable. If full transposition has a bearing on the course of the limitation period, the referring court asks whether that is true generally or whether it applies only where the directive confers a right on individuals.

48 It should be recalled that, as is apparent from paragraphs 31 and 32 of the present judgment, in the absence of Community legislation, it is for the Member States to lay down the detailed procedural rules for legal proceedings intended to safeguard the rights which individuals derive from Community law, including the provisions governing limitation, in so far as those rules observe the principles of equivalence and effectiveness. It should further be recalled that the setting of reasonable time-limits for bringing proceedings observes those principles and cannot, in particular, be considered to make it in practice impossible or excessively difficult to exercise the rights conferred by Community law.

49 The fact that the limitation period laid down by national law begins to run when the first injurious effects have been produced, although other effects of that kind are foreseeable, is likewise not liable to make it in practice impossible or excessively difficult to exercise the rights conferred by Community law.

50 The judgment in Joined Cases C-295/04 to C-298/04 *Manfredi and Others* [2006] ECR I-6619, to which Danske Slagterier refers, cannot cast doubt on that conclusion.

51 In paragraphs 78 and 79 of that judgment, the Court held that it is conceivable that a short limitation period for bringing an action for damages that runs from the day on which an agreement or concerted practice has been adopted could make it impossible in practice to exercise the right to seek compensation for the harm caused by that prohibited agreement or practice. The Court stated that, where there are continuous or repeated infringements, it is thus possible for the limitation period to expire even before the infringement is brought to an end, in which case it would be impossible for any individual who has suffered harm after the expiry of the limitation period to bring an action.

52 However, that is not the situation in the main proceedings. It is clear from the order for reference that the limitation period at issue in the main proceedings cannot begin to run until the injured party has become aware of the loss or damage and of the identity of the person required to pay compensation. In such circumstances, it is thus impossible for a person who has sustained loss or damage to find himself in a situation in which the limitation period begins to run, or indeed expires, without his even knowing that he has been harmed, as could have been the position in the context of the case which gave rise to the judgment in *Manfredi and Others*, where the limitation period began to run on the adoption of the agreement or concerted practice, of which certain persons concerned may not have been aware until much later.

53 As regards the possibility of setting the point at which a limitation period begins to run as being before the directive in question has been fully transposed, it is true that the Court held in Case

C-208/90 *Emmott* [1991] ECR I-4269, paragraph 23, that, until such time as a directive has been properly transposed, a defaulting Member State may not rely on an individual's delay in initiating proceedings against it in order to protect rights conferred upon him by the provisions of the directive and that a period laid down by national law within which proceedings must be initiated cannot begin to run before that time.

54 However, as was confirmed in Case C-410/92 *Johnson* [11994] ECR I-5483, paragraph 26, it is clear from the judgment in Case C-338/91 *Steenhorst-Neerings* [1993] ECR I-5475 that the solution adopted in *Emmott* was justified by the particular circumstances of that case, in which a time-bar had the result of depriving the applicant in the main proceedings of any opportunity whatsoever to rely on her right to equal treatment under a directive (see also Case C-90/94 *Haahr Petroleum* [1997] ECR I-4085, paragraph 52; Joined Cases C-114/95 and C-115/95 *Texaco and Olieselskabet Danmark* [1997] ECR I-4263, paragraph 48; and Joined Cases C-279/96 to C-281/96 *Ansaldo Energia and Others* [1998] ECR I-5025, paragraph 20).

55 It is not apparent either from the documents before the court or from the hearing which took place in the oral procedure that, in the main proceedings, the existence of the time-limit at issue had the result, as in the proceedings which gave rise to the judgment in *Emmott*, of depriving the injured parties of any opportunity whatsoever to rely on their rights before the national courts.

56 Accordingly, the answer to the fourth question is that Community law does not preclude the limitation period applicable to an action for damages against the State for incorrect transposition of a directive from beginning to run on the date on which the first injurious effects of the incorrect transposition have been produced and the further injurious effects thereof are foreseeable, even if that date is prior to the correct transposition of the directive.

57 In the light of the answer given to the first part of the fourth question, there is no need to answer the second part.

Question 5

58 By its fifth question, the referring court essentially asks whether Community law precludes a rule such as that laid down in Paragraph 839(3) of the BGB which provides that an individual cannot obtain reparation for loss or damage which he has wilfully or negligently failed to avert by utilising a legal remedy. The referring court elaborates upon its question by asking whether such a national rule would be contrary to Community law in so far as it were applied subject to the proviso that recourse to that remedy be reasonable for the person concerned. The referring court would like, finally, to ascertain whether recourse to a legal remedy may be regarded as reasonable when it is likely that the court before which a case is brought will make a reference for a preliminary ruling under Article 234 EC or when infringement proceedings under Article 226 EC have been brought.

59 As has been recalled when answering the previous two questions, it is for the Member States, in the absence of Community legislation, to lay down the detailed procedural rules for legal proceedings intended to safeguard the rights which individuals derive from Community law, in so far as those rules observe the principles of equivalence and effectiveness.

60 As regards utilisation of the available legal remedies, the Court held in *Brasserie du pêcheur and Factortame*, paragraph 84, in relation to liability of a Member State for breach of Community law, that the national court may inquire whether the injured person showed reasonable diligence in order to avoid the loss or damage or limit its extent and whether, in particular, he availed himself in time of all the legal remedies available to him.

61 Indeed, it is a general principle common to the legal systems of the Member States that the injured party must show reasonable diligence in limiting the extent of the loss or damage, or risk having to bear the loss or damage himself (Joined Cases C-104/89 and C-37/90 *Mulder and Others* v *Council and Commission* [1992] ECR I-3061, paragraph 33, and *Brasserie du pêcheur and Factortame*, paragraph 85).

62 It would, however, be contrary to the principle of effectiveness to oblige injured parties to have recourse systematically to all the legal remedies available to them even if that would give rise to excessive difficulties or could not reasonably be required of them.

63 In Joined Cases C-397/98 and C-410/98 *Metallgesellschaft and Others* [2001] ECR I-1727, paragraph 106, the Court indeed held that the exercise of rights conferred on private persons by directly applicable provisions of Community law would be rendered impossible or excessively difficult if their claims for compensation based on Community law were rejected or reduced solely because the persons concerned did not apply for grant of the right which was conferred by Community provisions, and which national law denied them, with a view to challenging the refusal of the Member State by means of the legal remedies provided for that purpose, invoking the primacy and direct effect of Community law. In a case of that kind, it would not have been reasonable to require the injured parties to utilise the legal remedies available to them, since they would in any event have had to make the payment at issue in advance, and even if the national court had held the fact that payment had to be made in advance incompatible with Community law, the persons in question would not have been able to obtain interest on that sum and they would have laid themselves open to the possibility of penalties (see, to this effect, *Metallgesellschaft and Others*, paragraph 104).

64 Consequently, it is to be concluded that Community law does not preclude the application of a national rule such as that laid down in Paragraph 839(3) of the BGB, provided that utilisation of the legal remedy in question can reasonably be required of the injured party. It is for the referring court to determine in light of all the circumstances of the main proceedings whether that is so.

65 As regards the possibility that the legal remedy utilised will give rise to a reference for a preliminary ruling, and the effect which that would have on the reasonableness of that legal remedy, it should be recalled that, in accordance with settled case-law, the procedure provided for by Article 234 EC is an instrument of cooperation between the Court of Justice and the national courts, by means of which the Court provides the national courts with the points of interpretation of Community law which they need in order to decide the disputes before them (see Case C-83/91 *Meilicke* [1992] ECR I-4871, paragraph 22, and Case C-380/01 *Schneider* [2004] ECR I-1389, paragraph 20). The guidance thus obtained by the national court therefore facilitates its application of Community law, so that utilisation of that instrument of cooperation does not in any way contribute to making it excessively difficult for individuals to exercise the rights which they derive from Community law. Accordingly, it would not be reasonable not to utilise a legal remedy solely because that remedy would be likely to give rise to a reference for a preliminary ruling.

66 It follows that a strong likelihood that recourse to a legal remedy will give rise to a reference for a preliminary ruling is not in itself a reason for concluding that utilisation of that remedy is not reasonable.

67 As regards the reasonableness of the obligation to utilise the available legal remedies when infringement proceedings are pending before the Court, suffice it to state that the procedure under Article 226 EC is entirely independent of national procedures and does not replace them. As was stated when answering the third question, infringement proceedings amount in fact to an objective review of legality in the general interest. Although the result of such proceedings may serve an individual's interests, it none the less remains reasonable for him to avert the loss or damage by applying all the means available to him, that is to say utilising the available legal remedies.

68 It follows that the existence of infringement proceedings pending before the Court of Justice or the likelihood that the national court will make a reference to the Court of Justice for a preliminary ruling cannot, in itself, constitute a sufficient reason for concluding that it is not reasonable to have recourse to a legal remedy.

69 The answer to the fifth question therefore is that Community law does not preclude the application of national legislation which lays down that an individual cannot obtain reparation for

loss or damage which he has wilfully or negligently failed to avert by utilising a legal remedy, provided that utilisation of that remedy can reasonably be required of the injured party, a matter which is for the referring court to determine in light of all the circumstances of the main proceedings. The likelihood that a national court will make a reference for a preliminary ruling under Article 234 EC or the existence of infringement proceedings pending before the Court of Justice cannot, in itself, constitute a sufficient reason for concluding that it is not reasonable to have recourse to a legal remedy.

Costs

70 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the referring court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

1. **Individuals who have been harmed by the incorrect transposition and application of Council Directive 64/433/EEC of 26 June 1964 on health conditions for the production and marketing of fresh meat, as amended by Council Directive 91/497/EEC of 29 July 1991, and Council Directive 89/662/EEC of 11 December 1989 concerning veterinary checks in intra-Community trade with a view to the completion of the internal market may rely on the right to the free movement of goods in order to be able to render the State liable for the breach of Community law.**

2. **Where the Commission of the European Communities has brought infringement proceedings under Article 226 EC, Community law does not require the limitation period laid down by national legislation for a claim seeking reparation on account of State liability for breach of Community law to be interrupted or suspended during those proceedings.**

3. **Community law does not preclude the limitation period applicable to an action for damages against the State for incorrect transposition of a directive from beginning to run on the date on which the first injurious effects of the incorrect transposition have been produced and the further injurious effects thereof are foreseeable, even if that date is prior to the correct transposition of the directive.**

4. **Community law does not preclude the application of national legislation which lays down that an individual cannot obtain reparation for loss or damage which he has wilfully or negligently failed to avert by utilising a legal remedy, provided that utilisation of that remedy can reasonably be required of the injured party, a matter which is for the referring court to determine in light of all the circumstances of the main proceedings. The likelihood that a national court will make a reference for a preliminary ruling under Article 234 EC or the existence of infringement proceedings pending before the Court of Justice cannot, in itself, constitute a sufficient reason for concluding that it is not reasonable to have recourse to a legal remedy.**

JUDGMENT OF THE COURT (Grand Chamber)

22 June 2010 (*)

(Reference for a preliminary ruling – Article 267 TFEU – Examination of whether a national law is consistent both with European Union law and with the national constitution – National legislation granting priority to an interlocutory procedure for the review of constitutionality – Article 67 TFEU – Freedom of movement for persons – Abolition of border control at internal borders – Regulation (EC) No 562/2006 – Articles 20 and 21 – National legislation authorising identity checks in the area between the land border of France with States party to the Convention Implementing the Schengen Agreement and a line drawn 20 kilometres inside that border)

In Joined Cases C-188/10 and C-189/10,

REFERENCES for a preliminary ruling under Article 267 TFEU from the Cour de cassation (France), made by decisions of 16 April 2010, received at the Court on the same day, in proceedings against

Aziz Melki (C-188/10),

Sélim Abdeli (C-189/10),

THE COURT (Grand Chamber),

composed of V. Skouris, President, J.N. Cunha Rodrigues, K. Lenaerts, J.-C. Bonichot, R. Silva de Lapuerta and C. Toader, Presidents of Chambers, K. Schiemann, E. Juhász, T. von Danwitz (Rapporteur), J.-J. Kasel and M. Safjan, Judges,

Advocate General: J. Mazák,

Registrar: M.-A. Gaudissart, Head of Unit,

having regard to the order of the President of the Court of 12 May 2010 deciding to apply an accelerated procedure to the references for a preliminary ruling in accordance with Article 23a of the Statute of the Court of Justice of the European Union and the first paragraph of Article 104a of the Rules of Procedure,

having regard to the written procedure and further to the hearing on 2 June 2010,

after considering the observations submitted on behalf of:

– Mr Melki and Mr Abdeli, by R. Boucq, avocat,

– the French Government, by E. Belliard, G. de Bergues and B. Beaupère-Manokha, acting as Agents,

– the Belgian Government, by C. Pochet, M. Jacobs and T. Materne, acting as Agents, and by F. Tulkens, avocat,

– the Czech Government, by M. Smolek, acting as Agent,

– the German Government, by J. Möller, B. Klein and N. Graf Vitzthum, acting as Agents,

– the Greek Government, by T. Papadopoulou and L. Kotroni, acting as Agents,

– the Netherlands Government, by C. Wissels and M. de Ree, acting as Agents,

– the Polish Government, by J. Faldyga, M. Jarosz and M. Szpunar, acting as Agents,

– the Slovak Government, by B. Ricziová, acting as Agent,

– the European Commission, by J.-P. Keppenne and M. Wilderspin, acting as Agents,

after hearing the Advocate General,

gives the following

Judgment

1 These references for a preliminary ruling concern the interpretation of Articles 67 TFEU and 267 TFEU.

2 The references have been made in the course of two sets of proceedings brought against Mr Melki and Mr Abdeli respectively – both of whom are of Algerian nationality – seeking the extension of their detention in premises not falling within the control of the prison service.

Legal context

European Union law

3 Under the preamble to Protocol (No 19) on the Schengen *acquis* integrated into the framework of the European Union, annexed to the Treaty of Lisbon (OJ 2010 C 83, p. 290; 'Protocol No 19'):

'The High Contracting Parties,

noting that the Agreements on the gradual abolition of checks at common borders signed by some Member States of the European Union in Schengen on 14 June 1985 and on 19 June 1990, as well as related agreements and the rules adopted on the basis of these agreements, have been integrated into the framework of the European Union by the Treaty of Amsterdam of 2 October 1997,

desiring to preserve the Schengen *acquis*, as developed since the entry into force of the Treaty of Amsterdam, and to develop this *acquis* in order to contribute towards achieving the objective of offering citizens of the Union an area of freedom, security and justice without internal borders,

…

have agreed upon the following provisions, which shall be annexed to the Treaty on European Union and to the Treaty on the Functioning of the European Union'.

4 Article 2 of that protocol states:

'The Schengen *acquis* shall apply to the Member States referred to in Article 1, without prejudice to Article 3 of the Act of Accession of 16 April 2003 or to Article 4 of the Act of Accession of 25 April 2005. The Council will substitute itself for the Executive Committee established by the Schengen agreements.'

5 The Schengen *acquis* comprises, inter alia, the Convention implementing the Schengen Agreement of 14 June 1985 between the Governments of the States of the Benelux Economic

Union, the Federal Republic of Germany and the French Republic on the gradual abolition of checks at their common borders (OJ 2000 L 239, p. 19), signed at Schengen (Luxembourg) on 19 June 1990 ('the CISA'), Article 2 of which concerned the crossing of internal borders.

6 Under Article 2(1) to (3) of the CISA:

'1. Internal borders may be crossed at any point without any checks on persons being carried out.

2. However, where public policy or national security so require a Contracting Party may, after consulting the other Contracting Parties, decide that for a limited period national border checks appropriate to the situation shall be carried out at internal borders. If public policy or national security require immediate action, the Contracting Party concerned shall take the necessary measures and at the earliest opportunity shall inform the other Contracting Parties thereof.

3. The abolition of checks on persons at internal borders shall not affect the provisions laid down in Article 22, or the exercise of police powers throughout a Contracting Party's territory by the competent authorities under that Party's law, or the requirement to hold, carry and produce permits and documents provided for in that Party's law.'

7 Article 2 of the CISA was repealed as from 13 October 2006, in accordance with Article 39(1) of Regulation (EC) No 562/2006 of the European Parliament and of the Council of 15 March 2006 establishing a Community Code on the rules governing the movement of persons across borders (Schengen Borders Code) (OJ 2006 L 105, p. 1).

8 Under Article 2, points 9 to 11, of that regulation:

'For the purposes of this Regulation the following definitions shall apply:

…

9. "border control", means the activity carried out at a border, in accordance with and for the purposes of this Regulation, in response exclusively to an intention to cross or the act of crossing that border, regardless of any other consideration, consisting of border checks and border surveillance;

10. "border checks", means the checks carried out at border crossing points, to ensure that persons, including their means of transport and the objects in their possession, may be authorised to enter the territory of the Member States or authorised to leave it;

11. "border surveillance", means the surveillance of borders between border crossing points and the surveillance of border crossing points outside the fixed opening hours, in order to prevent persons from circumventing border checks'.

9 Article 20 of Regulation No 562/2006, entitled 'Crossing internal borders', provides:

'Internal borders may be crossed at any point without a border check on persons, irrespective of their nationality, being carried out.'

10 Article 21 of that regulation, entitled 'Checks within the territory', provides:

'The abolition of border control at internal borders shall not affect:

(a) the exercise of police powers by the competent authorities of the Member States under national law, in so far as the exercise of those powers does not have an effect equivalent to border checks; that shall also apply in border areas. Within the meaning of the first sentence, the exercise of police powers may not, in particular, be considered equivalent to the exercise of border checks when the police measures:

(i) do not have border control as an objective;

(ii) are based on general police information and experience regarding possible threats to public security and aim, in particular, to combat cross-border crime;

(iii) are devised and executed in a manner clearly distinct from systematic checks on persons at the external borders;

(iv) are carried out on the basis of spot-checks;

…

(c) the possibility for a Member State to provide by law for an obligation to hold or carry papers and documents;

…'

National law

Constitution of 4 October 1958

11 Article 61-1 of the Constitution of 4 October 1958, as amended by Constitutional Law No 2008-724 of 23 July 2008 on the modernisation of the institutions of the Fifth Republic (JORF of 24 July 2008, p. 11890) ('the Constitution'), provides:

'If, in the course of proceedings before a court or tribunal, it is claimed that a legislative provision prejudices the rights and freedoms which the Constitution guarantees, the matter may be brought before the Conseil constitutionnel [Constitutional Council] further to a reference from the Conseil d'État [Council of State] or the Cour de Cassation [Court of Cassation], which shall rule within a fixed period.

An Organic Law shall determine the conditions for implementing the present article.'

12 The second and third paragraphs of Article 62 of the Constitution provide:

'A provision declared unconstitutional on the basis of Article 61-1 shall be repealed as of the publication of the decision of the Conseil constitutionnel or as of a subsequent date determined by that decision. The Conseil constitutionnel shall determine the conditions and limits within which the effects produced by the provision may be affected.

No appeal shall lie from the decisions of the Conseil constitutionnel. They shall be binding on public authorities and on all administrative authorities and courts.'

13 Under Article 88-1 of the Constitution:

'The Republic shall participate in the European Union constituted by States which have freely chosen to exercise some of their powers in common pursuant to the Treaty on European Union and the Treaty on the Functioning of the European Union, as they result from the treaty signed in Lisbon on 13 December 2007.'

Order No 58-1067

14 Organic Law No 2009-1523 of 10 December 2009 on the application of Article 61-1 of the Constitution (JORF of 11 December 2009, p. 21379) inserted a new Chapter IIa, entitled 'Priority Questions on Constitutionality', into Title II of Order No 58-1067 of 7 November 1958 on the organic law governing the Conseil constitutionnel. That Chapter IIa provides:

'Section 1

Provisions applicable before the courts and tribunals subject to the authority of the Conseil d'État or the Cour de cassation

Article 23-1

Before the courts and tribunals subject to the authority of the Conseil d'État or the Cour de cassation, a plea alleging that a legislative provision prejudices the rights and freedoms guaranteed by the Constitution shall be submitted in a separate, reasoned document, failing which it shall be inadmissible. Such a plea may be raised for the first time in appeal proceedings. A court or tribunal may not raise the issue of its own motion.

…

Article 23-2

The court or tribunal shall rule without delay, by way of reasoned decision, on whether to submit the priority question on constitutionality to the Conseil d'État or the Cour de cassation. The question shall be so submitted if the following conditions are met:

1. The contested provision is applicable to the dispute or to the proceedings, or forms the basis of the action;

2. It has not already been declared constitutional in the grounds or the operative part of a decision of the Conseil constitutionnel, except where there has been a change in circumstances;

3. The question is not devoid of substance.

In any event, where pleas are made before the court or tribunal challenging whether a legislative provision is consistent, first, with the rights and freedoms guaranteed by the Constitution and, secondly, with France's international commitments, it must rule as a matter of priority on whether to submit the question on constitutionality to the Conseil d'État or the Cour de cassation.

The decision to submit the question shall be sent to the Conseil d'État or to the Cour de cassation within eight days of its being made, together with the pleadings or the submissions of the parties. It shall not be open to appeal. A refusal to submit the question may be challenged only at the time of an appeal against the decision disposing of all or part of the case.

Article 23-3

Where the question is submitted, the court or tribunal shall stay proceedings until receipt of the decision of the Conseil d'État or the Cour de cassation or, if the matter has been referred to it, of the Conseil constitutionnel. The preparatory inquiries shall not be suspended and the court or tribunal may take the necessary interim or protective measures.

However, proceedings shall not be stayed either where a person is deprived of his liberty by reason of the proceedings, or where the purpose of the proceedings is to bring to an end a measure depriving someone of his liberty.

The court or tribunal may also rule without awaiting the decision on the priority question on constitutionality if law or regulation provides that it is to rule within a fixed period or as a matter of urgency. If the court at first instance rules without waiting and an appeal is brought against its decision, the appeal court shall stay proceedings. It may, however, not stay the proceedings if it is itself required to rule within a fixed period or as a matter of urgency.

In addition, where a stay of proceedings would risk leading to irreparable or manifestly excessive consequences for the rights of a party, the court or tribunal which decides to submit

the question may rule on those points which must be decided immediately.

If an appeal on a point of law has been brought where the courts adjudicating on the substance have ruled without awaiting the decision of the Conseil d'État or the Cour de cassation or, if the matter has been referred to it, the decision of the Conseil constitutionnel, any decision on that appeal shall be stayed until a ruling has been given on the priority question on constitutionality. That shall not apply where the party concerned is deprived of his liberty by reason of the proceedings and legislation provides that the Cour de cassation is to rule within a fixed period.'

Section 2

Provisions applicable before the Conseil d'État and the Cour de cassation

Article 23-4

Within a period of three months from receipt of the submission provided for in Article 23-2 or in the last paragraph of Article 23-1, the Conseil d'État or the Cour de cassation shall rule on whether to refer the priority question on constitutionality to the Conseil constitutionnel. A reference shall be made where the conditions laid down in Article 23-2(1) and (2) are met and where the question is new or of substance.

Article 23-5

A plea alleging that a legislative provision prejudices the rights and freedoms guaranteed by the Constitution may be raised, including for the first time on appeal on a point of law, in proceedings before the Conseil d'État or the Cour de cassation. The plea shall be submitted in a separate, reasoned document, failing which it shall be inadmissible. The court may not raise the issue of its own motion.

In any event, where pleas are made before the Conseil d'État or the Cour de cassation challenging whether a legislative provision is consistent, first, with the rights and freedoms guaranteed by the Constitution and, secondly, with France's international commitments, it must rule as a matter of priority on the referral of the question on constitutionality to the Conseil constitutionnel.

The Conseil d'État or the Cour de cassation shall have a period of three months from the date on which the plea is submitted to deliver its decision. The priority question on constitutionality shall be referred to the Conseil constitutionnel where the conditions laid down in Article 23-2(1) and (2) are met and the question is new or of substance.

Where a reference has been made to the Conseil constitutionnel, the Conseil d'État or the Cour de cassation shall stay proceedings until it has made its ruling. That shall not apply where the party concerned is deprived of his liberty by reason of the proceedings and legislation provides that the Cour de Cassation is to rule within a fixed period. If the Conseil d'État or the Cour de cassation is required to rule as a matter of urgency, it is possible for the proceedings not to be stayed.

…

Article 23-7

The reasoned decision of the Conseil d'État or the Cour de cassation to refer the matter to the Conseil constitutionnel shall be sent to it together with the pleadings or submissions of the parties. The Conseil constitutionnel shall receive a copy of any reasoned decision of the Conseil d'État or the Cour de cassation not to refer a priority question on constitutionality to it. If the Conseil d'État or the Cour de cassation has not ruled within the periods prescribed in Articles 23-4 and 23-5, the question is submitted to the Conseil constitutionnel.

…

Section 3

Provisions applicable before the Conseil constitutionnel

[…]

Article 23-10

The Conseil constitutionnel shall issue a ruling within three months of the date on which the matter was referred to it. The parties shall be permitted to submit their observations in adversarial proceedings. The hearing shall be public, save in exceptional cases defined in the Rules of Procedure of the Conseil constitutionnel.

…'

The Code of Criminal Procedure

15 Article 78-2 of the Code of Criminal Procedure (code de procédure pénale), in the version in force at the material time, provides:

'Senior police officers and, upon their orders and under their responsibility, the police officers and assistant police officers referred to in Articles 20 and 21-1 may ask any person to prove his identity by any means, where one or more plausible reasons exist for suspecting that:

– the person has committed or attempted to commit an offence;

– or the person is preparing to commit a "crime" [most serious criminal offence] or a "délit" [less serious offence];

– or the person is likely to provide information useful for the investigation in the event of a "crime" or a "délit";

– or the person is the subject of inquiries ordered by a judicial authority.

On the public prosecutor's written recommendations for the purposes of the investigation and prosecution of offences specified by him, the identity of any person may also be checked, in accordance with the same rules, in the places and for a period of time determined by the public prosecutor. The fact that the identity check uncovers offences other than those referred to in the public prosecutor's recommendations shall not constitute a ground for invalidating the related proceedings.

The identity of any person, regardless of his behaviour, may also be checked pursuant to the rules set out in the first paragraph, to prevent a breach of public order, in particular, an offence against the safety of persons or property.

In an area between the land border of France with the States party to the Convention signed at Schengen on 19 June 1990 and a line drawn 20 kilometres inside that border, and in the publicly accessible areas of ports, airports and railway or bus stations open to international traffic, designated by order, the identity of any person may also be checked, in accordance with the rules provided for in the first paragraph, in order to ascertain whether the obligations laid down by law to hold, carry and produce papers and documents are fulfilled. Where that control takes place on board an international train, it may be carried out on the section of the journey between the border and the first stop situated beyond the 20 kilometres from the border. However, on international trains on lines with particular service characteristics the control may also be carried out between that stop and a stop situated within the next 50 kilometres. Those lines and those stops shall be designated by Ministerial order. Where there is a section of motorway

starting in the area referred to in the first sentence of this paragraph and the first motorway tollbooth is situated beyond the 20 kilometre line, the control may also take place up to that first tollbooth, on parking areas and on the site of that tollbooth and the adjoining parking areas. The tollbooths concerned by this provision shall be designated by order. The fact that the identity check reveals an offence other than the non-observance of the aforementioned obligations shall not constitute a ground for invalidating the related proceedings.

…'

The actions in the main proceedings and the questions referred for a preliminary ruling

16 Mr Melki and Mr Abdeli, Algerian nationals unlawfully present in France, were subject to a police control, pursuant to Article 78-2, fourth paragraph, of the Code of Criminal Procedure, in the area between the land border of France with Belgium and a line drawn 20 kilometres inside that border. On 23 March 2010, they were each made the subject of a deportation order from the Prefect and a decision for continued detention.

17 Before the juge des libertés et de la détention (Judge deciding on provisional detention), to which the Prefect had made an application for extension of that detention, Mr Melki and Mr Abdeli disputed the lawfulness of the check made on them and raised the issue of the constitutionality of Article 78-2, fourth paragraph, of the Code of Criminal Procedure, on the ground that that provision prejudices the rights and freedoms guaranteed by the Constitution.

18 By two orders of 25 March 2010, the juge des libertés et de la détention ordered, first, that the question whether Article 78-2, fourth paragraph, of the Code of Criminal Procedure prejudices the rights and freedoms guaranteed by the Constitution be submitted to the Cour de Cassation and, second, that the detention of Mr Melki and Mr Abdeli be extended by 15 days.

19 According to the referring court, Mr Melki and Mr Abdeli claim that Article 78-2, fourth paragraph, of the Code of Criminal Procedure is contrary to the Constitution, given that the French Republic's commitments resulting from the Treaty of Lisbon have constitutional value in the light of Article 88-1 of the Constitution, and that that provision of the Code of Criminal Procedure, in so far as it authorises border controls at the borders with other Member States, is contrary to the principle of freedom of movement for persons set out in Article 67(2) TFEU, which provides that the European Union is to ensure the absence of internal border controls for persons.

20 The referring court considers, first, that the issue arises whether Article 78-2, fourth paragraph, of the Code of Criminal Procedure is consistent both with European Union Law ('EU law') and with the Constitution.

21 Second, the Cour de cassation infers from Articles 23-2 and 23-5 of Order No 58-1067, and from Article 62 of the Constitution, that courts adjudicating on the substance, like itself, are denied, by the effect of Organic Law No 2009-1523 which introduced those articles into Order No 58-1067, the opportunity to refer a question to the Court of Justice of the European Union for a preliminary ruling, where a priority question on constitutionality has been referred to the Conseil constitutionnel.

22 As it takes the view that its decision on whether to refer the priority question on constitutionality to the Conseil constitutionnel depends on the interpretation of EU law, the Cour de cassation decided, in both cases which are pending, to stay proceedings and to refer the following questions to the Court for a preliminary ruling:

'1. Does Article 267 [TFEU] preclude legislation such as that resulting from Article 23-2, paragraph 2, and Article 23-5, paragraph 2, of Order No 58-1067 of 7 November 1958, created by Organic Law No 2009-1523 of 10 December 2009, in so far as those provisions require courts to rule as a matter of priority on the submission to the Conseil constitutionnel of the question on constitutionality referred to them, inasmuch as that

question relates to whether domestic legislation, because it is contrary to European Union law, is in breach of the Constitution?

2. Does Article 67 [TFEU] preclude legislation such as that resulting from Article 78-2, paragraph 4, of the Code of Criminal Procedure, which provides that "in an area between the land border of France with the States party to the Convention signed at Schengen on 19 June 1990 and a line drawn 20 kilometres inside that border, and in the publicly accessible areas of ports, airports and railway or bus stations open to international traffic, designated by order, the identity of any person may also be checked, in accordance with the rules provided for in the first paragraph, in order to ascertain whether the obligations laid down by law to hold, carry and produce papers and documents are observed. Where that control takes place on board an international train, it may be carried out on the section of the journey between the border and the first stop situated beyond the 20 kilometres from the border. However, on international trains on lines with particular service characteristics the control may also be carried out between that stop and a stop situated within the next 50 kilometres. Those lines and those stops shall be designated by Ministerial order. Where there is a section of motorway starting in the area referred to in the first sentence of this paragraph and the first motorway tollbooth is situated beyond the 20 kilometre line, the control may also take place up to that first tollbooth, on parking areas and on the site of that tollbooth and the adjoining parking areas. The tollbooths concerned by this provision shall be designated by order".'

23 By order of the President of the Court of 20 April 2010, Cases C-188/10 and C-189/10 were joined for the purposes of the written and oral procedures and of the judgment.

The questions referred for a preliminary ruling

Admissibility

24 The French Government contends that the references for a preliminary ruling are inadmissible.

25 As regards the first question, the French Government submits that it is purely hypothetical. That question is based on the premiss that the Conseil constitutionnel, when examining whether a law is consistent with the Constitution, may find it necessary to examine whether that law is consistent with EU law. However, according to the case-law of the Conseil constitutionnel, it is not for the Conseil, in the context of review of the constitutionality of laws, but rather for the ordinary and administrative courts to examine whether a law is consistent with EU law. It follows that, under national law, the Conseil d'État and the Cour de cassation are not obliged to refer to the Conseil constitutionnel questions on the compatibility of provisions of national law with EU law, since such questions are not related to the review of constitutionality.

26 As regards the second question, the French Government contends that a reply to that question would serve no purpose. Since 9 April 2010, Mr Melki and Mr Abdeli have no longer been the subject of any measure depriving them of their liberty and, as from that date, the two orders of the juge des libertés et de la détention have ceased to have any effect. The issue of the compatibility of Article 78-2, fourth paragraph, of the Code of Criminal Procedure with Article 67 TFEU is also irrelevant for the only set of proceedings still pending before the Cour de cassation, given that, as the Conseil constitutionnel recalled in its decision No 2010-605 DC of 12 May 2010, the Conseil maintains that it does not have jurisdiction to examine the compatibility of legislation with EU law, where it is required to review the constitutionality of that legislation.

27 In that regard, suffice it to point out that, according to settled case-law, questions on the interpretation of EU law referred by a national court in the factual and legislative context which that court is responsible for defining, and the accuracy of which is not a matter for the Court to determine, enjoy a presumption of relevance. The Court may refuse to rule on a question referred by a national court only where it is quite obvious that the interpretation of EU law that is

sought bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (see, inter alia, Case C-333/07 *Regie Networks* [2008] ECR I-10807, paragraph 46; Case C-478/07 *Budejovicky Budvar* [2009] ECR I-0000, paragraph 63; and Case C-56/09 *Zanotti* [2010] ECR I-0000, paragraph 15).

28 In this instance, the questions referred concern the interpretation of Articles 67 TFEU and 267 TFEU. It is not apparent from the grounds of the orders for reference that the orders issued by the juge des libertés et de la détention in respect of Mr Melki and Mr Abdeli have ceased to have any effect. Furthermore, it is not obvious that the Cour de cassation's interpretation of how the priority question on constitutionality functions is clearly precluded in the light of the wording of the provisions of national law.

29 Therefore, the presumption of relevance enjoyed by the reference for a preliminary ruling in each of the cases is not rebutted by the objections submitted by the French Government.

30 In those circumstances, the references for a preliminary ruling made in these cases must be declared admissible.

The first question

31 By its first question, the referring court asks, in essence, whether Article 267 TFEU precludes Member State legislation which establishes an interlocutory procedure for the review of the constitutionality of national laws, requiring the courts of that Member State to rule as a matter of priority on whether to refer, to the national court responsible for reviewing the constitutionality of laws, a question on whether a provision of national law is consistent with the Constitution, when at the same time the conflict of that provision with EU law is at issue.

Observations submitted to the Court

32 Mr Melki and Mr Abdeli consider that the national legislation at issue in the main proceedings is consistent with EU law, provided that the Conseil constitutionnel examines EU law and, where there is a doubt on the interpretation of that law, makes a reference to the Court of Justice for a preliminary ruling, requesting that the accelerated procedure be applied to that reference pursuant to Article 104a of the Rules of Procedure of the Court of Justice.

33 The French Government is of the opinion that EU law does not preclude the national legislation at issue, since that legislation does not alter or affect the role and the jurisdiction of the national courts in applying EU law. In support of that line of argument, the French Government relies, in essence, on the same interpretation of that legislation as that given – subsequent to the submission of the orders for reference by the Cour de cassation to the Court of Justice – both by the Conseil constitutionnel in its decision No 2010-605 DC of 12 May 2010, and by the Conseil d'État in its decision No 312305 of 14 May 2010.

34 Under that interpretation, the purpose of a priority question on constitutionality cannot be to refer to the Conseil constitutionnel a question on the compatibility of legislation with EU law. It is not for the Conseil, but for the ordinary and administrative courts to examine whether legislation is consistent with EU law, to apply EU law themselves on the basis of their own assessment, and to refer questions to the Court of Justice for a preliminary ruling at the same time as, or subsequent to, the submission of a priority question on constitutionality.

35 In that regard, the French Government contends in particular that, according to the national legislation at issue in the main proceedings, the national court can either rule, under certain conditions, on the substance of the case without awaiting the decision of the Cour de cassation, the Conseil d'État or the Conseil constitutionnel on the priority question on constitutionality, or take the interim or protective measures necessary to ensure the immediate protection of the rights granted to individuals under EU law.

36 Both the French and Belgian Governments claim that the procedural mechanism of the priority question on constitutionality is designed to guarantee to individuals that their request for an examination of the constitutionality of a national provision will actually be dealt with, without its being possible for referral to the Conseil constitutionnel to be precluded on the basis that the provision in question is incompatible with EU law. In addition, referral to the Conseil constitutionnel has the advantage that the Conseil can repeal a law which is incompatible with the Constitution, and that repeal then has an effect *erga omnes*. By contrast, the effects of a judgment of an ordinary or administrative court, which finds that a national provision is incompatible with EU law, are limited to the specific case decided by that court.

37 The Czech Government suggests that the Court reply that it follows from the principle of primacy of EU law that the national court is required to ensure that EU law is given full effect, by examining whether national law is compatible with EU law and by not applying those provisions of national law which are contrary to EU law, without having first to refer the matter to the national constitutional court or another national court. According to the German Government, the exercise of the right to make a reference to the Court of Justice for a preliminary ruling, which is conferred on every national court or tribunal by Article 267 TFEU, must not be obstructed by a provision of national law which makes a reference to the Court of Justice, for an interpretation of EU law, subject to the decision of another national court. The Polish Government is of the opinion that Article 267 TFEU does not preclude legislation such as that covered by the first question referred, given that the procedure laid down in that legislation does not adversely affect the substance of the rights and obligations of national courts resulting from Article 267 TFEU.

38 The Commission considers that EU law, and in particular the principle of primacy of that law and Article 267 TFEU, precludes national legislation such as that described in the orders for reference, where every challenge to the compatibility of a legislative provision with EU law enables the individual to rely on a breach of the Constitution by that legislative provision. In that case, the burden of ensuring that EU law is observed is implicitly but necessarily transferred from the court ruling on the substance of a case to the Conseil constitutionnel. Consequently, the mechanism of the priority question on constitutionality leads to a situation such as that held to be contrary to EU law by the Court in Case 106/77 *Simmenthal* [1978] ECR 629. The fact that the constitutional court may, itself, refer questions to the Court of Justice for a preliminary ruling does not remedy that situation.

39 If, on the other hand, a challenge to the compatibility of a legislative provision with EU law does not enable the individual *ipso facto* to challenge the compatibility of the same legislative provision with the Constitution, such that the court ruling on the substance of a case retains jurisdiction to apply EU law, then EU law does not preclude national legislation such as that covered by the first question referred, in so far as a number of criteria are met. According to the Commission, the national court must remain free, simultaneously, to refer to the Court of Justice for a preliminary ruling any question which it considers necessary, and to adopt any measure necessary to ensure provisional judicial protection of the rights guaranteed under EU law. It is also necessary, first, that the interlocutory procedure for the review of constitutionality does not lead to a stay of the substantive proceedings for an excessively long period and, second, that, at the end of that interlocutory procedure and irrespective of its outcome, the national court remains entirely free to assess whether the national legislative provision is consistent with EU law, to disapply that provision if that court holds that it is contrary to EU law, and to refer questions to the Court of Justice for a preliminary ruling if it considers that to be necessary.

The Court’s reply

40 Article 267 TFEU confers jurisdiction on the Court to give preliminary rulings concerning both the interpretation of the Treaties and acts of the institutions, bodies, offices or agencies of the Union and the validity of those acts. The second paragraph of that article provides that a national court or tribunal may refer such questions to the Court, if it considers that a decision on the question is necessary to enable it to give judgment, and the third paragraph of that article

provides that the national court or tribunal is bound to make a reference if there is no judicial remedy under national law against its decisions.

41 It follows that, first, while it might be convenient, in certain circumstances, for questions of purely national law to be settled at the time the reference is made to the Court (see Joined Cases 36/80 and 71/80 *Irish Creamery Milk Suppliers Association and Others* [1981] ECR 735, paragraph 6), national courts have the widest discretion in referring matters to the Court if they consider that a case pending before them raises questions involving interpretation of provisions of EU law, or consideration of their validity, necessitating a decision on their part (see, inter alia, Case 166/73 *Rheinmühlen-Düsseldorf* [1974] ECR 33, paragraph 3; Case C-348/89 *Mecanarte* [1991] ECR I-3277, paragraph 44; and Case C-210/06 *Cartesio* [2008] ECR I-9641, paragraph 88).

42 The Court has concluded therefrom that the existence of a rule of national law whereby courts or tribunals against whose decisions there is a judicial remedy are bound on points of law by the rulings of a court superior to them cannot, on the basis of that fact alone, deprive the lower courts of the right provided for in Article 267 TFEU to refer questions on the interpretation of EU law to the Court of Justice (see, to that effect, *Rheinmühlen-Düsseldorf*, paragraphs 4 and 5, and *Cartesio*, paragraph 94). The lower court must be free, in particular if it considers that a higher court's legal ruling could lead it to give a judgment contrary to EU law, to refer to the Court questions which concern it (Case C-378/08 *ERG and Others* [2010] ECR I-0000, paragraph 32).

43 Second, the Court has already held that a national court which is called upon, within the exercise of its jurisdiction, to apply provisions of EU law is under a duty to give full effect to those provisions, if necessary refusing of its own motion to apply any conflicting provision of national legislation, even if adopted subsequently, and it is not necessary for the court to request or await the prior setting aside of such provision by legislative or other constitutional means (see, inter alia, *Simmenthal*, paragraphs 21 and 24; Case C-187/00 *Kutz-Bauer* [2003] ECR I-2741, paragraph 73; Joined Cases C-387/02, C-391/02 and C-403/02 *Berlusconi and Others* [2005] ECR I-3565, paragraph 72; and Case C-314/08 *Filipiak* [2009] ECR I-0000, paragraph 81).

44 Any provision of a national legal system and any legislative, administrative or judicial practice which might impair the effectiveness of EU law by withholding from the national court having jurisdiction to apply such law the power to do everything necessary at the moment of its application to set aside national legislative provisions which might prevent European Union rules from having full force and effect are incompatible with those requirements which are the very essence of EU law (see *Simmenthal*, paragraph 22, and Case C-213/89 *Factortame and Others* [1990] ECR I-2433, paragraph 20). This would be the case in the event of a conflict between a provision of EU law and a national law, if the solution of the conflict were to be reserved for an authority with a discretion of its own, other than the court called upon to apply EU law, even if such an impediment to the full effectiveness of EU law were only temporary (see, to that effect, *Simmenthal*, paragraph 23).

45 Lastly, the Court has held that a national court which, in a case concerning EU law, considers that a provision of national law is not only contrary to EU law, but also unconstitutional, does not lose the right or escape the obligation under Article 267 TFEU to refer questions to the Court of Justice on the interpretation or validity of EU law by reason of the fact that the declaration, that a rule of national law is unconstitutional, is subject to a mandatory reference to the constitutional court. The effectiveness of EU law would be in jeopardy if the existence of an obligation to refer a matter to a constitutional court could prevent a national court hearing a case governed by EU law from exercising the right conferred on it by Article 267 TFEU to refer to the Court of Justice questions concerning the interpretation or validity of EU law in order to enable it to decide whether or not a provision of national law was compatible with that EU law (see *Mecanarte*, paragraphs 39, 45 and 46).

46 As regards the conclusions to be drawn from the case-law referred to above in relation to

national provisions such as those covered by the first question referred, it should be observed that the referring court starts from the premiss that, under those provisions, when considering a question on constitutionality which is based on the fact that the legislation in question is not consistent with EU law, the Conseil constitutionnel also assesses whether that legislation is compatible with EU law. If that is so, where the court ruling on the substance submits the question on constitutionality, it could, before that submission, neither rule on whether the legislation concerned is compatible with EU law, nor refer a question in relation to that legislation to the Court of Justice for a preliminary ruling. Moreover, if the Conseil constitutionnel were to hold that the legislation in question is consistent with EU law, the court ruling on the substance also could not, after the Conseil constitutionnel's decision – which is binding on all judicial authorities – has been delivered, refer a question to the Court of Justice for a preliminary ruling. The same would be true where the plea alleging that a legislative provision is unconstitutional is raised during proceedings before the Conseil d'État or the Cour de cassation.

47 Under that interpretation, the national legislation at issue in the main proceedings would result in the ordinary and administrative national courts being prevented, both before submitting a question on constitutionality and, as the case may be, after the decision of the Conseil constitutionnel on that question, from exercising their right or fulfilling their obligation, provided for in Article 267 TFEU, to refer questions to the Court of Justice for a preliminary ruling. It must be stated that it follows from the principles set out in the case-law cited in paragraphs 41 to 45 above that Article 267 TFEU precludes national legislation such as that described in the orders for reference.

48 However, as is apparent from paragraphs 33 to 36 above, the French and Belgian Governments have advanced a different interpretation of the French legislation covered by the first question referred, relying on, inter alia, the decision of the Conseil constitutionnel No 2010-605 DC of 12 May 2010, and the decision of the Conseil d'État No 312305 of 14 May 2010, which were delivered after the Cour de cassation submitted its orders for reference to the Court of Justice.

49 In that regard, it should be borne in mind that it is for the referring court to determine, in the cases before it, what the correct interpretation of national law is.

50 Under settled case-law, it is for the national court to interpret the national law which it has to apply, as far as is at all possible, in a manner which accords with the requirements of EU law (Case C-262/97 *Engelbrecht* [2000] ECR I-7321, paragraph 39; Case C-115/08 *ČEZ* [2009] ECR I-0000, paragraph 138; and Case C-91/08 *Wall* [2010] ECR I-0000, paragraph 70). In the light of the aforementioned decisions of the Conseil constitutionnel and the Conseil d'État, such an interpretation of the national provisions which introduced the mechanism for review of constitutionality at issue in the main proceedings cannot be ruled out.

51 An examination of the question whether it is possible to interpret the mechanism of the priority question on constitutionality in accordance with the requirements of EU law cannot undermine the essential characteristics of the system of cooperation between the Court of Justice and the national courts, established by Article 267 TFEU, as they result from the case-law cited in paragraphs 41 to 45 above.

52 According to the settled case-law of the Court, in order to ensure the primacy of EU law, the functioning of that system of cooperation requires the national court to be free to refer to the Court of Justice for a preliminary ruling any question that it considers necessary, at whatever stage of the proceedings it considers appropriate, even at the end of an interlocutory procedure for the review of constitutionality.

53 In so far as national law lays down an obligation to initiate an interlocutory procedure for the review of constitutionality, which would prevent the national court from immediately disapplying a national legislative provision which it considers to be contrary to EU law, the functioning of the system established by Article 267 TFEU nevertheless requires that that court be free, first, to adopt any measure necessary to ensure the provisional judicial protection of the rights

conferred under the European Union's legal order and, second, to disapply, at the end of such an interlocutory procedure, that national legislative provision if that court holds it to be contrary to EU law.

54 It should also be observed that the priority nature of an interlocutory procedure for the review of the constitutionality of a national law, the content of which merely transposes the mandatory provisions of a European Union directive, cannot undermine the jurisdiction of the Court of Justice alone to declare an act of the European Union invalid, and in particular a directive, the purpose of that jurisdiction being to guarantee legal certainty by ensuring that EU law is applied uniformly (see, to that effect, Case 314/85 *Foto-Frost* [1987] ECR 4199, paragraphs 15 to 20; Case C-344/04 *IATA and ELFAA* [2006] ECR I-403, paragraph 27; and Case C-119/05 *Lucchini* [2007] ECR I-6199, paragraph 53).

55 To the extent that the priority nature of an interlocutory procedure for the review of constitutionality leads to the repeal of a national law – which merely transposes the mandatory provisions of a European Union directive – on the basis that that law is contrary to the national constitution, the Court could, in practice, be denied the possibility, at the request of the courts ruling on the substance of cases in the Member State concerned, of reviewing the validity of that directive in relation to the same grounds relating to the requirements of primary law, and in particular the rights recognised by the Charter of Fundamental Rights of the European Union, to which Article 6 TEU accords the same legal value as that accorded to the Treaties.

56 Before the interlocutory review of the constitutionality of a law – the content of which merely transposes the mandatory provisions of a European Union directive – can be carried out in relation to the same grounds which cast doubt on the validity of the directive, national courts against whose decisions there is no judicial remedy under national law are, as a rule, required – under the third paragraph of Article 267 TFEU – to refer to the Court of Justice a question on the validity of that directive and, thereafter, to draw the appropriate conclusions resulting from the preliminary ruling given by the Court, unless the court which initiates the interlocutory review of constitutionality has itself referred that question to the Court pursuant to the second paragraph of Article 267 TFEU. In the case of a national implementing law with such content, the question of whether the directive is valid takes priority, in the light of the obligation to transpose that directive. In addition, imposing a strict time-limit on the examination by the national courts cannot prevent the reference for a preliminary ruling on the validity of the directive in question.

57 Accordingly, the reply to the first question referred is that Article 267 TFEU precludes Member State legislation which establishes an interlocutory procedure for the review of the constitutionality of national laws, in so far as the priority nature of that procedure prevents – both before the submission of a question on constitutionality to the national court responsible for reviewing the constitutionality of laws and, as the case may be, after the decision of that court on that question – all the other national courts or tribunals from exercising their right or fulfilling their obligation to refer questions to the Court of Justice for a preliminary ruling. On the other hand, Article 267 TFEU does not preclude such national legislation, in so far as the other national courts or tribunals remain free:

– to refer to the Court of Justice for a preliminary ruling, at whatever stage of the proceedings they consider appropriate, even at the end of the interlocutory procedure for the review of constitutionality, any question which they consider necessary,

– to adopt any measure necessary to ensure provisional judicial protection of the rights conferred under the European Union legal order, and

– to disapply, at the end of such an interlocutory procedure, the national legislative provision at issue if they consider it to be contrary to EU law.

It is for the referring court to ascertain whether the national legislation at issue in the main proceedings can be interpreted in accordance with those requirements of EU law.

The second question

58 By its second question, the referring court seeks to know, in essence, whether Article 67 TFEU precludes national legislation which permits police authorities, within an area of 20 kilometres from the land border of a Member State with States party to the CISA, to check the identity of any person in order to ascertain whether he fulfils the obligations laid down by law to hold, carry and produce papers and documents.

Observations submitted to the Court

59 Mr Melki and Mr Abdeli are of the opinion that Articles 67 TFEU and 77 TFEU provide, purely and simply, that there should be no internal border controls and that the Treaty of Lisbon, on that basis, made freedom of movement for persons absolute, irrespective of the nationality of the persons concerned. Accordingly, that freedom of movement precludes a restriction such as that provided for in Article 78-2, fourth paragraph, of the Code of Criminal Procedure, which authorises the national authorities to carry out systematic identity checks in border areas. Furthermore, they seek an order that Article 21 of Regulation No 562/2006 is invalid, on the ground that it infringes in itself the absolute nature of the right to come and go as enshrined in Articles 67 TFEU and 77 TFEU.

60 The French Government contends that the national provisions at issue in the main proceedings are justified by the need to combat a specific type of criminality at border crossings and along borders which present specific risks. The identity checks carried out on the basis of Article 78-2, fourth paragraph, of the Code of Criminal Procedure fully comply with Article 21(a) of Regulation No 562/2006. Their purpose is to establish the identity of a person, either in order to prevent the commission of offences or disruption to public order, or to seek the perpetrators of an offence. Those controls are also based on general information and police experience which have shown the particular benefit of checks in those areas. They are carried out on the basis of police information – coming from earlier police inquiries or from information obtained in the context of cooperation between the police forces of different Member States – which guide the placement and timing of the control. Those controls are not fixed, permanent or systematic. On the contrary, they are carried out as spot checks.

61 The German, Greek, Netherlands and Slovak Governments also propose a negative reply to the second question, pointing out that, even after the entry into force of the Treaty of Lisbon, non-systematic police checks in border areas are still permissible in compliance with the conditions laid down in Article 21 of Regulation No 562/2006. Those governments claim, inter alia, that identity checks in those areas, pursuant to the national legislation at issue in the main proceedings, are distinguishable by their purpose, their content, the way they are carried out and their effect from border control for the purpose of Article 20 of Regulation No 562/2006. Those checks can be authorised pursuant to the provisions of Article 21(a) or (c) of that regulation.

62 By contrast, the Czech Government and the Commission consider that Articles 20 and 21 of Regulation No 562/2006 preclude national legislation such as that at issue in the main proceedings. The checks under that legislation constitute disguised border controls which cannot be authorised under Article 21 of Regulation No 562/2006, given that they are only permitted in border areas and are subject to no condition other than that the person checked be in one of those areas.

The Court's reply

63 As a preliminary point, it should be noted that the referring court has not referred for a preliminary ruling a question on the validity of a provision of Regulation No 562/2006. As Article 267 TFEU does not constitute a means of redress available to the parties to a case pending before a national court, the Court cannot be compelled to evaluate the validity of EU law on the sole ground that that question has been put before it by one of the parties (Joined Cases C-376/05 and C-377/05 *Brünsteiner and Autohaus Hilgert* [2006] ECR I-11383, paragraph 28).

64 In relation to the interpretation sought by the referring court of Article 67 TFEU, paragraph 2 of which provides that the Union is to ensure the absence of internal border controls for persons, it should be pointed out that that article is part of Chapter 1, entitled 'General Provisions', of Title V of the Treaty on the Functioning of the European Union, and that it is apparent from the very wording of that article that it is the Union itself which is the addressee of the obligation which it lays down. Chapter 1 also contains Article 72, which reproduces the reservation contained in Article 64(1) EC, relating to the exercise of the responsibilities incumbent upon Member States with regard to the maintenance of law and order and the safeguarding of internal security.

65 Chapter 2 of Title V contains specific provisions on the policy on border checks, and in particular Article 77 TFEU, which is the successor to Article 62 EC. Under Article 77(2)(e), the European Parliament and the Council are to adopt measures concerning the absence of any controls on persons when crossing internal borders. It follows that the provisions adopted on that basis must be taken into account, in particular Articles 20 and 21 of Regulation No 562/2006, in order to determine whether EU law precludes national legislation such as that in Article 78-2, fourth paragraph, of the Code of Criminal Procedure.

66 The Community legislature implemented the principle of the absence of internal border controls by adopting, pursuant to Article 62 EC, Regulation No 562/2006 which seeks, according to Recital 22 in the preamble to that regulation, to build on the Schengen *acquis*. That regulation establishes, in Title III, a Community scheme on the crossing of internal borders, replacing Article 2 of the CISA as from 13 October 2006. The applicability of that regulation has not been affected by the entry into force of the Treaty of Lisbon. Protocol No 19 annexed thereto expressly provides that the Schengen *acquis* remains applicable.

67 Article 20 of Regulation No 562/2006 provides that internal borders may be crossed at any point without a border check on persons, irrespective of their nationality, being carried out. Under Article 2, point 10, of that regulation 'border checks' means the checks carried out at border crossing points, to ensure that persons may be authorised to enter the territory of the Member States or authorised to leave it.

68 As regards the controls provided for in Article 78-2, fourth paragraph, of the Code of Criminal Procedure, it must be observed that they are carried out not 'at borders' but within the national territory and they do not depend on movement across the border by the person checked. In particular, they are not carried out at the time when the border is crossed. Thus, those controls constitute not border checks prohibited under Article 20 of Regulation No 562/2006, but checks within the territory of a Member State, covered by Article 21 of that regulation.

69 Article 21(a) of Regulation No 562/2006 provides that the abolition of border control at internal borders is not to affect the exercise of police powers by the competent authorities of the Member States under national law, in so far as the exercise of those powers does not have an effect equivalent to border checks; that is also to apply in border areas. It follows that controls within the territory of a Member State are, pursuant to Article 21(a), prohibited only where they have an effect equivalent to border checks.

70 The exercise of police powers may not, under the second sentence of that provision, in particular, be considered equivalent to the exercise of border checks when the police measures do not have border control as an objective; are based on general police information and experience regarding possible threats to public security and aim, in particular, to combat cross-border crime; are devised and executed in a manner clearly distinct from systematic checks on persons at the external borders; and, lastly, are carried out on the basis of spot-checks.

71 In relation to the question whether the exercise of the control powers granted by Article 78-2, fourth paragraph, of the Code of Criminal Procedure has an effect equivalent to border checks, it must be held, first, that the objective of the control under that provision is not the same as that of border control within the meaning of Regulation No 562/2006. The objective of that border control, according to Article 2, points 9 to 11, of that regulation, is, first, to ensure that persons may be authorised to enter the territory of the Member State or authorised to leave it and,

second, to prevent persons from circumventing border checks. By contrast, the national provision in question relates to checking whether the obligations laid down by law to hold, carry and produce papers and documents are fulfilled. The possibility for a Member State to provide for such obligations in its national law is not, pursuant to Article 21(c) of Regulation No 562/2006, affected by the abolition of border control at internal borders.

72 Second, the fact that the territorial scope of the power granted by the national provision at issue in the main proceedings is limited to a border area does not suffice, in itself, to find that the exercise of that power has an equivalent effect within the meaning of Article 21(a) of Regulation No 562/2006, in view of the wording and objective of Article 21. However, as regards controls on board an international train or on a toll motorway, the national provision at issue in the main proceedings lays down specific rules regarding its territorial scope, a factor which might constitute evidence of the existence of such an equivalent effect.

73 Furthermore, Article 78-2, fourth paragraph, of the Code of Criminal Procedure, which authorises controls irrespective of the behaviour of the person concerned and of specific circumstances giving rise to a risk of breach of public order, contains neither further details nor limitations on the power thus conferred – in particular in relation to the intensity and frequency of the controls which may be carried out on that legal basis – for the purposes of preventing the practical application of that power, by the competent authorities, from leading to controls with an effect equivalent to border checks within the meaning of Article 21(a) of Regulation No 562/2006.

74 In order to comply with Articles 20 and 21(a) of Regulation No 562/2006, interpreted in the light of the requirement of legal certainty, national legislation granting a power to police authorities to carry out identity checks – a power which, first, is restricted to the border area of the Member State with other Member States and, second, does not depend upon the behaviour of the person checked or on specific circumstances giving rise to a risk of breach of public order – must provide the necessary framework for the power granted to those authorities in order, inter alia, to guide the discretion which those authorities enjoy in the practical application of that power. That framework must guarantee that the practical exercise of that power, consisting in carrying out identity controls, cannot have an effect equivalent to border checks, as evidenced by, in particular, the circumstances listed in the second sentence of Article 21(a) of Regulation No 562/2006.

75 In those circumstances, the answer to the second question referred is that Article 67(2) TFEU, and Articles 20 and 21 of Regulation No 562/2006, preclude national legislation which grants to the police authorities of the Member State in question the power to check, solely within an area of 20 kilometres from the land border of that State with States party to the CISA, the identity of any person, irrespective of his behaviour and of specific circumstances giving rise to a risk of breach of public order, in order to ascertain whether the obligations laid down by law to hold, carry and produce papers and documents are fulfilled, where that legislation does not provide the necessary framework for that power to guarantee that its practical exercise cannot have an effect equivalent to border checks.

Costs

76 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

1. Article 267 TFEU precludes Member State legislation which establishes an interlocutory procedure for the review of the constitutionality of national laws, in

so far as the priority nature of that procedure prevents – both before the submission of a question on constitutionality to the national court responsible for reviewing the constitutionality of laws and, as the case may be, after the decision of that court on that question – all the other national courts or tribunals from exercising their right or fulfilling their obligation to refer questions to the Court of Justice for a preliminary ruling. On the other hand, Article 267 TFEU does not preclude such national legislation, in so far as the other national courts or tribunals remain free:

– **to refer to the Court of Justice for a preliminary ruling, at whatever stage of the proceedings they consider appropriate, even at the end of the interlocutory procedure for the review of constitutionality, any question which they consider necessary,**

– **to adopt any measure necessary to ensure provisional judicial protection of the rights conferred under the European Union legal order, and**

– **to disapply, at the end of such an interlocutory procedure, the national legislative provision at issue if they consider it to be contrary to European Union law.**

It is for the referring court to ascertain whether the national legislation at issue in the main proceedings can be interpreted in accordance with those requirements of European Union law.

2. **Article 67(2) TFEU, and Articles 20 and 21 of Regulation (EC) No 562/2006 of the European Parliament and of the Council of 15 March 2006 establishing a Community Code on the rules governing the movement of persons across borders (Schengen Borders Code), preclude national legislation which grants to the police authorities of the Member State in question the power to check, solely within an area of 20 kilometres from the land border of that State with States party to the Convention implementing the Schengen Agreement of 14 June 1985 between the Governments of the States of the Benelux Economic Union, the Federal Republic of Germany and the French Republic on the gradual abolition of checks at their common borders, signed at Schengen (Luxembourg) on 19 June 1990, the identity of any person, irrespective of his behaviour and of specific circumstances giving rise to a risk of breach of public order, in order to ascertain whether the obligations laid down by law to hold, carry and produce papers and documents are fulfilled, where that legislation does not provide the necessary framework for that power to guarantee that its practical exercise cannot have an effect equivalent to border checks.**

Case C-240/09

Lesoochranárske zoskupenie VLK

v

Ministerstvo životného prostredia Slovenskej republiky

(Reference for a preliminary ruling from the Najvyšší súd Slovenskej republiky)

(Environment – Aarhus Convention – Public participation in the decision-making process and access to justice in environmental matters – Direct effect)

Summary of the Judgment

1. *Preliminary rulings – Jurisdiction of the Court – Interpretation of an international agreement concluded by the Community and the Member States on the basis of joint competence – Convention on access to information, public participation in decision-making and access to justice on environmental matters (Aarhus Convention) – Jurisdiction to determine the distribution of competences between the Community and the Member States*

   (Art. 234 EC; Aarhus Convention, Art. 9(3); Council Decision 2005/370)

2. *Preliminary rulings – Jurisdiction of the Court – Limits – Interpretation requested on account of the applicability of a provision both to situations falling within the scope of national law and to situations falling within the scope of EU law – Jurisdiction to provide that interpretation*

   (Aarhus Convention, Art. 9(3); Council Decision 2005/370)

3. *International agreements – Agreements concluded by the Community – Convention on access to information, public participation in decision-making and public access to justice on environmental matters (Aarhus Convention) – Article 9(3) – Direct effect – None*

   (Art. 10 EC; Aarhus Convention, Art. 9(3); Council Decision 2005/370)

1. Since the Convention on access to information, public participation in decision-making and public access to justice on environmental matters (Aarhus Convention) was concluded by the Community and all the Member States on the basis of joint competence, it follows that where a case is brought before the Court in accordance with the provisions of the Treaty, in particular Article 234 EC thereof, the Court has jurisdiction to draw the line dividing the obligations the Community has assumed from those remaining the sole responsibility of the Member States and to interpret that convention.

   Next, it must be determined whether, in the field covered by Article 9(3) of the Aarhus Convention, the Union has exercised its powers and adopted provisions to implement the obligations which derive from it. If that should not be the case, the obligations deriving from Article 9(3) of the Aarhus Convention would continue to be covered by the national law of the Member States. In those circumstances, it would be for the courts of those Member States to determine, on the basis of national law, whether individuals could rely directly on the rules of that international agreement relevant to that field or whether the courts must apply those rules of their own motion. In that case, Union law neither requires nor forbids the legal order of a Member State to accord to individuals the right to rely directly on a rule laid down in the Aarhus Convention or to oblige the courts to apply

that rule of their own motion.

However, if it were to be held that the Union has exercised its powers and adopted provisions in the field covered by Article 9(3) of the Aarhus Convention, Union law would apply and it would be for the Court of Justice to determine whether the provision of the international agreement in question has direct effect.

In that connection, it must be observed first of all, that, in the field of environmental protection, the Union has explicit external competence pursuant to Article 175 EC, read in conjunction with Article 174(2) EC.

Furthermore, the Court has held that a specific issue which has not yet been the subject of Union legislation is part of Union law, when that issue is regulated in agreements concluded by the Union and the Member State and concerns a field in large measure covered by Union law.

(see paras 31-33, 35-36)

2. The Court has jurisdiction to interpret the provisions of Article 9(3) of the Convention on access to information, public participation in decision-making and public access to justice on environmental matters (Aarhus Convention) and, in particular, to give a ruling on whether or not they have direct effect.

When a provision can apply both to situations falling within the scope of national law and to situations falling within the scope of Union law, there is a certain interest in that provision's being interpreted uniformly, whatever the circumstances in which it is to apply, in order to forestall future differences of interpretation.

(see paras 42-43)

3. Article 9(3) of the Convention on access to information, public participation in decision-making and access to justice in environmental matters (Aarhus Convention) does not have direct effect in Union law. It is, however, for the referring court to interpret, to the fullest extent possible, the procedural rules relating to the conditions to be met in order to bring administrative or judicial proceedings in accordance with the objectives of Article 9(3) of that convention and the objective of effective judicial protection of the rights conferred by European Union law, so as to enable an environmental protection organisation to challenge before a court a decision taken following administrative proceedings liable to be contrary to European Union environmental law.

Failing EU rules governing the matter, it is for the domestic legal system of each Member State to lay down the detailed procedural rules governing actions for safeguarding the rights that individuals derive from Union law, in this case the Habitats Directive, the Member States being responsible for ensuring that those rights are effectively protected in every case.

On that basis, as is apparent from well-established case-law, the detailed procedural rules governing actions for safeguarding an individual's rights under Union law must be no less favourable than those governing similar domestic actions (principle of equivalence) and must not make it in practice impossible or excessively difficult to exercise rights conferred by Union law (principle of effectiveness).

(see paras 47-48, 51-52, operative part)

JUDGMENT OF THE COURT (Grand Chamber)

8 March 2011 (*)

(Environment – Aarhus Convention – Public participation in the decision-making process and access to justice in environmental matters – Direct effect)

In Case C-240/09,

REFERENCE for a preliminary ruling under Article 234 EC from the Najvyšší súd Slovenskej republiky (Slovakia), made by decision of 22 June 2009, received at the Court on 3 July 2009, in the proceedings

Lesoochranárske zoskupenie VLK

v

Ministerstvo životného prostredia Slovenskej republiky,

THE COURT (Grand Chamber),

composed of V. Skouris, President, A. Tizzano, J.N. Cunha Rodrigues, K. Lenaerts, J.-C. Bonichot (Rapporteur), K. Schiemann and D. Šváby, Presidents of Chambers, A. Rosas, R. Silva de Lapuerta, U. Lõhmus, A. Ó Caoimh, M. Safjan and M. Berger, Judges,

Advocate General: E. Sharpston,

Registrar: R. Şereş, Administrator,

having regard to the written procedure and further to the hearing on 4 May 2010,

after considering the observations submitted on behalf of:

– Lesoochranárske zoskupenie VLK, by I. Rajtáková, advokátka,

– the Slovak Government, by B. Ricziová, acting as Agent,

– the German Government, by M. Lumma and B. Klein, acting as Agents,

– the Greek Government, by G. Karipsiadis and T. Papadopoulou, acting as Agents,

– the French Government, by G. de Bergues and S. Menez, acting as Agents,

– the Polish Government, by M. Dowgielewicz, D. Krawczyk and M. Nowacki, acting as Agents,

– the Finnish Government, by J. Heliskoski and M. Pere, acting as Agents,

– the Swedish Government, by A. Falk, acting as Agent,

– the United Kingdom Government, by L. Seeboruth and J. Stratford, acting as Agents,

– the European Commission, by P. Oliver and A. Tokár, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 15 July 2010,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Article 9(3) of the Convention on access to information, public participation in decision-making and access to justice in environmental matters approved on behalf of the European Community by Council Decision 2005/370/EC of 17 February 2005 (OJ 2005 L 124, p. 1) ('the Aarhus Convention').

2 The reference has been made in proceedings between Lesoochranáske zoskupenie VLK ('zoskupenie'), an association established in accordance with Slovak law whose objective is the protection of the environment, and the Ministerstvo životného prostredia Slovenskej republiky (Ministry of the Environment of the Slovak Republic) ('the Ministerstvo životného prostredia'), concerning the association's request to be a 'party' to the administrative proceedings relating to the grant of derogations to the system of protection for species such as the brown bear, access to protected countryside areas, or the use of chemical substances in such areas.

Legal context

International law

3 Article 9 of the Aarhus Convention states:

'1. Each Party shall, within the framework of its national legislation, ensure that any person who considers that his or her request for information under Article 4 has been ignored, wrongfully refused, whether in part or in full, inadequately answered, or otherwise not dealt with in accordance with the provisions of that article, has access to a review procedure before a court of law or another independent and impartial body established by law.

In the circumstances where a Party provides for such a review by a court of law, it shall ensure that such a person also has access to an expeditious procedure established by law that is free of charge or inexpensive for reconsideration by a public authority or review by an independent and impartial body other than a court of law.

Final decisions under this paragraph 1 shall be binding on the public authority holding the information. Reasons shall be stated in writing, at least where access to information is refused under this paragraph.

2. Each Party shall, within the framework of its national legislation, ensure that members of the public concerned:

(a) having a sufficient interest or, alternatively,

(b) maintaining impairment of a right, where the administrative procedural law of a Party requires this as a precondition,

have access to a review procedure before a court of law and/or another independent and impartial body established by law, to challenge the substantive and procedural legality of any decision, act or omission subject to the provisions of Article 6 and, where so provided for under national law and without prejudice to paragraph 3 below, of other relevant provisions of this Convention.

What constitutes a sufficient interest and impairment of a right shall be determined in

accordance with the requirements of national law and consistently with the objective of giving the public concerned wide access to justice within the scope of this Convention. To this end, the interest of any non-governmental organisation meeting the requirements referred to in Article 2(5) shall be deemed sufficient for the purpose of subparagraph (a) above. Such organisations shall also be deemed to have rights capable of being impaired for the purpose of subparagraph (b) above.

The provisions of this paragraph 2 shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

3. In addition and without prejudice to the review procedures referred to in paragraphs 1 and 2 above, each Party shall ensure that, where they meet the criteria, if any, laid down in its national law, members of the public have access to administrative or judicial procedures to challenge acts and omissions by private persons and public authorities which contravene provisions of its national law relating to the environment.

…'

4 Article 19(4) and (5) of the Aarhus Convention states:

'4. Any organisation referred to in Article 17 which becomes a Party to this Convention without any of its Member States being a Party shall be bound by all the obligations under this Convention. If one or more of such an organisation's Member States is a Party to this Convention, the organisation and its Member States shall decide on their respective responsibilities for the performance of their obligations under this Convention. In such cases, the organisation and the Member States shall not be entitled to exercise rights under this Convention concurrently.

5. In their instruments of ratification, acceptance, approval or accession, the regional economic integration organisations referred to in Article 17 shall declare the extent of their competence with respect to the matters governed by this Convention. These organisations shall also inform the Depositary of any substantial modification to the extent of their competence.'

European Union ('EU') law

5 Article 12(1) of Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora (OJ 1992 L 206, p. 7) ('the Habitats Directive') provides:

'Member States shall take the requisite measures to establish a system of strict protection for the animal species listed in Annex IV(a) in their natural range, prohibiting:

(a) all forms of deliberate capture or killing of specimens of these species in the wild;

(b) deliberate disturbance of these species, particularly during the period of breeding, rearing, hibernation and migration;

(c) deliberate destruction or taking of eggs from the wild;

(d) deterioration or destruction of breeding sites or resting places.'

6 Article 16(1) of the Habitats Directive further states:

'Provided that there is no satisfactory alternative and the derogation is not detrimental to the maintenance of the populations of the species concerned at a favourable conservation status in

their natural range, Member States may derogate from the provisions of Articles 12, 13, 14 and 15(a) and (b):

(a) in the interest of protecting wild fauna and flora and conserving natural habitats;

(b) to prevent serious damage, in particular to crops, livestock, forests, fisheries and water and other types of property;

(c) in the interests of public health and public safety, or for other imperative reasons of overriding public interest, including those of a social or economic nature and beneficial consequences of primary importance for the environment;

(d) for the purpose of research and education, of repopulating and re-introducing these species and for the breeding operations necessary for these purposes, including the artificial propagation of plants;

(e) to allow, under strictly supervised conditions, on a selective basis and to a limited extent, the taking or keeping of certain specimens of the species listed in Annex IV in limited numbers specified by the competent national authorities.'

7 Annex IV to the Habitats Directive relating to animal and plant species of Community interest in need of strict protection, mentions, in particular, the species 'Ursus arctos'.

8 Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information and repealing Council Directive 90/313/EEC (OJ 2003 L 41, p. 26) states in recital 5 in the preamble thereto:

'On 25 June 1998 the European Community signed the UN/ECE Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters ("the Aarhus Convention"). Provisions of Community law must be consistent with that Convention with a view to its conclusion by the European Community.'

9 Article 6 of Directive 2003/4 implements Article 9(1) of the Aarhus Convention, and reproduces almost word for word its provisions.

10 Directive 2003/35/EC of the European Parliament and of the Council of 26 May 2003 providing for public participation in respect of the drawing up of certain plans and programmes relating to the environment and amending with regard to public participation and access to justice Council Directives 85/337/EEC and 96/61/EC states in recitals 5, 9 and 11 in the preamble thereto:

'(5) On 25 June 1998 the Community signed the UN/ECE Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters ("the Århus Convention"). Community law should be properly aligned with that Convention with a view to its ratification by the Community;

…

(9) Article 9(2) and (4) of the Århus Convention provides for access to judicial or other procedures for challenging the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of Article 6 of the Convention.

…

(11) Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment [OJ 1985 L 175, p. 40], and Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control [OJ 1996 L 257, p. 26] should be amended to ensure that they are fully compatible with the provisions of the Århus Convention, in particular Article 6 and Article 9(2) and (4)

thereof.'

11 Articles 3(7) and 4(4) of Directive 2003/35 introduce respectively Article 10a into Directive 85/337 and Article 15a into Directive 96/61 in order to implement Article 9(2) of the Aarhus Convention, which they reproduce in almost identical terms.

12 Decision 2005/370 states, in recitals 4 to 7 in the preamble thereto:

'(4) Under the terms of the Aarhus Convention, a regional economic integration organisation must declare in its instrument of ratification, acceptance, approval or accession, the extent of its competence in respect of the matters governed by the Convention.

(5) The Community, in accordance with the Treaty, and in particular Article 175(1) thereof, is competent, together with its Member States, for entering into international agreements, and for implementing the obligations resulting therefrom, which contribute to the pursuit of the objectives listed in Article 174 of the Treaty.

(6) The Community and most of its Member States signed the Aarhus Convention in 1998 and since then have pursued their efforts in view of their approval of the Convention. In the meantime, relevant Community legislation is being made consistent with the Convention.

(7) The objective of the Aarhus Convention, as set forth in its Article 1 thereof, is consistent with the objectives of the Community's environmental policy, listed in Article 174 of the Treaty, pursuant to which the Community, which shares competence with its Member States, has already adopted a comprehensive set of legislation which is evolving and contributes to the achievement of the objective of the Convention, not only by its own institutions, but also by public authorities in its Member States.'

13 Article 1 of Decision 2005/370 provides:

'The UN/ECE Convention on access to information, public participation in decision-making and access to justice in environmental matters, (Aarhus Convention) is hereby approved on behalf of the Community.'

14 In its declaration of competence made pursuant to Article 19(5) of the Aarhus Convention and annexed to Decision 2005/370, the Commission stated, in particular, 'that the legal instruments in force do not cover fully the implementation of the obligations resulting from Article 9(3) of the Convention as they relate to administrative and judicial procedures to challenge acts and omissions by private persons and public authorities other than the institutions of the European Community as covered by Article 2(2)(d) of the Convention, and that, consequently, its Member States are responsible for the performance of these obligations at the time of approval of the Convention by the European Community and will remain so unless and until the Community, in the exercise of its powers under the EC Treaty, adopts provisions of Community law covering the implementation of those obligations'.

15 Articles 10 to 12 of Regulation (EC) No 1367/2006 of the European Parliament and of the Council of 6 September 2006 on the application of the provisions of the Aarhus Convention on Access to Information, Public Participation in Decision-making and Access to Justice in Environmental Matters to Community institutions and bodies (OJ 2006 L 264, p. 13) aim to ensure access to justice by non-governmental organisations with respect to administrative acts adopted by the institutions and bodies of the European Union or omissions by the latter, in accordance with Article 9(3) of the Aarhus Convention.

Slovak law

16 Pursuant to Article 82(3) of Law No 543/2002 on the protection of nature and the countryside, as amended, (zákon č. 543/2002 Z.z. o ochrane prírody a krajiny), which applies to the dispute in the main proceedings, an association having legal personality is to be regarded as a

'participant' in administrative proceedings, within the meaning of that provision, if, for at least one year, it has had the object of protecting nature and the countryside, and it has given written notice of its participation in those proceedings within the period prescribed in that article. The status of 'participant' confers on it the right to be informed of all pending administrative proceedings relating to the protection of nature and the countryside.

17 In accordance with Article 15a(2) of the Code of Administrative Procedure (Správny poriadok), 'a participant' is entitled to be informed that administrative proceedings have been initiated, to have access to files submitted by the parties to the administrative proceedings, to attend hearings and on-the-spot inspections, and to produce evidence and other information on the basis of which the decision will be taken.

18 Under Article 250(2) of the Code of Civil Procedure (Občiansky súdny poriadok) any natural or legal person who/which claims that his/its rights, as a party to the administrative proceedings, have been prejudiced by the decision taken or by the procedure followed by the administrative authority is to have the status of an applicant. Any natural or legal person not appearing at the administrative proceedings and whose presence, as a party to the proceedings has been requested, may also be an applicant.

19 According to Article 250(m) of the Code of Civil Procedure, persons having the status of parties to the proceedings are those who were parties to the administrative proceedings and the administrative body whose decision is to be reviewed.

The dispute in the main proceedings and the questions referred for a preliminary ruling

20 The zoskupenie was informed of the initiation of a number of administrative proceedings brought by various hunting associations or other persons concerning the grant of derogations to the system of protection for species such as the brown bear, access to protected countryside areas or the use of chemical substances in such areas.

21 The zoskupenie therefore applied to the Ministerstvo životného prostredia to be a 'party' to the administrative proceedings concerning the grant of those derogations or authorisations and relied on the Aarhus Convention for that purpose. The Ministerstvo životného prostredia rejected that request and the administrative appeal subsequently brought by the zoskupenie against that rejection.

22 The zoskupenie then brought a contentious appeal against the two decisions, arguing in particular that the provisions in Article 9(3) of the Aarhus Convention had direct effect.

23 In those circumstances, the Najvyšší súd Slovenskej republiky decided to stay the proceedings and refer the following questions to the Court of Justice for a preliminary ruling:

'1. Is it possible to recognise Article 9 and in particular Article 9(3) of the Aarhus Convention of 25 June 1998, given that the principal objective pursued by that international treaty is to change the classic definition of *locus standi* by according the status of a party to proceedings to the public, or the public concerned, as having the direct effect of an international treaty ("self-executing effect") in a situation where the European Union acceded to that international treaty on 17 February 2005 but to date has not adopted Community legislation in order to transpose the treaty concerned into Community law?

2. Is it possible to recognise Article 9 and in particular Article 9(3) of the Aarhus Convention, which has become a part of Community law, as having the direct applicability or direct effect of Community law within the meaning of the settled case-law of the Court of Justice?

3. If the answer to the first or the second question is in the affirmative, is it then possible to

interpret Article 9(3) of the Aarhus Convention, given the principal objective pursued by that international treaty, as meaning that it is necessary also to include within the concept "act of a public authority" an act consisting in the delivery of decisions, that is to say, that the right of public access to judicial hearings intrinsically also includes the right to challenge the decision of an administrative body, the unlawfulness of which lies in its effect on the environment?'

24 By order of the President of the Court of 23 October 2009, the referring court's request that the accelerated procedure provided for in the first paragraph of Article 104a of the Rules of Procedure be applied to the present case was rejected.

Consideration of the questions referred

Admissibility

25 The Polish and United Kingdom Governments submit that the questions are admissible only in so far as they concern the provisions of Article 9(3) of the Aarhus Convention, and are inadmissible for the remainder on the ground that the interpretation of EU law requested bears no relation to the actual facts of the main action or its purpose.

26 In answer to those arguments, it is sufficient to note that the questions referred relate essentially only to Article 9(3) of the Aarhus Convention, and do not concern the other subparagraphs of that article.

27 In those circumstances, there are no grounds for the Court to rule that the questions referred are partially inadmissible because they concern provisions other than those in Article 9(3) of the Aarhus Convention.

The first and second questions

28 By its first two questions, which it is appropriate to examine together, the referring court asks essentially whether individuals, and in particular environmental protection associations, where they wish to challenge a decision to derogate from a system of environmental protection, such as that put in place by the Habitats Directive for a species mentioned in Annex IV thereto, may derive a right to bring proceedings under EU law, having regard, in particular, to the provisions of Article 9(3) of the Aarhus Convention on direct effect, to which its questions relate.

29 A preliminary point to be made is that Article 300(7) EC provides that '[a]greements concluded under the conditions set out in this Article shall be binding on the institutions of the Community and on Member States'.

30 The Aarhus Convention was signed by the Community and subsequently approved by Decision 2005/370. Therefore, according to settled case-law, the provisions of that convention now form an integral part of the legal order of the European Union (see, by analogy, Case C-344/04 *IATA and ELFAA* [2006] ECR I-403, paragraph 36, and Case C-459/03 *Commission* v *Ireland* [2006] ECR I-4635, paragraph 82). Within the framework of that legal order the Court therefore has jurisdiction to give preliminary rulings concerning the interpretation of such an agreement (see, inter alia, Case 181/73 *Haegeman* [1974] ECR 449, paragraphs 4 to 6, and Case 12/86 *Demirel* [1987] ECR 3719, paragraph 7).

31 Since the Aarhus Convention was concluded by the Community and all the Member States on the basis of joint competence, it follows that where a case is brought before the Court in accordance with the provisions of the EC Treaty, in particular Article 234 EC thereof, the Court has jurisdiction to define the obligations which the Community has assumed and those which remain the sole responsibility of the Member States in order to interpret the Aarhus Convention (see, by analogy, Joined Cases C-300/98 and C-392/98 *Dior and Others* [2000] ECR I-11307, paragraph 33, and Case C-431/05 *Merck Genéricos – Produtos Farmacêuticos* [2007] ECR

I-7001, paragraph 33).

32 Next, it must be determined whether, in the field covered by Article 9(3) of the Aarhus Convention, the European Union has exercised its powers and adopted provisions to implement the obligations which derive from it. If that were not the case, the obligations deriving from Article 9(3) of the Aarhus Convention would continue to be covered by the national law of the Member States. In those circumstances, it would be for the courts of those Member States to determine, on the basis of national law, whether individuals could rely directly on the rules of that international agreement relevant to that field or whether the courts must apply those rules of their own motion. In that case, EU law does not require or forbid the legal order of a Member State to accord to individuals the right to rely directly on a rule laid down in the Aarhus Convention or to oblige the courts to apply that rule of their own motion (see, by analogy, *Dior and Others*, paragraph 48 and *MerckGenéricos – Produtos Farmacêuticos*, paragraph 34).

33 However, if it were to be held that the European Union has exercised its powers and adopted provisions in the field covered by Article 9(3) of the Aarhus Convention, EU law would apply and it would be for the Court of Justice to determine whether the provision of the international agreement in question has direct effect.

34 Therefore, it is appropriate to examine whether, in the particular field into which Article 9(3) of the Aarhus Convention falls, the European Union has exercised its powers and adopted provisions to implement obligations deriving from it (see, by analogy, *MerckGenéricos – Produtos Farmacêuticos*, paragraph 39).

35 In that connection, it must be observed first of all, that, in the field of environmental protection, the European Union has explicit external competence pursuant to Article 175 EC, read in conjunction with Article 174(2) EC (see, *Commission* v *Ireland*, paragraphs 94 and 95).

36 Furthermore, the Court has held that a specific issue which has not yet been the subject of EU legislation is part of EU law, where that issue is regulated in agreements concluded by the European Union and the Member State and it concerns a field in large measure covered by it (see, by analogy, Case C-239/03 *Commission* v *France* [2004] ECR I-9325, paragraphs 29 to 31).

37 In the present case, the dispute in the main proceedings concerns whether an environmental protection association may be a ‘party’ to administrative proceedings concerning, in particular, the grant of derogations to the system of protection for species such as the brown bear. That species is mentioned in Annex IV(a) to the Habitats Directive, so that, under Article 12 thereof, it is subject to a system of strict protection from which derogations may be granted only under the conditions laid down in Article 16 of that directive.

38 It follows that the dispute in the main proceedings falls within the scope of EU law.

39 It is true that, in its declaration of competence made in accordance with Article 19(5) of the Aarhus Convention and annexed to Decision 2005/370, the Community stated, in particular, that ‘the legal instruments in force do not cover fully the implementation of the obligations resulting from Article 9(3) of the Convention as they relate to administrative and judicial procedures to challenge acts and omissions by private persons and public authorities other than the institutions of the European Community as covered by Article 2(2)(d) of the Convention, and that, consequently, its Member States are responsible for the performance of these obligations at the time of approval of the Convention by the European Community and will remain so unless and until the Community, in the exercise of its powers under the EC Treaty, adopts provisions of Community law covering the implementation of those obligations’.

40 However, it cannot be inferred that the dispute in the main proceedings does not fall within the scope of EU law because, as stated in paragraph 36 of this judgment, a specific issue which has not yet been subject to EU legislation may fall within the scope of EU law if it relates to a field covered in large measure by it.

41 In that connection, it is irrelevant that Regulation No 1367/2006, which is intended to implement the provisions of Article 9(3) of the Aarhus Convention, only concerns the institutions of the European Union and cannot be regarded as the adoption by the European Union of provisions implementing the obligations which derive from Article 9(3) of the Aarhus Convention with respect to national administrative or judicial proceedings.

42 Where a provision can apply both to situations falling within the scope of national law and to situations falling within the scope of EU law, it is clearly in the interest of the latter that, in order to forestall future differences of interpretation, that provision should be interpreted uniformly, whatever the circumstances in which it is to apply (see, in particular, Case C-130/95 *Giloy* [1997] ECR I-4291, paragraph 28, and Case C-53/96 *Hermès* [1998] ECR I-3603, paragraph 32).

43 It follows that the Court has jurisdiction to interpret the provisions of Article 9(3) of the Aarhus Convention and, in particular, to give a ruling on whether or not they have direct effect.

44 In that connection, a provision in an agreement concluded by the European Union with a non-member country must be regarded as being directly applicable when, regard being had to its wording and to the purpose and nature of the agreement, the provision contains a clear and precise obligation which is not subject, in its implementation or effects, to the adoption of any subsequent measure (see, in particular, Case C-265/03 *Simutenkov* [2005] ECR I-2579, paragraph 21, and Case C-372/06 *Asda Stores* [2007] ECR I-11223, paragraph 82).

45 It must be held that the provisions of Article 9(3) of the Aarhus Convention do not contain any clear and precise obligation capable of directly regulating the legal position of individuals. Since only members of the public who meet the criteria, if any, laid down by national law are entitled to exercise the rights provided for in Article 9(3), that provision is subject, in its implementation or effects, to the adoption of a subsequent measure.

46 However, it must be observed that those provisions, although drafted in broad terms, are intended to ensure effective environmental protection.

47 In the absence of EU rules governing the matter, it is for the domestic legal system of each Member State to lay down the detailed procedural rules governing actions for safeguarding rights which individuals derive from EU law, in this case the Habitats Directive, since the Member States are responsible for ensuring that those rights are effectively protected in each case (see, in particular, Case C-268/06 *Impact* [2008] ECR I-2483, paragraphs 44 and 45).

48 On that basis, as is apparent from well-established case-law, the detailed procedural rules governing actions for safeguarding an individual's rights under EU law must be no less favourable than those governing similar domestic actions (principle of equivalence) and must not make it in practice impossible or excessively difficult to exercise rights conferred by EU law (principle of effectiveness) (*Impact*, paragraph 46 and the case-law cited).

49 Therefore, if the effective protection of EU environmental law is not to be undermined, it is inconceivable that Article 9(3) of the Aarhus Convention be interpreted in such a way as to make it in practice impossible or excessively difficult to exercise rights conferred by EU law.

50 It follows that, in so far as concerns a species protected by EU law, and in particular the Habitats Directive, it is for the national court, in order to ensure effective judicial protection in the fields covered by EU environmental law, to interpret its national law in a way which, to the fullest extent possible, is consistent with the objectives laid down in Article 9(3) of the Aarhus Convention.

51 Therefore, it is for the referring court to interpret, to the fullest extent possible, the procedural rules relating to the conditions to be met in order to bring administrative or judicial proceedings in accordance with the objectives of Article 9(3) of the Aarhus Convention and the objective of effective judicial protection of the rights conferred by EU law, so as to enable an environmental

protection organisation, such as the zoskupenie, to challenge before a court a decision taken following administrative proceedings liable to be contrary to EU environmental law (see, to that effect, Case C-432/05 *Unibet* [2007] ECR I-2271, paragraph 44, and *Impact*, paragraph 54).

52 In those circumstances, the answer to the first and second questions referred is that Article 9(3) of the Aarhus Convention does not have direct effect in EU law. It is, however, for the referring court to interpret, to the fullest extent possible, the procedural rules relating to the conditions to be met in order to bring administrative or judicial proceedings in accordance with the objectives of Article 9(3) of that convention and the objective of effective judicial protection of the rights conferred by EU law, in order to enable an environmental protection organisation, such as the zoskupenie, to challenge before a court a decision taken following administrative proceedings liable to be contrary to EU environmental law.

The third question

53 In the light of the reply given to the first and second questions, it is not necessary to reply to the third question.

Costs

54 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

Article 9(3) of the Convention on access to information, public participation in decision-making and access to justice in environmental matters approved on behalf of the European Community by Council Decision 2005/370/EC of 17 February 2005 does not have direct effect in European Union law. It is, however, for the referring court to interpret, to the fullest extent possible, the procedural rules relating to the conditions to be met in order to bring administrative or judicial proceedings in accordance with the objectives of Article 9(3) of that convention and the objective of effective judicial protection of the rights conferred by European Union law, in order to enable an environmental protection organisation, such as the Lesoochranárske zoskupenie, to challenge before a court a decision taken following administrative proceedings liable to be contrary to European Union environmental law.

JUDGMENT OF THE COURT (Grand Chamber)

24 January 2012 *(1)

(Social policy – Directive 2003/88/EC – Article 7 – Right to paid annual leave – Precondition for entitlement imposed by national rules – Absence of the worker – Length of the leave entitlement based on the nature of the absence – National rules incompatible with Directive 2003/88 – Role of the national court)

In Case C-282/10,

REFERENCE for a preliminary ruling under Article 267 TFEU from the Cour de cassation (France), made by decision of 2 June 2010, received at the Court on 7 June 2010, in the proceedings

Maribel Dominguez

v

Centre informatique du Centre Ouest Atlantique,

Préfet de la région Centre,

THE COURT (Grand Chamber),

composed of V. Skouris, President, A. Tizzano, J.N. Cunha Rodrigues, K. Lenaerts, and U. Lõhmus, Presidents of Chambers, A. Rosas, E. Levits (Rapporteur), A. Ó Caoimh, L. Bay Larsen, T. von Danwitz and A. Arabadjiev, Judges,

Advocate General: V. Trstenjak,

Registrar: R. Şereş, Administrator,

having regard to the written procedure and further to the hearing on 17 May 2011,

after considering the observations submitted on behalf of:

– Ms Dominguez, by H. Masse-Dessen and V. Lokiec, avocats,

– the Centre informatique du Centre Ouest Atlantique, by D. Célice, avocat,

– the French Government, by G. de Bergues, A. Czubinski and N. Rouam, acting as Agents,

– the Danish Government, by S. Juul Jørgensen, acting as Agent,

– the Netherlands Government, by C. Wissels and M. Noort, acting as Agents,

– the European Commission, by M. van Beek and M. Van Hoof, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 8 September 2011,

gives the following

Judgment

1 This reference for a preliminary ruling concerns the interpretation of Article 7 of Directive 2003/88/EC of the European Parliament and of the Council of 4 November 2003 concerning certain aspects of the organisation of working time (OJ 2003 L 299, p. 9).

2 The reference has been made in the proceedings between Ms Dominguez and her employer, the Centre informatique du Centre Ouest Atlantique ('the CICOA'), concerning Ms Dominguez's claim for entitlement to paid annual leave not taken in respect of the period between November 2005 and January 2007 due to absence from work granted after an accident and, in the alternative, for compensation.

Legal context

European Union legislation

3 Article 1 of Directive 2003/88 provides:

'Purpose and scope

1. This Directive lays down minimum safety and health requirements for the organisation of working time.

2. This Directive applies to:

(a) minimum periods of … annual leave …

...'

4 Article 7 of that directive reads as follows:

'Annual leave

1. Member States shall take the measures necessary to ensure that every worker is entitled to paid annual leave of at least four weeks in accordance with the conditions for entitlement to, and granting of, such leave laid down by national legislation and/or practice.

2. The minimum period of paid annual leave may not be replaced by an allowance in lieu, except where the employment relationship is terminated.'

5 Article 15 of that directive provides:

'More favourable provisions

This Directive shall not affect Member States' right to apply or introduce laws, regulations or administrative provisions more favourable to the protection of the safety and health of workers or to facilitate or permit the application of collective agreements or agreements concluded between the two sides of industry which are more favourable to the protection of the safety and health of workers.'

6 Article 17 of Directive 2003/88 provides that Member States may derogate from certain provisions of that directive. No derogation is allowed with regard to Article 7 of the directive.

National legislation

7 The first paragraph of Article L. 223-2 of the Code du travail (Labour Code) provides:

‘A worker who, during the reference year, has been employed by the same employer for a period equivalent to a minimum of one month of actual work shall be entitled to leave, the length of which shall be calculated on the basis of two and a half working days for each month worked, provided the total period of leave that may be requested does not exceed thirty working days.’

8 Article L. 223-4 of the Code du travail provides:

‘Periods equivalent to four weeks or twenty-four days of work shall be treated as equivalent to one month of actual work for the purpose of calculating the length of leave. Periods of paid leave, compensatory leave …, periods of maternity leave …, leave acquired by reason of reduced working time and periods of an uninterrupted duration not exceeding one year during which performance of the contract of employment is suspended owing to a work-related accident or occupational disease, shall be treated as periods of actual work ...’

9 The fourth paragraph of Article XIV of the model rules annexed to the national collective labour agreement for staff of social security bodies provides:

‘No annual leave entitlement is given in a particular year in respect of absences as a result of the following: illness or prolonged illness that has resulted in a break in work of twelve consecutive months or more, ... leave entitlement begins again on the date on which work is resumed, the length of leave being calculated in proportion to the time of actual work that has not yet given rise to the allocation of annual leave.’

The dispute in the main proceedings and the questions referred for a preliminary ruling

10 Ms Dominguez, who has been employed by the CICOA since 1987, is covered by the collective labour agreement for staff of social security bodies. Following an accident on the journey between her home and her place of work she was absent from work from 3 November 2005 until 7 January 2007.

11 Ms Dominguez brought a claim before the industrial relations court (juridiction prud’homale) and also the Cour d’appel, Limoges for 22.5 days’ paid leave in respect of that period and, in the alternative, a payment in lieu of leave.

12 Since those courts dismissed her claims, Ms Dominguez brought an appeal on a point of law. She argues that an accident on the journey to or from work is a work-related accident and is covered by the same arrangements as a work-related accident. Thus, under Article L. 223-4 of the Code du travail, the period of suspension of her contract of employment following the accident on the journey to work should be treated as being equivalent to actual work time for the purpose of calculating her paid leave.

13 In the light of the case-law of the Court of Justice relating to Article 7 of Directive 2003/88, the Cour de cassation (French Court of Cassation) was unsure whether the relevant French provisions were compatible with that article.

14 In those circumstances, the Cour de cassation decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

‘1. Must Article 7(1) of Directive 2003/88… be interpreted as precluding national provisions or practices which make entitlement to paid annual leave conditional on a minimum of ten days’ (or one month’s) actual work during the reference period?

2. If the answer to the first question is in the affirmative, does Article 7 of Directive 2003/88…, which imposes a specific obligation on an employer in so far as it creates entitlement to paid leave for a worker who is absent on health grounds for a period of one year or more, require a national court hearing proceedings between individuals to disregard a conflicting national provision which makes entitlement to paid annual leave in such a case conditional on at least ten days’ actual work during the reference year?

3. Since Article 7 of Directive 2003/88/EC does not distinguish between workers according to whether their absence from work during the reference period is due to a work-related accident, an occupational disease, an accident on the journey to or from work or a non-occupational disease, are workers entitled, under that directive, to paid leave of the same length whatever the reason for their absence on health grounds, or must that directive be interpreted as not precluding the length of paid leave differing according to the reason for the worker’s absence, if national law provides that in certain circumstances the length of paid annual leave may exceed the minimum of four weeks provided for by [Directive 2003/88]?’

The first question

15 By its first question, the national court asks, essentially, whether Article 7(1) of Directive 2003/88 must be interpreted as precluding national provisions or practices which make entitlement to paid annual leave conditional on a minimum period of ten days’ or one month’s actual work during the reference period.

16 In that regard it should be noted that, according to settled case-law, the entitlement of every worker to paid annual leave must be regarded as a particularly important principle of European Union social law from which there can be no derogations and whose implementation by the competent national authorities must be confined within the limits expressly laid down by Council Directive 93/104/EC of 23 November 1993 concerning certain aspects of the organisation of working time (OJ 1993 L 307, p. 18) itself, that directive being now codified by Directive 2003/88 (see Case C-173/99 *BECTU* [2001] ECR I-4881, paragraph 43; Joined Cases C-350/06 and C-520/06 *Schultz-Hoff and Others* [2009] ECR I-179, paragraph 22; and Case C-214/10 *KHS* [2011] ECR I-0000, paragraph 23).

17 Thus, Directive 93/104 must be interpreted as precluding Member States from unilaterally limiting the entitlement to paid annual leave conferred on all workers by applying a precondition for such entitlement which has the effect of preventing certain workers from benefiting from it (*BECTU*, paragraph 52).

18 Although Member States are free to lay down, in their domestic legislation, conditions for the exercise and implementation of the right to paid annual leave, they are not entitled to make the very existence of that right subject to any preconditions whatsoever (see *Schultz-Hoff and Others*, paragraph 46).

19 Thus, the requisite arrangements for implementation and application of the requirements of Directive 93/104, codified by Directive 2003/88, may display certain divergences as regards the conditions for

exercising the right to paid annual leave, but that directive does not allow Member States to exclude the very existence of a right expressly granted to all workers (*BECTU*, paragraph 55, and *Schultz-Hoff and Others*, paragraph 47).

20 Also, since Directive 2003/88 does not make any distinction between workers who are absent from work on sick leave during the reference period and those who have in fact worked in the course of that period (see *Schultz-Hoff and Others*, paragraph 40) it follows that, with regard to workers on sick leave which has been duly granted, the right to paid annual leave conferred by that directive on all workers cannot be made subject by a Member State to a condition that the worker has actually worked during the reference period laid down by that State (*Schultz-Hoff and Others*, paragraph 41).

21 It follows from the foregoing that Article 7(1) of Directive 2003/88 must be interpreted as precluding national provisions or practices which make entitlement to paid annual leave conditional on a minimum period of ten days' or one month's actual work during the reference period.

The second question

22 By its second question, the national court asks, essentially, whether Article 7 of Directive 2003/88 must be interpreted as meaning that in proceedings between individuals a national provision which makes entitlement to paid annual leave conditional on a minimum period of actual work during the reference period, which is contrary to Article 7, must be disregarded.

23 It should be stated at the outset that the question whether a national provision must be disapplied in as much as it conflicts with European Union law arises only if no compatible interpretation of that provision proves possible.

24 In that regard, the Court has consistently held that when national courts apply domestic law they are bound to interpret it, so far as possible, in the light of the wording and the purpose of the directive concerned in order to achieve the result sought by the directive and consequently comply with the third paragraph of Article 288 TFEU. This obligation to interpret national law in conformity with European Union law is inherent in the system of the Treaty on the Functioning of the European Union, since it permits national courts, for the matters within their jurisdiction, to ensure the full effectiveness of European Union law when they determine the disputes before them (see, inter alia, Joined Cases C-397/01 to C-403/01 *Pfeiffer and Others* [2004] ECR I-8835, paragraph 114; Joined Cases C-378/07 to C-380/07 *Angelidaki and Others* [2009] ECR I-3071, paragraphs 197 and 198; and Case C-555/07 *Kücükdeveci* [2010] ECR I-365, paragraph 48).

25 It is true that this principle of interpreting national law in conformity with European Union law has certain limitations. Thus the obligation on a national court to refer to the content of a directive when interpreting and applying the relevant rules of domestic law is limited by general principles of law and it cannot serve as the basis for an interpretation of national law contra legem (see Case C-268/06 *Impact* [2008] ECR I-2483, paragraph 100, and *Angelidaki and Others*, paragraph 199).

26 In the dispute in the main proceedings, the national court states that it has encountered such a limitation. According to that court, the first paragraph of Article L. 223-2 of the Code du travail, which makes entitlement to paid annual leave conditional on a minimum of one month's actual work during the reference period, is not amenable to an interpretation that is compatible with Article 7 of Directive 2003/88.

27 In that regard, it should be noted that the principle that national law must be interpreted in conformity

with European Union law also requires national courts to do whatever lies within their jurisdiction, taking the whole body of domestic law into consideration and applying the interpretative methods recognised by domestic law, with a view to ensuring that the directive in question is fully effective and achieving an outcome consistent with the objective pursued by it (see Case C-212/04 *Adeneler and Others* [2006] ECR I-6057, paragraph 111, and *Angelidaki and Others*, paragraph 200).

28 In the dispute in the main proceedings, Article L. 223-4 of the Code du travail, which provides an exemption from the requirement of actual work during the reference period in respect of certain periods of absence from work, is an integral part of the domestic law to be taken into consideration by the French courts.

29 If Article L. 223-4 of the Code du travail were to be interpreted by the national court as meaning that a period of absence due to an accident on the journey to or from work must be treated as being equivalent to a period of absence due to an accident at work in order to give full effect to Article 7 of Directive 2003/88, that court would not encounter the limitation, referred to in paragraph 26 above, as regards interpreting Article L. 223-2 of the Code du travail in accordance with European Union law.

30 In that regard, it should be pointed out that Article 7 of Directive 2003/88 does not make any distinction between workers who are absent on sick leave during the reference period and those who have actually worked in the course of that period (see paragraph 20 above). It follows that the right to paid annual leave of a worker who is absent from work on health grounds during the reference period cannot be made subject by a Member State to a condition concerning the obligation actually to have worked during that period. Thus, according to Article 7 of Directive 2003/88, any worker, whether he be on sick leave during the reference period as a result of an accident at his place of work or elsewhere, or as the result of sickness of whatever nature or origin, cannot have his entitlement to at least four weeks' paid annual leave affected.

31 It is clear from the foregoing that it is for the national court to determine, taking the whole body of domestic law into consideration, in particular Article L. 223-4 of the Code du travail, and applying the interpretative methods recognised by domestic law with a view to ensuring that Directive 2003/88 is fully effective and achieving an outcome consistent with the objective pursued by it, whether it can find an interpretation of that law that allows the absence of the worker due to an accident on the journey to or from work to be treated as being equivalent to one of the situations covered by that article of the Code du travail.

32 In the event that such an interpretation is not possible, it is necessary to consider whether Article 7(1) of Directive 2003/88 has a direct effect and, if so, whether Ms Dominguez may rely on that direct effect against the respondents in the main proceedings, in particular her employer, the CICOA, in view of their legal nature.

33 In that regard, it is clear from the settled case-law of the Court that, whenever the provisions of a directive appear, so far as their subject-matter is concerned, to be unconditional and sufficiently precise, they may be relied upon before the national courts by individuals against the State where the latter has failed to implement the directive in domestic law by the end of the period prescribed or where it has failed to implement the directive correctly (see, inter alia, *Pfeiffer and Others*, paragraph 103 and the case-law cited).

34 Article 7 of Directive 2003/88 fulfils those criteria as it imposes on Member States, in unequivocal terms, a precise obligation as to the result to be achieved that is not coupled with any condition regarding application of the rule laid down by it, which gives every worker entitlement to at least four

weeks' paid annual leave.

35 Even though Article 7 of Directive 2003/88 leaves the Member States a degree of latitude when they adopt the conditions for entitlement to, and granting of, the paid annual leave which it provides for, that does not alter the precise and unconditional nature of the obligation laid down in that article. It is appropriate to note in that regard that Article 7 of Directive 2003/88 is not one of the provisions of that directive from which Article 17 thereof permits derogation. It is therefore possible to determine the minimum protection which must be provided in any event by the Member States pursuant to that Article 7 (see, *mutatis mutandis*, *Pfeiffer and Others*, paragraph 105).

36 Since Article 7(1) of Directive 2003/88 fulfils the conditions required to produce a direct effect, it should also be noted that the CICOA, one of the two respondents in the main proceedings and Ms Dominguez's employer, is a body operating in the field of social security.

37 It is true that the Court has consistently held that a directive cannot of itself impose obligations on an individual and cannot therefore be relied on as such against an individual (see, inter alia, Case C-91/92 *Faccini Dori* [1994] ECR I-3325, paragraph 20; Case C-192/94 *El Corte Inglés* [1996] ECR I-1281, paragraph 15; *Pfeiffer and Others*, paragraph 108; and *Kücükdeveci*, paragraph 46).

38 It should also be recalled however that, where a person is able to rely on a directive not as against an individual but as against the State he may do so regardless of the capacity in which the latter is acting, whether as employer or as public authority. In either case it is necessary to prevent the State from taking advantage of its own failure to comply with European Union law (see, inter alia, Case 152/84 *Marshall* [1986] ECR 723, paragraph 49; Case C-188/89 *Foster and Others* [1990] ECR I-3313, paragraph 17; and Case C-343/98 *Collino and Chiappero* [2000] ECR I-6659, paragraph 22).

39 Thus the entities against which the provisions of a directive that are capable of having direct effect may be relied upon include a body, whatever its legal form, which has been made responsible, pursuant to a measure adopted by the State, for providing a public service under the control of the State and has for that purpose special powers beyond those which result from the normal rules applicable in relations between individuals (see, inter alia, *Foster and Others*, paragraph 20; *Collino and Chiappero*, paragraph 23; and Case C-356/05 *Farrell* [2007] ECR I-3067, paragraph 40).

40 It is therefore for the national court to determine whether Article 7(1) of Directive 2003/88 may be relied upon against the CICOA.

41 If that is the case, as Article 7 of Directive 2003/88 fulfils the conditions required to produce a direct effect, the consequence would be that the national court would have to disregard any conflicting national provision.

42 If that is not the case, it should be borne in mind that even a clear, precise and unconditional provision of a directive seeking to confer rights or impose obligations on individuals cannot of itself apply in proceedings exclusively between private parties (see *Pfeiffer and Others*, paragraph 109).

43 In such a situation, the party injured as a result of domestic law not being in conformity with European Union law can none the less rely on the judgment in Joined Cases C-6/90 and C-9/90 *Francovich and Others* [1991] ECR I-5357 in order to obtain, if appropriate, compensation for the loss sustained.

44 The answer to the second question is therefore that

– it is for the national court to determine, taking the whole body of domestic law into

consideration, in particular Article L. 223-4 of the Code du travail, and applying the interpretative methods recognised by domestic law, with a view to ensuring that Article 7 of Directive 2003/88 is fully effective and achieving an outcome consistent with the objective pursued by it, whether it can find an interpretation of that law that allows the absence of the worker due to an accident on the journey to or from work to be treated as being equivalent to one of the situations covered by that article of the Code du travail.

– if such an interpretation is not possible, it is for the national court to determine whether, in the light of the legal nature of the respondents in the main proceedings, the direct effect of Article 7(1) of Directive 2003/88 may be relied upon against them.

– if the national court is unable to achieve the objective laid down in Article 7 of Directive 2003/88, the party injured as a result of domestic law not being in conformity with European Union law can none the less rely on the judgment in *Francovich and Others* in order to obtain, if appropriate, compensation for the loss sustained.

The third question

45 By its third question, the national court asks, essentially, whether Article 7 of Directive 2003/88 must be interpreted as precluding a national provision which, depending on the reason for the worker's absence on sick leave, provides for a period of paid annual leave equal to or exceeding the minimum period of four weeks laid down in that directive.

46 In that regard, it should be noted, as was held in paragraph 30 above, that Article 7 of Directive 2003/88 does not make any distinction, on grounds of the reason for the worker's absence on sick leave, duly granted, and any worker, whether he be on sick leave following an accident at his place of work or elsewhere, or as the result of sickness of whatever nature or origin, is entitled to at least four weeks' paid annual leave.

47 However, as stated both by the Advocate General in point 178 of her Opinion and by the European Commission in its written observations, the finding made in the preceding paragraph does not mean that Directive 2003/88 precludes national provisions giving entitlement to more than four weeks' paid annual leave, granted under the conditions for entitlement to, and granting of, the right to paid annual leave laid down by that national law.

48 As appears expressly from Article 1(1) and (2)(a) and from Articles 7(1) and 15 of Directive 2003/88, the purpose of the directive is merely to lay down minimum safety and health requirements for the organisation of working time and it does not affect Member States' right to apply national provisions more favourable to the protection of workers.

49 Thus it is permissible for Member States to provide that entitlement to paid annual leave under national law may vary according to the reason for the worker's absence on health grounds, provided that the entitlement is always equal to or exceeds the minimum period of four weeks laid down in Article 7 of that directive.

50 It follows from the foregoing that Article 7(1) of Directive 2003/88 must be interpreted as not precluding a national provision which, depending on the reason for the worker's absence on sick leave, provides for a period of paid annual leave equal to or exceeding the minimum period of four weeks laid down in that directive.

Costs

51 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

1. **Article 7(1) of Directive 2003/88/EC of the European Parliament and of the Council of 4 November 2003 concerning certain aspects of the organisation of working time must be interpreted as precluding national provisions or practices which make entitlement to paid annual leave conditional on a minimum period of ten days' or one month's actual work during the reference period;**

2. **It is for the national court to determine, taking the whole body of domestic law into consideration, in particular Article L. 223-4 of the Code du travail, and applying the interpretative methods recognised by domestic law, with a view to ensuring that Article 7 of Directive 2003/88 is fully effective and achieving an outcome consistent with the objective pursued by it, whether it can find an interpretation of that law that allows the absence of the worker due to an accident on the journey to or from work to be treated as being equivalent to one of the situations covered by that article of the Code du travail.**

   If such an interpretation is not possible, it is for the national court to determine whether, in the light of the legal nature of the respondents in the main proceedings, the direct effect of Article 7(1) of Directive 2003/88 may be relied upon against them.

   If the national court is unable to achieve the objective laid down in Article 7 of Directive 2003/88, the party injured as a result of domestic law not being in conformity with European Union law can none the less rely on the judgment of 19 November 1991 in Joined Cases C-6/90 and C-9/90 *Francovich and Others* in order to obtain, if appropriate, compensation for the loss sustained.

3. **Article 7(1) of Directive 2003/88 must be interpreted as not precluding a national provision which, depending on the reason for the worker's absence on sick leave, provides for a period of paid annual leave equal to or exceeding the minimum period of four weeks laid down in that directive.**

JUDGMENT OF THE COURT (Fourth Chamber)

19 December 2012 (*)

(Failure of a Member State to fulfil obligations – Directive 75/442/EEC – Domestic waste waters discharged through septic tanks in the countryside – Judgment of the Court finding that a Member State has failed to fulfil obligations – Article 260(2) TFEU – Measures to ensure compliance with a judgment of the Court – Financial penalties – Penalty payment – Lump sum)

In Case C-374/11,

ACTION under Article 260(2) TFEU for failure to fulfil obligations, brought on 13 July 2011,

European Commission, represented by E. White, acting as Agent, with an address for service in Luxembourg,

applicant,

v

Ireland, represented by D. O'Hagan and E. Creedon, acting as Agents**,** assisted by A. Collins, SC, and M. Gray, BL, with an address for service in Luxembourg,

defendant,

THE COURT (Fourth Chamber),

composed of L. Bay Larsen, acting as President of the Fourth Chamber, J.-C. Bonichot (Rapporteur), C. Toader, A. Prechal and E. Jarašiūnas, Judges,

Advocate General: J. Kokott,

Registrar: T. Millett, Deputy Registrar,

having regard to the written procedure and further to the hearing on 4 October 2012,

having decided, after hearing the Advocate General, to proceed to judgment without an Opinion,

gives the following

Judgment

1 By its application, the European Commission requests the Court to:

– declare that, by failing to take the necessary measures to comply with the judgment of the Court of 29 October 2009 in Case C-188/08 *Commission* v *Ireland* concerning the failure of Ireland to fulfil its obligations under Council Directive 75/442/EEC of 15 July 1975 on waste (OJ 1975 L 194, p. 39), as amended by Council Directive 91/156/EEC of 18 March 1991 (OJ 1991

L 78, p. 32) (‘Directive 75/442’), Ireland has failed to fulfil its obligations under Article 260 TFEU;

– order Ireland to pay to the Commission a lump sum of EUR 4 771.20 multiplied by the number of days between the date of delivery of the judgment in Case C-188/08 *Commission* v *Ireland* and the date of the judgment in the present case (or the date of full compliance with the judgment in Case C-188/08 *Commission* v *Ireland*, if such compliance occurs while the present case is pending);

– order Ireland to pay to the Commission a daily penalty payment of EUR 26 173.44 from the date of judgment delivered in the present proceedings to the date of compliance by Ireland with the judgment in Case C-188/08 *Commission* v *Ireland*; and

– order Ireland to pay the costs.

Legal context

2 Article 4 of Directive 75/442 is worded as follows:

‘Member States shall take the necessary measures to ensure that waste is recovered or disposed of without endangering human health and without using processes or methods which could harm the environment, and in particular:

– without risk to water, air, soil and plants or animals;

– without causing a nuisance through noise or odours;

– without adversely affecting the countryside or places of special interest.

Member States shall also take the necessary measures to prohibit the abandonment, dumping or uncontrolled disposal of waste.’

3 Article 8 of that directive provides:

‘Member States shall take the necessary measures to ensure that any holder of waste:

– has it handled by a private or public waste collector or by an undertaking which carries out the operations listed in Annex II A or II B, or

– recovers or disposes of it himself in accordance with the provisions of this Directive’.

4 Article 13 of Directive 75/442 states:

‘Establishments or undertakings which carry out the operations referred to in Articles 9 to 12 shall be subject to appropriate periodic inspections by the competent authorities’.

The judgment in Case C-188/08 *Commission* v *Ireland*

5 On 6 May 2008, the Commission, pursuant to Article 226 EC, brought an action against Ireland for failure to fulfil obligations by which it sought a declaration that that Member State had failed to fulfil its obligations under Directive 75/442 by failing to transpose, fully and correctly, into its domestic

legislation the requirements of Articles 4 and 8 of that directive, relating to the disposal of domestic waste waters in the countryside through septic tanks and other individual waste water treatment systems ('IWWTS').

6 In paragraph 1 of the operative part of the judgment in Case C-188/08 *Commission* v *Ireland*, the Court held as follows:

'… by failing to adopt, save in County Cavan, all the laws, regulations and administrative provisions necessary to comply with Articles 4 and 8 of [Directive 75/442] … as regards domestic waste waters disposed of in the countryside through [IWWTS], Ireland has failed to fulfil its obligations under that directive'.

The pre-litigation procedure

7 By letter of 23 November 2009, the Commission requested the Irish authorities to notify it of the measures taken to comply with the judgment in Case C-188/08 *Commission* v *Ireland*.

8 The Irish authorities replied by letter of 22 December 2009, proposing to the Commission a timetable for the adoption of the legislative and regulatory provisions envisaged and outlining their main features. That letter also announced, first, the creation of a working group to determine the appropriate performance standards and necessary changes in the planning requirements and building standards and, secondly, the publication by the Environmental Protection Agency (EPA) of a 'Code of Practice' on on-site waste-water treatment and disposal systems.

9 As it was not satisfied with that reply, the Commission, in a letter dated 25 November 2010, sent to Ireland a letter of formal notice calling on it to submit, within two months from the date of notification, its observations on the extent to which the judgment had been complied with.

10 On 3 February 2011, the Irish authorities replied to the letter of formal notice by informing the Commission of the progress of the legislative work. They stated that draft legislation amending the Water Services Act 2007 had been prepared and would be presented as soon as possible to the Government for approval.

11 In an additional reply received by the Commission on 10 May 2011, the Irish authorities stated that the draft legislative text had been approved by the Government.

12 As it was still not satisfied by the replies provided by the Irish authorities, the Commission, in accordance with Article 260(2) TFEU, brought the present action before the Court.

Procedure before the Court

13 In the course of the written procedure, the Irish authorities sent to the Commission the initial version of the 2011 draft legislation amending the 2007 Act (the Water Services (Amendment) Bill 2011). The Commission, basing itself on the provisions of the draft legislation, expressed the view, in its reply, that such measures still did not ensure the correct transposition of Articles 4 and 8 of Directive 75/442.

14 The Irish authorities informed the Court, in their rejoinder, that that draft legislation had been adopted and that the Water Services (Amendment) Act 2012 had entered into force.

The failure to fulfil obligations

Arguments of the parties

15 The Commission, examining the Water Services (Amendment) Bill 2011, considers that the effectiveness of the monitoring and inspection system provided for still depends on ministerial regulations which will be approved at a later date. It points out that the financing of the new inspection system seems to it to be uncertain, that there is no express obligation requiring the competent authorities to ensure that inspections are carried out, that the national inspection plan does not appear to be binding, that the system envisaged for the recruitment of inspectors does not guarantee that there will be a sufficient number of inspectors, and that the inspections are neither systematic nor sufficiently binding.

16 Ireland is of the view that it has taken the measures necessary to comply with the Court's judgment by adopting the Water Services (Amendment) Act 2012. That act provides for the establishment of a new monitoring and inspection system for septic tanks and other on-site systems for the treatment of waste water and drains associated with the discharge of domestic waste water. It also provides that the owners of such systems must ensure that they are registered with the competent water services authority.

17 Ireland claims that, in any event, the action should be dismissed, on the ground that the application was made too early. The period of 21 months between the delivery of the judgment in Case C-188/08 *Commission* v *Ireland* and the Commission's application is, it argues, insufficient in the light of the efforts required by the Irish authorities in order to comply with that judgment and does not take into account either the continuing and constructive dialogue that Ireland has been engaged in with the Commission after that judgment was delivered or the difficulties involved in the adoption of legislation in a particularly complex area.

Findings of the Court

18 According to Article 260(2) TFEU, if the Commission considers that the Member State concerned has not taken the necessary measures to comply with the Court's judgment, it may, after giving that Member State the opportunity to submit its observations, bring the case before the Court specifying the amount of the lump sum or penalty payment to be paid by the Member State concerned which it considers appropriate in the circumstances.

19 In that respect, the reference date for assessing whether there has been a failure to fulfil obligations under Article 260(1) TFEU is the date of expiry of the period prescribed in the reasoned opinion issued under that provision (see judgment of 11 December 2012 in Case C-610/10 *Commission* v *Spain* [2012] ECR I-0000, paragraph 67).

20 In the present case, it is common ground that, at the time when the period laid down in the reasoned opinion sent by the Commission to Ireland on 25 November 2010 expired, Ireland had not adopted all the measures necessary to ensure full compliance with the obligations resulting from the judgment in Case C-188/08 *Commission* v *Ireland*.

21 Furthermore, with regard to Ireland's argument that the action is premature, it must be pointed out that, even though Article 260(1) TFEU does not specify the period within which a judgment must be complied with, it follows from settled case-law that the importance of immediate and uniform application of European Union law means that the process of compliance must be initiated at once and

completed as soon as possible (see, to that effect, Case C-278/01 *Commission* v *Spain* [2003] ECR I-14141, paragraph 27 and the case-law cited).

22 In the present case, however, a period of approximately 21 months elapsed between the delivery of the judgment in Case C-188/08 *Commission* v *Ireland* and the lodging of the Commission's application. Even though the implementation of the judgment in Case C-188/08 *Commission* v *Ireland* involved complex operations, such a period cannot, in the circumstances of the present case, be considered to be insufficient.

23 In those circumstances, it must be held that, by failing to adopt all of the measures necessary to ensure compliance with the judgment in Case C-188/08 *Commission* v *Ireland*, Ireland has failed to fulfil its obligations under Article 260(1) TFEU.

The financial penalties

Arguments of the parties

24 The Commission, establishing that Ireland has still not complied with the judgment in Case C-188/08 *Commission* v *Ireland*, submits that that Member State should be ordered to pay, firstly, a lump sum of EUR 4 771.20, multiplied by the number of days between the date of delivery of that judgment and the date of the Court's judgment in the present case and, secondly, a daily penalty payment of EUR 26 173.44 from the date of the judgment in the present case to the date of full compliance by Ireland with the first judgment.

25 Referring to the guidelines contained in its Communication SEC (2005) 1658 of 13 December 2005 on the application of Article 228 EC (OJ 2007 C 126, p 15), as updated by Communication SEC (2010) 923/3 of 20 July 2010 entitled 'Application of Article 260 of the Treaty on the Functioning of the European Union. Up-dating of data used to calculate lump sum and penalty payments to be proposed by the Commission to the Court of Justice in infringement proceedings', the Commission proposes to apply penalties calculated on the basis of a seriousness factor of 8 out of 20, taking account of the importance of the European Union rules which were the subject of the infringement, that is to say, the provisions of a directive intended to protect human health and the environment, the large number of IWWTS concerned by the inadequacies of the national provisions with regard to the requirements of that directive, and the extent of the risk of pollution resulting therefrom. The Commission, furthermore, considers that account must be taken of Ireland's repeated engagement in infringing conduct which has given rise to the delivery by the Court of several judgments against that Member State for failure to fulfil its obligations in environmental matters.

26 In order to determine the duration of the infringement, the Commission submits that the amount of the lump sum must be calculated with regard to the period between the date of delivery of the judgment in Case C-188/08 *Commission* v *Ireland*, implementation of which is sought, and the date on which it decided to bring the present proceedings before the Court, that is to say, approximately 18 months, which corresponds, under the terms of its Communication of 13 December 2005, to a duration factor of 1.8.

27 Finally, in order to determine the factor 'n', which corresponds to the financial capacity of individual Member States, the Commission relies on its Communication of 20 July 2010, which fixes that factor, for Ireland, at 2.84. The Commission adds that, while it is true that, in a revision dated 1 September 2011 (SEC (2011) 1024 final), the factor 'n' for Ireland was reduced to 2.71, it is not appropriate to

take account of that factor as the present action was brought prior to that revision.

28 Ireland, for its part, contends that, since the adoption of the Water Services (Amendment) Act 2012, there is no longer any need to order it to pay a lump sum or penalty payment. On the assumption, however, that the Court intends to impose such financial penalties on it, Ireland argues that the lump sum should not be in excess of EUR 630 per day and that the penalty payment should not exceed EUR 5 000 per day.

29 In respect of the criterion of seriousness, Ireland considers that a factor of 3 out of 20 would be more appropriate, in view of the difficulties encountered by the Irish legislature, the existence in Irish legislation of provisions which could not have been taken into account by the Court in 2009, as being subsequent to the date fixed in the reasoned opinion, the establishment by the Environmental Protection Agency of stricter criteria regarding drinking water and, finally, the proven and sincere cooperation of the Irish authorities.

30 Ireland considers that the Court should take into account, in assessing the duration of the infringement, the commitment of the Irish authorities to on-going constructive dialogue with the Commission on the content of the draft legislation, which falls into a complex legislative framework requiring time to enact the legislation necessary to ensure compliance with the judgment in Case C-188/08 *Commission* v *Ireland*.

31 Finally, the Irish authorities take issue with the method employed by the Commission to determine Ireland's capacity-to-pay factor, since this does not take into account the fall in Ireland's gross domestic product between 2008 and 2010 and the deterioration of Ireland's public finances. The reference to a gross domestic product dating back to three years prior to the commencement of the proceedings is, it is submitted, inadequate. The factor 'n' should be reduced to 1. In any event, if the Court should decide to apply the factor 'n' as set out in the Commission's Communications, Ireland argues that it would be appropriate to use the factor indicated in the most recent Communication.

Findings of the Court

32 Having recognised that Ireland has failed to comply with the judgment in Case C-188/08 *Commission* v *Ireland*, compliance with which the Commission is seeking to ensure, the Court may impose on that Member State, pursuant to the second subparagraph of Article 260(2) TFEU, a lump sum or a penalty payment.

The penalty payment

– The principle of the imposition of a penalty payment

33 According to settled case-law, the imposition of a penalty payment is, in principle, justified only in so far as the failure to comply with an earlier judgment of the Court continues up to the time of the Court's examination of the facts (Case C-496/09 *Commission* v *Italy* [2011] ECR I-0000, paragraph 42, and Case C-610/10 *Commission* v *Spain*, paragraph 96).

34 It must be held in the present case that, at the time of that examination, the measures necessary for the implementation of the judgment in Case C-188/08 *Commission* v *Ireland* had not yet been adopted in full. In particular, it is common ground that the Water Services (Amendment) Act 2012 requires implementation of texts not all of which have yet been adopted and that the national inspection plan for IWWTS has still to be developed. It also does not appear that a definitive deadline for the registration of IWWTS has been set.

35 In those circumstances, the Court takes the view that the imposition of a penalty payment on Ireland constitutes an appropriate financial means to ensure full compliance with the judgment in Case C-188/08 *Commission* v *Ireland* (see, to that effect, *Commission* v *Italy*, paragraph 45, and Case C-610/10 *Commission* v *Spain*, paragraph 114).

– The amount of the penalty payment

36 It should be recalled that, in exercising its discretion in the matter, it is for the Court to set the penalty payment so that it is both appropriate to the circumstances and proportionate to the infringement established and the ability of the Member State concerned to pay (see *Commission* v *Italy*, paragraph 56 and the case-law cited).

37 In the assessment carried out by the Court, the criteria which must be taken into account in order to ensure that a penalty payment has coercive force with a view to the uniform and effective application of European Union law are, in principle, the duration of the infringement, its degree of seriousness and the ability of the Member State concerned to pay. For the purpose of applying those criteria, the Court is required to have regard in particular to the effects of non-compliance on the public and private interests at issue and to the urgency of compliance by the Member State concerned with its obligations (see *Commission* v *Italy*, paragraph 57).

38 In the present case, the failure to fulfil obligations identified in the judgment in Case C-188/08 *Commission* v *Ireland* concerns the incomplete transposition of Directive 75/442, Article 2 of which provided for a transposition period expiring no later than 1 April 1993. Since, more than 19 years after that date, Ireland has still not complied with all of its obligations under that directive – the principal objectives of which are the protection of human health and of the environment – the Court cannot but confirm the particularly lengthy character of an infringement which, in the light of such objectives, is also a matter of indisputable gravity.

39 While Ireland claims that the delay in its compliance with the judgment in Case C-188/08 *Commission* v *Ireland* was attributable to internal difficulties connected with the complexity of the implementation of Directive 75/442, it must be pointed out that a Member State cannot plead provisions, practices or situations prevailing in its domestic legal order to justify the failure to observe obligations arising under European Union law (see Case C-407/09 *Commission* v *Greece* [2011] ECR I-0000, paragraph 36).

40 Account must, however, be taken of the adoption of the Water Services (Amendment) Act 2012 and of significant measures such as, in particular, those designed to establish a national register of IWWTS and to ensure the training of inspectors of those systems, which demonstrate the efforts made by the Irish authorities since the delivery of the judgment in Case C-188/08 *Commission* v *Ireland* with a view to full compliance therewith.

41 In addition, Ireland has committed itself to implementing the final steps necessary for the full implementation of that judgment in close collaboration with the Commission. Ireland also states, inter alia, that the recruitment of the inspectors is underway and that the national inspection plan should be finalised by 31 December 2012.

42 In so doing, Ireland does not dispute that it has yet to finalise the measures necessary to ensure compliance with the judgment in Case C-188/08 *Commission* v *Ireland* establishing a failure to fulfil the requirements arising from Articles 4 and 8 of Directive 75/442. It is common ground in this regard that the transposition of that directive by the Water Services (Amendment) Act 2012 can be regarded

as effective only when the measures referred to at paragraph 34 of the present judgment are adopted.

43 Having regard to all of the circumstances of the present case, the Court considers that it is appropriate to impose a daily penalty payment of EUR 12 000 to ensure implementation of the judgment in Case C-188/08 *Commission* v *Ireland*, that sum taking into account Ireland's capacity to pay as it stands at the date of the Court's examination of the facts (see, to that effect, Case C-610/10 *Commission* v *Spain*, paragraph 131).

44 In the present case, the data provided by Ireland, which have not been substantively disputed by the Commission, show that that Member State's capacity to pay was reduced in the context of economic crisis (see also, to that effect, judgment of 19 December 2012 in Case C-279/11 *Commission* v *Ireland* [2012] ECR I-0000, paragraph 79).

45 In those circumstances, Ireland must be ordered to pay to the Commission, into the 'European Union own resources' account, a penalty payment of EUR 12 000 for each day of delay in adopting the measures necessary to ensure compliance with the judgment in Case C-188/08 *Commission* v *Ireland* from the date on which judgment is delivered in the present case until the date of full compliance with the judgment in Case C-188/08 *Commission* v *Ireland*.

The lump sum payment

– The principle of the imposition of a lump sum payment

46 As a preliminary point, it must be pointed out that, in the light of the objectives of the procedure laid down in Article 260(2) TFEU, the Court is empowered, in the exercise of the discretion conferred on it by that article, to impose a penalty payment and a lump sum payment cumulatively (see, to that effect, Case C-304/02 *Commission* v *France* [2005] ECR I-6263, paragraph 83, and Case C-610/10 *Commission* v *Spain*, paragraph 140).

47 The imposition of a lump sum payment must, in each individual case, depend on all the relevant factors relating both to the characteristics of the infringement established and to the conduct of the Member State involved in the procedure initiated under Article 260 TFEU. In that respect, that provision confers a wide discretion on the Court in deciding whether or not to impose such a penalty (Case C-610/10 *Commission* v *Spain*, paragraph 141).

48 With regard to the present case, the Court takes the view that all the legal and factual circumstances pertaining to the infringement established indicate that effective prevention of future repetition of similar infringements of European Union law requires the adoption of a deterrent measure, such as the imposition of a lump sum payment (see, to that effect, Case C-369/07 *Commission* v *Greece* [2009] ECR I-5703, paragraph 145, and Case C-610/10 *Commission* v *Spain*, paragraph 142).

49 Indeed, other than the failure to comply with the judgment in Case C-188/08 *Commission* v *Ireland*, which has given rise to the present proceedings, a finding of a failure on the part of Ireland to fulfil its obligations under European Union law as regards water quality was made, as the Commission points out, in the judgments in Case C-316/00 *Commission* v *Ireland* [2002] ECR I-10527, Case C-396/01 *Commission* v *Ireland* [2004] ECR I-2315 and Case C-282/02 *Commission* v *Ireland* [2005] ECR I-4653. Such a situation reflects the persistent avoidance by that Member State of its European Union obligations in that area.

– The amount of the lump sum payment

50 If the Court decides to order a lump sum payment, it must, in the exercise of its discretion, set that payment in such a way that it is, first, appropriate to the circumstances and, secondly, proportionate both to the infringement that has been established and to the ability of the Member State concerned to pay (*Commission* v *Greece*, paragraph 146).

51 The relevant factors to be taken into account in that regard include, in particular, factors such as how long the breach of obligations has persisted since the judgment which initially established it was delivered and the public and private interests involved (Case C-121/07 *Commission* v *France* [2008] ECR I-9159, paragraph 64 and the case-law cited).

52 In the present case, in the light of all of the foregoing and, in particular, of the considerations set out in paragraphs 38 to 45 of the present judgment, proper account of the circumstances of the present case will be taken by setting the amount of the lump sum which Ireland will have to pay at EUR 2 000 000.

53 It is therefore appropriate to order Ireland to pay to the Commission, into the account 'European Union own resources', a lump sum of EUR 2 000 000.

Costs

54 Under Article 138(1) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Commission has applied for costs and Ireland's failure to fulfil its obligations has been established, Ireland must be ordered to pay the costs.

On those grounds, the Court (Fourth Chamber) hereby:

1. **Declares that, by failing to adopt all of the measures necessary to ensure compliance with the judgment of 29 October 2009 in Case C-188/08 *Commission* v *Ireland* establishing that Ireland has failed to fulfil its obligations under Articles 4 and 8 of Council Directive 75/442/EEC of 15 July 1975 on waste, as amended by Council Directive 91/156/EEC of 18 March 1991, Ireland has failed to fulfil its obligations under Article 260(1) TFEU;**

2. **Orders Ireland to pay to the European Commission, into the 'European Union own resources' account, a penalty payment of EUR 12 000 for each day of delay in adopting the measures necessary to ensure compliance with the judgment in Case C-188/08 *Commission* v *Ireland*, with effect from the date on which judgment is delivered in the present case until the date of full compliance with the judgment in Case C-188/08 *Commission* v *Ireland*;**

3. **Orders Ireland to pay to the European Commission, into the 'European Union own resources' account, the lump sum of EUR 2 000 000;**

4. **Orders Ireland to pay the costs.**

[Signatures]

* Language of the case: English.

JUDGMENT OF THE COURT (Fourth Chamber)

31 January 2013 (*)

(Request for a preliminary ruling – Article 267 TFEU – Concept of 'national court' – Lack of jurisdiction of the Court)

In Case C-394/11,

REQUEST for a preliminary ruling under Article 267 TFEU from the Komisia za zashtita ot diskriminatsia (Bulgaria), made by decision of 19 July 2011, received at the Court on 25 July 2011, in the proceedings

Valeri Hariev Belov

v

CHEZ Elektro Balgaria AD,

Lidia Georgieva Dimitrova,

Roselina Dimitrova Kostova,

Kremena Stoyanova Stoyanova,

CHEZ Razpredelenie Balgaria AD,

Ivan Kovarzhchik,

Atanas Antonov Dandarov,

Irzhi Postolka,

Vladimir Marek,

Darzhavna Komisia po energiyno i vodno regulirane,

THE COURT (Fourth Chamber),

composed of L. Bay Larsen, acting for the President of the Fourth Chamber, J.-C. Bonichot, C. Toader, A. Prechal (Rapporteur) and E. Jarašiūnas, Judges,

Advocate General: J. Kokott,

Registrar: M. Aleksejev, Administrator,

having regard to the written procedure and further to the hearing on 11 July 2012,

after considering the observations submitted on behalf of:

– Mr Belov, by G. Chernicherska, Адвокат,

– CHEZ Elektro Balgaria AD and CHEZ Razpredelenie Balgaria AD, by A. Ganev and V. Bozhilov, Адвокати,

– the Bulgarian Government, by T. Ivanov and D. Drambozova, acting as Agents,

– the European Commission, by J. Enegren and D. Roussanov, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 20 September 2012,

gives the following

Judgment

1 This request for a preliminary ruling concerns the interpretation of Articles 2(2) and (3), 3(1)(h) and 8(1) of Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin (OJ 2000 L 180, p. 22), Article 3(5) of Directive 2003/54/EC of the European Parliament and of the Council of 26 June 2003 concerning common rules for the internal market in electricity and repealing Directive 96/92/EC (OJ 2003 L 176, p. 37), recital 29 in the preamble to and Articles 1 and 13(1) of Directive 2006/32/EC of the European Parliament and of the Council of 5 April 2006 on energy end-use efficiency and energy services and repealing Council Directive 93/76/EEC (OJ 2006 L 114, p. 64), Article 3(7) of Directive 2009/72/EC of the European Parliament and of the Council of 13 July 2009 concerning common rules for the internal market in electricity and repealing Directive 2003/54/EC (OJ 2009 L 211, p. 55), and Article 38 of the Charter of Fundamental Rights of the European Union.

2 The request has been made in proceedings seeking to establish whether the measure, consisting in placing meters to measure electricity consumption at a height of seven metres on posts situated outside houses connected to the electricity network in two areas of the City of Montana (Bulgaria) mainly inhabited by members of the Roma community, constitutes discrimination based on ethnic origin and, if so, to order the cessation of that discrimination and the payment of fines by the persons responsible.

Legal context

European Union law

3 Article 2(2) and (3) of Directive 2000/43 provides:

‘2. For the purposes of paragraph 1:

(a) direct discrimination shall be taken to occur where one person is treated less favourably than another is, has been or would be treated in a comparable situation on grounds of racial or ethnic origin;

(b) indirect discrimination shall be taken to occur where an apparently neutral provision, criterion or practice would put persons of a racial or ethnic origin at a particular disadvantage compared with other persons, unless that provision, criterion or practice is objectively justified by a legitimate aim and the means of achieving that aim are appropriate and necessary.

3. Harassment shall be deemed to be discrimination within the meaning of paragraph 1, when an unwanted conduct related to racial or ethnic origin takes place with the purpose or effect of violating the dignity of a person and of creating an intimidating, hostile, degrading, humiliating or offensive environment. In this context, the concept of harassment may be defined in accordance with the national laws and practice of the Member States.'

4 Article 3(1)(h) of Directive 2000/43 states:

'Within the limits of the powers conferred upon the Community, this Directive shall apply to all persons, as regards both the public and private sectors, including public bodies, in relation to:

…

(h) access to and supply of goods and services which are available to the public, including housing.'

5 Article 8(1) of that directive provides:

'Member States shall take such measures as are necessary, in accordance with their national judicial systems, to ensure that, when persons who consider themselves wronged because the principle of equal treatment has not been applied to them establish, before a court or other competent authority, facts from which it may be presumed that there has been direct or indirect discrimination, it shall be for the respondent to prove that there has been no breach of the principle of equal treatment.'

6 Article 13 of Directive 2000/43 states:

'1. Member States shall designate a body or bodies for the promotion of equal treatment of all persons without discrimination on the grounds of racial or ethnic origin. These bodies may form part of agencies charged at national level with the defence of human rights or the safeguard of individuals' rights.

2. Member States shall ensure that the competences of these bodies include:

– without prejudice to the right of victims and of associations, organisations or other legal entities referred to in Article 7(2), providing independent assistance to victims of discrimination in pursuing their complaints about discrimination,

– conducting independent surveys concerning discrimination,

– publishing independent reports and making recommendations on any issue relating to such discrimination.'

Bulgarian law

7 Under Article 4 of the Law on protection against discrimination (Zakon za zatschtita ot diskriminatsia, 'the ZZD'):

'1. All direct or indirect discrimination on grounds of … ethnicity is prohibited …

2. Direct discrimination is any treatment of a person based on the characteristics mentioned in subparagraph 1 which is less favourable as compared with the manner in which another person in comparable and similar conditions is, has been or would be treated.

3. Indirect discrimination consists in placing a person, on the basis of the characteristics mentioned in subparagraph 1, in a less favourable position as compared with other persons by way of a measure, criterion or an ostensibly neutral practice, unless that measure, criterion or practice is justified taking account of a legitimate objective and that the means used to achieve are appropriate and necessary.'

8 Article 9 of the ZZD provides that 'in anti-discrimination proceedings, where a party claims that he is the victim of discrimination and establishes the facts from which it may be concluded that there has been discrimination, the defendant must show that there has been no infringement of the right to equal treatment'.

9 Article 37 of the ZZD states that 'it is not permitted to refuse to provide goods or services, to provide goods or services of inferior quality or on less favourable conditions on the basis of the characteristics referred to in Article 4(1).'

10 Paragraph 1 of 'Supplementary provisions' of the ZZD defines 'unfavourable treatment' as being 'any act or omission which adversely affects, directly or indirectly, rights or legitimate interests.'

11 Additionally, the ZZD contains a number of provisions relating to the Komisia za zashtita ot diskriminatsia (Commission for Protection against Discrimination 'the KZD'), for the purpose, inter alia, of setting out the composition, the duties and mode of functioning of that body.

12 In that regard, Article 47 of the ZZD states:

'The [KZD] shall:

1. record infringements of this Law or other laws on equal treatment and shall determine the person responsible for the infringement and the person concerned;

2. order the prevention and cessation of the infringement and the re-establishment of the initial situation;

3. apply the sanctions provided for and adopt coercive administrative measures;

4. give binding instructions concerning compliance with this Law or with other laws on equal treatment;

5. bring actions against administrative acts adopted contrary to this Law or other laws on equal treatment; bring legal proceedings and intervene as an interested party in cases brought under this Law or other laws on equal treatment;

6. formulate proposals and recommendations to State and local authority bodies for the prevention of discriminatory practices and for the annulment of their acts adopted contrary to this Law or other laws on equal treatment;

7. keep a public record of its decisions in force and its binding instructions;

8. give advice as to whether draft legislative acts are consistent with the legislation on the prevention of discrimination and recommend the adoption, repeal, amendment or supplementation of legislative acts;

9. provide independent assistance to victims of discrimination when they bring actions;

10. carry out independent studies on discrimination;

11. publish independent reports and make recommendations on any questions relating to discrimination;

12. exercise any other powers laid down in the legislation governing its organisation and its activity.'

13 Article 48 of the ZZD provides:

'(1) The [KZD] shall examine and decide the cases brought before it in formations determined by its President.

(2) The President of the [KZD] shall determine the permanent formation which specialises in discrimination:

1. on grounds of ethnicity or race;

2. on grounds of sex;

3. based on other characteristics referred to in Article 4(1).

…'

14 According to Article 50 of the ZZD:

'Proceedings before the [KZD] are brought:

1. on application of the persons concerned;

2. on the initiative of the [KZD];

3. by complaints from natural and legal persons or State and local authority bodies.'

15 Article 54 of the ZZD states:

'Once proceedings have been brought, the President of the [KZD] shall allocate the case to a formation, which shall appoint a rapporteur from among its members.'

16 Article 55 of the ZZD provides:

'1. The rapporteur shall open an investigation, during which he shall gather all the written evidence necessary to elucidate the facts of the case, using the services of its employees and external experts.

2. All persons, State and local authority bodies must cooperate with the [KZD] during the investigation and are required to provide the information and documents requested and to give any necessary clarifications.'

17 Article 65 of the ZZD provides:

'In giving its decision, the formation shall:

1. determine the infringement committed;

2. determine the person responsible for the infringement and the person concerned;

3. determine the type and magnitude of the sanction;

4. order coercive administrative measures;

5. find that there has been no infringement of the law and dismiss the action.'

18 Under Article 68(1) of the ZZD:

'The decisions of the [KZD] may be subject to an appeal, in accordance with the Administrative Procedure Code, within 14 days from their notification to the persons concerned.'

The dispute in the main proceedings and the questions referred for a preliminary ruling

19 In 1998 and 1999, the State electricity distribution companies placed meters to measure electricity consumption at a height of seven metres above the ground on posts situated on the outside of houses connected to the electricity network in a certain number of urban districts in Bulgaria which were known to be inhabited primarily by members of the Roma community.

20 Such a measure was adopted, in particular, in the Ogosta and Kosharnik districts in the City of Montana, it being common ground that they are still inhabited primarily by people belonging to the Roma community ('the measure at issue in the main proceedings').

21 Meanwhile, the supply and distribution of electricity in those two districts was taken over, following the privatisation of the energy sector, in particular by CHEZ Elektro Balgaria AD ('CEB'), the company supplying electricity, and CHEZ Razpredelenie Balgaria AD ('CRB'), a company which owns the electricity distribution networks.

22 Article 27 of the general conditions for contracts for the use of CRB's electricity distribution networks ('CRB's general conditions') states, in subparagraph 1 thereof, that 'commercial measuring instruments, including tariff management apparatus are made available so that the consumer may check his consumption'. However, subparagraph 2 thereof provides that '[if], to protect the life and health of citizens and property, the quality of the electricity, the continuity of the supply and the safety and reliability of the electricity supply system, commercial measuring instruments are installed in places to which access is difficult, the electricity distribution company is required to ensure at its own cost the possibility to make a visual inspection within three days of a written request from a consumer'.

23 Mr Belov, who describes himself as Roma, lives in the Ogosta district. As, both in his own opinion and in that of other persons of Roma origin who consume electricity in that district and in the Kosharnik district, the measure at issue in the main proceedings constitutes discrimination on grounds of ethnicity prohibited by Article 37 of the ZZD, Mr Belov made a complaint to the KZD, to which a petition signed by numerous other inhabitants of those districts was joined, which asked the KZD to order that CEB abolish that measure and impose sanctions, as laid down in the ZZD.

24 The KZD takes the view that the action brought by Mr Belov may be regarded both as an application and a complaint within the meaning of Article 50(1) and (3) respectively of the ZZD. As an inhabitant of the Ogosta district concerned by the measure at issue in the main proceedings, he acts on his own behalf and as the applicant in the proceedings and, in so far as he acts on behalf of other inhabitants of the same district and those in the Kosharnik district, he has the status of complainant.

25 As a result, the KZD brought proceedings against CRB, in its capacity of the owner of the electricity meters and the Darzhavna Komisia po energiyno i vodno regulirane (State Energy and Water Regulation Commission) as the authority which approved CRB's general conditions. The same is true for the various natural persons who, in their capacity as legal representatives of CEB and CRB, may be liable to pay fines if the alleged discrimination is established.

26 Before the KZD, CRB submits, first of all, that the measure at issue in the main proceedings cannot be regarded as discrimination if, in particular, it applies indistinctly to all the inhabitants of the districts concerned and that no law provides for the right or legitimate interest of the user to consult the reading on his meter.

27 Next, CRB claims that the applicant in the main proceedings has not produced evidence of the facts which would lead to the conclusion that there had been such discrimination, as required by Article 9 of the ZZD.

28 Finally, CRB contends that the introduction of the measure at issue in the main proceedings has no relationship to the ethnicity of the consumers in the two districts concerned. Moreover, it is justified by the purpose of avoiding damage to the infrastructure and illegal extraction of electricity which might endanger, in particular, the life and health of citizens, safety, the ownership and continuity of the electricity supply, and the extra costs which might result for other consumers.

29 As regards Article 27(2) of CRB's general conditions, the KZD points out that, if, as provided by that provisions, a consumer makes an application for a visual inspection of the meter reading, CRB is required to make available, within three days, a special platform allowing access to the meters. However, in such a case, the consumer cannot take a reading himself as this must be communicated to him by the persons authorised to use the platform. Furthermore, that measure has never been relied on in practice.

30 The possibility, provided for in Article 17(6) of the general conditions, to install an inspection meter at the consumer's residence involves the payment of a rental charge and, even in that case, the main meter is still positioned outside the house at a height of seven metres.

31 The KZD takes the view that the measure at issue in the main proceedings constitutes indirect discrimination on grounds of ethnicity, within the meaning of Articles 4(3) and 37 of the ZZD.

32 While noting that the provisions of the ZZD have been adopted, inter alia, to transpose Directive 2000/43, the KZD takes the view that an interpretation of European Union law is necessary in order to give its decision.

33 In that connection, it states, in particular, that Article 4(2) and (3) of the ZZD, read together with Point 1(7) of the Supplementary Provisions of the ZZD, as interpreted by the Varhoven administrativen sad (Supreme Administrative Court) (Bulgaria), requires, in order to establish the existence of discrimination, that a right or legitimate interest protected by law has been adversely affected. That is not the case as regards the right to access an electricity meter in order to read it. The KZD wonders whether such an interpretation complies with the provisions of Article 2(2)(a) and (b) of Directive 2000/43.

34 Furthermore, the KZD observes that, although Article 8(1) of Directive 2000/43 was transposed almost literally by Article 9 of the ZZD, the Bulgarian-language version of Article 8(1) differs from other language versions of that provision. The Bulgarian-language version provides that the victim must

establish the facts from which it may be ‘concluded’ that there has been discrimination, whereas the other language versions thereof refer to facts from which the existence of such discrimination may be ‘presumed’. The Varhoven administrativen sad also applies Article 9 of the ZZD as a full and complete traditional general rule of evidence, taking the view, in particular, that, having regard to the fact that the Ogosta and Kosharnik districts are not inhabited solely by Roma and the fact that the reasons for the measure at issue in the main proceedings are not based on the ethnicity of the persons concerned by that measure, the existence of discrimination has not been established.

35 Finally, the Varhoven administrativen sad held that, in any event, measures such as that at issue in the main proceedings are necessary and justified having regard to the legitimate objectives pursued. The KZD expresses doubts as to whether such an analysis is well founded.

36 It is in those circumstances that the KZD decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

‘1 Does the case to be considered fall within the scope of Council Directive 2000/43 … of equal treatment between persons irrespective of racial or ethnic origin (here with respect to Article 3(1)(h))?

2 What is meant by “treated less favourably” within the meaning of Article 2(2)(a) of Directive 2000/43 and by “put persons of a racial or ethnic origin at a particular disadvantage” within the meaning of Article 2(2)(b) of Directive 2000/43?

(a) For less favourable treatment to qualify as direct discrimination, is it absolutely essential for the treatment to be more unfavourable and for it to infringe, directly or indirectly, rights or interests explicitly defined in law, or is it to be understood as any form of behaviour (relationship) in the wider sense of the word which is less advantageous than behaviour in a similar situation?

(b) For the fact of being put in a particular unfavourable situation to qualify as indirect discrimination, is it also necessary for it to infringe, directly or indirectly, rights or interests explicitly defined in law, or is it to be understood in the wider sense as any form of being placed in a particular unfavourable/disadvantageous situation?

3 Depending on the answer to the second question, if, for direct or indirect discrimination within the meaning of Article 2(2)(a) and (b) of Directive 2000/43 to be deemed to have occurred, it is necessary for the less favourable treatment or the fact of being put in a particular unfavourable situation to infringe, directly or indirectly, a right or interest defined in law,

(a) do the provisions of Article 38 of the Charter of Fundamental Rights of the European Union, [Directive 2006/32] (Recital 29, Article 1 and Article 13(1)), [Directive 2003/54] (Article 3(5)) and [Directive 2009/72] (Article 3(7)) define, to the benefit of the final consumer of electricity, a right or interest entitling him to check meter readings regularly and capable of being relied on before the national courts in proceedings such as the main proceedings,

and

(b) is national legislation and/or administrative practice approved by the State energy regulatory authority granting a distribution undertaking the freedom to install electricity meters in places to which it is difficult or impossible to gain access, preventing consumers

from checking and monitoring meter readings regularly, compatible with those provisions?

4 Depending on the answer to the second question: If, for direct or indirect discrimination to be deemed to have occurred, it is not absolutely necessary for a right or interest defined in law to have been directly or indirectly infringed,

(a) is, pursuant to Article 2(2)(a) and (b) of Directive 2000/43, national legislation or case-law, as at issue in the main proceedings, admissible if it requires, for discrimination to be deemed to have occurred, that the more unfavourable treatment and the fact of being put in a more unfavourable position infringe, directly or indirectly, rights or interests defined in law;

(b) if they are not admissible, is the national court then obliged not to apply them in the case before it and to refer to the definitions given in [that] directive?

5 Is Article 8(1) of Directive 2000/43 to be interpreted

(a) as meaning that it requires the victim to establish facts which impose an unambiguous, incontestable and certain conclusion or inference that direct or indirect discrimination has occurred, or is it sufficient for the facts to justify only an assumption/presumption of such discrimination?

(b) Do the facts that only in the two parts of the city known as Roma districts are electricity meters attached to electricity poles in the streets at a height at which consumers cannot read them, with known exceptions in some parts of those two urban districts, and in all other districts of the city the electricity meters are placed at a different height (up to 1.7 m) at which they can be read, usually in the consumer's home, on the outside of the building or on surrounding fences, lead to a shift in the burden of proof to the defendant?

(c) Do the facts that not only Roma but also people of a different ethnic origin live in the two parts of the city known as Roma districts and/or accordingly, not all the inhabitants of those two districts actually regard themselves as Roma, and/or the reasons for placing the electricity meters in those two urban districts at a height of 7 m are described by the distribution undertaking as being generally known, preclude a shift in the burden of proof to the defendant?

6 Depending on the answer to Question 5:

(a) If Article 8(1) of Directive 2000/43 is to be interpreted as meaning that an assumption/presumption of the occurrence of discrimination is necessary and if the aforementioned facts lead to a shift in the burden of proof to the defendant, what form of discrimination can be presumed from those facts – direct or indirect discrimination and/or harassment?

(b) Do the provisions of Directive 2000/43 enable direct discrimination and/or harassment to be justified by the pursuit of a legal objective by necessary and suitable means?

(c) In view of the legal objectives which the distribution undertaking emphasises it is pursuing, can the measure taken in the two urban districts be justified in a situation in which

– the measure is taken because of the increasing incidence of unpaid bills in the two

urban districts and the frequent offences committed by consumers which impair or threaten the safety, quality and continuous and secure operation of the electrical installations

and

– the measure is taken across the board, irrespective of whether the individual consumer pays his bills for the distribution and supply of electricity and whether the individual consumer has been found to have committed any offence (manipulation of meter readings, illegal connection and/or extraction and/or consumption of electricity without payment, or any other interference with the network which impairs or threatens its safe, high-quality, continuous and secure operation);

– provision is made in legislation and the General Conditions of the Contract on Distribution ("Distribution Contract") for liability for any similar offence in civil, administrative and criminal law;

– the clause contained in Article 27(2) of the General Conditions of the Distribution Contract – whereby the distribution undertaking gives an assurance that, if explicitly requested by a consumer in writing, it will enable him to make a visual check of the meter readings – does not in fact enable the consumer to check the readings personally and regularly;

– it is possible for an inspection meter to be installed in the consumer's home at his explicit written request, although a fee is payable;

– the measure is a distinctive and visible reference to the dishonesty of the consumer in one or other form in view of what the distribution undertaking refers to as the generally known reasons for the measure being taken;

– other technical methods and means can be used to protect electricity meters against interference;

– the legal representative of the distribution undertaking claims that a similar measure taken in a Roma district of another city was in fact unable to prevent interference;

– it is not assumed that an electrical installation in one of these urban districts, a transformer station, will need to undergo measures similar to those taken to protect electricity meters?'

Jurisdiction of the Court

37 In its order for reference, the KZD sets out the reasons for which it considers that it is a 'court or tribunal' within the meaning of Article 267 TFEU. The Bulgarian Government and the European Commission also consider that the KZD has such a character, and that the Court of Justice therefore has jurisdiction to give a ruling on the questions referred to it by that body. However, CEB and CRB express doubts on this matter and argue, first of all, that the KZD does not have compulsory jurisdiction, second, that that body does not offer sufficient guarantees as to its independence and, third, that the proceedings pending before that body are not intended to lead to a decision of a judicial nature.

38 In that regard, it should be recalled, as a preliminary point, that, according to settled case-law, in order to determine whether a body making a reference is a court or tribunal for the purposes of Article 267 TFEU, which is a question governed by EU law alone, the Court takes account of a number of factors, such as whether the body is established by law, whether it is permanent, whether its jurisdiction is compulsory, whether its procedure is *inter partes*, whether it applies rules of law and whether it is independent (see, in particular, Case C-196/09 *Miles and Others* [2011] ECR I-0000, paragraph 37 and the case-law cited).

39 In addition, a national court may refer a question to the Court only if there is a case pending before it and if it is called upon to give judgment in proceedings intended to lead to a decision of a judicial nature (see, in particular, Case C-53/03 *Syfait and Others* [2005] ECR I-4609, paragraph 29 and the case-law cited).

40 Therefore, it is appropriate to determine whether a body may refer a case to the Court of Justice on the basis of criteria relating both to the constitution of that body and to its function. In that connection, a national body may be classified as a court or tribunal within the meaning of Article 267 TFEU, when it is performing judicial functions, but when exercising other functions, of an administrative nature, for example, it cannot be recognised as such (see, in particular, order of 26 November 1999 in Case C-192/98 *ANAS* [1999] ECR I-8583, paragraph 22).

41 It follows that, in order to establish whether a national body, entrusted by law with different categories of functions, is to be regarded as a court or tribunal within the meaning of Article 267 TFEU, it is necessary to determine in what specific capacity it is acting within the particular legal context in which it seeks a ruling from the Court (see order in *ANAS*, paragraph 23).

42 Therefore, as regards the present case, it should be observed that although the KZD is called on, in particular, as the body responsible for promoting equal treatment referred to in Article 13 of Directive 2000/43, to exercise various functions which are not in any way of a judicial nature, in the present case, having regard to the functions that it exercises in the proceedings which gave rise to the present request for a preliminary ruling, it is appropriate to ascertain whether or not that body may be regarded as a court or tribunal within the meaning of Article 267 TFEU.

43 In that connection, it is clear from Article 50 of the ZZD that proceedings taking place before the section of the KZD which made the present request for a preliminary ruling may originate either from an application from a person who considers himself a victim of discrimination, pursuant to Point 1 of that provision, or as a complaint made by natural and legal persons or State or local authority bodies, as provided for in Point 3 of Article 50 of the ZZD or, lastly, in an initiative of the KZD itself in accordance with Point 2 of that article.

44 In the present case, it is clear from the assessments made by the KZD as set out in paragraph 24 of this judgment, that Mr Belov brought a complaint before it both on the basis of Article 50(1) of the ZZD, as a person directly concerned by the measure at issue in the main proceedings, and Article 50(3) of the ZZD in so far as he claims also to act on behalf of other inhabitants of the two districts concerned by that measure.

45 It is, in particular, in taking account of the functions that the KZD is called on to exercise when a case is referred to it that it is appropriate in the present case to determine whether that body must be classified as a court or tribunal within the meaning of Article 267 TFEU.

46 In that connection, it must be held that the various factors, among those relied on by CEB and CRB,

which are capable of giving rise to doubts that the proceedings before the KZD based on Article 50(1) and (3) of the ZZD are intended to lead to a decision of a judicial nature for the purposes of the case-law set out in paragraph 39 of this judgment.

47 In the first place, it is clear from Article 50(2) of the ZZD that similar proceedings to those which gave rise to the present request for a preliminary ruling could, in relation to the same facts, equally have been brought by the KZD acting on its own initiative. It is apparent, in light of the information before the Court, that, regardless of the circumstances in which the case was referred to that body on the basis of Article 50 of the ZZD, that is, by way of application, complaint or of its own motion, that body is required to bring proceedings which are essentially similar in which it has, inter alia, extensive powers of investigation in order to gather the evidence necessary to elucidate the facts concerned. Furthermore, the results to which those proceedings are intended to lead thus initiated by application, complaint or of the KZD's own motion, are themselves similar, namely an injunction to cease the discrimination found and an order for the persons responsible for it to pay fines.

48 In the second place, it is common ground that the KZD may, as it has done in the present case, join to the proceedings, of its own motion, other persons than those expressly appointed by the party which has brought the action before it by way of an application or a complaint, in particular where the KZD considers that those parties may have to answer for the discrimination alleged by the applicant/complainant and/or be liable to pay a fine on that basis.

49 Third, it is also common ground, on the basis of the information submitted to the Court, that, where an action is brought against a decision of the KZD adopted after proceedings have been brought on the basis of Article 50 of the ZZD, that body has the status of defendant before the administrative court called on to give a ruling on that application. Furthermore, if the decision of the KZD is annulled by the administrative court before which an action has been brought, that body may appeal against the decision to annul before the Varhoven administrativen sad.

50 Fourth, it also seems to follow from the Administrative Procedural Code, as alleged at the hearing by CEB and CRB and confirmed by Mr Belov, that, if an action is brought against a decision of the KZD given in proceedings such as those at issue in the main proceedings, it is possible for that body to revoke that decision, if the party to whom the decision is addressed is favourable.

51 All the circumstances lead to the view that the decision that the KZD is called on to give at the end of proceedings brought before that body on the basis of Article 50 of the ZZD and in particular subparagraphs 1 and 3 thereof, is similar in substance to an administrative decision and do not have a judicial nature within the meaning of the case-law of the Court relating to the concept of 'court or tribunal' in Article 267 TFEU.

52 Furthermore, it must be stated in that connection that, if such a decision of the KZD is, as stated, subject to appeal before an administrative court whose decision is itself subject to appeal before the Varhoven administrativen sad, the existence of those judicial appeals ensures the effectiveness of the mechanism of the request for a preliminary ruling provided for in Article 267 TFEU and the uniform interpretation of European Union law and, in the present case, in particular of Directive 2000/43, that that provision of the Treaty seeks to ensure. Under Article 267 TFEU, such national courts have the option or, where appropriate, are required to make a request for a preliminary ruling to the Court where a decision on the interpretation or the validity of European Union law is necessary to give their judgment.

53 Similarly, it must be observed that before the Court decisions of the Varhoven kasatsionen sad

(Supreme Court of Cassation) (Bulgaria) were cited of 22 January 2009 and of the Varhoven administrativen sad of 27 October 2010, from which it is clear that the ZZD put in place two alternative independent procedures enabling a person who, like Mr Belov, considers himself to be the victim of discrimination to request that that discrimination should cease. Apart from the possibility to initiate administrative type proceedings, such as those pending before the KZD in the case in the main proceedings based on Article 50 of the ZZD, the person concerned also has the possibility to bring an action before the Rayonen sad (District Court) (Bulgaria) which hears civil matters in order to put an end to such discrimination and the payment of damages.

54 Since the finding in paragraph 51 of this judgment suffices to conclude that when the KZD is called on to exercise a function such as that required of it in the main proceedings, that body is not a 'court or tribunal' within the meaning of Article 267 TFEU, there is no need to examine whether the other criteria for assessing whether a referring body is a 'court or tribunal' for the purposes of Article 267 TFEU are satisfied by the KZD nor therefore to give a ruling on the other objections made by CEB and CRB in that regard (see, to that effect, Case C-517/09 *RTL Belgium* [2010] ECR I-14093, paragraph 48).

55 It follows from all of the foregoing that the Court does not have jurisdiction to rule on the questions referred by the KZD.

Costs

56 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Fourth Chamber) hereby rules:

The Court of Justice of the European Union does not have jurisdiction to answer the questions referred by the Komisia za zashtita ot diskriminatsia in its order for reference of 19 July 2011.

Environmental judgments by the Court of Justice and their duration

Prof. Dr. Ludwig Krämer

Infringement procedures under the EC Treaty

Little attention is paid, until now, to the duration of environmental procedures under Articles 226 and 228 EC Treaty, though these procedures are the only instrument at the disposal of the European Commission to enforce the application of EC environmental law[1]. Indeed, the Commission itself has no possibility to impose a fine or a penalty payment against a Member State, or to withhold sums under the Structural Funds, where a Member State persistently infringes Community environmental law. Rather, the Commission is obliged to first issue a Letter of Formal Notice against a Member State which infringes Community law. Where the infringement is not repaired, the Commission may issue a Reasoned Opinion against the Member State, and if also this does not lead to the compliance with EC law, it may appeal to the Court of Justice[2]. At this moment, it may also ask for interim measures on which only the Court of Justice may decide.

The judgment by the Court is declaratory: the Court states, if it finds a case of non-compliance, that the Member State in question has infringed its obligations under Community law, by not doing this or that. It is then up to the Member State to take the necessary measures in order to bring its national law in line with the requirements of Community law. Where the Member State does not do so, the Commission may send, under Article 228 EC Treaty, a second letter of formal notice, then a second reasoned opinion and, should this not be successful, seize the Court of Justice a second time. The Court may then, in its judgment under Article 228 EC Treaty and on request of the Commission, impose a lump sum or a penalty payment on the Member State in question.

These provisions apply to all three forms of national infringements, i.e. cases, where a Member State did not transpose EC secondary legislation into its national legal order (non-transposition), where the Member State transposed secondary EC legislation in an incomplete or incorrect way (incorrect transposition), or where a Member State did not correctly apply primary or secondary Community law in concrete cases (incorrect application). Of course, nothing prevents the Commission from bringing a case against a Member State which groups aspects of incorrect transposition with aspects of incorrect application. Nevertheless, the differentiation is of use, because the object of litigation in the case of incorrect transposition is of purely legal nature, while in the case of incorrect application the practice of a Member State, at national, regional or local level, is examined by the Commission and, subsequently, by the Court.

The duration of litigation is also of interest in other cases. Article 230 EC Treaty concerns those cases, where an action is brought against a Community institution or body. In these cases, no pre-judicial procedure is foreseen, and thus, the overall duration of the procedure is much shorter. Also in the cases of Article 234 EC Treaty, where a national court asks the EC Court of Justice for a preliminary ruling, no pre-judicial procedure is required.

One would have wished that in cases of Articles 242 and 243 EC Treaty which concern interim measures, the Commission would be allowed to ask the Court for such interim measures, without having first to send letters of formal notice and reasoned opinions. However, these provisions do not provide for an exception to

---

[2] For details see Article 226 EC Treaty.

Articles 226 and 228. It will be shown below that the pre-judicial phase of litigation – the issuing of letters of formal notice and of reasoned opinions – normally takes a long time; this then leads to the situation that the Commission, when finally the application to the Court is made, has great difficulties to explain that interim measures are necessary in view of the urgency of the case or the threat to the environment. This is the underlying reason, why in the more than thirty years between 1976 and 2007, only 10 environmental procedures had been brought to the Court which asked for interim measures[3].

The Commission does not normally publish the letter of formal notice or the reasoned opinions which it issues[4]. It also refuses to give, under the EC provisions on access to documents[5] or access to environmental information[6], access to them on request. In this attitude, it appears to be supported by the Court of First Instance which agreed with the Commission that the refusal to give access allowed the Member State in question and the Commission to find an amicable solution to the problem in question[7]. The Court of First Instance did not discuss that just the publication of letters of formal notice and reasoned opinions might facilitate such an amicable solution. The Court of Justice did not yet decide on this question.

The following contribution gives some statistical data on the duration of environmental procedures – pre-judicial and judicial – under the different Treaty provisions. The contribution concentrates on the years 2006 and 2007. Data on previous years which have been published earlier will be used to show trends in the duration.

"Environmental" cases are understood in a material sense. Thus, where, for example, a case deals with the question, whether a Member State is entitled to adopt national legislation on air emissions by cars that deviates from existing EC legislation, the case is considered to be an environmental case, though the interpretation of Article 95(4) and (5) EC Treaty is at stake – and the Court of Justice's own classification system would range such a case under "institutional matters" or "free circulation of goods". Generally, this classification gives good results; sometimes, though, doubts might exist, whether a product-related directive should be classified as an "environmental" or a "free circulation of goods" act of legislation.

Number and legal basis of judgments

In 2006 and 2007, there were 115 judgments on environmental matters delivered, more than in any earlier two-year period. On average, the Court delivered about one environmental judgment per week (Table 1).

Table 1: Number of Decisions in environmental matters 1976-2007

1976	1	1987	12	1998	34
1977	-	1988	9	1999	23
1978	-	1989	3	2000	21
1979	-	1990	11	2001	23
1980	3	1991	17	2002	47
1981	3	1992	7	2003	56
1982	7	1993	12	2004	63

[3] See Table 3 below.

[4] See L. Krämer, Access to letters of formal notice and reasoned opinions in environmental law matters, European Environmental Law Review 2003, p.197.

[5] See on that Article 255 EC Treaty and Regulation 1049/2001, OJ 2001, L 145 p.43.

[6] See Regulation 1367/2006, OJ 2006, L 264 p.13.

[7] Court of First Instance, Cases T-105/95, WWF v. Commission, ECR 1997, p.II-313; T-191/99, Petrie a.o. v. Commission ECR 2001, p.II-3677.

1983	1	1994	14	2005	43
1984	4	1995	7	2006	52
1985	5	1996	29	2007	63
1986	1	1997	20	Total	587

The increase of decisions over the last years is mainly due to the fact that the Commission examines more systematically the cases of non-transposition and of incorrect transposition and, furthermore, that individual persons apply more frequently to the Court.
The 115 judgments were divided on the different sectors of environmental law as follows (Table 2).

Table 2: Decisions concerning the different sectors of environmental law 1976-2007(all legal bases)

Period	Waste	Water	Nature	Products	Horizontal Acts	Air Climate	Impact Assessment	Noise	Total
1976-1991	23	18	13	8	4	6	-	-	72
1992-1994	11	6	9	4	-	1	2	-	33
1995-1997	13	7	10	13	8	3	3	-	57
1998-1999	9	19	5	7	5	2	7	3	57
2000-2001	8	15	11	4	3	2	1	-	44
2002-2003	27	14	14	19	18	3	4	4	103
2004-2005	41	17	16	12	4	9	7	-	106
2006-2007	20	12	30	9	12	17	12	3	115
Total	152	108	108	76	54	43	36	10	587

As can be seen, the greatest number of cases during 2006-2007 concerned nature protection issues. In eight of the total of 30 cases, individual persons had applied to the Court, because they opposed the inclusion of their land property in the EC-lists of Natura 2000 which groups habitats of fauna and flora of Community interest. They were all unsuccessful, as the Court declared that they were not directly and individually affected by such a decision[8]. In view of legal consequences which flow from the Commission's decision on lists of Community interest, I am rather of the opinion that individual persons do have standing under Article 230 EC Treaty.
Waste matters rank second in 2006-2007, though in the overall period 1976-2007, they continue to occupy a lead position. Waste treatment and disposal remains a problem in most Member States – not only in Italy – and the shared competence between administrations at local, regional, national and Community level does not facilitate environmentally sound waste management practices. The reviewed EC legislation on waste[9] is not likely to change much of this situation.

[8] See for example Court of First Instance, Cases T-136/04 Fhr.v.Cramer v. Commission, ECR 2006, p.II-1805; T-150/05 Sahlstedt v. Commission, ECR 2006, p.II-1851; T-117/05 Rodenbröker v. Commission, ECR 2006, p.II-2593; T-122/05, Benkö v. Commission, ECR 2006, p.II-2939.

[9] See Regulation 1013/2006 on the shipment of waste, OJ 2006, L 190 p.1; Directive 2006/66 on batteries, OJ 2006, L 266 p.1, and in particular the imminent adoption of the revision of Directive 2006/12 on waste, OJ 2006, L 114 p.9

Table 2 clearly demonstrates the low priority of noise legislation in the Community. Noise is of considerable concern to numerous people in the EC, and the main source of noise is transport – which is a common EC policy. Yet, EC measures on noise are scarce and do not follow a consistent strategy, and this is even reflected in the number of court decisions on noise which concern lack of transposition or incorrect transposition, but not the application of noise protection levels.
Table 3 shows the legal basis of the Court's Decisions. It demonstrates the important role of the Commission in enforcing the application of Community environmental law (Articles 226 and 228 EC Treaty) which remains the significant aspect of the Table. As regards environmental law, the Commission almost has a monopoly for taking actions

Table 3: Legal basis of the Court's Decisions 1976-2007 (Number of cases)

Period	Art.226	Art.227	Art.228	Art.230	Art.232	Art.234	Art.242,243	Art.225(appeal)	Total
1976-1991	50	-	1	3	-	17	1	-	-
1992-1994	14	-	4	9	-	6	-	-	-
1995-1997	30	-	-	5	-	15	2	3	1
1998-1999	37	-	-	2	-	17	-	1	-
2000-2001	28	-	1	2	-	11	1	-	1
2002-2003	77	-	1	9	-	15	1	-	-
2004-2005	85	-	-	4	-	16	1	-	-
2006-2007	70	-	-	25	-	12	4	3	1
Total	391	-	7	59	-	109	10	7	3

in Court. All the more it is regrettable, that the procedures under Article 226 and 228 are so non-transparent. Indeed, the Commission does not lay accounts on its actions. Its annual reports on the monitoring the application of Community law[10] are unhelpful. They do not explain, why actions were started, they do not detail the pre-judicial procedures under Articles 226 and 228 – the dispatch of letters of formal notice is only mentioned, where a Member State has not communicated its national transposing legislation; where a Member State has incorrectly transposed the legislation or where it does not apply environmental legislation in practice, the Commission keeps this information confidential – and the basis of tables and statistics changes frequently so that comparisons from one year to the other are hardly possible. Letters of formal notice and reasoned opinions are only exceptionally made public.
The Commission's quasi-monopoly in enforcing EC environmental law also becomes obvious when one considers actions by environmental organisations against the breach of EC environmental law. Indeed, the three cases where environmental organisations were involved in 2006-2007, concerned the request from national courts for a preliminary ruling[11]. In practice, access to the EC Courts is not possible

[10] See last Commission, Monitoring the application of Community law 23rd Report, for 2005, COM (2006) 416; 24th Report, on 2006, COM(2007) 398.
[11] Cases C-60/05 WWF v. Lombardia, ECR 2006, p.I-2147; C-138/05 Milieufederatie, ECR 2006, p.I-8339; C-244/05 Bund Naturschutz, ECR 2006, p.I-8445.

for environmental organisations which have, in the past, seen all their actions declared inadmissible, as they were considered not to be directly and individually concerned by the breach of EC environmental legislation[12]. This practice appears not to be in compliance with the provisions on access to justice of the Aarhus Convention[13] which, after its ratification by the EC, is part of EC law and binds the EC institutions, including the EC Courts.
Table 4 differentiates Court judgments against Member States, based on Article 226 and 228 EC Treaty. For the years 2006-2007, Italy ranks top. The Table illustrates the policy of the Scandinavian States Denmark, Sweden and, to a lesser degree, Finland, to avoid, if any possible, negative judgments by the Court of Justice, by ensuring that compliance measures are taken; the contrast between Denmark on the one hand and Ireland and Great Britain on the other hand which all joined the EU in 1973, is as noticeable as the contrast between Austria and Sweden/Finland which all three joined the EU in 1995. The same active policy to ensure compliance is ensured by the Netherlands. Generally, however, Table 4, as all the other Tables in this paper, should be viewed as showing some trends rather than allowing too precise conclusions.

Table 4: Environmental judgments against Member States 1976-2007 (Articles 226 and 228 EC Treaty)

	1976 -1991	1992 -1994	1995 -1997	1998 -1999	2000 -2001	2002 -2003	2004 -2005	2006 2007	Total

Malta							-	1	1

It might be interesting to compare this Table 4 with the Table on environmental cases which were submitted by national courts to the Court of Justice for a preliminary ruling (Article 234 EC Treaty). These cases are listed in Table 5.

Table 5: Preliminary rulings in environmental matters 1976-2007 (grouped according to the Member State of the requesting court)

	1976-1991	1992-1994	1995-1997	1998-1999	2000-2001	2002-2003	2004-2005	2006-2007	Total

[12] The landmark cases are T-585/93 Greenpeace v. Commission ECR 1995, p.II-2205 and C-321/95P Greenpeace v. Commission ECR 1998, p.I-1651.

[13] Convention on access to information, public participation in decision-making and access to justice in environmental matters (Aarhus Convention) of 25 June 1998. The EC ratified this Convention by Decision 2005/370, OJ 2005, L 124 p.1.

Total	16	6	15	17	11	15	16	12	108

It is not surprising that Italian and Dutch courts top this list. Indeed, Italian courts are – at the latest following the role in the "mani pulite"-events in the 1990s – known for their creative ingenuity and intellectual curiosity. This is probably the reason, why they actively explore, be it via requests for a preliminary ruling, what kind of legal arguments EC environmental law offers. As regards the Netherlands, about three quarters of their gross national products stems from foreign trade. In that country, EC environmental law is frequently seen as an opportunity and, in any way, as part of the national provisions which aim at the optimisation of environmental protection.

. Germany, with the largest population, sophisticated environmental legislation and a very great number of courts, submitted remarkably few cases for a preliminary ruling; these figures reflect the generally rather reserved attitude of the German judiciary and legal profession in general with regard to EC environmental law.

The four Member States Spain, Portugal, Ireland and Greece, as well as the twelve Member States which joined the European Union in 2004, have not yet been the cause of any preliminary ruling from the Court of Justice in environmental matters.

Article 228(1) EC Treaty states that a Member State shall take the necessary measures in order to comply with the statements of a judgment by the Court of Justice. The European Commission regularly publishes a list of judgments of the Court of Justice which had not yet been complied with by the Member States at the end of each year. With the increase of the number of judgments in environmental matters (see on that Table 1), also the overall figures of non-compliance increased. At the end of 2005, 81 judgments, and at the end of 2006 66 judgments had not yet complied with[14]. Table 5 lists the evolution of the last five years.

Table 5: Number of judgments that had not been complied with by the end of the year (all legal bases)

Member State	2002	2003	2004	2005	2006
France	13	17	18	14	7
Italy	6	6	14	12	8
Ireland	8	6	8	9	7
Spain	4	6	4	9	7
UK	4	3	6	7	8
Belgium	6	8	6	5	3
Greece	4	4	5	7	6

[14] Annual reports on monitoring application (note 10, above), each time annex V.

Luxembg	5	6	1	-	6
Portugal	1	3	5	4	4
Germany	3	4	5	3	1
Austria	1	1	4	5	5
Netherld	2	4	4	3	-
Finland	-	1	3	2	3
Sweden	1	1	2	1	1
Denmark	-	1	1	-	-
Total	58	71	86	81	66

Of course, the figures for the different years may not be cumulated. Nevertheless, Table 5 shows that the above-mentioned four States Denmark, Sweden, Finland and Netherlands also attach some political importance to quickly comply with the judgments of the Court of Justice. In France, Italy, Ireland and Spain, such a policy seems to be less a priority.

Duration of procedures

The duration of litigation before the Courts is of particular interest for economic operators, but also for environmental organisations, administrations and lawyers. Table 6 shows the duration during the years 2006-2007.

Table 6: Duration of Court litigation 2006-2007 (in months, figures rounded)

Legal Basis	Number of cases	Longest duration	Shortest duration	Average
Article 226	70	39	5	18
- lack of transposition	15	14	5	9
- incorrect transposition	21	34	6	19
- incorrect application	34	39	5	21
Article 230	25	50	2	21
- Court 1st Instance	21	50	2	21
- Court of Justice	7	34	12	23
Article 234	12	36	9	19

On average thus, Court procedures under Article 226 take 18 months, under Article 230 21 months and under Article 234 19 months. Where the action concerns a case of lack of transposition, the procedure takes 9 months only.

The duration of Court litigation under Article 226 has not significantly changed during the last fifteen years, as can be seen from Table 7. This is different from actions under Article 230 – the duration varied between 14 and 33 months – and Article 234, where the variation was between 16 and 24 months. Overall, for all three legal bases, a reduction of the duration as compared to the previous period 2004-2005 can be observed.

Table 7: Duration of Court litigation 1992-2007 (in months, figures rounded)

Period	Article 226	Article 230	Article 234
1992-1994	22	14	18
1995-1997	14	20	16
1998-1999	20	29	23
2000-2001	21	16	24
2002-2003	19	33	26

2004-2005	20	30	22
2006-2007	18	23(1st Inst:21)	19

For procedures under Article 226 EC Treaty which oppose the European Commission and a Member State, the duration of the litigation before the Court itself might be misleading, because in all cases, the litigation before the Court has to be preceded by a pre-judicial procedure. This procedure is, as mentioned above, opened by the dispatch of a Letter of Formal Notice[15] to which the Member State in question may answer. When the Commission considers the infringement of Community law not yet to be ended, it may issue a Reasoned Opinion to which the Member State again may react. Only then may the Commission make an application to the Court.
Table 8 indicates the duration of procedures under Article 226, from the dispatch of the Letter of Formal Notice till the judgment of the Court:

Table 8: Duration of procedures under Article 226 in 2006-2007 from the dispatch of the Letter of Formal Notice till the Court's judgment (figures in months and rounded)

Procedure	Number of cases[16]	Longest duration	Shortest duration	Average
Lack of transposition	12 (of 15)	35	21	26
Incorrect transposition	18 (of 21)	98	22	51
Incorrect application	31 (of 34)	109	26	52
Total	61 (of 70)	109	21	47

This means that the procedure under Article 226 EC Treaty takes, on average, almost four years – really a long time.
With regard to previous periods, this time-span has not significantly been reduced, as appears from Table 9:

Table 9: Duration of procedures under Article 226 in the years 1992-2007 (from dispatch of the letter of formal notice till the Court's judgment; figures in months and rounded)

Period	Number of cases	Longest duration	Shortest duration	Average
1992-1994	14	85	36	57
1995-1997	30	87	27	47
1998-1999	37	120	21	68
2000-2001	28	128	22	59
2002-2003	77	147	15	45
2004-2005	85	168	19	47
2006-2007	61	108	15	47

This long duration of litigation has several effects: First, Member States which do not correctly transpose or apply EC environmental legislation, can be ensured that it

[15] The term "letter of formal notice" is not found in Article 226 which does not require a specific form for the begin of the infringement procedures; however, the term is generally used. The Court appears to require a written form of notice in all cases, for reasons of legal certainty.

[16] Only those cases were included in this Table, where the precise date of the dispatch of the Letter of Formal Notice could be determined. The total number of cases in 2006-2007 is set in brackets.

takes a while before they are called to order by the judgment of the EC Court of Justice, with all its negative publicity. This effect is increased by the fact that the Commission often does not start the procedure under Article 226 EC Treaty as soon as the national incorrect legislation is adopted or as soon as there is a concrete case of non-application. Rather, the delay between the enactment of the national legislation and the begin of the infringement procedure is frequently quite considerable[17].

Second, this problem of delays becomes even more important in cases of Article 228 EC Treaty. In 2006-2007, there were no such cases decided in environmental matters. Since 1992, the Court of Justice had decided, overall, six environmental cases under Article 228 and its predecessor, Article 171 EC Treaty. The average time-span between the dispatch of the letter of formal notice under Article 226 and the judgment under Article 228 was 136 months, thus more than eleven years[18].

It is clear that such delays do not have much of a deterrent effect on Member States, inciting them to comply with Court judgments – and, this should not be forgotten, to adequately protect their environment! - as quickly as possible.

This observation might sound abstract and theoretical. A concrete example, though, is the case of the present waste problems in the Italian region of Campania (Naples). The EC procedure against Italy for non-compliance with EC waste law started in 1987[19], but was later discontinued. More than twenty years later, Italy still does not comply with its legal requirements.

Though the length of procedures under Articles 226 and 228 EC Treaty may not have a deterrent effect on Member States by inducing them to align their legislation and practice to EC environmental law, it certainly has a deterrent effect on the EC Commission, in the sense that the Commission does not even start proceedings against a Member State. This happens in particular, where cases on the lack of application of EC environmental law are in question. The construction of a motorway without an environmental impact assessment, the refusal to grant access to environmental information, the realisation of infrastructure projects within a natural habitat – there are numerous cases of this kind, where the Commission does not begin or pursue infringement procedures, because a judgment from the Court would come at a stage, when the environmental impairment has occurred and cannot be repaired – when “the infringement is consumed”, as it is called in the Brussels jargon.

Table 10 tries to elucidate the reasons for the length of procedure, differentiating between the pre-Court procedure – from the dispatch of the Letter of Formal Notice till the application to the Court – and the procedure before the Court.

Table 10: Average duration of procedures under Article 226 in 2006-2007 (in months; figures rounded)

	Pre-Court procedure	Court procedure	Total duration
Lack of transposition	16	8	24
Incorrect transposition	33	21	54
Incorrect application	27	23	50
Total	28	19	47

[17] See, for example case C-376/06 Commission v. Portugal, ECR 2007, p.I-78, where this period was 26 months.

[18] See cases C-345/92, Commission v. Germany, ECR 1993, p.I-1115 (duration 109 months); C-174/91, Commission v. Belgium, ECR 1993, p.I-2275 (duration 106 months); C-366/89, Commission v. Italy, ECR 1993, p.I-4201 (duration 175 months); C-291/93 Commission v. Italy, ECR 1994, p.I-859 (duration 120 months); C-378/97 Commission v. Greece, ECR 2000, p.I-5047 (duration 134 months); C-278/01, Commission v. Spain, ECR 2003, p.I-14141 (duration 170 months).

[19] See case C-33/90, Commission v. Italy, ECR 1991, p.I-5698 and, for the background L.Krämer, European Environmental Law Casebook, London 1993, p. 387.

These data show that in all cases the pre-Court procedure was longer than the procedure before the Court itself. Part of the explanation is certainly that the Commission is obliged to clarify the facts of a case which is often done during the pre-Court procedure; and this takes time, all the more, when Member States do not answer requests for information or are otherwise reluctant to assist the Commission.
However, in the cases of lack of transposition and incorrect transposition, the factual side of a specific case does not offer specific difficulties. Indeed, where a Member State has not transposed an environmental directive into its national law, the legal situation is quite clear and one might imagine that the Commission clarifies this situation before it starts the procedure under Article 226 EC Treaty.
The situation of incorrect transposition has to be examined merely under legal aspects, too: the national legislation must be compared with the environmental directive, as to whether it is correct and whether it covers the whole of the territory of a Member State. This is best done before infringement procedures start. Then, however, it is not clear, why the Commission needs, on average, more than two and a half years before it applies to the Court (incorrect transposition) and 16 months in those cases, where no national legislation exists.
Table 11 shows that in the past, the pre-Court procedure was always longer than the Court procedure and never shorter than two years. Also, the duration of the procedure before the Court was remarkably stable during the last ten years.

Table 11: Comparison of the average duration of procedures under Article 226 EC Treaty between 1992 and 2007 (in months; figures rounded)

Period	Pre-Court procedure	Court procedure	Total duration
1992-1994	35	22	47
1995-1997	33	14	47
1998-1999	48	20	68
2000-2001	38	21	59
2002-2003	26	19	45
2004-2005	27	20	47
2006-2007	28	19	47

In order to further explore the origin of the delays in these procedures, the cases where the length of procedure between the dispatch of the letter of formal notice and the Court judgment exceeded 80 months, underwent a more detailed scrutiny. The 80-month length is admittedly arbitrary; however, it allows comparisons with previous years.
In 2006-2007, there were five cases which took, overall, more than eighty months, as is shown by Table 12.

Table 12: Court judgments under Article 226 with a total duration of more than 80 months between the dispatch of the letter of formal notice and the judgment (in months; figures rounded)

Date, number of judgment	Date Letter of Formal Notice	Reply by Member State	Date Reasoned Opinion	Reply by Member State	Application to the Court	Total duration of procedure
28-6-07 C-235/04 Comm. v.	26-1-00	18-5-01	31-1-01	17-4-01	4-6-04	53+36 = 89 months; Nature Conservation

Spain						
12-7-07 C-507/04 Comm. v. Austria	13-4-00	26-7-00	17-10-03	23-12-03	28-12-04	56+31= 87 months; Nature Conservation
13-12-07 C-418/04 Comm. v. Ireland	11-11-98		24-10-01		29-9-04	72+37= 109 months; Nature Conservation
18-12-07 C-195/05 Comm.v. Italy	22-10-99	11-6-01	11-7-03	4-11-03	2-5-05	62+32= 94 months; Waste Management
10-5-07 C-508/04 Comm.v. Austria	13-4-00	27-7-00	17-12-03	23-12-03	8-12-04	56+29= 85 months; Nature conservation

The Table shows that the main cause of delay in these procedures is the failure by the European Commission to decide on or execute the next step in the procedure. Indeed,

- in case C-235/04, 38 months passed between the answer of the Member State to the Reasoned Opinion and the application to the Court;
- in case C-507/04, 39 months passed between the answer of the Member State to the Letter of Formal Notice and the dispatch of the Reasoned Opinion;
- in case C-418/04, 37 months passed between the dispatch of the Letter of Formal Notice and that of the Reasoned Opinion; and another 35 months passed between the dispatch of the Reasoned Opinion and the Application to the Court;
- in case C-195/05, 25 months passed between the Member State's answer to the Letter of Formal Notice and the dispatch of the Reasoned Opinion; and another 18 months passed between the Member State's answer to the Reasoned Opinion and the application to the Court;
- in case C-508/04, 41 months passed between the Member State's answer to the Letter of Formal Notice and the dispatch of the Reasoned Opinion.

Such delays cannot be explained by lack of human resources, translation problems or other administrative circumstances, all the more as three of the five cases concerned the incorrect legal transposition of an EC directive into national legislation; thus, there were no matters of fact to be clarified.

The Commission never even tried to explain such delays – which have been existing since years and are, with regard to administrative behaviour, only the tip of the iceberg. It had already been mentioned above that procedures which take, on average, 47 months, simply are too lengthy. The Commission, though, keeps the precise internal provisions on the procedure under Article 226 EC Treaty confidential. Of course, its annual reports on the monitoring the implementation of Community law do not discuss such items as the length of procedure, and the separate reports on the monitoring the implementation of environmental legislation are also silent on this issue.

In this context, the quasi-monopoly of the Commission to bring cases on environmental matters before the Court of Justice gains all its weight: if the Commission delays procedures to protect the environment or does not take steps

under Articles 226/228 EC Treaty at all – who then will protect the environment? Environmental organisations and individual persons have practically no access to the Court of Justice. True, the European Union is not a State and one should not be too surprised that there is nobody else to ensure the enforcement of *European* law or to protect the *European* environment. Yet, the EU Treaty mentions the European general interest as a value to be protected[20]. And all experience shows that Member States which perceive EC (environmental) laws all too often as "foreign laws"[21], have a limited interest to protect the environment in cases of conflict with other, planning or economical, interests

Concluding remarks

The data for 2006-2007 on environmental judgments by the EC Court of Justice confirm the trends of previous years: The number of environmental judgments delivered by the Court increase. Article 226 remains by far the principal legal basis for the Court decisions, which underlines the important role of the Commission in ensuring the application of EC environmental law. Court actions of one Member State against the other do not exist in environmental law; the Member States prefer to leave it to the European Commission to take action against a specific Member State. The number of actions based on Article 230 EC Treaty increased, though all applications of individual persons against the inscription of their land on the list of natural habitats of Community interest were rejected as inadmissible.

Most judgments were given against Italy which also was the most often condemned by the Court since 1976. In this overall list follow with Belgium, France and Germany three other of the original six EC Member States. They are followed by Spain which only joined the EC in 1986. Remarkable is the low number of judgments which were given against Denmark, Sweden and Finland, as well as against the Netherlands which is also one of the original six Member States.

The duration of litigation before the Court – 18 to 20 months - remains stable since about ten years. The same is true for the duration of the procedure under Article 226 – pre-Court procedure *and* Court litigation – which takes, on average, 47 months, thus almost four years. The duration of procedures appears unacceptably long, in particular as regards cases of lack of transposition of EC legislation into national law (average 26 months) and the incorrect transposition (average 51 months). The pre-litigation procedure takes more time than the procedure before the Court itself. A closer look at cases which took more than 80 months reveals that the length of procedure is essentially due to delays for which the European Commission is responsible.

The lessons to learn from these data appear clear: the European Commission has a quasi-monopoly in enforcing EC environmental law and bringing cases before the Court of Justice. The best remedies against monopolistic situations are well known from economic policy:

(1) Transparency. This means that the Commission should publish the rules and provisions which govern the EC infringement procedures.

(2) Openness. This means that the Commission should publish the Letters of Formal Notice and Reasoned Opinions which it decides against Member States. At present, these decisions are kept confidential, with no convincing arguments. The Commission goes even so far to keep confidential the legal studies which it undertakes to examine Member States' correct transposition of EC legislation[22]

---

[20] See Article 213 EC Treaty.

[21] Commission, European Governance, A White Paper, COM (2001) 428, p.25.

[22] See European Parliament, Resolution of 21 February 2008, no 7: "The European Parliament.. is not satisfied with the Commission's answer concerning the confidentiality of

(3) Competition. This means that the Commission should present legislative proposals which allow environmental organisations and individual persons to have legal standing before the Court of Justice in environmental matters. And the European Parliament and the Council should speedily adopt such proposals, in order to at last comply with the requirements of the Aarhus Convention in this regard.

What happened instead in 2006-2007 is that the Commission decided not to look at (environmental) complaints any more, but to concentrate on the non-transposition of Community legislation, on non-compliance with judgments of the Court (Article 228 EC Treaty, and on cases which raise fundamental problems[23]. As environmental complaints constitute by far the largest source of information for the Commission as regards the application of EC environmental legislation in practice within the 27 Member States, the Commission deliberately changed its policy to seriously control the effective application of EC environmental law. In my opinion, this reduction is not compatible with Article 211 EC Treaty which requires the Commission to ensure that EC law, including EC environmental law, is not only transposed into national law, but that it is "applied".

---

the conformity studies; calls once more on the Commission to publish on its website the studies requested by the various Directorate-Generals on the valuation of the conformity of national implementation measures with Community legislation" (http://www.europarl.eu/sides/getDoc.do?pubRef=-//EP//TEXT+TA+PG-TA).

[23] See Commission, COM (2007) 502. See on that European Parliament (note 22, above) no.19: "The European Parliament.. observes that the Commission is often the only body left to which citizens can turn to complain about the non-application of Community law; is therefore concerned that, by referring back to the Member States concerned (which is the party responsible for the incorrect application of Community law in the first place), the new working method could present a risk of weakening the Commission's institutional responsibility for ensuring the application of Community law as the "guardian of the Treaty" in accordance with Article 211 of the EC Treaty.

DIRECTIVES

DIRECTIVE 2010/75/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 24 November 2010

on industrial emissions (integrated pollution prevention and control)

(Recast)

(Text with EEA relevance)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 192(1) thereof,

Having regard to the proposal from the European Commission,

Having regard to the opinion of the European Economic and Social Committee ([1]),

Having regard to the opinion of the Committee of the Regions ([2]),

Acting in accordance with the ordinary legislative procedure ([3]),

Whereas:

(1) A number of substantial changes are to be made to Council Directive 78/176/EEC of 20 February 1978 on waste from the titanium dioxide industry ([4]), Council Directive 82/883/EEC of 3 December 1982 on procedures for the surveillance and monitoring of environments concerned by waste from the titanium dioxide industry ([5]), Council Directive 92/112/EEC of 15 December 1992 on procedures for harmonising the programmes for the reduction and eventual elimination of pollution caused by waste from the titanium dioxide industry ([6]), Council Directive 1999/13/EC of 11 March 1999 on the limitation of emissions of volatile organic compounds due to the use of organic solvents in certain activities and installations ([7]), Directive 2000/76/EC of the European Parliament and of the Council of 4 December 2000 on the incineration of waste ([8]), Directive 2001/80/EC of the European Parliament and of the Council of 23 October 2001 on the limitation of emissions of certain pollutants into the air from large combustion plants ([9]) and Directive 2008/1/EC of the European Parliament and of the Council of 15 January 2008 concerning integrated pollution prevention and control ([10]). In the interests of clarity, those Directives should be recast.

(2) In order to prevent, reduce and as far as possible eliminate pollution arising from industrial activities in compliance with the 'polluter pays' principle and the principle of pollution prevention, it is necessary to establish a general framework for the control of the main industrial activities, giving priority to intervention at source, ensuring prudent management of natural resources and taking into account, when necessary, the economic situation and specific local characteristics of the place in which the industrial activity is taking place.

(3) Different approaches to controlling emissions into air, water or soil separately may encourage the shifting of pollution from one environmental medium to another rather than protecting the environment as a whole. It is, therefore, appropriate to provide for an integrated approach to prevention and control of emissions into air, water and soil, to waste management, to energy efficiency and to accident prevention. Such an approach will also contribute to the achievement of a level playing field in the Union by aligning environmental performance requirements for industrial installations.

Position of the European Parliament of 7 July 2010 (not yet published in the Official Journal) and decision of the Council of 8 November 2010.

([4]) OJ L 54, 25.2.1978, p. 19.

([5]) OJ L 378, 31.12.1982, p. 1.

([6]) OJ L 409, 31.12.1992, p. 11.

([7]) OJ L 85, 29.3.1999, p. 1.

([8]) OJ L 332, 28.12.2000, p. 91.

([9]) OJ L 309, 27.11.2001, p. 1.

([10]) OJ L 24, 29.1.2008, p. 8.

(4) It is appropriate to revise the legislation relating to industrial installations in order to simplify and clarify the existing provisions, reduce unnecessary administrative burden and implement the conclusions of the Commission Communications of 21 September 2005 on the Thematic Strategy on Air Pollution (hereinafter the Thematic Strategy on Air Pollution), of 22 September 2006 on the Thematic Strategy for Soil Protection and of 21 December 2005 on the Thematic Strategy on the Prevention and Recycling of Waste adopted as a follow-up to Decision No 1600/2002/EC of the European Parliament and of the Council of 22 July 2002 laying down the Sixth Community Environment Action Programme ([1]). Those Communications set objectives to protect human health and the environment which cannot be met without further reductions in emissions arising from industrial activities.

(5) In order to ensure the prevention and control of pollution, each installation should operate only if it holds a permit or, in the case of certain installations and activities using organic solvents, only if it holds a permit or is registered.

(6) It is for Member States to determine the approach for assigning responsibilities to operators of installations provided that compliance with this Directive is ensured. Member States may choose to grant a permit to one responsible operator for each installation or to specify the responsibility amongst several operators of different parts of an installation. Where its current legal system provides for only one responsible operator for each installation, a Member State may decide to retain this system.

(7) In order to facilitate the granting of permits, Member States should be able to set requirements for certain categories of installations in general binding rules.

(8) It is important to prevent accidents and incidents and limit their consequences. Liability regarding the environmental consequences of accidents and incidents is a matter for relevant national law and, where applicable, other relevant Union law.

(9) In order to avoid duplication of regulation, the permit for an installation covered by Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community ([2]) should not include an emission limit value for direct emissions of the greenhouse gases specified in Annex I to that Directive except where it is necessary to ensure that no significant local pollution is caused or where an installation is excluded from that scheme.

(10) In accordance with Article 193 of the Treaty on the Functioning of the European Union (TFEU), this Directive does not prevent Member States from maintaining or introducing more stringent protective measures, for example greenhouse gas emission requirements, provided that such measures are compatible with the Treaties and the Commission has been notified.

(11) Operators should submit permit applications containing the information necessary for the competent authority to set permit conditions. Operators should be able to use information resulting from the application of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment ([3]) and of Council Directive 96/82/EC of 9 December 1996 on the control of major-accident hazards involving dangerous substances ([4]) when submitting permit applications.

(12) The permit should include all the measures necessary to achieve a high level of protection of the environment as a whole and to ensure that the installation is operated in accordance with the general principles governing the basic obligations of the operator. The permit should also include emission limit values for polluting substances, or equivalent parameters or technical measures, appropriate requirements to protect the soil and groundwater and monitoring requirements. Permit conditions should be set on the basis of best available techniques.

(13) In order to determine best available techniques and to limit imbalances in the Union as regards the level of emissions from industrial activities, reference documents for best available techniques (hereinafter BAT reference documents') should be drawn up, reviewed and, where necessary, updated through an exchange of information with stakeholders and the key elements of BAT reference documents (hereinafter BAT conclusions') adopted through committee procedure. In this respect, the Commission should, through committee procedure, establish guidance on the collection of data, on the elaboration of BAT reference documents and on their quality assurance. BAT conclusions should be the reference for setting permit conditions. They can be supplemented by other sources. The Commission should aim to update BAT reference documents not later than 8 years after the publication of the previous version.

([1]) OJ L 242, 10.9.2002, p. 1.
([2]) OJ L 275, 25.10.2003, p. 32.
([3]) OJ L 175, 5.7.1985, p. 40.
([4]) OJ L 10, 14.1.1997, p. 13.

(14) In order to ensure an effective and active exchange of information resulting in high-quality BAT reference documents, the Commission should establish a forum that functions in a transparent manner. Practical arrangements for the exchange of information and the accessibility of BAT reference documents should be laid down, in particular to ensure that Member States and stakeholders provide data of sufficient quality and quantity based on established guidance to enable the determination of best available techniques and emerging techniques.

(15) It is important to provide sufficient flexibility to competent authorities to set emission limit values that ensure that, under normal operating conditions, emissions do not exceed the emission levels associated with the best available techniques. To this end, the competent authority may set emission limits that differ from the emission levels associated with the best available techniques in terms of the values, periods of time and reference conditions applied, so long as it can be demonstrated, through the results of emission monitoring, that emissions have not exceeded the emission levels associated with the best available techniques. Compliance with the emission limit values that are set in permits results in emissions below those emission limit values.

(16) In order to take into account certain specific circumstances where the application of emission levels associated with the best available techniques would lead to disproportionately high costs compared to the environmental benefits, competent authorities should be able to set emission limit values deviating from those levels. Such deviations should be based on an assessment taking into account well-defined criteria. The emission limit values set out in this Directive should not be exceeded. In any event, no significant pollution should be caused and a high level of protection of the environment taken as a whole should be achieved.

(17) In order to enable operators to test emerging techniques which could provide for a higher general level of environmental protection, or at least the same level of environmental protection and higher cost savings than existing best available techniques, the competent authority should be able to grant temporary derogations from emission levels associated with the best available techniques.

(18) Changes to an installation may give rise to higher levels of pollution. Operators should notify the competent authority of any planned change which might affect the environment. Substantial changes to installations which may have significant negative effects on human health or the environment should not be made without a permit granted in accordance with this Directive.

(19) The spreading of manure contributes significantly to emissions of pollutants into air and water. With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution and Union law on water protection, it is necessary for the Commission to review the need to establish the most suitable controls of these emissions through the application of best available techniques.

(20) The intensive rearing of poultry and cattle contributes significantly to emissions of pollutants into air and water. With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution and in Union law on water protection, it is necessary for the Commission to review the need to establish differentiated capacity thresholds for different poultry species in order to define the scope of this Directive and to review the need to establish the most suitable controls on emissions from cattle rearing installations.

(21) In order to take account of developments in best available techniques or other changes to an installation, permit conditions should be reconsidered regularly and, where necessary, updated, in particular where new or updated BAT conclusions are adopted.

(22) In specific cases where permit reconsideration and updating identifies that a longer period than 4 years after the publication of a decision on BAT conclusions might be needed to introduce new best available techniques, competent authorities may set a longer time period in permit conditions where this is justified on the basis of the criteria laid down in this Directive.

(23) It is necessary to ensure that the operation of an installation does not lead to a deterioration of the quality of soil and groundwater. Permit conditions should, therefore, include appropriate measures to prevent emissions to soil and groundwater and regular surveillance of those measures to avoid leaks, spills, incidents or accidents occurring during the use of equipment and during storage. In order to detect possible soil and groundwater pollution at an early stage and, therefore, to take appropriate corrective measures before the pollution spreads, the monitoring of soil and groundwater for relevant hazardous substances is also necessary. When determining the frequency of monitoring, the type of prevention measures and the extent and occurrence of their surveillance may be considered.

(24) In order to ensure that the operation of an installation does not deteriorate the quality of soil and groundwater, it is necessary to establish, through a baseline report, the state of soil and groundwater contamination. The baseline report should be a practical tool that permits, as far as possible, a quantified comparison between the state of the site described in that report and the state of the site upon definitive cessation of activities, in order to ascertain whether a significant increase in pollution of soil or groundwater has taken place. The baseline report should, therefore, contain information making use of existing data on soil and groundwater measurements and historical data related to past uses of the site.

(25) In accordance with the polluter pays principle, when assessing the level of significance of the pollution of soil and groundwater caused by the operator which would trigger the obligation to return the site to the state described in the baseline report, Member States should take into account the permit conditions that have applied over the lifetime of the activity concerned, the pollution prevention measures adopted for the installation, and the relative increase in pollution compared to the contamination load identified in the baseline report. Liability regarding pollution not caused by the operator is a matter for relevant national law and, where applicable, other relevant Union law.

(26) In order to ensure the effective implementation and enforcement of this Directive, operators should regularly report to the competent authority on compliance with permit conditions. Member States should ensure that the operator and the competent authority each take necessary measures in the event of non-compliance with this Directive and provide for a system of environmental inspections. Member States should ensure that sufficient staff are available with the skills and qualifications needed to carry out those inspections effectively.

(27) In accordance with the Århus Convention on access to information, public participation in decision-making and access to justice in environmental matters ([1]), effective public participation in decision-making is necessary to enable the public to express, and the decision-maker to take account of, opinions and concerns which may be relevant to those decisions, thereby increasing the accountability and transparency of the decision-making process and contributing to public awareness of environmental issues and support for the decisions taken. Members of the public concerned should have access to justice in order to contribute to the protection of the right to live in an environment which is adequate for personal health and well-being.

(28) The combustion of fuel in installations with a total rated thermal input below 50 MW contributes significantly to emissions of pollutants into the air. With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution, it is necessary for the Commission to review the need to establish the most suitable controls on emissions from such installations. That review should take into account the specificities of combustion plants used in healthcare facilities, in particular with regard to their exceptional use in the case of emergencies.

(29) Large combustion plants contribute greatly to emissions of polluting substances into the air resulting in a significant impact on human health and the environment. In order to reduce that impact and to work towards meeting the requirements of Directive 2001/81/EC of the European Parliament and of the Council of 23 October 2001 on national emission ceilings for certain atmospheric pollutants ([2]) and the objectives set out in the Thematic Strategy on Air Pollution, it is necessary to set more stringent emission limit values at Union level for certain categories of combustion plants and pollutants.

(30) The Commission should review the need to establish Union-wide emission limit values and to amend the emission limit values set out in Annex V for certain large combustion plants, taking into account the review and update of the relevant BAT reference documents. In this context, the Commission should consider the specificity of the energy systems of refineries.

(31) Due to the characteristics of certain indigenous solid fuels, it is appropriate to apply minimum desulphurisation rates rather than emission limit values for sulphur dioxide for combustion plants firing such fuels. Moreover, as the specific characteristics of oil shale may not allow the application of the same sulphur abatement techniques or the achievement of the same desulphurisation efficiency as for other fuels, a slightly lower minimum desulphurisation rate for plants using this fuel is appropriate.

(32) In the case of a sudden interruption in the supply of low-sulphur fuel or gas resulting from a serious shortage, the competent authority should be able to grant temporary derogations to allow emissions of the combustion plants concerned to exceed the emission limit values set out in this Directive.

([1]) OJ L 124, 17.5.2005, p. 4.

([2]) OJ L 309, 27.11.2001, p. 22.

(33) The operator concerned should not operate a combustion plant for more than 24 hours after malfunctioning or breakdown of abatement equipment and unabated operation should not exceed 120 hours in a 12-month period in order to limit the negative effects of pollution on the environment. However, where there is an overriding need for energy supplies or it is necessary to avoid an overall increase of emissions resulting from the operation of another combustion plant, competent authorities should be able to grant a derogation from those time limits.

(34) In order to ensure a high level of environmental and human health protection and to avoid transboundary movements of waste to plants operating at lower environmental standards, it is necessary to set and maintain stringent operating conditions, technical requirements and emission limit values for plants incinerating or co-incinerating waste within the Union.

(35) The use of organic solvents in certain activities and installations gives rise to emissions of organic compounds into the air which contribute to the local and transboundary formation of photochemical oxidants which causes damage to natural resources and has harmful effects on human health. It is, therefore, necessary to take preventive action against the use of organic solvents and to establish a requirement to comply with emission limit values for organic compounds and appropriate operating conditions. Operators should be allowed to comply with the requirements of a reduction scheme instead of complying with the emission limit values set out in this Directive where other measures, such as the use of low-solvent or solvent-free products or techniques, provide alternative means of achieving equivalent emission reduction.

(36) Installations producing titanium dioxide can give rise to significant pollution into air and water. In order to reduce these impacts, it is necessary to set at Union level more stringent emission limit values for certain polluting substances.

(37) With regard to the inclusion in the scope of national laws, regulations and administrative provisions brought into force in order to comply with this Directive of installations for the manufacturing of ceramic products by firings, on the basis of the characteristics of the national industrial sector, and in order to grant clear interpretation of the scope, Member States should decide whether to apply both the criteria, production capacity and kiln capacity, or just one of the two criteria.

(38) In order to simplify reporting and reduce unnecessary administrative burden, the Commission should identify methods to streamline the way in which data are made available pursuant to this Directive with the other requirements of Union law, and in particular Regulation (EC) No 166/2006 of the European Parliament and of the Council of 18 January 2006 concerning the establishment of a European Pollutant Release and Transfer Register ([1]).

(39) In order to ensure uniform conditions for implementation, implementing powers should be conferred on the Commission to adopt guidance on the collection of data, on the drawing up of BAT reference documents and on their quality assurance, including the suitability of their content and format, to adopt decisions on BAT conclusions, to establish detailed rules on the determination of start-up and shut-down periods and for transitional national plans for large combustion plants, and to establish the type, format and frequency of information that Member States are to make available to the Commission. In accordance with Article 291 TFEU, rules and general principles concerning mechanisms for the control by Member States of the Commission's exercise of implementing powers are to be laid down in advance by a regulation adopted in accordance with the ordinary legislative procedure. Pending the adoption of that new regulation, Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission ([2]) continues to apply, with the exception of the regulatory procedure with scrutiny, which is not applicable.

(40) The Commission should be empowered to adopt delegated acts in accordance with Article 290 TFEU in respect of the setting of the date from which continuous measurements of emissions into the air of heavy metals and dioxins and furans are to be carried out, and the adaptation of certain parts of Annexes V, VI and VII to scientific and technical progress. In the case of waste incineration plants and waste co-incineration plants, this may include, inter alia, the establishment of criteria to allow derogations from continuous monitoring of total dust emissions. It is of particular importance that the Commission carry out appropriate consultations during its preparatory work, including at expert level.

(41) In order to address significant environmental pollution, for example from heavy metals and dioxins and furans, the Commission should, based on an assessment of the implementation of the best available techniques by certain activities or of the impact of those activities on the environment as a whole, present proposals for Union-wide minimum requirements for emission limit values and for rules on monitoring and compliance.

(42) Member States should lay down rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive and ensure that they are implemented. Those penalties should be effective, proportionate and dissuasive.

([1]) OJ L 33, 4.2.2006, p. 1.

([2]) OJ L 184, 17.7.1999, p. 23.

(43) In order to provide existing installations with sufficient time to adapt technically to the new requirements of this Directive, some of the new requirements should apply to those installations after a fixed period from the date of application of this Directive. Combustion plants need sufficient time to install the necessary abatement measures to meet the emission limit values set out in Annex V.

(44) Since the objectives of this Directive, namely to ensure a high level of environmental protection and the improvement of environmental quality, cannot be sufficiently achieved by Member States and can, therefore, by reason of the transboundary nature of pollution from industrial activities, be better achieved at Union level, the Union may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(45) This Directive respects the fundamental rights and observes the principles recognised in particular by the Charter of Fundamental Rights of the European Union. In particular, this Directive seeks to promote the application of Article 37 of that Charter.

(46) The obligation to transpose this Directive into national law should be confined to those provisions which represent a substantive change as compared with the earlier Directives. The obligation to transpose the provisions which are unchanged arises under the earlier Directives.

(47) In accordance with paragraph 34 of the Interinstitutional agreement on better law-making [1], Member States are encouraged to draw up, for themselves and in the interests of the Union, their own tables, which will as far as possible, illustrate the correlation between this Directive and the transposition measures, and to make those tables public.

(48) This Directive should be without prejudice to the obligations of the Member States relating to the time-limits for transposition into national law and application of the Directives set out in Annex IX, Part B,

HAVE ADOPTED THIS DIRECTIVE:

CHAPTER I

COMMON PROVISIONS

Article 1

Subject matter

This Directive lays down rules on integrated prevention and control of pollution arising from industrial activities. It also lays down rules designed to prevent or, where that is not practicable, to reduce emissions into air, water and land and to prevent the generation of waste, in order to achieve a high level of protection of the environment taken as a whole.

Article 2

Scope

1. This Directive shall apply to the industrial activities giving rise to pollution referred to in Chapters II to VI.

2. This Directive shall not apply to research activities, development activities or the testing of new products and processes.

Article 3

Definitions

For the purposes of this Directive the following definitions shall apply:

(1) 'substance' means any chemical element and its compounds, with the exception of the following substances:

(a) radioactive substances as defined in Article 1 of Council Directive 96/29/Euratom of 13 May 1996 laying down basic safety standards for the protection of the health of workers and the general public against the dangers arising from ionising radiation [2];

(b) genetically modified micro-organisms as defined in Article 2(b) of Directive 2009/41/EC of the European Parliament and the Council of 6 May 2009 on the contained use of genetically modified micro-organisms [3];

(c) genetically modified organisms as defined in point 2 of Article 2 of Directive 2001/18/EC of the European Parliament and of the Council of 12 March 2001 on the deliberate release into the environment of genetically modified organisms [4];

(2) 'pollution' means the direct or indirect introduction, as a result of human activity, of substances, vibrations, heat or noise into air, water or land which may be harmful to human health or the quality of the environment, result in damage to material property, or impair or interfere with amenities and other legitimate uses of the environment;

[1] OJ C 321, 31.12.2003, p. 1.

[2] OJ L 159, 29.6.1996, p. 1.

[3] OJ L 125, 21.5.2009, p. 75.

[4] OJ L 106, 17.4.2001, p. 1.

(3) 'installation' means a stationary technical unit within which one or more activities listed in Annex I or in Part 1 of Annex VII are carried out, and any other directly associated activities on the same site which have a technical connection with the activities listed in those Annexes and which could have an effect on emissions and pollution;

(4) 'emission' means the direct or indirect release of substances, vibrations, heat or noise from individual or diffuse sources in the installation into air, water or land;

(5) 'emission limit value' means the mass, expressed in terms of certain specific parameters, concentration and/or level of an emission, which may not be exceeded during one or more periods of time;

(6) 'environmental quality standard' means the set of requirements which must be fulfilled at a given time by a given environment or particular part thereof, as set out in Union law;

(7) 'permit' means a written authorisation to operate all or part of an installation or combustion plant, waste incineration plant or waste co-incineration plant;

(8) 'general binding rules' means emission limit values or other conditions, at least at sector level, that are adopted with the intention of being used directly to set permit conditions;

(9) 'substantial change' means a change in the nature or functioning, or an extension, of an installation or combustion plant, waste incineration plant or waste co-incineration plant which may have significant negative effects on human health or the environment;

(10) 'best available techniques' means the most effective and advanced stage in the development of activities and their methods of operation which indicates the practical suitability of particular techniques for providing the basis for emission limit values and other permit conditions designed to prevent and, where that is not practicable, to reduce emissions and the impact on the environment as a whole:

(a) 'techniques' includes both the technology used and the way in which the installation is designed, built, maintained, operated and decommissioned;

(b) 'available techniques' means those developed on a scale which allows implementation in the relevant industrial sector, under economically and technically viable conditions, taking into consideration the costs and advantages, whether or not the techniques are used or produced inside the Member State in question, as long as they are reasonably accessible to the operator;

(c) 'best' means most effective in achieving a high general level of protection of the environment as a whole;

(11) 'BAT reference document' means a document, resulting from the exchange of information organised pursuant to Article 13, drawn up for defined activities and describing, in particular, applied techniques, present emissions and consumption levels, techniques considered for the determination of best available techniques as well as BAT conclusions and any emerging techniques, giving special consideration to the criteria listed in Annex III;

(12) 'BAT conclusions' means a document containing the parts of a BAT reference document laying down the conclusions on best available techniques, their description, information to assess their applicability, the emission levels associated with the best available techniques, associated monitoring, associated consumption levels and, where appropriate, relevant site remediation measures;

(13) 'emission levels associated with the best available techniques' means the range of emission levels obtained under normal operating conditions using a best available technique or a combination of best available techniques, as described in BAT conclusions, expressed as an average over a given period of time, under specified reference conditions;

(14) 'emerging technique' means a novel technique for an industrial activity that, if commercially developed, could provide either a higher general level of protection of the environment or at least the same level of protection of the environment and higher cost savings than existing best available techniques;

(15) 'operator' means any natural or legal person who operates or controls in whole or in part the installation or combustion plant, waste incineration plant or waste co-incineration plant or, where this is provided for in national law, to whom decisive economic power over the technical functioning of the installation or plant has been delegated;

(16) 'the public' means one or more natural or legal persons and, in accordance with national law or practice, their associations, organisations or groups;

(17) 'the public concerned' means the public affected or likely to be affected by, or having an interest in, the taking of a decision on the granting or the updating of a permit or of permit conditions; for the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest;

(18) 'hazardous substances' means substances or mixtures as defined in Article 3 of Regulation (EC) No 1272/2008 of the European Parliament and of the Council of 16 December 2008 on classification, labelling and packaging of substances and mixtures ([1]);

(19) 'baseline report' means information on the state of soil and groundwater contamination by relevant hazardous substances;

(20) 'groundwater' means groundwater as defined in point 2 of Article 2 of Directive 2000/60/EC of the European Parliament and of the Council of 23 October 2000 establishing a framework for Community action in the field of water policy ([2]);

(21) 'soil' means the top layer of the Earth's crust situated between the bedrock and the surface. The soil is composed of mineral particles, organic matter, water, air and living organisms;

(22) 'environmental inspection' means all actions, including site visits, monitoring of emissions and checks of internal reports and follow-up documents, verification of self-monitoring, checking of the techniques used and adequacy of the environment management of the installation, undertaken by or on behalf of the competent authority to check and promote compliance of installations with their permit conditions and, where necessary, to monitor their environmental impact;

(23) 'poultry' means poultry as defined in point 1 of Article 2 of Council Directive 90/539/EEC of 15 October 1990 on animal health conditions governing intra-Community trade in, and imports from third countries of, poultry and hatching eggs ([3]);

(24) 'fuel' means any solid, liquid or gaseous combustible material;

(25) 'combustion plant' means any technical apparatus in which fuels are oxidised in order to use the heat thus generated;

(26) 'stack' means a structure containing one or more flues providing a passage for waste gases in order to discharge them into the air;

(27) 'operating hours' means the time, expressed in hours, during which a combustion plant, in whole or in part, is operating and discharging emissions into the air, excluding start-up and shut-down periods;

(28) 'rate of desulphurisation' means the ratio over a given period of time of the quantity of sulphur which is not emitted into air by a combustion plant to the quantity of sulphur contained in the solid fuel which is introduced into the combustion plant facilities and which is used in the plant over the same period of time;

(29) 'indigenous solid fuel' means a naturally occurring solid fuel fired in a combustion plant specifically designed for that fuel and extracted locally;

(30) 'determinative fuel' means the fuel which, amongst all fuels used in a multi-fuel firing combustion plant using the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, has the highest emission limit value as set out in Part 1 of Annex V, or, in the case of several fuels having the same emission limit value, the fuel having the highest thermal input amongst those fuels;

(31) 'biomass' means any of the following:

(a) products consisting of any vegetable matter from agriculture or forestry which can be used as a fuel for the purpose of recovering its energy content;

(b) the following waste:

(i) vegetable waste from agriculture and forestry;

(ii) vegetable waste from the food processing industry, if the heat generated is recovered;

(iii) fibrous vegetable waste from virgin pulp production and from production of paper from pulp, if it is co-incinerated at the place of production and the heat generated is recovered;

(iv) cork waste;

(v) wood waste with the exception of wood waste which may contain halogenated organic compounds or heavy metals as a result of treatment with wood preservatives or coating and which includes, in particular, such wood waste originating from construction and demolition waste;

(32) 'multi-fuel firing combustion plant' means any combustion plant which may be fired simultaneously or alternately by two or more types of fuel;

(33) 'gas turbine' means any rotating machine which converts thermal energy into mechanical work, consisting mainly of a compressor, a thermal device in which fuel is oxidised in order to heat the working fluid, and a turbine;

(34) 'gas engine' means an internal combustion engine which operates according to the Otto cycle and uses spark ignition or, in case of dual fuel engines, compression ignition to burn fuel;

([1]) OJ L 353, 31.12.2008, p. 1.
([2]) OJ L 327, 22.12.2000, p. 1.
([3]) OJ L 303, 31.10.1990, p. 6.

(35) 'diesel engine' means an internal combustion engine which operates according to the diesel cycle and uses compression ignition to burn fuel;

(36) 'small isolated system' means a small isolated system as defined in point 26 of Article 2 of Directive 2003/54/EC of the European Parliament and of the Council of 26 June 2003 concerning common rules for the internal market in electricity [1];

(37) 'waste' means waste as defined in point 1 of Article 3 of Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste [2];

(38) 'hazardous waste' means hazardous waste as defined in point 2 of Article 3 of Directive 2008/98/EC;

(39) 'mixed municipal waste' means waste from households as well as commercial, industrial and institutional waste which, because of its nature and composition, is similar to waste from households, but excluding fractions indicated under heading 20 01 of the Annex to Decision 2000/532/EC [3] that are collected separately at source and excluding the other waste indicated under heading 20 02 of that Annex;

(40) 'waste incineration plant' means any stationary or mobile technical unit and equipment dedicated to the thermal treatment of waste, with or without recovery of the combustion heat generated, through the incineration by oxidation of waste as well as other thermal treatment processes, such as pyrolysis, gasification or plasma process, if the substances resulting from the treatment are subsequently incinerated;

(41) 'waste co-incineration plant' means any stationary or mobile technical unit whose main purpose is the generation of energy or production of material products and which uses waste as a regular or additional fuel or in which waste is thermally treated for the purpose of disposal through the incineration by oxidation of waste as well as other thermal treatment processes, such as pyrolysis, gasification or plasma process, if the substances resulting from the treatment are subsequently incinerated;

(42) 'nominal capacity' means the sum of the incineration capacities of the furnaces of which a waste incineration plant or a waste co-incineration plant is composed, as specified by the constructor and confirmed by the operator, with due account being taken of the calorific value of the waste, expressed as the quantity of waste incinerated per hour;

(43) 'dioxins and furans' means all polychlorinated dibenzo-p-dioxins and dibenzofurans listed in Part 2 of Annex VI;

(44) 'organic compound' means any compound containing at least the element carbon and one or more of hydrogen, halogens, oxygen, sulphur, phosphorus, silicon or nitrogen, with the exception of carbon oxides and inorganic carbonates and bicarbonates;

(45) 'volatile organic compound' means any organic compound as well as the fraction of creosote, having at 293,15 K a vapour pressure of 0,01 kPa or more, or having a corresponding volatility under the particular conditions of use;

(46) 'organic solvent' means any volatile organic compound which is used for any of the following:

(a) alone or in combination with other agents, and without undergoing a chemical change, to dissolve raw materials, products or waste materials;

(b) as a cleaning agent to dissolve contaminants;

(c) as a dissolver;

(d) as a dispersion medium;

(e) as a viscosity adjuster;

(f) as a surface tension adjuster;

(g) as a plasticiser;

(h) as a preservative;

(47) 'coating' means coating as defined in point 8 of Article 2 of Directive 2004/42/EC of the European Parliament and of the Council of 21 April 2004 on the limitation of emissions of volatile organic compounds due to the use of organic solvents in certain paints and varnishes and vehicle refinishing products [4].

Article 4

Obligation to hold a permit

1. Member States shall take the necessary measures to ensure that no installation or combustion plant, waste incineration plant or waste co-incineration plant is operated without a permit.

By way of derogation from the first subparagraph, Member States may set a procedure for the registration of installations covered only by Chapter V.

The procedure for registration shall be specified in a binding act and include at least a notification to the competent authority by the operator of the intention to operate an installation.

[1] OJ L 176, 15.7.2003, p. 37.

[2] OJ L 312, 22.11.2008, p. 3.

[3] Commission Decision 2000/532/EC of 3 May 2000 replacing Decision 94/3/EC establishing a list of wastes pursuant to Article 1(a) of Council Directive 75/442/EEC on waste and Council Decision 94/904/EC establishing a list of hazardous waste pursuant to Article 1(4) of Council Directive 91/689/EEC on hazardous waste (OJ L 226, 6.9.2000, p. 3).

[4] OJ L 143, 30.4.2004, p. 87.

2. Member States may opt to provide that a permit cover two or more installations or parts of installations operated by the same operator on the same site.

Where a permit covers two or more installations, it shall contain conditions to ensure that each installation complies with the requirements of this Directive.

3. Member States may opt to provide that a permit cover several parts of an installation operated by different operators. In such cases, the permit shall specify the responsibilities of each operator.

Article 5

Granting of a permit

1. Without prejudice to other requirements laid down in national or Union law, the competent authority shall grant a permit if the installation complies with the requirements of this Directive.

2. Member States shall take the measures necessary to ensure that the conditions of, and the procedures for the granting of, the permit are fully coordinated where more than one competent authority or more than one operator is involved or more than one permit is granted, in order to guarantee an effective integrated approach by all authorities competent for this procedure.

3. In the case of a new installation or a substantial change where Article 4 of Directive 85/337/EEC applies, any relevant information obtained or conclusion arrived at pursuant to Articles 5, 6, 7 and 9 of that Directive shall be examined and used for the purposes of granting the permit.

Article 6

General binding rules

Without prejudice to the obligation to hold a permit, Member States may include requirements for certain categories of installations, combustion plants, waste incineration plants or waste co-incineration plants in general binding rules.

Where general binding rules are adopted, the permit may simply include a reference to such rules.

Article 7

Incidents and accidents

Without prejudice to Directive 2004/35/EC of the European Parliament and of the Council of 21 April 2004 on environmental liability with regard to the prevention and remedying of environmental damage [1], in the event of any incident or accident significantly affecting the environment, Member States shall take the necessary measures to ensure that:

(a) the operator informs the competent authority immediately;

(b) the operator immediately takes the measures to limit the environmental consequences and to prevent further possible incidents or accidents;

(c) the competent authority requires the operator to take any appropriate complementary measures that the competent authority considers necessary to limit the environmental consequences and to prevent further possible incidents or accidents.

Article 8

Non-compliance

1. Member States shall take the necessary measures to ensure that the permit conditions are complied with.

2. In the event of a breach of the permit conditions, Member States shall ensure that:

(a) the operator immediately informs the competent authority;

(b) the operator immediately takes the measures necessary to ensure that compliance is restored within the shortest possible time;

(c) the competent authority requires the operator to take any appropriate complementary measures that the competent authority considers necessary to restore compliance.

Where the breach of the permit conditions poses an immediate danger to human health or threatens to cause an immediate significant adverse effect upon the environment, and until compliance is restored in accordance with points (b) and (c) of the first subparagraph, the operation of the installation, combustion plant, waste incineration plant, waste co-incineration plant or relevant part thereof shall be suspended.

Article 9

Emission of greenhouse gases

1. Where emissions of a greenhouse gas from an installation are specified in Annex I to Directive 2003/87/EC in relation to an activity carried out in that installation, the permit shall not include an emission limit value for direct emissions of that gas, unless necessary to ensure that no significant local pollution is caused.

2. For activities listed in Annex I to Directive 2003/87/EC, Member States may choose not to impose requirements relating to energy efficiency in respect of combustion units or other units emitting carbon dioxide on the site.

[1] OJ L 143, 30.4.2004, p. 56.

3. Where necessary, the competent authorities shall amend the permit as appropriate.

4. Paragraphs 1 to 3 shall not apply to installations which are temporarily excluded from the scheme for greenhouse gas emission allowance trading within the Union in accordance with Article 27 of Directive 2003/87/EC.

CHAPTER II

PROVISIONS FOR ACTIVITIES LISTED IN ANNEX I

Article 10

Scope

This Chapter shall apply to the activities set out in Annex I and, where applicable, reaching the capacity thresholds set out in that Annex.

Article 11

General principles governing the basic obligations of the operator

Member States shall take the necessary measures to provide that installations are operated in accordance with the following principles:

(a) all the appropriate preventive measures are taken against pollution;

(b) the best available techniques are applied;

(c) no significant pollution is caused;

(d) the generation of waste is prevented in accordance with Directive 2008/98/EC;

(e) where waste is generated, it is, in order of priority and in accordance with Directive 2008/98/EC, prepared for re-use, recycled, recovered or, where that is technically and economically impossible, it is disposed of while avoiding or reducing any impact on the environment;

(f) energy is used efficiently;

(g) the necessary measures are taken to prevent accidents and limit their consequences;

(h) the necessary measures are taken upon definitive cessation of activities to avoid any risk of pollution and return the site of operation to the satisfactory state defined in accordance with Article 22.

Article 12

Applications for permits

1. Member States shall take the necessary measures to ensure that an application for a permit includes a description of the following:

(a) the installation and its activities;

(b) the raw and auxiliary materials, other substances and the energy used in or generated by the installation;

(c) the sources of emissions from the installation;

(d) the conditions of the site of the installation;

(e) where applicable, a baseline report in accordance with Article 22(2);

(f) the nature and quantities of foreseeable emissions from the installation into each medium as well as identification of significant effects of the emissions on the environment;

(g) the proposed technology and other techniques for preventing or, where this is not possible, reducing emissions from the installation;

(h) measures for the prevention, preparation for re-use, recycling and recovery of waste generated by the installation;

(i) further measures planned to comply with the general principles of the basic obligations of the operator as provided for in Article 11;

(j) measures planned to monitor emissions into the environment;

(k) the main alternatives to the proposed technology, techniques and measures studied by the applicant in outline.

An application for a permit shall also include a non-technical summary of the details referred to in the first subparagraph.

2. Where information supplied in accordance with the requirements provided for in Directive 85/337/EEC or a safety report prepared in accordance with Directive 96/82/EC or other information produced in response to other legislation fulfils any of the requirements of paragraph 1, that information may be included in, or attached to, the application.

Article 13

BAT reference documents and exchange of information

1. In order to draw up, review and, where necessary, update BAT reference documents, the Commission shall organise an exchange of information between Member States, the industries concerned, non-governmental organisations promoting environmental protection and the Commission.

2. The exchange of information shall, in particular, address the following:

(a) the performance of installations and techniques in terms of emissions, expressed as short- and long-term averages, where appropriate, and the associated reference conditions, consumption and nature of raw materials, water consumption, use of energy and generation of waste;

(b) the techniques used, associated monitoring, cross-media effects, economic and technical viability and developments therein;

(c) best available techniques and emerging techniques identified after considering the issues mentioned in points (a) and (b).

3. The Commission shall establish and regularly convene a forum composed of representatives of Member States, the industries concerned and non-governmental organisations promoting environmental protection.

The Commission shall obtain the opinion of the forum on the practical arrangements for the exchange of information and, in particular, on the following:

(a) the rules of procedure of the forum;

(b) the work programme for the exchange of information;

(c) guidance on the collection of data;

(d) guidance on the drawing up of BAT reference documents and on their quality assurance including the suitability of their content and format.

The guidance referred to in points (c) and (d) of the second subparagraph shall take account of the opinion of the forum and shall be adopted in accordance with the regulatory procedure referred to in Article 75(2).

4. The Commission shall obtain and make publicly available the opinion of the forum on the proposed content of the BAT reference documents and shall take into account this opinion for the procedures laid down in paragraph 5.

5. Decisions on the BAT conclusions shall be adopted in accordance with the regulatory procedure referred to in Article 75(2).

6. After the adoption of a decision in accordance with paragraph 5, the Commission shall without delay make the BAT reference document publicly available and ensure that BAT conclusions are made available in all the official languages of the Union.

7. Pending the adoption of a relevant decision in accordance with paragraph 5, the conclusions on best available techniques from BAT reference documents adopted by the Commission prior to the date referred to in Article 83 shall apply as BAT conclusions for the purposes of this Chapter except for Article 15(3) and (4).

Article 14

Permit conditions

1. Member States shall ensure that the permit includes all measures necessary for compliance with the requirements of Articles 11 and 18.

Those measures shall include at least the following:

(a) emission limit values for polluting substances listed in Annex II, and for other polluting substances, which are likely to be emitted from the installation concerned in significant quantities, having regard to their nature and their potential to transfer pollution from one medium to another;

(b) appropriate requirements ensuring protection of the soil and groundwater and measures concerning the monitoring and management of waste generated by the installation;

(c) suitable emission monitoring requirements specifying:

(i) measurement methodology, frequency and evaluation procedure; and

(ii) where Article 15(3)(b) is applied, that results of emission monitoring are available for the same periods of time and reference conditions as for the emission levels associated with the best available techniques;

(d) an obligation to supply the competent authority regularly, and at least annually, with:

(i) information on the basis of results of emission monitoring referred to in point (c) and other required data that enables the competent authority to verify compliance with the permit conditions; and

(ii) where Article 15(3)(b) is applied, a summary of the results of emission monitoring which allows a comparison with the emission levels associated with the best available techniques;

(e) appropriate requirements for the regular maintenance and surveillance of measures taken to prevent emissions to soil and groundwater pursuant to point (b) and appropriate requirements concerning the periodic monitoring of soil and groundwater in relation to relevant hazardous substances likely to be found on site and having regard to the possibility of soil and groundwater contamination at the site of the installation;

(f) measures relating to conditions other than normal operating conditions such as start-up and shut-down operations, leaks, malfunctions, momentary stoppages and definitive cessation of operations;

(g) provisions on the minimisation of long-distance or transboundary pollution;

(h) conditions for assessing compliance with the emission limit values or a reference to the applicable requirements specified elsewhere.

2. For the purpose of paragraph 1(a), emission limit values may be supplemented or replaced by equivalent parameters or technical measures ensuring an equivalent level of environmental protection.

3. BAT conclusions shall be the reference for setting the permit conditions.

4. Without prejudice to Article 18, the competent authority may set stricter permit conditions than those achievable by the use of the best available techniques as described in the BAT conclusions. Member States may establish rules under which the competent authority may set such stricter conditions.

5. Where the competent authority sets permit conditions on the basis of a best available technique not described in any of the relevant BAT conclusions, it shall ensure that:

(a) that technique is determined by giving special consideration to the criteria listed in Annex III; and

(b) the requirements of Article 15 are complied with.

Where the BAT conclusions referred to in the first subparagraph do not contain emission levels associated with the best available techniques, the competent authority shall ensure that the technique referred to in the first subparagraph ensures a level of environmental protection equivalent to the best available techniques described in the BAT conclusions.

6. Where an activity or a type of production process carried out within an installation is not covered by any of the BAT conclusions or where those conclusions do not address all the potential environmental effects of the activity or process, the competent authority shall, after prior consultations with the operator, set the permit conditions on the basis of the best available techniques that it has determined for the activities or processes concerned, by giving special consideration to the criteria listed in Annex III.

7. For installations referred to in point 6.6 of Annex I, paragraphs 1 to 6 of this Article shall apply without prejudice to the legislation relating to animal welfare.

Article 15

Emission limit values, equivalent parameters and technical measures

1. The emission limit values for polluting substances shall apply at the point where the emissions leave the installation, and any dilution prior to that point shall be disregarded when determining those values.

With regard to indirect releases of polluting substances into water, the effect of a water treatment plant may be taken into account when determining the emission limit values of the installation concerned, provided that an equivalent level of protection of the environment as a whole is guaranteed and provided this does not lead to higher levels of pollution in the environment.

2. Without prejudice to Article 18, the emission limit values and the equivalent parameters and technical measures referred to in Article 14(1) and (2) shall be based on the best available techniques, without prescribing the use of any technique or specific technology.

3. The competent authority shall set emission limit values that ensure that, under normal operating conditions, emissions do not exceed the emission levels associated with the best available techniques as laid down in the decisions on BAT conclusions referred to in Article 13(5) through either of the following:

(a) setting emission limit values that do not exceed the emission levels associated with the best available techniques. Those emission limit values shall be expressed for the same or shorter periods of time and under the same reference conditions as those emission levels associated with the best available techniques; or

(b) setting different emission limit values than those referred to under point (a) in terms of values, periods of time and reference conditions.

Where point (b) is applied, the competent authority shall, at least annually, assess the results of emission monitoring in order to ensure that emissions under normal operating conditions have not exceeded the emission levels associated with the best available techniques.

4. By way of derogation from paragraph 3, and without prejudice to Article 18, the competent authority may, in specific cases, set less strict emission limit values. Such a derogation may apply only where an assessment shows that the achievement of emission levels associated with the best available techniques as described in BAT conclusions would lead to disproportionately higher costs compared to the environmental benefits due to:

(a) the geographical location or the local environmental conditions of the installation concerned; or

(b) the technical characteristics of the installation concerned.

The competent authority shall document in an annex to the permit conditions the reasons for the application of the first subparagraph including the result of the assessment and the justification for the conditions imposed.

The emission limit values set in accordance with the first subparagraph shall, however, not exceed the emission limit values set out in the Annexes to this Directive, where applicable.

The competent authority shall in any case ensure that no significant pollution is caused and that a high level of protection of the environment as a whole is achieved.

On the basis of information provided by Member States in accordance with Article 72(1), in particular concerning the application of this paragraph, the Commission may, where necessary, assess and further clarify, through guidance, the criteria to be taken into account for the application of this paragraph.

The competent authority shall re-assess the application of the first subparagraph as part of each reconsideration of the permit conditions pursuant to Article 21.

5. The competent authority may grant temporary derogations from the requirements of paragraphs 2 and 3 of this Article and from Article 11(a) and (b) for the testing and use of emerging techniques for a total period of time not exceeding 9 months, provided that after the period specified, either the technique is stopped or the activity achieves at least the emission levels associated with the best available techniques.

Article 16

Monitoring requirements

1. The monitoring requirements referred to in Article 14(1)(c) shall, where applicable, be based on the conclusions on monitoring as described in the BAT conclusions.

2. The frequency of the periodic monitoring referred to in Article 14(1)(e) shall be determined by the competent authority in a permit for each individual installation or in general binding rules.

Without prejudice to the first subparagraph, periodic monitoring shall be carried out at least once every 5 years for groundwater and 10 years for soil, unless such monitoring is based on a systematic appraisal of the risk of contamination.

Article 17

General binding rules for activities listed in Annex I

1. When adopting general binding rules, Member States shall ensure an integrated approach and a high level of environmental protection equivalent to that achievable with individual permit conditions.

2. General binding rules shall be based on the best available techniques, without prescribing the use of any technique or specific technology in order to ensure compliance with Articles 14 and 15.

3. Member States shall ensure that general binding rules are updated to take into account developments in best available techniques and in order to ensure compliance with Article 21.

4. General binding rules adopted in accordance with paragraphs 1 to 3 shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication.

Article 18

Environmental quality standards

Where an environmental quality standard requires stricter conditions than those achievable by the use of the best available techniques, additional measures shall be included in the permit, without prejudice to other measures which may be taken to comply with environmental quality standards.

Article 19

Developments in best available techniques

Member States shall ensure that the competent authority follows or is informed of developments in best available techniques and of the publication of any new or updated BAT conclusions and shall make that information available to the public concerned.

Article 20

Changes by operators to installations

1. Member States shall take the necessary measures to ensure that the operator informs the competent authority of any planned change in the nature or functioning, or an extension of the installation which may have consequences for the environment. Where appropriate, the competent authority shall update the permit.

2. Member States shall take the necessary measures to ensure that no substantial change planned by the operator is made without a permit granted in accordance with this Directive.

The application for a permit and the decision by the competent authority shall cover those parts of the installation and those details listed in Article 12 which may be affected by the substantial change.

3. Any change in the nature or functioning or an extension of an installation shall be deemed to be substantial if the change or extension in itself reaches the capacity thresholds set out in Annex I.

Article 21

Reconsideration and updating of permit conditions by the competent authority

1. Member States shall take the necessary measures to ensure that the competent authority periodically reconsiders in accordance with paragraphs 2 to 5 all permit conditions and, where necessary to ensure compliance with this Directive, updates those conditions.

2. At the request of the competent authority, the operator shall submit all the information necessary for the purpose of reconsidering the permit conditions, including, in particular, results of emission monitoring and other data, that enables a comparison of the operation of the installation with the best available techniques described in the applicable BAT conclusions and with the emission levels associated with the best available techniques.

When reconsidering permit conditions, the competent authority shall use any information resulting from monitoring or inspections.

3. Within 4 years of publication of decisions on BAT conclusions in accordance with Article 13(5) relating to the main activity of an installation, the competent authority shall ensure that:

(a) all the permit conditions for the installation concerned are reconsidered and, if necessary, updated to ensure compliance with this Directive, in particular, with Article 15(3) and (4), where applicable;

(b) the installation complies with those permit conditions.

The reconsideration shall take into account all the new or updated BAT conclusions applicable to the installation and adopted in accordance with Article 13(5) since the permit was granted or last reconsidered.

4. Where an installation is not covered by any of the BAT conclusions, the permit conditions shall be reconsidered and, if necessary, updated where developments in the best available techniques allow for the significant reduction of emissions.

5. The permit conditions shall be reconsidered and, where necessary, updated at least in the following cases:

(a) the pollution caused by the installation is of such significance that the existing emission limit values of the permit need to be revised or new such values need to be included in the permit;

(b) the operational safety requires other techniques to be used;

(c) where it is necessary to comply with a new or revised environmental quality standard in accordance with Article 18.

Article 22

Site closure

1. Without prejudice to Directive 2000/60/EC, Directive 2004/35/EC, Directive 2006/118/EC of the European Parliament and of the Council of 12 December 2006 on the protection of groundwater against pollution and deterioration [1] and to relevant Union law on soil protection, the competent authority shall set permit conditions to ensure compliance with paragraphs 3 and 4 of this Article upon definitive cessation of activities.

2. Where the activity involves the use, production or release of relevant hazardous substances and having regard to the possibility of soil and groundwater contamination at the site of the installation, the operator shall prepare and submit to the competent authority a baseline report before starting operation of an installation or before a permit for an installation is updated for the first time after 7 January 2013.

The baseline report shall contain the information necessary to determine the state of soil and groundwater contamination so as to make a quantified comparison with the state upon definitive cessation of activities provided for under paragraph 3.

The baseline report shall contain at least the following information:

(a) information on the present use and, where available, on past uses of the site;

(b) where available, existing information on soil and groundwater measurements that reflect the state at the time the report is drawn up or, alternatively, new soil and groundwater measurements having regard to the possibility of soil and groundwater contamination by those hazardous substances to be used, produced or released by the installation concerned.

Where information produced pursuant to other national or Union law fulfils the requirements of this paragraph that information may be included in, or attached to, the submitted baseline report.

The Commission shall establish guidance on the content of the baseline report.

3. Upon definitive cessation of the activities, the operator shall assess the state of soil and groundwater contamination by relevant hazardous substances used, produced or released by the installation. Where the installation has caused significant pollution of soil or groundwater by relevant hazardous substances compared to the state established in the baseline report referred to in paragraph 2, the operator shall take the necessary measures to address that pollution so as to return the site to that state. For that purpose, the technical feasibility of such measures may be taken into account.

Without prejudice to the first subparagraph, upon definitive cessation of the activities, and where the contamination of soil and groundwater at the site poses a significant risk to human health or the environment as a result of the permitted activities carried out by the operator before the permit for the installation is updated for the first time after 7 January 2013 and taking into account the conditions of the site of the installation established in accordance with Article 12(1)(d), the operator shall take the necessary actions aimed at the removal, control, containment or reduction of relevant hazardous substances, so that the site, taking into account its current or approved future use, ceases to pose such a risk.

[1] OJ L 372, 27.12.2006, p. 19.

4. Where the operator is not required to prepare a baseline report referred to in paragraph 2, the operator shall, upon definitive cessation of the activities, take the necessary actions aimed at the removal, control, containment or reduction of relevant hazardous substances, so that the site, taking into account its current or approved future use, ceases to pose any significant risk to human health or the environment due to the contamination of soil and groundwater as a result of the permitted activities and taking into account the conditions of the site of the installation established in accordance with Article 12(1)(d).

Article 23

Environmental inspections

1. Member States shall set up a system of environmental inspections of installations addressing the examination of the full range of relevant environmental effects from the installations concerned.

Member States shall ensure that operators afford the competent authorities all necessary assistance to enable those authorities to carry out any site visits, to take samples and to gather any information necessary for the performance of their duties for the purposes of this Directive.

2. Member States shall ensure that all installations are covered by an environmental inspection plan at national, regional or local level and shall ensure that this plan is regularly reviewed and, where appropriate, updated.

3. Each environmental inspection plan shall include the following:

(a) a general assessment of relevant significant environmental issues;

(b) the geographical area covered by the inspection plan;

(c) a register of the installations covered by the plan;

(d) procedures for drawing up programmes for routine environmental inspections pursuant to paragraph 4;

(e) procedures for non-routine environmental inspections pursuant to paragraph 5;

(f) where necessary, provisions on the cooperation between different inspection authorities.

4. Based on the inspection plans, the competent authority shall regularly draw up programmes for routine environmental inspections, including the frequency of site visits for different types of installations.

The period between two site visits shall be based on a systematic appraisal of the environmental risks of the installations concerned and shall not exceed 1 year for installations posing the highest risks and 3 years for installations posing the lowest risks.

If an inspection has identified an important case of non-compliance with the permit conditions, an additional site visit shall be carried out within 6 months of that inspection.

The systematic appraisal of the environmental risks shall be based on at least the following criteria:

(a) the potential and actual impacts of the installations concerned on human health and the environment taking into account the levels and types of emissions, the sensitivity of the local environment and the risk of accidents;

(b) the record of compliance with permit conditions;

(c) the participation of the operator in the Union eco-management and audit scheme (EMAS), pursuant to Regulation (EC) No 1221/2009 [1].

The Commission may adopt guidance on the criteria for the appraisal of environmental risks.

5. Non-routine environmental inspections shall be carried out to investigate serious environmental complaints, serious environmental accidents, incidents and occurrences of non-compliance as soon as possible and, where appropriate, before the granting, reconsideration or update of a permit.

6. Following each site visit, the competent authority shall prepare a report describing the relevant findings regarding compliance of the installation with the permit conditions and conclusions on whether any further action is necessary.

The report shall be notified to the operator concerned within 2 months of the site visit taking place. The report shall be made publicly available by the competent authority in accordance with Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information [2] within 4 months of the site visit taking place.

Without prejudice to Article 8(2), the competent authority shall ensure that the operator takes all the necessary actions identified in the report within a reasonable period.

---

[1] Regulation (EC) No 1221/2009 of the European Parliament and of the Council of 25 November 2009 on the voluntary participation by organisations in a Community eco-management and audit scheme (EMAS) (OJ L 342, 22.12.2009, p. 1).

[2] OJ L 41, 14.2.2003, p. 26.

Article 24

Access to information and public participation in the permit procedure

1. Member States shall ensure that the public concerned are given early and effective opportunities to participate in the following procedures:

(a) the granting of a permit for new installations;

(b) the granting of a permit for any substantial change;

(c) the granting or updating of a permit for an installation where the application of Article 15(4) is proposed;

(d) the updating of a permit or permit conditions for an installation in accordance with Article 21(5)(a).

The procedure set out in Annex IV shall apply to such participation.

2. When a decision on granting, reconsideration or updating of a permit has been taken, the competent authority shall make available to the public, including via the Internet in relation to points (a), (b) and (f), the following information:

(a) the content of the decision, including a copy of the permit and any subsequent updates;

(b) the reasons on which the decision is based;

(c) the results of the consultations held before the decision was taken and an explanation of how they were taken into account in that decision;

(d) the title of the BAT reference documents relevant to the installation or activity concerned;

(e) how the permit conditions referred to in Article 14, including the emission limit values, have been determined in relation to the best available techniques and emission levels associated with the best available techniques;

(f) where a derogation is granted in accordance with Article 15(4), the specific reasons for that derogation based on the criteria laid down in that paragraph and the conditions imposed.

3. The competent authority shall also make available to the public, including via the Internet at least in relation to point (a):

(a) relevant information on the measures taken by the operator upon definitive cessation of activities in accordance with Article 22;

(b) the results of emission monitoring as required under the permit conditions and held by the competent authority.

4. Paragraphs 1, 2 and 3 of this Article shall apply subject to the restrictions laid down in Article 4(1) and (2) of Directive 2003/4/EC.

Article 25

Access to justice

1. Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to Article 24 when one of the following conditions is met:

(a) they have a sufficient interest;

(b) they maintain the impairment of a right, where administrative procedural law of a Member State requires this as a precondition.

2. Member States shall determine at what stage the decisions, acts or omissions may be challenged.

3. What constitutes a sufficient interest and impairment of a right shall be determined by Member States, consistently with the objective of giving the public concerned wide access to justice.

To this end, the interest of any non-governmental organisation promoting environmental protection and meeting any requirements under national law shall be deemed sufficient for the purpose of paragraph 1(a).

Such organisations shall also be deemed to have rights capable of being impaired for the purpose of paragraph 1(b).

4. Paragraphs 1, 2 and 3 shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

5. Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.

Article 26

Transboundary effects

1. Where a Member State is aware that the operation of an installation is likely to have significant negative effects on the environment of another Member State, or where a Member State which is likely to be significantly affected so requests, the Member State in whose territory the application for a permit pursuant to Article 4 or Article 20(2) was submitted shall forward to the other Member State any information required to be given or made available pursuant to Annex IV at the same time as it makes it available to the public.

Such information shall serve as a basis for any consultations necessary in the framework of the bilateral relations between the two Member States on a reciprocal and equivalent basis.

2. Within the framework of their bilateral relations, Member States shall ensure that in the cases referred to in paragraph 1, the applications are also made available for an appropriate period of time to the public of the Member State likely to be affected so that it will have the right to comment on them before the competent authority reaches its decision.

3. The results of any consultations pursuant to paragraphs 1 and 2 shall be taken into consideration when the competent authority reaches a decision on the application.

4. The competent authority shall inform any Member State which has been consulted pursuant to paragraph 1 of the decision reached on the application and shall forward to it the information referred to in Article 24(2). That Member State shall take the measures necessary to ensure that that information is made available in an appropriate manner to the public concerned in its own territory.

Article 27

Emerging techniques

1. Member States shall, where appropriate, encourage the development and application of emerging techniques, in particular for those emerging techniques identified in BAT reference documents.

2. The Commission shall establish guidance to assist Member States in encouraging the development and application of emerging techniques as referred to in paragraph 1.

CHAPTER III

SPECIAL PROVISIONS FOR COMBUSTION PLANTS

Article 28

Scope

This Chapter shall apply to combustion plants, the total rated thermal input of which is equal to or greater than 50 MW, irrespective of the type of fuel used.

This Chapter shall not apply to the following combustion plants:

(a) plants in which the products of combustion are used for the direct heating, drying, or any other treatment of objects or materials;

(b) post-combustion plants designed to purify the waste gases by combustion which are not operated as independent combustion plants;

(c) facilities for the regeneration of catalytic cracking catalysts;

(d) facilities for the conversion of hydrogen sulphide into sulphur;

(e) reactors used in the chemical industry;

(f) coke battery furnaces;

(g) cowpers;

(h) any technical apparatus used in the propulsion of a vehicle, ship or aircraft;

(i) gas turbines and gas engines used on offshore platforms;

(j) plants which use any solid or liquid waste as a fuel other than waste referred to in point (b) of point 31 of Article 3.

Article 29

Aggregation rules

1. Where the waste gases of two or more separate combustion plants are discharged through a common stack, the combination formed by such plants shall be considered as a single combustion plant and their capacities added for the purpose of calculating the total rated thermal input.

2. Where two or more separate combustion plants which have been granted a permit for the first time on or after 1 July 1987, or the operators of which have submitted a complete application for a permit on or after that date, are installed in such a way that, taking technical and economic factors into account, their waste gases could in the judgement of the competent authority, be discharged through a common stack, the combination formed by such plants shall be considered as a single combustion plant and their capacities added for the purpose of calculating the total rated thermal input.

3. For the purpose of calculating the total rated thermal input of a combination of combustion plants referred to in paragraphs 1 and 2, individual combustion plants with a rated thermal input below 15 MW shall not be considered.

Article 30

Emission limit values

1. Waste gases from combustion plants shall be discharged in a controlled way by means of a stack, containing one or more flues, the height of which is calculated in such a way as to safeguard human health and the environment.

2. All permits for installations containing combustion plants which have been granted a permit before 7 January 2013, or the operators of which have submitted a complete application for a permit before that date, provided that such plants are put into operation no later than 7 January 2014, shall include conditions ensuring that emissions into air from these plants do not exceed the emission limit values set out in Part 1 of Annex V.

All permits for installations containing combustion plants which had been granted an exemption as referred to in Article 4(4) of Directive 2001/80/EC and which are in operation after 1 January 2016, shall include conditions ensuring that emissions into the air from these plants do not exceed the emission limit values set out in Part 2 of Annex V.

3. All permits for installations containing combustion plants not covered by paragraph 2 shall include conditions ensuring that emissions into the air from these plants do not exceed the emission limit values set out in Part 2 of Annex V.

4. The emission limit values set out in Parts 1 and 2 of Annex V as well as the minimum rates of desulphurisation set out in Part 5 of that Annex shall apply to the emissions of each common stack in relation to the total rated thermal input of the entire combustion plant. Where Annex V provides that emission limit values may be applied for a part of a combustion plant with a limited number of operating hours, those limit values shall apply to the emissions of that part of the plant, but shall be set in relation to the total rated thermal input of the entire combustion plant.

5. The competent authority may grant a derogation for a maximum of 6 months from the obligation to comply with the emission limit values provided for in paragraphs 2 and 3 for sulphur dioxide in respect of a combustion plant which to this end normally uses low-sulphur fuel, in cases where the operator is unable to comply with those limit values because of an interruption in the supply of low-sulphur fuel resulting from a serious shortage.

Member States shall immediately inform the Commission of any derogation granted under the first subparagraph.

6. The competent authority may grant a derogation from the obligation to comply with the emission limit values provided for in paragraphs 2 and 3 in cases where a combustion plant using only gaseous fuel has to resort exceptionally to the use of other fuels because of a sudden interruption in the supply of gas and for this reason would need to be equipped with a waste gas purification facility. The period for which such a derogation is granted shall not exceed 10 days except where there is an overriding need to maintain energy supplies.

The operator shall immediately inform the competent authority of each specific case referred to in the first subparagraph.

Member States shall inform the Commission immediately of any derogation granted under the first subparagraph.

7. Where a combustion plant is extended, the emission limit values set out in Part 2 of Annex V shall apply to the extended part of the plant affected by the change and shall be set in relation to the total rated thermal input of the entire combustion plant. In the case of a change to a combustion plant, which may have consequences for the environment and which affects a part of the plant with a rated thermal input of 50 MW or more, the emission limit values as set out in Part 2 of Annex V shall apply to the part of the plant which has changed in relation to the total rated thermal input of the entire combustion plant.

8. The emission limit values set out in Parts 1 and 2 of Annex V shall not apply to the following combustion plants:

(a) diesel engines;

(b) recovery boilers within installations for the production of pulp.

9. For the following combustion plants, on the basis of the best available techniques, the Commission shall review the need to establish Union-wide emission limit values and to amend the emission limit values set out in Annex V:

(a) the combustion plants referred to in paragraph 8;

(b) combustion plants within refineries firing the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, taking into account the specificity of the energy systems of refineries;

(c) combustion plants firing gases other than natural gas;

(d) combustion plants in chemical installations using liquid production residues as non-commercial fuel for own consumption.

The Commission shall, by 31 December 2013, report the results of this review to the European Parliament and to the Council accompanied, if appropriate, by a legislative proposal.

Article 31

Desulphurisation rate

1. For combustion plants firing indigenous solid fuel, which cannot comply with the emission limit values for sulphur dioxide referred to in Article 30(2) and (3) due to the characteristics of this fuel, Member States may apply instead the minimum rates of desulphurisation set out in Part 5 of Annex V, in accordance with the compliance rules set out in Part 6 of that Annex and with prior validation by the competent authority of the technical report referred to in Article 72(4)(a).

2. For combustion plants firing indigenous solid fuel, which co-incinerate waste, and which cannot comply with the C_{proc} values for sulphur dioxide set out in points 3.1 or 3.2 of Part 4 of Annex VI due to the characteristics of the indigenous solid fuel, Member States may apply instead the minimum rates of desulphurisation set out in Part 5 of Annex V, in accordance with the compliance rules set out in Part 6 of that Annex. If Member States choose to apply this paragraph, C_{waste} as referred to in point 1 of Part 4 of Annex VI shall be equal to 0 mg/Nm^3.

3. The Commission shall, by 31 December 2019, review the possibility of applying minimum rates of desulphurisation set out in Part 5 of Annex V, taking into account, in particular, the best available techniques and benefits obtained from reduced sulphur dioxide emissions.

Article 32

Transitional National Plan

1. During the period from 1 January 2016 to 30 June 2020, Member States may draw up and implement a transitional national plan covering combustion plants which were granted the first permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003. For each of the combustion plants covered by the plan, the plan shall cover emissions of one or more of the following pollutants: nitrogen oxides, sulphur dioxide and dust. For gas turbines, only nitrogen oxides emissions shall be covered by the plan.

The transitional national plan shall not include any of the following combustion plants:

(a) those to which Article 33(1) applies;

(b) those within refineries firing low calorific gases from the gasification of refinery residues or the distillation and conversion residues from the refining of crude oil for own consumption, alone or with other fuels;

(c) those to which Article 35 applies;

(d) those which are granted an exemption as referred to in Article 4(4) of Directive 2001/80/EC.

2. Combustion plants covered by the plan may be exempted from compliance with the emission limit values referred to in Article 30(2) for the pollutants which are subject to the plan or, where applicable, with the rates of desulphurisation referred to in Article 31.

The emission limit values for sulphur dioxide, nitrogen oxides and dust set out in the permit for the combustion plant applicable on 31 December 2015, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, shall at least be maintained.

Combustion plants with a total rated thermal input of more than 500 MW firing solid fuels, which were granted the first permit after 1 July 1987, shall comply with the emission limit values for nitrogen oxides set out in Part 1 of Annex V.

3. For each of the pollutants it covers, the transitional national plan shall set a ceiling defining the maximum total annual emissions for all of the plants covered by the plan on the basis of each plant's total rated thermal input on 31 December 2010, its actual annual operating hours and its fuel use, averaged over the last 10 years of operation up to and including 2010.

The ceiling for the year 2016 shall be calculated on the basis of the relevant emission limit values set out in Annexes III to VII to Directive 2001/80/EC or, where applicable, on the basis of the rates of desulphurisation set out in Annex III to Directive 2001/80/EC. In the case of gas turbines, the emission limit values for nitrogen oxides set out for such plants in Part B of Annex VI to Directive 2001/80/EC shall be used. The ceilings for the years 2019 and 2020 shall be calculated on the basis of the relevant emission limit values set out in Part 1 of Annex V to this Directive or, where applicable, the relevant rates of desulphurisation set out in Part 5 of Annex V to this Directive. The ceilings for the years 2017 and 2018 shall be set providing a linear decrease of the ceilings between 2016 and 2019.

Where a plant included in the transitional national plan is closed or no longer falls within the scope of Chapter III, this shall not result in an increase in total annual emissions from the remaining plants covered by the plan.

4. The transitional national plan shall also contain provisions on monitoring and reporting that comply with the implementing rules established in accordance with Article 41(b), as well as the measures foreseen for each of the plants in order to ensure timely compliance with the emission limit values that will apply from 1 July 2020.

5. Not later than 1 January 2013, Member States shall communicate their transitional national plans to the Commission.

The Commission shall evaluate the plans and, where the Commission has raised no objections within 12 months of receipt of a plan, the Member State concerned shall consider its plan to be accepted.

When the Commission considers a plan not to be in accordance with the implementing rules established in accordance with Article 41(b), it shall inform the Member State concerned that its plan cannot be accepted. In relation to the evaluation of a new version of a plan which a Member State communicates to the Commission, the time period referred to in the second subparagraph shall be 6 months.

6. Member States shall inform the Commission of any subsequent changes to the plan.

Article 33

Limited life time derogation

1. During the period from 1 January 2016 to 31 December 2023, combustion plants may be exempted from compliance with the emission limit values referred to in Article 30(2) and with the rates of desulphurisation referred to in Article 31, where applicable, and from their inclusion in the transitional national plan referred to in Article 32 provided that the following conditions are fulfilled:

(a) the operator of the combustion plant undertakes, in a written declaration submitted by 1 January 2014 at the latest to the competent authority, not to operate the plant for more than 17 500 operating hours, starting from 1 January 2016 and ending no later than 31 December 2023;

(b) the operator is required to submit each year to the competent authority a record of the number of operating hours since 1 January 2016;

(c) the emission limit values for sulphur dioxides, nitrogen oxides and dust set out in the permit for the combustion plant applicable on 31 December 2015, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, shall at least be maintained during the remaining operational life of the combustion plant. Combustion plants with a total rated thermal input of more than 500 MW firing solid fuels, which were granted the first permit after 1 July 1987, shall comply with the emission limit values for nitrogen oxides set out in Part 1 of Annex V; and

(d) the combustion plant has not been granted an exemption as referred to in Article 4(4) of Directive 2001/80/EC.

2. At the latest on 1 January 2016, each Member State shall communicate to the Commission a list of any combustion plants to which paragraph 1 applies, including their total rated thermal input, the fuel types used and the applicable emission limit values for sulphur dioxide, nitrogen oxides and dust. For plants subject to paragraph 1, Member States shall communicate annually to the Commission a record of the number of operating hours since 1 January 2016.

3. In case of a combustion plant being, on 6 January 2011, part of a small isolated system and accounting at that date for at least 35 % of the electricity supply within that system, which is unable, due to its technical characteristics, to comply with the emission limit values referred to in Article 30(2), the number of operating hours referred to in paragraph 1(a) of this Article shall be 18 000, starting from 1 January 2020 and ending no later than 31 December 2023, and the date referred to in paragraph 1(b) and paragraph 2 of this Article shall be 1 January 2020.

4. In case of a combustion plant with a total rated thermal input of more than 1 500 MW which started operating before 31 December 1986 and fires indigenous solid fuel with a net calorific value of less than 5 800 kJ/kg, a moisture content greater than 45 % by weight, a combined moisture and ash content greater than 60 % by weight and a calcium oxide content in ash greater than 10 %, the number of operating hours referred to in paragraph 1(a) shall be 32 000.

Article 34

Small isolated systems

1. Until 31 December 2019, combustion plants being, on 6 January 2011, part of a small isolated system may be exempted from compliance with the emission limit values referred to in Article 30(2) and the rates of desulphurisation referred to in Article 31, where applicable. Until 31 December 2019, the emission limit values set out in the permits of these combustion plants, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, shall at least be maintained.

2. Combustion plants with a total rated thermal input of more than 500 MW firing solid fuels, which were granted the first permit after 1 July 1987, shall comply with the emission limit values for nitrogen oxides set out in Part 1 of Annex V.

3. Where there are, on the territory of a Member State combustion plants covered by this Chapter that are part of a small isolated system, that Member State shall report to the Commission before 7 January 2013 a list of those combustion plants, the total annual energy consumption of the small isolated system and the amount of energy obtained through interconnection with other systems.

Article 35

District heating plants

1. Until 31 December 2022, a combustion plant may be exempted from compliance with the emission limit values referred to in Article 30(2) and the rates of desulphurisation referred to in Article 31 provided that the following conditions are fulfilled:

(a) the total rated thermal input of the combustion plant does not exceed 200 MW;

(b) the plant was granted a first permit before 27 November 2002 or the operator of that plant had submitted a complete application for a permit before that date, provided that it was put into operation no later than 27 November 2003;

(c) at least 50 % of the useful heat production of the plant, as a rolling average over a period of 5 years, is delivered in the form of steam or hot water to a public network for district heating; and

(d) the emission limit values for sulphur dioxide, nitrogen oxides and dust set out in its permit applicable on 31 December 2015, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, are at least maintained until 31 December 2022.

2. At the latest on 1 January 2016, each Member State shall communicate to the Commission a list of any combustion plants to which paragraph 1 applies, including their total rated thermal input, the fuel types used and the applicable emission limit values for sulphur dioxide, nitrogen oxides and dust. In addition, Member States shall, for any combustion plants to which paragraph 1 applies and during the period mentioned in that paragraph, inform the Commission annually of the proportion of useful heat production of each plant which was delivered in the form of steam or hot water to a public network for district heating, expressed as a rolling average over the preceding 5 years.

Article 36

Geological storage of carbon dioxide

1. Member States shall ensure that operators of all combustion plants with a rated electrical output of 300 megawatts or more for which the original construction licence or, in the absence of such a procedure, the original operating licence is granted after the entry into force of Directive 2009/31/EC of the European Parliament and of the Council of 23 April 2009 on the geological storage of carbon dioxide [1], have assessed whether the following conditions are met:

(a) suitable storage sites are available,

(b) transport facilities are technically and economically feasible,

(c) it is technically and economically feasible to retrofit for carbon dioxide capture.

2. If the conditions laid down in paragraph 1 are met, the competent authority shall ensure that suitable space on the installation site for the equipment necessary to capture and compress carbon dioxide is set aside. The competent authority shall determine whether the conditions are met on the basis of the assessment referred to in paragraph 1 and other available information, particularly concerning the protection of the environment and human health.

Article 37

Malfunction or breakdown of the abatement equipment

1. Member States shall ensure that provision is made in the permits for procedures relating to malfunction or breakdown of the abatement equipment.

2. In the case of a breakdown, the competent authority shall require the operator to reduce or close down operations if a return to normal operation is not achieved within 24 hours, or to operate the plant using low polluting fuels.

The operator shall notify the competent authority within 48 hours after the malfunction or breakdown of the abatement equipment.

The cumulative duration of unabated operation shall not exceed 120 hours in any 12-month period.

The competent authority may grant a derogation from the time limits set out in the first and third subparagraphs in one of the following cases:

(a) there is an overriding need to maintain energy supplies;

(b) the combustion plant with the breakdown would be replaced for a limited period by another plant which would cause an overall increase in emissions.

Article 38

Monitoring of emissions into air

1. Member States shall ensure that the monitoring of air polluting substances is carried out in accordance with Part 3 of Annex V.

2. The installation and functioning of the automated monitoring equipment shall be subject to control and to annual surveillance tests as set out in Part 3 of Annex V.

3. The competent authority shall determine the location of the sampling or measurement points to be used for the monitoring of emissions.

4. All monitoring results shall be recorded, processed and presented in such a way as to enable the competent authority to verify compliance with the operating conditions and emission limit values which are included in the permit.

Article 39

Compliance with emission limit values

The emission limit values for air shall be regarded as being complied with if the conditions set out in Part 4 of Annex V are fulfilled.

Article 40

Multi-fuel firing combustion plants

1. In the case of a multi-fuel firing combustion plant involving the simultaneous use of two or more fuels, the competent authority shall set the emission limit values in accordance with the following steps:

(a) taking the emission limit value relevant for each individual fuel and pollutant corresponding to the total rated thermal input of the entire combustion plant as set out in Parts 1 and 2 of Annex V;

(b) determining fuel-weighted emission limit values, which are obtained by multiplying the individual emission limit value referred to in point (a) by the thermal input delivered by each fuel, and dividing the product of multiplication by the sum of the thermal inputs delivered by all fuels,

(c) aggregating the fuel-weighted emission limit values.

[1] OJ L 140, 5.6.2009, p. 114.

2. In the case of multi-fuel firing combustion plants covered by Article 30(2), which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, the following emission limit values may be applied instead of the emission limit values set according to paragraph 1:

(a) where, during the operation of the combustion plant, the proportion contributed by the determinative fuel to the sum of the thermal inputs delivered by all fuels is 50 % or more, the emission limit value set in Part 1 of Annex V for the determinative fuel;

(b) where the proportion contributed by the determinative fuel to the sum of the thermal inputs delivered by all fuels is less than 50 %, the emission limit value determined in accordance with the following steps:

(i) taking the emission limit values set out in Part 1 of Annex V for each of the fuels used, corresponding to the total rated thermal input of the combustion plant;

(ii) calculating the emission limit value of the determinative fuel by multiplying the emission limit value, determined for that fuel according to point (i), by a factor of two, and subtracting from this product the emission limit value of the fuel used with the lowest emission limit value as set out in Part 1 of Annex V, corresponding to the total rated thermal input of the combustion plant;

(iii) determining the fuel-weighted emission limit value for each fuel used by multiplying the emission limit value determined under points (i) and (ii) by the thermal input of the fuel concerned and by dividing the product of this multiplication by the sum of the thermal inputs delivered by all fuels;

(iv) aggregating the fuel-weighted emission limit values determined under point (iii).

3. In the case of multi-fuel firing combustion plants covered by Article 30(2), which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, the average emission limit values for sulphur dioxide set out in Part 7 of Annex V may be applied instead of the emission limit values set according to paragraphs 1 or 2 of this Article.

Article 41

Implementing rules

Implementing rules shall be established concerning:

(a) the determination of the start-up and shut-down periods referred to in point 27 of Article 3 and in point 1 of Part 4 of Annex V; and

(b) the transitional national plans referred to in Article 32 and, in particular, the setting of emission ceilings and related monitoring and reporting.

Those implementing rules shall be adopted in accordance with the regulatory procedure referred to in Article 75(2). The Commission shall make appropriate proposals not later than 7 July 2011.

CHAPTER IV

SPECIAL PROVISIONS FOR WASTE INCINERATION PLANTS AND WASTE CO-INCINERATION PLANTS

Article 42

Scope

1. This Chapter shall apply to waste incineration plants and waste co-incineration plants which incinerate or co-incinerate solid or liquid waste.

This Chapter shall not apply to gasification or pyrolysis plants, if the gases resulting from this thermal treatment of waste are purified to such an extent that they are no longer a waste prior to their incineration and they can cause emissions no higher than those resulting from the burning of natural gas.

For the purposes of this Chapter, waste incineration plants and waste co-incineration plants shall include all incineration lines or co-incineration lines, waste reception, storage, on site pretreatment facilities, waste-, fuel- and air-supply systems, boilers, facilities for the treatment of waste gases, on-site facilities for treatment or storage of residues and waste water, stacks, devices and systems for controlling incineration or co-incineration operations, recording and monitoring incineration or co-incineration conditions.

If processes other than oxidation, such as pyrolysis, gasification or plasma process, are applied for the thermal treatment of waste, the waste incineration plant or waste co-incineration plant shall include both the thermal treatment process and the subsequent incineration process.

If waste co-incineration takes place in such a way that the main purpose of the plant is not the generation of energy or production of material products but rather the thermal treatment of waste, the plant shall be regarded as a waste incineration plant.

2. This Chapter shall not apply to the following plants:

(a) plants treating only the following wastes:

(i) waste listed in point (b) of point 31 of Article 3;

(ii) radioactive waste;

(iii) animal carcasses as regulated by Regulation (EC) No 1774/2002 of the European Parliament and of the Council of 3 October 2002 laying down health rules concerning animal by-products not intended for human consumption [1];

[1] OJ L 273, 10.10.2002, p. 1.

(iv) waste resulting from the exploration for, and the exploitation of, oil and gas resources from off-shore installations and incinerated on board the installations;

(b) experimental plants used for research, development and testing in order to improve the incineration process and which treat less than 50 tonnes of waste per year.

Article 43

Definition of residue

For the purposes of this Chapter, 'residue' shall mean any liquid or solid waste which is generated by a waste incineration plant or waste co-incineration plant.

Article 44

Applications for permits

An application for a permit for a waste incineration plant or waste co-incineration plant shall include a description of the measures which are envisaged to guarantee that the following requirements are met:

(a) the plant is designed, equipped and will be maintained and operated in such a manner that the requirements of this Chapter are met taking into account the categories of waste to be incinerated or co-incinerated;

(b) the heat generated during the incineration and co-incineration process is recovered as far as practicable through the generation of heat, steam or power;

(c) the residues will be minimised in their amount and harmfulness and recycled where appropriate;

(d) the disposal of the residues which cannot be prevented, reduced or recycled will be carried out in conformity with national and Union law.

Article 45

Permit conditions

1. The permit shall include the following:

(a) a list of all types of waste which may be treated using at least the types of waste set out in the European Waste List established by Decision 2000/532/EC, if possible, and containing information on the quantity of each type of waste, where appropriate;

(b) the total waste incinerating or co-incinerating capacity of the plant;

(c) the limit values for emissions into air and water;

(d) the requirements for the pH, temperature and flow of waste water discharges;

(e) the sampling and measurement procedures and frequencies to be used to comply with the conditions set for emission monitoring;

(f) the maximum permissible period of any technically unavoidable stoppages, disturbances, or failures of the purification devices or the measurement devices, during which the emissions into the air and the discharges of waste water may exceed the prescribed emission limit values.

2. In addition to the requirements set out in paragraph 1, the permit granted to a waste incineration plant or waste co-incineration plant using hazardous waste shall include the following:

(a) a list of the quantities of the different categories of hazardous waste which may be treated;

(b) the minimum and maximum mass flows of those hazardous wastes, their lowest and maximum calorific values and their maximum contents of polychlorinated biphenyls, pentachlorophenol, chlorine, fluorine, sulphur, heavy metals and other polluting substances.

3. Member States may list the categories of waste to be included in the permit which can be co-incinerated in certain categories of waste co-incineration plants.

4. The competent authority shall periodically reconsider and, where necessary, update permit conditions.

Article 46

Control of emissions

1. Waste gases from waste incineration plants and waste co-incineration plants shall be discharged in a controlled way by means of a stack the height of which is calculated in such a way as to safeguard human health and the environment.

2. Emissions into air from waste incineration plants and waste co-incineration plants shall not exceed the emission limit values set out in parts 3 and 4 of Annex VI or determined in accordance with Part 4 of that Annex.

If in a waste co-incineration plant more than 40 % of the resulting heat release comes from hazardous waste, or the plant co-incinerates untreated mixed municipal waste, the emission limit values set out in Part 3 of Annex VI shall apply.

3. Discharges to the aquatic environment of waste water resulting from the cleaning of waste gases shall be limited as far as practicable and the concentrations of polluting substances shall not exceed the emission limit values set out in Part 5 of Annex VI.

4. The emission limit values shall apply at the point where waste waters from the cleaning of waste gases are discharged from the waste incineration plant or waste co-incineration plant.

When waste waters from the cleaning of waste gases are treated outside the waste incineration plant or waste co-incineration plant at a treatment plant intended only for the treatment of this sort of waste water, the emission limit values set out in Part 5 of Annex VI shall be applied at the point where the waste waters leave the treatment plant. Where the waste water from the cleaning of waste gases is treated collectively with other sources of waste water, either on site or off site, the operator shall make the appropriate mass balance calculations, using the results of the measurements set out in point 2 of Part 6 of Annex VI in order to determine the emission levels in the final waste water discharge that can be attributed to the waste water arising from the cleaning of waste gases.

Under no circumstances shall dilution of waste water take place for the purpose of complying with the emission limit values set out in Part 5 of Annex VI.

5. Waste incineration plant sites and waste co-incineration plant sites, including associated storage areas for waste, shall be designed and operated in such a way as to prevent the unauthorised and accidental release of any polluting substances into soil, surface water and groundwater.

Storage capacity shall be provided for contaminated rainwater run-off from the waste incineration plant site or waste co-incineration plant site or for contaminated water arising from spillage or fire-fighting operations. The storage capacity shall be adequate to ensure that such waters can be tested and treated before discharge where necessary.

6. Without prejudice to Article 50(4)(c), the waste incineration plant or waste co-incineration plant or individual furnaces being part of a waste incineration plant or waste co-incineration plant shall under no circumstances continue to incinerate waste for a period of more than 4 hours uninterrupted where emission limit values are exceeded.

The cumulative duration of operation in such conditions over 1 year shall not exceed 60 hours.

The time limit set out in the second subparagraph shall apply to those furnaces which are linked to one single waste gas cleaning device.

Article 47

Breakdown

In the case of a breakdown, the operator shall reduce or close down operations as soon as practicable until normal operations can be restored.

Article 48

Monitoring of emissions

1. Member States shall ensure that the monitoring of emissions is carried out in accordance with Parts 6 and 7 of Annex VI.

2. The installation and functioning of the automated measuring systems shall be subject to control and to annual surveillance tests as set out in point 1 of Part 6 of Annex VI.

3. The competent authority shall determine the location of the sampling or measurement points to be used for monitoring of emissions.

4. All monitoring results shall be recorded, processed and presented in such a way as to enable the competent authority to verify compliance with the operating conditions and emission limit values which are included in the permit.

5. As soon as appropriate measurement techniques are available within the Union, the Commission shall, by means of delegated acts in accordance with Article 76 and subject to the conditions laid down in Articles 77 and 78, set the date from which continuous measurements of emissions into the air of heavy metals and dioxins and furans are to be carried out.

Article 49

Compliance with emission limit values

The emission limit values for air and water shall be regarded as being complied with if the conditions described in Part 8 of Annex VI are fulfilled.

Article 50

Operating conditions

1. Waste incineration plants shall be operated in such a way as to achieve a level of incineration such that the total organic carbon content of slag and bottom ashes is less than 3 % or their loss on ignition is less than 5 % of the dry weight of the material. If necessary, waste pre-treatment techniques shall be used.

2. Waste incineration plants shall be designed, equipped, built and operated in such a way that the gas resulting from the incineration of waste is raised, after the last injection of combustion air, in a controlled and homogeneous fashion and even under the most unfavourable conditions, to a temperature of at least 850 °C for at least two seconds.

Waste co-incineration plants shall be designed, equipped, built and operated in such a way that the gas resulting from the co-incineration of waste is raised in a controlled and homogeneous fashion and even under the most unfavourable conditions, to a temperature of at least 850 °C for at least two seconds.

If hazardous waste with a content of more than 1 % of halogenated organic substances, expressed as chlorine, is incinerated or co-incinerated, the temperature required to comply with the first and second subparagraphs shall be at least 1 100 °C.

In waste incineration plants, the temperatures set out in the first and third subparagraphs shall be measured near the inner wall of the combustion chamber. The competent authority may authorise the measurements at another representative point of the combustion chamber.

3. Each combustion chamber of a waste incineration plant shall be equipped with at least one auxiliary burner. This burner shall be switched on automatically when the temperature of the combustion gases after the last injection of combustion air falls below the temperatures set out in paragraph 2. It shall also be used during plant start-up and shut-down operations in order to ensure that those temperatures are maintained at all times during these operations and as long as unburned waste is in the combustion chamber.

The auxiliary burner shall not be fed with fuels which can cause higher emissions than those resulting from the burning of gas oil as defined in Article 2(2) of Council Directive 1999/32/EC of 26 April 1999 relating to a reduction in the sulphur content of certain liquid fuels [1], liquefied gas or natural gas.

4. Waste incineration plants and waste co-incineration plants shall operate an automatic system to prevent waste feed in the following situations:

(a) at start-up, until the temperature set out in paragraph 2 of this Article or the temperature specified in accordance with Article 51(1) has been reached;

(b) whenever the temperature set out in paragraph 2 of this Article or the temperature specified in accordance with Article 51(1) is not maintained;

(c) whenever the continuous measurements show that any emission limit value is exceeded due to disturbances or failures of the waste gas cleaning devices.

5. Any heat generated by waste incineration plants or waste co-incineration plants shall be recovered as far as practicable.

6. Infectious clinical waste shall be placed straight in the furnace, without first being mixed with other categories of waste and without direct handling.

7. Member States shall ensure that the waste incineration plant or waste co-incineration plant is operated and controlled by a natural person who is competent to manage the plant.

[1] OJ L 121, 11.5.1999, p. 13.

Article 51

Authorisation to change operating conditions

1. Conditions different from those laid down in Article 50(1), (2) and (3) and, as regards the temperature, paragraph 4 of that Article and specified in the permit for certain categories of waste or for certain thermal processes, may be authorised by the competent authority provided the other requirements of this Chapter are met. Member States may lay down rules governing these authorisations.

2. For waste incineration plants, the change of the operating conditions shall not cause more residues or residues with a higher content of organic polluting substances compared to those residues which could be expected under the conditions laid down in Article 50(1), (2) and (3).

3. Emissions of total organic carbon and carbon monoxide from waste co-incineration plants, authorised to change operating conditions according to paragraph 1 shall also comply with the emission limit values set out in Part 3 of Annex VI.

Emissions of total organic carbon from bark boilers within the pulp and paper industry co-incinerating waste at the place of its production which were in operation and had a permit before 28 December 2002 and which are authorised to change operating conditions according to paragraph 1 shall also comply with the emission limit values set out in Part 3 of Annex VI.

4. Member States shall communicate to the Commission all operating conditions authorised under paragraphs 1, 2 and 3 and the results of verifications made as part of the information provided in accordance with the reporting requirements under Article 72.

Article 52

Delivery and reception of waste

1. The operator of the waste incineration plant or waste co-incineration plant shall take all necessary precautions concerning the delivery and reception of waste in order to prevent or to limit as far as practicable the pollution of air, soil, surface water and groundwater as well as other negative effects on the environment, odours and noise, and direct risks to human health.

2. The operator shall determine the mass of each type of waste, if possible according to the European Waste List established by Decision 2000/532/EC, prior to accepting the waste at the waste incineration plant or waste co-incineration plant.

3. Prior to accepting hazardous waste at the waste incineration plant or waste co-incineration plant, the operator shall collect available information about the waste for the purpose of verifying compliance with the permit requirements specified in Article 45(2).

That information shall cover the following:

(a) all the administrative information on the generating process contained in the documents mentioned in paragraph 4(a);

(b) the physical, and as far as practicable, chemical composition of the waste and all other information necessary to evaluate its suitability for the intended incineration process;

(c) the hazardous characteristics of the waste, the substances with which it cannot be mixed, and the precautions to be taken in handling the waste.

4. Prior to accepting hazardous waste at the waste incineration plant or waste co-incineration plant, at least the following procedures shall be carried out by the operator:

(a) the checking of the documents required by Directive 2008/98/EC and, where applicable, those required by Regulation (EC) No 1013/2006 of the European Parliament and of the Council of 14 June 2006 on shipments of waste [1] and by legislation on transport of dangerous goods;

(b) the taking of representative samples, unless inappropriate as far as possible before unloading, to verify conformity with the information provided for in paragraph 3 by carrying out controls and to enable the competent authorities to identify the nature of the wastes treated.

The samples referred to in point (b) shall be kept for at least 1 month after the incineration or co-incineration of the waste concerned.

5. The competent authority may grant exemptions from paragraphs 2, 3 and 4 to waste incineration plants or waste co-incineration plants which are a part of an installation covered by Chapter II and only incinerate or co-incinerate waste generated within that installation.

Article 53

Residues

1. Residues shall be minimised in their amount and harmfulness. Residues shall be recycled, where appropriate, directly in the plant or outside.

2. Transport and intermediate storage of dry residues in the form of dust shall take place in such a way as to prevent dispersal of those residues in the environment.

3. Prior to determining the routes for the disposal or recycling of the residues, appropriate tests shall be carried out to establish the physical and chemical characteristics and the polluting potential of the residues. Those tests shall concern the total soluble fraction and heavy metals soluble fraction.

Article 54

Substantial change

A change of operation of a waste incineration plant or a waste co-incineration plant treating only non-hazardous waste in an installation covered by Chapter II which involves the incineration or co-incineration of hazardous waste shall be regarded as a substantial change.

Article 55

Reporting and public information on waste incineration plants and waste co-incineration plants

1. Applications for new permits for waste incineration plants and waste co-incineration plants shall be made available to the public at one or more locations for an appropriate period to enable the public to comment on the applications before the competent authority reaches a decision. That decision, including at least a copy of the permit, and any subsequent updates, shall also be made available to the public.

2. For waste incineration plants or waste co-incineration plants with a nominal capacity of 2 tonnes or more per hour, the report referred to in Article 72 shall include information on the functioning and monitoring of the plant and give account of the running of the incineration or co-incineration process and the level of emissions into air and water in comparison with the emission limit values. That information shall be made available to the public.

3. A list of waste incineration plants or waste co-incineration plants with a nominal capacity of less than 2 tonnes per hour shall be drawn up by the competent authority and shall be made available to the public.

CHAPTER V

SPECIAL PROVISIONS FOR INSTALLATIONS AND ACTIVITIES USING ORGANIC SOLVENTS

Article 56

Scope

This chapter shall apply to activities listed in Part 1 of Annex VII and, where applicable, reaching the consumption thresholds set out in Part 2 of that Annex.

[1] OJ L 190, 12.7.2006, p. 1.

Article 57

Definitions

For the purposes of this Chapter, the following definitions shall apply:

(1) 'existing installation' means an installation in operation on 29 March 1999 or which was granted a permit or registered before 1 April 2001 or the operator of which submitted a complete application for a permit before 1 April 2001, provided that that installation was put in operation no later than 1 April 2002;

(2) 'waste gases' means the final gaseous discharge containing volatile organic compounds or other pollutants from a stack or abatement equipment into air;

(3) 'fugitive emissions' means any emissions not in waste gases of volatile organic compounds into air, soil and water as well as solvents contained in any products, unless otherwise stated in Part 2 of Annex VII;

(4) 'total emissions' means the sum of fugitive emissions and emissions in waste gases;

(5) 'mixture' means mixture as defined in Article 3(2) of Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) and establishing a European Chemicals Agency [1],

(6) 'adhesive' means any mixture, including all the organic solvents or mixtures containing organic solvents necessary for its proper application, which is used to adhere separate parts of a product;

(7) 'ink' means a mixture, including all the organic solvents or mixtures containing organic solvents necessary for its proper application, which is used in a printing activity to impress text or images on to a surface;

(8) 'varnish' means a transparent coating;

(9) 'consumption' means the total input of organic solvents into an installation per calendar year, or any other 12-month period, less any volatile organic compounds that are recovered for re-use;

(10) 'input' means the quantity of organic solvents and their quantity in mixtures used when carrying out an activity, including the solvents recycled inside and outside the installation, and which are counted every time they are used to carry out the activity;

(11) 're-use' means the use of organic solvents recovered from an installation for any technical or commercial purpose and including use as a fuel but excluding the final disposal of such recovered organic solvent as waste;

(12) 'contained conditions' means conditions under which an installation is operated so that the volatile organic compounds released from the activity are collected and discharged in a controlled way either via a stack or abatement equipment and are, therefore, not entirely fugitive;

(13) 'start-up and shut-down operations' means operations excluding regularly oscillating activity phases whilst bringing an activity, an equipment item or a tank into or out of service or into or out of an idling state.

Article 58

Substitution of hazardous substances

Substances or mixtures which, because of their content of volatile organic compounds classified as carcinogens, mutagens, or toxic to reproduction under Regulation (EC) No 1272/2008, are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F, shall be replaced, as far as possible by less harmful substances or mixtures within the shortest possible time.

Article 59

Control of emissions

1. Member States shall take the necessary measures to ensure that each installation complies with either of the following:

(a) the emission of volatile organic compounds from installations shall not exceed the emission limit values in waste gases and the fugitive emission limit values, or the total emission limit values, and other requirements laid down in Parts 2 and 3 of Annex VII are complied with;

(b) the requirements of the reduction scheme set out in Part 5 of Annex VII provided that an equivalent emission reduction is achieved compared to that achieved through the application of the emission limit values referred to in point (a).

Member States shall report to the Commission in accordance with Article 72(1) on the progress in achieving the equivalent emission reduction referred to in point (b).

2. By way of derogation from paragraph 1(a), where the operator demonstrates to the competent authority that for an individual installation the emission limit value for fugitive emissions is not technically and economically feasible, the competent authority may allow emissions to exceed that emission limit value provided that significant risks to human health or the environment are not to be expected and that the operator demonstrates to the competent authority that the best available techniques are being used.

[1] OJ L 396, 30.12.2006, p. 1.

3. By way of derogation from paragraph 1, for coating activities covered by item 8 of the table in Part 2 of Annex VII which cannot be carried out under contained conditions, the competent authority may allow the emissions of the installation not to comply with the requirements set out in that paragraph if the operator demonstrates to the competent authority that such compliance is not technically and economically feasible and that the best available techniques are being used.

4. Member States shall report to the Commission on the derogations referred to in paragraphs 2 and 3 of this Article in accordance with Article 72(2).

5. The emissions of either volatile organic compounds which are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F or halogenated volatile organic compounds which are assigned or need to carry the hazard statements H341 or H351, shall be controlled under contained conditions as far as technically and economically feasible to safeguard public health and the environment and shall not exceed the relevant emission limit values set out in Part 4 of Annex VII.

6. Installations where two or more activities are carried out, each of which exceeds the thresholds in Part 2 of Annex VII shall:

(a) as regards the substances specified in paragraph 5, meet the requirements of that paragraph for each activity individually;

(b) as regards all other substances, either:

(i) meet the requirements of paragraph 1 for each activity individually; or

(ii) have total emissions of volatile organic compounds not exceeding those which would have resulted had point (i) been applied.

7. All appropriate precautions shall be taken to minimise emissions of volatile organic compounds during start-up and shut-down operations.

Article 60

Monitoring of emissions

Member States shall, either by specification in the permit conditions or by general binding rules, ensure that measurements of emissions are carried out in accordance with Part 6 of Annex VII.

Article 61

Compliance with emission limit values

The emission limit values in waste gases shall be regarded as being complied with if the conditions set out in Part 8 of Annex VII are fulfilled.

Article 62

Reporting on compliance

The operator shall supply the competent authority, on request, with data enabling the competent authority to verify compliance with either of the following:

(a) emission limit values in waste gases, fugitive emission limit values and total emission limit values;

(b) the requirements of the reduction scheme under Part 5 of Annex VII;

(c) the derogations granted in accordance with Article 59(2) and (3).

This may include a solvent management plan prepared in accordance with Part 7 of Annex VII.

Article 63

Substantial change to existing installations

1. A change of the maximum mass input of organic solvents by an existing installation averaged over 1 day, where the installation is operated at its design output under conditions other than start-up and shut-down operations and maintenance of equipment, shall be considered as substantial if it leads to an increase of emissions of volatile organic compounds of more than:

(a) 25 % for an installation carrying out either activities which fall within the lower threshold band of items 1, 3, 4, 5, 8, 10, 13, 16 or 17 of the table in Part 2 of Annex VII or, activities which fall under one of the other items of Part 2 of Annex VII, and with a solvent consumption of less than 10 tonnes per year;

(b) 10 % for all other installations.

2. Where an existing installation undergoes a substantial change, or falls within the scope of this Directive for the first time following a substantial change, that part of the installation which undergoes the substantial change shall be treated either as a new installation or as an existing installation, provided that the total emissions of the whole installation do not exceed those that would have resulted had the substantially changed part been treated as a new installation.

3. In case of a substantial change, the competent authority shall check compliance of the installation with the requirements of this Directive.

Article 64

Exchange of information on substitution of organic solvents

The Commission shall organise an exchange of information with the Member States, the industry concerned and non-governmental organisations promoting environmental protection on the use of organic solvents and their potential substitutes and techniques which have the least potential effects on air, water, soil, ecosystems and human health.

The exchange of information shall be organised on all of the following:

(a) fitness for use;

(b) potential effects on human health and occupational exposure in particular;

(c) potential effects on the environment;

(d) the economic consequences, in particular the costs and benefits of the options available.

Article 65

Access to information

1. The decision of the competent authority, including at least a copy of the permit, and any subsequent updates, shall be made available to the public.

The general binding rules applicable for installations and the list of installations subject to permitting and registration shall be made available to the public.

2. The results of the monitoring of emissions as required under Article 60 and held by the competent authority shall be made available to the public.

3. Paragraphs 1 and 2 of this Article shall apply, subject to the restrictions laid down in Article 4(1) and (2) of Directive 2003/4/EC.

CHAPTER VI

SPECIAL PROVISIONS FOR INSTALLATIONS PRODUCING TITANIUM DIOXIDE

Article 66

Scope

This Chapter shall apply to installations producing titanium dioxide.

Article 67

Prohibition of the disposal of waste

Member States shall prohibit the disposal of the following waste into any water body, sea or ocean:

(a) solid waste;

(b) the mother liquors arising from the filtration phase following hydrolysis of the titanyl sulphate solution from installations applying the sulphate process; including the acid waste associated with such liquors, containing overall more than 0,5 % free sulphuric acid and various heavy metals and including such mother liquors which have been diluted until they contain 0,5 % or less free sulphuric acid;

(c) waste from installations applying the chloride process containing more than 0,5 % free hydrochloric acid and various heavy metals, including such waste which has been diluted until it contains 0,5 % or less free hydrochloric acid;

(d) filtration salts, sludges and liquid waste arising from the treatment (concentration or neutralisation) of the waste mentioned under points (b) and (c) and containing various heavy metals, but not including neutralised and filtered or decanted waste containing only traces of heavy metals and which, before any dilution, has a pH value above 5,5.

Article 68

Control of emissions into water

Emissions from installations into water shall not exceed the emission limit values set out in Part 1 of Annex VIII.

Article 69

Prevention and control of emissions into air

1. The emission of acid droplets from installations shall be prevented.

2. Emissions into air from installations shall not exceed the emission limit values set out in Part 2 of Annex VIII.

Article 70

Monitoring of emissions

1. Member States shall ensure the monitoring of emissions into water in order to enable the competent authority to verify compliance with the permit conditions and Article 68.

2. Member States shall ensure the monitoring of emissions into air in order to enable the competent authority to verify compliance with the permit conditions and Article 69. Such monitoring shall include at least monitoring of emissions as set out in Part 3 of Annex VIII.

3. Monitoring shall be carried out in accordance with CEN standards or, if CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality.

CHAPTER VII

COMMITTEE, TRANSITIONAL AND FINAL PROVISIONS

Article 71

Competent authorities

Member States shall designate the competent authorities responsible for carrying out the obligations arising from this Directive.

Article 72

Reporting by Member States

1. Member States shall ensure that information is made available to the Commission on the implementation of this Directive, on representative data on emissions and other forms of pollution, on emission limit values, on the application of best available techniques in accordance with Articles 14 and 15, in particular on the granting of exemptions in accordance with Article 15(4), and on progress made concerning the development and application of emerging techniques in accordance with Article 27. Member States shall make the information available in an electronic format.

2. The type, format and frequency of information to be made available pursuant to paragraph 1 shall be established in accordance with the regulatory procedure referred to in Article 75(2). This shall include the determination of the specific activities and pollutants for which data referred to in paragraph 1 shall be made available.

3. For all combustion plants covered by Chapter III of this Directive, Member States shall, from 1 January 2016, establish an annual inventory of the sulphur dioxide, nitrogen oxides and dust emissions and energy input.

Taking into account the aggregation rules set out in Article 29, the competent authority shall obtain the following data for each combustion plant:

(a) the total rated thermal input (MW) of the combustion plant;

(b) the type of combustion plant: boiler, gas turbine, gas engine, diesel engine, other (specifying the type);

(c) the date of the start of operation of the combustion plant;

(d) the total annual emissions (tonnes per year) of sulphur dioxide, nitrogen oxides and dust (as total suspended particles);

(e) the number of operating hours of the combustion plant;

(f) the total annual amount of energy input, related to the net calorific value (TJ per year), broken down in terms of the following categories of fuel: coal, lignite, biomass, peat, other solid fuels (specifying the type), liquid fuels, natural gas, other gases (specifying the type).

The annual plant-by-plant data contained in these inventories shall be made available to the Commission upon request.

A summary of the inventories shall be made available to the Commission every 3 years within 12 months from the end of the three-year period considered. This summary shall show separately the data for combustion plants within refineries.

The Commission shall make available to the Member States and to the public a summary of the comparison and evaluation of those inventories in accordance with Directive 2003/4/EC within 24 months from the end of the three-year period considered.

4. Member States shall, from 1 January 2016, report the following data annually to the Commission:

(a) for combustion plants to which Article 31 applies, the sulphur content of the indigenous solid fuel used and the rate of desulphurisation achieved, averaged over each month. For the first year where Article 31 is applied, the technical justification of the non-feasibility of complying with the emission limit values referred to in Article 30(2) and (3) shall also be reported; and

(b) for combustion plants which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, the number of operating hours per year.

Article 73

Review

1. By 7 January 2016, and every 3 years thereafter, the Commission shall submit to the European Parliament and to the Council a report reviewing the implementation of this Directive on the basis of the information referred to in Article 72.

That report shall include an assessment of the need for Union action through the establishment or updating of Union-wide minimum requirements for emission limit values and for rules on monitoring and compliance for activities within the scope of the BAT conclusions adopted during the previous three-year period, on the basis of the following criteria:

(a) the impact of the activities concerned on the environment as a whole; and

(b) the state of implementation of best available techniques for the activities concerned.

That assessment shall consider the opinion of the forum referred to in Article 13(4).

Chapter III and Annex V of this Directive shall be considered to represent the Union-wide minimum requirements in the case of large combustion plants.

The report shall be accompanied by a legislative proposal where appropriate. Where the assessment referred to in the second subparagraph identifies such a need, the legislative proposal shall include provisions establishing or updating Union-wide minimum requirements for emission limit values and for rules on monitoring and compliance assessment for the activities concerned.

2. The Commission shall, by 31 December 2012, review the need to control emissions from:

(a) the combustion of fuels in installations with a total rated thermal input below 50 MW;

(b) the intensive rearing of cattle; and

(c) the spreading of manure.

The Commission shall report the results of that review to the European Parliament and to the Council accompanied by a legislative proposal where appropriate.

3. The Commission shall report to the European Parliament and the Council, by 31 December 2011, on the establishment in Annex I of:

(a) differentiated capacity thresholds for the rearing of different poultry species, including the specific case of quail;

(b) capacity thresholds for the simultaneous rearing of different types of animals within the same installation.

The Commission shall report the results of that review to the European Parliament and to the Council accompanied by a legislative proposal where appropriate.

Article 74

Amendments of Annexes

In order to allow the provisions of this Directive to be adapted to scientific and technical progress on the basis of best available techniques, the Commission shall adopt delegated acts in accordance with Article 76 and subject to the conditions laid down in Articles 77 and 78 as regards the adaptation of Parts 3 and 4 of Annex V, Parts 2, 6, 7 and 8 of Annex VI and Parts 5, 6, 7 and 8 of Annex VII to such scientific and technical progress.

Article 75

Committee procedure

1. The Commission shall be assisted by a committee.

2. Where reference is made to this paragraph, Articles 5 and 7 of Decision 1999/468/EC shall apply, having regard to the provisions of Article 8 thereof.

The period laid down in Article 5(6) of Decision 1999/468/EC shall be set at 3 months.

Article 76

Exercise of the delegation

1. The power to adopt the delegated acts referred to in Article 48(5) and Article 74 shall be conferred on the Commission for a period of 5 years from 6 January 2011. The Commission shall draw up a report in respect of the delegated power at the latest 6 months before the end of the five-year period. The delegation of power shall be automatically extended for periods of an identical duration, unless the European Parliament or the Council revokes it in accordance with Article 77.

2. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.

3. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in Articles 77 and 78.

Article 77

Revocation of the delegation

1. The delegation of power referred to in Article 48(5) and Article 74 may be revoked at any time by the European Parliament or by the Council.

2. The institution which has commenced an internal procedure for deciding whether to revoke a delegation of power shall endeavour to inform the other institution and the Commission within a reasonable time before the final decision is taken, indicating the delegated power which could be subject to revocation and possible reasons for a revocation.

3. The decision of revocation shall put an end to the delegation of the power specified in that decision. It shall take effect immediately or on a later date specified therein. It shall not affect the validity of the delegated acts already in force. It shall be published in the *Official Journal of the European Union*.

Article 78

Objections to delegated acts

1. The European Parliament or the Council may object to a delegated act within a period of 2 months from the date of notification.

At the initiative of the European Parliament or the Council that period shall be extended by 2 months.

2. If, on expiry of the period referred to in paragraph 1, neither the European Parliament nor the Council has objected to the delegated act, it shall be published in the *Official Journal of the European Union* and shall enter into force on the date stated therein.

The delegated act may be published in the *Official Journal of the European Union* and enter into force before the expiry of that period if the European Parliament and the Council have both informed the Commission of their intention not to raise objections.

3. If either the European Parliament or the Council objects to the delegated act within the period referred to in paragraph 1, it shall not enter into force. The institution which objects shall state the reasons for objecting to the delegated act.

Article 79

Penalties

Member States shall determine penalties applicable to infringements of the national provisions adopted pursuant to this Directive. The penalties thus provided for shall be effective, proportionate and dissuasive. Member States shall notify those provisions to the Commission by 7 January 2013 and shall notify it without delay of any subsequent amendment affecting them.

Article 80

Transposition

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with Article 2, points (8), (11) to (15), (18) to (23), (26) to (30), (34) to (38) and (41) of Article 3, Article 4(2) and (3), Article 7, Articles 8 and 10, Article 11(e) and (h), Article 12(1)(e) and (h), Article 13(7), point (ii) of Article 14(1)(c), points (d), (e), (f) and (h) of Article 14(1), Article 14(2) to (7), Article 15(2) to (5), Articles 16, 17 and 19, Article 21(2) to (5), Articles 22, 23, 24, 27, 28 and 29, Article 30(1), (2), (3), (4), (7) and (8), Articles 31, 32, 33, 34, 35, 36, 38 and 39, Article 40(2) and (3), Articles 42 and 43, Article 45(1), Article 58, Article 59(5), Article 63, Article 65(3), Articles 69, 70, 71, 72 and 79, and with the first subparagraph and points 1.1, 1.4, 2.5(b), 3.1, 4, 5, 6.1(c), 6.4(b), 6.10 and 6.11 of Annex I, Annex II, point 12 of Annex III, Annex V, point (b) of Part 1, points 2.2, 2.4, 3.1 and 3.2 of Part 4, points 2.5 and 2.6 of Part 6 and point 1.1(d) of Part 8 of Annex VI, point 2 of Part 4, point 1 of Part 5, point 3 of Part 7 of Annex VII, points 1 and 2(c) of Part 1, points 2 and 3 of Part 2 and Part 3 of Annex VIII by 7 January 2013.

They shall apply those measures from that same date.

When Member States adopt those measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. The methods of making such reference shall be laid down by Member States.

2. Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

Article 81

Repeal

1. Directives 78/176/EEC, 82/883/EEC, 92/112/EEC, 1999/13/EC, 2000/76/EC and 2008/1/EC, as amended by the acts listed in Annex IX, Part A are repealed with effect from 7 January 2014, without prejudice to the obligations of the Member States relating to the time limits for transposition into national law and application of the Directives set out in Annex IX, Part B.

2. Directive 2001/80/EC as amended by the acts listed in Annex IX, Part A is repealed with effect from 1 January 2016, without prejudice to the obligations of the Member States relating to the time limits for transposition into national law and application of the Directives set out in Annex IX, Part B.

3. References to the repealed Directives shall be construed as references to this Directive and shall be read in accordance with the correlation table set out in Annex X.

Article 82

Transitional provisions

1. In relation to installations carrying out activities referred to in Annex I, point 1.1 for activities with a total rated thermal input exceeding 50 MW, points 1.2 and 1.3, point 1.4(a), points 2.1 to 2.6, points 3.1 to 3.5, points 4.1 to 4.6 for activities concerning production by chemical processing, points 5.1 and 5.2 for activities covered by Directive 2008/1/EC, point 5.3 (a)(i) and (ii), point 5.4, point 6.1(a) and (b), points 6.2 and 6.3, point 6.4(a), point 6.4(b) for activities covered by Directive 2008/1/EC, point 6.4(c) and points 6.5 to 6.9 which are in operation and hold a permit before 7 January 2013 or the operators of which have submitted a complete application for a permit before that date, provided that those installations are put into operation no later than 7 January 2014, Member States shall apply the laws, regulations and administrative provisions adopted in accordance with Article 80(1) from 7 January 2014 with the exception of Chapter III and Annex V.

2. In relation to installations carrying out activities referred to in Annex I, point 1.1 for activities with a total rated thermal input of 50 MW, point 1.4(b), points 4.1 to 4.6 for activities concerning production by biological processing, points 5.1 and 5.2 for activities not covered by Directive 2008/1/EC, point 5.3(a)(iii) to (v), point 5.3(b), points 5.5 and 5.6, point 6.1(c), point 6.4(b) for activities not covered by Directive 2008/1/EC and points 6.10 and 6.11 which are in operation before 7 January 2013, Member States shall apply the laws, regulations and administrative provisions adopted in accordance with this Directive from 7 July 2015 with the exception of Chapters III and IV and Annexes V and VI.

3. In relation to combustion plants referred to in Article 30(2), Member States shall, from 1 January 2016, apply the laws, regulations and administrative provisions adopted in accordance with Article 80(1) to comply with Chapter III and Annex V.

4. In relation to combustion plants referred to in Article 30(3), Member States shall no longer apply Directive 2001/80/EC from 7 January 2013.

5. In relation to combustion plants which co-incinerate waste, point 3.1 of Part 4 of Annex VI shall apply until:

(a) 31 December 2015, for combustion plants referred to in Article 30(2);

(b) 7 January 2013, for combustion plants referred to in Article 30(3).

6. Point 3.2 of Part 4 of Annex VI shall apply in relation to combustion plants which co-incinerate waste, as from:

(a) 1 January 2016, for combustion plants referred to in Article 30(2)

(b) 7 January 2013, for combustion plants referred to in Article 30(3).

7. Article 58 shall apply from 1 June 2015. Until that date, substances or mixtures which, because of their content of volatile organic compounds classified as carcinogens, mutagens, or toxic to reproduction under Regulation (EC) No 1272/2008, are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F or the risk phrases R45, R46, R49, R60 or R61, shall be replaced, as far as possible, by less harmful substances or mixtures within the shortest possible time.

8. Article 59(5) shall apply from 1 June 2015. Until that date, the emissions of either volatile organic compounds which are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F or the risk phrases R45, R46, R49, R60 or R61 or halogenated volatile organic compounds which are assigned or need to carry the hazard statements H341 or H351 or the risk phrases R40 or R68, shall be controlled under contained conditions, as far as technically and economically feasible, to safeguard public health and the environment and shall not exceed the relevant emission limit values set out in Part 4 of Annex VII.

9. Point 2 of Part 4 of Annex VII shall apply from 1 June 2015. Until that date, for emissions of halogenated volatile organic compounds which are assigned or need to carry the hazard statements H341 or H351 or the risk phrases R40 or R68, where the mass flow of the sum of the compounds causing the hazard statements H341 or H351 or the labelling R40 or R68 is greater than, or equal to, 100 g/h, an emission limit value of 20 mg/Nm^3 shall be complied with. The emission limit value refers to the mass sum of the individual compounds.

Article 83

Entry into force

This Directive shall enter into force on the 20th day following its publication in the *Official Journal of the European Union*.

Article 84

Addressees

This Directive is addressed to the Member States.

Done at Strasbourg, 24 November 2010.

For the European Parliament	*For the Council*
The President	*The President*
J. BUZEK	O. CHASTEL

ANNEX I

Categories of activities referred to in Article 10

The threshold values given below generally refer to production capacities or outputs. Where several activities falling under the same activity description containing a threshold are operated in the same installation, the capacities of such activities are added together. For waste management activities, this calculation shall apply at the level of activities 5.1, 5.3(a) and 5.3(b).

The Commission shall establish guidance on:

(a) the relationship between waste management activities described in this Annex and those described in Annexes I and II to Directive 2008/98/EC; and

(b) the interpretation of the term 'industrial scale' regarding the description of chemical industry activities described in this Annex.

1. Energy industries

1.1. Combustion of fuels in installations with a total rated thermal input of 50 MW or more

1.2. Refining of mineral oil and gas

1.3. Production of coke

1.4. Gasification or liquefaction of:

(a) coal;

(b) other fuels in installations with a total rated thermal input of 20 MW or more.

2. Production and processing of metals

2.1. Metal ore (including sulphide ore) roasting or sintering

2.2. Production of pig iron or steel (primary or secondary fusion) including continuous casting, with a capacity exceeding 2,5 tonnes per hour

2.3. Processing of ferrous metals:

(a) operation of hot-rolling mills with a capacity exceeding 20 tonnes of crude steel per hour;

(b) operation of smitheries with hammers the energy of which exceeds 50 kilojoule per hammer, where the calorific power used exceeds 20 MW;

(c) application of protective fused metal coats with an input exceeding 2 tonnes of crude steel per hour.

2.4. Operation of ferrous metal foundries with a production capacity exceeding 20 tonnes per day

2.5. Processing of non-ferrous metals:

(a) production of non-ferrous crude metals from ore, concentrates or secondary raw materials by metallurgical, chemical or electrolytic processes;

(b) melting, including the alloyage, of non-ferrous metals, including recovered products and operation of non-ferrous metal foundries, with a melting capacity exceeding 4 tonnes per day for lead and cadmium or 20 tonnes per day for all other metals.

2.6. Surface treatment of metals or plastic materials using an electrolytic or chemical process where the volume of the treatment vats exceeds 30 m^3

3. Mineral industry

3.1. Production of cement, lime and magnesium oxide:

(a) production of cement clinker in rotary kilns with a production capacity exceeding 500 tonnes per day or in other kilns with a production capacity exceeding 50 tonnes per day;

(b) production of lime in kilns with a production capacity exceeding 50 tonnes per day;

(c) production of magnesium oxide in kilns with a production capacity exceeding 50 tonnes per day.

3.2. Production of asbestos or the manufacture of asbestos-based products

3.3. Manufacture of glass including glass fibre with a melting capacity exceeding 20 tonnes per day

3.4. Melting mineral substances including the production of mineral fibres with a melting capacity exceeding 20 tonnes per day

3.5. Manufacture of ceramic products by firing, in particular roofing tiles, bricks, refractory bricks, tiles, stoneware or porcelain with a production capacity exceeding 75 tonnes per day and/or with a kiln capacity exceeding 4 m^3 and with a setting density per kiln exceeding 300 kg/m^3

4. Chemical industry

For the purpose of this section, production within the meaning of the categories of activities contained in this section means the production on an industrial scale by chemical or biological processing of substances or groups of substances listed in points 4.1 to 4.6

4.1. Production of organic chemicals, such as:

(a) simple hydrocarbons (linear or cyclic, saturated or unsaturated, aliphatic or aromatic);

(b) oxygen-containing hydrocarbons such as alcohols, aldehydes, ketones, carboxylic acids, esters and mixtures of esters, acetates, ethers, peroxides and epoxy resins;

(c) sulphurous hydrocarbons;

(d) nitrogenous hydrocarbons such as amines, amides, nitrous compounds, nitro compounds or nitrate compounds, nitriles, cyanates, isocyanates;

(e) phosphorus-containing hydrocarbons;

(f) halogenic hydrocarbons;

(g) organometallic compounds;

(h) plastic materials (polymers, synthetic fibres and cellulose-based fibres);

(i) synthetic rubbers;

(j) dyes and pigments;

(k) surface-active agents and surfactants.

4.2. Production of inorganic chemicals, such as:

(a) gases, such as ammonia, chlorine or hydrogen chloride, fluorine or hydrogen fluoride, carbon oxides, sulphur compounds, nitrogen oxides, hydrogen, sulphur dioxide, carbonyl chloride;

(b) acids, such as chromic acid, hydrofluoric acid, phosphoric acid, nitric acid, hydrochloric acid, sulphuric acid, oleum, sulphurous acids;

(c) bases, such as ammonium hydroxide, potassium hydroxide, sodium hydroxide;

(d) salts, such as ammonium chloride, potassium chlorate, potassium carbonate, sodium carbonate, perborate, silver nitrate;

(e) non-metals, metal oxides or other inorganic compounds such as calcium carbide, silicon, silicon carbide.

4.3. Production of phosphorous-, nitrogen- or potassium-based fertilisers (simple or compound fertilisers)

4.4. Production of plant protection products or of biocides

4.5. Production of pharmaceutical products including intermediates

4.6. Production of explosives

5. Waste management

5.1. Disposal or recovery of hazardous waste with a capacity exceeding 10 tonnes per day involving one or more of the following activities:

(a) biological treatment;

(b) physico-chemical treatment;

(c) blending or mixing prior to submission to any of the other activities listed in points 5.1 and 5.2;

(d) repackaging prior to submission to any of the other activities listed in points 5.1 and 5.2;

(e) solvent reclamation/regeneration;

(f) recycling/reclamation of inorganic materials other than metals or metal compounds;

(g) regeneration of acids or bases;

(h) recovery of components used for pollution abatement;

(i) recovery of components from catalysts;

(j) oil re-refining or other reuses of oil;

(k) surface impoundment.

5.2. Disposal or recovery of waste in waste incineration plants or in waste co-incineration plants:

(a) for non-hazardous waste with a capacity exceeding 3 tonnes per hour;

(b) for hazardous waste with a capacity exceeding 10 tonnes per day.

5.3. (a) Disposal of non-hazardous waste with a capacity exceeding 50 tonnes per day involving one or more of the following activities, and excluding activities covered by Council Directive 91/271/EEC of 21 May 1991 concerning urban waste-water treatment [1]:

(i) biological treatment;

(ii) physico-chemical treatment;

(iii) pre-treatment of waste for incineration or co-incineration;

(iv) treatment of slags and ashes;

(v) treatment in shredders of metal waste, including waste electrical and electronic equipment and end-of-life vehicles and their components.

[1] OJ L 135, 30.5.1991, p. 40.

(b) Recovery, or a mix of recovery and disposal, of non-hazardous waste with a capacity exceeding 75 tonnes per day involving one or more of the following activities, and excluding activities covered by Directive 91/271/EEC:

(i) biological treatment;

(ii) pre-treatment of waste for incineration or co-incineration;

(iii) treatment of slags and ashes;

(iv) treatment in shredders of metal waste, including waste electrical and electronic equipment and end-of-life vehicles and their components.

When the only waste treatment activity carried out is anaerobic digestion, the capacity threshold for this activity shall be 100 tonnes per day.

5.4. Landfills, as defined in Article 2(g) of Council Directive 1999/31/EC of 26 April 1999 on the landfill of waste [1], receiving more than 10 tonnes of waste per day or with a total capacity exceeding 25 000 tonnes, excluding landfills of inert waste

5.5. Temporary storage of hazardous waste not covered under point 5.4 pending any of the activities listed in points 5.1, 5.2, 5.4 and 5.6 with a total capacity exceeding 50 tonnes, excluding temporary storage, pending collection, on the site where the waste is generated

5.6. Underground storage of hazardous waste with a total capacity exceeding 50 tonnes

6. Other activities

6.1. Production in industrial installations of:

(a) pulp from timber or other fibrous materials;

(b) paper or card board with a production capacity exceeding 20 tonnes per day;

(c) one or more of the following wood-based panels: oriented strand board, particleboard or fibreboard with a production capacity exceeding 600 m^3 per day.

6.2. Pre-treatment (operations such as washing, bleaching, mercerisation) or dyeing of textile fibres or textiles where the treatment capacity exceeds 10 tonnes per day

6.3. Tanning of hides and skins where the treatment capacity exceeds 12 tonnes of finished products per day

6.4. (a) Operating slaughterhouses with a carcass production capacity greater than 50 tonnes per day

(b) Treatment and processing, other than exclusively packaging, of the following raw materials, whether previously processed or unprocessed, intended for the production of food or feed from:

(i) only animal raw materials (other than exclusively milk) with a finished product production capacity greater than 75 tonnes per day;

(ii) only vegetable raw materials with a finished product production capacity greater than 300 tonnes per day or 600 tonnes per day where the installation operates for a period of no more than 90 consecutive days in any year;

(iii) animal and vegetable raw materials, both in combined and separate products, with a finished product production capacity in tonnes per day greater than:

— 75 if A is equal to 10 or more; or,

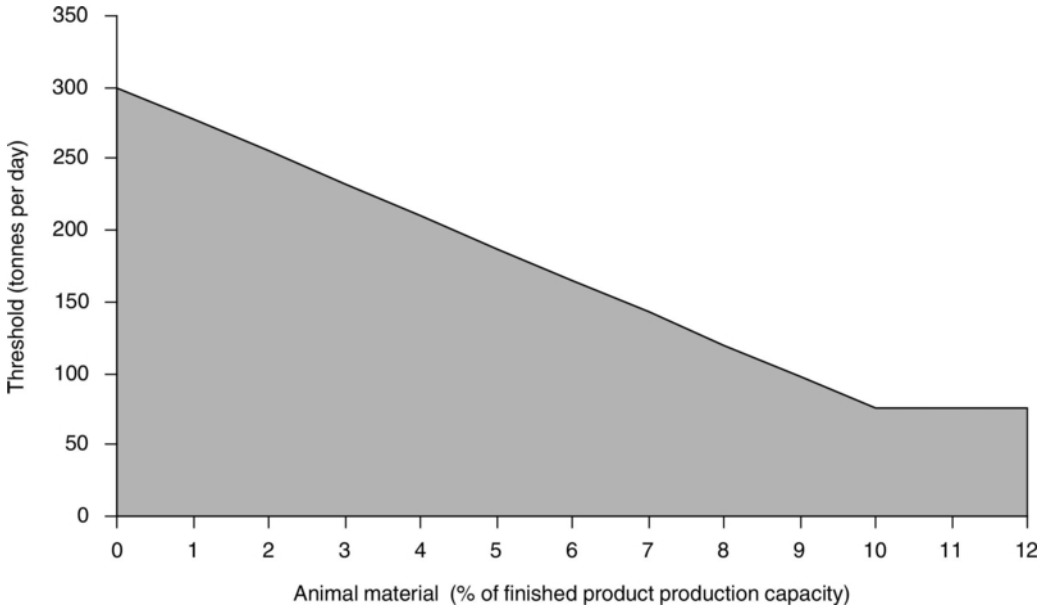
— [300- (22,5 × A)] in any other case,

where 'A' is the portion of animal material (in percent of weight) of the finished product production capacity.

Packaging shall not be included in the final weight of the product.

[1] OJ L 182, 16.7.1999, p. 1.

This subsection shall not apply where the raw material is milk only.



(c) Treatment and processing of milk only, the quantity of milk received being greater than 200 tonnes per day (average value on an annual basis).

6.5. Disposal or recycling of animal carcases or animal waste with a treatment capacity exceeding 10 tonnes per day

6.6. Intensive rearing of poultry or pigs:

(a) with more than 40 000 places for poultry;

(b) with more than 2 000 places for production pigs (over 30 kg), or

(c) with more than 750 places for sows.

6.7. Surface treatment of substances, objects or products using organic solvents, in particular for dressing, printing, coating, degreasing, waterproofing, sizing, painting, cleaning or impregnating, with an organic solvent consumption capacity of more than 150 kg per hour or more than 200 tonnes per year

6.8. Production of carbon (hard-burnt coal) or electrographite by means of incineration or graphitisation

6.9. Capture of CO_2 streams from installations covered by this Directive for the purposes of geological storage pursuant to Directive 2009/31/EC

6.10. Preservation of wood and wood products with chemicals with a production capacity exceeding 75 m^3 per day other than exclusively treating against sapstain

6.11. Independently operated treatment of waste water not covered by Directive 91/271/EEC and discharged by an installation covered by Chapter II

ANNEX II

List of polluting substances

AIR

1. Sulphur dioxide and other sulphur compounds
2. Oxides of nitrogen and other nitrogen compounds
3. Carbon monoxide
4. Volatile organic compounds
5. Metals and their compounds
6. Dust including fine particulate matter
7. Asbestos (suspended particulates, fibres)
8. Chlorine and its compounds
9. Fluorine and its compounds
10. Arsenic and its compounds
11. Cyanides
12. Substances and mixtures which have been proved to possess carcinogenic or mutagenic properties or properties which may affect reproduction via the air
13. Polychlorinated dibenzodioxins and polychlorinated dibenzofurans

WATER

1. Organohalogen compounds and substances which may form such compounds in the aquatic environment
2. Organophosphorus compounds
3. Organotin compounds
4. Substances and mixtures which have been proved to possess carcinogenic or mutagenic properties or properties which may affect reproduction in or via the aquatic environment
5. Persistent hydrocarbons and persistent and bioaccumulable organic toxic substances
6. Cyanides
7. Metals and their compounds
8. Arsenic and its compounds
9. Biocides and plant protection products
10. Materials in suspension
11. Substances which contribute to eutrophication (in particular, nitrates and phosphates)
12. Substances which have an unfavourable influence on the oxygen balance (and can be measured using parameters such as BOD, COD, etc.)
13. Substances listed in Annex X to Directive 2000/60/EC

ANNEX III

Criteria for determining best available techniques

1. the use of low-waste technology;

2. the use of less hazardous substances;

3. the furthering of recovery and recycling of substances generated and used in the process and of waste, where appropriate;

4. comparable processes, facilities or methods of operation which have been tried with success on an industrial scale;

5. technological advances and changes in scientific knowledge and understanding;

6. the nature, effects and volume of the emissions concerned;

7. the commissioning dates for new or existing installations;

8. the length of time needed to introduce the best available technique;

9. the consumption and nature of raw materials (including water) used in the process and energy efficiency;

10. the need to prevent or reduce to a minimum the overall impact of the emissions on the environment and the risks to it;

11. the need to prevent accidents and to minimise the consequences for the environment;

12. information published by public international organisations.

ANNEX IV

Public participation in decision-making

1. The public shall be informed (by public notices or other appropriate means such as electronic media where available) of the following matters early in the procedure for the taking of a decision or, at the latest, as soon as the information can reasonably be provided:

   (a) the application for a permit or, as the case may be, the proposal for the updating of a permit or of permit conditions in accordance with Article 21, including the description of the elements listed in Article 12(1);

   (b) where applicable, the fact that a decision is subject to a national or transboundary environmental impact assessment or to consultations between Member States in accordance with Article 26;

   (c) details of the competent authorities responsible for taking the decision, those from which relevant information can be obtained, those to which comments or questions can be submitted, and details of the time schedule for transmitting comments or questions;

   (d) the nature of possible decisions or, where there is one, the draft decision;

   (e) where applicable, the details relating to a proposal for the updating of a permit or of permit conditions;

   (f) an indication of the times and places where, or means by which, the relevant information will be made available;

   (g) details of the arrangements for public participation and consultation made pursuant to point 5.

2. Member States shall ensure that, within appropriate time-frames, the following is made available to the public concerned:

   (a) in accordance with national law, the main reports and advice issued to the competent authority or authorities at the time when the public concerned were informed in accordance with point 1;

   (b) in accordance with Directive 2003/4/EC, information other than that referred to in point 1 which is relevant for the decision in accordance with Article 5 of this Directive and which only becomes available after the time the public concerned was informed in accordance with point 1.

3. The public concerned shall be entitled to express comments and opinions to the competent authority before a decision is taken.

4. The results of the consultations held pursuant to this Annex must be taken into due account in the taking of a decision.

5. The detailed arrangements for informing the public (for example by bill posting within a certain radius or publication in local newspapers) and consulting the public concerned (for example by written submissions or by way of a public inquiry) shall be determined by the Member States. Reasonable time-frames for the different phases shall be provided, allowing sufficient time to inform the public and for the public concerned to prepare and participate effectively in environmental decision-making subject to this Annex.

ANNEX V

Technical provisions relating to combustion plants

PART 1

Emission limit values for combustion plants referred to in Article 30(2)

1. All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O_2 content of 6 % for solid fuels, 3 % for combustion plants, other than gas turbines and gas engines using liquid and gaseous fuels and 15 % for gas turbines and gas engines.

2. Emission limit values (mg/Nm^3) for SO_2 for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass	Peat	Liquid fuels
50-100	400	200	300	350
100-300	250	200	300	250
> 300	200	200	200	200

Combustion plants, using solid fuels which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for SO_2 of 800 mg/Nm^3.

Combustion plants using liquid fuels, which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for SO_2 of 850 mg/Nm^3 in case of plants with a total rated thermal input not exceeding 300 MW and of 400 mg/Nm^3 in case of plants with a total rated thermal input greater than 300 MW.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding two paragraphs in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

3. Emission limit values (mg/Nm^3) for SO_2 for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	35
Liquefied gas	5
Low calorific gases from coke oven	400
Low calorific gases from blast furnace	200

Combustion plants, firing low calorific gases from gasification of refinery residues, which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, shall be subject to an emission limit value for SO_2 of 800 mg/Nm^3.

4. Emission limit values (mg/Nm^3) for NO_x for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels
50-100	300 450 in case of pulverised lignite combustion	300	450
100-300	200	250	200 (1)
> 300	200	200	150 (1)

Note:

(1) The emission limit value is 450 mg/Nm^3 for the firing of distillation and conversion residues from the refining of crude-oil for own consumption in combustion plants with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

Combustion plants in chemical installations using liquid production residues as non-commercial fuel for own consumption with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, shall be subject to an emission limit value for NO_x of 450 mg/Nm^3.

Combustion plants using solid or liquid fuels with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO_x of 450 mg/Nm^3.

Combustion plants using solid fuels with a total rated thermal input greater than 500 MW, which were granted a permit before 1 July 1987 and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO_x of 450 mg/Nm^3.

Combustion plants using liquid fuels, with a total rated thermal input greater than 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO_x of 400 mg/Nm^3.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding three paragraphs in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

5. Gas turbines (including combined cycle gas turbines (CCGT)) using light and middle distillates as liquid fuels shall be subject to an emission limit value for NO_x of 90 mg/Nm^3 and for CO of 100 mg/Nm^3.

Gas turbines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

6. Emission limit values (mg/Nm^3) for NO_x and CO for gas fired combustion plants

	NO_x	CO
Combustion plants firing natural gas with the exception of gas turbines and gas engines	100	100
Combustion plants firing blast furnace gas, coke oven gas or low calorific gases from gasification of refinery residues, with the exception of gas turbines and gas engines	200 (4)	—
Combustion plants firing other gases, with the exception of gas turbines and gas engines	200 (4)	—
Gas turbines (including CCGT), using natural gas (1) as fuel	50 (2) (3)	100
Gas turbines (including CCGT), using other gases as fuel	120	—
Gas engines	100	100

Notes:

(1) Natural gas is naturally occurring methane with not more than 20 % (by volume) of inerts and other constituents.

(2) 75 mg/Nm^3 in the following cases, where the efficiency of the gas turbine is determined at ISO base load conditions:

(i) gas turbines, used in combined heat and power systems having an overall efficiency greater than 75 %;

(ii) gas turbines used in combined cycle plants having an annual average overall electrical efficiency greater than 55 %;

(iii) gas turbines for mechanical drives.

(3) For single cycle gas turbines not falling into any of the categories mentioned under note (2), but having an efficiency greater than 35 % – determined at ISO base load conditions – the emission limit value for NO_x shall be 50xη/35 where η is the gas turbine efficiency at ISO base load conditions expressed as a percentage.

(4) 300 mg/Nm^3 for such combustion plants with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

For gas turbines (including CCGT), the NO_x and CO emission limit values set out in the table contained in this point apply only above 70 % load.

For gas turbines (including CCGT) which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, the emission limit value for NO_x is 150 mg/Nm^3 when firing natural gas and 200 mg/Nm^3 when firing other gases or liquid fuels.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding paragraph in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

Gas turbines and gas engines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

7. Emission limit values (mg/Nm^3) for dust for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels (1)
50-100	30	30	30
100-300	25	20	25
> 300	20	20	20

Note:

(1) The emission limit value is 50 mg/Nm^3 for the firing of distillation and conversion residues from the refining of crude oil for own consumption in combustion plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

8. Emission limit values (mg/Nm^3) for dust for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	5
Blast furnace gas	10
Gases produced by the steel industry which can be used elsewhere	30

PART 2

Emission limit values for combustion plants referred to in Article 30(3)

1. All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O_2 content of 6 % for solid fuels, 3 % for combustion plants other than gas turbines and gas engines using liquid and gaseous fuels and 15 % for gas turbines and gas engines.

   In case of combined cycle gas turbines with supplementary firing, the standardised O_2 content may be defined by the competent authority, taking into account the specific characteristics of the installation concerned.

2. Emission limit values (mg/Nm^3) for SO_2 for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass	Peat	Liquid fuels
50-100	400	200	300	350
100-300	200	200	300 250 in case of fluidised bed combustion	200
> 300	150 200 in case of circulating or pressurised fluidised bed combustion	150	150 200 in case of fluidised bed combustion	150

3. Emission limit values (mg/Nm^3) for SO_2 for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	35
Liquefied gas	5
Low calorific gases from coke oven	400
Low calorific gases from blast furnace	200

4. Emission limit values (mg/Nm^3) for NO_x for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels
50-100	300 400 in case of pulverised lignite combustion	250	300
100-300	200	200	150
> 300	150 200 in case of pulverised lignite combustion	150	100

5. Gas turbines (including CCGT) using light and middle distillates as liquid fuels shall be subject to an emission limit value for NO_x of 50 mg/Nm^3 and for CO of 100 mg/Nm^3

Gas turbines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

6. Emission limit values (mg/Nm^3) for NO_x and CO for gas fired combustion plants

	NO_x	CO
Combustion plants other than gas turbines and gas engines	100	100
Gas turbines (including CCGT)	50 (1)	100
Gas engines	75	100

Note:

(1) For single cycle gas turbines having an efficiency greater than 35 % – determined at ISO base load conditions – the emission limit value for NO_x shall be $50x\eta/35$ where η is the gas turbine efficiency at ISO base load conditions expressed as a percentage.

For gas turbines (including CCGT), the NO_x and CO emission limit values set out in this point apply only above 70 % load.

Gas turbines and gas engines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

7. Emission limit values (mg/Nm^3) for dust for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	
50-300	20
> 300	10
	20 for biomass and peat

8. Emission limit values (mg/Nm^3) for dust for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	5
Blast furnace gas	10
Gases produced by the steel industry which can be used elsewhere	30

PART 3

Emission monitoring

1. The concentrations of SO_2, NO_x and dust in waste gases from each combustion plant with a total rated thermal input of 100 MW or more shall be measured continuously.

The concentration of CO in waste gases from each combustion plant firing gaseous fuels with a total rated thermal input of 100 MW or more shall be measured continuously.

2. The competent authority may decide not to require the continuous measurements referred to in point 1 in the following cases:

(a) for combustion plants with a life span of less than 10 000 operational hours;

(b) for SO_2 and dust from combustion plants firing natural gas;

(c) for SO_2 from combustion plants firing oil with known sulphur content in cases where there is no waste gas desulphurisation equipment;

(d) for SO_2 from combustion plants firing biomass if the operator can prove that the SO_2 emissions can under no circumstances be higher than the prescribed emission limit values.

3. Where continuous measurements are not required, measurements of SO_2, NO_x, dust and, for gas fired plants, also of CO shall be required at least once every 6 months.

4. For combustion plants firing coal or lignite, the emissions of total mercury shall be measured at least once per year.

5. As an alternative to the measurements of SO_2 and NO_x referred to in point 3, other procedures, verified and approved by the competent authority, may be used to determine the SO_2 and NO_x emissions. Such procedures shall use relevant CEN standards or, if CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality.

6. The competent authority shall be informed of significant changes in the type of fuel used or in the mode of operation of the plant. The competent authority shall decide whether the monitoring requirements laid down in points 1 to 4 are still adequate or require adaptation.

7. The continuous measurements carried out in accordance with point 1 shall include the measurement of the oxygen content, temperature, pressure and water vapour content of the waste gases. The continuous measurement of the water vapour content of the waste gases shall not be necessary, provided that the sampled waste gas is dried before the emissions are analysed.

8. Sampling and analysis of relevant polluting substances and measurements of process parameters as well as the quality assurance of automated measuring systems and the reference measurement methods to calibrate those systems shall be carried out in accordance with CEN standards. If CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality shall apply.

The automated measuring systems shall be subject to control by means of parallel measurements with the reference methods at least once per year.

The operator shall inform the competent authority about the results of the checking of the automated measuring systems.

9. At the emission limit value level, the values of the 95 % confidence intervals of a single measured result shall not exceed the following percentages of the emission limit values:

Carbon monoxide	10 %
Sulphur dioxide	20 %
Nitrogen oxides	20 %
Dust	30 %

10. The validated hourly and daily average values shall be determined from the measured valid hourly average values after having subtracted the value of the confidence interval specified in point 9.

Any day in which more than three hourly average values are invalid due to malfunction or maintenance of the automated measuring system shall be invalidated. If more than 10 days over a year are invalidated for such situations the competent authority shall require the operator to take adequate measures to improve the reliability of the automated measuring system.

11. In the case of plants which must comply with the rates of desulphurisation referred to in Article 31, the sulphur content of the fuel which is fired in the combustion plant shall also be regularly monitored. The competent authorities shall be informed of substantial changes in the type of fuel used.

PART 4

Assessment of compliance with emission limit values

1. In the case of continuous measurements, the emission limit values set out in Parts 1 and 2 shall be regarded as having been complied with if the evaluation of the measurement results indicates, for operating hours within a calendar year, that all of the following conditions have been met:

   (a) no validated monthly average value exceeds the relevant emission limit values set out in Parts 1 and 2;

   (b) no validated daily average value exceeds 110 % of the relevant emission limit values set out in Parts 1 and 2;

   (c) in cases of combustion plants composed only of boilers using coal with a total rated thermal input below 50 MW, no validated daily average value exceeds 150 % of the relevant emission limit values set out in Parts 1 and 2,

   (d) 95 % of all the validated hourly average values over the year do not exceed 200 % of the relevant emission limit values set out in Parts 1 and 2.

   The validated average values are determined as set out in point 10 of Part 3.

   For the purpose of the calculation of the average emission values, the values measured during the periods referred to in Article 30(5) and (6) and Article 37 as well as during the start-up and shut-down periods shall be disregarded.

2. Where continuous measurements are not required, the emission limit values set out in Parts 1 and 2 shall be regarded as having been complied with if the results of each of the series of measurements or of the other procedures defined and determined according to the rules laid down by the competent authorities do not exceed the emission limit values.

PART 5

Minimum rate of desulphurisation

1. Minimum rate of desulphurisation for combustion plants referred to in Article 30(2)

Total rated thermal input (MW)	Minimum rate of desulphurisation	
	Plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003	Other plants
50-100	80 %	92 %
100-300	90 %	92 %
> 300	96 % (1)	96 %

Note:
(1) For combustion plants firing oil shale, the minimum rate of desulphurisation is 95 %.

2. Minimum rate of desulphurisation for combustion plants referred to in Article 30(3)

Total rated thermal input (MW)	Minimum rate of desulphurisation
50-100	93 %
100-300	93 %
> 300	97 %

PART 6

Compliance with rate of desulphurisation

The minimum rates of desulphurisation set out in Part 5 of this Annex shall apply as a monthly average limit value.

PART 7

Average emission limit values for multi-fuel firing combustion plants within a refinery

Average emission limit values (mg/Nm^3) for SO_2 for multi-fuel firing combustion plants within a refinery, with the exception of gas turbines and gas engines, which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels:

(a) for combustion plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003: 1 000 mg/Nm^3;

(b) for other combustion plants: 600 mg/Nm^3.

These emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O_2 content of 6 % for solid fuels and 3 % for liquid and gaseous fuels.

ANNEX VI

Technical provisions relating to waste incineration plants and waste co-incineration plants

PART 1

Definitions

For the purpose of this Annex the following definitions shall apply:

(a) 'existing waste incineration plant' means one of the following waste incineration plants:

(i) which was in operation and had a permit in accordance with applicable Union law before 28 December 2002,

(ii) which was authorised or registered for waste incineration and had a permit granted before 28 December 2002 in accordance with applicable Union law, provided that the plant was put into operation no later than 28 December 2003,

(iii) which, in the view of the competent authority, was the subject of a full request for authorisation before 28 December 2002, provided that the plant was put into operation not later than 28 December 2004;

(b) 'new waste incineration plant' means any waste incineration plant not covered by point (a).

PART 2

Equivalence factors for dibenzo-p-dioxins and dibenzofurans

For the determination of the total concentration of dioxins and furans, the mass concentrations of the following dibenzo-p-dioxins and dibenzofurans shall be multiplied by the following equivalence factors before summing:

	Toxic equivalence factor
2,3,7,8 — Tetrachlorodibenzodioxin (TCDD)	1
1,2,3,7,8 — Pentachlorodibenzodioxin (PeCDD)	0,5
1,2,3,4,7,8 — Hexachlorodibenzodioxin (HxCDD)	0,1
1,2,3,6,7,8 — Hexachlorodibenzodioxin (HxCDD)	0,1
1,2,3,7,8,9 — Hexachlorodibenzodioxin (HxCDD)	0,1
1,2,3,4,6,7,8 — Heptachlorodibenzodioxin (HpCDD)	0,01
Octachlorodibenzodioxin (OCDD)	0,001
2,3,7,8 — Tetrachlorodibenzofuran (TCDF)	0,1
2,3,4,7,8 — Pentachlorodibenzofuran (PeCDF)	0,5
1,2,3,7,8 — Pentachlorodibenzofuran (PeCDF)	0,05
1,2,3,4,7,8 — Hexachlorodibenzofuran (HxCDF)	0,1
1,2,3,6,7,8 — Hexachlorodibenzofuran (HxCDF)	0,1
1,2,3,7,8,9 — Hexachlorodibenzofuran (HxCDF)	0,1
2,3,4,6,7,8 — Hexachlorodibenzofuran (HxCDF)	0,1
1,2,3,4,6,7,8 — Heptachlorodibenzofuran (HpCDF)	0,01
1,2,3,4,7,8,9 — Heptachlorodibenzofuran (HpCDF)	0,01
Octachlorodibenzofuran (OCDF)	0,001

PART 3

Air emission limit values for waste incineration plants

1. All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correcting for the water vapour content of the waste gases.

They are standardised at 11 % oxygen in waste gas except in case of incineration of mineral waste oil as defined in point 3 of Article 3 of Directive 2008/98/EC, when they are standardised at 3 % oxygen, and in the cases referred to in Point 2.7 of Part 6.

1.1. Daily average emission limit values for the following polluting substances (mg/Nm^3)

Total dust	10
Gaseous and vaporous organic substances, expressed as total organic carbon (TOC)	10
Hydrogen chloride (HCl)	10
Hydrogen fluoride (HF)	1
Sulphur dioxide (SO_2)	50
Nitrogen monoxide (NO) and nitrogen dioxide (NO_2), expressed as NO_2 for existing waste incineration plants with a nominal capacity exceeding 6 tonnes per hour or new waste incineration plants	200
Nitrogen monoxide (NO) and nitrogen dioxide (NO_2), expressed as NO_2 for existing waste incineration plants with a nominal capacity of 6 tonnes per hour or less	400

1.2. Half-hourly average emission limit values for the following polluting substances (mg/Nm^3)

	(100 %) A	(97 %) B
Total dust	30	10
Gaseous and vaporous organic substances, expressed as total organic carbon (TOC)	20	10
Hydrogen chloride (HCl)	60	10
Hydrogen fluoride (HF)	4	2
Sulphur dioxide (SO_2)	200	50
Nitrogen monoxide (NO) and nitrogen dioxide (NO_2), expressed as NO_2 for existing waste incineration plants with a nominal capacity exceeding 6 tonnes per hour or new waste incineration plants	400	200

1.3. Average emission limit values (mg/Nm^3) for the following heavy metals over a sampling period of a minimum of 30 minutes and a maximum of 8 hours

Cadmium and its compounds, expressed as cadmium (Cd)	Total: 0,05
Thallium and its compounds, expressed as thallium (Tl)	
Mercury and its compounds, expressed as mercury (Hg)	0,05
Antimony and its compounds, expressed as antimony (Sb)	Total: 0,5
Arsenic and its compounds, expressed as arsenic (As)	
Lead and its compounds, expressed as lead (Pb)	
Chromium and its compounds, expressed as chromium (Cr)	
Cobalt and its compounds, expressed as cobalt (Co)	
Copper and its compounds, expressed as copper (Cu)	
Manganese and its compounds, expressed as manganese (Mn)	
Nickel and its compounds, expressed as nickel (Ni)	
Vanadium and its compounds, expressed as vanadium (V)	

These average values cover also the gaseous and the vapour forms of the relevant heavy metal emissions as well as their compounds.

1.4. Average emission limit value (ng/Nm^3) for dioxins and furans over a sampling period of a minimum of 6 hours and a maximum of 8 hours. The emission limit value refers to the total concentration of dioxins and furans calculated in accordance with Part 2.

Dioxins and furans	0,1

1.5. Emission limit values (mg/Nm^3) for carbon monoxide (CO) in the waste gases:

(a) 50 as daily average value;

(b) 100 as half-hourly average value;

(c) 150 as 10-minute average value.

The competent authority may authorise exemptions from the emission limit values set out in this point for waste incineration plants using fluidised bed technology, provided that the permit sets an emission limit value for carbon monoxide (CO) of not more than 100 mg/Nm^3 as an hourly average value.

2. Emission limit values applicable in the circumstances described in Article 46(6) and Article 47.

The total dust concentration in the emissions into the air of a waste incineration plant shall under no circumstances exceed 150 mg/Nm^3 expressed as a half-hourly average. The air emission limit values for TOC and CO set out in points 1.2 and 1.5(b) shall not be exceeded.

3. Member States may lay down rules governing the exemptions provided for in this Part.

PART 4

Determination of air emission limit values for the co-incineration of waste

1. The following formula (mixing rule) shall be applied whenever a specific total emission limit value 'C' has not been set out in a table in this Part.

The emission limit value for each relevant polluting substance and CO in the waste gas resulting from the co-incineration of waste shall be calculated as follows:

$$\frac{V_{waste} \times C_{waste} + V_{proc} \times C_{proc}}{V_{waste} + C_{proc}} = C$$

V_{waste}: waste gas volume resulting from the incineration of waste only determined from the waste with the lowest calorific value specified in the permit and standardised at the conditions given by this Directive.

If the resulting heat release from the incineration of hazardous waste amounts to less than 10 % of the total heat released in the plant, V_{waste} must be calculated from a (notional) quantity of waste that, being incinerated, would equal 10 % heat release, the total heat release being fixed.

C_{waste}: emission limit values for waste incineration plants set out in Part 3

V_{proc}: waste gas volume resulting from the plant process including the combustion of the authorised fuels normally used in the plant (wastes excluded) determined on the basis of oxygen contents at which the emissions must be standardised as set out in Union or national law. In the absence of legislation for this kind of plant, the real oxygen content in the waste gas without being thinned by addition of air unnecessary for the process must be used.

C_{proc}: emission limit values as set out in this Part for certain industrial activities or in case of the absence of such values, emission limit values of plants which comply with the national laws, regulations and administrative provisions for such plants while burning the normally authorised fuels (wastes excluded). In the absence of these measures the emission limit values set out in the permit are used. In the absence of such permit values the real mass concentrations are used.

C: total emission limit values at an oxygen content as set out in this Part for certain industrial activities and certain polluting substances or, in case of the absence of such values, total emission limit values replacing the emission limit values as set out in specific Annexes of this Directive. The total oxygen content to replace the oxygen content for the standardisation is calculated on the basis of the content above respecting the partial volumes.

All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correcting for the water vapour content of the waste gases.

Member States may lay down rules governing the exemptions provided for in this Part.

2. Special provisions for cement kilns co-incinerating waste

2.1. The emission limit values set out in points 2.2 and 2.3 apply as daily average values for total dust, HCl, HF, NO_x, SO_2 and TOC (for continuous measurements), as average values over the sampling period of a minimum of 30 minutes and a maximum of 8 hours for heavy metals and as average values over the sampling period of a minimum of 6 hours and a maximum of 8 hours for dioxins and furans.

All values are standardised at 10 % oxygen.

Half-hourly average values shall only be needed in view of calculating the daily average values.

2.2. C – total emission limit values (mg/Nm^3 except for dioxins and furans) for the following –polluting substances

Polluting substance	C
Total dust	30
HCl	10
HF	1
NO_x	500 (1)
Cd + Tl	0,05
Hg	0,05
Sb + As + Pb + Cr + Co + Cu + Mn + Ni + V	0,5
Dioxins and furans (ng/Nm^3)	0,1

(1) Until 1 January 2016, the competent authority may authorise exemptions from the limit value for NO_x for Lepol kilns and long rotary kilns provided that the permit sets a total emission limit value for NO_x of not more than 800 mg/Nm^3.

2.3. C – total emission limit values (mg/Nm^3) for SO_2 and TOC

Pollutant	C
SO_2	50
TOC	10

The competent authority may grant derogations for emission limit values set out in this point in cases where TOC and SO_2 do not result from the co-incineration of waste.

2.4. C- total emission limit values for CO

The competent authority may set emission limit values for CO.

3. Special provisions for combustion plants co-incinerating waste

3.1. C_{proc} expressed as daily average values (mg/Nm^3) valid until the date set out in Article 82(5)

For determining the total rated thermal input of the combustion plants, the aggregation rules as defined in Article 29 shall apply. Half-hourly average values shall only be needed in view of calculating the daily average values.

C_{proc} for solid fuels with the exception of biomass (O_2 content 6 %):

Polluting substances	< 50 MWth	50-100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	850	200	200
NO_x	—	400	200	200
Dust	50	50	30	30

C_{proc} for biomass (O_2 content 6 %):

Polluting substances	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	200	200	200
NO_x	—	350	300	200
Dust	50	50	30	30

C_{proc} for liquid fuels (O_2 content 3 %):

Polluting substances	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	850	400 to 200 (linear decrease from 100 to 300 MWth)	200
NO_x	—	400	200	200
Dust	50	50	30	30

3.2. C_{proc} expressed as daily average values (mg/Nm^3) valid from the date set out in Article 82(6)

For determining the total rated thermal input of the combustion plants, the aggregation rules as defined in Article 29 shall apply. Half-hourly average values shall only be needed in view of calculating the daily average values.

3.2.1. C_{proc} for combustion plants referred to in Article 30(2), with the exception of gas turbines and gas engines

C_{proc} for solid fuels with the exception of biomass (O_2 content 6 %):

Polluting substance	< 50 MWth	50-100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	400 for peat: 300	200	200
NO_x	—	300 for pulverised lignite: 400	200	200
Dust	50	30	25 for peat: 20	20

C_{proc} for biomass (O_2 content 6 %):

Polluting substance	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	200	200	200
NO_x	—	300	250	200
Dust	50	30	20	20

C_{proc} for liquid fuels (O_2 content 3 %):

Polluting substance	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	350	250	200
NO_x	—	400	200	150
Dust	50	30	25	20

3.2.2. C_{proc} for combustion plants referred to in Article 30(3), with the exception of gas turbines and gas engines

C_{proc} for solid fuels with the exception of biomass (O_2 content 6 %):

Polluting substance	< 50 MWth	50-100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	400 for peat: 300	200 for peat: 300, except in the case of fluidised bed combustion: 250	150 for circulating or pressurised fluidised bed combustion or, in case of peat firing, for all fluidised bed combustion: 200
NO_x	—	300 for peat: 250	200	150 for pulverised lignite combustion: 200
Dust	50	20	20	10 for peat: 20

C_{proc} for biomass (O_2 content 6 %):

Polluting substance	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	200	200	150
NO_x	—	250	200	150
Dust	50	20	20	20

C_{proc} for liquid fuels (O_2 content 3 %):

Polluting substance	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	350	200	150
NO_x	—	300	150	100
Dust	50	20	20	10

3.3. C — total emission limit values for heavy metals (mg/Nm^3) expressed as average values over the sampling period of a minimum of 30 minutes and a maximum of 8 hours (O_2 content 6 % for solid fuels and 3 % for liquid fuels)

Polluting substances	C
Cd + Tl	0,05
Hg	0,05
Sb + As + Pb + Cr + Co + Cu + Mn + Ni + V	0,5

3.4. C — total emission limit value (ng/Nm^3) for dioxins and furans expressed as average value measured over the sampling period of a minimum of 6 hours and a maximum of 8 hours (O_2 content 6 % for solid fuels and 3 % for liquid fuels)

Polluting substance	C
Dioxins and furans	0,1

4. Special provisions for waste co-incineration plants in industrial sectors not covered under Points 2 and 3 of this Part

4.1. C — total emission limit value (ng/Nm^3) for dioxins and furans expressed as average value measured over the sampling period of a minimum of 6 hours and a maximum of 8 hours:

Polluting substance	C
Dioxins and furans	0,1

4.2. C – total emission limit values (mg/Nm^3) for heavy metals expressed as average values over the sampling period of a minimum of 30 minutes and a maximum of 8 hours:

Polluting substances	C
Cd + Tl	0,05
Hg	0,05

PART 5

Emission limit values for discharges of waste water from the cleaning of waste gases

Polluting substances	Emission limit values for unfiltered samples (mg/l except for dioxins and furans)	
1. Total suspended solids as defined in Annex I of Directive 91/271/EEC	(95 %)	(100 %)
	30	45
2. Mercury and its compounds, expressed as mercury (Hg)	0,03	
3. Cadmium and its compounds, expressed as cadmium (Cd)	0,05	
4. Thallium and its compounds, expressed as thallium (Tl)	0,05	
5. Arsenic and its compounds, expressed as arsenic (As)	0,15	
6. Lead and its compounds, expressed as lead (Pb)	0,2	
7. Chromium and its compounds, expressed as chromium (Cr)	0,5	
8. Copper and its compounds, expressed as copper (Cu)	0,5	
9. Nickel and its compounds, expressed as nickel (Ni)	0,5	
10. Zinc and its compounds, expressed as zinc (Zn)	1,5	
11. Dioxins and furans	0,3 ng/l	

PART 6

Monitoring of emissions

1. Measurement techniques

1.1. Measurements for the determination of concentrations of air and water polluting substances shall be carried out representatively.

1.2. Sampling and analysis of all polluting substances including dioxins and furans as well as the quality assurance of automated measuring systems and the reference measurement methods to calibrate them shall be carried out according to CEN-standards. If CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality shall apply. Automated measuring systems shall be subject to control by means of parallel measurements with the reference methods at least once per year.

1.3. At the daily emission limit value level, the values of the 95 % confidence intervals of a single measured result shall not exceed the following percentages of the emission limit values:

Carbon monoxide:	10 %
Sulphur dioxide:	20 %
Nitrogen dioxide:	20 %
Total dust:	30 %
Total organic carbon:	30 %
Hydrogen chloride:	40 %
Hydrogen fluoride:	40 %.

Periodic measurements of the emissions into air and water shall be carried out in accordance with points 1.1 and 1.2.

2. Measurements relating to air polluting substances

2.1. The following measurements relating to air polluting substances shall be carried out:

(a) continuous measurements of the following substances: NO_x, provided that emission limit values are set, CO, total dust, TOC, HCl, HF, SO_2;

(b) continuous measurements of the following process operation parameters: temperature near the inner wall or at another representative point of the combustion chamber as authorised by the competent authority, concentration of oxygen, pressure, temperature and water vapour content of the waste gas;

(c) at least two measurements per year of heavy metals and dioxins and furans; one measurement at least every 3 months shall, however, be carried out for the first 12 months of operation.

2.2. The residence time as well as the minimum temperature and the oxygen content of the waste gases shall be subject to appropriate verification, at least once when the waste incineration plant or waste co-incineration plant is brought into service and under the most unfavourable operating conditions anticipated.

2.3. The continuous measurement of HF may be omitted if treatment stages for HCl are used which ensure that the emission limit value for HCl is not being exceeded. In that case the emissions of HF shall be subject to periodic measurements as laid down in point 2.1(c).

2.4. The continuous measurement of the water vapour content shall not be required if the sampled waste gas is dried before the emissions are analysed.

2.5. The competent authority may decide not to require continuous measurements for HCl, HF and SO_2 in waste incineration plants or waste co-incineration plants and require periodic measurements as set out in point 2.1(c) or no measurements if the operator can prove that the emissions of those pollutants can under no circumstances be higher than the prescribed emission limit values.

The competent authority may decide not to require continuous measurements for NO_x and require periodic measurements as set out in point 2.1(c) in existing waste incineration plants with a nominal capacity of less than 6 tonnes per hour or in existing waste co-incineration plants with a nominal capacity of less than 6 tonnes per hour if the operator can prove on the basis of information on the quality of the waste concerned, the technologies used and the results of the monitoring of emissions, that the emissions of NO_x can under no circumstances be higher than the prescribed emission limit value.

2.6. The competent authority may decide to require one measurement every 2 years for heavy metals and one measurement per year for dioxins and furans in the following cases:

(a) the emissions resulting from co-incineration or incineration of waste are under all circumstances below 50 % of the emission limit values;

(b) the waste to be co-incinerated or incinerated consists only of certain sorted combustible fractions of non-hazardous waste not suitable for recycling and presenting certain characteristics, and which is further specified on the basis of the assessment referred to in point (c);

(c) the operator can prove on the basis of information on the quality of the waste concerned and the monitoring of the emissions that the emissions are under all circumstances significantly below the emission limit values for heavy metals and dioxins and furans.

2.7. The results of the measurements shall be standardised using the standard oxygen concentrations mentioned in Part 3 or calculated according to Part 4 and by applying the formula given in Part 7.

When waste is incinerated or co-incinerated in an oxygen-enriched atmosphere, the results of the measurements can be standardised at an oxygen content laid down by the competent authority reflecting the special circumstances of the individual case.

When the emissions of polluting substances are reduced by waste gas treatment in a waste incineration plant or waste co-incineration plant treating hazardous waste, the standardisation with respect to the oxygen contents provided for in the first subparagraph shall be done only if the oxygen content measured over the same period as for the polluting substance concerned exceeds the relevant standard oxygen content.

3. Measurements relating to water polluting substances

3.1. The following measurements shall be carried out at the point of waste water discharge:

(a) continuous measurements of pH, temperature and flow;

(b) spot sample daily measurements of total suspended solids or measurements of a flow proportional representative sample over a period of 24 hours;

(c) at least monthly measurements of a flow proportional representative sample of the discharge over a period of 24 hours of Hg, Cd, Tl, As, Pb, Cr, Cu, Ni and Zn;

(d) at least every 6 months measurements of dioxins and furans; however, one measurement at least every 3 months shall be carried out for the first 12 months of operation.

3.2. Where the waste water from the cleaning of waste gases is treated on site collectively with other on-site sources of waste water, the operator shall take the measurements:

(a) on the waste water stream from the waste gas cleaning processes prior to its input into the collective waste water treatment plant;

(b) on the other waste water stream or streams prior to its or their input into the collective waste water treatment plant;

(c) at the point of final waste water discharge, after the treatment, from the waste incineration plant or waste co-incineration plant.

PART 7

Formula to calculate the emission concentration at the standard percentage oxygen concentration

$$E_S = \frac{21 - O_S}{21 - O_M} \times E_M$$

E_S = calculated emission concentration at the standard percentage oxygen concentration

E_M = measured emission concentration

O_S = standard oxygen concentration

O_M = measured oxygen concentration

PART 8

Assessment of compliance with emission limit values

1. Air emission limit values

1.1. The emission limit values for air shall be regarded as being complied with if:

(a) none of the daily average values exceeds any of the emission limit values set out in point 1.1 of Part 3 or in Part 4 or calculated in accordance with Part 4;

(b) either none of the half-hourly average values exceeds any of the emission limit values set out in column A of the table under point 1.2 of Part 3 or, where relevant, 97 % of the half-hourly average values over the year do not exceed any of the emission limit values set out in column B of the table under point 1.2 of Part 3;

(c) none of the average values over the sampling period set out for heavy metals and dioxins and furans exceeds the emission limit values set out in points 1.3 and 1.4 of Part 3 or in Part 4 or calculated in accordance with Part 4;

(d) for carbon monoxide (CO):

(i) in case of waste incineration plants:

— at least 97 % of the daily average values over the year do not exceed the emission limit value set out in point 1.5(a) of Part 3; and,

— at least 95 % of all 10-minute average values taken in any 24-hour period or all of the half-hourly average values taken in the same period do not exceed the emission limit values set out in points 1.5(b) and (c) of Part 3; in case of waste incineration plants in which the gas resulting from the incineration process is raised to a temperature of at least 1 100 °C for at least two seconds, Member States may apply an evaluation period of 7 days for the 10-minute average values;

(ii) in case of waste co-incineration plants: the provisions of Part 4 are met.

1.2. The half-hourly average values and the 10-minute averages shall be determined within the effective operating time (excluding the start-up and shut-down periods if no waste is being incinerated) from the measured values after having subtracted the value of the confidence interval specified in point 1.3 of Part 6. The daily average values shall be determined from those validated average values.

To obtain a valid daily average value no more than five half-hourly average values in any day shall be discarded due to malfunction or maintenance of the continuous measurement system. No more than ten daily average values per year shall be discarded due to malfunction or maintenance of the continuous measurement system.

1.3. The average values over the sampling period and the average values in the case of periodical measurements of HF, HCl and SO_2 shall be determined in accordance with the requirements of Articles 45(1)(e), 48(3) and point 1 of Part 6.

2. Water emission limit values

The emission limit values for water shall be regarded as being complied with if:

(a) for total suspended solids 95 % and 100 % of the measured values do not exceed the respective emission limit values as set out in Part 5;

(b) for heavy metals (Hg, Cd, Tl, As, Pb, Cr, Cu, Ni and Zn) no more than one measurement per year exceeds the emission limit values set out in Part 5; or, if the Member State provides for more than 20 samples per year, no more than 5 % of these samples exceed the emission limit values set out in Part 5;

(c) for dioxins and furans, the measurement results do not exceed the emission limit value set out in Part 5.

ANNEX VII

Technical provisions relating to installations and activities using organic solvents

PART 1

Activities

1. In each of the following points, the activity includes the cleaning of the equipment but not the cleaning of products unless specified otherwise.

2. Adhesive coating

Any activity in which an adhesive is applied to a surface, with the exception of adhesive coating and laminating associated with printing activities.

3. Coating activity

Any activity in which a single or multiple application of a continuous film of a coating is applied to:

(a) either of the following vehicles:

(i) new cars, defined as vehicles of category M1 in Directive 2007/46/EC of the European Parliament and of the Council of 5 September 2007 establishing a framework for the approval of motor vehicles and their trailers, and of systems, components and separate technical units intended for such vehicles [1] and of category N1 in so far as they are coated at the same installation as M1 vehicles;

(ii) truck cabins, defined as the housing for the driver, and all integrated housing for the technical equipment, of vehicles of categories N2 and N3 in Directive 2007/46/EC;

(iii) vans and trucks, defined as vehicles of categories N1, N2 and N3 in Directive 2007/46/EC, but not including truck cabins;

(iv) buses, defined as vehicles of categories M2 and M3 in Directive 2007/46/EC;

(v) trailers, defined in categories O1, O2, O3 and O4 in Directive 2007/46/EC;

(b) metallic and plastic surfaces including surfaces of airplanes, ships, trains, etc.;

(c) wooden surfaces;

(d) textile, fabric, film and paper surfaces;

(e) leather.

Coating activities do not include the coating of substrate with metals by electrophoretic and chemical spraying techniques. If the coating activity includes a step in which the same article is printed by whatever technique used, that printing step is considered part of the coating activity. However, printing activities operated as a separate activity are not included, but may be covered by Chapter V of this Directive if the printing activity falls within the scope thereof.

4. Coil coating

Any activity where coiled steel, stainless steel, coated steel, copper alloys or aluminium strip is coated with either a film forming or laminate coating in a continuous process.

[1] OJ L 263, 9.10.2007, p. 1.

5. Dry cleaning

Any industrial or commercial activity using volatile organic compounds in an installation to clean garments, furnishing and similar consumer goods with the exception of the manual removal of stains and spots in the textile and clothing industry.

6. Footwear manufacture

Any activity of producing complete footwear or parts thereof.

7. Manufacturing of coating mixtures, varnishes, inks and adhesives

The manufacture of the above final products, and of intermediates where carried out at the same site, by mixing of pigments, resins and adhesive materials with organic solvent or other carrier, including dispersion and predispersion activities, viscosity and tint adjustments and operations for filling the final product into its container.

8. Manufacturing of pharmaceutical products

The chemical synthesis, fermentation, extraction, formulation and finishing of pharmaceutical products and, where carried out at the same site, the manufacture of intermediate products.

9. Printing

Any reproduction activity of text and/or images in which, with the use of an image carrier, ink is transferred onto whatever type of surface. It includes associated varnishing, coating and laminating techniques. However, only the following sub-processes are subject to Chapter V:

(a) flexography – a printing activity using an image carrier of rubber or elastic photopolymers on which the printing areas are above the non-printing areas, using liquid inks which dry through evaporation;

(b) heatset web offset – a web-fed printing activity using an image carrier in which the printing and non-printing area are in the same plane, where web-fed means that the material to be printed is fed to the machine from a reel as distinct from separate sheets. The non-printing area is treated to attract water and thus reject ink. The printing area is treated to receive and transmit ink to the surface to be printed. Evaporation takes place in an oven where hot air is used to heat the printed material;

(c) laminating associated to a printing activity – the adhering together of two or more flexible materials to produce laminates;

(d) publication rotogravure – a rotogravure printing activity used for printing paper for magazines, brochures, catalogues or similar products, using toluene-based inks;

(e) rotogravure – a printing activity using a cylindrical image carrier in which the printing area is below the non-printing area, using liquid inks which dry through evaporation. The recesses are filled with ink and the surplus is cleaned off the non-printing area before the surface to be printed contacts the cylinder and lifts the ink from the recesses;

(f) rotary screen printing – a web-fed printing activity in which the ink is passed onto the surface to be printed by forcing it through a porous image carrier, in which the printing area is open and the non-printing area is sealed off, using liquid inks which dry only through evaporation. Web-fed means that the material to be printed is fed into the machine from a reel as distinct from separate sheets;

(g) varnishing – an activity by which a varnish or an adhesive coating for the purpose of later sealing the packaging material is applied to a flexible material.

10. Rubber conversion

Any activity of mixing, milling, blending, calendering, extrusion and vulcanisation of natural or synthetic rubber and any ancillary operations for converting natural or synthetic rubber into a finished product.

11. Surface cleaning

Any activity except dry cleaning using organic solvents to remove contamination from the surface of material including degreasing. A cleaning activity consisting of more than one step before or after any other activity shall be considered as one surface cleaning activity. This activity does not refer to the cleaning of the equipment but to the cleaning of the surface of products.

12. Vegetable oil and animal fat extraction and vegetable oil refining activities

Any activity to extract vegetable oil from seeds and other vegetable matter, the processing of dry residues to produce animal feed, the purification of fats and vegetable oils derived from seeds, vegetable matter and/or animal matter.

13. Vehicle refinishing

Any industrial or commercial coating activity and associated degreasing activities performing either of the following:

(a) the original coating of road vehicles as defined in Directive 2007/46/EC or part of them with refinishing-type materials, where this is carried out away from the original manufacturing line;

(b) the coating of trailers (including semi-trailers) (category O in Directive 2007/46/EC).

14. Winding wire coating

Any coating activity of metallic conductors used for winding the coils in transformers and motors, etc.

15. Wood impregnation

Any activity giving a loading of preservative in timber.

16. Wood and plastic lamination

Any activity to adhere together wood and/or plastic to produce laminated products.

PART 2

Thresholds and emission limit values

The emission limit values in waste gases shall be calculated at a temperature of 273,15 K, and a pressure of 101,3 kPa.

	Activity (solvent consumption threshold in tonnes/year)	Threshold (solvent consumption threshold in tonnes/year)	Emission limit values in waste gases (mg C/Nm^3)	Fugitive emission limit values (percentage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installations	New installations	Existing installations	
1	Heatset web offset printing (> 15)	15—25	100		30 (1)			(1) Solvent residue in finished product is not to be considered as part of fugitive emissions.
		> 25	20		30 (1)			
2	Publication rotogravure (> 25)		75	10	15			
3	Other rotogravure, flexography, rotary screen printing, laminating or varnishing units (> 15) rotary screen printing on textile/cardboard (> 30)	15—25	100		25			(1) Threshold for rotary screen printing on textile and on cardboard.
		> 25	100		20			
		> 30 (1)	100		20			
4	Surface cleaning using compounds specified in Article 59(5). (> 1)	1—5	20 (1)		15			(1) Limit value refers to mass of compounds in mg/Nm^3, and not to total carbon.
		> 5	20 (1)		10			
5	Other surface cleaning (> 2)	2—10	75 (1)		20 (1)			(1) Installations which demonstrate to the competent authority that the average organic solvent content of all cleaning material used does not exceed 30 % by weight are exempt from application of these values.
		> 10	75 (1)		15 (1)			
6	Vehicle coating (< 15) and vehicle refinishing	> 0,5	50 (1)		25			(1) Compliance in accordance with point 2 of Part 8 shall be demonstrated based on 15 minute average measurements.
7	Coil coating (> 25)		50 (1)	5	10			(1) For installations which use techniques which allow reuse of recovered solvents, the emission limit value shall be 150.

	Activity (solvent consumption threshold in tonnes/year)	Threshold (solvent consumption threshold in tonnes/year)	Emission limit values in waste gases (mg C/Nm^3)	Fugitive emission limit values (percentage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installations	New installations	Existing installations	
8	Other coating, including metal, plastic, textile ([5]), fabric, film and paper coating (> 5)	5—15 > 15	100 ([1]) ([4]) 50/75 ([2]) ([3]) ([4])		25 ([4]) 20 ([4])			([1]) Emission limit value applies to coating application and drying processes operated under contained conditions. ([2]) The first emission limit value applies to drying processes, the second to coating application processes. ([3]) For textile coating installations which use techniques which allow reuse of recovered solvents, the emission limit value applied to coating application and drying processes taken together shall be 150. ([4]) Coating activities which cannot be carried out under contained conditions (such as shipbuilding, aircraft painting) may be exempted from these values, in accordance with Article 59(3). ([5]) Rotary screen printing on textile is covered by activity No 3.
9	Winding wire coating (> 5)					10 g/kg ([1]) 5 g/kg ([2])		([1]) Applies for installations where average diameter of wire ≤ 0,1 mm. ([2]) Applies for all other installations.
10	Coating of wooden surfaces (> 15)	15—25 > 25	100 ([1]) 50/75 ([2])		25 20			([1]) Emission limit value applies to coating application and drying processes operated under contained conditions. ([2]) The first value applies to drying processes, the second to coating application processes.
11	Dry cleaning					20 g/kg ([1]) ([2])		([1]) Expressed in mass of solvent emitted per kilogram of product cleaned and dried. ([2]) The emission limit value in point 2 of Part 4 does not apply for this activity.

	Activity (solvent consumption threshold in tonnes/year)	Threshold (solvent consumption threshold in tonnes/year)	Emission limit values in waste gases (mg C/Nm^3)	Fugitive emission limit values (percentage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installations	New installations	Existing installations	
12	Wood impregnation (> 25)		100 (1)	45		11 kg/m^3		(1) Emission limit value does not apply for impregnation with creosote.
13	Coating of leather (> 10)	10—25 > 25 > 10 (1)				85 g/m^2 75 g/m^2 150 g/m^2		Emission limit values are expressed in grams of solvent emitted per m^2 of product produced. (1) For leather coating activities in furnishing and particular leather goods used as small consumer goods like bags, belts, wallets, etc.
14	Footwear manufacture (> 5)					25 g per pair		Total emission limit value is expressed in grams of solvent emitted per pair of complete footwear produced.
15	Wood and plastic lamination (> 5)					30 g/m^2		
16	Adhesive coating (> 5)	5—15 > 15	50 (1) 50 (1)	25 20				(1) If techniques are used which allow reuse of recovered solvent, the emission limit value in waste gases shall be 150.
17	Manufacture of coating mixture, varnishes, inks and adhesives (> 100)	100—1 000 > 1 000	150 150	5 3		5 % of solvent input 3 % of solvent input		The fugitive emission limit value does not include solvent sold as part of a coatings mixture in a sealed container.
18	Rubber conversion (> 15)		20 (1)	25 (2)		25 % of solvent input		(1) If techniques are used which allow reuse of recovered solvent, the emission limit value in waste gases shall be 150. (2) The fugitive emission limit value does not include solvent sold as part of products or mixtures in a sealed container.

	Activity (solvent consumption threshold in tonnes/year)	Threshold (solvent consumption threshold in tonnes/year)	Emission limit values in waste gases (mg C/Nm^3)	Fugitive emission limit values (percentage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installations	New installations	Existing installations	
19	Vegetable oil and animal fat extraction and vegetable oil refining activities (> 10)					Animal fat: 1,5 kg/tonne Castor: 3 kg/tonne Rape seed: 1 kg/tonne Sunflower seed: 1 kg/tonne Soya beans (normal crush): 0,8 kg/tonne Soya beans (white flakes): 1,2 kg/tonne Other seeds and other vegetable matter: 3 kg/tonne ([1]) 1,5 kg/tonne ([2]) 4 kg/tonne ([3])		([1]) Total emission limit values for installations processing individual batches of seeds and other vegetable matter should be set by the competent authority on a case-by-case basis, applying the best available techniques. ([2]) Applies to all fractionation processes excluding de-gumming (the removal of gums from the oil). ([3]) Applies to de-gumming.
20	Manufacturing of pharmaceutical products (> 50)		20 ([1])	5 ([2])	15 ([2])	5 % of solvent input	15 % of solvent input	([1]) If techniques are used which allow reuse of recovered solvent, the emission limit value in waste gases shall be 150. ([2]) The fugitive emission limit value does not include solvent sold as part of products or mixtures in a sealed container.

PART 3

Emission limit values for installations of the vehicle coating industry

1. The total emission limit values are expressed in terms of grams of organic solvent emitted in relation to the surface area of product in square metres and in kilograms of organic solvent emitted in relation to the car body.

2. The surface area of any product dealt with in the table under point 3 is defined as the surface area calculated from the total electrophoretic coating area, and the surface area of any parts that might be added in successive phases of the coating process which are coated with the same coatings as those used for the product in question, or the total surface area of the product coated in the installation.

   The surface of the electrophoretic coating area is calculated using the following formula:

$$\frac{2 \times \text{total weight of product shell}}{\text{average thickness of metal sheet} \times \text{density of metal sheet}}$$

   This method shall also be applied for other coated parts made out of sheets.

   Computer aided design or other equivalent methods shall be used to calculate the surface area of the other parts added, or the total surface area coated in the installation.

3. The total emission limit values in the table below refer to all process stages carried out at the same installation from electrophoretic coating, or any other kind of coating process, through to the final wax and polish of topcoating inclusive, as well as solvent used in cleaning of process equipment, including spray booths and other fixed equipment, both during and outside of production time.

Activity (solvent consumption threshold in tonnes/year)	Production threshold (refers to annual production of coated item)	Total emission limit value	
		New installations	Existing installations
Coating of new cars (> 15)	> 5 000	45 g/m^2 or 1,3 kg/body + 33 g/m^2	60 g/m^2 or 1,9 kg/body + 41 g/m^2
	≤ 5 000 monocoque or > 3 500 chassis-built	90 g/m^2 or 1,5 kg/body + 70 g/m^2	90 g/m^2 or 1,5 kg/body + 70 g/m^2
		Total emission limit value (g/m^2)	
Coating of new truck cabins (> 15)	≤ 5 000	65	85
	> 5 000	55	75
Coating of new vans and trucks (> 15)	≤ 2 500	90	120
	> 2 500	70	90
Coating of new buses (> 15)	≤ 2 000	210	290
	> 2 000	150	225

4. Vehicle coating installations below the solvent consumption thresholds mentioned in the table under point 3 shall meet the requirements for the vehicle refinishing sector set out in Part 2.

PART 4

Emission limit values relating to volatile organic compounds with specific risk phrases

1. For emissions of the volatile organic compounds referred to in Article 58 where the mass flow of the sum of the compounds causing the labelling referred to in that Article is greater than, or equal to, 10 g/h, an emission limit value of 2 mg/Nm^3 shall be complied with. The emission limit value refers to the mass sum of the individual compounds.

2. For emissions of halogenated volatile organic compounds which are assigned or need to carry the hazard statements H341 or H351, where the mass flow of the sum of the compounds causing the hazard statements H341 or H351 is greater than, or equal to, 100 g/h, an emission limit value of 20 mg/Nm^3 shall be complied with. The emission limit value refers to the mass sum of the individual compounds.

PART 5

Reduction scheme

1. The operator may use any reduction scheme, specially designed for his installation.

2. In the case of applying coatings, varnishes, adhesives or inks, the following scheme can be used. Where the following method is inappropriate, the competent authority may allow an operator to apply any alternative scheme achieving equivalent emission reductions to those achieved if the emission limit values of Parts 2 and 3 were to be applied. The design of the scheme shall take into account the following facts:

   (a) where substitutes containing little or no solvent are still under development, a time extension shall be given to the operator to implement his emission reduction plans;

   (b) the reference point for emission reductions should correspond as closely as possible to the emissions which would have resulted had no reduction action been taken.

3. The following scheme shall operate for installations for which a constant solid content of product can be assumed:

   (a) The annual reference emission is calculated as follows:

      (i) The total mass of solids in the quantity of coating and/or ink, varnish or adhesive consumed in a year is determined. Solids are all materials in coatings, inks, varnishes and adhesives that become solid once the water or the volatile organic compounds are evaporated.

      (ii) The annual reference emissions are calculated by multiplying the mass determined in (i) by the appropriate factor listed in the table below. Competent authorities may adjust these factors for individual installations to reflect documented increased efficiency in the use of solids.

Activity	Multiplication factor for use in item (a)(ii)
Rotogravure printing; flexography printing; laminating as part of a printing activity; varnishing as part of a printing activity; wood coating; coating of textiles, fabric film or paper; adhesive coating	4
Coil coating, vehicle refinishing	3
Food contact coating, aerospace coatings	2,33
Other coatings and rotary screen printing	1,5

   (b) The target emission is equal to the annual reference emission multiplied by a percentage equal to:

      (i) (the fugitive emission limit value + 15), for installations falling within item 6 and the lower threshold band of items 8 and 10 of Part 2,

      (ii) (the fugitive emission limit value + 5) for all other installations.

   (c) Compliance is achieved if the actual solvent emission determined from the solvent management plan is less than or equal to the target emission.

PART 6

Emission monitoring

1. Channels to which abatement equipment is connected, and which at the final point of discharge emit more than an average of 10 kg/h of total organic carbon, shall be monitored continuously for compliance.

2. In the other cases, Member States shall ensure that either continuous or periodic measurements are carried out. For periodic measurements at least three measurement values shall be obtained during each measurement exercise.

3. Measurements are not required in the case where end-of-pipe abatement equipment is not needed to comply with this Directive.

PART 7

Solvent management plan

1. Principles

The solvent management plan shall be used to:

(a) verify compliance as specified in Article 62;

(b) identify future reduction options;

(c) enable provision of information on solvent consumption, solvent emissions and compliance with the requirements of Chapter V to the public.

2. Definitions

The following definitions provide a framework for the mass balance exercise.

Inputs of organic solvents (I):

I1 The quantity of organic solvents or their quantity in mixtures purchased which are used as input into the process in the time frame over which the mass balance is being calculated.

I2 The quantity of organic solvents or their quantity in mixtures recovered and reused as solvent input into the process. The recycled solvent is counted every time it is used to carry out the activity.

Outputs of organic solvents (O):

O1 Emissions in waste gases.

O2 Organic solvents lost in water, taking into account waste water treatment when calculating O5.

O3 The quantity of organic solvents which remains as contamination or residue in products output from the process.

O4 Uncaptured emissions of organic solvents into air. This includes the general ventilation of rooms, where air is released to the outside environment via windows, doors, vents and similar openings.

O5 Organic solvents and/or organic compounds lost due to chemical or physical reactions (including those which are destroyed, by incineration or other waste gas or waste water treatments, or captured, as long as they are not counted under O6, O7 or O8).

O6 Organic solvents contained in collected waste.

O7 Organic solvents, or organic solvents contained in mixtures, which are sold or are intended to be sold as a commercially valuable product.

O8 Organic solvents contained in mixtures recovered for reuse but not as input into the process, as long as not counted under O7.

O9 Organic solvents released in other ways.

3. Use of the solvent management plan for verification of compliance.

The use made of the solvent management plan shall be determined by the particular requirement which is to be verified, as follows:

(a) verification of compliance with the reduction scheme as set out in Part 5, with a total emission limit value expressed in solvent emissions per unit product, or otherwise stated in Parts 2 and 3.

(i) for all activities using the reduction scheme as set out in Part 5, the solvent management plan shall be drawn up annually to determine the consumption (C). The consumption shall be calculated according to the following equation:

$$C = I1 - O8$$

A parallel exercise shall also be undertaken to determine solids used in coating in order to derive the annual reference emission and the target emission each year.

(ii) for assessing compliance with a total emission limit value expressed in solvent emissions per unit product or otherwise stated in Parts 2 and 3, the solvent management plan shall be drawn up annually to determine the emissions (E). The emissions shall be calculated according to the following equation:

$$E = F + O1$$

Where F is the fugitive emission as defined in point (b)(i). The emission figure shall then be divided by the relevant product parameter.

(iii) for assessing compliance with the requirements of point (b)(ii) of Article 59(6), the solvent management plan shall be drawn up annually to determine total emissions from all activities concerned, and that figure shall then be compared with the total emissions that would have resulted had the requirements of Parts 2, 3 and 5 been met for each activity separately.

(b) Determination of fugitive emissions for comparison with the fugitive emission limit values in Part 2:

(i) The fugitive emission shall be calculated according to one of the following equations;

$$F = I1 - O1 - O5 - O6 - O7 - O8$$

or

$$F = O2 + O3 + O4 + O9$$

F shall be determined either by direct measurement of the quantities or by an equivalent method or calculation, for instance by using the capture efficiency of the process.

The fugitive emission limit value is expressed as a proportion of the input, which shall be calculated according to the following equation:

$$I = I1 + I2$$

(ii) Determination of fugitive emissions shall be done by a short but comprehensive set of measurements and needs not be done again until the equipment is modified.

PART 8

Assessment of compliance with emission limit values in waste gases

1. In the case of continuous measurements the emission limit values shall be considered to be complied with if:

   (a) none of the arithmetic averages of all valid readings taken during any 24-hour period of operation of an installation or activity except start-up and shut-down operations and maintenance of equipment exceeds the emission limit values,

   (b) none of the hourly averages exceeds the emission limit values by more than a factor of 1,5.

2. In the case of periodic measurements the emission limit values shall be considered to be complied with if, in one monitoring exercise:

   (a) the average of all the measurement values does not exceed the emission limit values,

   (b) none of the hourly averages exceeds the emission limit value by more than a factor of 1,5.

3. Compliance with Part 4 shall be verified on the basis of the sum of the mass concentrations of the individual volatile organic compounds concerned. For all other cases, compliance shall be verified on the basis of the total mass of organic carbon emitted unless otherwise specified in Part 2.

4. Gas volumes may be added to the waste gas for cooling or dilution purposes where technically justified but shall not be considered when determining the mass concentration of the pollutant in the waste gas.

ANNEX VIII

Technical provisions relating to installations producing titanium dioxide

PART 1

Emission limit values for emissions into water

1. In case of installations using the sulphate process (as an annual average):

   550 kg of sulphate per tonne of titanium dioxide produced.

2. In case of installations using the chloride process (as an annual average):

   (a) 130 kg chloride per tonne of titanium dioxide produced using neutral rutile,

   (b) 228 kg chloride per tonne of titanium dioxide produced using synthetic rutile,

   (c) 330 kg chloride per tonne of titanium dioxide produced using slag. Installations discharging into salt water (estuarine, coastal, open sea) may be subject to an emission limit value of 450 kg chloride per tonne of titanium dioxide produced using slag.

3. For installations using the chloride process and using more than one type of ore, the emission limit values in point 2 shall apply in proportion to the quantity of the ores used.

PART 2

Emission limit values into air

1. The emission limit values which are expressed as concentrations in mass per cubic meter (Nm^3) shall be calculated at a temperature of 273,15 K, and a pressure of 101,3 kPa.

2. For dust: 50 mg/Nm^3 as an hourly average from major sources and 150 mg/Nm^3 as an hourly average from any other source.

3. For gaseous sulphur dioxide and trioxide discharged from digestion and calcination, including acid droplets calculated as SO_2 equivalent:

   (a) 6 kg per tonne of titanium dioxide produced as an annual average;

   (b) 500 mg/Nm^3 as an hourly average for plants for the concentration of waste acid.

4. For chlorine in the case of installations using the chloride process:

   (a) 5 mg/Nm^3 as a daily average;

   (b) 40 mg/Nm^3 at any time.

PART 3

Emission monitoring

The monitoring of emissions into air shall include at least the continuous monitoring of:

(a) gaseous sulphur dioxide and trioxide discharged from digestion and calcination from plants for the concentration of waste acid in installations using the sulphate process;

(b) chlorine from major sources within installations using the chloride process;

(c) dust from major sources.

DIRECTIVE 2008/1/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 15 January 2008

concerning integrated pollution prevention and control

(Codified version)

(Text with EEA relevance)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 175(1) thereof,

Having regard to the proposal from the Commission,

Having regard to the opinion of the European Economic and Social Committee ([1]),

After consulting the Committee of the Regions,

Acting in accordance with the procedure laid down in Article 251 of the Treaty ([2]),

Whereas:

(1) Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control ([3]) has been substantially amended several times ([4]). In the interests of clarity and rationality the said Directive should be codified.

(2) The objectives and principles of the Community's environment policy, as set out in Article 174 of the Treaty, consist in particular of preventing, reducing and as far as possible eliminating pollution by giving priority to intervention at source and ensuring prudent management of natural resources, in compliance with the 'polluter pays' principle and the principle of pollution prevention.

(3) The Fifth Environmental Action Programme, the broad outline of which was approved by the Council and the Representatives of the Governments of the Member States, meeting within the Council, in the Resolution of 1 February 1993 on a Community programme of policy and action in relation to the environment and sustainable development ([5]), accorded priority to integrated pollution control as an important part of the move towards a more sustainable balance between human activity and socioeconomic development, on the one hand, and the resources and regenerative capacity of nature, on the other.

(4) The implementation of an integrated approach to reduce pollution requires action at Community level in order to modify and supplement existing Community legislation concerning the prevention and control of pollution from industrial plants.

(5) Council Directive 84/360/EEC of 28 June 1984 on the combating of air pollution from industrial plants ([6]) introduced a general framework requiring authorisation prior to any operation or

([1]) OJ C 97, 28.4.2007, p. 12.
([2]) Opinion of the European Parliament of 19 June 2007 (not yet published in the Official Journal) and Council Decision of 17 December 2007.
([3]) OJ L 257, 10.10.1996, p. 26. Directive as last amended by Regulation (EC) No 166/2006 of the European Parliament and of the Council (OJ L 33, 4.2.2006, p. 1).
([4]) See Annex VI, Part A.
([5]) OJ C 138, 17.5.1993, p. 1.
([6]) OJ L 188, 16.7.1984, p. 20. Directive as amended by Directive 91/692/EEC (OJ L 377, 31.12.1991, p. 48).

▼B

substantial modification of industrial installations which may cause air pollution.

(6) Directive 2006/11/EC of the European Parliament and of the Council of 15 February 2006 on pollution caused by certain dangerous substances discharged into the aquatic environment of the Community ([1]) provides for an authorisation requirement for the discharge of those substances.

(7) Although Community legislation exists on the combating of air pollution and the prevention or minimisation of the discharge of dangerous substances into water, there is no comparable Community legislation aimed at preventing or minimising emissions into soil.

(8) Different approaches to controlling emissions into the air, water or soil separately may encourage the shifting of pollution between the various environmental media rather than protecting the environment as a whole.

(9) The objective of an integrated approach to pollution control is to prevent emissions into air, water or soil wherever this is practicable, taking into account waste management, and, where it is not, to minimise them in order to achieve a high level of protection for the environment as a whole.

(10) This Directive should establish a general framework for integrated pollution prevention and control. It should lay down the measures necessary to implement integrated pollution prevention and control in order to achieve a high level of protection for the environment as a whole. Application of the principle of sustainable development should be promoted by an integrated approach to pollution control.

(11) The provisions of this Directive should apply without prejudice to the provisions of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment ([2]). When information or conclusions obtained further to the application of that Directive have to be taken into consideration for the granting of authorisation, this Directive should not affect the implementation of Directive 85/337/EEC.

(12) Member States should take the necessary steps in order to ensure that the operator of the industrial activities referred to in this Directive is complying with the general principles of certain basic obligations. For that purpose it would suffice for the competent authorities to take those general principles into account when laying down the authorisation conditions.

(13) Some of the provisions adopted pursuant to this Directive must be applied to existing installations after 30 October 2007 and others had to be applied as from 30 October 1999.

(14) In order to tackle pollution problems more effectively and efficiently, environmental aspects should be taken into consideration by the operator. Those aspects should be communicated to the competent authority or authorities so that they can satisfy themselves, before granting a permit, that all appropriate preventive or pollution-control measures have been laid down. Very different application procedures may give rise to different levels of environmental protection and public awareness. Therefore, applications for permits under this Directive should include minimum data.

([1]) OJ L 64, 4.3.2006, p. 52.
([2]) OJ L 175, 5.7.1985, p. 40. Directive as last amended by Directive 2003/35/EC of the European Parliament and of the Council (OJ L 156, 25.6.2003, p. 17).

▼B

(15) Full coordination of the authorisation procedure and conditions between competent authorities should make it possible to achieve the highest practicable level of protection for the environment as a whole.

(16) The competent authority or authorities should grant or amend a permit only when integrated environmental protection measures for air, water and land have been laid down.

(17) The permit should include all necessary measures to fulfil the authorisation conditions in order thus to achieve a high level of protection for the environment as a whole. Without prejudice to the authorisation procedure, those measures may also be the subject of general binding requirements.

(18) Emission limit values, parameters or equivalent technical measures should be based on the best available techniques, without prescribing the use of one specific technique or technology and taking into consideration the technical characteristics of the installation concerned, its geographical location and local environmental conditions. In all cases the authorisation conditions should lay down provisions on minimising long-distance or transfrontier pollution and ensure a high level of protection for the environment as a whole.

(19) It is for the Member States to determine how the technical characteristics of the installation concerned, its geographical location and local environmental conditions can, where appropriate, be taken into consideration.

(20) When an environmental quality standard requires more stringent conditions than those that can be achieved by using the best available techniques, supplementary conditions should in particular be required by the permit, without prejudice to other measures that may be taken to comply with the environmental quality standards.

(21) Because best available techniques will change with time, particularly in the light of technical advances, the competent authorities should monitor or be informed of such progress.

(22) Changes to an installation may give rise to pollution. The competent authority or authorities should therefore be notified of any change which might affect the environment. Substantial changes to plant must be subject to the granting of prior authorisation in accordance with this Directive.

(23) The authorisation conditions should be periodically reviewed and if necessary updated. Under certain conditions, they should in any event be re-examined.

(24) Effective public participation in the taking of decisions should enable the public to express, and the decision-maker to take account of, opinions and concerns which may be relevant to those decisions, thereby increasing the accountability and transparency of the decision-making process and contributing to public awareness of environmental issues and support for the decisions taken. In particular, the public should have access to information on the operation of installations and their potential effect on the environment, and, before any decision is taken, to information relating to applications for permits for new installations or substantial changes and to the permits themselves, their updating and the relevant monitoring data.

(25) Participation, including participation by associations, organisations and groups, in particular non-governmental organisations promoting environmental protection, should accordingly be fostered, including by promoting environmental education of the public.

▼B

(26) On 25 June 1998 the Community signed the UNECE Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters (the Århus Convention). Among the objectives of the Århus Convention is the desire to guarantee rights of public participation in decision-making in environmental matters in order to contribute to the protection of the right to live in an environment which is adequate for personal health and well-being.

(27) The development and exchange of information at Community level about best available techniques should help to redress the technological imbalances in the Community, should promote the worldwide dissemination of limit values and techniques used in the Community and should help the Member States in the efficient implementation of this Directive.

(28) Reports on the implementation and effectiveness of this Directive should be drawn up regularly.

(29) This Directive is concerned with installations whose potential for pollution, and therefore transfrontier pollution, is significant. Transboundary consultation should be organised where applications relate to the licensing of new installations or substantial changes to installations which are likely to have significant negative environmental effects. The applications relating to such proposals or substantial changes should be available to the public of the Member State likely to be affected.

(30) The need for action may be identified at Community level to lay down emission limit values for certain categories of installation and pollutant covered by this Directive. The European Parliament and the Council should set such emission limit values in accordance with the provisions of the Treaty.

(31) The provisions of this Directive should apply without prejudice to Community provisions on health and safety at the workplace.

(32) This Directive should be without prejudice to the obligations of the Member States relating to the time-limits for transposition into national law of the Directives as set out in Annex VI, Part B,

HAVE ADOPTED THIS DIRECTIVE:

Article 1

Purpose and scope

The purpose of this Directive is to achieve integrated prevention and control of pollution arising from the activities listed in Annex I. It lays down measures designed to prevent or, where that is not practicable, to reduce emissions in the air, water and land from the abovementioned activities, including measures concerning waste, in order to achieve a high level of protection of the environment taken as a whole, without prejudice to Directive 85/337/EEC and other relevant Community provisions.

Article 2

Definitions

For the purposes of this Directive the following definitions shall apply:

1. ‘substance’ means any chemical element and its compounds, with the exception of radioactive substances within the meaning of Council Directive 96/29/Euratom of 13 May 1996 laying down basic safety standards for the protection of the health of workers and the general public against the dangers arising from ionizing radiation ([1]) and

([1]) OJ L 159, 29.6.1996, p. 1.

▼B

genetically modified organisms within the meaning of Council Directive 90/219/EEC of 23 April 1990 on the contained use of genetically modified micro-organisms ([1]) and Directive 2001/18/EC of the European Parliament and of the Council of 12 March 2001 on the deliberate release into the environment of genetically modified organisms ([2]);

2. 'pollution' means the direct or indirect introduction, as a result of human activity, of substances, vibrations, heat or noise into the air, water or land which may be harmful to human health or the quality of the environment, result in damage to material property, or impair or interfere with amenities and other legitimate uses of the environment;

3. 'installation' means a stationary technical unit where one or more activities listed in Annex I are carried out, and any other directly associated activities which have a technical connection with the activities carried out on that site and which could have an effect on emissions and pollution;

4. 'existing installation' means an installation which on 30 October 1999, in accordance with legislation existing before that date, was in operation or was authorised or, in the view of the competent authority, was the subject of a full request for authorisation, provided that that installation was put into operation no later than 30 October 2000;

5. 'emission' means the direct or indirect release of substances, vibrations, heat or noise from individual or diffuse sources in the installation into the air, water or land;

6. 'emission limit values' means the mass, expressed in terms of certain specific parameters, concentration and/or level of an emission, which may not be exceeded during one or more periods of time; emission limit values may also be laid down for certain groups, families or categories of substances, in particular for those listed in Annex III. The emission limit values for substances normally apply at the point where the emissions leave the installation, any dilution being disregarded when determining them; with regard to indirect releases into water, the effect of a water treatment plant may be taken into account when determining the emission limit values of the installation involved, provided that an equivalent level is guaranteed for the protection of the environment as a whole and provided this does not lead to higher levels of pollution in the environment, without prejudice to Directive 2006/11/EC or the Directives implementing it;

7. 'environmental quality standard' means the set of requirements which must be fulfilled at a given time by a given environment or particular part thereof, as set out in Community legislation;

8. 'competent authority' means the authority or authorities or bodies responsible under the legal provisions of the Member States for carrying out the obligations arising from this Directive;

9. 'permit' means that part or the whole of a written decision (or several such decisions) granting authorisation to operate all or part of an installation, subject to certain conditions which guarantee that the installation complies with the requirements of this Directive. A permit may cover one or more installations or parts of installations on the same site operated by the same operator;

([1]) OJ L 117, 8.5.1990, p. 1. Directive as last amended by Commission Decision 2005/174/EC (OJ L 59, 5.3.2005, p. 20).

([2]) OJ L 106, 17.4.2001, p. 1. Directive as last amended by Regulation (EC) No 1830/2003 (OJ L 268, 18.10.2003, p. 24).

▼B

10. ‘change in operation’ means a change in the nature or functioning, or an extension, of the installation which may have consequences for the environment;

11. ‘substantial change’ means a change in operation which, in the opinion of the competent authority, may have significant negative effects on human beings or the environment; for the purposes of this definition, any change to or extension of an operation shall be deemed to be substantial if the change or extension in itself meets the thresholds, if any, set out in Annex I;

12. ‘best available techniques’ means the most effective and advanced stage in the development of activities and their methods of operation which indicate the practical suitability of particular techniques for providing in principle the basis for emission limit values designed to prevent and, where that is not practicable, generally to reduce emissions and the impact on the environment as a whole:

    (a) ‘techniques’ shall include both the technology used and the way in which the installation is designed, built, maintained, operated and decommissioned;

    (b) ‘available techniques’ means those developed on a scale which allows implementation in the relevant industrial sector, under economically and technically viable conditions, taking into consideration the costs and advantages, whether or not the techniques are used or produced inside the Member State in question, as long as they are reasonably accessible to the operator;

    (c) ‘best’ means most effective in achieving a high general level of protection of the environment as a whole.

    In determining the best available techniques, special consideration should be given to the items listed in Annex IV;

13. ‘operator’ means any natural or legal person who operates or controls the installation or, where this is provided for in national legislation, to whom decisive economic power over the technical functioning of the installation has been delegated;

14. ‘the public’ means one or more natural or legal persons and, in accordance with national legislation or practice, their associations, organisations or groups;

15. ‘the public concerned’ means the public affected or likely to be affected by, or having an interest in, the taking of a decision on the issuing or the updating of a permit or of permit conditions; for the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest.

Article 3

General principles governing the basic obligations of the operator

1. Member States shall take the necessary measures to provide that the competent authorities ensure that installations are operated in such a way that:

(a) all the appropriate preventive measures are taken against pollution, in particular through application of the best available techniques;

(b) no significant pollution is caused;

(c) waste production is avoided in accordance with Directive 2006/12/EC of the European Parliament and of the Council of 5 April 2006 on waste ([1]); where waste is produced, it is recovered or, where that is technically and economically impossible,

([1]) OJ L 114, 27.4.2006, p. 9.

▼B

it is disposed of while avoiding or reducing any impact on the environment;

(d) energy is used efficiently;

(e) the necessary measures are taken to prevent accidents and limit their consequences;

(f) the necessary measures are taken upon definitive cessation of activities to avoid any pollution risk and return the site of operation to a satisfactory state.

2. For the purposes of compliance with this Article, it shall be sufficient if Member States ensure that the competent authorities take account of the general principles set out in paragraph 1 when they determine the conditions of the permit.

Article 4

Permits for new installations

Member States shall take the necessary measures to ensure that no new installation is operated without a permit issued in accordance with this Directive, without prejudice to the exceptions provided for in Directive 2001/80/EC of the European Parliament and of the Council of 23 October 2001 on the limitation of emissions of certain pollutants into the air from large combustion plants ([1]).

Article 5

Requirements for the granting of permits for existing installations

1. Member States shall take the necessary measures to ensure that the competent authorities see to it, by means of permits in accordance with Articles 6 and 8 or, as appropriate, by reconsidering and, where necessary, by updating the conditions, that existing installations operate in accordance with the requirements of Articles 3, 7, 9, 10 and 13, Article 14(a) and (b) and Article 15(2) not later than 30 October 2007, without prejudice to specific Community legislation.

2. Member States shall take the necessary measures to apply the provisions of Articles 1, 2, 11 and 12, Article 14(c), Article 15(1) and (3), Articles 17, 18 and Article 19(2) to existing installations as from 30 October 1999.

Article 6

Applications for permits

1. Member States shall take the necessary measures to ensure that an application to the competent authority for a permit includes a description of:

(a) the installation and its activities;

(b) the raw and auxiliary materials, other substances and the energy used in or generated by the installation;

(c) the sources of emissions from the installation;

(d) the conditions of the site of the installation;

(e) the nature and quantities of foreseeable emissions from the installation into each medium as well as identification of significant effects of the emissions on the environment;

([1]) OJ L 309, 27.11.2001, p. 1. Directive as last amended by Council Directive 2006/105/EC (OJ L 363, 20.12.2006, p. 368).

▼B

(f) the proposed technology and other techniques for preventing or, where this not possible, reducing emissions from the installation;

(g) where necessary, measures for the prevention and recovery of waste generated by the installation;

(h) further measures planned to comply with the general principles of the basic obligations of the operator as provided for in Article 3;

(i) measures planned to monitor emissions into the environment;

(j) the main alternatives, if any, studied by the applicant in outline.

An application for a permit shall also include a non-technical summary of the details referred to in points (a) to (j).

2. Where information supplied in accordance with the requirements provided for in Directive 85/337/EEC or a safety report prepared in accordance with Council Directive 96/82/EC of 9 December 1996 on the control of major-accident hazards involving dangerous substances ([1]) or other information produced in response to other legislation fulfils any of the requirements of this Article, that information may be included in, or attached to, the application.

Article 7

Integrated approach to issuing permits

Member States shall take the measures necessary to ensure that the conditions of, and procedure for the grant of, the permit are fully coordinated where more than one competent authority is involved, in order to guarantee an effective integrated approach by all authorities competent for this procedure.

Article 8

Decisions

Without prejudice to other requirements laid down in national or Community legislation, the competent authority shall grant a permit containing conditions guaranteeing that the installation complies with the requirements of this Directive or, if it does not, shall refuse to grant the permit.

All permits granted and modified permits must include details of the arrangements made for air, water and land protection as referred to in this Directive.

Article 9

Conditions of the permit

1. Member States shall ensure that the permit includes all measures necessary for compliance with the requirements of Articles 3 and 10 for the granting of permits in order to achieve a high level of protection for the environment as a whole by means of protection of the air, water and land.

2. In the case of a new installation or a substantial change where Article 4 of Directive 85/337/EEC applies, any relevant information obtained or conclusion arrived at pursuant to Articles 5, 6 and 7 of that Directive shall be taken into consideration for the purposes of granting the permit.

3. The permit shall include emission limit values for polluting substances, in particular those listed in Annex III, likely to be emitted

([1]) OJ L 10, 14.1.1997, p. 13. Directive as last amended by Regulation (EC) No 1882/2003 of the European Parliament and of the Council (OJ L 284, 31.10.2003, p. 1).

▼B

from the installation concerned in significant quantities, having regard to their nature and their potential to transfer pollution from one medium to another (water, air and land). If necessary, the permit shall include appropriate requirements ensuring protection of the soil and ground water and measures concerning the management of waste generated by the installation. Where appropriate, limit values may be supplemented or replaced by equivalent parameters or technical measures.

For installations under point 6.6 in Annex I, emission limit values laid down in accordance with this paragraph shall take into account practical considerations appropriate to these categories of installation.

Where emissions of a greenhouse gas from an installation are specified in Annex I to Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community ([1]) in relation to an activity carried out in that installation, the permit shall not include an emission limit value for direct emissions of that gas unless it is necessary to ensure that no significant local pollution is caused.

For activities listed in Annex I to Directive 2003/87/EC, Member States may choose not to impose requirements relating to energy efficiency in respect of combustion units or other units emitting carbon dioxide on the site.

Where necessary, the competent authorities shall amend the permit as appropriate.

The third, fourth and fifth subparagraphs shall not apply to installations temporarily excluded from the scheme for greenhouse gas emission allowance trading within the Community in accordance with Article 27 of Directive 2003/87/EC.

4. Without prejudice to Article 10, the emission limit values and the equivalent parameters and technical measures referred to in paragraph 3 shall be based on the best available techniques, without prescribing the use of any technique or specific technology, but taking into account the technical characteristics of the installation concerned, its geographical location and the local environmental conditions. In all circumstances, the conditions of the permit shall contain provisions on the minimisation of long-distance or transboundary pollution and ensure a high level of protection for the environment as a whole.

5. The permit shall contain suitable release monitoring requirements, specifying measurement methodology and frequency, evaluation procedure and an obligation to supply the competent authority with data required for checking compliance with the permit.

For installations under point 6.6 in Annex I, the measures referred to in this paragraph may take account of costs and benefits.

6. The permit shall contain measures relating to conditions other than normal operating conditions. Thus, where there is a risk that the environment may be affected, appropriate provision shall be made for start-up, leaks, malfunctions, momentary stoppages and definitive cessation of operations.

The permit may also contain temporary derogations from the requirements of paragraph 4 if a rehabilitation plan approved by the competent authority ensures that these requirements will be met within six months and if the project leads to a reduction of pollution.

7. The permit may contain such other specific conditions for the purposes of this Directive as the Member State or competent authority may think fit.

8. Without prejudice to the obligation to implement a permit procedure pursuant to this Directive, Member States may prescribe certain requirements for certain categories of installations in general

([1]) OJ L 275, 25.10.2003, p. 32. Directive as amended by Directive 2004/101/EC (OJ L 338, 13.11.2004, p. 18).

▼B

binding rules instead of including them in individual permit conditions, provided that an integrated approach and an equivalent high level of environmental protection as a whole are ensured.

Article 10

Best available techniques and environmental quality standards

Where an environmental quality standard requires stricter conditions than those achievable by the use of the best available techniques, additional measures shall in particular be required in the permit, without prejudice to other measures which might be taken to comply with environmental quality standards.

Article 11

Developments in best available techniques

Member States shall ensure that the competent authority follows or is informed of developments in best available techniques.

Article 12

Changes by operators to installations

1. Member States shall take the necessary measures to ensure that the operator informs the competent authorities of any planned change in the operation. Where appropriate, the competent authorities shall update the permit or the conditions.

2. Member States shall take the necessary measures to ensure that no substantial change planned by the operator is made without a permit issued in accordance with this Directive. The application for a permit and the decision by the competent authority must cover those parts of the installation and those aspects listed in Article 6 that may be affected by the change. The relevant provisions of Article 3, Articles 6 to 10 and Article 15(1), (2) and (3) shall apply *mutatis mutandis*.

Article 13

Reconsideration and updating of permit conditions by the competent authority

1. Member States shall take the necessary measures to ensure that competent authorities periodically reconsider and, where necessary, update permit conditions.

2. The reconsideration shall be undertaken in any event where:

(a) the pollution caused by the installation is of such significance that the existing emission limit values of the permit need to be revised or new such values need to be included in the permit;

(b) substantial changes in the best available techniques make it possible to reduce emissions significantly without imposing excessive costs;

(c) the operational safety of the process or activity requires other techniques to be used;

(d) new provisions of Community or national legislation so dictate.

Article 14

Compliance with permit conditions

Member States shall take the necessary measures to ensure that:

(a) the conditions of the permit are complied with by the operator when operating the installation;

▼B

(b) the operator regularly informs the competent authority of the results of the monitoring of releases and without delay of any incident or accident significantly affecting the environment;

(c) operators of installations afford the representatives of the competent authority all necessary assistance to enable them to carry out any inspections within the installation, to take samples and to gather any information necessary for the performance of their duties for the purposes of this Directive.

Article 15

Access to information and public participation in the permit procedure

1. Member States shall ensure that the public concerned is given early and effective opportunities to participate in the procedure for:

(a) issuing a permit for new installations;

(b) issuing a permit for any substantial change;

(c) updating of a permit or permit conditions for an installation in accordance with Article 13(2)(a).

The procedure set out in Annex V shall apply for the purposes of such participation.

2. The results of monitoring of releases as required under the permit conditions referred to in Article 9 and held by the competent authority shall be made available to the public.

3. Paragraphs 1 and 2 shall apply subject to the restrictions laid down in Article 4(1), (2) and (4) of Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information ([1]).

4. When a decision has been taken, the competent authority shall inform the public in accordance with the appropriate procedures and shall make available to the public the following information:

(a) the content of the decision, including a copy of the permit and of any conditions and any subsequent updates; and

(b) having examined the concerns and opinions expressed by the public concerned, the reasons and considerations on which the decision is based, including information on the public participation process.

Article 16

Access to justice

1. Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned have access to a review procedure before a court of law or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to the public participation provisions of this Directive when:

(a) they have a sufficient interest; or

(b) they maintain the impairment of a right, where administrative procedural law of a Member State requires this as a precondition.

2. Member States shall determine at what stage the decisions, acts or omissions may be challenged.

3. What constitutes a sufficient interest and impairment of a right shall be determined by the Member States, consistently with the

([1]) OJ L 41, 14.2.2003, p. 26.

▼B

objective of giving the public concerned wide access to justice. To this end, the interest of any non-governmental organisation promoting environmental protection and meeting any requirements under national law shall be deemed sufficient for the purpose of paragraph 1(a).

Such organisations shall also be deemed to have rights capable of being impaired for the purpose of paragraph 1(b).

4. The provisions of this Article shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

5. In order to further the effectiveness of the provisions of this Article, Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.

Article 17

Exchange of information

1. With a view to exchanging information, Member States shall take the necessary measures to send the Commission every three years, and for the first time before 30 April 2001, the available representative data on the limit values laid down by specific category of activities in accordance with Annex I and, if appropriate, the best available techniques from which those values are derived in accordance with, in particular, Article 9. On subsequent occasions the data shall be supplemented in accordance with the procedures laid down in paragraph 3 of this Article.

2. The Commission shall organise an exchange of information between Member States and the industries concerned on best available techniques, associated monitoring, and developments in them.

Every three years the Commission shall publish the results of the exchanges of information.

3. At intervals of three years, and for the first time for the period 30 October 1999 to 30 October 2002 inclusive, Member States shall send information to the Commission on the implementation of this Directive in the form of a report. The report shall be drawn up on the basis of a questionnaire or outline drafted by the Commission in accordance with the procedure laid down in Article 6(2) of Council Directive 91/692/EEC of 23 December 1991 standardising and rationalising reports on the implementation of certain Directives relating to the environment ([1]). The questionnaire or outline shall be sent to the Member States six months before the start of the period covered by the report. The report shall be submitted to the Commission within nine months of the end of the three-year period covered by it.

The Commission shall publish a Community report on the implementation of the Directive within nine months of receiving the reports from the Member States.

The Commission shall submit the Community report to the European Parliament and to the Council, accompanied by proposals if necessary.

4. Member States shall establish or designate the authority or authorities which are to be responsible for the exchange of information under paragraphs 1, 2 and 3 and shall inform the Commission accordingly.

([1]) OJ L 377, 31.12.1991, p. 48. Directive as amended by Regulation (EC) No 1882/2003.

▼B

Article 18

Transboundary effects

1. Where a Member State is aware that the operation of an installation is likely to have significant negative effects on the environment of another Member State, or where a Member State likely to be significantly affected so requests, the Member State in whose territory the application for a permit pursuant to Article 4 or Article 12(2) was submitted shall forward to the other Member State any information required to be given or made available pursuant to Annex V at the same time as it makes it available to its own nationals. Such information shall serve as a basis for any consultations necessary in the framework of the bilateral relations between the two Member States on a reciprocal and equivalent basis.

2. Within the framework of their bilateral relations, Member States shall see to it that in the cases referred to in paragraph 1 the applications are also made available for an appropriate period of time to the public of the Member State likely to be affected so that it will have the right to comment on them before the competent authority reaches its decision.

3. The results of any consultations pursuant to paragraphs 1 and 2 must be taken into consideration when the competent authority reaches a decision on the application.

4. The competent authority shall inform any Member State which has been consulted pursuant to paragraph 1 of the decision reached on the application and shall forward to it the information referred to in Article 15(4). That Member State shall take the measures necessary to ensure that that information is made available in an appropriate manner to the public concerned in its own territory.

Article 19

Community emission limit values

1. Where the need for Community action has been identified, on the basis, in particular, of the exchange of information provided for in Article 17, the European Parliament and the Council, acting on a proposal from the Commission, shall set emission limit values, in accordance with the procedures laid down in the Treaty, for:

(a) the categories of installations listed in Annex I except for the landfills covered by points 5,1 and 5,4 of that Annex,

and

(b) the polluting substances referred to in Annex III.

2. In the absence of Community emission limit values defined pursuant to this Directive, the relevant emission limit values contained in the Directives listed in Annex II and in other Community legislation shall be applied as minimum emission limit values pursuant to this Directive for the installations listed in Annex I.

3. Without prejudice to the requirements of this Directive, the technical requirements applicable for the landfills covered by points 5,1 and 5,4 of Annex I, have been fixed in Council Directive 1999/31/EC of 26 April 1999 on the landfill of waste ([1]).

Article 20

Transitional provisions

1. The provisions of Directive 84/360/EEC, the provisions of Articles 4, 5 and 6(2) of Directive 2006/11/EC and the relevant provisions

([1]) OJ L 182, 16.7.1999, p. 1. Directive as amended by Regulation (EC) No 1882/2003.

▼B

concerning authorisation systems in the Directives listed in Annex II shall apply, without prejudice to the exceptions provided for in Directive 2001/80/EC, to existing installations in respect of activities listed in Annex I until the measures required pursuant to Article 5 of this Directive have been taken by the competent authorities.

2. The relevant provisions concerning authorisation systems in the Directives listed in Annex II shall not, in respect of the activities listed in Annex I, apply to installations which are not existing installations within the meaning of point 4 of Article 2.

3. Directive 84/360/EEC shall be repealed on 30 October 2007.

Acting on a proposal from the Commission, the Council or the European Parliament and the Council shall, where necessary, amend the relevant provisions of the Directives listed in Annex II in order to adapt them to the requirements of this Directive before 30 October 2007.

Article 21

Communication

Member States shall communicate to the Commission the texts of the main provisions of national law which they adopt in the field covered by this Directive.

Article 22

Repeal

Directive 96/61/EC, as amended by the acts listed in Annex VI, Part A, is repealed, without prejudice to the obligations of the Member States relating to the time-limits for transposition into national law of the Directives as set out in Annex VI, Part B.

References to the repealed Directive shall be construed as references to this Directive and shall be read in accordance with the correlation table in Annex VII.

Article 23

Entry into force

This Directive shall enter into force on the 20th day following its publication in the *Official Journal of the European Union*.

Article 24

Addressees

This Directive is addressed to the Member States.

▼B

ANNEX I

CATEGORIES OF INDUSTRIAL ACTIVITIES REFERRED TO IN ARTICLE 1

1. Installations or parts of installations used for research, development and testing of new products and processes are not covered by this Directive.

2. The threshold values given below generally refer to production capacities or outputs. Where one operator carries out several activities falling under the same subheading in the same installation or on the same site, the capacities of such activities are added together.

1. **Energy industries**

1.1. Combustion installations with a rated thermal input exceeding 50 MW.

1.2. Mineral oil and gas refineries.

1.3. Coke ovens.

1.4. Coal gasification and liquefaction plants.

2. **Production and processing of metals**

2.1. Metal ore (including sulphide ore) roasting or sintering installations.

2.2. Installations for the production of pig iron or steel (primary or secondary fusion) including continuous casting, with a capacity exceeding 2,5 tonnes per hour.

2.3. Installations for the processing of ferrous metals:

(a) hot-rolling mills with a capacity exceeding 20 tonnes of crude steel per hour;

(b) smitheries with hammers the energy of which exceeds 50 kilojoules per hammer, where the calorific power used exceeds 20 MW;

(c) application of protective fused metal coats with an input exceeding 2 tonnes of crude steel per hour.

2.4. Ferrous metal foundries with a production capacity exceeding 20 tonnes per day.

2.5. Installations:

(a) for the production of non-ferrous crude metals from ore, concentrates or secondary raw materials by metallurgical, chemical or electrolytic processes;

(b) for the smelting, including the alloyage, of non-ferrous metals, including recovered products, (refining, foundry casting, etc.) with a melting capacity exceeding 4 tonnes per day for lead and cadmium or 20 tonnes per day for all other metals.

2.6. Installations for surface treatment of metals and plastic materials using an electrolytic or chemical process where the volume of the treatment vats exceeds 30 m^3.

3. **Mineral industry**

3.1. Installations for the production of cement clinker in rotary kilns with a production capacity exceeding 500 tonnes per day or lime in rotary kilns with a production capacity exceeding 50 tonnes per day or in other furnaces with a production capacity exceeding 50 tonnes per day.

3.2. Installations for the production of asbestos and the manufacture of asbestos-based products.

3.3. Installations for the manufacture of glass including glass fibre with a melting capacity exceeding 20 tonnes per day.

3.4. Installations for melting mineral substances including the production of mineral fibres with a melting capacity exceeding 20 tonnes per day.

3.5. Installations for the manufacture of ceramic products by firing, in particular roofing tiles, bricks, refractory bricks, tiles, stoneware or porcelain, with a production capacity exceeding 75 tonnes per day,

▼B

and/or with a kiln capacity exceeding 4 m^3 and with a setting density per kiln exceeding 300 kg/m^3.

4. **Chemical industry**

Production within the meaning of the categories of activities contained in this section means the production on an industrial scale by chemical processing of substances or groups of substances listed in points 4.1 to 4.6.

4.1. Chemical installations for the production of basic organic chemicals, such as:

(a) simple hydrocarbons (linear or cyclic, saturated or unsaturated, aliphatic or aromatic);

(b) oxygen-containing hydrocarbons such as alcohols, aldehydes, ketones, carboxylic acids, esters, acetates, ethers, peroxides, epoxy resins;

(c) sulphurous hydrocarbons;

(d) nitrogenous hydrocarbons such as amines, amides, nitrous compounds, nitro compounds or nitrate compounds, nitriles, cyanates, isocyanates;

(e) phosphorus-containing hydrocarbons;

(f) halogenic hydrocarbons;

(g) organometallic compounds;

(h) basic plastic materials (polymers, synthetic fibres and cellulose-based fibres);

(i) synthetic rubbers;

(j) dyes and pigments;

(k) surface-active agents and surfactants.

4.2. Chemical installations for the production of basic inorganic chemicals, such as:

(a) gases, such as ammonia, chlorine or hydrogen chloride, fluorine or hydrogen fluoride, carbon oxides, sulphur compounds, nitrogen oxides, hydrogen, sulphur dioxide, carbonyl chloride;

(b) acids, such as chromic acid, hydrofluoric acid, phosphoric acid, nitric acid, hydrochloric acid, sulphuric acid, oleum, sulphurous acids;

(c) bases, such as ammonium hydroxide, potassium hydroxide, sodium hydroxide;

(d) salts, such as ammonium chloride, potassium chlorate, potassium carbonate, sodium carbonate, perborate, silver nitrate;

(e) non-metals, metal oxides or other inorganic compounds such as calcium carbide, silicon, silicon carbide.

4.3. Chemical installations for the production of phosphorous-, nitrogen- or potassium-based fertilisers (simple or compound fertilisers).

4.4. Chemical installations for the production of basic plant health products and of biocides.

4.5. Installations using a chemical or biological process for the production of basic pharmaceutical products.

4.6. Chemical installations for the production of explosives.

5. **Waste management**

Without prejudice to Article 11 of Directive 2006/12/EC or Article 3 of Council Directive 91/689/EEC of 12 December 1991 on hazardous waste ([1]):

5.1. Installations for the disposal or recovery of hazardous waste as defined in the list referred to in Article 1(4) of Directive 91/689/EEC, as defined in Annexes II A and II B (operations R1, R5, R6, R8 and R9) to Directive

([1]) OJ L 377, 31.12.1991, p. 20. Directive as last amended by Regulation (EC) No 166/2006 of the European Parliament and of the Council (OJ L 33, 4.2.2006, p. 1).

▼B

2006/12/EC and in Council Directive 75/439/EEC of 16 June 1975 on the disposal of waste oils ([1]), with a capacity exceeding 10 tonnes per day.

5.2. Installations for the incineration of municipal waste (household waste and similar commercial, industrial and institutional wastes) with a capacity exceeding 3 tonnes per hour.

5.3. Installations for the disposal of non-hazardous waste as defined in Annex II A to Directive 2006/12/EC under headings D8 and D9, with a capacity exceeding 50 tonnes per day.

5.4. Landfills receiving more than 10 tonnes per day or with a total capacity exceeding 25 000 tonnes, excluding landfills of inert waste.

6. **Other activities**

6.1. Industrial plants for the production of:

(a) pulp from timber or other fibrous materials;

(b) paper and cardboard with a production capacity exceeding 20 tonnes per day.

6.2. Plants for the pre-treatment (operations such as washing, bleaching, mercerisation) or dyeing of fibres or textiles where the treatment capacity exceeds 10 tonnes per day.

6.3. Plants for the tanning of hides and skins where the treatment capacity exceeds 12 tonnes of finished products per day.

6.4. (a) Slaughterhouses with a carcase production capacity greater than 50 tonnes per day.

(b) Treatment and processing intended for the production of food products from:

— animal raw materials (other than milk) with a finished product production capacity greater than 75 tonnes per day,

— vegetable raw materials with a finished product production capacity greater than 300 tonnes per day (average value on a quarterly basis).

(c) Treatment and processing of milk, the quantity of milk received being greater than 200 tonnes per day (average value on an annual basis).

6.5. Installations for the disposal or recycling of animal carcases and animal waste with a treatment capacity exceeding 10 tonnes per day.

6.6. Installations for the intensive rearing of poultry or pigs with more than:

(a) 40 000 places for poultry;

(b) 2 000 places for production pigs (over 30 kg); or

(c) 750 places for sows.

6.7. Installations for the surface treatment of substances, objects or products using organic solvents, in particular for dressing, printing, coating, degreasing, waterproofing, sizing, painting, cleaning or impregnating, with a consumption capacity of more than 150 kg per hour or more than 200 tonnes per year.

6.8. Installations for the production of carbon (hard-burnt coal) or electrographite by means of incineration or graphitisation.

▼M1

6.9. Capture of CO_2 streams from installations covered by this Directive for the purposes of geological storage pursuant to Directive 2009/31/EC of the European Parliament and of the Council of 23 April 2009 on the geological storage of carbon dioxide ([2]).

([1]) OJ L 194, 25.7.1975, p. 23. Directive as last amended by Directive 2000/76/EC of the European Parliament and of the Council (OJ L 332, 28.12.2000, p. 91).

([2]) OJ L 140, 5.6.2009, p. 114.

▼B

ANNEX II

LIST OF THE DIRECTIVES REFERRED TO IN ARTICLES 19(2), (3) AND 20

1. Council Directive 87/217/EEC of 19 March 1987 on the prevention and reduction of environmental pollution by asbestos.
2. Council Directive 82/176/EEC of 22 March 1982 on limit values and quality objectives for mercury discharges by the chlor-alkali electrolysis industry.
3. Council Directive 83/513/EEC of 26 September 1983 on limit values and quality objectives for cadmium discharges.
4. Council Directive 84/156/EEC of 8 March 1984 on limit values and quality objectives for mercury discharges by sectors other than the chlor-alkali electrolysis industry.
5. Council Directive 84/491/EEC of 9 October 1984 on limit values and quality objectives for discharges of hexachlorocyclohexane.
6. Council Directive 86/280/EEC of 12 June 1986 on limit values and quality objectives for discharges of certain dangerous substances included in List I of the Annex to Directive 76/464/EEC.
7. Directive 2000/76/EC of the European Parliament and of the Council of 4 December 2000 on the incineration of waste.
8. Council Directive 92/112/EEC of 15 December 1992 on procedures for harmonising the programmes for the reduction and eventual elimination of pollution caused by waste from the titanium dioxide industry.
9. Directive 2001/80/EC of the European Parliament and of the Council of 23 October 2001 on the limitation of emissions of certain pollutants into the air from large combustion plants.
10. Directive 2006/11/EC of the European Parliament and of the Council of 15 February 2006 on pollution caused by certain dangerous substances discharged into the aquatic environment of the Community.
11. Directive 2006/12/EC of the European Parliament and of the Council of 5 April 2006 on waste.
12. Council Directive 75/439/EEC of 16 June 1975 on the disposal of waste oils.
13. Council Directive 91/689/EEC of 12 December 1991 on hazardous waste.
14. Council Directive 1999/31/EC of 26 April 1999 on the landfill of waste.

▼B

ANNEX III

INDICATIVE LIST OF THE MAIN POLLUTING SUBSTANCES TO BE TAKEN INTO ACCOUNT IF THEY ARE RELEVANT FOR FIXING EMISSION LIMIT VALUES

Air

1. Sulphur dioxide and other sulphur compounds.
2. Oxides of nitrogen and other nitrogen compounds.
3. Carbon monoxide.
4. Volatile organic compounds.
5. Metals and their compounds.
6. Dust.
7. Asbestos (suspended particulates, fibres).
8. Chlorine and its compounds.
9. Fluorine and its compounds.
10. Arsenic and its compounds.
11. Cyanides.
12. Substances and preparations which have been proved to possess carcinogenic or mutagenic properties or properties which may affect reproduction via the air.
13. Polychlorinated dibenzodioxins and polychlorinated dibenzofurans.

Water

1. Organohalogen compounds and substances which may form such compounds in the aquatic environment.
2. Organophosphorus compounds.
3. Organotin compounds.
4. Substances and preparations which have been proved to possess carcinogenic or mutagenic properties or properties which may affect reproduction in or via the aquatic environment.
5. Persistent hydrocarbons and persistent and bioaccumulable organic toxic substances.
6. Cyanides.
7. Metals and their compounds.
8. Arsenic and its compounds.
9. Biocides and plant health products.
10. Materials in suspension.
11. Substances which contribute to eutrophication (in particular, nitrates and phosphates).
12. Substances which have an unfavourable influence on the oxygen balance (and can be measured using parameters such as BOD, COD, etc.).

▼B

ANNEX IV

Considerations to be taken into account generally or in specific cases when determining best available techniques, as defined in Article 2(12), bearing in mind the likely costs and benefits of a measure and the principles of precaution and prevention:

1. the use of low-waste technology;
2. the use of less hazardous substances;
3. the furthering of recovery and recycling of substances generated and used in the process and of waste, where appropriate;
4. comparable processes, facilities or methods of operation which have been tried with success on an industrial scale;
5. technological advances and changes in scientific knowledge and understanding;
6. the nature, effects and volume of the emissions concerned;
7. the commissioning dates for new or existing installations;
8. the length of time needed to introduce the best available technique;
9. the consumption and nature of raw materials (including water) used in the process and energy efficiency;
10. the need to prevent or reduce to a minimum the overall impact of the emissions on the environment and the risks to it;
11. the need to prevent accidents and to minimise the consequences for the environment;
12. the information published by the Commission pursuant to Article 17(2), second subparagraph, or by international organisations.

▼B

ANNEX V

PUBLIC PARTICIPATION IN DECISION-MAKING

1. The public shall be informed (by public notices or other appropriate means such as electronic media where available) of the following matters early in the procedure for the taking of a decision or, at the latest, as soon as the information can reasonably be provided:

   (a) the application for a permit or, as the case may be, the proposal for the updating of a permit or of permit conditions in accordance with Article 15(1), including the description of the elements listed in Article 6(1);

   (b) where applicable, the fact that a decision is subject to a national or transboundary environmental impact assessment or to consultations between Member States in accordance with Article 18;

   (c) details of the competent authorities responsible for taking the decision, those from which relevant information can be obtained, those to which comments or questions can be submitted, and details of the time schedule for transmitting comments or questions;

   (d) the nature of possible decisions or, where there is one, the draft decision;

   (e) where applicable, the details relating to a proposal for the updating of a permit or of permit conditions;

   (f) an indication of the times and places where, or means by which, the relevant information will be made available;

   (g) details of the arrangements for public participation and consultation made pursuant to point 5.

2. Member States shall ensure that, within appropriate time-frames, the following is made available to the public concerned:

   (a) in accordance with national legislation, the main reports and advice issued to the competent authority or authorities at the time when the public concerned were informed in accordance with point 1;

   (b) in accordance with the provisions of Directive 2003/4/EC, information other than that referred to in point 1 which is relevant for the decision in accordance with Article 8 and which only becomes available after the time the public concerned was informed in accordance with point 1.

3. The public concerned shall be entitled to express comments and opinions to the competent authority before a decision is taken.

4. The results of the consultations held pursuant to this Annex must be taken into due account in the taking of a decision.

5. The detailed arrangements for informing the public (for example by bill posting within a certain radius or publication in local newspapers) and consulting the public concerned (for example by written submissions or by way of a public inquiry) shall be determined by the Member States. Reasonable time-frames for the different phases shall be provided, allowing sufficient time for informing the public and for the public concerned to prepare and participate effectively in environmental decision-making subject to the provisions of this Annex.

DIRECTIVE 2001/80/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 23 October 2001

on the limitation of emissions of certain pollutants into the air from large combustion plants

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 175(1) thereof,

Having regard to the proposal from the Commission ([1]),

Having regard to the Opinion of the Economic and Social Committee ([2]),

Having consulted the Committee of the Regions,

Acting in accordance with the procedure laid down in Article 251 of the Treaty ([3]), in the light of the joint text approved by the Conciliation Committee on 2 August 2001,

Whereas:

(1) Council Directive 88/609/EEC of 24 November 1988 on the limitation of emissions of certain pollutants into the air from large combustion plants ([4]) has contributed to the reduction and control of atmospheric emissions from large combustion plants. It should be recast in the interests of clarity.

(2) The Fifth Environmental Action Programme ([5]) sets as objectives that the critical loads and levels of certain acidifying pollutants such as sulphur dioxide (SO_2) and nitrogen oxides (NO_x) should not be exceeded at any time and, as regards air quality, that all people should be effectively protected against recognised health risks from air pollution.

(3) All Member States have signed the Gothenburg Protocol of 1 December 1999 to the 1979 Convention of the United Nations Economic Commission for Europe (UNECE) on long-range transboundary air pollution to abate acidification, eutrophication and ground-level ozone, which includes, *inter alia*, commitments to reduce emissions of sulphur dioxide and oxides of nitrogen.

(4) The Commission has published a Communication on a Community strategy to combat acidification in which the revision of Directive 88/609/EEC was identified as being an integral component of that strategy with the long term aim of reducing emissions of sulphur dioxide and nitrogen oxides sufficiently to bring depositions and concentrations down to levels below the critical loads and levels.

(5) In accordance with the principle of subsidiarity as set out in Article 5 of the Treaty, the objective of reducing acidifying emissions from large combustion plants cannot be sufficiently achieved by the Member States acting individually and unconcerted action offers no guarantee of achieving the desired objective; in view of the need to reduce acidifying emissions

([2]) OJ C 101, 12.4.1999, p. 55.
([3]) Opinion of the European Parliament of 14 April 1999 (OJ C 219, 30.7.1999, p. 175), Council Common Position of 9 November 2000 (OJ C 375, 28.12.2000, p. 12) and Decision of the European Parliament of 14 March 2001 (not yet published in the Official Journal). Decision of the European Parliament of 20 September 2001 and Decision of the Council of 27 September 2001.
([4]) OJ L 336, 7.12.1988, p. 1. Directive as last amended by Council Directive 94/66/EC (OJ L 337, 24.12.1994, p. 83).
([5]) OJ C 138, 17.5.1993, p. 1.

▼B

across the Community, it is more effective to take action at Community level.

(6) Existing large combustion plants are significant contributors to emissions of sulphur dioxide and nitrogen oxides in the Community and it is necessary to reduce these emissions. It is therefore necessary to adapt the approach to the different characteristics of the large combustion plant sector in the Member States.

(7) Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control [1] sets out an integrated approach to pollution prevention and control in which all the aspects of an installation's environmental performance are considered in an integrated manner; combustion installations with a rated thermal input exceeding 50 MW are included within the scope of that Directive; pursuant to Article 15(3) of that Directive an inventory of the principal emissions and sources responsible is to be published every three years by the Commission on the basis of data supplied by the Member States. Pursuant to Article 18 of that Directive, acting on a proposal from the Commission, the Council will set emission limit values in accordance with the procedures laid down in the Treaty for which the need for Community action has been identified, on the basis, in particular, of the exchange of information provided for in Article 16 of that Directive.

(8) Compliance with the emission limit values laid down by this Directive should be regarded as a necessary but not sufficient condition for compliance with the requirements of Directive 96/61/EC regarding the use of best available techniques. Such compliance may involve more stringent emission limit values, emission limit values for other substances and other media, and other appropriate conditions.

(9) Industrial experience in the implementation of techniques for the reduction of polluting emissions from large combustion plants has been acquired over a period of 15 years.

(10) The Protocol on heavy metals to the UNECE Convention on long-range transboundary air pollution recommends the adoption of measures to reduce heavy metals emitted by certain installations. It is known that benefits from reducing dust emissions by dust abatement equipment will provide benefits on reducing particle–bound heavy metal emissions.

(11) Installations for the production of electricity represent an important part of the large combustion plant sector.

(12) Directive 96/92/EC of the European Parliament and of the Council of 19 December 1996 concerning common rules for the internal market in electricity [2] is intended *inter alia* to have the effect of distributing new production capacity among new arrivals in the sector.

(13) The Community is committed to a reduction of carbon dioxide emissions. Where it is feasible the combined production of heat and electricity represents a valuable opportunity for significantly improving overall efficiency in fuel use.

(14) A significant increase in the use of natural gas for producing electricity is already underway and is likely to continue, in particular through the use of gas turbines.

(15) In view of the increase in energy production from biomass, specific emission standards for this fuel are justified.

(16) The Council Resolution of 24 February 1997 on a Community strategy for waste management [3] emphasises the need for promoting waste recovery and states that appropriate emission

[3] OJ C 76, 11.3.1997, p. 1.

▼B

standards should apply to the operation of facilities in which waste is incinerated in order to ensure a high level of protection for the environment.

(17) Industrial experience has been gained concerning techniques and equipment for the measurement of the principal pollutants emitted by large combustion plants; the European Committee for Standardisation (CEN) has undertaken work with the aim of providing a framework securing comparable measurement results within the Community and guaranteeing a high level of quality of such measurements.

(18) There is a need to improve knowledge concerning the emission of the principal pollutants from large combustion plants. In order to be genuinely representative of the level of pollution of an installation, such information should also be associated with knowledge concerning its energy consumption.

(19) This Directive is without prejudice to the time limits within which the Member States must transpose and implement Directive 88/609/EEC,

HAVE ADOPTED THIS DIRECTIVE:

Article 1

This Directive shall apply to combustion plants, the rated thermal input of which is equal to or greater than 50 MW, irrespective of the type of fuel used (solid, liquid or gaseous).

Article 2

For the purpose of this Directive:

(1) 'emission' means the discharge of substances from the combustion plant into the air;

(2) 'waste gases' means gaseous discharges containing solid, liquid or gaseous emissions; their volumetric flow rates shall be expressed in cubic metres per hour at standard temperature (273 K) and pressure (101,3 kPa) after correction for the water vapour content, hereinafter referred to as (Nm^3/h);

(3) 'emission limit value' means the permissible quantity of a substance contained in the waste gases from the combustion plant which may be discharged into the air during a given period; it shall be calculated in terms of mass per volume of the waste gases expressed in mg/Nm^3, assuming an oxygen content by volume in the waste gas of 3 % in the case of liquid and gaseous fuels, 6 % in the case of solid fuels and 15 % in the case of gas turbines;

(4) 'rate of desulphurisation' means the ratio of the quantity of sulphur which is not emitted into the air at the combustion plant site over a given period to the quantity of sulphur contained in the fuel which is introduced into the combustion plant facilities and which is used over the same period;

(5) 'operator' means any natural or legal person who operates the combustion plant, or who has or has been delegated decisive economic power over it;

(6) 'fuel' means any solid, liquid or gaseous combustible material used to fire the combustion plant with the exception of waste covered by Council Directive 89/369/EEC of 8 June 1989 on the prevention of air pollution from new municipal waste incineration plants ([1]), Council Directive 89/429/EEC of 21 June 1989 on the reduction of air pollution from existing municipal waste incineration plants ([2]), and Council Directive 94/67/EC of 16 December

([1]) OJ L 163, 14.6.1989, p. 32.
([2]) OJ L 203, 15.7.1989, p. 50.

▼B

1994 concerning the incineration of hazardous waste [1] or any subsequent Community act repealing and replacing one or more of these Directives;

(7) 'combustion plant' means any technical apparatus in which fuels are oxidised in order to use the heat thus generated.

This Directive shall apply only to combustion plants designed for production of energy with the exception of those which make direct use of the products of combustion in manufacturing processes. In particular, this Directive shall not apply to the following combustion plants:

(a) plants in which the products of combustion are used for the direct heating, drying, or any other treatment of objects or materials e.g. reheating furnaces, furnaces for heat treatment;

(b) post-combustion plants i.e. any technical apparatus designed to purify the waste gases by combustion which is not operated as an independent combustion plant;

(c) facilities for the regeneration of catalytic cracking catalysts;

(d) facilities for the conversion of hydrogen sulphide into sulphur;

(e) reactors used in the chemical industry;

(f) coke battery furnaces;

(g) cowpers;

(h) any technical apparatus used in the propulsion of a vehicle, ship or aircraft;

(i) gas turbines used on offshore platforms;

(j) gas turbines licensed before 27 November 2002 or which in the view of the competent authority are the subject of a full request for a licence before 27 November 2002 provided that the plant is put into operation no later than 27 November 2003 without prejudice to Article 7(1) and Annex VIII(A) and (B);

Plants powered by diesel, petrol and gas engines shall not be covered by this Directive.

Where two or more separate new plants are installed in such a way that, taking technical and economic factors into account, their waste gases could, in the judgement of the competent authorities, be discharged through a common stack, the combination formed by such plants shall be regarded as a single unit;

(8) 'multi-fuel firing unit' means any combustion plant which may be fired simultaneously or alternately by two or more types of fuel;

(9) 'new plant' means any combustion plant for which the original construction licence or, in the absence of such a procedure, the original operating licence was granted on or after 1 July 1987;

(10) 'existing plant' means any combustion plant for which the original construction licence or, in the absence of such a procedure, the original operating licence was granted before 1 July 1987;

(11) 'biomass' means products consisting of any whole or part of a vegetable matter from agriculture or forestry which can be used as a fuel for the purpose of recovering its energy content and the following waste used as a fuel:

(a) vegetable waste from agriculture and forestry;

(b) vegetable waste from the food processing industry, if the heat generated is recovered;

(c) fibrous vegetable waste from virgin pulp production and from production of paper from pulp, if it is co-incinerated at the place of production and the heat generated is recovered;

(d) cork waste;

[1] OJ L 365, 31.12.1994, p. 34.

▼B

(e) wood waste with the exception of wood waste which may contain halogenated organic compounds or heavy metals as a result of treatment with wood preservatives or coating, and which includes in particular such wood waste originating from construction and demolition waste;

(12) 'gas turbine' means any rotating machine which converts thermal energy into mechanical work, consisting mainly of a compressor, a thermal device in which fuel is oxidised in order to heat the working fluid, and a turbine.

(13) 'Outermost Regions' means the French Overseas Departments with regard to France, the Azores and Madeira with regard to Portugal and the Canary Islands with regard to Spain.

Article 3

1. Not later than 1 July 1990 Member States shall draw up appropriate programmes for the progressive reduction of total annual emissions from existing plants. The programmes shall set out the timetables and the implementing procedures.

2. In accordance with the programmes mentioned in paragraph 1, Member States shall continue to comply with the emission ceilings and with the corresponding percentage reductions laid down for sulphur dioxide in Annex I, columns 1 to 6, and for oxides of nitrogen in Annex II, columns 1 to 4, by the dates specified in those Annexes, until the implementation of the provisions of Article 4 that apply to existing plants.

3. When the programmes are being carried out, Member States shall also determine the total annual emissions in accordance with Annex VIII(C).

4. 4. If a substantial and unexpected change in energy demand or in the availability of certain fuels or certain generating installations creates serious technical difficulties for the implementation by a Member State of its programme drawn up under paragraph 1, the Commission shall, at the request of the Member State concerned and taking into account the terms of the request, take a decision to modify, for that Member State, the emission ceilings and/or the dates set out in Annexes I and II and communicate its decision to the Council and to the Member States. Any Member State may within three months refer the decision of the Commission to the Council. The Council, acting by a qualified majority, may within three months take a different decision.

Article 4

1. Without prejudice to Article 17 Member States shall take appropriate measures to ensure that all licences for the construction or, in the absence of such a procedure, for the operation of new plants which in the view of the competent authority are the subject of a full request for a licence before 27 November 2002, provided that the plant is put into operation no later than 27 November 2003 contain conditions relating to compliance with the emission limit values laid down in part A of Annexes III to VII in respect of sulphur dioxide, nitrogen oxides and dust.

2. Member States shall take appropriate measures to ensure that all licences for the construction or, in the absence of such a procedure, for the operation of new plants, other than those covered by paragraph 1, contain conditions relating to compliance with the emission limit values laid down in part B of Annexes III to VII in respect of sulphur dioxide, nitrogen oxides and dust.

▼B

3. Without prejudice to Directive 96/61/EC and Council Directive 96/62/EC of 27 September 1996 on ambient air quality assessment and management ([1]), Member States shall, by 1 January 2008 at the latest, achieve significant emission reductions by:

(a) taking appropriate measures to ensure that all licences for the operation of existing plants contain conditions relating to compliance with the emission limit values established for new plants referred to in paragraph 1; or

(b) ensuring that existing plants are subject to the national emission reduction plan referred to in paragraph 6;

and, where appropriate, applying Articles 5, 7 and 8.

4. Without prejudice to Directives 96/61/EC and 96/62/EC, existing plants may be exempted from compliance with the emission limit values referred to in paragraph 3 and from their inclusion in the national emission reduction plan on the following conditions:

(a) the operator of an existing plant undertakes, in a written declaration submitted by 30 June 2004 at the latest to the competent authority, not to operate the plant for more than 20 000 operational hours starting from 1 January 2008 and ending no later than 31 December 2015;

(b) the operator is required to submit each year to the competent authority a record of the used and unused time allowed for the plants' remaining operational life.

5. Member States may require compliance with emission limit values and time limits for implementation which are more stringent than those set out in paragraphs 1, 2, 3 and 4 and in Article 10. They may include other pollutants, and they may impose additional requirements or adaptation of plant to technical progress.

6. Member States may, without prejudice to this Directive and Directive 96/61/EC, and taking into consideration the costs and benefits as well as their obligations under Directive 2001/81/EC of the European Parliament and of the Council of 23 October 2001 on national emission ceilings for certain atmospheric pollutants ([2]) and Directive 96/62/EC, define and implement a national emission reduction plan for existing plants, taking into account, *inter alia*, compliance with the ceilings as set out in Annexes I and II.

The national emission reduction plan shall reduce the total annual emissions of nitrogen oxides (NO_x), sulphur dioxide (SO_2) and dust from existing plants to the levels that would have been achieved by applying the emission limit values referred to in paragraph 3 to the existing plants in operation in the year 2000, (including those existing plants undergoing a rehabilitation plan in 2000, approved by the competent authority, to meet emission reductions required by national legislation) on the basis of each plant's actual annual operating time, fuel used and thermal input, averaged over the last five years of operation up to and including 2000.

The closure of a plant included in the national emission reduction plan shall not result in an increase in the total annual emissions from the remaining plants covered by the plan.

The national emission reduction plan may under no circumstances exempt a plant from the provisions laid down in relevant Community legislation, including inter alia Directive 96/61/EC.

The following conditions shall apply to national emission reduction plans:

(a) the plan shall comprise objectives and related targets, measures and timetables for reaching these objectives and targets, and a monitoring mechanism;

([1]) OJ L 296, 21.11.1996, p. 55.
([2]) See p. 22 of this Edition of the Official Journal.

▼B

(b) Member States shall communicate their national emission reduction plan to the Commission no later than 27 November 2003;

(c) within six months of the communication referred to in point (b) the Commission shall evaluate whether or not the plan meets the requirements of this paragraph. When the Commission considers that this is not the case, it shall inform the Member State and within the subsequent three months the Member State shall communicate any measures it has taken in order to ensure that the requirements of this paragraph are met;

(d) the Commission shall, no later than 27 November 2002, develop guidelines to assist Member States in the preparation of their plans.

7. Not later than 31 December 2004 and in the light of progress towards protecting human health and attaining the Community's environmental objectives for acidification and for air quality pursuant to Directive 96/62/EC, the Commission shall submit a report to the European Parliament and the Council in which it shall assess:

(a) the need for further measures;

(b) the amounts of heavy metals emitted by large combustion plants;

(c) the cost-effectiveness and costs and advantages of further emission reductions in the combustion plants sector in Member States compared to other sectors;

(d) the technical and economic feasibility of such emission reductions;

(e) the effects of both the standards set for the large combustion plants sector including the provisions for indigenous solid fuels, and the competition situation in the energy market, on the environment and the internal market;

(f) any national emission reduction plans provided by Member States in accordance with paragraph 6.

The Commission shall include in its report an appropriate proposal of possible end dates or of lower limit values for the derogation contained in footnote 2 to Annex VI A.

8. The report referred to in paragraph 7 shall, as appropriate, be accompanied by related proposals, having regard to Directive 96/61/EC.

Article 5

By way of derogation from Annex III:

(1) Plants, of a rated thermal input equal to or greater than 400 MW, which do not operate more than the following numbers of hours a year (rolling average over a period of five years),

— until 31 December 2015, 2 000 hours;

— from 1 January 2016, 1 500 hours;

shall be subject to a limit value for sulphur dioxide emissions of 800 mg/Nm^3.

This provision shall not apply to new plants for which the licence is granted pursuant to Article 4(2).

(2) Until 31 December 1999, the Kingdom of Spain may authorise new power plants with a rated thermal input equal to or greater than 500 MW burning indigenous or imported solid fuels, commissioned before the end of 2005 and complying with the following requirements:

(a) in the case of imported solid fuels, a sulphur dioxide emission limit value of 800 mg/Nm^3;

(b) in the case of indigenous solid fuels, at least a 60 % rate of desulphurisation,

provided that the total authorised capacity of such plants to which this derogation applies does not exceed:

— 2 000 MWe in the case of plants burning indigenous solid fuels;

▼B

— in the case of plants burning imported solid fuels either 7 500 or 50 % of all the new capacity of all plants burning solid fuels authorised up to 31 December 1999, whichever is the lower.

Article 6

In the case of new plants for which the licence is granted pursuant to Article 4(2) or plants covered by Article 10, Member States shall ensure that the technical and economic feasibility of providing for the combined generation of heat and power is examined. Where this feasibility is confirmed, bearing in mind the market and the distribution situation, installations shall be developed accordingly.

Article 7

1. Member States shall ensure that provision is made in the licences or permits referred to in Article 4 for procedures relating to malfunction or breakdown of the abatement equipment. In case of a breakdown the competent authority shall in particular require the operator to reduce or close down operations if a return to normal operation is not achieved within 24 hours, or to operate the plant using low polluting fuels. In any case the competent authority shall be notified within 48 hours. In no circumstances shall the cumulative duration of unabated operation in any twelve-month period exceed 120 hours. The competent authority may allow exceptions to the limits of 24 hours and 120 hours above in cases where, in their judgement:

(a) there is an overriding need to maintain energy supplies, or

(b) the plant with the breakdown would be replaced for a limited period by another plant which would cause an overall increase in emissions.

2. The competent authority may allow a suspension for a maximum of six months from the obligation to comply with the emission limit values provided for in Article 4 for sulphur dioxide in respect of a plant which to this end normally uses low-sulphur fuel, in cases where the operator is unable to comply with these limit values because of an interruption in the supply of low-sulphur fuel resulting from a serious shortage. The Commission shall immediately be informed of such cases.

3. The competent authority may allow a derogation from the obligation to comply with the emission limit values provided for in Article 4 in cases where a plant which normally uses only gaseous fuel, and which would otherwise need to be equipped with a waste gas purification facility, has to resort exceptionally, and for a period not exceeding 10 days except where there is an overriding need to maintain energy supplies, to the use of other fuels because of a sudden interruption in the supply of gas. The competent authority shall immediately be informed of each specific case as it arises. Member States shall inform the Commission immediately of the cases referred to in this paragraph.

Article 8

1. In the case of plants with a multi-firing unit involving the simultaneous use of two or more fuels, when granting the licence referred to in Articles 4(1) or 4(2), and in the case of such plants covered by Articles 4(3) or 10, the competent authority shall set the emission limit values as follows:

(a) firstly by taking the emission limit value relevant for each individual fuel and pollutant corresponding to the rated thermal input of the combustion plant as given in Annexes III to VII,

(b) secondly by determining fuel-weighted emission limit values, which are obtained by multiplying the above individual emission limit value by the thermal input delivered by each fuel, the product of multiplication being divided by the sum of the thermal inputs delivered by all fuels,

(c) thirdly by aggregating the fuel-weighted limit values.

▼B

2. In multi-firing units using the distillation and conversion residues from crude-oil refining for own consumption, alone or with other fuels, the provisions for the fuel with the highest emission limit value (determinative fuel) shall apply, notwithstanding paragraph 1 above, if during the operation of the combustion plant the proportion contributed by that fuel to the sum of the thermal inputs delivered by all fuels is at least 50 %.

Where the proportion of the determinative fuel is lower than 50 %, the emission limit value is determined on a pro rata basis of the heat input supplied by the individual fuels in relation to the sum of the thermal inputs delivered by all fuels as follows:

(a) firstly by taking the emission limit value relevant for each individual fuel and pollutant corresponding to the rated heat input of the combustion plant as given in Annexes III to VII,

(b) secondly by calculating the emission limit value of the determinative fuel (fuel with the highest emission limit value according to Annexes III to VII and, in the case of two fuels having the same emission limit value, the fuel with the higher thermal input); this value is obtained by multiplying the emission limit value laid down in Annexes III to VII for that fuel by a factor of two, and subtracting from this product the emission limit value of the fuel with the lowest emission limit value,

(c) thirdly by determining the fuel-weighted emission limit values, which are obtained by multiplying the calculated fuel emission limit value by the thermal input of the determinative fuel and the other individual emission limit values by the thermal input delivered by each fuel, the product of multiplication being divided by the sum of the thermal inputs delivered by all fuels,

(d) fourthly by aggregating the fuel-weighted emission limit values.

3. As an alternative to paragraph 2, the following average emission limit values for sulphur dioxide may be applied (irrespective of the fuel combination used):

(a) for plants referred to in Article 4(1) and (3): 1 000 mg/Nm^3, averaged over all such plants within the refinery;

(b) for new plants referred to in Article 4(2): 600 mg/Nm^3 , averaged over all such plants within the refinery, with the exception of gas turbines.

The competent authorities shall ensure that the application of this provision does not lead to an increase in emissions from existing plants.

4. In the case of plants with a multi-firing unit involving the alternative use of two or more fuels, when granting the licence referred to in Article 4(1) and (2), and in the case of such plants covered by Articles 4(3) or 10, the emission limit values set out in Annexes III to VII corresponding to each fuel used shall be applied.

Article 9

Waste gases from combustion plants shall be discharged in controlled fashion by means of a stack. The licence referred to in Article 4 and licences for combustion plants covered by Article 10 shall lay down the discharge conditions. The competent authority shall in particular ensure that the stack height is calculated in such a way as to safeguard health and the environment.

Article 10

Where a combustion plant is extended by at least 50 MW, the emission limit values as set in part B of Annexes III to VII shall apply to the new part of the plant and shall be fixed in relation to the thermal capacity of the entire plant. This provision shall not apply in the cases referred to in Article 8(2) and (3).

▼B

Where the operator of a combustion plant is envisaging a change according to Articles 2(10)(b) and 12(2) of Directive 96/61/EC, the emission limit values as set out in part B of Annexes III to VII in respect of sulphur dioxide, nitrogen oxides and dust shall apply.

Article 11

In the case of construction of combustion plants which are likely to have significant effects on the environment in another Member State, the Member States shall ensure that all appropriate information and consultation takes place, in accordance with Article 7 of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment ([1]).

Article 12

Member States shall take the necessary measures to ensure the monitoring, in accordance with Annex VIII(A), of emissions from the combustion plants covered by this Directive and of all other values required for the implementation of this Directive. Member States may require that such monitoring shall be carried out at the operator's expense.

Article 13

Member States shall take appropriate measures to ensure that the operator informs the competent authorities within reasonable time limits about the results of the continuous measurements, the checking of the measuring equipment, the individual measurements and all other measurements carried out in order to assess compliance with this Directive.

Article 14

1. In the event of continuous measurements, the emission limit values set out in part A of Annexes III to VII shall be regarded as having been complied with if the evaluation of the results indicates, for operating hours within a calendar year, that:

(a) none of the calendar monthly mean values exceeds the emission limit values; and

(b) in the case of:

(i) sulphur dioxide and dust: 97 % of all the 48 hourly mean values do not exceed 110 % of the emission limit values,

(ii) nitrogen oxides: 95 % of all the 48 hourly mean values do not exceed 110 % of the emission limit values.

The periods referred to in Article 7 as well as start-up and shut-down periods shall be disregarded.

2. In cases where only discontinuous measurements or other appropriate procedures for determination are required, the emission limit values set out in Annexes III to VII shall be regarded as having been complied with if the results of each of the series of measurements or of the other procedures defined and determined according to the rules laid down by the competent authorities do not exceed the emission limit values.

►C1 3. In the cases referred to in Article 5(2), the rates ◄ of desulphurisation shall be regarded as having been complied with if the evaluation of measurements carried out pursuant to Annex VIII, point A.3, indicates that all of the calendar monthly mean values or all of the rolling monthly mean values achieve the required desulphurisation rates.

([1]) OJ L 175, 5.7.1985, p. 40. Directive as last amended by Council Directive 97/11/EC (OJ L 73, 14.3.1997, p. 5).

▼B

The periods referred to in Article 7 as well as start-up and shut-down periods shall be disregarded.

4. For new plants for which the licence is granted pursuant to Article 4(2), the emission limit values shall be regarded, for operating hours within a calendar year, as complied with if:

(a) no validated daily average value exceeds the relevant figures set out in part B of Annexes III to VII, and

(b) 95 % of all the validated hourly average values over the year do not exceed 200 % of the relevant figures set out in part B of Annexes III to VII.

The 'validated average values' are determined as set out in point A.6 of Annex VIII.

The periods referred to in Article 7 as well as start up and shut down periods shall be disregarded.

Article 15

1. Member States shall, not later than 31 December 1990, inform the Commission of the programmes drawn up in accordance with Article 3(1).

At the latest one year after the end of the different phases for reduction of emissions from existing plants, the Member States shall forward to the Commission a summary report on the results of the implementation of the programmes.

An intermediate report is required as well in the middle of each phase.

2. The reports referred to in paragraph 1 shall provide an overall view of:

(a) all the combustion plants covered by this Directive,

(b) emissions of sulphur dioxide, and oxides of nitrogen expressed in tonnes per annum and as concentrations of these substances in the waste gases,

(c) measures already taken or envisaged with a view to reducing emissions, and of changes in the choice of fuel used,

(d) changes in the method of operation already made or envisaged,

(e) definitive closures of combustion plants already effected or envisaged, and

(f) where appropriate, the emission limit values imposed in the programmes in respect of existing plants.

When determining the annual emissions and concentrations of pollutants in the waste gases, Member States shall take account of Articles 12, 13 and 14.

3. Member States applying Article 5 or the provisions of the Nota Bene in Annex III or the footnotes in Annex VI.A shall report thereon annually to the Commission.

Article 16

The Member States shall determine the penalties applicable to breaches of the national provisions adopted pursuant to this Directive. The penalties thus provided for shall be effective, proportionate and dissuasive.

Article 17

1. Directive 88/609/EEC shall be repealed with effect from 27 November 2002, without prejudice to paragraph 2 or to the obligations of Member States concerning the time limits for transposition and application of that Directive listed in Annex IX hereto.

2. In the case of new plants licensed ►C1 before 27 November 2002 as specified in Article 4(1) ◄ of this Directive, Article 4(1),

▼B

Article 5(2), Article 6, Article 15(3), Annexes III, VI, VIII and point A.2 of Annex IX to Directive 88/609/EEC as amended by Directive 94/66/EC shall remain in effect until 1 January 2008 after which they shall be repealed.

3. References to Directive 88/609/EEC shall be construed as references to this Directive and shall be read in accordance with the correlation table in Annex X hereto.

Article 18

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive before 27 November 2002. They shall forthwith inform the Commission thereof.

When Member States adopt these provisions, they shall contain a reference to this Directive or shall be accompanied by such reference on the occasion of their official publication. The methods of making such reference shall be laid down by Member States.

2. For existing plant, and for new plant for which a licence is granted pursuant to Article 4(1), the provisions of point A.2 of Annex VIII shall be applied from 27 November 2004.

3. Member States shall communicate to the Commission the texts of the provisions of national law which they adopt in the field covered by this Directive.

Article 19

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Communities*.

Article 20

This Directive is addressed to the Member States.

▼B

ANNEX I

CEILINGS AND REDUCTION TARGETS FOR EMISSIONS OF SO_2 FROM EXISTING PLANTS (1) (2)

Member State	0	1	2	3	4	5	6	7	8	9
	SO_2 emissions by large combustion plants 1980 ktonnes	Emission ceiling (ktonnes/year)			% reduction over 1980 emissions			% reduction over adjusted 1980 emissions

Sweden	31	25	19	− 20	− 40	− 20	− 40

(1) Member States may for technical reasons delay for up to two years the phase 1 date for reduction in NO_x emissions by notifying the Commission within one month of the notification of this Directive.

(1) Additional emissions may arise from capacity authorised on or after 1 July 1987.

(2) Emissions coming from combustion plants authorised before 1 July 1987 but not yet in operation before that date and which have not been taken into account in establishing the emission ceilings fixed by this Annex shall either comply with the requirements established by this Directive for new plants or be accounted for in the overall emissions from existing plants that must not exceed the ceilings fixed in this Annex.

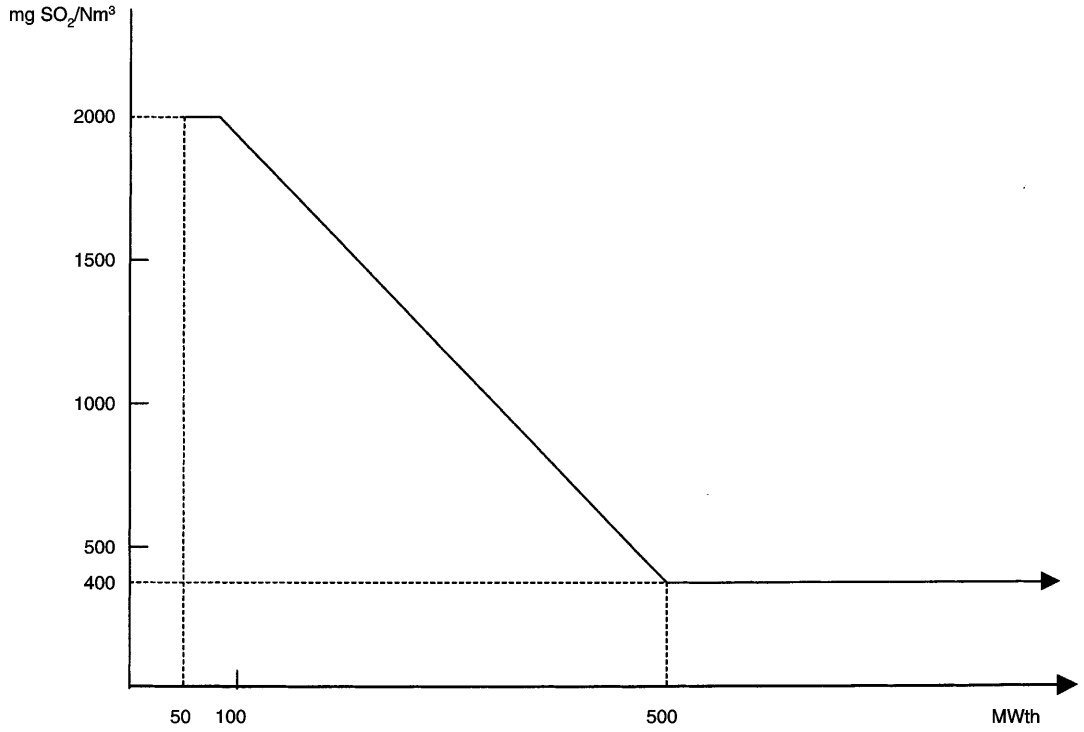
▼B

ANNEX III

EMISSION LIMIT VALUES FOR SO_2

Solid fuel

A. SO_2 emission limit values expressed in mg/Nm³ (O_2 content 6 %) to be applied by new and existing plants pursuant to Article 4(1) and 4(3) respectively:



NB. Where the emission limit values above cannot be met due to the characteristics of the fuel, a rate of desulphurisation of at least 60 % shall be achieved in the case of plants with a rated thermal input of less than or equal to 100 MWth, 75 % for plants greater than 100 MWth and less than or equal to 300 MWth and 90 % for plants greater than 300 MWth. For plants greater than 500 MWth, a desulphurisation rate of at least 94 % shall apply or of at least 92 % where a contract for the fitting of flue gas desulphurisation or lime injection equipment has been entered into, and work on its installation has commenced, before 1 January 2001.

B. SO_2 emission limit values expressed in mg/Nm³ (O_2 content 6 %) to be applied by new plants pursuant to Article 4(2) with the exception of gas turbines.

Type of fuel	50 to 100 MWth	100 to 300 MWth	> 300 MWth
Biomass	200	200	200
General case	850	200 (1)	200

(1) Except in the case of the 'Outermost Regions' where 850 to 200 mg/Nm³ (linear decrease) shall apply.

NB. Where the emission limit values above cannot be met due to the characteristics of the fuel, installations shall achieve 300 mg/Nm³ SO_2, or a rate of desulphurisation of at least 92 % shall be achieved in the case of plants with a rated thermal input of less than or equal to 300 MWth and in the case of plants with a rated thermal input greater than 300 MWth

▼B

a rate of desulphurisation of at least 95 % together with a maximum permissible emission limit value of 400 mg/Nm^3 shall apply.

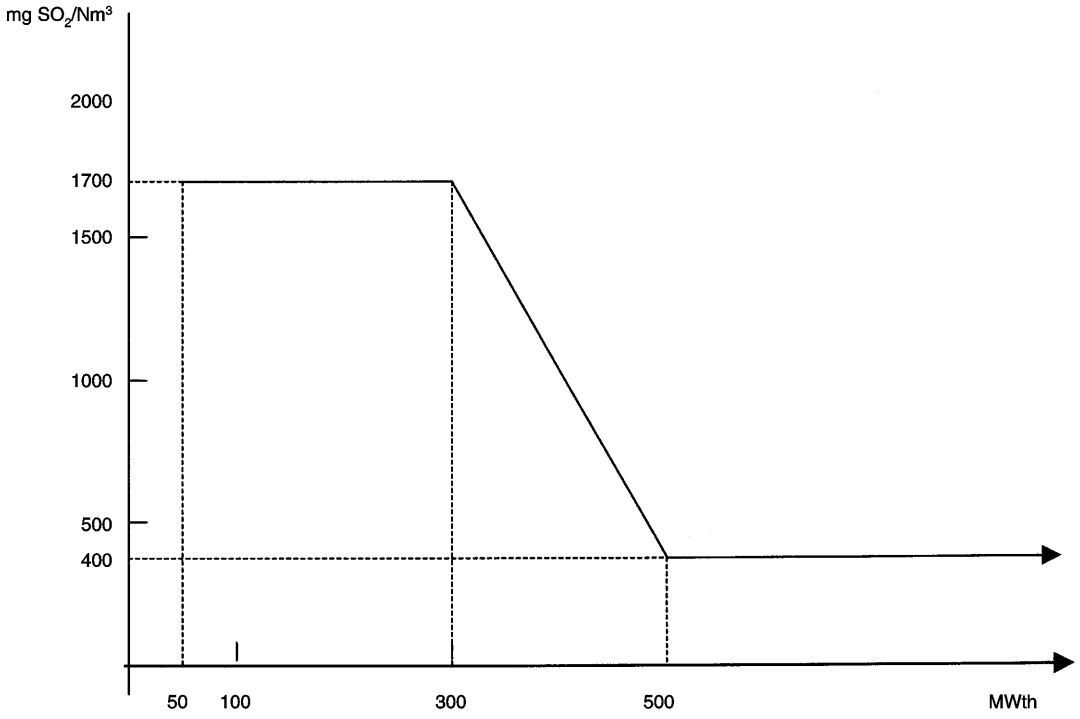
▼B

ANNEX IV

EMISSION LIMIT VALUES FOR SO_2

Liquid fuels

A. SO_2 emission limit values expressed in mg/Nm³ (O_2 content 3 %) to be applied by new and existing plants pursuant to Article 4(1) and 4(3), respectively:



B. SO_2 emission limit values expressed in mg/Nm³ (O_2 content 3 %) to be applied by new plants pursuant to Article 4(2) with the exception of gas turbines

50 to 100 MWth	100 to 300 MWth	> 300 MWth
850	400 to 200 (linear decrease) (1)	200

(1) Except in the case of the 'Outermost Regions' where 850 to 200 mg/Nm³ (linear decrease) shall apply.

In the case of two installations with a rated thermal input of 250 MWth on Crete and Rhodos to be licensed before 31 December 2007 the emission limit value of 1 700 mg/Nm³ shall apply.

▼B

ANNEX V

EMISSION LIMIT VALUES FOR SO_2

Gaseous fuels

A. SO_2 emission limit values expressed in mg/Nm³ (O_2 content 3 %) to be applied by new and existing plants pursuant to Article 4(1) and 4(3), respectively:

Type of fuel	Limit values (mg/Nm³)
Gaseous fuels in general	35
Liquefied gas	5
Low calorific gases from gasification of refinery residues, coke oven gas, blast-furnace gas	800
Gas from gasification of coal	(1)

(1) The Council will fix the emission limit values applicable to such gas at a later stage on the basis of proposals from the Commission to be made in the light of further technical experience.

B. SO_2 emission limit values expressed in mg/Nm³ (O_2 content 3 %) to be applied by new plants pursuant to Article 4(2):

Gaseous fuels in general	35
Liquefied gas	5
Low calorific gases from coke oven	400
Low caloric gases from blast furnace	200

▼B

ANNEX VI

EMISSION LIMIT VALUES FOR NO_x (MEASURED AS NO_2)

A. NO_x emission limit values expressed in mg/Nm³ (O_2 content 6 % for solid fuels, 3 % for liquid and gaseous fuels) to be applied by new and existing plants pursuant to Article 4(1) and 4(3), respectively:

Type of fuel:	Limit values (1) (mg/Nm³)
Solid (2), (3):	
50 to 500 MWth:	600
>500 MWth:	500
From 1 January 2016	
50 to 500 MWth:	600
>500 MWth:	200
Liquid:	
50 to 500 MWth:	450
>500 MWth:	400
Gaseous:	
50 to 500 MWth:	300
>500 MWth:	200

(1) Except in the case of the 'Outermost Regions' where the following values shall apply:

Solid in general: 650

Solid with < 10 % vol comps: 1 300

Liquid: 450

Gaseous: 350

(2) Until 31 December 2015 plants of a rated thermal input greater than 500 MW, which from 2008 onwards do not operate more than 2 000 hours a year (rolling average over a period of five years), shall:

— in the case of plant licensed in accordance with Article 4(3)(a), be subject to a limit value for nitrogen oxide emissions (measured as NO_2) of 600 mg/Nm³;

— In the case of plant subject to a national plan under Article 4(6), have their contribution to the national plan assessed on the basis of a limit value of 600 mg/Nm_3.

From 1 January 2016 such plants, which do not operate more than 1 500 hours a year (rolling average over a period of five years), shall be subject to a limit value for nitrogen oxide emissions (measured as NO_2) of 450 mg/Nm³.

(3) Until 1 January 2018 in the case of plants that in the 12 month period ending on 1 January 2001 operated on, and continue to operate on, solid fuels whose volatile content is less than 10 %, 1 200 mg/Nm³ shall apply.

B. NO_x emission limit values expressed in mg/Nm³ to be applied by new plants pursuant to Article 4(2) with the exception of gas turbines

Solid fuels (O_2 content 6 %)

Type of fuel	50 to 100 MWth	100 to 300 MWth	> 300 MWth
Biomass	400	300	200
General case	400	200 (1)	200

(1) Except in the case of the 'Outermost Regions' where 300 mg/Nm³ shall apply.

Liquid fuels (O_2 content 3 %)

50 to 100 MWth	100 to 300 MWth	> 300 MWth
400	200 (1)	200

▼B

(1) Except in the case of the 'Outermost Regions' where 300 mg/Nm^3 shall apply.

In the case of two installations with a rated thermal input of 250 MWth on Crete and Rhodos to be licensed before 31 December 2007 the emission limit value of 400 mg/Nm^3 shall apply.

Gaseous fuels (O_2 content 3 %)

	50 to 300 MWth	> 300 MWth
Natural gas (note 1)	150	100
Other gases	200	200

Gas Turbines

NO_x emission limit values expressed in mg/Nm^3 (O_2 content 15 %) to be applied by a single gas turbine unit pursuant to Article 4(2) (the limit values apply only above 70 % load):

	> 50 MWth (thermal input at ISO conditions)
Natural gas (Note 1)	50 (Note 2)
Liquid fuels (Note 3)	120
Gaseous fuels (other than natural gas)	120

Gas turbines for emergency use that operate less than 500 hours per year are excluded from these limit values. The operator of such plants is required to submit each year to the competent authority a record of such used time.

Note 1: Natural gas is naturally occurring methane with not more than 20 % (by volume) of inerts and other constituents.

Note 2: 75 mg/Nm^3 in the following cases, where the efficiency of the gas turbine is determined at ISO base load conditions:

— gas turbines, used in combined heat and power systems having an overall efficiency greater than 75 %;

— gas turbines used in combined cycle plants having an annual average overall electrical efficiency greater than 55 %;

— gas turbines for mechanical drives.

For single cycle gas turbines not falling into any of the above categories, but having an efficiency greater than 35 % − determined at ISO base load conditions − the emission limit value shall be $50*\eta/35$ where η is the gas turbine efficiency expressed as a percentage (and at ISO base load conditions).

Note 3: This emission limit value only applies to gas turbines firing light and middle distillates.

▼B

ANNEX VII

EMISSION LIMIT VALUES FOR DUST

A. Dust emission limit values expressed in mg/Nm³ (O_2 content 6 % for solid fuels, 3 % for liquid and gaseous fuels) to be applied by new and existing plants pursuant to Article 4(1) and 4(3), respectively:

Type of fuel	Rated thermal input (MW)	Emission limit values (mg/Nm³)
Solid	≥ 500 < 500	50 (2) 100
Liquid (1)	all plants	50
Gaseous	all plants	5 as a rule 10 for blast furnace gas 50 for gases produced by the steel industry which can be used elsewhere

(1) A limit value of 100 mg/Nm³ may be applied to plants with a rated thermal input of less than 500 MWth burning liquid fuel with an ash content of more than 0,06 %.

(2) A limit value of 100 mg/Nm³ may be applied to plants licensed pursuant to Article 4(3) with a rated thermal input greater than or equal to 500 MWth burning solid fuel with a heat content of less than 5 800 kJ/kg (net calorific value), a moisture content greater than 45 % by weight, a combined moisture and ash content greater than 60 % by weight and a calcium oxide content greater than 10 %.

B. Dust emission limit values expressed in mg/Nm³ to be applied by new plants, pursuant to Article 4(2) with the exception of gas turbines:

Solid fuels (O_2 content 6 %)

50 to 100 MWth	> 100 MWth
50	30

Liquid fuels (O_2 content 3 %)

50 to 100 MWth	> 100 MWth
50	30

In the case of two installations with a rated thermal input of 250 MWth on Crete and Rhodos to be licensed before 31 December 2007 the emission limit value of 50 mg/Nm³ shall apply.

Gaseous fuels (O_2 content 3 %)

As a rule	5
For blast furnace gas	10
For gases produced by the steel industry which can be used elsewhere	30

▼B

ANNEX VIII

METHODS OF MEASUREMENT OF EMISSIONS

A. **Procedures for measuring and evaluating emissions from combustion plants.**

1. *Until 27 November 2004*

   Concentrations of SO_2, dust, NO_x shall be measured continuously in the case of new plants for which a licence is granted pursuant to Article 4(1) with a rated thermal input of more than 300 MW. However, monitoring of SO_2 and dust may be confined to discontinuous measurements or other appropriate determination procedures in cases where such measurements or procedures, which must be verified and approved by the competent authorities, may be used to obtain concentration.

   In the case of new plants for which a licence is granted pursuant to Article 4(1) not covered by the first subparagraph, the competent authorities may require continuous measurements of those three pollutants to be carried out where considered necessary. Where continuous measurements are not required, discontinuous measurements or appropriate determination procedures as approved by the competent authorities shall be used regularly to evaluate the quantity of the above-mentioned substances present in the emissions.

2. *From 27 November 2002 and without prejudice to Article 18(2)*

   Competent authorities shall require continuous measurements of concentrations of SO_2, NO_x, and dust from waste gases from each combustion plant with a rated thermal input of 100 MW or more.

   By way of derogation from the first subparagraph, continuous measurements may not be required in the following cases:

   — for combustion plants with a life span of less than 10 000 operational hours;
   — for SO_2 and dust from natural gas burning boilers or from gas turbines firing natural gas;
   — for SO_2 from gas turbines or boilers firing oil with known sulphur content in cases where there is no desulphurisation equipment;
   — for SO_2 from biomass firing boilers if the operator can prove that the SO_2 emissions can under no circumstances be higher than the prescribed emission limit values.

   Where continuous measurements are not required, discontinuous measurements shall be required at least every six months. As an alternative, appropriate determination procedures, which must be verified and approved by the competent authorities, may be used to evaluate the quantity of the above mentioned pollutants present in the emissions. Such procedures shall use relevant CEN standards as soon as they are available. If CEN standards are not available ISO standards, national or international standards which will ensure the provision of data of an equivalent scientific quality shall apply.

3. In the case of plants which must comply with the desulphurisation rates fixed by Article 5(2) and and Annex III, the requirements concerning SO_2 emission measurements established under paragraph 2 of this point shall apply. Moreover, the sulphur content of the fuel which is introduced into the combustion plant facilities must be regularly monitored.

4. The competent authorities shall be informed of substantial changes in the type of fuel used or in the mode of operation of the plant. They shall decide whether the monitoring requirements laid down in paragraph 2 are still adequate or require adaptation.

5. The continuous measurements carried out in compliance with paragraph 2 shall include the relevant process operation parameters of oxygen content, temperature, pressure and water vapour content. The continuous measurement of the water vapour content of the exhaust gases shall not be necessary, provided that the sampled exhaust gas is dried before the emissions are analysed.

   Representative measurements, i.e. sampling and analysis, of relevant pollutants and process parameters as well as reference measurement methods to calibrate automated measurement systems shall be carried out in accordance with CEN standards as soon as they are available. If CEN standards are not available ISO standards, national or international

▼B

standards which will ensure the provision of data of an equivalent scientific quality shall apply.

Continuous measuring systems shall be subject to control by means of parallel measurements with the reference methods at least every year.

6. The values of the 95 % confidence intervals of a single measured result shall not exceed the following percentages of the emission limit values:

Sulphur dioxide	20 %
Nitrogen oxides	20 %
Dust	30 %

The validated hourly and daily average values shall be determined from the measured valid hourly average values after having subtracted the value of the confidence interval specified above.

Any day in which more than three hourly average values are invalid due to malfunction or maintenance of the continuous measurement system shall be invalidated. If more than ten days over a year are invalidated for such situations the competent authority shall require the operator to take adequate measures to improve the reliability of the continuous monitoring system.

B. **Determination of total annual emissions of combustion plants**

Until and including 2003 the competent authorities shall obtain determination of the total annual emissions of SO_2 and NO_x from new combustion plants. When continuous monitoring is used, the operator of the combustion plant shall add up separately for each pollutant the mass of pollutant emitted each day, on the basis of the volumetric flow rates of waste gases. Where continuous monitoring is not in use, estimates of the total annual emissions shall be determined by the operator on the basis of paragraph A.1 to the satisfaction of the competent authorities.

Member States shall communicate to the Commission the total annual SO_2 and NO_x emissions of new combustion plants at the same time as the communication required under paragraph C.3 concerning the total annual emissions of existing plants.

Member States shall establish, starting in 2004 and for each subsequent year, an inventory of SO_2, NO_x and dust emissions from all combustion plants with a rated thermal input of 50 MW or more. The competent authority shall obtain for each plant operated under the control of one operator at a given location the following data:

— the total annual emissions of SO_2, NO_x and dust (as total suspended particles).

— the total annual amount of energy input, related to the net calorific value, broken down in terms of the five categories of fuel: biomass, other solid fuels, liquid fuels, natural gas, other gases.

A summary of the results of this inventory that shows the emissions from refineries separately shall be communicated to the Commission every three years within twelve months from the end of the three-year period considered . The yearly plant-by-plant data shall be made available to the Commission upon request. The Commission shall make available to the Member States a summary of the comparison and evaluation of the national inventories within twelve months of receipt of the national inventories.

Commencing on 1 January 2008 Member States shall report annually to the Commission on those existing plants declared for eligibility under Article 4(4) along with the record of the used and unused time allowed for the plants' remaining operational life.

C. **Determination of the total annual emissions of existing plants until and including 2003.**

1. Member States shall establish, starting in 1990 and for each subsequent year until and including 2003, a complete emission inventory for existing plants covering SO_2 and NO_x:

   — on a plant by plant basis for plants above 300 MWth and for refineries;

   — on an overall basis for other combustion plants to which this Directive applies.

2. The methodology used for these inventories shall be consistent with that used to determine SO_2 and NO_x emissions from combustion plants in 1980.

▼B

3. The results of this inventory shall be communicated to the Commission in a conveniently aggregated form within nine months from the end of the year considered. The methodology used for establishing such emission inventories and the detailed base information shall be made available to the Commission at its request.

4. The Commission shall organise a systematic comparison of such national inventories and, if appropriate, shall submit proposals to the Council aiming at harmonising emission inventory methodologies, for the needs of an effective implementation of this Directive.

DIRECTIVE 2000/76/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 4 December 2000

on the incineration of waste

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 175(1) thereof,

Having regard to the proposal from the Commission ([1]),

Having regard to the Opinion of the Economic and Social Committee ([2]),

Having regard to the Opinion of the Committee of the Regions ([3]),

Acting in accordance with the procedure laid down in Article 251 of the Treaty ([4]), and in the light of the joint text approved by the Conciliation Committee on 11 October 2000,

Whereas:

(1) The fifth Environment Action Programme: Towards sustainability — A European Community programme of policy and action in relation to the environment and sustainable development, supplemented by Decision No 2179/98/EC on its review ([5]), sets as an objective that critical loads and levels of certain pollutants such as nitrogen oxides (NO_x), sulphur dioxide (SO_2), heavy metals and dioxins should not be exceeded, while in terms of air quality the objective is that all people should be effectively protected against recognised health risks from air pollution. That Programme further sets as an objective a 90 % reduction of dioxin emissions of identified sources by 2005 (1985 level) and at least 70 % reduction from all pathways of cadmium (Cd), mercury (Hg) and lead (Pb) emissions in 1995.

(2) The Protocol on persistent organic pollutants signed by the Community within the framework of the United Nations Economic Commission for Europe (UN-ECE) Convention on long-range transboundary air pollution sets legally binding limit values for the emission of dioxins and furans of 0,1 ng/m; TE (Toxicity Equivalents) for installations burning more than 3 tonnes per hour of municipal solid waste, 0,5 ng/m; TE for installations burning more than 1 tonne per hour of medical waste, and 0,2 ng/m; TE for installations burning more than 1 tonne per hour of hazardous waste.

(3) The Protocol on Heavy Metals signed by the Community within the framework of the UN-ECE Convention on long-range trans-

Decision of the European Parliament of 16 November 2000 and Decision of the Council of 20 November 2000.
([5]) OJ C 138, 17.5.1993, p. 1 and
OJ L 275, 10.10.1998, p. 1.

▼B

boundary air pollution sets legally binding limit values for the emission of particulate of 10 mg/m^3 for hazardous and medical waste incineration and for the emission of mercury of 0,05 mg/m^3 for hazardous waste incineration and 0,08 mg/m^3 for municipal waste incineration.

(4) The International Agency for Research on Cancer and the World Health Organisation indicate that some polycyclic aromatic hydrocarbons (PAHs) are carcinogenic. Therefore, Member States may set emission limit values for PAHs among other pollutants.

(5) In accordance with the principles of subsidiarity and proportionality as set out in Article 5 of the Treaty, there is a need to take action at the level of the Community. The precautionary principle provides the basis for further measures. This Directive confines itself to minimum requirements for incineration and co-incineration plants.

(6) Further, Article 174 provides that Community policy on the environment is to contribute to protecting human health.

(7) Therefore, a high level of environmental protection and human health protection requires the setting and maintaining of stringent operational conditions, technical requirements and emission limit values for plants incinerating or co-incinerating waste within the Community. The limit values set should prevent or limit as far as practicable negative effects on the environment and the resulting risks to human health.

(8) The Communication from the Commission on the review of the Community Strategy for waste management assigns prevention of waste the first priority, followed by reuse and recovery and finally by safe disposal of waste; in its Resolution of 24 February 1997 on a Community Strategy for waste management ([1]), the Council reiterated its conviction that waste prevention should be the first priority of any rational waste policy in relation to minimising waste production and the hazardous properties of waste.

(9) In its Resolution of 24 February 1997 the Council also underlines the importance of Community criteria concerning the use of waste, the need for appropriate emission standards to apply to incineration facilities, the need for monitoring measures to be envisaged for existing incineration plants, and the need for the Commission to consider amending Community legislation in relation to the incineration of waste with energy recovery in order to avoid large-scale movements of waste for incineration or co-incineration in the Community.

(10) It is necessary to set strict rules for all plants incinerating or co-incinerating waste in order to avoid transboundary movements to plants operating at lower costs due to less stringent environmental standards.

(11) The Communication from the Commission/energy for the future: renewable sources of energy/White paper for a Community strategy and action plan takes into consideration in particular the use of biomass for energy purposes.

(12) Council Directive 96/61/EC ([2]) sets out an integrated approach to pollution prevention and control in which all the aspects of an installations environmental performance are considered in an integrated manner. Installations for the incineration of municipal waste with a capacity exceeding 3 tonnes per hour and installations for the disposal or recovery of hazardous waste with a

([1]) OJ C 76, 11.3.1997, p. 1.
([2]) OJ L 257, 10.10.1996, p. 26.

▼B

capacity exceeding 10 tonnes per day are included within the scope of the said Directive.

(13) Compliance with the emission limit values laid down by this Directive should be regarded as a necessary but not sufficient condition for compliance with the requirements of Directive 96/61/EC. Such compliance may involve more stringent emissions limit values for the pollutants envisaged by this Directive, emission limit values for other substances and other media, and other appropriate conditions.

(14) Industrial experience in the implementation of techniques for the reduction of polluting emissions from incineration plants has been acquired over a period of ten years.

(15) Council Directives 89/369/EEC ([1]) and 89/429/EEC ([2]) on the prevention and reduction of air pollution from municipal waste incineration plants have contributed to the reduction and control of atmospheric emissions from incineration plants. More stringent rules should now be adopted and those Directives should accordingly be repealed.

(16) The distinction between hazardous and non-hazardous waste is based principally on the properties of waste prior to incineration or co-incineration but not on differences in emissions. The same emission limit values should apply to the incineration or co-incineration of hazardous and non-hazardous waste but different techniques and conditions of incineration or co-incineration and different monitoring measures upon reception of waste should be retained.

(17) Member States should take into account Council Directive 1999/30/EC of 22 April 1999 relating to limit values for sulphur dioxide, nitrogen dioxide and oxides of nitrogen, particulate matter and lead in ambient air ([3]) when implementing this Directive.

(18) The incineration of hazardous waste with a content of more than 1 % of halogenated organic substances, expressed as chlorine, has to comply with certain operational conditions in order to destroy as many organic pollutants such as dioxins as possible.

(19) The incineration of waste which contains chlorine generates flue gas residues. Such residues should be managed in a way that minimises their amount and harmfulness.

(20) There may be grounds to provide for specified exemptions to the emission limit values for some pollutants during a specified time limit and subject to specific conditions.

(21) Criteria for certain sorted combustible fraction of non-hazardous waste not suitable for recycling, should be developed in order to allow the authorisation of the reduction of the frequency of periodical measurements.

(22) A single text on the incineration of waste will improve legal clarity and enforceability. There should be a single directive for the incineration and co-incineration of hazardous and non-hazardous waste taking fully into account the substance and structure of Council Directive 94/67/EC of 16 December 1994 on the incineration of hazardous waste ([4]). Therefore Directive 94/67/EC should also be repealed.

([4]) OJ L 365, 31.12.1994, p. 34.

▼B

(23) Article 4 of Council Directive 75/442/EEC of 15 July 1975 on waste ([1]) requires Member States to take the necessary measures to ensure that waste is recovered or disposed of without endangering human health and without harming the environment. To this end, Articles 9 and 10 of that Directive provide that any plant or undertaking treating waste must obtain a permit from the competent authorities relating, *inter alia*, to the precautions to be taken.

(24) The requirements for recovering the heat generated by the incineration or co-incineration process and for minimising and recycling residues resulting from the operation of incineration or co-incineration plants will assist in meeting the objectives of Article 3 on the waste hierarchy of Directive 75/442/EEC.

(25) Incineration and co-incineration plants treating only animal waste regulated by Directive 90/667/EEC ([2]) are excluded from the scope of this Directive. The Commission intends to propose a revision to the requirements of Directive 90/667 with a view to providing for high environmental standards for the incineration and co-incineration of animal waste.

(26) The permit for an incineration or co-incineration plant shall also comply with any applicable requirements laid down in Directives 91/271/EEC ([3]), 96/61/EC, 96/62/EC ([4]), 76/464/EEC ([5]), and 1999/31/EC ([6]).

(27) The co-incineration of waste in plants not primarily intended to incinerate waste should not be allowed to cause higher emissions of polluting substances in that part of the exhaust gas volume resulting from such co-incineration than those permitted for dedicated incineration plants and should therefore be subject to appropriate limitations.

(28) High-standard measurement techniques are required to monitor emissions to ensure compliance with the emission limit values for the pollutants.

(29) The introduction of emission limit values for the discharge of waste water from the cleaning of exhaust gases from incineration and co-incineration plants will limit a transfer of pollutants from the air into water.

(30) Provisions should be laid down for cases where the emission limit values are exceeded as well as for technically unavoidable stoppages, disturbances or failures of the purification devices or the measurement devices.

(31) In order to ensure transparency of the permitting process throughout the Community the public should have access to information with a view to allowing it to be involved in decisions to be taken following applications for new permits and their subsequent updates. The public should have access to

([1]) OJ L 194, 25.7.1975, p. 39. Directive as last amended by Commission Decision 350/96/EC (OJ L 135, 6.6.1996, p. 32).

([2]) Council Directive 90/667/EEC of 27 November 1990, laying down the veterinary rules for the disposal and processing of animal waste, for its placing on the market and for the prevention of pathogens in feedstuffs of animal or fish origin and amending Directive 90/425/EEC (OJ L 363, 27.12.1990, p. 51). Directive as last amended by the Accession Act of 1994.

▼B

reports on the functioning and monitoring of the plants burning more than three tonnes per hour in order to be informed of their potential effects on the environment and human health.

(32) The Commission should present a report both to the European Parliament and the Council based on the experience of applying this Directive, the new scientific knowledge gained, the development of the state of technology, the progress achieved in emission control techniques, and on the experience made in waste management and operation of the plants and on the development of environmental requirements, with a view to proposing, as appropriate, to adapt the related provisions of this Directive.

(33) The measures necessary for the implementation of this Directive are to be adopted in accordance with Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission ([1]).

(34) Member States should lay down rules on penalties applicable to infringements of the provisions of this Directive and ensure that they are implemented; those penalties should be effective, proportionate and dissuasive,

HAVE ADOPTED THIS DIRECTIVE:

Article 1

Objectives

The aim of this Directive is to prevent or to limit as far as practicable negative effects on the environment, in particular pollution by emissions into air, soil, surface water and groundwater, and the resulting risks to human health, from the incineration and co-incineration of waste.

This aim shall be met by means of stringent operational conditions and technical requirements, through setting emission limit values for waste incineration and co-incineration plants within the Community and also through meeting the requirements of Directive 75/442/EEC.

Article 2

Scope

1. This Directive covers incineration and co-incineration plants.

2. The following plants shall however be excluded from the scope of this Directive:

(a) Plants treating only the following wastes:

(i) vegetable waste from agriculture and forestry,

(ii) vegetable waste from the food processing industry, if the heat generated is recovered,

(iii) fibrous vegetable waste from virgin pulp production and from production of paper from pulp, if it is co-incinerated at the place of production and the heat generated is recovered,

(iv) wood waste with the exception of wood waste which may contain halogenated organic compounds or heavy metals as a result of treatment with wood-preservatives or coating, and which includes in particular such wood waste originating from construction and demolition waste,

(v) cork waste,

([1]) OJ L 184, 17.7.1999, p. 23.

▼B

(vi) radioactive waste,

(vii) animal carcasses as regulated by Directive 90/667/EEC without prejudice to its future amendements amendments,

(viii) waste resulting from the exploration for, and the exploitation of, oil and gas resources from off-shore installations and incinerated on board the installation;

(b) Experimental plants used for research, development and testing in order to improve the incineration process and which treat less than 50 tonnes of waste per year.

Article 3

Definitions

For the purposes of this Directive:

1. 'waste' means any solid or liquid waste as defined in Article 1(a) of Directive 75/442/EEC;

2. 'hazardous waste' means any solid or liquid waste as defined in Article 1(4) of Council Directive 91/689/EEC of 12 December 1991 on hazardous waste ([1]).

   For the following hazardous wastes, the specific requirements for hazardous waste in this Directive shall not apply:

   (a) combustible liquid wastes including waste oils as defined in Article 1 of Council Directive 75/439/EEC of 16 June 1975 on the disposal of waste oils ([2]) provided that they meet the following criteria:

      (i) the mass content of polychlorinated aromatic hydrocarbons, e.g. polychlorinated biphenyls (PCB) or pentachlorinated phenol (PCP) amounts to concentrations not higher than those set out in the relevant Community legislation;

      (ii) these wastes are not rendered hazardous by virtue of containing other constituents listed in Annex II to Directive 91/689/EEC in quantities or in concentrations which are inconsistent with the achievement of the objectives set out in Article 4 of Directive 75/442/EEC; and

      (iii) the net calorific value amounts to at least 30 MJ per kilogramme,

   (b) any combustible liquid wastes which cannot cause, in the flue gas directly resulting from their combustion, emissions other than those from gasoil as defined in Article 1(1) of Directive 93/12/EEC ([3]) or a higher concentration of emissions than those resulting from the combustion of gasoil as so defined;

3. 'mixed municipal waste' means waste from households as well as commercial, industrial and institutional waste, which because of its nature and composition is similar to waste from households, but excluding fractions indicated in the Annex to Decision 94/3/EC ([4])

([1]) OJ L 377, 31.12.1991, p. 20. Directive as amended by Directive 94/31/EC. (OJ L 168, 2.7.1994, p. 28).
([2]) OJ L 194, 25.7.1975, p. 23. Directive as last amended by the Accession Act of 1994.
([3]) Council Directive 93/12/EEC of 23 March 1993 relating to the sulphur content of certain liquid fuels (OJ L 74, 27.3.1993, p. 81). Directive as last amended by Directive 1999/32/EC (OJ L 121,11.5.1999, p. 13).
([4]) Commission Decision 94/3/EC of 20 December 1993 establishing a list of wastes pursuant to Article 1a of Council Directive 75/442/EEC on waste (OJ L 5, 7.1.1994, p. 15).

▼B

under heading 20 01 that are collected separately at source and excluding the other wastes indicated under heading 20 02 of that Annex;

4. ‘incineration plant’ means any stationary or mobile technical unit and equipment dedicated to the thermal treatment of wastes with or without recovery of the combustion heat generated. This includes the incineration by oxidation of waste as well as other thermal treatment processes such as pyrolysis, gasification or plasma processes in so far as the substances resulting from the treatment are subsequently incinerated.

   This definition covers the site and the entire incineration plant including all incineration lines, waste reception, storage, on site pretreatment facilities, waste-fuel and air-supply systems, boiler, facilities for the treatment of exhaust gases, on-site facilities for treatment or storage of residues and waste water, stack, devices and systems for controlling incineration operations, recording and monitoring incineration conditions;

5. ‘co-incineration plant’ means any stationary or mobile plant whose main purpose is the generation of energy or production of material products and:

   — which uses wastes as a regular or additional fuel; or

   — in which waste is thermally treated for the purpose of disposal.

   If co-incineration takes place in such a way that the main purpose of the plant is not the generation of energy or production of material products but rather the thermal treatment of waste, the plant shall be regarded as an incineration plant within the meaning of point 4.

   This definition covers the site and the entire plant including all co-incineration lines, waste reception, storage, on site pretreatment facilities, waste-, fuel- and air-supply systems, boiler, facilities for the treatment of exhaust gases, on-site facilities for treatment or storage of residues and waste water, stack devices and systems for controlling incineration operations, recording and monitoring incineration conditions;

6. ►C1 ‘existing incineration or co-incineration plant’ means ◄ an incineration or co-incineration plant:

   (a) which is in operation and has a permit in accordance with existing Community legislation before 28 December 2002, or,

   (b) which is authorised or registered for incineration or co-incineration and has a permit issued before 28 December 2002 in accordance with existing Community legislation, provided that the plant is put into operation not later than 28 December 2003, or

   (c) which, in the view of the competent authority, is the subject of a full request for a permit, before 28 December 2002, provided that the plant is put into operation not later than 28 December 2004;

7. ‘nominal capacity’ means the sum of the incineration capacities of the furnaces of which an incineration plant is composed, as specified by the constructor and confirmed by the operator, with due account being taken, in particular, of the calorific value of the waste, expressed as the quantity of waste incinerated per hour;

8. ‘emission’ means the direct or indirect release of substances, vibrations, heat or noise from individual or diffuse sources in the plant into the air, water or soil;

9. ‘emission limit values’ means the mass, expressed in terms of certain specific parameters, concentration and/or level of an

▼B

emission, which may not be exceeded during one or more periods of time;

10. ‘dioxins and furans’ means all polychlorinated dibenzo-p-dioxins and dibenzofurans listed in Annex I;

11. ‘operator’ means any natural or legal person who operates or controls the plant or, where this is provided for in national legislation, to whom decisive economic power over the technical functioning of the plant has been delegated;

12. ‘permit’ means a written decision (or several such decisions) delivered by the competent authority granting authorisation to operate a plant, subject to certain conditions which guarantee that the plant complies with all the requirements of this Directive. A permit may cover one or more plants or parts of a plant on the same site operated by the same operator;

13. ‘residue’ means any liquid or solid material (including bottom ash and slag, fly ash and boiler dust, solid reaction products from gas treatment, sewage sludge from the treatment of waste waters, spent catalysts and spent activated carbon) defined as waste in Article 1(a) of Directive 75/442/EEC, which is generated by the incineration or co-incineration process, the exhaust gas or waste water treatment or other processes within the incineration or co-incineration plant.

Article 4

Application and permit

1. Without prejudice to Article 11 of Directive 75/442/EEC or to Article 3 of Directive 91/689/EEC, no incineration or co-incineration plant shall operate without a permit to carry out these activities.

2. Without prejudice to Directive 96/61/EC, the application for a permit for an incineration or co-incineration plant to the competent authority shall include a description of the measures which are envisaged to guarantee that:

(a) the plant is designed, equipped and will be operated in such a manner that the requirements of this Directive are taking into account the categories of waste to be incinerated;

(b) the heat generated during the incineration and co-incineration process is recovered as far as practicable e.g. through combined heat and power, the generating of process steam or district heating;

(c) the residues will be minimised in their amount and harmfulness and recycled where appropriate;

(d) the disposal of the residues which cannot be prevented, reduced or recycled will be carried out in conformity with national and Community legislation.

3. The permit shall be granted only if the application shows that the proposed measurement techniques for emissions into the air comply with Annex III and, as regards water, comply with Annex III paragraphs 1 and 2.

4. The permit granted by the competent authority for an incineration or co-incineration plant shall, in addition to complying with any applicable requirement laid down in Directives 91/271/EEC, 96/61/EC, 96/62/EC, 76/464/EEC and 1999/31/EC:

(a) list explicitly the categories of waste which may be treated. The list shall use at least the categories of waste set up in the European Waste Catalogue (EWC), if possible, and contain information on the quantity of waste, where appropriate;

▼B

(b) include the total waste incinerating or co-incinerating capacity of the plant;

(c) specify the sampling and measurement procedures used to satisfy the obligations imposed for periodic measurements of each air and water pollutants.

5. The permit granted by the competent authority to an incineration or co-incineration plant using hazardous waste shall in addition to paragraph 4:

(a) list the quantities of the different categories of hazardous waste which may be treated;

(b) specify the minimum and maximum mass flows of those hazardous wastes, their lowest and maximum calorific values and their maximum contents of pollutants, e.g. PCB, PCP, chlorine, fluorine, sulphur, heavy metals.

6. Without prejudice to the provisions of the Treaty, Member States may list the categories of waste to be mentioned in the permit which can be co-incinerated in defined categories of co-incineration plants.

7. Without prejudice to Directive 96/61/EC, the competent authority shall periodically reconsider and, where necessary, update permit conditions.

8. Where the operator of an incineration or co-incineration plant for non-hazardous waste is envisaging a change of operation which would involve the incineration or co-incineration of hazardous waste, this shall be regarded as a substantial change within the meaning of Article 2(10)(b) of Directive 96/61/EC and Article 12(2) of that Directive shall apply.

9. If an incineration or co-incineration plant does not comply with the conditions of the permit, in particular with the emission limit values for air and water, the competent authority shall take action to enforce compliance.

Article 5

Delivery and reception of waste

1. The operator of the incineration or co-incineration plant shall take all necessary precautions concerning the delivery and reception of waste in order to prevent or to limit as far as practicable negative effects on the environment, in particular the pollution of air, soil, surface water and groundwater as well as odours and noise, and direct risks to human health. These measures shall meet at least the requirements set out in paragraphs 3 and 4.

2. The operator shall determine the mass of each category of waste, if possible according to the EWC, prior to accepting the waste at the incineration or co-incineration plant.

3. Prior to accepting hazardous waste at the incineration or co-incineration plant, the operator shall have available information about the waste for the purpose of verifying, *inter alia*, compliance with the permit requirements specified in Article 4(5). This information shall cover:

(a) all the administrative information on the generating process contained in the documents mentioned in paragraph 4(a);

(b) the physical, and as far as practicable, chemical composition of the waste and all other information necessary to evaluate its suitability for the intended incineration process;

(c) the hazardous characteristics of the waste, the substances with which it cannot be mixed, and the precautions to be taken in handling the waste.

▼B

4. Prior to accepting hazardous waste at the incineration or co-incineration plant, at least the following reception procedures shall be carried out by the operator:

(a) the checking of those documents required by Directive 91/689/EEC and, where applicable, those required by Council Regulation (EEC) No 259/93 of 1 February 1993 on the supervision, and control of shipments of waste within, into and out of the European Community ([1]) and by dangerous-goods transport regulations;

(b) the taking of representative samples, unless inappropriate, e.g. for infectious clinical waste, as far as possible before unloading, to verify conformity with the information provided for in paragraph 3 by carrying out controls and to enable the competent authorities to identify the nature of the wastes treated. These samples shall be kept for at least one month after the incineration.

5. The competent authorities may grant exemptions from paragraphs 2, 3 and 4 for industrial plants and undertakings incinerating or co-incinerating only their own waste at the place of generation of the waste provided that the requirements of this Directive are met.

Article 6

Operating conditions

1. Incineration plants shall be operated in order to achieve a level of incineration such that the slag and bottom ashes Total Organic Carbon (TOC) content is less than 3 % or their loss on ignition is less than 5 % of the dry weight of the material. If necessary appropriate techniques of waste pretreatment shall be used.

Incineration plants shall be designed, equipped, built and operated in such a way that the gas resulting from the process is raised, after the last injection of combustion air, in a controlled and homogeneous fashion and even under the most unfavourable conditions, to a temperature of 850 °C, as measured near the inner wall or at another representative point of the combustion chamber as authorised by the competent authority, for two seconds. If hazardous wastes with a content of more than 1 % of halogenated organic substances, expressed as chlorine, are incinerated, the temperature has to be raised to 1 100 °C for at least two seconds.

Each line of the incineration plant shall be equipped with at least one auxiliary burner. This burner must be switched on automatically when the temperature of the combustion gases after the last injection of combustion air falls below 850 °C or 1 100 °C as the case may be. It shall also be used during plant start-up and shut-down operations in order to ensure that the temperature of 850 °C or 1 100 °C as the case may be is maintained at all times during these operations and as long as unburned waste is in the combustion chamber.

During start-up and shut-down or when the temperature of the combustion gas falls below 850 °C or 1 100 °C as the case may be, the auxiliary burner shall not be fed with fuels which can cause higher emissions than those resulting from the burning of gasoil as defined in Article 1(1) of Council Directive 75/716/EEC, liquefied gas or natural gas.

2. Co-incineration plants shall be designed, equipped, built and operated in such a way that the gas resulting from the co-incineration of waste is raised in a controlled and homogeneous fashion and even under the most unfavourable conditions, to a temperature of 850 °C for two seconds. If hazardous wastes with a content of more than 1 % of

([1]) OJ L 30, 6.2.1993, p. 1. Regulation as last amended by Commission Regulation (EC) No 2408/98 (OJ L 298, 7.11.1998, p. 19).

▼B

halogenated organic substances, expressed as chlorine, are co-incinerated, the temperature has to be raised to 1 100 °C.

3. Incineration and co-incineration plants shall have and operate an automatic system to prevent waste feed:

(a) at start-up, until the temperature of 850 °C or 1 100 °C as the case may be or the temperature specified according to paragraph 4 has been reached;

(b) whenever the temperature of 850 °C or 1 100 °C as the case may be or the temperature specified according to paragraph 4 is not maintained;

(c) whenever the continuous measurements required by this Directive show that any emission limit value is exceeded due to disturbances or failures of the purification devices.

4. Conditions different from those laid down in paragraph 1 and, as regards the temperature, paragraph 3 and specified in the permit for certain categories of waste or for certain thermal processes may be authorised by the competent authority, provided the requirements of this Directive are met. Member States may lay down rules governing these authorisations. The change of the operational conditions shall not cause more residues or residues with a higher content of organic pollutants compared to those residues which could be expected under the conditions laid down in paragraph 1.

Conditions different from those laid down in paragraph 2 and, as regards the temperature, paragraph 3 and specified in the permit for certain categories of waste or for certain thermal processes may be authorised by the competent authority, provided the requirements of this Directive are met. Member States may lay down rules governing these authorisations. Such authorisation shall be conditional upon at least the provisions for emission limit values set out in Annex V for total organic carbon and CO being complied with.

In the case of co-incineration of their own waste at the place of its production in existing bark boilers within the pulp and paper industry, such authorisation shall be conditional upon at least the provisions for emission limit values set out in Annex V for total organic carbon being complied with.

All operating conditions determined under this paragraph and the results of verifications made shall be communicated by the Member State to the Commission as part of the information provided in accordance with the reporting requirements.

5. Incineration and co-incineration plants shall be designed, equipped, built and operated in such a way as to prevent emissions into the air giving rise to significant ground-level air pollution; in particular, exhaust gases shall be discharged in a controlled fashion and in conformity with relevant Community air quality standards by means of a stack the height of which is calculated in such a way as to safeguard human health and the environment.

6. Any heat generated by the incineration or the co-incineration process shall be recovered as far as practicable.

7. Infectious clinical waste should be placed straight in the furnace, without first being mixed with other categories of waste and without direct handling.

8. The management of the incineration or the co-incineration plant shall be in the hands of a natural person who is competent to manage the plant.

▼B

Article 7

Air emission limit values

1. Incineration plants shall be designed, equipped, built and operated in such a way that the emission limit values set out in Annex V are not exceeded in the exhaust gas.

2. Co-incineration plants shall be designed, equipped, built and operated in such a way that the emission limit values determined according to or set out in Annex II are not exceeded in the exhaust gas.

If in a co-incineration plant more than 40 % of the resulting heat release comes from hazardous waste, the emission limit values set out in Annex V shall apply.

3. The results of the measurements made to verify compliance with the emission limit values shall be standardised with respect to the conditions laid down in Article 11.

4. In the case of co-incineration of untreated mixed municipal waste, the limit values will be determined according to Annex V, and Annex II will not apply.

5. Without prejudice to the provisions of the Treaty, Member States may set emission limit values for polycyclic aromatic hydrocarbons or other pollutants.

Article 8

Water discharges from the cleaning of exhaust gases

1. Waste water from the cleaning of exhaust gases discharged from an incineration or co-incineration plant shall be subject to a permit granted by the competent authorities.

2. Discharges to the aquatic environment of waste water resulting from the cleaning of exhaust gases shall be limited as far as practicable, at least in accordance with the emission limit values set in Annex IV.

3. Subject to a specific provision in the permit, the waste water from the cleaning of exhaust gases may be discharged to the aquatic environment after separate treatment on condition that:

(a) the requirements of relevant Community, national and local provisions are complied with in the form of emission limit values; and

(b) the mass concentrations of the polluting substances referred to in Annex IV do not exceed the emission limit values laid down therein.

4. The emission limit values shall apply at the point where waste waters from the cleaning of exhaust gases containing the polluting substances referred to in Annex IV are discharged from the incineration or co-incineration plant.

Where the waste water from the cleaning of exhaust gases is treated on site collectively with other on-site sources of waste water, the operator shall take the measurements referred to in Article 11:

(a) on the waste water stream from the exhaust gas cleaning processes prior to its input into the collective waste water treatment plant;

(b) on the other waste water stream or streams prior to its or their input into the collective waste water treatment plant;

(c) at the point of final waste water discharge, after the treatment, from the incineration plant or co-incineration plant.

The operator shall take appropriate mass balance calculations in order to determine the emission levels in the final waste water discharge that can

▼B

be attributed to the waste water arising from the cleaning of exhaust gases in order to check compliance with the emission limit values set out in Annex IV for the waste water stream from the exhaust gas cleaning process.

Under no circumstances shall dilution of waste water take place for the purpose of complying with the emission limit values set in Annex IV.

5. When waste waters from the cleaning of exhaust gases containing the polluting substances referred to in Annex IV are treated outside the incineration or co-incineration plant at a treatment plant intended only for the treatment of this sort of waste water, the emission limit values of Annex IV are to be applied at the point where the waste waters leave the treatment plant. If this off-site treatment plant is not only dedicated to treat waste water from incineration, the operator shall take the appropriate mass balance calculations, as provided for under paragraph 4(a), (b) and (c), in order to determine the emission levels in the final waste water discharge that can be attributed to the waste water arising from the cleaning of exhaust gases in order to check compliance with the emission limit values set out in Annex IV for the waste water stream from the exhaust gas cleaning process.

Under no circumstances shall dilution of waste water take place for the purpose of complying with the emission limit values set in Annex IV.

6. The permit shall:

(a) establish emission limit values for the polluting substances referred to in Annex IV, in accordance with paragraph 2 and in order to meet the requirements referred to in paragraph 3(a);

(b) set operational control parameters for waste water at least for pH, temperature and flow.

7. Incineration and co-incineration plant sites, including associated storage areas for wastes, shall be designed and in such a way as to prevent the unauthorised and accidental release of any polluting substances into soil, surface water and groundwater in accordance with the provisions provided for in relevant Community legislation. Moreover, storage capacity shall be provided for contaminated rainwater run-off from the incineration or co-incineration plant site or for contaminated water arising from spillage or fire-fighting operations.

The storage capacity shall be adequate to ensure that such waters can be tested and treated before discharge where necessary.

8. Without prejudice to the provisions of the Treaty, Member States may set emission limit values for polycyclic aromatic hydrocarbons or other pollutants.

Article 9

Residues

Residues resulting from the operation of the incineration or co-incineration plant shall be minimised in their amount and harmfulness. Residues shall be recycled, where appropriate, directly in the plant or outside in accordance with relevant Community legislation.

Transport and intermediate storage of dry residues in the form of dust, such as boiler dust and dry residues from the treatment of combustion gases, shall take place in such a way as to prevent dispersal in the environment e.g. in closed containers.

Prior to determining the routes for the disposal or recycling of the residues from incineration and co-incineration plants, appropriate tests shall be carried out to establish the physical and chemical characteristics and the polluting potential of the different incineration residues. The analysis shall concern the total soluble fraction and heavy metals soluble fraction.

▼B

Article 10

Control and monitoring

1. Measurement equipment shall be installed and techniques used in order to monitor the parameters, conditions and mass concentrations relevant to the incineration or co-incineration process.

2. The measurement requirements shall be laid down in the permit or in the conditions attached to the permit issued by the competent authority.

3. The appropriate installation and the functioning of the automated monitoring equipment for emissions into air and water shall be subject to control and to an annual surveillance test. Calibration has to be done by means of parallel measurements with the reference methods at least every three years.

4. The location of the sampling or measurement points shall be laid down by the competent authority.

5. Periodic measurements of the emissions into the air and water shall be carried out in accordance with Annex III, points 1 and 2.

Article 11

Measurement requirements

1. Member States shall, either by specification in the conditions of the permit or by general binding rules, ensure that paragraphs 2 to 12 and 17, as regards air, and paragraphs 9 and 14 to 17, as regards water, are complied with.

2. The following measurements of air pollutants shall be carried out in accordance with Annex III at the incineration and co-incineration plant:

(a) continuous measurements of the following substances: NO_x, provided that emission limit values are set, CO, total dust, TOC, HCl, HF, SO_2;

(b) continuous measurements of the following process operation parameters: temperature near the inner wall or at another representative point of the combustion chamber as authorised by the competent authority, concentration of oxygen, pressure, temperature and water vapour content of the exhaust gas;

(c) at least two measurements per year of heavy metals, dioxins and furans; one measurement at least every three months shall however be carried out for the first 12 months of operation. Member States may fix measurement periods where they have set emission limit values for polycyclic aromatic hydrocarbons or other pollutants.

3. The residence time as well as the minimum temperature and the oxygen content of the exhaust gases shall be subject to appropriate verification, at least once when the incineration or co-incineration plant is brought into service and under the most unfavourable operating conditions anticipated.

4. The continuous measurement of HF may be omitted if treatment stages for HCl are used which ensure that the emission limit value for HCl is not being exceeded. In this case the emissions of HF shall be subject to periodic measurements as laid down in paragraph 2(c).

5. The continuous measurement of the water vapour content shall not be required if the sampled exhaust gas is dried before the emissions are analysed.

6. Periodic measurements as laid down in paragraph 2(c) of HCl, HF and SO_2 instead of continuous measuring may be authorised in the

▼B

permit by the competent authority in incineration or co-incineration plants, if the operator can prove that the emissions of those pollutants can under no circumstances be higher than the prescribed emission limit values.

►M1 7. The reduction of the frequency of the periodic measurements for heavy metals from twice a year to once every two years and for dioxins and furans from twice a year to once a year may be authorised in the permit by the competent authority provided that the emissions resulting from co-incineration or incineration are below 50 % of the emission limit values determined in accordance with Annex II or Annex V respectively and that criteria for the requirements to be met are available. The Commission shall adopt measures establishing these criteria, based at least on the provisions of points (a) and (d) of the second subparagraph. Those measures, designed to amend non-essential elements of this Directive by supplementing it, shall be adopted in accordance with the regulatory procedure with scrutiny referred to in Article 17(2). ◄

Until 1 January 2005 the reduction of the frequency may be authorised even if no such criteria are available provided that:

(a) the waste to be co-incinerated or incinerated consists only of certain sorted combustible fractions of non-hazardous waste not suitable for recycling and presenting certain characteristics, and which is further specified on the basis of the assessment referred to in subparagraph (d);

(b) national quality criteria, which have been reported to the Commission, are available for these wastes;

(c) co-incineration and incineration of these wastes is in line with the relevant waste management plans referred to in Article 7 of Directive 75/442/EEC;

(d) the operator can prove to the competent authority that the emissions are under all circumstances significantly below the emission limit values set out in Annex II or Annex V for heavy metals, dioxins and furans; this assessment shall be based on information on the quality of the waste concerned and measurements of the emissions of the said pollutants;

(e) the quality criteria and the new period for the periodic measurements are specified in the permit; and

(f) all decisions on the frequency of measurements referred to in this paragraph, supplemented with information on the amount and quality of the waste concerned, shall be communicated on a yearly basis to the Commission.

8. The results of the measurements made to verify compliance with the emission limit values shall be standardised at the following conditions and for oxygen according to the formula as referred to in Annex VI:

(a) Temperature 273 K, pressure 101,3 kPa, 11 % oxygen, dry gas, in exhaust gas of incineration plants;

(b) Temperature 273 K, pressure 101,3 kPa, 3 % oxygen, dry gas, in exhaust gas of incineration of waste oil as defined in Directive 75/439/EEC;

(c) when the wastes are incinerated or co-incinerated in an oxygen-enriched atmosphere, the results of the measurements can be standardised at an oxygen content laid down by the competent authority reflecting the special circumstances of the individual case;

(d) in the case of co-incineration, the results of the measurements shall be standardised at a total oxygen content as calculated in Annex II.

When the emissions of pollutants are reduced by exhaust gas treatment in an incineration or co-incineration plant treating hazardous waste, the

▼B

standardisation with respect to the oxygen contents provided for in the first subparagraph shall be done only if the oxygen content measured over the same period as for the pollutant concerned exceeds the relevant standard oxygen content.

9. All measurement results shall be recorded, processed and presented in an appropriate fashion in order to enable the competent authorities to verify compliance with the permitted operating conditions and emission limit values laid down in this Directive in accordance with procedures to be decided upon by those authorities.

10. The emission limit values for air shall be regarded as being complied with if:

(a) — none of the daily average values exceeds any of the emission limit values set out in Annex V(a) or Annex II;

— 97 % of the daily average value over the year does not exceed the emission limit value set out in Annex V(e) first indent;

(b) either none of the half-hourly average values exceeds any of the emission limit values set out in Annex V(b), column A or, where relevant, 97 % of the half-hourly average values over the year do not exceed any of the emission limit values set out in Annex V(b), column B;

(c) none of the average values over the sample period set out for heavy metals and dioxins and furans exceeds the emission limit values set out in Annex V(c) and (d) or Annex II;

(d) the provisions of Annex V(e), second indent or Annex II, are met.

11. The half-hourly average values and the 10-minute averages shall be determined within the effective operating time (excluding the start-up and shut-off periods if no waste is being incinerated) from the measured values after having subtracted the value of the confidence interval specified in point 3 of Annex III. The daily average values shall be determined from those validated average values.

To obtain a valid daily average value no more than five half-hourly average values in any day shall be discarded due to malfunction or maintenance of the continuous measurement system. No more than ten daily average values per year shall be discarded due to malfunction or maintenance of the continuous measurement system.

12. The average values over the sample period and the average values in the case of periodical measurements of HF, HCl and SO_2 shall be determined in accordance with the requirements of Article 10(2) and (4) and Annex III.

▼M1

13. The Commission shall determine, as soon as appropriate measurement techniques are available within the Community, the date from which continuous measurements of the air emission limit values for heavy metals, dioxins and furans shall be carried out in accordance with Annex III. That measure, designed to amend non-essential elements of this Directive by supplementing it, shall be adopted in accordance with the regulatory procedure with scrutiny referred to in Article 17(2).

▼B

14. The following measurements shall be carried out at the point of waste water discharge:

(a) continuous measurements of the parameters referred to in Article 8(6)(b);

(b) spot sample daily measurements of total suspended solids; Member States may alternatively provide for measurements of a flow proportional representative sample over a period of 24 hours;

▼B

(c) at least monthly measurements of a flow proportional representative sample of the discharge over a period of 24 hours of the polluting substances referred to in Article 8(3) with respect to items 2 to 10 in Annex IV;

(d) at least every six months measurements of dioxins and furans; however one measurement at least every three months shall be carried out for the first 12 months of operation. Member States may fix measurement periods where they have set emission limit values for polycyclic aromatic hydrocarbons or other pollutants.

15. The monitoring of the mass of pollutants in the treated waste water shall be done in conformity with Community legislation and laid down in the permit as well as the frequency of the measurements.

16. The emission limit values for water shall be regarded as being complied with if:

(a) for total suspended solids (polluting substance number 1), 95 % and 100 % of the measured values do not exceed the respective emission limit values as set out in Annex IV;

(b) for heavy metals (polluting substances number 2 to 10) no more than one measurement per year exceeds the emission limit values set out in Annex IV; or, if the Member State provides for more than 20 samples per year, no more than 5 % of these samples exceed the emission limit values set out in Annex IV;

(c) for dioxins and furans (polluting substance 11), the twice-yearly measurements do not exceed the emission limit value set out in Annex IV.

17. Should the measurements taken show that the emission limit values for air or water laid down in this Directive have been exceeded, the competent authorities shall be informed without delay.

Article 12

Access to information and public participation

1. Without prejudice to Council Directive 90/313/EEC [1] and Directive 96/61/EC, applications for new permits for incineration and co-incineration plants shall be made available at one or more locations accessible to the public, such as local authority offices, for an appropriate period to enable it to comment on them before the competent authority reaches a decision. That decision, including at least a copy of the permit, and any subsequent updates, shall also be made available to the public.

2. For incineration or co-incineration plants with a nominal capacity of two tonnes or more per hour and notwithstanding Article 15(2) of Directive 96/61/EC, an annual report to be provided by the operator to the competent authority on the functioning and monitoring of the plant shall be made available to the public. This report shall, as a minimum requirement, give an account of the running of the process and the emissions into air and water compared with the emission standards in this Directive. A list of incineration or co-incineration plants with a nominal capacity of less than two tonnes per hour shall be drawn up by the competent authority and shall be made available to the public.

[1] Council Directive 90/313/EEC of 7 June 1990 on the freedom of access to information on the environment (OJ L 158, 23.6.1990, p. 56). Directive as last amended by the Accession Act of 1994.

▼B

Article 13

Abnormal operating conditions

1. The competent authority shall lay down in the permit the maximum permissible period of any technically unavoidable stoppages, disturbances, or failures of the purification devices or the measurement devices, during which the concentrations in the discharges into the air and the purified waste water of the regulated substances may exceed the prescribed emission limit values.

2. In the case of a breakdown, the operator shall reduce or close down operations as soon as practicable until normal operations can be restored.

3. Without prejudice to Article 6(3)(c), the incineration plant or co-incineration plant or incineration line shall under no circumstances continue to incinerate waste for a period of more than four hours uninterrupted where emission limit values are exceeded; moreover, the cumulative duration of operation in such conditions over one year shall be less than 60 hours. The 60-hour duration applies to those lines of the entire plant which are linked to one single flue gas cleaning device.

4. The total dust content of the emissions into the air of an incineration plant shall under no circumstances exceed 150 mg/m^3 expressed as a half-hourly average; moreover the air emission limit values for CO and TOC shall not be exceeded. All other conditions referred to in Article 6 shall be complied with.

Article 14

Review clause

Without prejudice to Directive 96/61/EC, the Commission shall submit a report to the European Parliament and the Council before 31 December 2008 based on experience of the application of this Directive, in particular for new plants, and on the progress achieved in emission control techniques and experience in waste management. Furthermore, the report shall be based on the development of the state of technology, of experience in the operation of the plants, of environmental requirements. This report will include a specific section on the application of Annex II.1.1. and in particular on the economic and technical feasibility for existing cement kilns as referred to in the footnote to Annex II.1.1. of respecting the NO_x emission limit value for new cement kilns set out in that Annex. The report shall, as appropriate, be accompanied by proposals for revision of the related provisions of this Directive. However, the Commission shall, if appropriate, propose an amendment for Annex II.3 before the said report, if major waste streams are directed to types of co-incineration plants other than those dealt with in Annex II.1 and II.2.

Article 15

Reporting

The reports on the implementation of this Directive shall be established in accordance with the procedure laid down in Article 5 of Council Directive 91/692/EEC. The first report shall cover at least the first full three-year period after 28 December 2002 and comply with the periods referred to in Article 17 of Directive 94/67/EC and in Article 16(3) of Directive 96/61/EC. To this effect, the Commission shall elaborate the appropriate questionnaire in due time.

▼M1

Article 16

Adaptation to technical progress or new findings

The Commission shall adopt measures designed to amend non-essential elements of this Directive and adapting Articles 10, 11 and 13 and Annexes I and III to technical progress or new findings concerning the health benefits of emission reductions in accordance with the regulatory procedure with scrutiny referred to in Article 17(2).

Article 17

Committee procedure

1. The Commission shall be assisted by a committee.

2. Where reference is made to this paragraph, Article 5a(1) to (4) and Article 7 of Decision 1999/468/EC shall apply, having regard to the provisions of Article 8 thereof.

▼B

Article 18

Repeal

The following shall be repealed as from 28 December 2005:

(a) Article 8(1) and the Annex to Directive 75/439/EEC;

(b) Directive 89/369/EEC;

(c) Directive 89/429/EEC;

(d) Directive 94/67/EC.

Article 19

Penalties

The Member States shall determine penalties applicable to breaches of the national provisions adopted pursuant to this Directive. The penalties thus provided for shall be effective, proportionate and dissuasive. The Member States shall notify those provisions to the Commission by 28 December 2002 at the latest and shall notify it without delay of any subsequent amendment affecting them.

Article 20

Transitional provisions

1. Without prejudice to the specific transitional provisions provided for in the Annexes to this Directive, the provisions of this Directive shall apply to existing plants as from 28 December 2005.

2. For new plants, i.e. plants not falling under the definition of ‘existing incineration or co-incineration plant’ in Article 3(6) or paragraph 3 of this Article, this Directive, instead of the Directives mentioned in Article 18, shall apply as from 28 December 2002.

3. Stationary or mobile plants whose purpose is the generation of energy or production of material products and which are in operation and have a permit in accordance with existing Community legislation where required and which start co-incinerating waste not later than 28 December 2004 are to be regarded as existing co-incineration plants.

▼B

Article 21

Implementation

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive not later than 28 December 2002. They shall forthwith inform the Commission thereof.

When Member States adopt those measures, they shall contain a reference to this Directive or be accompanied by such reference on the occasion of their official publication. The methods of making such reference shall be laid down by the Member States.

2. Member States shall communicate to the Commission the text of the provisions of domestic law which they adopt in the field governed by this Directive.

Article 22

Entry into force

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Communities*.

Article 23

Addressees

This Directive is addressed to the Member States.

▼B

ANNEX I

Equivalence factors for dibenzo-p-dioxins and dibenzofurans

For the determination of the total concentration (TE) of dioxins and furans, the mass concentrations of the following dibenzo-p-dioxins and dibenzofurans shall be multiplied by the following equivalence factors before summing:

		Toxic equivalence factor
2,3,7,8	— Tetrachlorodibenzodioxin (TCDD)	1
1,2,3,7,8	— Pentachlorodibenzodioxin (PeCDD)	0,5
1,2,3,4,7,8	— Hexachlorodibenzodioxin (HxCDD)	0,1

▼B

ANNEX II

DETERMINATION OF AIR EMISSION LIMIT VALUES FOR THE CO-INCINERATION OF WASTE

The following formula (mixing rule) is to be applied whenever a specific total emission limit value 'C' has not been set out in a table in this Annex.

The limit value for each relevant pollutant and carbon monoxide in the exhaust gas resulting from the co-incineration of waste shall be calculated as follows:

$$\frac{V_{waste} \times C_{waste} + V_{proc} \times C_{proc}}{V_{waste} + V_{proc1}} = C$$

V_{waste}: exhaust gas volume resulting from the incineration of waste only determined from the waste with the lowest calorific value specified in the permit and standardised at the conditions given by this Directive.

If the resulting heat release from the incineration of hazardous waste amounts to less than 10 % of the total heat released in the plant, V_{waste} must be calculated from a (notional) quantity of waste that, being incinerated, would equal 10 % heat release, the total heat release being fixed.

C_{waste}: emission limit values set for incineration plants in Annex V for the relevant pollutants and carbon monoxide.

V_{proc}: exhaust gas volume resulting from the plant process including the combustion of the authorised fuels normally used in the plant (wastes excluded) determined on the basis of oxygen contents at which the emissions must be standardised as laid down in Community or national regulations. In the absence of regulations for this kind of plant, the real oxygen content in the exhaust gas without being thinned by addition of air unnecessary for the process must be used. The standardisation at the other conditions is given in this Directive.

C_{proc}: emission limit values as laid down in the tables of this annex for certain industrial sectors or in case of the absence of such a table or such values, emission limit values of the relevant pollutants and carbon monoxide in the flue gas of plants which comply with the national laws, regulations and administrative provisions for such plants while burning the normally authorised fuels (wastes excluded). In the absence of these measures the emission limit values laid down in the permit are used. In the absence of such permit values the real mass concentrations are used.

C: total emission limit values and oxygen content as laid down in the tables of this annex for certain industrial sectors and certain pollutants or in case of the absence of such a table or such values total emission limit values for CO and the relevant pollutants replacing the emission limit values as laid down in specific Annexes of this Directive. The total oxygen content to replace the oxygen content for the standardisation is calculated on the basis of the content above respecting the partial volumes.

Member States may lay down rules governing the exemptions provided for in this Annex.

II.1. **Special provisions for cement kilns co-incinerating waste**

Daily average values (for continuous measurements) Sample periods and other measurement requirements as in Article 7. All values in mg/m^3 (Dioxins and furans ng/m^3). Half-hourly average values shall only be needed in view of calculating the daily average values.

The results of the measurements made to verify compliance with the emission limit values shall be standardised at the following conditions: Temperature 273 K, pressure 101,3 kPa, 10 % oxygen, dry gas.

▼B

II.1.1. *C — total emission limit values*

Pollutant	C
Total dust	30
HCI	10
HF	1
NO_x for existing plants	800
NO_x for new plants	500 ([1])
Cd + Tl	0,05
Hg	0,05
Sb+As+Pb+Cr+Co+Cu+Mn+Ni+V	0,5
Dioxins and furans	0,1

([1]) For the implementation of the NO_x emission limit values, cement kilns which are in operation and have a permit in accordance with existing Community legislation and which start co-incinerating waste after the date mentioned in Article 20(3) are not to be regarded as new plants.

Until 1 January 2008, exemptions for NO_x may be authorised by the competent authorities for existing wet process cement kilns or cement kilns which burn less than three tonnes of waste per hour, provided that the permit foresees a total emission limit value for NO_x of not more than 1200 mg/m^3.

Until 1 January 2008, exemptions for dust may be authorised by the competent authority for cement kilns which burn less than three tonnes of waste per hour, provided that the permit foresees a total emission limit value of not more than 50 mg/m^3.

II.1.2. *C — total emission limit values for SO_2 and TOC*

Pollutant	C
SO_2	50
TOC	10

Exemptions may be authorised by the competent authority in cases where TOC and SO_2 do not result from the incineration of waste.

II.1.3. *Emission limit value for CO*

Emission limit values for CO can be set by the competent authority.

II.2. **Special provisions for combustion plants co-incinerating waste**

II.2.1. *Daily average values*

▼M1

Where, for large combustion plants, more stringent emission limit values are set under Directive 2001/80/EC or will be set under other Community legislation, those emission limit values shall replace, for the plants and pollutants concerned, the emission limit values laid down in the following tables (Cproc). In that case, the Commission shall adapt those tables to the more stringent emission limit values. Those measures, designed to amend non-essential elements of this Directive, shall be adopted in accordance with the regulatory procedure with scrutiny referred to in Article 17(2), without delay.

▼B

Half-hourly average values shall only be needed in view of calculating the daily average values.

C_{proc}:

C_{proc} for solid fuels expressed in mg/Nm^3 (O_2 content 6 %):

▼B

Pollutants	< 50 MWth	50-100 MWth	100 to 300 MWth	> 300 MWth
SO_2				
general case		850	850 to 200 (linear decrease from 100 to 300 MWth)	200
indigenous fuels		or rate of desulphurisation ≥90%	or rate of desulphurisation ≥92%	or rate of desulphurisation ≥95%
NO_x		400	300	200
Dust	50	50	30	30

Until 1 January 2007 and without prejudice to relevant Community legislation, the emission limit value for NO_x does not apply to plants only co-incinerating hazardous waste.

Until 1 January 2008, exemptions for NO_x and SO_2 may be authorised by the competent authorities for existing co-incineration plants between 100 and 300 MWth using fluidised bed technology and burning solid fuels provided that the permit foresees a C_{proc} value of not more than 350 mg/Nm^3 for NO_x and not more than 850 to 400 mg/Nm^3 (linear decrease from 100 to 300 MWth) for SO_2.

C_{proc} for biomass expressed in mg/Nm^3 (O_2 content 6 %):

'Biomass' means: products consisting of any whole or part of a vegetable matter from agriculture or forestry, which can be used for the purpose of recovering its energy content as well as wastes listed in Article 2(2)(a)(i) to (v).

Pollutants	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2		200	200	200
NO_x		350	300	300
Dust	50	50	30	30

Until 1 January 2008, exemptions for NO_x may be authorised by the competent authorities for existing co-incineration plants between 100 and 300 MWth using fluidised bed technology and burning biomass provided that the permit foresees a C_{proc} value of not more than 350 mg/Nm^3.

C_{proc} for liquid fuels expressed in mg/Nm^3 (O_2 content 3 %):

Pollutants	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2		850	850 to 200 (linear decrease from 100 to 300 MWth)	200
NO_x		400	300	200
Dust	50	50	30	30

II.2.2. *C — total emission limit values*

C expressed in mg/Nm^3 (O_2 content 6 %). All average values over the sample period of a minimum of 30 minutes and a maximum of 8 hours:

Pollutant	C
Cd + Tl	0,05
Hg	0,05
Sb+As+Pb+Cr+Co+Cu+Mn+Ni+V	0,5

C expressed in ng/Nm^3 (O_2 content 6 %). All average values measured over the sample period of a minimum of 6 hours and a maximum of 8 hours:

▼B

Pollutant	C
Dioxins and furans	0,1

II.3. **Special provisions for industrial sectors not covered under II.1 or II.2 co-incinerating waste**

II.3.1. *C — total emission limit values:*

C expressed in ng/Nm^3. All average values measured over the sample period of a minimum of 6 hours and a maximum of 8 hours:

Pollutant	C
Dioxins and furans	0,1

C expressed in mg/Nm^3. All average values over the sample period of a minimum of 30 minutes and a maximum of 8 hours:

Pollutant	C
Cd + Tl	0,05
Hg	0,05

▼B

ANNEX III

Measurement techniques

1. Measurements for the determination of concentrations of air and water polluting substances have to be carried out representatively.

2. Sampling and analysis of all pollutants including dioxins and furans as well as reference measurement methods to calibrate automated measurement systems shall be carried out as given by CEN-standards. If CEN standards are not available, ISO standards, national or international standards which will ensure the provision of data of an equivalent scientific quality shall apply.

3. At the daily emission limit value level, the values of the 95 % confidence intervals of a single measured result shall not exceed the following percentages of the emission limit values:

Carbon monoxide:	10 %
Sulphur dioxide:	20 %
Nitrogen dioxide:	20 %
Total dust:	30 %
Total organic carbon:	30 %
Hydrogen chloride:	40 %
Hydrogen fluoride:	40 %.

▼B

ANNEX IV

Emission limit values for discharges of waste water from the cleaning of exhaust gases

Polluting substances	Emission limit values expressed in mass concentrations for unfiltered samples	
1. Total suspended solids as defined by Directive 91/271/EEC	95% / $30 mg/l$	100% / $45 mg/l$
2. Mercury and its compounds, expressed as mercury (Hg)	0,03 mg/l	
3. Cadmium and its compounds, expressed as cadmium (Cd)	0,05 mg/l	
4. Thallium and its compounds, expressed as thallium (Tl)	0,05 mg/l	
5. Arsenic and its compounds, expressed as arsenic (As)	0,15 mg/l	
6. Lead and its compounds, expressed as lead (Pb)	0,2 mg/l	
7. Chromium and its compounds, expressed as chromium (Cr)	0,5 mg/l	
8. Copper and its compounds, expressed as copper (Cu)	0,5 mg/l	
9. Nickel and its compounds, expressed as nickel (Ni)	0,5 mg/l	
10. Zinc and its compounds, expressed as zinc (Zn)	1,5 mg/l	
11. Dioxins and furans, defined as the sum of the individual dioxins and furans evaluated in accordance with Annex I	►C1 0,3 ng/l ◄	

Until 1 January 2008, exemptions for total suspended solids may be authorised by the competent authority for existing incineration plants provided the permit foresees that 80 % of the measured values do not exceed 30 mg/l and none of them exceed 45 mg/l.

▼B

ANNEX V

AIR EMISSION LIMIT VALUES

(a) **Daily average values**

Total dust	10 mg/m^3
Gaseous and vaporous organic substances, expressed as total organic carbon	10 mg/m^3
Hydrogen chloride (HCl)	10 mg/m^3
Hydrogen fluoride (HF)	1 mg/m^3
Sulphur dioxide (SO_2)	50 mg/m^3
Nitrogen monoxide (NO) and nitrogen dioxide (NO_2) expressed as nitrogen dioxide for existing incineration plants with a nominal capacity exceeding 6 tonnes per hour or new incineration plants	200 mg/m^3 (*)
Nitrogen monoxide (NO) and nitrogen dioxide (NO_2), expressed as nitrogen dioxide for existing incineration plants with a nominal capacity of 6 tonnes per hour or less	400 mg/m^3 (*)

(*) Until 1 January 2007 and without prejudice to relevant (Community) legislation the emission limit value for NO_x does not apply to plants only incinerating hazardous waste.

Exemptions for NO_x may be authorised by the competent authority for existing incineration plants:

— with a nominal capacity of 6 tonnes per hour, provided that the permit foresees the daily average values do not exceed 500 mg/m^3 and this until 1 January 2008,

— with a nominal capacity of >6 tonnes per hour but equal or less than 16 tonnes per hour, provided the permit foresees the daily average values do not exceed 400 mg/m^3 and this until 1 January 2010,

— with a nominal capacity of >16 tonnes per hour but <25 tonnes per hour and which do not produce water discharges, provided that the permit foresees the daily average values do not exceed 400 mg/m^3 and this until 1 January 2008.

Until 1 January 2008, exemptions for dust may be authorised by the competent authority for existing incinerating plants, provided that the permit foresees the daily average values do not exceed 20 mg/m^3.

(b) **Half-hourly average values**

	(100 %) A	(97 %) B
Total dust	30 mg/m^3	10 mg/m^3
Gaseous and vaporous organic substances, expressed as total organic carbon	20 mg/m^3	10 mg/m^3
Hydrogen chloride (HCl)	60 mg/m^3	10 mg/m^3
Hydrogen fluoride (HF)	4 mg/m^3	2 mg/m^3
Sulphur dioxide (SO_2)	200 mg/m^3	50 mg/m^3
Nitrogen monoxide (NO) and nitrogen dioxide (NO_2), expressed as nitrogen dixoide for existing incineration plants with a nominal capacity exceeding 6 tonnes per hour or new incineration plants	400 mg/m^3 (*)	200 mg/m^3 (*)

(*) Until 1 January 2007 and without prejudice to relevant Community legislation the emission limit value for NO_x does not apply to plants only incinerating hazardous waste.

▼B

Until 1 January 2010, exemptions for NO_x may be authorised by the competent authority for existing incineration plants with a nominal capacity between 6 and 16 tonnes per hour, provided the half-hourly average value does not exceed 600 mg/m^3 for column A or 400 mg/m^3 for column B.

(c) **All average values over the sample period of a minimum of 30 minutes and a maximum of 8 hours**

Cadmium and its compounds, expressed as cadmium (Cd)		
Thallium and its compounds, expressed as thallium (Tl)	total 0,05 mg/m^3	total 0,1 mg/m^3 (*)
Mercury and its compounds, expressed as mercury (Hg)	0,05 mg/m^3	0,1 mg/m^3 (*)
Antimony and its compounds, expressed as antimony (Sb)		
Arsenic and its compounds, expressed as arsenic (As)		
Lead and its compounds, expressed as lead (Pb)		
Chromium and its compounds, expressed as chromium (Cr)		
Cobalt and its compounds, expressed as cobalt (Co)	total 0,5 mg/m^3	total 1 mg/m^3 (*)
Copper and its compounds, expressed as copper (Cu)		
Manganese and its compounds, expressed as manganese (Mn)		
Nickel and its compounds, expressed as nickel (Ni)		
Vanadium and its compounds, expressed as vanadium (V)		

(*) Until 1 January 2007 average values for existing plants for which the permit to operate has been granted before 31 December 1996, and which incinerate hazardous waste only.

These average values cover also gaseous and the vapour forms of the relevant heavy metal emissions as well as their compounds.

(d) **Average values shall be measured over a sample period of a minimum of 6 hours and a maximum of 8 hours. The emission limit value refers to the total concentration of dioxins and furans calculated using the concept of toxic equivalence in accordance with Annex I.**

Dioxins and furans	0,1 ng/m^3

(e) **The following emission limit values of carbon monoxide (CO) concentrations shall not be exceeded in the combustion gases (excluding the start-up and shut-down phase):**

— 50 milligrams/m^3 of combustion gas determined as daily average value;

— 150 milligrams/m^3 of combustion gas of at least 95 % of all measurements determined as 10-minute average values or 100 mg/m^3 of combustion gas of all measurements determined as half-hourly average values taken in any 24-hour period.

Exemptions may be authorised by the competent authority for incineration plants using fluidised bed technology, provided that the permit foresees an emission limit value for carbon monoxide (CO) of not more than 100 mg/m^3 as an hourly average value.

(f) **Member States may lay down rules governing the exemptions provided for in this Annex.**

▼B

ANNEX VI

Formula to calculate the emission concentration at the standard percentage oxygen concentration

$$E_S = \frac{21 - O_S}{21 - O_M} \times E_M$$

E_S = calculated emission concentration at the standard percentage oxygen concentration

E_M = measured emission concentration

O_S = standard oxygen concentration

O_M = measured oxygen concentration

COUNCIL DIRECTIVE 1999/13/EC

of 11 March 1999

on the limitation of emissions of volatile organic compounds due to the use of organic solvents in certain activities and installations

THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 130s(1) thereof,

Having regard to the proposal from the Commission ([1]),

Having regard to the opinion of the Economic and Social Committee ([2]),

Acting in accordance with the procedure laid down in Article 189c of the Treaty ([3]),

(1) Whereas the European Community action programme on the environment approved by the Council and the representatives of the Governments of the Member States meeting within the Council by resolutions of 22 November 1973 ([4]), 17 May 1977 ([5]), 7 February 1983 ([6]), 19 October 1987 ([7]) and 1 February 1993 ([8]) stresses the importance of the prevention and reduction of air pollution;

(2) Whereas in particular the resolution of 19 October 1987 emphasises the importance of Community action to concentrate, *inter alia*, on implementation of appropriate standards in order to ensure a high level of public health and environmental protection;

(3) Whereas the European Community and its Member States are parties to the Protocol to the 1979 Convention on Long-Range Transboundary Air Pollution concerning the control of emissions of volatile organic compounds in order to reduce their transboundary fluxes and the fluxes of the resulting secondary photochemical oxidant products so as to protect human health and the environment from adverse effects;

(4) Whereas pollution due to volatile organic compounds in one Member State often influences the air and water of other Member States; whereas, in accordance with Article 130r of the Treaty, action at Community level is necessary;

(5) Whereas, because of their characteristics, the use of organic solvents in certain activities and installations gives rise to emissions of organic compounds into the air which can be harmful for public health and/or contributes to the local and transboundary formation of photochemical oxidants in the boundary layer of the troposphere which cause damage

([1]) OJ C 99, 26.3.1997, p. 32.
([2]) OJ C 287, 22.9.1997, p. 55.
([3]) Opinion of the European Parliament of 14 January 1998 (OJ C 34, 2.2.1998, p. 75), Council Common Position of 16 June 1998 (OJ C 248, 7.8.1998, p. 1) and Decision of the European Parliament of 21 October 1998 (OJ C 341, 9.11.1998, p. 70).
([4]) OJ C 112, 20.12.1973, p. 1.
([5]) OJ C 139, 13.6.1977, p. 1.
([6]) OJ C 46, 17.2.1983, p. 1.
([7]) OJ C 328, 7.12.1987, p. 1.
([8]) OJ C 138, 1.2.1993, p. 1.

▼B

to natural resources of vital environmental and economic importance and, under certain exposure conditions, has harmful effects on human health;

(6) Whereas the high incidence of high tropospheric ozone concentrations in recent years has triggered widespread concern regarding the impact on public health and the environment;

(7) Whereas, therefore, preventive action is required to protect public health and the environment against the consequences of particularly harmful emissions from the use of organic solvents and to guarantee citizens the right to a clean and healthy environment;

(8) Whereas emissions of organic compounds can be avoided or reduced in many activities and installations because potentially less harmful substitutes are available or will become available within the coming years; whereas, where appropriate substitutes are not available, other technical measures should be taken to reduce emissions into the environment as much as economically and technically feasible;

(9) Whereas the use of organic solvents and the emissions of organic compounds which have the most serious effects on public health should be reduced as much as technically feasible;

(10) Whereas installations and processes which fall under this Directive should at least be registered if they are not subject to authorisation under Community or national legislation;

(11) Whereas existing installations and activities should, where appropriate, be adapted so that within an appropriate period they meet the requirements established for new installations and activities; whereas that period should be consistent with the timetable for compliance of Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control ([1]);

(12) Whereas the relevant parts of existing installations which undergo substantial change must, as a matter of principle, meet the new installation standards for the substantially changed equipment;

(13) Whereas organic solvents are used by many different types of installations and activities so that, in addition to general requirements, specific requirements should be defined and, at the same time, thresholds for the size of the installations or activities which have to comply with this Directive;

(14) Whereas a high level of environmental protection requires the setting and achievement of emission limits for organic compounds and appropriate operating conditions, in accordance with the principle of best available techniques, for certain installations and activities using organic solvents within the Community;

(15) Whereas in some cases Member States may exempt operators from complying with the emission limit values because other measures, such as the use of low-solvent or solvent-free

([1]) OJ L 257, 10.10.1996, p. 26.

▼B

products or techniques, provide alternative means of achieving equivalent emission reductions;

(16) Whereas emission-limiting measures adopted before the entry into force of this Directive should be taken into account in an appropriate way;

(17) Whereas alternative approaches to reduction may allow the objectives of this Directive to be achieved more effectively than by implementing uniform emission limit values; whereas, therefore, Member States may exempt existing installations from compliance with the emission limits if they implement a national plan, which will, within the timetable for implementation of this Directive, lead to an at least equal reduction in emissions of organic compounds from these activities and installations;

(18) Whereas existing installations falling under Directive 96/61/EC which are covered by a national plan can under no circumstances be exempted from the provisions of that Directive, including Article 9(4) thereof;

(19) Whereas in many cases small and medium-sized, new and existing installations may be allowed to comply with somewhat less stringent requirements to maintain their competitiveness;

(20) Whereas for dry cleaning a zero threshold is appropriate, subject to specified exemptions;

(21) Whereas monitoring of emissions is required, including the application of measurement techniques, to assess the mass concentrations or the quantity of the pollutants whose release into the environment is permitted;

(22) Whereas operators should reduce emissions of organic solvents, including fugitive emissions, and of organic compounds; whereas a solvent management plan is an important tool to verify this; whereas, although guidance may be given, the solvent management plan is not developed to the stage where a Community methodology can be established;

(23) Whereas Member States have to establish a procedure to be followed and measures to be taken where emission limitations are exceeded;

(24) Whereas the Commission and the Member States should collaborate in order to ensure that information on the implementation of this Directive and on the progress of substitution options is exchanged,

HAS ADOPTED THIS DIRECTIVE:

Article 1

Purpose and scope

The purpose of this Directive is to prevent or reduce the direct and indirect effects of emissions of volatile organic compounds into the environment, mainly into air, and the potential risks to human health,

▼B

by providing measures and procedures to be implemented for the activities defined in Annex I, in so far as they are operated above the solvent consumption thresholds listed in Annex IIA.

Article 2

Definitions

For the purposes of this Directive:

1. *installation* shall mean a stationary technical unit where one or more activities falling within the scope defined in Article 1 are carried out, and any other directly associated activities which have a technical connection with the activities carried out on that site and which could have an effect on emissions;

2. *existing installation* shall mean an installation in operation or, in accordance with legislation existing before the date on which this Directive is brought into effect, an installation which is authorised or registered or, in the view of the competent authority, the subject of a full request for authorisation, provided that the installation is put into operation no later than one year after the date on which this Directive is brought into effect;

3. *small installation* shall mean an installation which falls within the lower threshold band of items 1, 3, 4, 5, 8, 10, 13, 16 or 17 of Annex IIA or for the other activities of Annex IIA which have a solvent consumption of less than 10 tonnes/year;

4. *substantial change*
   — for an installation falling within the scope of Directive 96/61/EC, shall have the definition specified in that Directive,

   — for a small installation, shall mean a change of the nominal capacity leading to an increase of emissions of volatile organic compounds of more than 25 %. Any change that may have, in the opinion of the competent authority, significant negative effects on human health or the environment is also a substantial change,

   — for all other installations, shall mean a change of the nominal capacity leading to an increase of emissions of volatile organic compounds of more than 10 %. Any change that may have, in the opinion of the competent authority, significant negative effects on human health or the environment is also a substantial change;

5. *competent authority* shall mean the authority or authorities or bodies responsible under the legal provisions of the Member States for carrying out the obligations arising from this Directive;

6. *operator* shall mean any natural or legal person who operates or controls the installation or, where this is provided for in national legislation, to whom decisive economic power over the technical functioning of the installation has been delegated;

7. *authorisation* shall mean a written decision by which the competent authority grants permission to operate all or part of an installation;

▼B

8. *registration* shall mean a procedure, specified in a legal act, involving at least notification to the competent authority by the operator of the intention to operate an installation or activity falling within the scope of this Directive;

9. *emission* shall mean any discharge of volatile organic compounds from an installation into the environment;

10. *fugitive emissions* shall mean any emissions not in waste gases of volatile organic compounds into air, soil and water as well as, unless otherwise stated in Annex IIA, solvents contained in any products. They include uncaptured emissions released to the outside environment via windows, doors, vents and similar openings;

11. *waste gases* shall mean the final gaseous discharge containing volatile organic compounds or other pollutants, from a stack or abatement equipment into air. The volumetric flow rates shall be expressed in m^3/h at standard conditions;

12. *total emissions* shall mean the sum of fugitive emissions and emissions in waste gases;

13. *emission limit value* shall mean the mass of volatile organic compounds, expressed in terms of certain specific parameters, concentration, percentage and/or level of an emission, calculated at standard conditions, N, which may not be exceeded during one or more periods of time;

14. *substances* shall mean any chemical element and its compounds, as they occur in the natural state or as produced by industry, whether in solid or liquid or gaseous form;

15. ►**M3** *mixture* ◄ shall mean mixtures or solutions composed of two or more substances;

16. *organic compound* shall mean any compound containing at least the element carbon and one or more of hydrogen, halogens, oxygen, sulphur, phosphorus, silicon or nitrogen, with the exception of carbon oxides and inorganic carbonates and bicarbonates;

17. *volatile organic compound (VOC)* shall mean any organic compound having at 293,15 K a vapour pressure of 0,01 kPa or more, or having a corresponding volatility under the particular conditions of use. For the purpose of this Directive, the fraction of creosote which exceeds this value of vapour pressure at 293,15 K shall be considered as a VOC;

18. *organic solvent* shall mean any VOC which is used alone or in combination with other agents, and without undergoing a chemical change, to dissolve raw materials, products or waste materials, or is used as a cleaning agent to dissolve contaminants, or as a dissolver, or as a dispersion medium, or as a viscosity adjuster, or as a surface tension adjuster, or a plasticiser, or as a preservative;

19. *halogenated organic solvent* shall mean an organic solvent which contains at least one atom of bromine, chlorine, fluorine or iodine per molecule;

▼B

20. *coating* shall mean any ►M3 mixture ◄, including all the organic solvents or ►M3 mixtures ◄ containing organic solvents necessary for its proper application, which is used to provide a decorative, protective or other functional effect on a surface;

21. *adhesive* shall mean any ►M3 mixture ◄, including all the organic solvents or ►M3 mixtures ◄ containing organic solvents necessary for its proper application, which is used to adhere separate parts of a product;

22. *ink* shall mean a ►M3 mixture ◄, including all the organic solvents or ►M3 mixtures ◄ containing organic solvents necessary for its proper application, which is used in a printing activity to impress text or images on to a surface;

23. *varnish* shall mean a transparent coating;

24. *consumption* shall mean the total input of organic solvents into an installation per calendar year, or any other 12-month period, less any VOCs that are recovered for reuse;

25. *input* shall mean the quantity of organic solvents and their quantity in ►M3 mixtures ◄ used when carrying out an activity, including the solvents recycled inside and outside the installation, and which are counted every time they are used to carry out the activity;

26. *reuse of organic solvents* shall mean the use of organic solvents recovered from an installation for any technical or commercial purpose and including use as a fuel but excluding the final disposal of such recovered organic solvent as waste;

27. *mass flow* shall mean the quantity of VOCs released, in unit of mass/hour;

28. *nominal capacity* shall mean the maximum mass input of organic solvents by an installation averaged over one day, if the installation is operated under conditions of normal operation at its design output;

29. *normal operation* shall mean all periods of operation of an installation or activity except start-up and shut-down operations and maintenance of equipment;

30. *contained conditions* shall mean conditions under which an installation is operated such that the VOCs released from the activity are collected and discharged in a controlled way either via a stack or abatement equipment and are therefore not entirely fugitive;

31. *standard conditions* shall mean a temperature of 273,15 K and a pressure of 101,3 kPa;

32. *average over 24 hours* shall mean the arithmetic average of all valid readings taken during the 24-hour period of normal operation;

▼B

33. *start-up and shut-down operations* shall mean operations whilst bringing an activity, an equipment item or a tank into or out of service or into or out of an idling state. Regularly oscillating activity phases are not to be considered as start-ups and shut-downs.

Article 3

Obligations applying to new installations

Member States shall adopt the necessary measures to ensure that:

1. all new installations comply with Articles 5, 8 and 9;

2. all new installations not covered by Directive 96/61/EC are registered or undergo authorisation before being put into operation.

Article 4

Obligations applying to existing installations

Without prejudice to Directive 96/61/EC, Member States shall adopt the necessary measures to ensure that:

1. existing installations comply with Articles 5, 8 and 9 no later than 31 October 2007;

2. all existing installations must have been registered or authorised by 31 October 2007 at the latest;

3. those installations to be authorised or registered using the reduction scheme of Annex IIB notify this to the competent authorities by 31 October 2005 at the latest;

4. where an installation:

   — undergoes a substantial change, or

   — comes within the scope of this Directive for the first time following a substantial change,

   that part of the installation which undergoes the substantial change shall be treated either as a new installation or as an existing installation, provided that the total emissions of the whole installation do not exceed those that would have resulted had the substantially changed part been treated as a new installation.

Article 5

Requirements

1. Member States shall take the appropriate measures, either by specification in the conditions of the authorisation or by general binding rules to ensure that paragraphs 2 to 12 are complied with.

2. All installations shall comply with:

(a) either the emission limit values in waste gases and the fugitive emission values, or the total emission limit values, and other requirements laid down in Annex IIA;

or

(b) the requirements of the reduction scheme specified in Annex IIB.

▼B

3. (a) For fugitive emissions, Member States shall apply fugitive emission values to installations as an emission limit value. However, where it is demonstrated to the satisfaction of the competent authority that for an individual installation this value is not technically and economically feasible, the competent authority can make an exception for such an individual installation provided that significant risks to human health or the environment are not to be expected. For each derogation, the operator must demonstrate to the satisfaction of the competent authority that the best available technique is being used;

(b) activities which cannot be operated under contained conditions may be exempted from the controls of Annex IIA, when this possibility is explicitly mentioned in that Annex. The reduction scheme of Annex IIB is then to be used, unless it is demonstrated to the satisfaction of the competent authority that this option is not technically and economically feasible. In this case, the operator must demonstrate to the satisfaction of the competent authority that the best available technique is being used.

Member States shall report to the Commission on the derogation concerning paragraphs (a) and (b) in accordance with Article 11.

4. For installations not using the reduction scheme, any abatement equipment installed after the date on which this Directive is brought into effect shall meet all the requirements of Annex IIA.

5. Installations where two or more activities are carried out, each of which exceeds the thresholds in Annex IIA shall:

(a) as regards the substances specified in paragraphs 6, 7 and 8, meet the requirements of those paragraphs for each activity individually;

(b) as regards all other substances, either:

(i) meet the requirements of paragraph 2 for each activity individually; or

(ii) have total emissions not exceeding those that would have resulted had point (i) been applied.

▼M3

6. Substances or mixtures which, because of their content of VOCs classified as carcinogens, mutagens or toxic to reproduction under Regulation (EC) No 1272/2008 of the European Parliament and of the Council of 16 December 2008 on classification, labelling and packaging of substances and mixtures [1] are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F or the risk phrases R45, R46, R49, R60 or R61 shall be replaced, as far as possible and by taking into account the guidance referred to in Article 7(1), by less harmful substances or mixtures within the shortest possible time.

▼B

7. For discharges of the VOCs referred to in paragraph 6, where the mass flow of the sum of the compounds causing the labelling referred to in that paragraph is greater than, or equal to, 10 g/h, an emission limit value of 2 mg/Nm^3 shall be complied with. The emission limit value refers to the mass sum of the individual compounds.

[1] OJ L 353, 31.12.2008, p. 1.

▼B

8. For discharges of halogenated VOCs which are assigned ►M3 the risk phrases R40 or R68 ◄, where the mass flow of the sum of the compounds causing ►M3 the labelling R40 or R68 ◄ is greater than, or equal to, 100 g/h, an emission limit value of 20 mg/Nm^3 shall be complied with. The emission limit value refers to the mass sum of the individual compounds.

The discharge of VOCs referred to in paragraphs 6 and 8 shall be controlled as emissions from an installation under contained conditions as far as technically and economically feasible to safeguard public health and the environment.

9. Discharges of those VOCs which, after the entry into force of this Directive, are assigned or need to carry one of the risk phrases mentioned in paragraphs 6 and 8, shall have to comply with the emission limit values mentioned in paragraphs 7 and 8 respectively, within the shortest possible time.

10. All appropriate precautions shall be taken to minimise emissions during start-up and shut-down.

11. Existing installations which operate existing abatement equipment and comply with the following emission limit values:

— 50 mg C/Nm^3 in the case of incineration,

— 150 mg C/Nm^3 in the case of any other abatement equipment,

shall be exempt from the waste gases emission limit values in the table in Annex IIA for a period of 12 years after the date referred to in Article 15, provided the total emissions of the whole installation do not exceed those that would have resulted had all the requirements of the table been met.

12. Neither the reduction scheme nor the application of paragraph 11 nor Article 6 exempt installations discharging substances specified in paragraphs 6, 7 and 8 from fulfilling the requirements of those paragraphs.

13. Where a risk assessment is carried out in accordance with Council Regulation (EEC) No 793/93 ([1]) and Commission Regulation (EC) No 1488/94 ([2]) or Council Directive 67/548/EEC and Commission Directive 93/67/EEC ([3]) of any of the substances causing ►M3 the risk phrases R40, R68, R60 or R61 ◄ which are controlled under this Directive, the Commission shall consider the conclusions of the risk assessment and shall take the necessary measures as appropriate.

Article 6

National plans

1. Without prejudice to Directive 96/61/EC, Member States may define and implement national plans for reducing emissions from the activities and industrial installations covered by Article 1, excluding activities 4 and 11 of Annex IIA. None of the other activities may be excluded from the scope of this Directive by means of a national plan. These plans shall result in a reduction of the annual emissions of VOCs from existing installations covered by this Directive by at least the same amount and within the same time frame as would have been achieved

([1]) OJ L 84, 5.4.1993, p. 1.
([2]) OJ L 161, 29.6.1994, p. 3.
([3]) OJ L 227, 8.9.1993, p. 9.

▼B

by applying the emission limits under Article 5(2) and (3) and Annex II, during the validity period of the national plan. The national plan, if necessary updated, will be resubmitted to the Commission every three years.

A Member State which defines and implements national plans may exempt existing installations from implementation of the emission limit values laid down in Article 5(2) and (3) and Annex II. A national plan may under no circumstances exempt an existing installation from the provisions laid down in Directive 96/61/EC.

2. A national plan shall include a list of the measures taken or to be taken to ensure that the aim specified in paragraph 1 will be achieved, including details of the proposed plan monitoring mechanism. It shall also include binding interim reduction targets against which progress towards the aim can be measured. It shall be compatible with the relevant existing Community legislation, including the relevant provisions of this Directive, and shall include:

— an identification of the activity or activities to which the plan applies,

— the reduction in emissions to be achieved by those activities which corresponds to that which would have been achieved by applying the emission limits as specified in paragraph 1,

— the number of installations affected by the plan and their total emissions and the total emission of each of the activities.

The plan shall also include a full description of the range of instruments through which its requirements will be achieved, evidence that these instruments will be enforceable and details of the means by which compliance with the plan will be demonstrated.

3. The Member State shall submit the plan to the Commission. The plan must be accompanied by supporting documentation sufficient to verify that the aim of paragraph 1 will be achieved, including any documentation specifically requested by the Commission. Existing installations undergoing a substantial change shall remain within the scope of the national plan, provided that they were part of this plan before undergoing such substantial change.

4. The Member State shall designate a national authority for the collection and evaluation of the information required by paragraph 3 and for the implementation of the national plan.

5. (a) The Commission shall inform the committee referred to in Article 13 of the criteria for assessing national plans, one year after the entry into force of this Directive at the latest.

(b) If the Commission, in considering the plan, the resubmitted plan, or in considering the progress reports submitted by the Member State under Article 11, is not satisfied that the objectives of the plan will be achieved within the prescribed period, it shall inform the Member State and the committee referred to in Article 13 of its opinion and of the reasons for reaching such an opinion. It shall do so within six months of receipt of the plan or report. The Member State shall then notify the Commission and inform the committee, within three months, of the corrective measures it will take in order to ensure that the objectives are achieved.

▼B

6. If the Commission decides within six months of the notification of the corrective measures that those measures are insufficient to ensure that the objective of the plan is achieved within the prescribed period, the Member State shall be obliged to satisfy the requirements of Article 5(2) and (3) and Annex II within the period specified in this Directive in the case of existing installations. The Commission shall inform the committee referred to in Article 13 of its decision.

Article 7

Substitution

1. The Commission shall ensure that an exchange of information between Member States and the activities concerned on the use of organic substances and their potential substitutes takes place. It shall consider the questions of:

— fitness for use,

— potential effects on human health and occupational exposure in particular;

— potential effects on the environment, and

— the economic consequences, in particular, the costs and benefits of the options available,

with a view to providing guidance on the use of substances and techniques which have the least potential effects on air, water, soil, ecosystems and human health. Following the exchange of information, the Commission shall publish guidance for each activity.

2. Member States shall ensure that the guidance referred to in paragraph 1 is taken into account during authorisation and during the formulation of general binding rules.

Article 8

Monitoring

1. Member States shall introduce an obligation for the operator of an installation covered by this Directive to supply the competent authority once a year or on request with data that enables the competent authority to verify compliance with this Directive.

2. Member States shall ensure that channels to which abatement equipment is connected, and which at the final point of discharge emit more than an average of 10 kg/h of total organic carbon, are monitored continuously for compliance.

3. In the other cases, Member States shall ensure that either continuous or periodic measurements are carried out. For periodic measurements at least three readings shall be obtained during each measurement exercise.

4. Measurements are not required in the case where end-of-pipe abatement equipment is not needed to comply with this Directive.

5. The Commission shall organise an exchange of information on the use of solvent management plans in Member States based on the data for the implementation of this Directive in the three years following the date referred to in Article 15.

▼B

Article 9

Compliance with emission limit values

1. Compliance with the following shall be demonstrated to the satisfaction of the competent authority:

— emission limit values in waste gases, fugitive emission values and total emission limit values,

— the requirements of the reduction scheme under Annex IIB,

— the provisions of Article 5(3).

Guidance is provided in Annex III on solvent management plans serving to demonstrate compliance with these parameters.

Gas volumes may be added to the waste gas for cooling or dilution purposes where technically justified but shall not be considered when determining the mass concentration of the pollutant in the waste gas.

2. Following a substantial change, compliance shall be reverified.

3. In the case of continuous measurements the emission limit values shall be considered to be complied with if:

(a) none of the averages over 24 hours of normal operation exceeds the emission limit values, and

(b) none of the hourly averages exceeds the emission limit values by more than a factor of 1,5.

4. In the case of periodic measurements the emission limit values shall be considered to be complied with if, in one monitoring exercise:

(a) the average of all the readings does not exceed the emission limit values, and

(b) none of the hourly averages exceeds the emission limit value by more than a factor of 1,5.

5. Compliance with the provisions of Article 5(7) and (8) shall be verified on the basis of the sum of the mass concentrations of the individual volatile organic compounds concerned. For all other cases, compliance shall be verified on the basis of the total mass of organic carbon emitted unless otherwise specified in Annex IIA.

Article 10

Non-compliance

Member States shall take appropriate measures to ensure that, if it is found that the requirements of this Directive have been breached:

(a) the operator informs the competent authority and takes measures to ensure that compliance is restored within the shortest possible time;

(b) in cases of non-compliance causing immediate danger to human health and as long as compliance is not restored under the conditions of paragraph (a), operation of the activity is suspended.

▼B

Article 11

Information systems and reporting

1. At intervals of three years, Member States shall send information to the Commission on the implementation of this Directive in the form of a report. The report shall be drawn up on the basis of a questionnaire or outline drafted by the Commission in accordance with the procedure laid down in Article 6 of Directive 91/692/EEC ([1]). The questionnaire or outline shall be sent to the Member States six months before the start of the period covered by the report. The report shall be made to the Commission within nine months of the end of the three-year period covered by it. Member States shall publish the reports produced at the same time as they are transmitted to the Commission, subject to the restrictions laid down in Article 3(2) and (3) of Directive 90/313/EEC ([2]). The first report shall cover the period of the first three years after the date referred to in Article 15.

2. The information submitted under paragraph 1 shall, in particular, include sufficient representative data to demonstrate that the requirements of Article 5 and as the case may be, the requirements of Article 6 have been complied with.

3. The Commission shall draw up a report on the implementation of this Directive on the basis of the data provided by the Member States at the latest five years after the first reports are submitted by the Member States. The Commission shall submit this report to the European Parliament and the Council, accompanied by proposals if necessary.

Article 12

Public access to information

1. Without prejudice to Directive 90/313/EEC, Member States shall take the necessary measures to ensure that at least applications for authorisation for new installations or for substantial changes of those installations requiring a permit under Directive 96/61/EC are made available for an appropriate period of time to the public, to enable it to comment on them before the competent authority reaches a decision. Without prejudice to Directive 96/61/EC, no obligation to reformat the information for the public is implied.

The decision of the competent authority, including at least a copy of the authorisation, and any subsequent updates, must also be made available to the public.

The general binding rules applicable for installations and the list of registered and authorised activities shall be made available to the public.

2. The results of emission-monitoring as required under the authorisation or registration conditions referred to in Articles 8 and 9 and held by the competent authority must be made available to the public.

3. Paragraphs 1 and 2 shall apply, subject to the restrictions regarding grounds for refusal by public authorities to provide information, including commercial and industrial confidentiality, laid down in Article 3(2) and (3) of Directive 90/313/EEC.

([1]) OJ L 377, 31.12.1991, p. 48.
([2]) OJ L 158, 23.6.1990, p. 56.

▼M1

Article 13

1. The Commission shall be assisted by a committee.

2. Where reference is made to this Article, Articles 3 and 7 of Decision 1999/468/EC [1] shall apply, having regard to the provisions of Article 8 thereof.

3. The Committee shall adopt its rules of procedure.

▼B

Article 14

Sanctions

Member States shall determine the sanctions applicable to breaches of the national provisions adopted pursuant to this Directive and shall take all necessary measures for their implementation. The sanctions determined must be effective, proportionate and dissuasive. Member States shall notify these provisions to the Commission at the latest by the date mentioned in Article 15, and shall notify any subsequent modification of them as soon as possible.

Article 15

Transposition

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive ►C2 not later than 1 April 2001. ◄ They shall forthwith inform the Commission thereof.

When Member States adopt these measures, they shall contain a reference to this Directive or shall be accompanied by such a reference on the occasion of their official publication. The methods of making such a reference shall be laid down by the Member States.

2. Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

Article 16

Entry into force

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Communities*.

Article 17

Addressees

This Directive is addressed to the Member States.

[1] Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission (OJ L 184, 17.7.1999, p. 23).

▼B

ANNEX I

SCOPE

This Annex contains the categories of activity referred to in Article 1. When operated above the thresholds listed in Annex IIA, the activities mentioned in this Annex fall within the scope of the Directive. In each case the activity includes the cleaning of the equipment but not the cleaning of products unless specified otherwise.

Adhesive coating

— Any activity in which an adhesive is applied to a surface, with the exception of adhesive coating and laminating associated with printing activities.

Coating activity

— Any activity in which a single or multiple application of a continuous film of a coating is applied to:

  — vehicles as listed below:

    — new cars, defined as vehicles of category M1 in Directive 70/156/EEC ([1]), and of category N1 in so far as they are coated at the same installation as M1 vehicles,

    — truck cabins, defined as the housing for the driver, and all integrated housing for the technical equipment, of vehicles of categories N2 and N3 in Directive 70/156/EEC,

    — vans and trucks, defined as vehicles of categories N1, N2 and N3 in Directive 70/156/EEC, but not including truck cabins,

    — buses, defined as vehicles of categories M2 and M3 in Directive 70/156/EEC,

  — trailers, defined in categories O1, O2, O3 and O4 in Directive 70/156/EEC,

  — metallic and plastic surfaces including surfaces of airplanes, ships, trains, etc.,

  — wooden surfaces,

  — textile, fabric, film and paper surfaces,

  — leather.

  It does not include the coating of substrate with metals by electrophoretic and chemical spraying techniques. If the coating activity includes a step in which the same article is printed by whatever technique used, that printing step is considered part of the coating activity. However, printing activities operated as a separate activity are not included, but may be covered by the Directive if the printing activity falls within the scope thereof.

Coil coating

— Any activity where coiled steel, stainless steel, coated steel, copper alloys or aluminium strip is coated with either a film forming or laminate coating in a continuous process.

Dry cleaning

— Any industrial or commercial activity using VOCs in an installation to clean garments, furnishing and similar consumer goods with the exception of the manual removal of stains and spots in the textile and clothing industry.

Footwear manufacture

— Any activity of producing complete footwear or parts thereof.

([1]) OJ L 42, 23.2.1970, p. 1. Directive as last amended by Directive 97/27/EC (OJ L 233, 25.8.1997, p. 1).

▼B

Manufacturing of coating ►M3 *mixtures* ◄*, varnishes, inks and adhesives*

— The manufacture of the above final products, and of intermediates where carried out at the same site, by mixing of pigments, resins and adhesive materials with organic solvent or other carrier, including dispersion and predispersion activities, viscosity and tint adjustments and operations for filling the final product into its container.

Manufacturing of pharmaceutical products

— The chemical synthesis, fermentation, extraction, formulation and finishing of pharmaceutical products and where carried out at the same site, the manufacture of intermediate products.

Printing

— Any reproduction activity of text and/or images in which, with the use of an image carrier, ink is transferred onto whatever type of surface. It includes associated varnishing, coating and laminating techniques. However, only the following sub-processes are subject to the Directive:

— *flexography* — a printing activity using an image carrier of rubber or elastic photopolymers on which the printing areas are above the non-printing areas, using liquid inks which dry through evaporation,

— *heatset web offset* — a web-fed printing activity using an image carrier in which the printing and non-printing area are in the same plane, where web-fed means that the material to be printed is fed to the machine from a reel as distinct from separate sheets. The non-printing area is treated to attract water and thus reject ink. The printing area is treated to receive and transmit ink to the surface to be printed. Evaporation takes place in an oven where hot air is used to heat the printed material,

— *laminating associated to a printing activity* — the adhering together of two or more flexible materials to produce laminates,

— *publication rotogravure* — a rotogravure printing activity used for printing paper for magazines, brochures, catalogues or similar products, using toluene-based inks,

— *rotogravure* — a printing activity using a cylindrical image carrier in which the printing area is below the non-printing area, using liquid inks which dry through evaporation. The recesses are filled with ink and the surplus is cleaned off the non-printing area before the surface to be printed contacts the cylinder and lifts the ink from the recesses,

— *rotary screen printing* — a web-fed printing activity in which the ink is passed onto the surface to be printed by forcing it through a porous image carrier, in which the printing area is open and the non-printing area is sealed off, using liquid inks which dry only through evaporation. Web-fed means that the material to be printed is fed to the machine from a reel as distinct from separate sheets,

— *varnishing* — an activity by which a varnish or an adhesive coating for the purpose of later sealing the packaging material is applied to a flexible material.

Rubber conversion

— Any activity of mixing, milling, blending, calendering, extrusion and vulcanisation of natural or synthetic rubber and any ancillary operations for converting natural or synthetic rubber into a finished product.

▼B

Surface cleaning

— Any activity except dry cleaning using organic solvents to remove contamination from the surface of material including degreasing. A cleaning activity consisting of more than one step before or after any other activity shall be considered as one surface cleaning activity. This activity does not refer to the cleaning of the equipment but to the cleaning of the surface of products.

Vegetable oil and animal fat extraction and vegetable oil refining activities

— Any activity to extract vegetable oil from seeds and other vegetable matter, the processing of dry residues to produce animal feed, the purification of fats and vegetable oils derived from seeds, vegetable matter and/or animal matter.

Vehicle refinishing

— Any industrial or commercial coating activity and associated degreasing activities performing:

▼M2

———————

▼B

— the original coating of road vehicles as defined in Directive 70/156/EEC or part of them with refinishing-type materials, where this is carried out away from the original manufacturing line, or

— the coating of trailers (including semi-trailers) (category O).

Winding wire coating

— Any coating activity of metallic conductors used for winding the coils in transformers and motors, etc.

Wood impregnation

— Any activity giving a loading of preservative in timber.

Wood and plastic lamination

— Any activity to adhere together wood and/or plastic to produce laminated products.

▼B

ANNEX IIA

I. THRESHOLDS AND EMISSION CONTROLS

	Activity (solvent consumption threshold in tonnes/year)	Threshold (solvent consumption threshold in tonnes/year)	Emission limit values in waste gases (mg C/Nm^3)	Fugitive emission values (percentage of solvent input)		Total emission limit values		Special provisions
				New	Existing	New	Existing	
1	Heatset web offset printing (> 15)	15—25 > 25	100 20	30 (1) 30 (1)				(1) Solvent residue in finished product is not to be considered as part of fugitive emissions.
2	Publication rotogravure (> 25)		75	10	15			
3	Other rotogravure, flexography, rotary screen printing, laminating or varnishing units (> 15) rotary screen printing on textile/cardboard (> 30)	15—25 > 25 > 30 (1)	100 100 100	25 20 20				(1) Threshold for rotary screen printing on textile and on cardboard.
4	Surface cleaning (1) (> 1)	1—5 > 5	20 (2) 20 (2)	15 10				(1) Using compounds specified in Article 5(6) and (8). (2) Limit refers to mass of compounds in mg/Nm^3, and not to total carbon.
5	Other surface cleaning (> 2)	2—10 > 10	75 (1) 75 (1)	20 (1) 15 (1)				(1) Installations which demonstrate to the competent authority that the average organic solvent content of all cleaning material used does not exceed 30 % by weight are exempt from application of these values.

▼B

	Activity (solvent consumption threshold in tonnes/year)	Threshold (solvent consumption threshold in tonnes/year)	Emission limit values in waste gases (mg C/Nm^3)	Fugitive emission values (percentage of solvent input)		Total emission limit values		Special provisions
				New	Existing	New	Existing	
6	Vehicle coating (< 15) and vehicle refinishing	> 0,5	50 ([1])	25				([1]) Compliance in accordance with Article 9(3) should be demonstrated based on 15 minute average measurements.
7	Coil coating (> 25)		50 ([1])	5	10			([1]) For installations which use techniques which allow reuse of recovered solvents, the emission limit shall be 150.
8	Other coating, including metal, plastic, textile ([5]), fabric, film and paper coating (> 5)	5—15 > 15	100 ([1]) ([4]) 50/75 ([2]) ([3]) ([4])	►C2 25 ([4]) ◄ 20 ([4])				([1]) Emission limit value applies to coating application and drying processes operated under contained conditions. ([2]) The first emission limit value applies to drying processes, the second to coating application processes. ([3]) For textile coating installations which use techniques which allow reuse of recovered solvents, the emission limit applied to coating application and drying processes taken together shall be 150. ([4]) Coating activities which cannot be applied under contained conditions (such as shipbuilding, aircraft painting) may be exempted from these values, in accordance with Article 5(3)(b). ([5]) Rotary screen printing on textile is covered by activity No 3.

▼B

	Activity (solvent consumption threshold in tonnes/year)	Threshold (solvent consumption threshold in tonnes/year)	Emission limit values in waste gases (mg C/Nm^3)	Fugitive emission values (percentage of solvent input)		Total emission limit values		Special provisions
				New	Existing	New	Existing	
9	Winding wire coating (> 5)					10 g/kg (1) 5 g/kg (2)		(1) Applies for installations where average diameter of wire ≤ 0,1 mm. (2) Applies for all other installations.
10	Coating of wooden surfaces (> 15)	15—25 > 25	100 (1) 50/75 (2)	25 20				(1) Emission limit applies to coating application and drying processes operated under contained conditions. (2) The first value applies to drying processes, the second to coating application processes.
11	Dry cleaning					20 g/kg (1) (2) (3)		(1) Expressed in mass of solvent emitted per kilogram of product cleaned and dried. (2) The emission limit in Article 5(8) does not apply for this sector. (3) The following exemption refers only to Greece: the total emission limit value does not apply, for a period of 12 years after the date on which this Directive is brought into effect, to existing installations located in remote areas and/or islands, with a population of no more than 2 000 permanent inhabitants where the use of advanced technology equipment is not economically feasible.
12	Wood impregnation (> 25)		100 (1)	45		11 kg/m^3		(1) Does not apply for impregnation with creosote.

▼B

II. THE VEHICLE COATING INDUSTRY

The total emission limit values are expressed in terms of grams of solvent emitted in relation to the surface area of product in square metres and in kilograms of solvent emitted in relation to the car body.

The surface area of any product dealt with in the table below is defined as follows:

— the surface area calculated from the total electrophoretic coating area, and the surface area of any parts that might be added in successive phases of the coating process which are coated with the same coatings as those used for the product in question, or the total surface area of the product coated in the installation.

The surface of the electrophoretic coating area is calculated using the formula:

$$\frac{2 \times \text{total weight of product shell}}{\text{average thickness of metal sheet} \times \text{density of metal sheet}}$$

This method shall also be applied for other coated parts made out of sheets.

Computer aided design or other equivalent methods shall be used to calculate the surface area of the other parts added, or the total surface area coated in the installation.

The total emission limit value in the table below refers to all process stages carried out at the same installation from electrophoretic coating, or any other kind of coating process, through to the final wax and polish of topcoating inclusive, as well as solvent used in cleaning of process equipment, including spray booths and other fixed equipment, both during and outside of production time. The total emission limit value is expressed as the mass sum of organic compounds per m^2 of the total surface area of coated product and as the mass sum of organic compounds per car body.

Activity (solvent consumption threshold in tonnes/year)	Production threshold (refers to annual production of coated item)	Total emission limit value	
		New	Existing
Coating of new cars (> 15)	> 5 000	45 g/m^2 or 1,3 kg/body + 33 g/m^2	60 g/m^2 or 1,9 kg/body + 41 g/m^2
	≤ 5 000 monocoque or > 3 500 chassis-built	90 g/m^2 or 1,5 kg/body + 70 g/m^2	90 g/m^2 or 1,5 kg/body + 70 g/m^2
		Total emission limit (g/m^2)	
Coating of new truck cabins (> 15)	≤ 5 000	65	85
	> 5 000	55	75
Coating of new vans and trucks (> 15)	≤ 2 500	90	120
	> 2 500	70	90
Coating of new buses (> 15)	≤ 2 000	210	290
	> 2 000	150	225

Vehicle coating installations below the solvent consumption thresholds in the table above shall meet the requirements for the vehicle refinishing sector in Annex IIA.

▼B

ANNEX IIB

REDUCTION SCHEME

1. **Principles**

The purpose of the reduction scheme is to allow the operator the possibility to achieve by other means emission reductions, equivalent to those achieved if the emission limit values were to be applied. To that end the operator may use any reduction scheme, specially designed for his installation, provided that in the end an equivalent emission reduction is achieved. Member States shall report according to Article 11 of the Directive to the Commission about the progress in achieving the same emission reduction, including the experience from the application of the reduction scheme.

2. **Practice**

In the case of applying coatings, varnishes, adhesives or inks, the following scheme can be used. Where the following method is inappropriate the competent authority may allow an operator to apply any alternative exemption scheme which it is satisfied fulfils the principles outlined here. The design of the scheme takes into account the following facts:

(i) where substitutes containing little or no solvent are still under development, a time extension must be given to the operator to implement his emission reduction plans;

(ii) the reference point for emission reductions should correspond as closely as possible to the emissions which would have resulted had no reduction action been taken.

The following scheme shall operate for installations for which a constant solid content of product can be assumed and used to define the reference point for emission reductions:

(i) the operator shall forward an emission reduction plan which includes in particular decreases in the average solvent content of the total input and/or increased efficiency in the use of solids to achieve a reduction of the total emissions from the installation to a given percentage of the annual reference emissions, termed the target emission. This must be done on the following time frame:

Time period		Maximum allowed total annual emissions
New installations	Existing installations	
By 31.10.2001	By 31.10.2005	Target emission × 1,5
By 31.10.2004	By 31.10.2007	Target emission

(ii) The annual reference emission is calculated as follows:

(a) The total mass of solids in the quantity of coating and/or ink, varnish or adhesive consumed in a year is determined. Solids are all materials in coatings, inks, varnishes and adhesives that become solid once the water or the volatile organic compounds are evaporated.

(b) The annual reference emissions are calculated by multiplying the mass determined in (a) by the appropriate factor listed in the table below. Competent authorities may adjust these factors for individual installations to reflect documented increased efficiency in the use of solids.

▼B

Activity	Multiplication factor for use in item (ii)(b)
Rotogravure printing; flexography printing; laminating as part of a printing activity; varnishing as part of a printing activity; wood coating; coating of textiles, fabric film or paper; adhesive coating	4
Coil coating, vehicle refinishing	3
Food contact coating, aerospace coatings	2,33
Other coatings and rotary screen printing	1,5

(c) The target emission is equal to the annual reference emission multiplied by a percentage equal to:

— (the fugitive emission value + 15), for installations falling within item 6 and the lower threshold band of items 8 and 10 of Annex IIA,

— (the fugitive emission value + 5) for all other installations.

(d) Compliance is achieved if the actual solvent emission determined from the solvent management plan is less than or equal to the target emission.

▼B

ANNEX III

SOLVENT MANAGEMENT PLAN

1. **Introduction**

This Annex provides guidance on carrying out a solvent management plan. It identifies the principles to be applied (item 2) and provides a framework for the mass balance (item 3) and an indication of the requirements for verification of compliance (item 4).

2. **Principles**

The solvent management plan serves the following purposes:

(i) verification of compliance as specified in Article 9(1);

(ii) identification of future reduction options;

(iii) enabling of the provision of information on solvent consumption, solvent emissions and compliance with the Directive to the public.

3. **Definitions**

The following definitions provide a framework for the mass balance exercise.

Inputs of organic solvents (I):

I1 The quantity of organic solvents or their quantity in ►M3 mixtures ◄ purchased which are used as input into the process in the time frame over which the mass balance is being calculated.

I2 The quantity of organic solvents or their quantity in ►M3 mixtures ◄ recovered and reused as solvent input into the process. (The recycled solvent is counted every time it is used to carry out the activity.)

Outputs of organic solvents (O):

O1 Emissions in waste gases.

O2 Organic solvents lost in water, if appropriate taking into account waste water treatment when calculating O5.

O3 The quantity of organic solvents which remains as contamination or residue in products output from the process.

O4 Uncaptured emissions of organic solvents to air. This includes the general ventilation of rooms, where air is released to the outside environment via windows, doors, vents and similar openings.

O5 Organic solvents and/or organic compounds lost due to chemical or physical reactions (including for example those which are destroyed, e.g. by incineration or other waste gas or waste water treatments, or captured, e.g. by adsorption, as long as they are not counted under O6, O7 or O8).

O6 Organic solvents contained in collected waste.

O7 Organic solvents, or organic solvents contained in ►M3 mixtures ◄, which are sold or are intended to be sold as a commercially valuable product.

O8 Organic solvents contained in ►M3 mixtures ◄ recovered for reuse but not as input into the process, as long as not counted under O7.

O9 Organic solvents released in other ways.

▼B

4. **Guidance on use of the solvent management plan for verification of compliance**

The use made of the solvent management plan will be determined by the particular requirement which is to be verified, as follows:

(i) Verification of compliance with the reduction option in Annex IIB, with a total emission limit value expressed in solvent emissions per unit product, or otherwise stated in Annex IIA.

(a) For all activities using Annex IIB the solvent management plan should be done annually to determine consumption (C). Consumption can be calculated according to the following equation:

$$C = I1 - O8$$

A parallel exercise should also be undertaken to determine solids used in coating in order to derive the annual reference emission and the target emission each year.

(b) For assessing compliance with a total emission limit value expressed in solvent emissions per unit product or otherwise stated in Annex IIA, the solvent management plan should be done annually to determine emissions (E). Emissions can be calculated according to the following equation:

$$E = F + O1$$

where F is the fugitive emission as defined in section (ii)(a). The emission figure should then be divided by the relevant product parameter.

(c) For assessing compliance with the requirements of Article 5(5)(b)(ii), the solvent management plan should be done annually to determine total emissions from all activities concerned, and that figure should then be compared with the total emissions that would have resulted had the requirements of Annex II been met for each activity separately.

(ii) Determination of fugitive emissions for comparison with fugitive emission values in Annex IIA:

(a) *Methodology*

The fugitive emission can be calculated according to the following equation:

$$F = I1 - O1 - O5 - O6 - O7 - O8$$

or

$$F = O2 + O3 + O4 + O9$$

This quantity can be determined by direct measurement of the quantities. Alternatively, an equivalent calculation can be made by other means, for instance by using the capture efficiency of the process.

The fugitive emission value is expressed as a proportion of the input, which can be calculated according to the following equation:

$$I = I1 + I2$$

(b) *Frequency*

Determination of fugitive emissions can be done by a short but comprehensive set of measurements. It need not be done again until the equipment is modified.

(Acts whose publication is not obligatory)

COUNCIL

COUNCIL DIRECTIVE 92/112/EEC

of 15 December 1992

on procedures for harmonizing the programmes for the reduction and eventual elimination of pollution caused by waste from the titanium dioxide industry

THE COUNCIL OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community, and in particular Article 100a thereof,

Having regard to the proposal from the Commission (1),

In cooperation with the European Parliament (2),

Having regard to the opinion of the Economic and Social Committee (3),

Whereas Council Directive 89/428/EEC of 21 June 1989 on procedures for harmonizing the programmes for the reduction and eventual elimination of pollution caused by waste from the titanium dioxide industry (4) was annulled by the Court of Justice in its judgment of 11 June 1991 on the grounds that it lacked an appropriate legal basis (5);

Whereas, if Member States have taken the necessary measures to comply with the said Directive, it is not necessary for them to adopt new measures to meet this Directive, provided the measures already taken comply with the latter;

Whereas the legal void caused by the annulment of the said Directive may have adverse effects on the environment and on conditions of competition in the titanium dioxide production sector; whereas it is necessary to restore the material situation created by the said Directive;

Whereas the objective of this Directive is to approximate national rules relating to titanium dioxide production conditions in order to eliminate the existing distortions of competition between the various producers in the industry and to ensure a high level of environmental protection;

Whereas Council Directive 78/176/EEC of 20 February 1978 on waste from the titanium dioxide industry (6), and in particular Article 9 thereof, requires the Member States to draw up programmes for the progressive reduction and eventual elimination of pollution caused by waste from industrial establishments in existence on 20 February 1978;

Whereas these programmes set general targets for the reduction of pollution caused by liquid, solid and gaseous wastes to be achieved by 1 July 1987; whereas these programmes were to be submitted to the Commission so that it could present suitable proposals to the Council for their harmonization with regard to the reduction and eventual elimination of this pollution and the improvement of the conditions of competition in the titanium dioxide industry;

Whereas, in order to protect the aquatic environment, dumping of waste and discharges of certain wastes, in particular of solid and strong acid wastes, should be prohibited and discharges of other wastes, in particular of weak acid and neutralized wastes, should be progressively reduced;

Whereas existing industrial establishments should employ the appropriate systems for treating the wastes in order to meet the requisite targets by the set dates;

Whereas installation of those systems can give rise to major technico-economic difficulties in the case of weak acid waste and neutralized waste from certain establishments; whereas Member States should therefore be

(1) OJ No C 317, 7. 12. 1991, p. 5.
(2) OJ No C 94, 13. 4. 1992, p. 158, and OJ No C 305, 23. 11. 1992.
(3) OJ No C 98, 21. 4. 1992, p. 9.
(4) OJ No L 201, 14. 7. 1989, p. 56.
(5) Judgment of 11 June 1991, Case C-300/89, Commission v. Council (not yet published).
(6) OJ No L 54, 25. 2. 1978, p. 19; Directive as last amended by Directive 83/29(EEC (OJ No L 32, 3. 2. 1983, p. 28).

able to defer application of these provisions, on condition that a programme of effective reduction of pollution is drawn up and submitted to the Commission; whereas where Member States experience such difficulties, the Commission should be able to extend the relevant time limits;

Whereas, in respect of discharges of certain wastes, Member States should be able to make use of quality objectives in such a way that the results are equivalent in all respects to those obtained through limit values; whereas such equivalence should be demonstrated in a programme to be presented to the Commission;

Whereas, without prejudice to the obligations placed on Member States by Council Directive 80/779/EEC of 15 July 1980 on air quality limit values and guide values for sulphur dioxide and suspended particulates [1], and Council Directive 84/360/EEC of 28 June 1984 on the combating of air pollution from industrial plants [2], it is expedient to protect the quality of the air by fixing appropriate emission standards in respect of gaseous discharges from the titanium dioxide industry;

Whereas, in order to verify the effective application of the measures, Member States should undertake monitoring in relation to the actual production of each establishment;

Whereas all waste from the titanium dioxide industry should be avoided or reused where technically and economically feasible and whereas such waste should be reused or disposed of without endangering human health or the environment,

HAS ADOPTED THIS DIRECTIVE:

Article 1

This Directive lays down, as required by Article 9 (3) of Directive 78/176/EEC, procedures for harmonizing the programmes for the reduction and eventual elimination of pollution from existing industrial establishments and is intended to improve the conditions of competition in the titanium dioxide industry.

Article 2

1. For the purposes of this Directive:

(a) where the sulphate process is used:

— *solid waste* shall mean:

— insoluble ore residues not broken down by sulphuric acid during the manufacturing proces,

— copperas, i. e. crystalline ferrous sulphate ($F_eSO_47H_2O$),

— *strong acid waste* shall mean:

— the mother liquors arising from the filtration phase following hydrolysis of the titanyl sulphate solution. If these mother liquors are associated with weak acid wastes which overall contain more than 0,5 % free sulphuric acid and various heavy metals [3], the liquors and waste taken together shall be considered strong acid waste,

— *treatment waste* shall mean:

— filtration salts, sludges and liquid waste arising from the treatment (concentration or neutralization) of strong acid waste and containing various heavy metals, but not including neutralized and filtered or decanted waste containing only traces of heavy metals and which, before any dilution, has a pH value above 5,5,

— *weak acid waste* shall mean:

— wash waters, cooling waters, condensates and other sludges and liquid wastes, other than those included in the above definitions, containing 0,5 % or less free sulphuric acid,

— *neutralized waste* shall mean:

— any liquid which has a pH value over 5,5, contains only traces of heavy metals, and is obtained directly by filtration or decantation from strong or weak acid waste after its treatment to reduce its acidity and its heavy metal content,

— *dust* shall mean:

— all kinds of dust from production plants and in particular ore and pigment dust,

(1) OJ No L 229, 30. 8. 1980, p. 30; Directive as last amended by Directive 89/427/EEC (OJ No L 201, 14. 7. 1989, p. 53).

(2) OJ No L 188, 16. 7. 1989, p. 20.

(3) Strong acid waste which has been diluted until it contains 0,5 % or less free sulphuric acid shall also be covered by this difinition.

— SO_x shall mean:

— gaseous sulphur dioxide and trioxide released in the various stages of the manufacturing and internal waste treatment processes, including acid droplets;

(b) where the chlorine process is used:

— *solid waste* shall mean:

— insoluble ore residues not broken down by the chlorine during the manufacturing process,

— metal chlorides and metal hydroxides (filtration substances), arising in solid form from the manufacture of titanium tetrachloride,

— coke residues arising from the manufacture of titanium tetrachloride,

— *strong acid waste* shall mean:

— waste containing more than 0,5 % free hydrochloric acid and various heavy metals (1);

— *treatment waste* shall mean:

— filtration salts, sludges and liquid waste arising from the treatment (concentration or neutralization) of strong acid waste and containing various heavy metals, but not including neutralized and filtered or decanted waste containing only traces of heavy metals and which, before any dilution, has a pH value over 5,5,

— *weak acid waste* shall mean:

— wash waters, cooling waters, condensates and other sludges and liquid wastes, other than those included in the above definitions, containing 0,5 % or less free hydrochloric acid,

— *neutralized waste* shall mean:

— any liquid which has a pH value over 5,5, contains only traces of heavy metals, and is obtained directly by filtration or decantation from strong or weak acid waste after its treatment to reduce its acidity and its heavy metal content,

— *dust* shall mean:

— all kinds of dust from production plants and in particular ore, pigment and coke dust,

— *chlorine* shall mean:

— gaseous chlorine released in the various stages of the manufacturing process;

(c) where the sulphate process or the chlorine process is used

— *dumping* shall mean:

— any deliberate disposal into inland surface waters, internal coastal waters, territorial waters or the high seas of substances and materials by or from ships or aircraft (2)

2. The terms defined in Directive 78/176/EEC shall have the same meaning for the purposes of this Directive.

Article 3

The dumping of any solid waste, strong acid waste, treatment waste, weak acid waste, or neutralized waste, as referred to in Article 2 shall be prohibited with effect from 15 June 1993.

Article 4

Member States shall take the necessary measures to ensure that discharges of waste into inland surface waters, internal coastal waters, territorial waters and the high sea are prohibited:

(a) as regards solid waste, strong acid waste and treatment waste from existing industrial establishments using the sulphate process:

— by 15 June 1993 in all the abovementioned waters;

(b) as regards solid waste and strong acid waste from existing industrial establishments using the chlorine process:

— by 15 June 1993 in all the abovementioned waters.

Article 5

In the case of Member States which have serious technical and economic difficulties in complying with the date of application referred to in Article 4, the Commission may grant an extension, provided that a programme for the effective reduction of discharges of such waste is submitted to the Commission by 15 June 1993. That programme must result in a definitive ban on such discharges by 30 June 1993.

(1) Strong acid waste which has been diluted until it contains 0,5 % or less free sulphuric acid shall also be covered by this definition.

(2) *'Ships and aircraft'* shall mean waterborne vessels and airborne craft of any type whatsoever. This expression shall include air-cushion craft, floating craft, whether self-propelled or not, and fixed or floating platforms.

No later than three months after adoption of this Directive, the Commission shall be informed of any such cases and shall be consulted thereon. The Commission shall inform the other Member States.

Article 6

Member States shall take the necessary measures to ensure that discharges of waste are reduced in accordance with the following provisions:

(a) from existing industrial establishments using the sulphate process:

— weak acid waste and neutralized waste shall be reduced by 31 December 1993 in all waters to a value of not more than 800 kg of total sulphate per tonne of titanium dioxide produced (i. e. corresponding to the SO_4 ions contained in the free sulphuric acid and in the metallic sulphates);

(b) from existing industrial establishments using the chlorine process:

— weak acid waste, treatment waste and neutralized waste shall be reduced by 15 June 1993 in all waters to the following values of total chloride per tonne of titanium dioxide produced (i. e. corresponding to the C1 ions contained in the free hydrochloric acid and in the metallic chlorides):

— 130 kg using neutral rutile,

— 228 kg using synthetic rutile,

— 450 kg using slag.

In the case of an establishment using more than one type or ore, the values shall apply in proportion to the quantity of these ores used.

Article 7

Except where inland surface waters are concerned, Member States may defer the date of application referred to in point (a) of Article 6 until 31 December 1994 at the latest if serious technico-economic difficulties so require and provided that a programme of effective reduction of discharges of such waste is submitted to the Commission by 15 June 1993. Such a programme shall enable the following limit value per tonne of titanium dioxide produced to be reached by the date shown:

— weak acid waste and neutralized waste: 1 200 kg — 15 June 1993,

— weak acid waste and neutralized waste: 800 kg — 31 December 1994.

Three months at the latest following adoption of this Directive the Commission shall be informed of such cases, which shall be the subject of consultation with the Commission. The Commission shall inform the other Member States.

Article 8

1. As regards the requirements of Article 6, Member States may choose to make use of quality objectives coupled with appropriate limit values applied in such a way that the effects in terms of protecting the environment and avoiding distortions of competition are equivalent to that of the limit values laid down in this Directive.

2. If a Member State chooses to make use of quality objectives, it shall present to the Commission a programme (1) demonstrating that the measures achieve an effect which, in terms of protecting the environment and avoiding distortion of competition, is equivalent to that of the limit values by the dates when these limit values are applied in accordance with Article 6.

This programme shall be submitted to the Commission at least six months before the Member State proposes to apply the quality objectives.

This programme shall be assessed by the Commission in accordance with the procedures laid down in Article 10 of Directive 78/176/EEC.

The Commission shall inform the other Member States.

Article 9

1. Member States shall take the necessary measures to ensure that discharges into the atmosphere are reduced in accordance with the following provisions:

(a) in the case of existing industrial establishments using the sulphate process:

(i) as regards dust, discharges shall be reduced by 31 December 1993 to a value of not more than 50 mg/nm^3 (2) from major sources and not more than 150 mg/nm^3 (2) from any other source (3);

(ii) as regards SO_x, discharges arising from digestion and calcination steps in the manufacture of titanium dioxide shall be reduced by 1 January 1995 to a value of not more than 10 kg of SO_2 equivalent per tonne of titanium dioxide produced;

(1) Such information shall be provided under Article 14 of Directive 78/176/EEC or separately should circumstances so require.

(2) Cubic metre at a temperature of 273 K and a pressure of 101,3 kPa.

(3) Member States shall inform the Commission of those minor sources not included in their measurements.

(iii) Member States shall require means to be installed for preventing the emission of acid droplets;

(iv) plants for the concentration of waste acid shall not discharge more than 500 mg/nm^3 SO_x calculated as SO_2 equivalent (1);

(v) plants for the roasting of salts generated by the treatment of waste shall be equipped with the best available technology not entailing excessive costs in order to reduce SO_x emissions;

(b) in the case of existing industrial establishments using the chlorine process:

(i) as regards dust, discharges shall be reduced by 15 June 1993 to a value of not more than 50 mg/nm^3 (2) for major sources and not more than 150 mg/nm^3 (2) from any other source (3);

(ii) as regards chlorine, discharges shall be reduced by 15 June 1993 to a daily average concentration of not more than 5 mg/nm^3 (4) and not more than 40 mg/ng^3 at any time.

2. This Directive shall not prejudice Directive 80/779/EEC.

3. The procedure for monitoring the reference measurements for discharges of SO_x into the atmosphere is set out in the Annex.

Article 10

Member States shall monitor the values and reductions specified in Articles 6, 8 and 9 in relation to the actual production of each establishment.

Article 11

Member States shall take the measures necessary to ensure that all waste from the titanium dioxide industry, and in particular waste subject to prohibition on discharge or dumping into water or on discharge into the atmosphere is:

— avoided or reused where technically and economically feasible,

— reused or disposed of without endangering human health or harming the environment.

The same shall apply to waste arising from the reuse or treatment of the abovementioned waste.

Article 12

1. Member States which have not yet taken the necessary measures to comply with this Directive shall bring them into force not later than 15 June 1993. They shall inform the Commission forthwith of the national provisions adopted to comply with this Directive.

When Member States adopt these provisions, they shall contain a reference to this Directive or shall be accompanied by such reference at the time of their official publication. The procedure for such reference shall be adopted by Member States.

2. Member States shall communicate to the Commission the provisions of national law which they adopt in the field governed by this Directive.

Article 13

This Directive is addressed to the Member States.

Done at Brussels, 15 December 1992.

For the Council

The President

M. HOWARD

(1) For new concentration processes the Commission can agree to a different value if the Member States can demonstrate the non-availability of techniques to achieve this standard.

(2) Cubic meter at a temperature of 273 K and a pressure of 101,3 kPa.

(3) Member States shall inform the Commission of those minor sources not included in their measurements.

(4) It is considered that these values correspond to a maximum of six grammes per tonne of titanium dioxide produced.

ANNEX

Procedure for monitoring the reference measurements for gaseous SO_x emissions

For the purposes of calculating the quantities of SO_2 and SO_3 and acid droplets expressed as SO_2 equivalent, discharged by specific installations, account must be taken of the volume of gas discharged over the duration of the specific operations in question and of the average SO_2/SO_3 content measured over the same period. The SO_2/SO_3 flow rate and content must be determined under the same temperature and humidity conditions.

COUNCIL DIRECTIVE

of 3 December 1982

on procedures for the surveillance and monitoring of environments concerned by waste from the titanium dioxide industry

(82/883/EEC)

THE COUNCIL OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community, and in particular Articles 100 and 235 thereof,

Having regard to Council Directive 78/176/EEC of 20 February 1978 on waste from the titanium dioxide industry ([1]), and in particular Article 7 (3) thereof,

Having regard to the proposal from the Commission ([2]),

Having regard to the opinion of the European Parliament ([3]),

Having regard to the opinion of the Economic and Social Committee ([4]),

Whereas, irrespective of the method and extent of the treatment of wastes from the titanium dioxide industry, the discharge, dumping, storage on, tipping on or injection into the ground of such wastes must be accompanied by measures for the surveillance and monitoring of the environments concerned from a physical, chemical, biological and ecological point of view;

Whereas, in order to monitor the quality of these environments, samples should be taken with a minimum frequency so that the parameters specified in the Annexes may be measured; whereas the number of these sampling operations could be reduced in the light of the results obtained; whereas, to ensure that the monitoring is effective, samples should also be taken if possible in a zone deemed to be unaffected by the discharges in question;

Whereas, in connection with the analyses carried out by the Member States, common reference methods of measurement should be fixed for determining the parametric values which define the physical, chemical, biological and ecological characteristics of the environments concerned;

Whereas, for the surveillance and monitoring of the environments affected, Member States may at any time lay down other parameters in addition to those laid down by this Directive;

Whereas it is necessary to define the details of the methods of surveillance and monitoring which Member States communicate to the Commission; whereas the Commission shall, with the prior agreement of the Member States, publish a consolidated report on these details;

Whereas in certain natural circumstances it may prove difficult to carry out the surveillance and monitoring operations, and, accordingly, provision must be made for derogation, in certain cases, from this Directive;

Whereas technical and scientific progress may require the rapid adjustment of certain of the provisions contained in the Annex; whereas to facilitate implementation of the requisite measures a procedure should be laid down to establish close cooperation between the Member States and the Commission through a committee on adaptation to scientific and technical progress,

HAS ADOPTED THIS DIRECTIVE:

([1]) OJ No L 54, 25.2.1978, p. 19.

Article 1

This Directive lays down, pursuant to Article 7 (3) of Directive 78/176/EEC, the procedures for the surveillance and monitoring of the effects on the environment, having regard to its physical, chemical, biological and ecological aspects, of the discharge, dumping, storage on, tipping on or injection into the ground of waste from the titanium dioxide industry.

Article 2

For the purpose of this Directive:

— 'environments affected' means the water, the land surface and underground strata and the air in or into which waste from the titanium dioxide industry is discharged, dumped, stored, tipped or injected,

— 'sampling point' means the point at which samples are taken.

Article 3

1. The parameters applicable for the surveillance and monitoring referred to in Article 1 are specified in the Annexes.

2. Where a parameter appears in the 'mandatory determination' column in the Annexes, sampling and analysis of the samples must be carried out in respect of the environmental components indicated.

3. Where a parameter appears in the 'optional determination' column in the Annexes, the Member States shall, if they consider it necessary, have the sampling and analysis of samples carried out for the environmental components indicated.

Article 4

1. Member States shall carry out surveillance and monitoring of the environments affected and of a neighbouring zone deemed to be unaffected, special account being taken of local environmental factors and the manner of disposal, i.e. whether intermittent or continuous.

2. Except where otherwise specified in the Annexes, Member States shall determine on a case-by-case basis the exact sites from which samples are to be taken, the distance of these sites from the nearest pollutant disposal point and the depth or height at which the samples must be taken.

The samples must be taken at the same location and depth and under the same conditions in the course of successive sampling operations, for example in the case of tidal waters, at the same time in relation to high tide, tidal coefficient.

3. For the monitoring and inspection of the environments affected, Member States shall determine the frequency of sampling and analysis for each parameter listed in the Annexes.

For parameters where determination is mandatory, the frequency of sampling and analysis must not be less than the minimum frequencies indicated in the Annexes. However, once the behaviour, fate and effects of the waste have, as far as possible, been established, and provided there is no significant deterioration in the quality of the environment, Member States may provide for a frequency of sampling and analysis below these frequencies. Should there subsequently be any significant deterioration in the quality of the environment as a result of the waste or of any change in the disposal operation, the Member State shall revert to sampling and analysis at a frequency not less than that specified in the Annexes. If a Member State considers it necessary or advisable, it may distinguish between different parameters, applying this subpar-

▼B

agraph to those parameters where no significant deterioration in the quality of the environment has been recorded.

4. For the monitoring and inspection of an appropriate neighbouring zone deemed to be unaffected, the laying down of the frequency of sampling and analysis shall be assessed by the Member States. When a Member State finds that it is not possible to identify such a neighbouring zone, it shall inform the Commission to that effect.

Article 5

1. The reference methods of measurement for determining the parametric values are specified in the Annexes. Laboratories using other methods must ensure that the results obtained are comparable.

2. The containers used to carry the samples, the agents or methods used to preserve a part sample with a view to analysis of one or more parameters, the transport and storage of samples and their preparation for analysis must be such that they do not significantly affect the analytical results.

Article 6

For the surveillance and monitoring of the environments affected, Member States may, at any time, lay down other parameters in addition to those laid down by this Directive.

Article 7
